

**NAME**

Pod::Perldoc::ToTerm - render Pod with terminal escapes

**SYNOPSIS**

```
perldoc -o term Some::Modulename
```

**DESCRIPTION**

This is a “plug-in” class that allows Perldoc to use [Pod::Text](#) as a formatter class.

It supports the following options, which are explained in [Pod::Text](#): alt, indent, loose, quotes, sentence, width

For example:

```
perldoc -o term -w indent:5 Some::Modulename
```

**CAVEAT**

This module may change to use a different text formatter class in the future, and this may change what options are supported.
