

**NAME**

dh\_perl\_dbi - add dependencies required for DBI modules

**SYNOPSIS**

**dh\_perl\_dbi** [*debhelper options*]

**DESCRIPTION**

dh\_perl\_dbi is a debhelper program that is responsible for adding a dependency on perl-dbdabi-\* to the `#{perl:Depends}` substitution variable. Such a dependency is required for packages that use the DBD<>DBI binary interface; do *not* use this for packages that only use the DBI module.

A debhelper addon is also provided. This makes it possible to just use

```
#!/usr/bin/make -f
%:
dh $@ --with perl_dbi
```

for *debian/rules*.
