

NAME

`apm_available` - test whether APM subsystem is available

SYNOPSIS

`apm_available`

DESCRIPTION

`apm_available` checks whether the APM ("Advanced Power Management") subsystem is available, as evidenced by the presence of the `/proc/apm` file.

OPTIONS

None.

EXIT STATUS

- 0** (true) APM subsystem is available
- 1** (false) APM subsystem is not available
- 2** usage error (arguments supplied)

FILES

`/proc/apm` APM status information file
