

NAME

Dpkg - module with core variables

DESCRIPTION

The Dpkg module provides a set of variables with information concerning this system installation.

VARIABLES

\$Dpkg::PROGNAME

Contains the name of the current program.

\$Dpkg::PROGVERSION

Contains the version of the dpkg suite.

\$Dpkg::CONFDIR

Contains the path to the dpkg system configuration directory.

\$Dpkg::ADMINDIR

Contains the path to the dpkg database directory.

\$Dpkg::LIBDIR

Contains the path to the dpkg methods and plugins directory.

\$Dpkg::DATADIR

Contains the path to the dpkg architecture tables directory.

CHANGES**Version 1.01**

New variables: `$PROGNAME`, `$PROGVERSION`, `$CONFDIR`, `$ADMINDIR`, `$LIBDIR` and `$DATADIR`.

Deprecated variables: `$version`, `$admindir`, `$dpkglibdir` and `$pkgdatadir`.

Version 1.00

Mark the module as public.
