

NAME

Dpkg::BuildProfiles - handle build profiles

DESCRIPTION

The Dpkg::BuildProfiles module provides functions to handle the build profiles.

FUNCTIONS

my @profiles = *get_build_profiles()*

Get an array with the currently active build profiles, taken from the environment variable **DEB_BUILD_PROFILES**.

set_build_profiles(@profiles)

Set @profiles as the current active build profiles, by setting the environment variable **DEB_BUILD_PROFILES**.

my @profiles = parse_build_profiles(\$string)

Parses a build profiles specification, into an array of array references.

evaluate_restriction_formula(@formula, @profiles)

Evaluate whether a restriction formula of the form “<foo bar> <baz>”, given as a nested array, is true or false, given the array of enabled build profiles.

CHANGES**Version 1.00**

Mark the module as public.
