

**NAME**

postfix-add-policy - add policy service to Postfix master.cf

**SYNOPSIS**

**postfix-add-policy** [*policy name...*] [*username...*] [*argv...*]

**DESCRIPTION**

The **postfix-add-policy(8)** command adds an smtp policy server named *policy name* running using *user-name* and called as *argv* to `etc/postfix/master.cf` to facilitate integration of SMTP policy servers such as postgrey or postfix-policyd-spf-perl. The configuration is based on the Postfix SMTPD\_POLICY\_README. Administrators should verify it is appropriate for their requirements.

The original file is copied prior to modification and left in `/etc/postfix` to make it possible to revert changes easily.

Available in the Debian package for Postfix version 2.5.3 and later.

**DIAGNOSTICS**

If the given *policy name* already appears in the master.cf, a message will be printed to standard out and master.cf will not be modified.

**ENVIRONMENT****MAIL\_CONFIG**

Directory with Postfix configuration files.

The **postfix-add-policy(8)** command should use this, but it currently doesn't. It is hard coded to `/etc/postfix`. This should be changed.

**CONFIGURATION PARAMETERS**

None

**FILES**

`/etc/postfix/master.cf`
