

NAME

roff2dvi - transform roff code into dvi mode

SYNOPSIS

roff2dvi [*groffer_option* ...] [--] [*filespec* ...]

roff2dvi -h|--help

roff2dvi -v|--version

The options **-v** and **--version** print the version information of the program to standard output and exit. The options **-h** and **--help** print a usage information of the program to standard output and stop the program instantly.

All other options are assumed to be **groffer** options. They are internally passed to **groffer**. They override the behavior of the program. The options are optional, they can be omitted.

The *filespec* arguments correspond to the *filespec* arguments of **groffer**. So they are either the names of existing, readable files or **-** for standard input, or the name of a man page or a [groffer\(1\)](#) man page search pattern. If *nofilespec* is specified standard input is assumed automatically.

DESCRIPTION

roff2dvi transforms *roff* code into *dvi* mode. Print the result to standard output.

There are more of these programs for generating other formats of *roff* input.

[roff2html\(1\)](#) generates *html* output.

[roff2pdf\(1\)](#) outputs *pdf* mode.

[roff2ps\(1\)](#) prints *PostScript* format to standard output.

[roff2text\(1\)](#) generates text output in the **groff** device *latin1*.

[roff2x\(1\)](#) prints the output in the **groff** device **X** that is suitable for programs like [gxditview\(1\)](#) or [xditview\(1\)](#).
