

NAME

TAP::Base - Base class that provides common functionality to TAP::Parser and TAP::Harness

VERSION

Version 3.36

SYNOPSIS

```
package TAP::Whatever;  
  
use base 'TAP::Base';  
  
# ... later ...  
  
my $thing = TAP::Whatever->new();  
  
$thing->callback( event => sub {  
    # do something interesting  
} );
```

DESCRIPTION

[TAP::Base](#) provides callback management.

METHODS**Class Methods**

callback

Install a callback for a named event.

get_time

Return the current time using [Time::HiRes](#) if available.

time_is_hires

Return true if the time returned by *get_time* is high resolution (i.e. if [Time::HiRes](#) is available).

get_times

Return array reference of the four-element list of CPU seconds, as with “times” in perlfunc.
