

NAME

sha224sum - compute and check SHA224 message digest

SYNOPSIS

sha224sum [*OPTION*]... [*FILE*]...

DESCRIPTION

Print or check SHA224 (224-bit) checksums.

With no *FILE*, or when *FILE* is -, read standard input.

-b, --binary

read in binary mode

-c, --check

read SHA224 sums from the *FILE*s and check them

--tag create a BSD-style checksum

-t, --text

read in text mode (default)

The following five options are useful only when verifying checksums:

--ignore-missing

don't fail or report status for missing files

--quiet don't print OK for each successfully verified file

--status

don't output anything, status code shows success

--strict exit non-zero for improperly formatted checksum lines

-w, --warn

warn about improperly formatted checksum lines

--help display this help and exit

--version

output version information and exit

The sums are computed as described in RFC 3874. When checking, the input should be a former output of this program. The default mode is to print a line with checksum, a space, a character indicating input mode ('*' for binary, ' ' for text or where binary is insignificant), and name for each *FILE*.
