

NAME

Pod::Perldoc::ToANSI - render Pod with ANSI color escapes

SYNOPSIS

```
perldoc -o ansi Some::Modulename
```

DESCRIPTION

This is a “plug-in” class that allows Perldoc to use [Pod::Text](#) as a formatter class.

It supports the following options, which are explained in [Pod::Text](#): alt, indent, loose, quotes, sentence, width

For example:

```
perldoc -o term -w indent:5 Some::Modulename
```

CAVEAT

This module may change to use a different text formatter class in the future, and this may change what options are supported.
