

NAME

AptPkg - interface to libapt-pkg

SYNOPSIS

```
use AptPkg;
```

DESCRIPTION

The AptPkg module provides a low-level XS interface to libapt-pkg.

Note that this interface is intended to be internal, and may change, see the AptPkg::Config, AptPkg::System, AptPkg::Version, AptPkg::Cache, Apt::Policy and AptPkg::Source classes for a higher level interface.

AptPkg

The AptPkg package provides the following functions:

`_init_config(CONF)`

Initialise a Configuration object (pkgInitConfig). See the init method in AptPkg::Config.

`_init_system(CONF)`

Return a pointer to the system object (pkgInitSystem). See the system method in AptPkg::Config.

`_parse_cmdline(CONF, ARG_DEFS, ...)`

Constructs a CommandLine instance, invokes the Parse method and returns the remaining arguments. See the parse_cmdline method in AptPkg::Config.

AptPkg::_config

The AptPkg::_config package wraps a Perl class around the Configuration class. It provides an instance of the global _config object, and exposes the following methods:

`Find, FindFile, FindDir, FindB, FindAny, Set, Exists, ExistsAny, Tree and Dump.`

The functions ReadConfigFile and ReadConfigDir are also provided within the package and may be used as methods.

AptPkg::_config::item

The AptPkg::_config::item package wraps a Perl class around the Configuration::Item class. The AptPkg::_config Tree method returns an instance of this class.

Methods:

`Value, Tag, FullTag, Parent, Child and Next.`

AptPkg::System

The [AptPkg::System](#) package wraps a Perl class around the pkgSystem class. It provides an instance of the global _system object, and exposes the following methods:

`Label, VS, Lock and UnLock.`

AptPkg::Version

The [AptPkg::Version](#) package wraps a Perl class around the pkgVersioningSystem class. It exposes the following methods:

`Label, CmpVersion, CmpReleaseVer, CheckDep and UpstreamVersion.`

AptPkg::_cache

The AptPkg::_cache package wraps a Perl class around the pkgCacheFile class. It exposes the following methods:

`Open, Close, FindPkg, PkgBegin, FileList, Packages, Policy, MultiArchCache and NativeArch.`

AptPkg::Cache:: package

The AptPkg::Cache:: package package wraps a Perl class around the pkgCache::PkgIterator class. It exposes the following methods:

`Next, Name, FullName, Arch, Section, VersionList, CurrentVer,
RevDependsList, ProvidesList, Index, SelectedState, InstState,
CurrentState and Flags.`

AptPkg::Cache:: version

The AptPkg::Cache:: version package wraps a Perl class around the pkgCache::VerIterator class. It exposes the following methods:

`VerStr, Section, MultiArch, Arch, ParentPkg, DescriptionList,
TranslatedDescription, DependsList, ProvidesList, FileList, Index
and Priority.`

AptPkg::Cache:: depends

The AptPkg::Cache:: depends package wraps a Perl class around the pkgCache::DepIterator class. It exposes the following methods:

`TargetVer, TargetPkg, ParentVer, ParentPkg, Index, CompType and
DepType.`

AptPkg::Cache:: provides

The AptPkg::Cache:: provides package wraps a Perl class around the pkgCache::PrvIterator class. It exposes the following methods:

`Name, ProvideVersion, OwnerVer, OwnerPkg and Index.`

AptPkg::Cache:: description

The AptPkg::Cache:: description package wraps a Perl class around the pkgCache::DescIterator class. It exposes the following methods:

`LanguageCode, md5 and FileList.`

AptPkg::Cache:: pkg_file

The AptPkg::Cache:: pkg_file package wraps a Perl class around the pkgCache::PkgFileIterator class. It exposes the following methods:

`FileName, Archive, Component, Version, Origin, Label, Site,
IndexType and Index.`

AptPkg::Cache:: ver_file

The AptPkg::Cache:: ver_file package wraps a Perl class around the pkgCache::VerFileIterator class. It exposes the following methods:

`File, Index, Offset and Size.`

AptPkg::Cache:: desc_file

The AptPkg::Cache:: desc_file package wraps a Perl class around the pkgCache::DescFileIterator class. It exposes the following methods:

`File`

AptPkg::Cache:: pkg_records

The AptPkg::Cache:: pkg_records package wraps a Perl class around the pkgRecords class. It exposes the following methods:

`Lookup.`

AptPkg:: policy

The AptPkg:: policy package wraps a Perl class around the pkgPolicy class. It exposes the following methods:

`GetPriority, GetMatch and GetCandidateVer.`

AptPkg:: source list

The AptPkg::_source_list package wraps a Perl class around the pkgSourceList class. Required as an argument to the AptPkg::_src_records constructor.

AptPkg:: src records

The AptPkg::_src_records package wraps a Perl class around the pkgSrcRecords class. It exposes the following methods:

`Restart`, `Find`.

Constants

The following **APT** enumerations are included, used by attributes of AptPkg::Cache.

pkgCache::Version::VerMultiArch

`AptPkg::Version::None` `AptPkg::Version::All` `AptPkg::Version::Foreign`
`AptPkg::Version::Same` `AptPkg::Version::Allowed` `AptPkg::Version::AllForeign` and
`AptPkg::Version::AllAllowed`

pkgCache::Dep::DepType

`AptPkg::Dep::Depends` `AptPkg::Dep::PreDepends` `AptPkg::Dep::Suggests`
`AptPkg::Dep::Dep::Recommends` `AptPkg::Dep::Conflicts` `AptPkg::Dep::Dep::Replaces` and
`AptPkg::Dep::Dep::Obsoletes`

pkgCache::Dep::DepCompareOp

`AptPkg::Dep::Or` `AptPkg::Dep::NoOp` `AptPkg::Dep::LessEq` `AptPkg::Dep::GreaterEq`
`AptPkg::Dep::Less` `AptPkg::Dep::Greater` `AptPkg::Dep::Dep::Equals` and
`AptPkg::Dep::NotEquals`

pkgCache::State::VerPriority

`AptPkg::State::Important` `AptPkg::State::Required` `AptPkg::State::Standard`
`AptPkg::State::Optional` and `AptPkg::State::Extra`

pkgCache::State::PkgSelectedState

`AptPkg::State::Unknown` `AptPkg::State::Install` `AptPkg::State::Hold`
`AptPkg::State::DeInstall` and `AptPkg::State::Purge`

pkgCache::State::PkgInstState

`AptPkg::State::Ok` `AptPkg::State::ReInstReq` `AptPkg::State::HoldInst` and
`AptPkg::State::HoldReInstReq`

pkgCache::State::PkgCurrentState

`AptPkg::State::NotInstalled` `AptPkg::State::UnPacked` `AptPkg::State::HalfConfigured`
`AptPkg::State::HalfInstalled` `AptPkg::State::ConfigFiles` and
`AptPkg::State::Installed`

pkgCache::Flag::PkgFlags

`AptPkg::Flag::Auto` `AptPkg::Flag::Essential` and `AptPkg::Flag::Important`
