

NAME

ExtUtils::ParseXS::Constants - Initialization values for some globals

SYNOPSIS

```
use ExtUtils::ParseXS::Constants ();
```

```
$PrototypeRegexp = $ExtUtils::ParseXS::Constants::PrototypeRegexp;
```

DESCRIPTION

Initialization of certain non-subroutine variables in [ExtUtils::ParseXS](#) and some of its supporting packages has been moved into this package so that those values can be defined exactly once and then re-used in any package.

Nothing is exported. Use fully qualified variable names.
