

**NAME**

TAP::Parser::Result::Bailout - Bailout result token.

**VERSION**

Version 3.36

**DESCRIPTION**

This is a subclass of TAP::Parser::Result. A token of this class will be returned if a bail out line is encountered.

```
1..5
```

```
ok 1 - woo hooo!
```

```
Bail out! Well, so much for "woo hooo!"
```

**OVERRIDDEN METHODS**

Mainly listed here to shut up the pitiful screams of the pod coverage tests. They keep me awake at night.

- `as_string`

**Instance Methods**

*explanation*

```
if ( $result->is_bailout ) {  
    my $explanation = $result->explanation;  
    print "We bailed out because ($explanation)";  
}
```

If, and only if, a token is a bailout token, you can get an “explanation” via this method. The explanation is the text after the mystical “Bail out!” words which appear in the tap output.
