NAME

fbdevhw - os-specific submodule for framebuffer device access

DESCRIPTION

 ${f fbdevhw}$ provides functions for talking to a frame buffer device. It is os-specific. It is a submodule used by other video drivers. A ${f fbdevh}$ w module is currently available for linux frame buffer devices

fbdev(4) is a non-accelerated driver which runs on top of the fbdevhw module. fbdevhw can be used by other drivers too, this is usually activated with 'Option UseFBDev' in the device section.
