

NAME

Openbox - standards compliant, fast, light-weight, extensible window manager.

SYNOPSIS

gdm-control <option>

DESCRIPTION

gdm-control lets you control gdm from within an X session. It enables you to change GDM's behaviour for when you end the current session. For instance, you can tell GDM to reboot, and then immediately log out of the current session, and the computer will be rebooted.

OPTIONS**--help**

Display some help and exit.

--none

Do nothing special when the current session ends.

--shutdown

Shutdown the computer when the current session ends.

--reboot

Reboot the computer when the current session ends.

--suspend

Suspend the computer when the current session ends.

--switch-user

Log in as a new user (this works immediately).

AUTHORS

Openbox was written by Mikael Magnusson <mangosoft@comhem.se> and Dana Jansens <danakj@orodu.net>, aided by several contributors; for a full list read the file AUTHORS.
