

**NAME**

TAP::Formatter::File::Session - Harness output delegate for file output

**VERSION**

Version 3.36

**DESCRIPTION**

This provides file orientated output formatting for TAP::Harness. It is particularly important when running with parallel tests, as it ensures that test results are not interleaved, even when run verbosely.

**METHODS**

**result**

Stores results for later output, all together.

**close\_test**

When the test file finishes, outputs the summary, together.
