

**NAME**

touch - change file timestamps

**SYNOPSIS**

**touch** [*OPTION*]... *FILE*...

**DESCRIPTION**

Update the access and modification times of each *FILE* to the current time.

A *FILE* argument that does not exist is created empty, unless **-c** or **-h** is supplied.

A *FILE* argument string of **-** is handled specially and causes touch to change the times of the file associated with standard output.

Mandatory arguments to long options are mandatory for short options too.

**-a** change only the access time

**-c, --no-create**  
do not create any files

**-d, --date=STRING**  
parse *STRING* and use it instead of current time

**-f** (ignored)

**-h, --no-dereference**  
affect each symbolic link instead of any referenced file (useful only on systems that can change the timestamps of a symlink)

**-m** change only the modification time

**-r, --reference=FILE**  
use this file's times instead of current time

**-t STAMP**  
use [[CC]YY]MMDDhhmm[.ss] instead of current time

**--time=WORD**  
change the specified time: *WORD* is access, atime, or use: equivalent to **-a** *WORD* is modify or mtime: equivalent to **-m**

**--help** display this help and exit

**--version**  
output version information and exit

Note that the **-d** and **-t** options accept different time-date formats.

**DATE STRING**

The **--date=STRING** is a mostly free format human readable date string such as "Sun, 29 Feb 2004 16:21:42 -0800" or "2004-02-29 16:21:42" or even "next Thursday". A date string may contain items indicating calendar date, time of day, time zone, day of week, relative time, relative date, and numbers. An empty string indicates the beginning of the day. The date string format is more complex than is easily documented here but is fully described in the info documentation.
