

NAME

leafpad - GTK+ based simple text editor

DESCRIPTION

leafpad is a simple GTK+ based text editor. The user interface is similar to Windows(tm) *notepad*. It aims to be lighter than GEdit and KWrite and to be as useful as them.

WARNING: The encoding feature is derived from built-in Glib's iconv feature (`g_convert`), which you can check with command `iconv -l`. Leafpad can use only the listed encoding. Any other encoding cause serious data loss.

SYNOPSIS

```
leafpad [options] [filename]
```

OPTIONS

--codeset=CODESET

Set codeset to open file.

--display=DISPLAY

X display to use.

--help

Display the command line options.
