

NAME

atof - convert a string to a double

SYNOPSIS

```
#include <stdlib.h>

double atof(const char *nptr);
```

DESCRIPTION

The **atof()** function converts the initial portion of the string pointed to by *nptr* to *double*. The behavior is the same as

```
strtod(nptr, NULL);
```

except that **atof()** does not detect errors.

RETURN VALUE

The converted value.

ATTRIBUTES**Multithreading (see pthreads(7))**

The **atof()** function is thread-safe with exceptions. It can be safely used in multithreaded applications, as long as **setlocale(3)** is not called to change the locale during its execution.

CONFORMING TO

SVr4, POSIX.1-2001, 4.3BSD, C89, C99.
