

NAME

e2undo - Replay an undo log for an ext2/ext3/ext4 filesystem

SYNOPSIS

e2undo [**-f**] *undo_log device*

DESCRIPTION

e2undo will replay the undo log *undo_log* for an ext2/ext3/ext4 filesystem found on *device*. This can be used to undo a failed operation by an e2fsprogs program.

OPTIONS

-f Normally, **e2undo** will check the filesystem UUID and last modified time to make sure the undo log matches with the filesystem on the device. If they do not match, **e2undo** will refuse to apply the undo log as a safety mechanism. The **-f** option disables this safety mechanism.

AUTHOR

e2undo was written by Aneesh Kumar K.V. (aneesh.kumar@linux.vnet.ibm.com)

AVAILABILITY

e2undo is part of the e2fsprogs package and is available from <http://e2fsprogs.sourceforge.net>.
