

NAME

List::Util::XS - Indicate if List::Util was compiled with a C compiler

SYNOPSIS

```
use List::Util::XS 1.20;
```

DESCRIPTION

[List::Util::XS](#) can be used as a dependency to ensure [List::Util](#) was installed using a C compiler and that the XS version is installed.

During installation `$List::Util::XS::VERSION` will be set to `undef` if the XS was not compiled.

Starting with release 1.23_03, Scalar-List-Util is **always** using the XS implementation, but for backwards compatibility, we still ship the [List::Util::XS](#) module which just loads [List::Util](#)

SEE ALSO

[Scalar::Util](#), [List::Util](#), [List::MoreUtils](#)
