

NAME

Pod::Perldoc::ToMan - let Perldoc render Pod as man pages

SYNOPSIS

```
perldoc -o man Some::Modulename
```

DESCRIPTION

This is a “plug-in” class that allows Perldoc to use [Pod::Man](#) and `groff` for reading Pod pages.

The following options are supported: `center`, `date`, `fixed`, `fixedbold`, `fixeditalic`, `fixedbolditalic`, `quotes`, `release`, `section`

(Those options are explained in [Pod::Man](#).)

For example:

```
perldoc -o man -w center:Pod Some::Modulename
```

CAVEAT

This module may change to use a different pod-to-nroff formatter class in the future, and this may change what options are supported.
