

NAME

mmroff - cross reference preprocessor

SYNOPSIS

mmroff [*-x*] *groff_arguments*

DESCRIPTION

mmroff is a simple preprocessor for **groff**, it is used for expanding cross references in **mm**, see [groff_mm\(7\)](#). **groff** is executed twice, first with **-z** and **-rRef=1** to collect all cross references and then to do the real processing when the cross reference file is up to date.

-x Just create the cross reference file. This can be used to refresh the cross reference file, it isnt always needed to have accurate cross references and by using this option **groff** will only be run once.

FILES

[/usr/share/groff/1.22.3/tmac/m.tmac](#)

[/usr/share/groff/1.22.3/tmac/mm/*.cov](#)

[/usr/share/groff/1.22.3/tmac/mm/*.MT](#)

[/usr/share/groff/1.22.3/tmac/mm/locale](#)

SEE ALSO
