

NAME

conj, conjf, conjl - calculate the complex conjugate

SYNOPSIS

```
#include <complex.h>
```

```
double complex conj(double complex z);
```

```
float complex conjf(float complex z);
```

```
long double complex conjl(long double complex z);
```

Link with *-lm*.

DESCRIPTION

The **conj()** function returns the complex conjugate value of *z*. That is the value obtained by changing the sign of the imaginary part.

One has:

$$\text{cabs}(z) = \text{csqrt}(z * \text{conj}(z))$$
VERSIONS

These functions first appeared in glibc in version 2.1.

ATTRIBUTES

Multithreading (see **pthread(7)**)

The **conj()**, **conjf()**, and **conjl()** functions are thread-safe.

CONFORMING TO

C99.
