

**NAME**

Bundle::DBI - A bundle to install DBI and required modules.

**SYNOPSIS**

```
perl -MCPAN -e 'install Bundle::DBI'
```

**CONTENTS**

DBI - for to get to know thyself

DBI::Shell 11.91 - the DBI command line shell

Storable 2.06 - for [DBD::Proxy](#), [DBI::ProxyServer](#), [DBD::Forward](#)

Net::Daemon 0.37 - for [DBD::Proxy](#) and [DBI::ProxyServer](#)

RPC::PiServer 0.2016 - for [DBD::Proxy](#) and [DBI::ProxyServer](#)

DBD::Multiplex 1.19 - treat multiple db handles as one

**DESCRIPTION**

This bundle includes all the modules used by the Perl Database Interface (DBI) module, created by Tim Bunce.

A *Bundle* is a module that simply defines a collection of other modules. It is used by the CPAN module to automate the fetching, building and installing of modules from the CPAN ftp archive sites.

This bundle does not deal with the various database drivers (e.g. [DBD::Informix](#), [DBD::Oracle](#) etc), most of which require software from sources other than CPAN. You'll need to fetch and build those drivers yourself.

**AUTHORS**

Jonathan Leffler, Jochen Wiedmann and Tim Bunce.
