NAME

scalbn, scalbnf, scalbnl, scalbln, scalblnf, scalblnl - multiply floating-point number by integral power of radix

SYNOPSIS

#include <math.h>

double scalbln(double *x***, long int** *exp***);**
float scalblnf(float *x***, long int** *exp***);**
long double scalblnl(long double *x***, long int** *exp***);**

double scalbn(double *x***, int** *exp***);**
float scalbnf(float *x***, int** *exp***);**
long double scalbnl(long double *x***, int** *exp***);**

Link with *-lm*.

Feature Test Macro Requirements for glibc (see feature_test_macros(7)):

scalbln(), **scalblnf**(), **scalblnl**():
    _ISOC99_SOURCE || _POSIX_C_SOURCE >= 200112L || /* Since glibc 2.19: */
    _DEFAULT_SOURCE
scalbn(), **scalbnf**(), **scalbnl**():
    _ISOC99_SOURCE || _POSIX_C_SOURCE >= 200112L || /* Since glibc 2.19: */
    _DEFAULT_SOURCE || /* Glibc versions <= 2.19: */ _BSD_SOURCE || _SVID_SOURCE

DESCRIPTION

These functions multiply their first argument *x* by **FLT_RADIX** (probably 2) to the power of *exp*, that is:

x * FLT_RADIX ** exp

The definition of **FLT_RADIX** can be obtained by including *<float.h>*.

RETURN VALUE

On success, these functions return *x* * **FLT_RADIX** ** *exp*.

If *x* is a NaN, a NaN is returned.

If *x* is positive infinity (negative infinity), positive infinity (negative infinity) is returned.

If *x* is +0 (-0), +0 (-0) is returned.

If the result overflows, a range error occurs, and the functions return **HUGE_VAL**, **HUGE_VALF**, or **HUGE_VALL**, respectively, with a sign the same as *x*.

If the result underflows, a range error occurs, and the functions return zero, with a sign the same as *x*.

ERRORS

See math_error(7) for information on how to determine whether an error has occurred when calling these functions.

The following errors can occur:

Range error, overflow
    An overflow floating-point exception (**FE_OVERFLOW**) is raised.

Range error, underflow
    An underflow floating-point exception (**FE_UNDERFLOW**) is raised.

These functions do not set *errno*.

VERSIONS

These functions first appeared in glibc in version 2.1.

ATTRIBUTES

For an explanation of the terms used in this section, see attributes(7).

Interface	Attribute	Value
scalbn(), **scalbnf**(), **scalbnl**(), **scalbln**(), **scalblnf**(), **scalblnl**()	Thread safety	MT-Safe

CONFORMING TO

C99, POSIX.1-2001, POSIX.1-2008.

NOTES

These functions differ from the obsolete functions described in scalb(3) in the type of their second argument. The functions described on this page have a second argument of an integral type, while those in scalb(3) have a second argument of type *double*.

If **FLT_RADIX** equals 2 (which is usual), then **scalbn**() is equivalent to ldexp(3).

SEE ALSO

ldexp(3), scalb(3)

COLOPHON

This page is part of release 4.10 of the Linux *man-pages* project. A description of the project, information about reporting bugs, and the latest version of this page, can be found at https://www.kernel.org/doc/man-pages/.
