NAME

git-column - Display data in columns

SYNOPSIS

git column [--command=<name>] [--[raw-]mode=<mode>] [--width=<width>]
[--indent=<string>] [--nl=<string>] [--padding=<n>]

DESCRIPTION

This command formats its input into multiple columns.

OPTIONS

--command=<name>

Look up layout mode using configuration variable column.<name> and column.ui.

--mode=<mode>

Specify layout mode. See configuration variable column.ui for option syntax.

--raw-mode=<n>

Same as --mode but take mode encoded as a number. This is mainly used by other
commands that have already parsed layout mode.

--width=<width>

Specify the terminal width. By default *git column* will detect the terminal width, or fall back
to 80 if it is unable to do so.

--indent=<string>

String to be printed at the beginning of each line.

--nl=<N>

String to be printed at the end of each line, including newline character.

--padding=<N>

The number of spaces between columns. One space by default.
