

NAME

systemd.index - List all manpages from the systemd project

B

[binfmt.d\(5\)](#) — Configure additional binary formats for executables at boot
[bootctl\(1\)](#) — Control the firmware and boot manager settings
[bootup\(7\)](#) — System bootup process
[busctl\(1\)](#) — Introspect the bus

C

[coredump.conf\(5\)](#) — Core dump storage configuration files
[coredump.conf.d\(5\)](#) — Core dump storage configuration files
[coredumpctl\(1\)](#) — Retrieve and process saved core dumps and metadata
[crypttab\(5\)](#) — Configuration for encrypted block devices

D

[daemon\(7\)](#) — Writing and packaging system daemons
[dnssec-trust-anchors.d\(5\)](#) — DNSSEC trust anchor configuration files

F

[file-hierarchy\(7\)](#) — File system hierarchy overview

H

[halt\(8\)](#) — Halt, power-off or reboot the machine
[hostname\(5\)](#) — Local hostname configuration file
[hostnamectl\(1\)](#) — Control the system hostname
[hwdb\(7\)](#) — Hardware Database

I

[init\(1\)](#) — systemd system and service manager

J

[journal-remote.conf\(5\)](#) — Configuration files for the service accepting remote journal uploads
[journal-remote.conf.d\(5\)](#) — Configuration files for the service accepting remote journal uploads
[journal-upload.conf\(5\)](#) — Configuration files for the journal upload service
[journal-upload.conf.d\(5\)](#) — Configuration files for the journal upload service
[journalctl\(1\)](#) — Query the systemd journal
[journal.conf\(5\)](#) — Journal service configuration files
[journal.conf.d\(5\)](#) — Journal service configuration files

K

[kernel-command-line\(7\)](#) — Kernel command line parameters
[kernel-install\(8\)](#) — Add and remove kernel and initramfs images to and from /boot

L

[libnss_myhostname.so.2\(8\)](#) — Provide hostname resolution for the locally configured system hostname.
[libnss_mymachines.so.2\(8\)](#) — Provide hostname resolution for local container instances.
[libnss_resolve.so.2\(8\)](#) — Provide hostname resolution via
[libnss_systemd.so.2\(8\)](#) — Provide UNIX user and group name resolution for dynamic users and groups.
[libudev\(3\)](#) — API for enumerating and introspecting local devices
[locale.conf\(5\)](#) — Configuration file for locale settings
[localectl\(1\)](#) — Control the system locale and keyboard layout settings
[localtime\(5\)](#) — Local timezone configuration file
[loginctl\(1\)](#) — Control the systemd login manager
[logind.conf\(5\)](#) — Login manager configuration files
[logind.conf.d\(5\)](#) — Login manager configuration files

M

- [machine-id\(5\)](#) — Local machine ID configuration file
- [machine-info\(5\)](#) — Local machine information file
- [machinectl\(1\)](#) — Control the systemd machine manager
- [modules-load.d\(5\)](#) — Configure kernel modules to load at boot

N

- [networkctl\(1\)](#) — Query the status of network links
- [networkd.conf\(5\)](#) — Global Network configuration files
- [networkd.conf.d\(5\)](#) — Global Network configuration files
- [nss-myhostname\(8\)](#) — Provide hostname resolution for the locally configured system hostname.
- [nss-mymachines\(8\)](#) — Provide hostname resolution for local container instances.
- [nss-resolve\(8\)](#) — Provide hostname resolution via
- [nss-systemd\(8\)](#) — Provide UNIX user and group name resolution for dynamic users and groups.

O

- [os-release\(5\)](#) — Operating system identification

P

- [pam_systemd\(8\)](#) — Register user sessions in the systemd login manager
- [poweroff\(8\)](#) — Halt, power-off or reboot the machine

R

- [reboot\(8\)](#) — Halt, power-off or reboot the machine
- [resolved.conf\(5\)](#) — Network Name Resolution configuration files
- [resolved.conf.d\(5\)](#) — Network Name Resolution configuration files
- [runlevel\(8\)](#) — Print previous and current SysV runlevel

S

- [sd-bus\(3\)](#) — A lightweight D-Bus IPC client library
- [sd-bus-errors\(3\)](#) — Standard D-Bus error names
- [sd-daemon\(3\)](#) — APIs for new-style daemons
- [sd-event\(3\)](#) — A generic event loop implementation
- [sd-id128\(3\)](#) — APIs for processing 128-bit IDs
- [sd-journal\(3\)](#) — APIs for submitting and querying log entries to and from the journal
- [sd-login\(3\)](#) — APIs for tracking logins
- [SD_ALERT\(3\)](#) — APIs for new-style daemons
- [sd_booted\(3\)](#) — Test whether the system is running the systemd init system
- [sd_bus_add_match\(3\)](#) — Add a match rule for message dispatching
- [sd_bus_creds_get_audit_login_uid\(3\)](#) — Retrieve fields from a credentials object
- [sd_bus_creds_get_audit_session_id\(3\)](#) — Retrieve fields from a credentials object
- [sd_bus_creds_get_augmented_mask\(3\)](#) — Retrieve credentials object for the specified PID
- [sd_bus_creds_get_cgroup\(3\)](#) — Retrieve fields from a credentials object
- [sd_bus_creds_get_cmdline\(3\)](#) — Retrieve fields from a credentials object
- [sd_bus_creds_get_comm\(3\)](#) — Retrieve fields from a credentials object
- [sd_bus_creds_get_description\(3\)](#) — Retrieve fields from a credentials object
- [sd_bus_creds_get_egid\(3\)](#) — Retrieve fields from a credentials object
- [sd_bus_creds_get_euid\(3\)](#) — Retrieve fields from a credentials object
- [sd_bus_creds_get_exe\(3\)](#) — Retrieve fields from a credentials object
- [sd_bus_creds_get_fsgid\(3\)](#) — Retrieve fields from a credentials object
- [sd_bus_creds_get_fsuid\(3\)](#) — Retrieve fields from a credentials object
- [sd_bus_creds_get_gid\(3\)](#) — Retrieve fields from a credentials object
- [sd_bus_creds_get_mask\(3\)](#) — Retrieve credentials object for the specified PID
- [sd_bus_creds_get_owner_uid\(3\)](#) — Retrieve fields from a credentials object
- [sd_bus_creds_get_pid\(3\)](#) — Retrieve fields from a credentials object

sd_bus_creds_get_ppid(3) — Retrieve fields from a credentials object
sd_bus_creds_get_selinux_context(3) — Retrieve fields from a credentials object
sd_bus_creds_get_session(3) — Retrieve fields from a credentials object
sd_bus_creds_get_sgid(3) — Retrieve fields from a credentials object
sd_bus_creds_get_slice(3) — Retrieve fields from a credentials object
sd_bus_creds_get_suid(3) — Retrieve fields from a credentials object
sd_bus_creds_get_supplementary_gids(3) — Retrieve fields from a credentials object
sd_bus_creds_get_tid(3) — Retrieve fields from a credentials object
sd_bus_creds_get_tid_comm(3) — Retrieve fields from a credentials object
sd_bus_creds_get_tty(3) — Retrieve fields from a credentials object
sd_bus_creds_get_uid(3) — Retrieve fields from a credentials object
sd_bus_creds_get_unique_name(3) — Retrieve fields from a credentials object
sd_bus_creds_get_unit(3) — Retrieve fields from a credentials object
sd_bus_creds_get_user_slice(3) — Retrieve fields from a credentials object
sd_bus_creds_get_user_unit(3) — Retrieve fields from a credentials object
sd_bus_creds_get_well_known_names(3) — Retrieve fields from a credentials object
sd_bus_creds_has_bounding_cap(3) — Retrieve fields from a credentials object
sd_bus_creds_has_effective_cap(3) — Retrieve fields from a credentials object
sd_bus_creds_has_inheritable_cap(3) — Retrieve fields from a credentials object
sd_bus_creds_has_permitted_cap(3) — Retrieve fields from a credentials object
sd_bus_creds_new_from_pid(3) — Retrieve credentials object for the specified PID
sd_bus_creds_ref(3) — Retrieve credentials object for the specified PID
sd_bus_creds_unref(3) — Retrieve credentials object for the specified PID
sd_bus_creds_unrefp(3) — Retrieve credentials object for the specified PID
sd_bus_default(3) — Acquire a connection to a system or user bus
sd_bus_default_system(3) — Acquire a connection to a system or user bus
sd_bus_default_user(3) — Acquire a connection to a system or user bus
sd_bus_error(3) — sd-bus error handling
SD_BUS_ERROR_ACCESS_DENIED(3) — Standard D-Bus error names
sd_bus_error_add_map(3) — Additional sd-dbus error mappings
SD_BUS_ERROR_ADDRESS_IN_USE(3) — Standard D-Bus error names
SD_BUS_ERROR_AUTH_FAILED(3) — Standard D-Bus error names
SD_BUS_ERROR_BAD_ADDRESS(3) — Standard D-Bus error names
sd_bus_error_copy(3) — sd-bus error handling
SD_BUS_ERROR_DISCONNECTED(3) — Standard D-Bus error names
SD_BUS_ERROR_END(3) — Additional sd-dbus error mappings
SD_BUS_ERROR_FAILED(3) — Standard D-Bus error names
SD_BUS_ERROR_FILE_EXISTS(3) — Standard D-Bus error names
SD_BUS_ERROR_FILE_NOT_FOUND(3) — Standard D-Bus error names
sd_bus_error_free(3) — sd-bus error handling
sd_bus_error_get_errno(3) — sd-bus error handling
sd_bus_error_has_name(3) — sd-bus error handling
SD_BUS_ERROR_INCONSISTENT_MESSAGE(3) — Standard D-Bus error names
SD_BUS_ERROR_INTERACTIVE_AUTHORIZATION_REQUIRED(3) — Standard D-Bus error names
SD_BUS_ERROR_INVALID_ARGS(3) — Standard D-Bus error names
SD_BUS_ERROR_INVALID_SIGNATURE(3) — Standard D-Bus error names
SD_BUS_ERROR_IO_ERROR(3) — Standard D-Bus error names
sd_bus_error_is_set(3) — sd-bus error handling
SD_BUS_ERROR_LIMITS_EXCEEDED(3) — Standard D-Bus error names
SD_BUS_ERROR_MAKE_CONST(3) — sd-bus error handling
sd_bus_error_map(3) — Additional sd-dbus error mappings
SD_BUS_ERROR_MAP(3) — Additional sd-dbus error mappings
SD_BUS_ERROR_MATCH_RULE_INVALID(3) — Standard D-Bus error names

SD_BUS_ERROR_MATCH_RULE_NOT_FOUND(3) — Standard D-Bus error names
SD_BUS_ERROR_NAME_HAS_NO_OWNER(3) — Standard D-Bus error names
SD_BUS_ERROR_NO_MEMORY(3) — Standard D-Bus error names
SD_BUS_ERROR_NO_NETWORK(3) — Standard D-Bus error names
SD_BUS_ERROR_NO_REPLY(3) — Standard D-Bus error names
SD_BUS_ERROR_NO_SERVER(3) — Standard D-Bus error names
SD_BUS_ERROR_NOT_SUPPORTED(3) — Standard D-Bus error names
SD_BUS_ERROR_NULL(3) — sd-bus error handling
SD_BUS_ERROR_PROPERTY_READ_ONLY(3) — Standard D-Bus error names
SD_BUS_ERROR_SERVICE_UNKNOWN(3) — Standard D-Bus error names
sd_bus_error_set(3) — sd-bus error handling
sd_bus_error_set_const(3) — sd-bus error handling
sd_bus_error_set_errno(3) — sd-bus error handling
sd_bus_error_set_errnof(3) — sd-bus error handling
sd_bus_error_set_errnofv(3) — sd-bus error handling
sd_bus_error_setf(3) — sd-bus error handling
SD_BUS_ERROR_TIMEOUT(3) — Standard D-Bus error names
SD_BUS_ERROR_UNIX_PROCESS_ID_UNKNOWN(3) — Standard D-Bus error names
SD_BUS_ERROR_UNKNOWN_INTERFACE(3) — Standard D-Bus error names
SD_BUS_ERROR_UNKNOWN_METHOD(3) — Standard D-Bus error names
SD_BUS_ERROR_UNKNOWN_OBJECT(3) — Standard D-Bus error names
SD_BUS_ERROR_UNKNOWN_PROPERTY(3) — Standard D-Bus error names
sd_bus_get_fd(3) — Get the file descriptor connected to the message bus
sd_bus_message_append(3) — Attach fields to a D-Bus message based on a type string
sd_bus_message_append_array(3) — Append an array of fields to a D-Bus message
sd_bus_message_append_array_iovec(3) — Append an array of fields to a D-Bus message
sd_bus_message_append_array_memfd(3) — Append an array of fields to a D-Bus message
sd_bus_message_append_array_space(3) — Append an array of fields to a D-Bus message
sd_bus_message_append_basic(3) — Attach a single field to a message
sd_bus_message_append_string_iovec(3) — Attach a string to a message
sd_bus_message_append_string_memfd(3) — Attach a string to a message
sd_bus_message_append_string_space(3) — Attach a string to a message
sd_bus_message_append_strv(3) — Attach an array of strings to a message
sd_bus_message_get_cookie(3) — Returns the transaction cookie of a message
sd_bus_message_get_monotonic_usec(3) — Retrieve the sender timestamps and sequence number of a message
sd_bus_message_get_realtime_usec(3) — Retrieve the sender timestamps and sequence number of a message
sd_bus_message_get_reply_cookie(3) — Returns the transaction cookie of a message
sd_bus_message_get_seqnum(3) — Retrieve the sender timestamps and sequence number of a message
sd_bus_message_read_basic(3) — Read a basic type from a message
sd_bus_negotiate_creds(3) — Control feature negotiation on bus connections
sd_bus_negotiate_fds(3) — Control feature negotiation on bus connections
sd_bus_negotiate_timestamp(3) — Control feature negotiation on bus connections
sd_bus_new(3) — Create a new bus object and create or destroy references to it
sd_bus_open(3) — Acquire a connection to a system or user bus
sd_bus_open_system(3) — Acquire a connection to a system or user bus
sd_bus_open_system_machine(3) — Acquire a connection to a system or user bus
sd_bus_open_system_remote(3) — Acquire a connection to a system or user bus
sd_bus_open_user(3) — Acquire a connection to a system or user bus
sd_bus_path_decode(3) — Convert an external identifier into an object path and back
sd_bus_path_decode_many(3) — Convert an external identifier into an object path and back
sd_bus_path_encode(3) — Convert an external identifier into an object path and back
sd_bus_path_encode_many(3) — Convert an external identifier into an object path and back

sd_bus_process(3) — Drive the connection
sd_bus_ref(3) — Create a new bus object and create or destroy references to it
sd_bus_release_name(3) — Request or release a well-known service name on a bus
sd_bus_request_name(3) — Request or release a well-known service name on a bus
sd_bus_track_add_name(3) — Add, remove and retrieve bus peers tracked in a bus peer tracking object
sd_bus_track_add_sender(3) — Add, remove and retrieve bus peers tracked in a bus peer tracking object
sd_bus_track_contains(3) — Add, remove and retrieve bus peers tracked in a bus peer tracking object
sd_bus_track_count(3) — Add, remove and retrieve bus peers tracked in a bus peer tracking object
sd_bus_track_count_name(3) — Add, remove and retrieve bus peers tracked in a bus peer tracking object
sd_bus_track_count_sender(3) — Add, remove and retrieve bus peers tracked in a bus peer tracking object
sd_bus_track_first(3) — Add, remove and retrieve bus peers tracked in a bus peer tracking object
sd_bus_track_get_bus(3) — Track bus peers
sd_bus_track_get_recursive(3) — Track bus peers
sd_bus_track_get_userdata(3) — Track bus peers
sd_bus_track_new(3) — Track bus peers
sd_bus_track_next(3) — Add, remove and retrieve bus peers tracked in a bus peer tracking object
sd_bus_track_ref(3) — Track bus peers
sd_bus_track_remove_name(3) — Add, remove and retrieve bus peers tracked in a bus peer tracking object
sd_bus_track_remove_sender(3) — Add, remove and retrieve bus peers tracked in a bus peer tracking object
sd_bus_track_set_recursive(3) — Track bus peers
sd_bus_track_set_userdata(3) — Track bus peers
sd_bus_track_unref(3) — Track bus peers
sd_bus_track_unrefp(3) — Track bus peers
sd_bus_unref(3) — Create a new bus object and create or destroy references to it
sd_bus_unrefp(3) — Create a new bus object and create or destroy references to it
SD_CRIT(3) — APIs for new-style daemons
SD_DEBUG(3) — APIs for new-style daemons
SD_EMERG(3) — APIs for new-style daemons
SD_ERR(3) — APIs for new-style daemons
sd_event(3) — Acquire and release an event loop object
sd_event_add_child(3) — Add a child process state change event source to an event loop
sd_event_add_defer(3) — Add static event sources to an event loop
sd_event_add_exit(3) — Add static event sources to an event loop
sd_event_add_io(3) — Add an I/O event source to an event loop
sd_event_add_post(3) — Add static event sources to an event loop
sd_event_add_signal(3) — Add a UNIX process signal event source to an event loop
sd_event_add_time(3) — Add a timer event source to an event loop
SD_EVENT_ARMED(3) — Low-level event loop operations
sd_event_child_handler_t(3) — Add a child process state change event source to an event loop
sd_event_default(3) — Acquire and release an event loop object
sd_event_dispatch(3) — Low-level event loop operations
sd_event_exit(3) — Ask the event loop to exit
SD_EVENT_EXITING(3) — Low-level event loop operations
SD_EVENT_FINISHED(3) — Low-level event loop operations
sd_event_get_exit_code(3) — Ask the event loop to exit
sd_event_get_fd(3) — Obtain a file descriptor to poll for event loop events
sd_event_get_iteration(3) — Low-level event loop operations
sd_event_get_state(3) — Low-level event loop operations
sd_event_get_tid(3) — Acquire and release an event loop object
sd_event_get_watchdog(3) — Enable event loop watchdog support
sd_event_handler_t(3) — Add static event sources to an event loop

SD_EVENT_INITIAL(3) — Low-level event loop operations
sd_event_io_handler_t(3) — Add an I/O event source to an event loop
sd_event_loop(3) — Run an event loop
sd_event_new(3) — Acquire and release an event loop object
sd_event_now(3) — Retrieve current event loop iteration timestamp
SD_EVENT_OFF(3) — Enable or disable event sources
SD_EVENT_ON(3) — Enable or disable event sources
SD_EVENT_ONESHOT(3) — Enable or disable event sources
SD_EVENT_PENDING(3) — Low-level event loop operations
sd_event_prepare(3) — Low-level event loop operations
SD_EVENT_PREPARING(3) — Low-level event loop operations
SD_EVENT_PRIORITY_IDLE(3) — Set or retrieve the priority of event sources
SD_EVENT_PRIORITY_IMPORTANT(3) — Set or retrieve the priority of event sources
SD_EVENT_PRIORITY_NORMAL(3) — Set or retrieve the priority of event sources
sd_event_ref(3) — Acquire and release an event loop object
sd_event_run(3) — Run an event loop
SD_EVENT_RUNNING(3) — Low-level event loop operations
sd_event_set_watchdog(3) — Enable event loop watchdog support
sd_event_signal_handler_t(3) — Add a UNIX process signal event source to an event loop
sd_event_source(3) — Add an I/O event source to an event loop
sd_event_source_get_child_pid(3) — Add a child process state change event source to an event loop
sd_event_source_get_description(3) — Set or retrieve descriptive names of event sources
sd_event_source_get_enabled(3) — Enable or disable event sources
sd_event_source_get_event(3) — Retrieve the event loop of an event source
sd_event_source_get_io_events(3) — Add an I/O event source to an event loop
sd_event_source_get_io_fd(3) — Add an I/O event source to an event loop
sd_event_source_get_io_revents(3) — Add an I/O event source to an event loop
sd_event_source_get_pending(3) — Determine pending state of event sources
sd_event_source_get_priority(3) — Set or retrieve the priority of event sources
sd_event_source_get_signal(3) — Add a UNIX process signal event source to an event loop
sd_event_source_get_time(3) — Add a timer event source to an event loop
sd_event_source_get_time_accuracy(3) — Add a timer event source to an event loop
sd_event_source_get_time_clock(3) — Add a timer event source to an event loop
sd_event_source_get_userdata(3) — Set or retrieve user data pointer of event sources
sd_event_source_ref(3) — Increase or decrease event source reference counters
sd_event_source_set_description(3) — Set or retrieve descriptive names of event sources
sd_event_source_set_enabled(3) — Enable or disable event sources
sd_event_source_set_io_events(3) — Add an I/O event source to an event loop
sd_event_source_set_io_fd(3) — Add an I/O event source to an event loop
sd_event_source_set_prepare(3) — Set a preparation callback for event sources
sd_event_source_set_priority(3) — Set or retrieve the priority of event sources
sd_event_source_set_time(3) — Add a timer event source to an event loop
sd_event_source_set_time_accuracy(3) — Add a timer event source to an event loop
sd_event_source_set_userdata(3) — Set or retrieve user data pointer of event sources
sd_event_source_unref(3) — Increase or decrease event source reference counters
sd_event_source_unrefp(3) — Increase or decrease event source reference counters
sd_event_time_handler_t(3) — Add a timer event source to an event loop
sd_event_unref(3) — Acquire and release an event loop object
sd_event_unrefp(3) — Acquire and release an event loop object
sd_event_wait(3) — Low-level event loop operations
sd_get_machine_names(3) — Determine available seats, sessions, logged in users and virtual machines/containers
sd_get_seats(3) — Determine available seats, sessions, logged in users and virtual machines/containers
sd_get_sessions(3) — Determine available seats, sessions, logged in users and virtual machines/containers

sd_get_uids(3) — Determine available seats, sessions, logged in users and virtual machines/containers
SD_ID128_CONST_STR(3) — APIs for processing 128-bit IDs
sd_id128_equal(3) — APIs for processing 128-bit IDs
SD_ID128_FORMAT_STR(3) — APIs for processing 128-bit IDs
SD_ID128_FORMAT_VAL(3) — APIs for processing 128-bit IDs
sd_id128_from_string(3) — Format or parse 128-bit IDs as strings
sd_id128_get_boot(3) — Retrieve 128-bit IDs
sd_id128_get_invocation(3) — Retrieve 128-bit IDs
sd_id128_get_machine(3) — Retrieve 128-bit IDs
sd_id128_is_null(3) — APIs for processing 128-bit IDs
SD_ID128_MAKE(3) — APIs for processing 128-bit IDs
SD_ID128_NULL(3) — APIs for processing 128-bit IDs
sd_id128_randomize(3) — Generate 128-bit IDs
sd_id128_t(3) — APIs for processing 128-bit IDs
sd_id128_to_string(3) — Format or parse 128-bit IDs as strings
SD_INFO(3) — APIs for new-style daemons
sd_is_fifo(3) — Check the type of a file descriptor
sd_is_mq(3) — Check the type of a file descriptor
sd_is_socket(3) — Check the type of a file descriptor
sd_is_socket_inet(3) — Check the type of a file descriptor
sd_is_socket_unix(3) — Check the type of a file descriptor
sd_is_special(3) — Check the type of a file descriptor
sd_journal(3) — Open the system journal for reading
sd_journal_add_conjunction(3) — Add or remove entry matches
sd_journal_add_disjunction(3) — Add or remove entry matches
sd_journal_add_match(3) — Add or remove entry matches
SD_JOURNAL_APPEND(3) — Journal change notification interface
sd_journal_close(3) — Open the system journal for reading
SD_JOURNAL_CURRENT_USER(3) — Open the system journal for reading
sd_journal_enumerate_data(3) — Read data fields from the current journal entry
sd_journal_enumerate_fields(3) — Read used field names from the journal
sd_journal_enumerate_unique(3) — Read unique data fields from the journal
sd_journal_flush_matches(3) — Add or remove entry matches
SD_JOURNAL_FOREACH(3) — Advance or set back the read pointer in the journal
SD_JOURNAL_FOREACH_BACKWARDS(3) — Advance or set back the read pointer in the journal
SD_JOURNAL_FOREACH_DATA(3) — Read data fields from the current journal entry
SD_JOURNAL_FOREACH_FIELD(3) — Read used field names from the journal
SD_JOURNAL_FOREACH_UNIQUE(3) — Read unique data fields from the journal
sd_journal_get_catalog(3) — Retrieve message catalog entry
sd_journal_get_catalog_for_message_id(3) — Retrieve message catalog entry
sd_journal_get_cursor(3) — Get cursor string for or test cursor string against the current journal entry
sd_journal_get_cutoff_monotonic_usec(3) — Read cut-off timestamps from the current journal entry
sd_journal_get_cutoff_realtime_usec(3) — Read cut-off timestamps from the current journal entry
sd_journal_get_data(3) — Read data fields from the current journal entry
sd_journal_get_data_threshold(3) — Read data fields from the current journal entry
sd_journal_get_events(3) — Journal change notification interface
sd_journal_get_fd(3) — Journal change notification interface
sd_journal_get_monotonic_usec(3) — Read timestamps from the current journal entry
sd_journal_get_realtime_usec(3) — Read timestamps from the current journal entry
sd_journal_get_timeout(3) — Journal change notification interface
sd_journal_get_usage(3) — Journal disk usage
sd_journal_has_persistent_files(3) — Query availability of runtime or persistent journal files.
sd_journal_has_runtime_files(3) — Query availability of runtime or persistent journal files.
SD_JOURNAL_INVALIDATE(3) — Journal change notification interface

SD_JOURNAL_LOCAL_ONLY(3) — Open the system journal for reading
sd_journal_next(3) — Advance or set back the read pointer in the journal
sd_journal_next_skip(3) — Advance or set back the read pointer in the journal
SD_JOURNAL_NOP(3) — Journal change notification interface
sd_journal_open(3) — Open the system journal for reading
sd_journal_open_directory(3) — Open the system journal for reading
sd_journal_open_directory_fd(3) — Open the system journal for reading
sd_journal_open_files(3) — Open the system journal for reading
sd_journal_open_files_fd(3) — Open the system journal for reading
SD_JOURNAL_OS_ROOT(3) — Open the system journal for reading
sd_journal_perror(3) — Submit log entries to the journal
sd_journal_previous(3) — Advance or set back the read pointer in the journal
sd_journal_previous_skip(3) — Advance or set back the read pointer in the journal
sd_journal_print(3) — Submit log entries to the journal
sd_journal_printv(3) — Submit log entries to the journal
sd_journal_process(3) — Journal change notification interface
sd_journal_query_unique(3) — Read unique data fields from the journal
sd_journal_reliable_fd(3) — Journal change notification interface
sd_journal_restart_data(3) — Read data fields from the current journal entry
sd_journal_restart_fields(3) — Read used field names from the journal
sd_journal_restart_unique(3) — Read unique data fields from the journal
SD_JOURNAL_RUNTIME_ONLY(3) — Open the system journal for reading
sd_journal_seek_cursor(3) — Seek to a position in the journal
sd_journal_seek_head(3) — Seek to a position in the journal
sd_journal_seek_monotonic_usec(3) — Seek to a position in the journal
sd_journal_seek_realtime_usec(3) — Seek to a position in the journal
sd_journal_seek_tail(3) — Seek to a position in the journal
sd_journal_send(3) — Submit log entries to the journal
sd_journal_sendv(3) — Submit log entries to the journal
sd_journal_set_data_threshold(3) — Read data fields from the current journal entry
sd_journal_stream_fd(3) — Create log stream file descriptor to the journal
SD_JOURNAL_SUPPRESS_LOCATION(3) — Submit log entries to the journal
SD_JOURNAL_SYSTEM(3) — Open the system journal for reading
sd_journal_test_cursor(3) — Get cursor string for or test cursor string against the current journal entry
sd_journal_wait(3) — Journal change notification interface
sd_listen_fds(3) — Check for file descriptors passed by the system manager
SD_LISTEN_FDS_START(3) — Check for file descriptors passed by the system manager
sd_listen_fds_with_names(3) — Check for file descriptors passed by the system manager
sd_login_monitor(3) — Monitor login sessions, seats, users and virtual machines/containers
sd_login_monitor_flush(3) — Monitor login sessions, seats, users and virtual machines/containers
sd_login_monitor_get_events(3) — Monitor login sessions, seats, users and virtual machines/containers
sd_login_monitor_get_fd(3) — Monitor login sessions, seats, users and virtual machines/containers
sd_login_monitor_get_timeout(3) — Monitor login sessions, seats, users and virtual machines/containers
sd_login_monitor_new(3) — Monitor login sessions, seats, users and virtual machines/containers
sd_login_monitor_unref(3) — Monitor login sessions, seats, users and virtual machines/containers
sd_login_monitor_unrefp(3) — Monitor login sessions, seats, users and virtual machines/containers
sd_machine_get_class(3) — Determine the class and network interface indices of a locally running virtual machine or container.
sd_machine_get_ifindices(3) — Determine the class and network interface indices of a locally running virtual machine or container.
SD_NOTICE(3) — APIs for new-style daemons
sd_notify(3) — Notify service manager about start-up completion and other service status changes
sd_notifyf(3) — Notify service manager about start-up completion and other service status changes
sd_peer_get_cgroup(3) — Determine session, unit, owner of a session, container/VM or slice of a specific

PID or socket peer

sd_peer_get_machine_name(3) — Determine session, unit, owner of a session, container/VM or slice of a specific PID or socket peer

sd_peer_get_owner_uid(3) — Determine session, unit, owner of a session, container/VM or slice of a specific PID or socket peer

sd_peer_get_session(3) — Determine session, unit, owner of a session, container/VM or slice of a specific PID or socket peer

sd_peer_get_slice(3) — Determine session, unit, owner of a session, container/VM or slice of a specific PID or socket peer

sd_peer_get_unit(3) — Determine session, unit, owner of a session, container/VM or slice of a specific PID or socket peer

sd_peer_get_user_slice(3) — Determine session, unit, owner of a session, container/VM or slice of a specific PID or socket peer

sd_peer_get_user_unit(3) — Determine session, unit, owner of a session, container/VM or slice of a specific PID or socket peer

sd_pid_get_cgroup(3) — Determine session, unit, owner of a session, container/VM or slice of a specific PID or socket peer

sd_pid_get_machine_name(3) — Determine session, unit, owner of a session, container/VM or slice of a specific PID or socket peer

sd_pid_get_owner_uid(3) — Determine session, unit, owner of a session, container/VM or slice of a specific PID or socket peer

sd_pid_get_session(3) — Determine session, unit, owner of a session, container/VM or slice of a specific PID or socket peer

sd_pid_get_slice(3) — Determine session, unit, owner of a session, container/VM or slice of a specific PID or socket peer

sd_pid_get_unit(3) — Determine session, unit, owner of a session, container/VM or slice of a specific PID or socket peer

sd_pid_get_user_slice(3) — Determine session, unit, owner of a session, container/VM or slice of a specific PID or socket peer

sd_pid_get_user_unit(3) — Determine session, unit, owner of a session, container/VM or slice of a specific PID or socket peer

sd_pid_notify(3) — Notify service manager about start-up completion and other service status changes

sd_pid_notify_with_fds(3) — Notify service manager about start-up completion and other service status changes

sd_pid_notifyf(3) — Notify service manager about start-up completion and other service status changes

sd_seat_can_graphical(3) — Determine state of a specific seat

sd_seat_can_multi_session(3) — Determine state of a specific seat

sd_seat_can_tty(3) — Determine state of a specific seat

sd_seat_get_active(3) — Determine state of a specific seat

sd_seat_get_sessions(3) — Determine state of a specific seat

sd_session_get_class(3) — Determine state of a specific session

sd_session_get_desktop(3) — Determine state of a specific session

sd_session_get_display(3) — Determine state of a specific session

sd_session_get_remote_host(3) — Determine state of a specific session

sd_session_get_remote_user(3) — Determine state of a specific session

sd_session_get_seat(3) — Determine state of a specific session

sd_session_get_service(3) — Determine state of a specific session

sd_session_get_state(3) — Determine state of a specific session

sd_session_get_tty(3) — Determine state of a specific session

sd_session_get_type(3) — Determine state of a specific session

sd_session_get_uid(3) — Determine state of a specific session

sd_session_get_vt(3) — Determine state of a specific session

sd_session_is_active(3) — Determine state of a specific session

sd_session_is_remote(3) — Determine state of a specific session

sd_uid_get_display(3) — Determine login state of a specific Unix user ID
sd_uid_get_seats(3) — Determine login state of a specific Unix user ID
sd_uid_get_sessions(3) — Determine login state of a specific Unix user ID
sd_uid_get_state(3) — Determine login state of a specific Unix user ID
sd_uid_is_on_seat(3) — Determine login state of a specific Unix user ID
SD_WARNING(3) — APIs for new-style daemons
sd_watchdog_enabled(3) — Check whether the service manager expects watchdog keep-alive notifications from a service
shutdown(8) — Halt, power-off or reboot the machine
sleep.conf.d(5) — Suspend and hibernation configuration file
sysctl.d(5) — Configure kernel parameters at boot
system.conf.d(5) — System and session service manager configuration files
systemctl(1) — Control the systemd system and service manager
systemd(1) — systemd system and service manager
systemd-analyze(1) — Analyze system boot-up performance
systemd-ask-password(1) — Query the user for a system password
systemd-ask-password-console.path(8) — Query the user for system passwords on the console and via wall
systemd-ask-password-console.service(8) — Query the user for system passwords on the console and via wall
systemd-ask-password-wall.path(8) — Query the user for system passwords on the console and via wall
systemd-ask-password-wall.service(8) — Query the user for system passwords on the console and via wall
systemd-backlight(8) — Load and save the display backlight brightness at boot and shutdown
systemd-backlight@.service(8) — Load and save the display backlight brightness at boot and shutdown
systemd-binfmt(8) — Configure additional binary formats for executables at boot
systemd-binfmt.service(8) — Configure additional binary formats for executables at boot
systemd-cat(1) — Connect a pipeline or program's output with the journal
systemd-cgls(1) — Recursively show control group contents
systemd-cgtop(1) — Show top control groups by their resource usage
systemd-coredump(8) — Acquire, save and process core dumps
systemd-coredump.socket(8) — Acquire, save and process core dumps
systemd-coredump@.service(8) — Acquire, save and process core dumps
systemd-cryptsetup(8) — Full disk decryption logic
systemd-cryptsetup-generator(8) — Unit generator for
systemd-cryptsetup@.service(8) — Full disk decryption logic
systemd-debug-generator(8) — Generator for enabling a runtime debug shell and masking specific units at boot
systemd-delta(1) — Find overridden configuration files
systemd-detect-virt(1) — Detect execution in a virtualized environment
systemd-escape(1) — Escape strings for usage in system unit names
systemd-fsck(8) — File system checker logic
systemd-fsck-root.service(8) — File system checker logic
systemd-fsck@.service(8) — File system checker logic
systemd-fsckd(8) — File system check progress reporting
systemd-fsckd.service(8) — File system check progress reporting
systemd-fsckd.socket(8) — File system check progress reporting
systemd-fstab-generator(8) — Unit generator for /etc/fstab
systemd-getty-generator(8) — Generator for enabling getty instances on the console
systemd-gpt-auto-generator(8) — Generator for automatically discovering and mounting root,
systemd-halt.service(8) — System shutdown logic
systemd-hibernate-resume(8) — Resume from hibernation
systemd-hibernate-resume-generator(8) — Unit generator for resume= kernel parameter
systemd-hibernate-resume@.service(8) — Resume from hibernation

systemd-hibernate.service(8) — System sleep state logic
systemd-hostnamed(8) — Host name bus mechanism
systemd-hostnamed.service(8) — Host name bus mechanism
systemd-hwdb(8) — hardware database management tool
systemd-hybrid-sleep.service(8) — System sleep state logic
systemd-importd(8) — VM and container image import and export service
systemd-importd.service(8) — VM and container image import and export service
systemd-inhibit(1) — Execute a program with an inhibition lock taken
systemd-initctl(8) — /dev/initctl compatibility
systemd-initctl.service(8) — /dev/initctl compatibility
systemd-initctl.socket(8) — /dev/initctl compatibility
systemd-journal-gatewayd(8) — HTTP server for journal events
systemd-journal-gatewayd.service(8) — HTTP server for journal events
systemd-journal-gatewayd.socket(8) — HTTP server for journal events
systemd-journal-remote(8) — Receive journal messages over the network
systemd-journal-upload(8) — Send journal messages over the network
systemd-journald(8) — Journal service
systemd-journald-audit.socket(8) — Journal service
systemd-journald-dev-log.socket(8) — Journal service
systemd-journald.service(8) — Journal service
systemd-journald.socket(8) — Journal service
systemd-kexec.service(8) — System shutdown logic
systemd-localed(8) — Locale bus mechanism
systemd-localed.service(8) — Locale bus mechanism
systemd-logind(8) — Login manager
systemd-logind.service(8) — Login manager
systemd-machine-id-commit.service(8) — Commit a transient machine ID to disk
systemd-machine-id-setup(1) — Initialize the machine ID in /etc/machine-id
systemd-machined(8) — Virtual machine and container registration manager
systemd-machined.service(8) — Virtual machine and container registration manager
systemd-modules-load(8) — Load kernel modules at boot
systemd-modules-load.service(8) — Load kernel modules at boot
systemd-mount(1) — Establish a mount or auto-mount point transiently
systemd-networkd(8) — Network manager
systemd-networkd-wait-online(8) — Wait for network to come online
systemd-networkd-wait-online.service(8) — Wait for network to come online
systemd-networkd.service(8) — Network manager
systemd-notify(1) — Notify service manager about start-up completion and other daemon status changes
systemd-nspawn(1) — Spawn a namespace container for debugging, testing and building
systemd-path(1) — List and query system and user paths
systemd-poweroff.service(8) — System shutdown logic
systemd-quotacheck(8) — File system quota checker logic
systemd-quotacheck.service(8) — File system quota checker logic
systemd-random-seed(8) — Load and save the system random seed at boot and shutdown
systemd-random-seed.service(8) — Load and save the system random seed at boot and shutdown
systemd-reboot.service(8) — System shutdown logic
systemd-remount-fs(8) — Remount root and kernel file systems
systemd-remount-fs.service(8) — Remount root and kernel file systems
systemd-resolve(1) — Resolve domain names, IPV4 and IPv6 addresses, DNS resource records, and services
systemd-resolved(8) — Network Name Resolution manager
systemd-resolved.service(8) — Network Name Resolution manager
systemd-rfkill(8) — Load and save the RF kill switch state at boot and change
systemd-rfkill.service(8) — Load and save the RF kill switch state at boot and change

systemd-rfkill.socket(8) — Load and save the RF kill switch state at boot and change
systemd-run(1) — Run programs in transient scope units, service units, or timer-scheduled service units
systemd-shutdown(8) — System shutdown logic
systemd-sleep(8) — System sleep state logic
systemd-sleep.conf(5) — Suspend and hibernation configuration file
systemd-socket-activate(1) — Test socket activation of daemons
systemd-socket-proxyd(8) — Bidirectionally proxy local sockets to another (possibly remote) socket.
systemd-suspend.service(8) — System sleep state logic
systemd-sysctl(8) — Configure kernel parameters at boot
systemd-sysctl.service(8) — Configure kernel parameters at boot
systemd-system-update-generator(8) — Generator for redirecting boot to offline update mode
systemd-system.conf(5) — System and session service manager configuration files
systemd-sysusers(8) — Allocate system users and groups
systemd-sysusers.service(8) — Allocate system users and groups
systemd-sysv-generator(8) — Unit generator for SysV init scripts
systemd-timedated(8) — Time and date bus mechanism
systemd-timedated.service(8) — Time and date bus mechanism
systemd-timesyncd(8) — Network Time Synchronization
systemd-timesyncd.service(8) — Network Time Synchronization
systemd-tmpfiles(8) — Creates, deletes and cleans up volatile and temporary files and directories
systemd-tmpfiles-clean.service(8) — Creates, deletes and cleans up volatile and temporary files and directories
systemd-tmpfiles-clean.timer(8) — Creates, deletes and cleans up volatile and temporary files and directories
systemd-tmpfiles-setup-dev.service(8) — Creates, deletes and cleans up volatile and temporary files and directories
systemd-tmpfiles-setup.service(8) — Creates, deletes and cleans up volatile and temporary files and directories
systemd-tty-ask-password-agent(1) — List or process pending systemd password requests
systemd-udev(8) — Device event managing daemon
systemd-udev-control.socket(8) — Device event managing daemon
systemd-udev-kernel.socket(8) — Device event managing daemon
systemd-udev.service(8) — Device event managing daemon
systemd-update-done(8) — Mark
systemd-update-done.service(8) — Mark
systemd-update-utmp(8) — Write audit and utmp updates at bootup, runlevel changes and shutdown
systemd-update-utmp-runlevel.service(8) — Write audit and utmp updates at bootup, runlevel changes and shutdown
systemd-update-utmp.service(8) — Write audit and utmp updates at bootup, runlevel changes and shutdown
systemd-user-sessions(8) — Permit user logins after boot, prohibit user logins at shutdown
systemd-user-sessions.service(8) — Permit user logins after boot, prohibit user logins at shutdown
systemd-user.conf(5) — System and session service manager configuration files
systemd.automount(5) — Automount unit configuration
systemd.device(5) — Device unit configuration
systemd.directives(7) — Index of configuration directives
systemd.exec(5) — Execution environment configuration
systemd.generator(7) — Systemd unit generators
systemd.journal-fields(7) — Special journal fields
systemd.kill(5) — Process killing procedure configuration
systemd.link(5) — Network device configuration
systemd.mount(5) — Mount unit configuration
systemd.negative(5) — DNSSEC trust anchor configuration files
systemd.netdev(5) — Virtual Network Device configuration

[systemd.network\(5\)](#) — Network configuration
[systemd.nspawn\(5\)](#) — Container settings
[systemd.offline-updates\(7\)](#) — Implementation of offline updates in systemd
[systemd.path\(5\)](#) — Path unit configuration
[systemd.positive\(5\)](#) — DNSSEC trust anchor configuration files
[systemd.preset\(5\)](#) — Service enablement presets
[systemd.resource-control\(5\)](#) — Resource control unit settings
[systemd.scope\(5\)](#) — Scope unit configuration
[systemd.service\(5\)](#) — Service unit configuration
[systemd.slice\(5\)](#) — Slice unit configuration
[systemd.socket\(5\)](#) — Socket unit configuration
[systemd.special\(7\)](#) — Special systemd units
[systemd.swap\(5\)](#) — Swap unit configuration
[systemd.target\(5\)](#) — Target unit configuration
[systemd.time\(7\)](#) — Time and date specifications
[systemd.timer\(5\)](#) — Timer unit configuration
[systemd.unit\(5\)](#) — Unit configuration
[sysusers.d\(5\)](#) — Declarative allocation of system users and groups

T

[telinit\(8\)](#) — Change SysV runlevel
[timedatectl\(1\)](#) — Control the system time and date
[timesyncd.conf\(5\)](#) — Network Time Synchronization configuration files
[timesyncd.conf.d\(5\)](#) — Network Time Synchronization configuration files
[tmpfiles.d\(5\)](#) — Configuration for creation, deletion and cleaning of volatile and temporary files

U

[udev\(7\)](#) — Dynamic device management
[udev.conf\(5\)](#) — Configuration for device event managing daemon
[udev_device_get_action\(3\)](#) — Query device properties
[udev_device_get_devlinks_list_entry\(3\)](#) — Retrieve or set device attributes
[udev_device_get_devnode\(3\)](#) — Query device properties
[udev_device_get_devnum\(3\)](#) — Query device properties
[udev_device_get_devpath\(3\)](#) — Query device properties
[udev_device_get_devtype\(3\)](#) — Query device properties
[udev_device_get_driver\(3\)](#) — Query device properties
[udev_device_get_is_initialized\(3\)](#) — Query device properties
[udev_device_get_parent\(3\)](#) — Query device properties
[udev_device_get_parent_with_subsystem_devtype\(3\)](#) — Query device properties
[udev_device_get_properties_list_entry\(3\)](#) — Retrieve or set device attributes
[udev_device_get_property_value\(3\)](#) — Retrieve or set device attributes
[udev_device_get_subsystem\(3\)](#) — Query device properties
[udev_device_get_sysattr_list_entry\(3\)](#) — Retrieve or set device attributes
[udev_device_get_sysattr_value\(3\)](#) — Retrieve or set device attributes
[udev_device_get_sysname\(3\)](#) — Query device properties
[udev_device_get_sysnum\(3\)](#) — Query device properties
[udev_device_get_syspath\(3\)](#) — Query device properties
[udev_device_get_tags_list_entry\(3\)](#) — Retrieve or set device attributes
[udev_device_get_udev\(3\)](#) — Query device properties
[udev_device_has_tag\(3\)](#) — Retrieve or set device attributes
[udev_device_new_from_device_id\(3\)](#) — Create, acquire and release a udev device object
[udev_device_new_from_devnum\(3\)](#) — Create, acquire and release a udev device object
[udev_device_new_from_environment\(3\)](#) — Create, acquire and release a udev device object
[udev_device_new_from_subsystem_sysname\(3\)](#) — Create, acquire and release a udev device object
[udev_device_new_from_syspath\(3\)](#) — Create, acquire and release a udev device object

[udev_device_ref\(3\)](#) — Create, acquire and release a udev device object
[udev_device_set_sysattr_value\(3\)](#) — Retrieve or set device attributes
[udev_device_unref\(3\)](#) — Create, acquire and release a udev device object
[udev_enumerate_add_match_is_initialized\(3\)](#) — Modify filters
[udev_enumerate_add_match_parent\(3\)](#) — Modify filters
[udev_enumerate_add_match_property\(3\)](#) — Modify filters
[udev_enumerate_add_match_subsystem\(3\)](#) — Modify filters
[udev_enumerate_add_match_sysattr\(3\)](#) — Modify filters
[udev_enumerate_add_match_sysname\(3\)](#) — Modify filters
[udev_enumerate_add_match_tag\(3\)](#) — Modify filters
[udev_enumerate_add_nomatch_subsystem\(3\)](#) — Modify filters
[udev_enumerate_add_nomatch_sysattr\(3\)](#) — Modify filters
[udev_enumerate_add_syspath\(3\)](#) — Query or modify a udev enumerate object
[udev_enumerate_get_list_entry\(3\)](#) — Query or modify a udev enumerate object
[udev_enumerate_get_udev\(3\)](#) — Query or modify a udev enumerate object
[udev_enumerate_new\(3\)](#) — Create, acquire and release a udev enumerate object
[udev_enumerate_ref\(3\)](#) — Create, acquire and release a udev enumerate object
[udev_enumerate_scan_devices\(3\)](#) — Query or modify a udev enumerate object
[udev_enumerate_scan_subsystems\(3\)](#) — Query or modify a udev enumerate object
[udev_enumerate_unref\(3\)](#) — Create, acquire and release a udev enumerate object
[udev_list_entry\(3\)](#) — Iterate and access udev lists
[udev_list_entry_get_by_name\(3\)](#) — Iterate and access udev lists
[udev_list_entry_get_name\(3\)](#) — Iterate and access udev lists
[udev_list_entry_get_next\(3\)](#) — Iterate and access udev lists
[udev_list_entry_get_value\(3\)](#) — Iterate and access udev lists
[udev_monitor_enable_receiving\(3\)](#) — Query and modify device monitor
[udev_monitor_filter_add_match_subsystem_devtype\(3\)](#) — Modify filters
[udev_monitor_filter_add_match_tag\(3\)](#) — Modify filters
[udev_monitor_filter_remove\(3\)](#) — Modify filters
[udev_monitor_filter_update\(3\)](#) — Modify filters
[udev_monitor_get_fd\(3\)](#) — Query and modify device monitor
[udev_monitor_get_udev\(3\)](#) — Query and modify device monitor
[udev_monitor_new_from_netlink\(3\)](#) — Create, acquire and release a udev monitor object
[udev_monitor_receive_device\(3\)](#) — Query and modify device monitor
[udev_monitor_ref\(3\)](#) — Create, acquire and release a udev monitor object
[udev_monitor_set_receive_buffer_size\(3\)](#) — Query and modify device monitor
[udev_monitor_unref\(3\)](#) — Create, acquire and release a udev monitor object
[udev_new\(3\)](#) — Create, acquire and release a udev context object
[udev_ref\(3\)](#) — Create, acquire and release a udev context object
[udev_unref\(3\)](#) — Create, acquire and release a udev context object
[udevadm\(8\)](#) — udev management tool
[user.conf.d\(5\)](#) — System and session service manager configuration files
