

**NAME**

`ntpsweep` - Sweep NTP Servers and Report Relationships

**SYNOPSIS**

`ntpsweep` [ `--help`|`--peers`|`--strip` <string> ] <file>|[`--host` <hostname> ]

**DESCRIPTION**

`ntpsweep` prints per host given in <file> the NTP stratum level, the clock offset in seconds, the daemon version, the operating system and the processor.

**OPTIONS**

- `--help` Print this short help text and exit.
- <file> Specify the hosts file. File format is one hostname or ip number per line. Lines beginning with # are considered as comment.
- `--host` <hostname>  
Specify a single host, bypassing the need for a hosts file.
- `--peers` List all peers a host synchronizes to.
- `--strip` <string>  
Strip <string> from hostnames.
