

**NAME**

fcloseall - close all open streams

**SYNOPSIS**

```
#define _GNU_SOURCE /* See feature\_test\_macros\(7\) */
#include <stdio.h>

int fcloseall(void);
```

**DESCRIPTION**

The `fcloseall()` function closes all of the calling process's open streams. Buffered output for each stream is written before it is closed (as for [fflush\(3\)](#)); buffered input is discarded.

The standard streams, *stdin*, *stdout*, and *stderr* are also closed.

**RETURN VALUE**

This function returns 0 if all files were successfully closed; on error, **EOF** is returned.

**ATTRIBUTES**

**Multithreading (see [pthreads\(7\)](#))**

The `fcloseall()` function does not lock the streams, so it is not thread-safe.

**CONFORMING TO**

This function is a GNU extension.

**SEE ALSO**

[close\(2\)](#), [fclose\(3\)](#), [fflush\(3\)](#), [fopen\(3\)](#), [setbuf\(3\)](#)

**COLOPHON**
