NAME

clog10, clog10f, clog10l - base-10 logarithm of a complex number

SYNOPSIS

```
#define _GNU_SOURCE /* See feature_test_macros(7) */ #include <complex.h>
double complex clog10(double complex z); float complex clog10f(float complex z); long double complex clog10l(long double complex z); Link with -lm.
```

DESCRIPTION

The call clog10(z) is equivalent to clog(z)/log(10). The other functions perform the same task for float and long double.

Note that z close to zero will cause an overflow.

VERSIONS

These functions first appeared in glibc in version 2.1.

CONFORMING TO

This function is a GNU extension. It is reserved for future use in C99.

SEE ALSO

```
cabs(3), cexp(3), clog(3), clog(3), complex(7)
```

COLOPHON

This page is part of release 3.74 of the Linux man-pages project. A description of the project, information about reporting bugs, and the latest version of this page, can be found at http://www.kernel.org/doc/man-pages/.
