

**NAME**

ntp-wait - wait for NTP server to synchronize

**SYNOPSIS**

**ntp-wait** [ -f ] [ -n *tries* ] [ -s *sleep* ] [ -v ]

**DESCRIPTION**

ntp-wait waits until the locally running ntpd is in state 4 (synchronized). This could be useful at boot time, to delay the boot sequence until after "ntpd -g" has set the time.

**OPTIONS**

- f Force hard failure if state is unknown.
- n *tries* Number of tries before giving up (default 1000 = 10min+)
- s *sleep* Seconds to sleep between tries (default 6s = 10/min)
- v Be verbose.
