

NAME

clearerr, feof, ferror, fileno - check and reset stream status

SYNOPSIS

```
#include <stdio.h>
```

```
void clearerr(FILE *stream);
```

```
int feof(FILE *stream);
```

```
int ferror(FILE *stream);
```

```
int fileno(FILE *stream);
```

Feature Test Macro Requirements for glibc (see [feature_test_macros\(7\)](#)):

```
fileno(): _POSIX_C_SOURCE >= 1 || _XOPEN_SOURCE || _POSIX_SOURCE
```

DESCRIPTION

The function **clearerr()** clears the end-of-file and error indicators for the stream pointed to by *stream*.

The function **feof()** tests the end-of-file indicator for the stream pointed to by *stream*, returning nonzero if it is set. The end-of-file indicator can be cleared only by the function **clearerr()**.

The function **ferror()** tests the error indicator for the stream pointed to by *stream*, returning nonzero if it is set. The error indicator can be reset only by the **clear err()** function.

The function **fileno()** examines the argument *stream* and returns its integer descriptor.

For nonlocking counterparts, see [unlocked_stdio\(3\)](#).

ERRORS

These functions should not fail and do not set the external variable *errno*. (However, in case **fileno()** detects that its argument is not a valid stream, it must return -1 and set *errno* to **EBADF**.)

ATTRIBUTES**Multithreading (see [pthreads\(7\)](#))**

The **clearerr()**, **feof()**, **ferror()**, and **fileno()** functions are thread-safe.

CONFORMING TO

The functions **clearerr()**, **feof()**, and **ferror()** conform to C89, C99, POSIX.1-2001, and POSIX.1-2008.

The function **fileno()** conforms to POSIX.1-2001 and POSIX.1-2008.
