

NAME

`cos`, `cosf`, `cosl` - cosine function

SYNOPSIS

```
#include <math.h>

double cos(double x);
float cosf(float x);
long double cosl(long double x);
```

Link with `-lm`.

Feature Test Macro Requirements for glibc (see [feature_test_macros\(7\)](#)):

```
cosf(), cosl():
    _BSD_SOURCE || _SVID_SOURCE || _XOPEN_SOURCE >= 600 || _ISOC99_SOURCE ||
    _POSIX_C_SOURCE >= 200112L;
    or cc -std=c99
```

DESCRIPTION

The `cos()` function returns the cosine of x , where x is given in radians.

RETURN VALUE

On success, these functions return the cosine of x .

If x is a NaN, a NaN is returned.

If x is positive infinity or negative infinity, a domain error occurs, and a NaN is returned.

ERRORS

See [math_error\(7\)](#) for information on how to determine whether an error has occurred when calling these functions.

The following errors can occur:

Domain error: x is an infinity

`errno` is set to **EDOM** (but see [BUGS](#)). An invalid floating-point exception (**FE_INVALID**) is raised.

ATTRIBUTES

Multithreading (see [pthreads\(7\)](#))

The `cos()`, `cosf()`, and `cosl()` functions are thread-safe.

CONFORMING TO

C99, POSIX.1-2001. The variant returning `double` also conforms to SVr4, 4.3BSD.

BUGS

Before version 2.10, the glibc implementation did not set `errno` to **EDOM** when a domain error occurred.
