

**NAME**

getc\_unlocked, getchar\_unlocked, putc\_unlocked, putchar\_unlocked - nonlocking stdio functions

**SYNOPSIS**

```
#include <stdio.h>

int getc_unlocked(FILE *stream);
int getchar_unlocked(void);
int putc_unlocked(int c, FILE *stream);
int putchar_unlocked(int c);

void clearerr_unlocked(FILE *stream);
int feof_unlocked(FILE *stream);
int ferror_unlocked(FILE *stream);
int fileno_unlocked(FILE *stream);
int fflush_unlocked(FILE *stream);
int fgetc_unlocked(FILE *stream);
int fputc_unlocked(int c, FILE *stream);
size_t fread_unlocked(void *ptr, size_t size, size_t n,
    FILE *stream);
size_t fwrite_unlocked(const void *ptr, size_t size, size_t n,
    FILE *stream);

char *fgets_unlocked(char *s, int n, FILE *stream);
int fputs_unlocked(const char *s, FILE *stream);

#include <wchar.h>

wint_t getwc_unlocked(FILE *stream);
wint_t getwchar_unlocked(void);
wint_t fgetwc_unlocked(FILE *stream);
wint_t fputwc_unlocked(wchar_t wc, FILE *stream);
wint_t putwc_unlocked(wchar_t wc, FILE *stream);
wint_t putwchar_unlocked(wchar_t wc);
wchar_t *fgetws_unlocked(wchar_t *ws, int n, FILE *stream);
int fputws_unlocked(const wchar_t *ws, FILE *stream);
```

Feature Test Macro Requirements for glibc (see [feature\\_test\\_macros\(7\)](#)):

```
getc_unlocked(), getchar_unlocked(), putc_unlocked(), putchar_unlocked():
    _POSIX_C_SOURCE || /* Glibc versions <= 2.19: */ _SVID_SOURCE || _BSD_SOURCE

clearerr_unlocked(), feof_unlocked(), ferror_unlocked(), fileno_unlocked(), fflush_unlocked(),
fgetc_unlocked(), fputc_unlocked(), fread_unlocked(), fwrite_unlocked():
    /* Glibc since 2.19: */ _DEFAULT_SOURCE || /* Glibc versions <= 2.19: */ _SVID_SOURCE ||
    _BSD_SOURCE

fgets_unlocked(), fputs_unlocked(), getwc_unlocked(), getwchar_unlocked(), fgetwc_unlocked(),
fputwc_unlocked(), putwchar_unlocked(), fgetws_unlocked(), fputws_unlocked():
    _GNU_SOURCE
```

**DESCRIPTION**

Each of these functions has the same behavior as its counterpart without the "\_unlocked" suffix, except that they do not use locking (they do not set locks themselves, and do not test for the presence of locks set by others) and hence are thread-unsafe. See [flockfile\(3\)](#).

**ATTRIBUTES**

For an explanation of the terms used in this section, see [attributes\(7\)](#).

Interface	Attribute	Value
<b>getc_unlocked()</b> , <b>putc_unlocked()</b> , <b>clear- err_unlocked()</b> , <b>fflush_unlocked()</b> , <b>fgetc_unlocked()</b> , <b>fputc_unlocked()</b> , <b>fread_unlocked()</b> , <b>fwrite_unlocked()</b> , <b>fgets_unlocked()</b> , <b>fputs_unlocked()</b> , <b>getwc_unlocked()</b> , <b>fgetwc_unlocked()</b> , <b>fputwc_unlocked()</b> , <b>putwc_unlocked()</b> , <b>fgetws_unlocked()</b> , <b>fputws_unlocked()</b>	Thread safety	MT-Safe race:stream
<b>getchar_unlocked()</b> , <b>getwchar_unlocked()</b>	Thread safety	MT-Unsafe race:stdin
<b>putchar_unlocked()</b> , <b>putwchar_unlocked()</b>	Thread safety	MT-Unsafe race:stdout
<b>feof_unlocked()</b> , <b>fer- ror_unlocked()</b> , <b>fileno_unlocked()</b>	Thread safety	MT-Safe

**CONFORMING TO**

The four functions **getc\_unlocked()**, **getchar\_unlocked()**, **putc\_unlocked()**, **putchar\_unlocked()** are in POSIX.1-2001 and POSIX.1-2008.

The nonstandard \*\_**unlocke**d() variants occur on a few UNIX systems, and are available in recent glibc. They should probably not be used.
