

NAME

ExtUtils::Constant::Utils - helper functions for ExtUtils::Constant

SYNOPSIS

```
use ExtUtils::Constant::Utils qw (C_stringify);
$C_code = C_stringify $stuff;
```

DESCRIPTION

[ExtUtils::Constant::Utils](#) packages up utility subroutines used by [ExtUtils::Constant](#), [ExtUtils::Constant::Base](#) and derived classes. All its functions are explicitly exportable.

USAGE

`C_stringify` NAME

A function which returns a 7 bit ASCII correctly escaped version of the string passed suitable for C's `'` or `"`. It will die if passed Unicode characters.

`perl_stringify` NAME

A function which returns a 7 bit ASCII correctly escaped version of the string passed suitable for a perl string.

AUTHOR

Nicholas Clark <nick@ccl4.org> based on the code in `h2xs` by Larry Wall and others
