

NAME

git-sh-i18n - Gits i18n setup code for shell scripts

SYNOPSIS

. (git --exec-path)/git-sh-i18n

DESCRIPTION

This is not a command the end user would want to run. Ever. This documentation is meant for people who are studying the Porcelain-ish scripts and/or are writing new ones.

The git sh-i18n scriptlet is designed to be sourced (using `.`) by Git's porcelain programs implemented in shell script. It provides wrappers for the GNU `gettext` and `eval_gettext` functions accessible through the `gettext.sh` script, and provides pass-through fallbacks on systems without GNU `gettext`.

FUNCTIONS

`gettext`

Currently a dummy fall-through function implemented as a wrapper around [printf\(1\)](#). Will be replaced by a real `gettext` implementation in a later version.

`eval_gettext`

Currently a dummy fall-through function implemented as a wrapper around [printf\(1\)](#) with variables expanded by the [git-sh-i18n--envsubst\(1\)](#) helper. Will be replaced by a real `gettext` implementation in a later version.

GIT

Part of the [git\(1\)](#) suite
