

NAME

perror - explain error codes

SYNOPSIS

perror [*options*] *errorcode* ...

DESCRIPTION

For most system errors, MariaDB displays, in addition to an internal text message, the system error code in one of the following styles:

message ... (errno: #)

message ... (Errcode: #)

You can find out what the error code means by examining the documentation for your system or by using the **perror** utility.

perror prints a description for a system error code or for a storage engine (table handler) error code.

Invoke **perror** like this:

```
shell> perror [options] errorcode ...
```

Example:

```
shell> perror 13 64
```

OS error code 13: Permission denied

OS error code 64: Machine is not on the network

Note that the meaning of system error messages may be dependent on your operating system. A given error code may mean different things on different operating systems.

perror supports the following options.

- **--help, --info, -I, -?**
Display a help message and exit.
- **--silent, -s**
Silent mode. Print only the error message.
- **--verbose, -v**
Verbose mode. Print error code and message. This is the default behavior.
- **--version, -V**
Display version information and exit.
