

NAME

Pod::Perldoc::ToXml - let Perldoc render Pod as XML

SYNOPSIS

```
perldoc -o xml -d out.xml Some::Modulename
```

DESCRIPTION

This is a “plug-in” class that allows Perldoc to use [Pod::Simple::XMLOutputStream](#) as a formatter class.

This is actually a [Pod::Simple::XMLOutputStream](#) subclass, and inherits all its options.

You have to have installed [Pod::Simple::XMLOutputStream](#) (from the [Pod::Simple](#) dist), or this class won't work.

SEE ALSO

[Pod::Simple::XMLOutputStream](#), [Pod::Simple](#), [Pod::Perldoc](#)
