

NAME

/etc/modules - kernel modules to load at boot time

DESCRIPTION

The `/etc/modules` file contains the names of kernel modules that are to be loaded at boot time, one per line. Arguments can be given in the same line as the module name. Lines beginning with a '#' are ignored.

EXAMPLE

/etc/modules: kernel modules to load at boot time. # # This file contains the names of kernel modules that # should be loaded at boot time, one per line. Lines # beginning with # are ignored.
