

NAME

git-sh-i18n--envsubst - Gits own envsubst(1) for i18n fallbacks

SYNOPSIS

```
eval_gettext () {  
  printf %s $1 | (  
    export PATH $(git sh-i18n--envsubst--v ariables $1);  
    git sh-i18n--envsubst$1  
  )  
}
```

DESCRIPTION

This is not a command the end user would want to run. Ever. This documentation is meant for people who are studying the plumbing scripts and/or are writing new ones.

git sh-i18n--envsubst is Git's stripped-down copy of the GNU `envsubst(1)` program that comes with the GNU `gettext` package. It's used internally by [git-sh-i18n\(1\)](#) to interpolate the variables passed to the `eval_gettext` function.

No promises are made about the interface, or that this program won't disappear without warning in the next version of Git. Don't use it.
