

NAME

`erf`, `erff`, `erfl` - error function

SYNOPSIS

```
#include <math.h>

double erf(double x);
float erff(float x);
long double erfl(long double x);
```

Link with `-lm`.

Feature Test Macro Requirements for glibc (see [feature_test_macros\(7\)](#)):

```
erf():
    _BSD_SOURCE || _SVID_SOURCE || _XOPEN_SOURCE || _ISOC99_SOURCE ||
    _POSIX_C_SOURCE >= 200112L;
    or cc -std=c99

erff(), erfl():
    _BSD_SOURCE || _SVID_SOURCE || _XOPEN_SOURCE >= 600 || _ISOC99_SOURCE ||
    _POSIX_C_SOURCE >= 200112L;
    or cc -std=c99
```

DESCRIPTION

The `erf()` function returns the error function of x , defined as

$$\text{erf}(x) = 2/\sqrt{\pi}^* \text{ integral from } 0 \text{ to } x \text{ of } \exp(-t^2) dt$$

RETURN VALUE

On success, these functions return the error function of x , a value in the range [-1, 1].

If x is a NaN, a NaN is returned.

If x is +0 (-0), +0 (-0) is returned.

If x is positive infinity (negative infinity), +1 (-1) is returned.

If x is subnormal, a range error occurs, and the return value is $2^*x/\sqrt{\pi}$.

ERRORS

See [math_error\(7\)](#) for information on how to determine whether an error has occurred when calling these functions.

The following errors can occur:

Range error: result underflow (x is subnormal)

An underflow floating-point exception (**FE_UNDERFLOW**) is raised.

These functions do not set `errno`.

ATTRIBUTES**Multithreading (see [pthreads\(7\)](#))**

The `erf()`, `erff()`, and `erfl()` functions are thread-safe.

CONFORMING TO

C99, POSIX.1-2001. The variant returning `double` also conforms to SVr4, 4.3BSD.
