

NAME

Error::Simple - the simple error sub-class of Error

SYNOPSIS

```
use base 'Error::Simple';
```

DESCRIPTION

The only purpose of this module is to allow one to say:

```
use base 'Error::Simple';
```

and the only thing it does is “use” Error.pm. Refer to the documentation of Error for more information about Error::Simple.

METHODS

Error::Simple->new(\$text [, \$value])

Constructs an [Error::Simple](#) with the text `$text` and the optional value `$value`.

`$err->stringify()`

[Error::Simple](#) overloads this method.

KNOWN BUGS

None.
