

**NAME**

ExtUtils::Constant::Utils - helper functions for ExtUtils::Constant

**SYNOPSIS**

```
use ExtUtils::Constant::Utils qw (C_stringify);
$C_code = C_stringify $stuff;
```

**DESCRIPTION**

[ExtUtils::Constant::Utils](#) packages up utility subroutines used by [ExtUtils::Constant](#), [ExtUtils::Constant::Base](#) and derived classes. All its functions are explicitly exportable.

**USAGE**

`C_stringify` NAME

A function which returns a 7 bit ASCII correctly escaped version of the string passed suitable for C's `'` or `"`. It will die if passed Unicode characters.

`perl_stringify` NAME

A function which returns a 7 bit ASCII correctly escaped version of the string passed suitable for a perl string.
