```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.database.user
PostgreSQL user.

Type: string

Default:

```
"szurubooru"
```

Example:

```
"szuru"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.group
Group under which Szurubooru runs.

Type: string

Default:

```
"szurubooru"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.openFirewall
Whether to open the firewall for the port in **services.szurubooru.server.port**.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.server.package
The server package to use.

Type: package

Default:

```
pkgs.szurubooru.server
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.server.host
The host address for Szurubooru to bind to.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.server.port
Port to expose HTTP service.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Example:

```
9000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.server.settings
Configuration to write to *config.yaml*. See **https://github.com/rr−/szurubooru/blob/master/server/config.yaml.dist** for more information.

Type: open submodule of (YAML 1.1 value)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.server.settings.data_dir
Path to the static files.

Type: absolute path

Default:

```
"${services.szurubooru.dataDir}/data"
```

Example:

```
"/srv/szurubooru/data"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.server.settings.data_url
Full URL to the data endpoint.

Type: string

Default:

```
"${services.szurubooru.server.settings.domain}/data/"
```

Example:

```
"http://example.com/content/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.server.settings.debug
Whether to generate server logs.

Type: signed integer

Default:

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.server.settings.delete_source_files
Whether to delete thumbnails and source files on post delete.

Type: one of “yes”, “no”

Default:

```
"no"
```

Example:

```
"yes"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.server.settings.domain
Full URL to the homepage of this szurubooru site (with no trailing slash).

Type: string

Example:

```
"http://example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.server.settings.name
Name shown in the website title and on the front page.

Type: string

Default:

```
"szurubooru"
```

Example:

```
"Szuru"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.server.settings.secretFile
File containing a secret used to salt the users' password hashes and generate filenames for static content.

Type: absolute path

Example:

```
"/run/secrets/szurubooru−server−secret"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.server.settings.show_sql
Whether to show SQL in server logs.

Type: signed integer

Default:

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.server.settings.smtp.host
Host of the SMTP server used to send reset password.

Type: null or string

Default:

```
null
```

Example:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/szurubooru.nix>

services.szurubooru.server.settings.smtp.passFile
File containing the password associated to the given user for the SMTP server.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/szurubooru-smtp-pass"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/szurubooru.nix>

services.szurubooru.server.settings.smtp.port
Port of the SMTP server.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Example:

```
25
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/szurubooru.nix>

services.szurubooru.server.settings.smtp.user
User to connect to the SMTP server.

Type: null or string

Default:

```
null
```

Example:

```
"bot"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/szurubooru.nix>

services.szurubooru.server.threads
Number of waitress threads to start.

Type: signed integer

Default:

```
4
```

Example:

```
6
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/szurubooru.nix>

services.szurubooru.user

User account under which Szurubooru runs.

Type: string

Default:

```
"szurubooru"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.tabby.enable

Whether to enable Self−hosted AI coding assistant using large language models.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tabby.nix>

services.tabby.package

The tabby package to use.

Type: package

Default:

```
pkgs.tabby
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tabby.nix>

services.tabby.acceleration

Specifies the device to use for hardware acceleration.

- ‘cpu’: no acceleration just use the CPU
- ‘rocm’: supported by modern AMD GPUs
- ‘cuda’: supported by modern NVIDIA GPUs
- ‘metal’: supported on darwin aarch64 machines

Tabby will try and determine what type of acceleration that is already enabled in your configuration when ‘acceleration = null’.

- nixpkgs.config.cudaSupport
- nixpkgs.config.rocmSupport
- if stdenv.hostPlatform.isDarwin && stdenv.hostPlatform.isAarch64

IFF multiple acceleration methods are found to be enabled or if you haven’t set either ‘cudaSupport or rocmSupport’ you will have to specify the device type manually here otherwise it will default to the first from the list above or to cpu.

Type: null or one of “cpu”, “rocm”, “cuda”, “metal”

Default:

```
null
```

Example:

```
"rocm"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tabby.nix>

services.tabby.host
Specifies the hostname on which the tabby server HTTP interface listens.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tabby.nix>

services.tabby.model
Specify the model that tabby will use to generate completions.

This model will be downloaded automatically if it is not already present.

If you want to utilize an existing model that you've already downloaded you'll need to move it into tabby's state directory which lives in '/var/lib/tabby'. Because the tabby.service is configured to use a DynamicUser the service will need to have been started at least once before you can move the locally existing model into '/var/lib/tabby'. You can set the model to 'none' and tabby will startup and fail to download a model, but will have created the '/var/lib/tabby' directory. You can then copy over the model manually into '/var/lib/tabby', update the model option to the name you just downloaded and copied over then 'nixos−rebuild switch' to start using it.

$ tabby download −−model TabbyML/DeepseekCoder−6.7B $ find ~/.tabby/ | tail −n1 /home/ghthor/.tabby/models/TabbyML/DeepseekCoder−6.7B/ggml/q8_0.v2.gguf $ sudo rsync −r ~/.tabby/models/ /var/lib/tabby/models/ $ sudo chown −R tabby:tabby /var/lib/tabby/models/

See for Model Options:

"" **https://github.com/TabbyML/registry−tabby**

Type: string

Default:

```
"TabbyML/StarCoder−1B"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tabby.nix>

services.tabby.port
Specifies the bind port on which the tabby server HTTP interface listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
11029
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tabby.nix>

services.tabby.usageCollection
Enable sending anonymous usage data.

See for more details:

"" **https://tabby.tabbyml.com/docs/configuration#usage−collection**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tabby.nix>

services.tabbyapi.enable
Whether to enable tabbyapi.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tabbyapi.nix>

services.tabbyapi.package
The tabbyapi package to use.

Type: package

Default:

```
pkgs.tabbyapi
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tabbyapi.nix>

services.tabbyapi.openFirewall
Whether to open the firewall for the TabbyAPI port.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tabbyapi.nix>

services.tabbyapi.settings
Configuration for TabbyAPI. https://github.com/theroyallab/tabbyAPI/wiki/02.−Server−options

Type: open submodule of (YAML 1.1 value)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tabbyapi.nix>

services.tabbyapi.settings.logging.log_prompt
Enable prompt logging.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tabbyapi.nix>

services.tabbyapi.settings.logging.log_requests
Enable request logging. Only use for debug.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/tabbyapi.nix>

services.tabbyapi.settings.model.cache_mode
Cache mode for VRAM savings. ExLlamaV2: FP16, Q8, Q6, Q4. ExLlamaV3: specific pair string (e.g., '8,8').

Type: string

Default:

```
"FP16"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/tabbyapi.nix>

services.tabbyapi.settings.model.dummy_model_names
List of fake model names sent via the /v1/models endpoint.

Type: list of string

Default:

```
[
  "gpt-3.5-turbo"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/tabbyapi.nix>

services.tabbyapi.settings.model.gpu_split_auto
Automatically allocate resources to GPUs.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/tabbyapi.nix>

services.tabbyapi.settings.model.max_seq_len
Max sequence length. Set null to use model defaults.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/tabbyapi.nix>

services.tabbyapi.settings.model.model_dir
Directory to look for models. Relative to the state directory.

Type: string

Default:

```
"models"
```

Example:

```
(pkgs.linkFarm "models" {
  qwen-8b = pkgs.fetchgit {
```

```
      url = "https://huggingface.co/turboderp/Qwen3-VL-8B-Instruct \
-exl3";
      rev = "652ab6be95b3e2880e78d87269013d98ca9c392d"; # 4bpw
      fetchLFS = true;
      hash = "sha256-n+9Mt7EZ3XHM0w8oGUZr4EBz91EFyp1VBpvl9Php/QM=";
    };
    # Example for patching Qwen 3.5's template to work with OpenWebUI \
's thinking feature
    Qwen3_5-9B = pkgs.applyPatches {
      src = pkgs.fetchgit {
        url = "https://huggingface.co/turboderp/Qwen3.5-9B-exl3";
        rev = "6f8763307a3130ae989269fbc79a8c8e9db5ee42"; # 5.0bpw
        fetchLFS = true;
        hash = "sha256-Y7Uw/MChXU0Iu9hb3dv+cTtNBwhPbd/I/gYDUjM1j8g=" \
;
      };
      patches = [ ./qwen-thinking.patch ];
    };
    # diff --git a/chat_template.jinja b/chat_template.jinja

```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/tabbyapi.nix>

services.tabbyapi.settings.model.model_name

The initial model to load on startup. Must exist in model_dir.

Type: null or string

Default:

```
null
```

Example:

```
"Qwen3_5-9B"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/tabbyapi.nix>

services.tabbyapi.settings.network.api_servers
Select API servers to enable. Options: OAI, Kobold.

Type: list of string

Default:

```
[
  "OAI"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tabbyapi.nix>

services.tabbyapi.settings.network.disable_auth
Disable HTTP token authentication. WARNING: Vulnerable if exposed.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tabbyapi.nix>

services.tabbyapi.settings.network.host
The IP to host on. Use 0.0.0.0 to expose on all adapters.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tabbyapi.nix>

services.tabbyapi.settings.network.port
The port to host on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tabbyapi.nix>

services.tahoe.introducers
The Tahoe introducers.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.introducers.<name>.package
The tahoelafs package to use.

Type: package

Default:

```
pkgs.tahoelafs
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.introducers.<name>.nickname
The nickname of this Tahoe introducer.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.introducers.<name>.tub.location
The external location that the introducer should listen on.

If specified, the port should be included.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.introducers.<name>.tub.port
The port on which the introducer will listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3458
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes
The Tahoe nodes.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.package
The tahoelafs package to use.

Type: package

Default:

```
pkgs.tahoelafs
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.client.helper
The furl for a Tahoe helper node.

Like all furls, keep this safe and don’t share it.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.client.introducer
The furl for a Tahoe introducer node.

Like all furls, keep this safe and don’t share it.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.client.shares.happy
The number of distinct storage nodes required to store a file.

Type: signed integer

Default:

```
7
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.client.shares.needed
The number of shares required to reconstitute a file.

Type: signed integer

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.client.shares.total
The number of shares required to store a file.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.helper.enable
Whether to enable helper service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.nickname
The nickname of this Tahoe node.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.sftpd.enable
Whether to enable SFTP service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.sftpd.accounts.file
Path to the accounts file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.sftpd.accounts.url
URL of the accounts server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.sftpd.hostPrivateKeyFile
Path to the SSH host private key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.sftpd.hostPublicKeyFile
Path to the SSH host public key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.sftpd.port
The port on which the SFTP server will listen.

This is the correct setting to tweak if you want Tahoe's SFTP daemon to listen on a different port.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.storage.enable
Whether to enable storage service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.storage.reservedSpace
The amount of filesystem space to not use for storage.

Type: string

Default:

```
"1G"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.tub.location
The external location that the node should listen on.

This is the setting to tweak if there are multiple interfaces and you want to alter which interface Tahoe is advertising.

If specified, the port should be included.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.tub.port

The port on which the tub will listen.

This is the correct setting to tweak if you want Tahoe's storage system to listen on a different port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3457
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tahoe.nodes.<name>.web.port

The port on which the Web server will listen.

This is the correct setting to tweak if you want Tahoe's WUI to listen on a different port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3456
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/tahoe.nix>

services.tailscale.enable

Whether to enable Tailscale client daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.package

The tailscale package to use.

Type: package

Default:

```
pkgs.tailscale
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.authKeyFile

A file containing the auth key. Tailscale will be automatically started if provided.

Services that bind to Tailscale IPs should order using **systemd.services.<name>.after** 'tailscaled−auto-connect.service'.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/tailscale_key"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.authKeyParameters
Extra parameters to pass after the auth key. See **https://tailscale.com/kb/1215/oauth-clients#registering-new-nodes-using-oauth-credentials**

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.authKeyParameters.baseURL
Base URL for the Tailscale API.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.authKeyParameters.ephemeral
Whether to register as an ephemeral node.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.authKeyParameters.preauthorized
Whether to skip manual device approval.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.derper.enable
Whether to enable Tailscale Derper. See upstream doc **https://tailscale.com/kb/1118/custom-derp-servers** how to configure it on clients.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−derper.nix>

services.tailscale.derper.package
The derper package to use.

Type: package

Default:

```
pkgs.tailscale.derper
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−derper.nix>

services.tailscale.derper.configureNginx
Whether to enable nginx reverse proxy for derper. When enabled, nginx will proxy requests to the derper service.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−derper.nix>

services.tailscale.derper.domain
Domain name under which the derper server is reachable.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−derper.nix>

services.tailscale.derper.openFirewall
Whether to open the firewall for the specified port. Derper requires the used ports to be opened, otherwise it doesn't work as expected.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−derper.nix>

services.tailscale.derper.port
The port the derper process will listen on. This is not the port tailscale will connect to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8010
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−derper.nix>

services.tailscale.derper.stunPort
STUN port to listen on. See online docs **https://tailscale.com/kb/1118/custom−derp−servers#prerequisites** on how to configure a different external port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3478
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−derper.nix>

services.tailscale.derper.verifyClients
Whether to verify clients against a locally running tailscale daemon if they are allowed to connect to this node or not.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−derper.nix>

services.tailscale.disableTaildrop
Whether to disable the Taildrop feature for sending files between nodes.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.disableUpstreamLogging
Whether to disable Tailscaled from sending debug logging upstream.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.extraDaemonFlags
Extra flags to pass to **tailscaled**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−no−logs−no−support"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.extraSetFlags
Extra flags to pass to **tailscale set**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--advertise-exit-node"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.extraUpFlags
Extra flags to pass to **tailscale up**. Only applied if **services.tailscale.authKeyFile** is specified.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--ssh"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.interfaceName
The interface name for tunnel traffic. Use “userspace-networking” (beta) to not use TUN.

Type: string

Default:

```
"tailscale0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.openFirewall
Whether to open the firewall for the specified port.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.permitCertUid
Username or user ID of the user allowed to to fetch Tailscale TLS certificates for the node.

Type: null or non-empty string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.port
The port to listen on for tunnel traffic (0=autoselect).

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
41641
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscale.serve.enable
Whether to enable Tailscale Serve configuration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−serve.nix>

services.tailscale.serve.configFile
Path to a Tailscale Serve configuration file in JSON format. If set, this takes precedence over **services.tailscale.serve.services**.

See **https://tailscale.com/kb/1589/tailscale−services−configuration−file** for the configuration format.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/tailscale−serve.json"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−serve.nix>

services.tailscale.serve.services
Services to configure for Tailscale Serve.

Each attribute name should be the service name (without the ‘svc:’ prefix). The ‘svc:’ prefix will be added automatically.

See **https://tailscale.com/kb/1589/tailscale−services−configuration−file** for details.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  web−server = {
    endpoints = {
      "tcp:443" = "https://localhost:443";
    };
  };
  api = {
    endpoints = {
      "tcp:8080" = "http://localhost:8080";
    };
    advertised = true;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−serve.nix>

services.tailscale.serve.services.<name>.advertised
Whether the service should accept new connections. Defaults to ‘true’ when not specified.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−serve.nix>

services.tailscale.serve.services.<name>.endpoints
Map of incoming traffic patterns to local targets.

Keys should be in the format ‘<protocol>:<port>’ or ‘<protocol>:<port−range>’. Currently only ‘tcp’ protocol is supported.

Values should be in the format ‘<protocol>://<host:port>’ where protocol is ‘http’, ‘https’, or ‘tcp’.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "tcp:443" = "https://localhost:443";
  "tcp:8080" = "http://localhost:8080";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−serve.nix>

services.tailscale.useRoutingFeatures
Enables settings required for Tailscale’s routing features like subnet routers and exit nodes.

To use these these features, you will still need to call ‘sudo tailscale up’ with the relevant flags like ‘−−advertise−exit−node’ and ‘−−exit−node’.

When set to ‘client’ or ‘both’, reverse path filtering will be set to loose instead of strict. When set to ‘server’ or ‘both’, IP forwarding will be enabled.

Type: one of “none”, “client”, “server”, “both”

Default:

```
"none"
```

Example:

```
"server"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale.nix>

services.tailscaleAuth.enable
Whether to enable tailscale.nginx−auth, to authenticate users via tailscale.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−auth.nix>

services.tailscaleAuth.package
The tailscale−nginx−auth package to use.

Type: package

Default:

```
pkgs.tailscale−nginx−auth
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−auth.nix>

services.tailscaleAuth.group
Group which runs tailscale−nginx−auth

Type: string

Default:

```
"tailscale−nginx−auth"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−auth.nix>

services.tailscaleAuth.socketPath
Path of the socket listening to authorization requests.

Type: absolute path

Default:

```
"/run/tailscale−nginx−auth/tailscale−nginx−auth.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−auth.nix>

services.tailscaleAuth.user
User which runs tailscale−nginx−auth

Type: string

Default:

```
"tailscale−nginx−auth"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tailscale−auth.nix>

services.taler.exchange.enable
Whether to enable the GNU Taler exchange.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/exchange.nix>

services.taler.exchange.package
The taler−exchange package to use.

Type: package

Default:

```
pkgs.taler-exchange
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/exchange.nix>

services.taler.exchange.debug
Whether to enable debug logging.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/exchange.nix>

services.taler.exchange.denominationConfig
This option configures the cash denomination for the coins that the exchange offers. For more information, consult the **upstream docs**.

You can either write these manually or you can use the 'taler−harness deployment gen−coin−config' command to generate it.

Warning: Do not modify existing denominations after deployment. Please see the upstream docs for how to safely do that.

Type: strings concatenated with "\n"

Default:

```
"None, you must set this yourself."
```

Example:

```
[COIN_KUDOS-n1-t1718140083]
VALUE = KUDOS:0.1
DURATION_WITHDRAW = 7 days
DURATION_SPEND = 2 years
DURATION_LEGAL = 6 years
FEE_WITHDRAW = KUDOS:0
FEE_DEPOSIT = KUDOS:0.1
FEE_REFRESH = KUDOS:0
FEE_REFUND = KUDOS:0
RSA_KEYSIZE = 2048
CIPHER = RSA
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/exchange.nix>

services.taler.exchange.openFirewall
Whether to open ports in the firewall

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/exchange.nix>

services.taler.exchange.settings
Configuration options for the taler exchange config file.

For a list of all possible options, please see the man page ‘taler−exchange.conf(5)’

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/exchange.nix>

services.taler.exchange.settings.exchange.CURRENCY
The currency which the exchange will operate with. This cannot be changed later.

Type: non−empty string

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/exchange.nix>

services.taler.exchange.settings.exchange.CURRENCY_ROUND_UNIT
Smallest amount in this currency that can be transferred using the underlying RTGS. For example: “EUR:0.01” or “JPY:1”

Type: string

Default:

```
"0.01 in {option}‘CURRENCY‘"
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/exchange.nix>

services.taler.exchange.settings.exchange.DB
Plugin to use for the database.

Type: value “postgres” (singular enum)

Default:

```
"postgres"
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/exchange.nix>

services.taler.exchange.settings.exchange.MASTER_PUBLIC_KEY
Used by the exchange to verify information signed by the offline system.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/exchange.nix>

services.taler.exchange.settings.exchange.PORT
Port on which the HTTP server listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8081
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/exchange.nix>

services.taler.exchange.settings.exchangedb−postgres.CONFIG
Database connection URI.

Type: non−empty string

Default:

```
"postgres:///taler−exchange−httpd"
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/exchange.nix>

services.taler.includes
Files to include into the config file using Taler's '@inline@' directive.

This allows including arbitrary INI files, including imperatively managed ones.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/module.nix>

services.taler.merchant.enable
Whether to enable the GNU Taler merchant.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/merchant.nix>

services.taler.merchant.package
The taler−merchant package to use.

Type: package

Default:

```
pkgs.taler−merchant
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/merchant.nix>

services.taler.merchant.debug
Whether to enable debug logging.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/merchant.nix>

services.taler.merchant.openFirewall
Whether to open ports in the firewall

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/merchant.nix>

services.taler.merchant.settings
Configuration options for the taler merchant config file.

For a list of all possible options, please see the man page ‘taler−merchant.conf(5)’

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/merchant.nix>

services.taler.merchant.settings.merchant.DB
Plugin to use for the database.

Type: value “postgres” (singular enum)

Default:

```
"postgres"
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/merchant.nix>

services.taler.merchant.settings.merchant.LEGAL_PRESERVATION
How long to keep data in the database for tax audits after the transaction has completed.

Type: string

Default:

```
"10 years"
```

Declared by:
<nixpkgs/nixos/modules/services/finance/taler/merchant.nix>

services.taler.merchant.settings.merchant.PORT

Port on which the HTTP server listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8083
```

Declared by:

<nixpkgs/nixos/modules/services/finance/taler/merchant.nix>

services.taler.merchant.settings.merchant.SERVE

Whether the HTTP server should listen on a UNIX domain socket (“unix”) or on a TCP socket (“tcp”).

Type: one of “tcp”, “unix”

Default:

```
"tcp"
```

Declared by:

<nixpkgs/nixos/modules/services/finance/taler/merchant.nix>

services.taler.merchant.settings.merchantdb−postgres.CONFIG

Database connection URI.

Type: non−empty string

Default:

```
"postgres:///taler−merchant−httpd"
```

Declared by:

<nixpkgs/nixos/modules/services/finance/taler/merchant.nix>

services.taler.runtimeDir

Runtime directory shared between the taler services.

Crypto helpers put their sockets here for instance and the httpd connects to them.

Type: string

Default:

```
"/run/taler−system−runtime/"
```

Declared by:

<nixpkgs/nixos/modules/services/finance/taler/module.nix>

services.taler.settings

Global configuration options for the taler config file.

For a list of all possible options, please see the man page ‘taler.conf(5)’

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/finance/taler/module.nix>

services.taler.settings.taler.CURRENCY

The currency which taler services will operate with. This cannot be changed later.

Type: non−empty string

Declared by:

<nixpkgs/nixos/modules/services/finance/taler/module.nix>

services.taler.settings.taler.CURRENCY_ROUND_UNIT

Smallest amount in this currency that can be transferred using the underlying RTGS.

You should probably not touch this.

Type: string

Default:

```
"${config.services.taler.settings.taler.CURRENCY}:0.01"
```

Declared by:

<nixpkgs/nixos/modules/services/finance/taler/module.nix>

services.tandoor−recipes.enable

Enable Tandoor Recipes.

When started, the Tandoor Recipes database is automatically created if it doesn't exist and updated if the package has changed. Both tasks are achieved by running a Django migration.

A script to manage the instance (by wrapping Django's manage.py) is linked to '/var/lib/tandoor−recipes/tandoor−recipes−manage'.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tandoor−recipes.nix>

services.tandoor−recipes.package

The tandoor−recipes package to use.

Type: package

Default:

```
pkgs.tandoor−recipes
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tandoor−recipes.nix>

services.tandoor−recipes.address

Web interface address.

Type: string

Default:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tandoor−recipes.nix>

services.tandoor−recipes.database.createLocally
Configure local PostgreSQL database server for Tandoor Recipes.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tandoor−recipes.nix>

services.tandoor−recipes.extraConfig
Extra tandoor recipes config options.

See **the example dot−env file** for available options.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  ENABLE_SIGNUP = "1";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tandoor−recipes.nix>

services.tandoor−recipes.group
Group under which Tandoor runs.

Type: string

Default:

```
"tandoor_recipes"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tandoor−recipes.nix>

services.tandoor−recipes.port
Web interface port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tandoor−recipes.nix>

services.tandoor−recipes.user
User account under which Tandoor runs.

Type: string

Default:

```
"tandoor_recipes"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tandoor−recipes.nix>

services.tang.enable

Whether to enable tang.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/tang.nix>

services.tang.package

The tang package to use.

Type: package

Default:

```
pkgs.tang
```

Declared by:

<nixpkgs/nixos/modules/services/security/tang.nix>

services.tang.ipAddressAllow

Whitelist a list of address prefixes. Preferably, internal addresses should be used.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "192.168.1.0/24"
]
```

Declared by:

<nixpkgs/nixos/modules/services/security/tang.nix>

services.tang.listenStream

Addresses and/or ports on which tang should listen. For detailed syntax see ListenStream in **systemd.socket**(5).

Type: list of string

Default:

```
[
  "7654"
]
```

Example:

```
[
  "198.168.100.1:7654"
  "[2001:db8::1]:7654"
  "7654"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/tang.nix>

services.target.enable
Whether to enable the kernel's LIO iscsi target.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iscsi/target.nix>

services.target.config
Content of /etc/target/saveconfig.json This file is normally read and written by targetcli

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iscsi/target.nix>

services.tarsnap.enable
Whether to enable periodic tarsnap backups.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.package
The tarsnap package to use.

Type: package

Default:

```
pkgs.tarsnap
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives
Tarsnap archive configurations. Each attribute names an archive to be created at a given time interval, according to the options associated with it. When uploading to the tarsnap server, archive names are suffixed by a 1 second resolution timestamp, with the format '%Y%m%d%H%M%S'.

For each member of the set is created a timer which triggers the instanced 'tarsnap−archive−name' service unit. You may use **systemctl start tarsnap−archive−name** to manually trigger creation of 'archive−name' at any time.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  nixos =
    { directories = [ "/home" "/root/ssl" ];
    };
  gamedata =
    { directories = [ "/var/lib/minecraft" ];
      period      = "*:30";
    };
}
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.aggressiveNetworking
Upload data over multiple TCP connections, potentially increasing tarsnap's bandwidth utilisation at the cost of slowing down all other network traffic. Not recommended unless TCP congestion is the dominant limiting factor.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.cachedir
The cache allows tarsnap to identify previously stored data blocks, reducing archival time and bandwidth usage.

Should the cache become desynchronized or corrupted, tarsnap will refuse to run until you manually rebuild the cache with **tarsnap --fsck**.

Set to 'null' to disable caching.

Type: null or absolute path

Default:

```
"/var/cache/tarsnap/${utils.escapeSystemdPath config.services.tarsn \
ap.archives.<name>.keyfile}"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.checkpointBytes
Create a checkpoint every 'checkpointBytes' of uploaded data (optionally specified using an SI prefix).

1GB is the minimum value. A higher value is recommended, as checkpointing is expensive.

Set to 'null' to disable checkpointing.

Type: null or string

Default:

```
"1GB"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.directories
List of filesystem paths to archive.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.excludes
Exclude files and directories matching these patterns.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.explicitSymlinks
Whether to follow symlinks specified as archives.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.followSymlinks
Whether to follow all symlinks in archive trees.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.includes
Include only files and directories matching these patterns (the empty list includes everything).

Exclusions have precedence over inclusions.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.keyfile

Set a specific keyfile for this archive. This defaults to ‘"/root/tarsnap.key"’ if left unspecified.

Use this option if you want to run multiple backups concurrently − each archive must have a unique key. You can generate a write−only key derived from your master key (which is recommended) using **tarsnap−keymgmt**(1).

Note: every archive must have an individual master key. You must generate multiple keys with **tarsnap−keygen**(1), and then generate write only keys from those.

The keyfile name should be given as a string and not a path, to avoid the key being copied into the Nix store.

Type: string

Default:

```
config.services.tarsnap.keyfile
```

Declared by:

<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.lowmem

Reduce memory consumption by not caching small files. Possibly beneficial if the average file size is smaller than 1 MB and the number of files is lower than the total amount of RAM in KB.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.maxbw

Abort archival if upstream bandwidth usage in bytes exceeds this threshold.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.maxbwRateDown

Download bandwidth rate limit in bytes.

Type: null or signed integer

Default:

```
null
```

Example:

```
50 * 1000
```

Declared by:

<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.maxbwRateUp

Upload bandwidth rate limit in bytes.

Type: null or signed integer

Default:

```
null
```

Example:

```
25 * 1000
```

Declared by:

<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.nodump

Exclude files with the ‘nodump’ flag.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.period

Create archive at this interval.

The format is described in **systemd.time**(7).

Type: string

Default:

```
"01:15"
```

Example:

```
"hourly"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.printStats

Print global archive statistics upon completion. The output is available via **systemctl status tarsnap-archive-name**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.verbose

Whether to produce verbose logging output.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.archives.<name>.verylowmem
Reduce memory consumption by a factor of 2 beyond what 'lowmem' does, at the cost of significantly slowing down the archiving process.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.tarsnap.keyfile
The keyfile which associates this machine with your tarsnap account. Create the keyfile with **tarsnap−keygen**.

Note that each individual archive (specified below) may also have its own individual keyfile specified. Tarsnap does not allow multiple concurrent backups with the same cache directory and key (starting a new backup will cause another one to fail). If you have multiple archives specified, you should either spread out your backups to be far apart, or specify a separate key for each archive. By default every archive defaults to using '"/root/tarsnap.key"'.

It's recommended for backups that you generate a key for every archive using **tarsnap−keygen**(1), and then generate a write−only tarsnap key using **tarsnap−keymgmt**(1), and keep your master key(s) for a particular machine off−site.

The keyfile name should be given as a string and not a path, to avoid the key being copied into the Nix store.

Type: string

Default:

```
"/root/tarsnap.key"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tarsnap.nix>

services.taskchampion−sync−server.enable
Whether to enable TaskChampion Sync Server for Taskwarrior 3.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskchampion−sync−server.nix>

services.taskchampion−sync−server.package
The taskchampion−sync−server package to use.

Type: package

Default:

```
pkgs.taskchampion−sync−server
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskchampion-sync-server.nix>

services.taskchampion-sync-server.allowClientIds
Client IDs to allow (can be repeated; if not specified, all clients are allowed)

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskchampion-sync-server.nix>

services.taskchampion-sync-server.dataDir
Directory in which to store data

Type: absolute path

Default:

```
"/var/lib/taskchampion-sync-server"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskchampion-sync-server.nix>

services.taskchampion-sync-server.dynamicUser
Whether to use dynamic user

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskchampion-sync-server.nix>

services.taskchampion-sync-server.group
Unix Group to run the server under

Type: string

Default:

```
"taskchampion"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskchampion-sync-server.nix>

services.taskchampion-sync-server.host
Host address on which to serve

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskchampion-sync-server.nix>

services.taskchampion−sync−server.openFirewall
Whether to enable Open firewall port for taskchampion−sync−server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskchampion−sync−server.nix>

services.taskchampion−sync−server.port
Port on which to serve

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
10222
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskchampion−sync−server.nix>

services.taskchampion−sync−server.snapshot.days
Target number of days between snapshots

Type: positive integer, meaning >0

Default:

```
14
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskchampion−sync−server.nix>

services.taskchampion−sync−server.snapshot.versions
Target number of versions between snapshots

Type: positive integer, meaning >0

Default:

```
100
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskchampion−sync−server.nix>

services.taskchampion−sync−server.user
Unix User to run the server under

Type: string

Default:

```
"taskchampion"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskchampion−sync−server.nix>

services.taskserver.enable

Whether to enable the Taskwarrior 2 server.

More instructions about NixOS in conjunction with Taskserver can be found **in the NixOS manual**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.allowedClientIDs

A list of regular expressions that are matched against the reported client id (such as ‘task 2.3.0’).

The values ‘all’ or ‘none’ have special meaning. Overridden by any entry in the option **services.taskserver.disallowedClientIDs**.

Type: string or list of string

Default:

```
[ ]
```

Example:

```
[
  "[Tt]ask [2-9]+"
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.ciphers

List of GnuTLS ciphers to use. See the GnuTLS documentation about priority strings at **https://gnutls.org/manual/html_node/Priority-Strings.html** for full details.

Type: null or strings concatenated with “:”

Default:

```
null
```

Example:

```
"NORMAL:-VERS-SSL3.0"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.config

Configuration options to pass to Taskserver.

The options here are the same as described in **taskdrc**(5) from the ‘taskwarrior2’ package, but with one difference:

The ‘server’ option is ‘server.listen’ here, because the ‘server’ option would collide with other options like ‘server.cert’ and we would run in a type error (attribute set versus string).

Nix types like integers or booleans are automatically converted to the right values Taskserver would expect.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  client = {
    cert = "/tmp/debugging.cert";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.confirmation
Determines whether certain commands are confirmed.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.dataDir
Data directory for Taskserver.

Type: absolute path

Default:

```
"/var/lib/taskserver"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.debug
Logs debugging information.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.disallowedClientIDs
A list of regular expressions that are matched against the reported client id (such as ‘task 2.3.0’).

The values ‘all’ or ‘none’ have special meaning. Any entry here overrides those in **services.taskserver.allowedClientIDs**.

Type: string or list of string

Default:

```
[ ]
```

Example:

```
[
  "[Tt]ask [2-9]+"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.extensions
Fully qualified path of the Taskserver extension scripts. Currently there are none.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.fqdn
The fully qualified domain name of this server, which is also used as the common name in the certificates.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.group
Group for Taskserver.

Type: string

Default:

```
"taskd"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.ipLog
Logs the IP addresses of incoming requests.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.listenHost
The address (IPv4, IPv6 or DNS) to listen on.

Type: string

Default:

```
"localhost"
```

Example:

```
"::"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.listenPort

Port number of the Taskserver.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
53589
```

Declared by:

<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.openFirewall

Whether to open the firewall for the specified Taskserver port.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.organisations

An attribute set where the keys name the organisation and the values are a set of lists of **users** and **groups**.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  myShinyOrganisation = {
    groups = [
      "staff"
      "outsiders"
    ];
    users = [
      "alice"
      "bob"
    ];
  };
  yetAnotherOrganisation = {
    users = [
      "foo"
      "bar"
    ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.organisations.<name>.groups

A list of group names that belong to the organization.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "workers"
  "slackers"
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.organisations.<name>.users

A list of user names that belong to the organization.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "alice"
  "bob"
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.pki.auto.bits

The bit size for generated keys.

> **Note**
> This option is for the automatically handled CA and will be ignored if any of the **services.taskserver.pki.manual.*** options are set.

Type: signed integer

Default:

```
4096
```

Example:

```
2048
```

Declared by:

<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.pki.auto.expiration.ca

The expiration time of the CA certificate in days or ‘null’ for no expiration time.

> **Note**
> This option is for the automatically handled CA and will be ignored if any of the **services.taskserver.pki.manual.*** options are set.

Type: null or signed integer

Default:

```
null
```

Example:

```
365
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.pki.auto.expiration.client
The expiration time of client certificates in days or ‘null’ for no expiration time.

Note
This option is for the automatically handled CA and will be ignored if any of the **services.taskserver.pki.manual.*** options are set.

Type: null or signed integer

Default:

```
null
```

Example:

```
365
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.pki.auto.expiration.crl
The expiration time of the certificate revocation list (CRL) in days or ‘null’ for no expiration time.

Note
This option is for the automatically handled CA and will be ignored if any of the **services.taskserver.pki.manual.*** options are set.

Type: null or signed integer

Default:

```
null
```

Example:

```
365
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.pki.auto.expiration.server
The expiration time of the server certificate in days or ‘null’ for no expiration time.

Note
This option is for the automatically handled CA and will be ignored if any of the **services.taskserver.pki.manual.*** options are set.

Type: null or signed integer

Default:

```
null
```

Example:

```
365
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.pki.manual.ca.cert
Fully qualified path to the CA certificate.

Note
Setting this option will prevent automatic CA creation and handling.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.pki.manual.server.cert
Fully qualified path to the server certificate.

Note
Setting this option will prevent automatic CA creation and handling.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.pki.manual.server.crl
Fully qualified path to the server certificate revocation list.

Note
Setting this option will prevent automatic CA creation and handling.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.pki.manual.server.key
Fully qualified path to the server key.

Note
Setting this option will prevent automatic CA creation and handling.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.queueSize
Size of the connection backlog, see **listen**(2).

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.requestLimit
Size limit of incoming requests, in bytes.

Type: signed integer

Default:

```
1048576
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.trust
Determines how client certificates are validated.

The value ‘allow all’ performs no client certificate validation. This is not recommended. The value ‘strict’ causes the client certificate to be validated against a CA.

Type: one of “allow all”, “strict”

Default:

```
"strict"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.taskserver.user
User for Taskserver.

Type: string

Default:

```
"taskd"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/taskserver>

services.tautulli.enable
Whether to enable Tautulli Plex Monitor.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tautulli.nix>

services.tautulli.package
The tautulli package to use.

Type: package

Default:

```
pkgs.tautulli
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tautulli.nix>

services.tautulli.configFile
The location of Tautulli's config file.

Type: string

Default:

```
"/var/lib/plexpy/config.ini"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tautulli.nix>

services.tautulli.dataDir
The directory where Tautulli stores its data files.

Type: string

Default:

```
"/var/lib/plexpy"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tautulli.nix>

services.tautulli.group
Group under which Tautulli runs.

Type: string

Default:

```
"nogroup"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tautulli.nix>

services.tautulli.openFirewall
Open ports in the firewall for Tautulli.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tautulli.nix>

services.tautulli.port
TCP port where Tautulli listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8181
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tautulli.nix>

services.tautulli.user
User account under which Tautulli runs.

Type: string

Default:

```
"plexpy"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tautulli.nix>

services.tayga.enable
Whether to enable Tayga.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.package
The tayga package to use.

Type: package

Default:

```
pkgs.tayga
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.dataDir
Directory for persistent data.

Type: absolute path

Default:

```
"/var/lib/tayga"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.ipv4
IPv4−specific configuration.

Type: submodule

Example:

```
{
  address = "192.0.2.0";
  router = {
    address = "192.0.2.1";
  };
  pool = {
    address = "192.0.2.1";
```

```
    prefixLength = 24;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.ipv4.address
The source IPv4 address of the TAYGA server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.ipv4.pool
The pool of IPv4 addresses which are used for translation.

Type: null or (submodule)

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.ipv4.pool.address
IPv4 address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.ipv4.pool.prefixLength
Subnet mask of the interface, specified as the number of bits in the prefix (“24”).

Type: integer between 0 and 32 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.ipv4.router.address
The IPv4 address of the router.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.ipv6
IPv6−specific configuration.

Type: submodule

Example:

```
{
  address = "2001:db8::1";
  router = {
    address = "64:ff9b::1";
  };
  pool = {
    address = "64:ff9b::";
    prefixLength = 96;
```

```
    };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.ipv6.address
The source IPv6 address of the TAYGA server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.ipv6.pool
The pool of IPv6 addresses which are used for translation.

Type: null or (submodule)

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.ipv6.pool.address
IPv6 address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.ipv6.pool.prefixLength
Subnet mask of the interface, specified as the number of bits in the prefix (“64”).

Type: integer between 0 and 128 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.ipv6.router.address
The IPv6 address of the router.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.log
Packet errors to log (drop, reject, icmp, self)

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "drop" "reject" "icmp" "self" ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.mappings

Static IPv4 −> IPv6 host mappings.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "192.168.5.42" = "2001:db8:1:4444::1";
  "192.168.5.43" = "2001:db8:1:4444::2";
  "192.168.255.2" = "2001:db8:1:569::143";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.tunDevice

Name of the nat64 tun device.

Type: string

Default:

```
"nat64"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tayga.wkpfStrict

Enable restrictions on the use of the well−known prefix (64:ff9b::/96) − prevents translation of non−global IPv4 ranges when using the well−known prefix. Must be enabled for RFC 6052 compatibility.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tayga.nix>

services.tcsd.enable

Whether to enable tcsd, a Trusted Computing management service that provides TCG Software Stack (TSS). The tcsd daemon is the only portal to the Trusted Platform Module (TPM), a hardware chip on the motherboard.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/tcsd.nix>

services.tcsd.conformanceCred

Path to the conformance credential for your TPM. See also the platformCred option

Type: absolute path

Default:

```
"${config.services.tcsd.stateDir}/conformance.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tcsd.nix>

services.tcsd.endorsementCred
Path to the endorsement credential for your TPM. See also the platformCred option

Type: absolute path

Default:

```
"${config.services.tcsd.stateDir}/endorsement.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tcsd.nix>

services.tcsd.firmwarePCRs
PCR indices used in the TPM for firmware measurements.

Type: string

Default:

```
"0,1,2,3,4,5,6,7"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tcsd.nix>

services.tcsd.group
Group account under which tcsd runs.

Type: string

Default:

```
"tss"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tcsd.nix>

services.tcsd.kernelPCRs
PCR indices used in the TPM for kernel measurements.

Type: string

Default:

```
"8,9,10,11,12"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tcsd.nix>

services.tcsd.platformCred
Path to the platform credential for your TPM. Your TPM manufacturer may have provided you with a set of credentials (certificates) that should be used when creating identities using your TPM. When a user of your TPM makes an identity, this credential will be encrypted as part of that process. See the 1.1b TPM Main specification section 9.3 for information on this process.

Type: absolute path

Default:

```
"${config.services.tcsd.stateDir}/platform.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tcsd.nix>

services.tcsd.stateDir

The location of the system persistent storage file. The system persistent storage file holds keys and data across restarts of the TCSD and system reboots.

Type: absolute path

Default:

```
"/var/lib/tpm"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/tcsd.nix>

services.tcsd.user

User account under which tcsd runs.

Type: string

Default:

```
"tss"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/tcsd.nix>

services.tdarr.enable

Whether to enable Tdarr. This is a convenience option that enables both the server and all configured nodes. For more granular control, use **services.tdarr.server.enable** and configure nodes individually.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tdarr>

services.tdarr.package

The tdarr package to use.

Type: package

Default:

```
pkgs.tdarr
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tdarr>

services.tdarr.dataDir

Base directory for Tdarr data.

Type: absolute path

Default:

```
"/var/lib/tdarr"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tdarr>

services.tdarr.group

Group under which Tdarr runs.

Type: string

Default:

```
"tdarr"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tdarr>

services.tdarr.nodes

Attribute set of Tdarr processing nodes to run on this machine.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.enable

Whether to enable this Tdarr node.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.package

Package to use for this Tdarr node.

Type: package

Default:

```
config.services.tdarr.package.node
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.cronPluginUpdate

Cron expression for automatic plugin updates. Empty string disables.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.dataDir

Data directory for this node.

Type: absolute path

Default:

```
"${config.services.tdarr.dataDir}/nodes/${name}"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.environmentFile

File containing environment variable overrides for this node, in the format accepted by systemd's 'EnvironmentFile'.

Useful for passing secrets like 'apiKey' without putting them in the Nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/tdarr-node-env"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.maxLogSizeMB

Maximum log file size in megabytes.

Type: unsigned integer, meaning >=0

Default:

```
10
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.name

Display name for this node in the Tdarr web UI.

Type: string

Default:

```
"${config.networking.hostName}-${name}"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.pathTranslators

Path translations between server and node for cross-platform or cross-mount-point file access.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  { server = "/media"; node = "/mnt/media"; }
  { server = "/cache"; node = "/mnt/cache"; }
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.pathTranslators.*.node
Node−side path for path translation.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.pathTranslators.*.server
Server−side path for path translation.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.pollInterval
How often the node checks the server for work, in milliseconds.

Type: unsigned integer, meaning >=0

Default:

```
2000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.priority
Node priority for job assignment.

‘−1’ means no priority. ‘0’ is the highest priority, ‘1’ is next, and so on.

Type: signed integer

Default:

```
-1
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.serverURL
Full URL of the Tdarr server this node connects to.

This is the recommended way to specify the server location. When running a local server, the default value is correct.

Type: string

Default:

```
"http://127.0.0.1:${toString config.services.tdarr.server.serverPor \
t}"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.startPaused
Whether the node starts in a paused state.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.type
Node type.

- 'mapped': Node accesses files directly from the library paths.
- 'unmapped': Node receives files over the network API.

Type: one of "mapped", "unmapped"

Default:

```
"mapped"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.workers.healthcheckCPU
Number of CPU healthcheck workers. Can be overridden in the web UI.

Type: unsigned integer, meaning >=0

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.workers.healthcheckGPU
Number of GPU healthcheck workers. Can be overridden in the web UI.

Type: unsigned integer, meaning >=0

Default:

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.workers.transcodeCPU
Number of CPU transcode workers. Can be overridden in the web UI.

Type: unsigned integer, meaning >=0

Default:

```
2
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.nodes.<name>.workers.transcodeGPU
Number of GPU transcode workers. Can be overridden in the web UI.

Type: unsigned integer, meaning >=0

Default:

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/node.nix>

services.tdarr.server.enable
Whether to enable Tdarr server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/server.nix>

services.tdarr.server.package
Package to use for the Tdarr server.

Type: package

Default:

```
config.services.tdarr.package.server
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/server.nix>

services.tdarr.server.auth.enable
Whether to enable authentication for the Tdarr web UI and API.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/server.nix>

services.tdarr.server.cronPluginUpdate
Cron expression for automatic plugin updates. Empty string disables.

Type: string

Default:

```
""
```

Example:

```
"0 2 * * *"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/server.nix>

services.tdarr.server.environmentFile
File containing environment variable overrides for the server, in the format accepted by systemd's 'EnvironmentFile'.

Useful for setting secrets such as 'authSecretKey' or 'seededApiKey' without exposing them in the Nix store.

Example file contents:

```
authSecretKey=your-secret-key
seededApiKey=tapi_your_api_key_here
```

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/tdarr-server-env"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/server.nix>

services.tdarr.server.maxLogSizeMB
Maximum log file size in megabytes.

Type: unsigned integer, meaning >=0

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/server.nix>

services.tdarr.server.openFirewall
Whether to open the firewall for the Tdarr server web UI and API ports.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/server.nix>

services.tdarr.server.serverBindIP
Whether to bind to the specific IP in **services.tdarr.server.serverIP**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/server.nix>

services.tdarr.server.serverDualStack
Enable dual−stack (IPv4/IPv6) networking.

When enabled, the server binds to '::' if IPv6 is available, accepting both IPv4 and IPv6 connections. Useful in Kubernetes and other modern networking setups.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/server.nix>

services.tdarr.server.serverIP
IP address the server binds to.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tdarr/server.nix>

services.tdarr.server.serverPort

Port for server API communication.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8266
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tdarr/server.nix>

services.tdarr.server.webUIPort

Port for the Tdarr web UI.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8265
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tdarr/server.nix>

services.tdarr.user

User account under which Tdarr runs.

Type: string

Default:

```
"tdarr"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tdarr>

services.teamspeak3.enable

Whether to run the Teamspeak3 voice communication server daemon.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/teamspeak3.nix>

services.teamspeak3.dataDir

Directory to store TS3 database and other state/data files.

Type: absolute path

Default:

```
"/var/lib/teamspeak3-server"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/teamspeak3.nix>

services.teamspeak3.defaultVoicePort

Default UDP port for clients to connect to virtual servers − used for first virtual server, subsequent ones will open on incrementing port numbers by default.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9987
```

Declared by:
<nixpkgs/nixos/modules/services/networking/teamspeak3.nix>

services.teamspeak3.fileTransferIP
IP on which the server instance will listen for incoming file transfer connections. Defaults to any IP.

Type: null or string

Default:

```
null
```

Example:

```
"[::]"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/teamspeak3.nix>

services.teamspeak3.fileTransferPort
TCP port opened for file transfers.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
30033
```

Declared by:
<nixpkgs/nixos/modules/services/networking/teamspeak3.nix>

services.teamspeak3.logPath
Directory to store log files in.

Type: absolute path

Default:

```
"/var/log/teamspeak3-server/"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/teamspeak3.nix>

services.teamspeak3.openFirewall
Open ports in the firewall for the TeamSpeak3 server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/teamspeak3.nix>

services.teamspeak3.openFirewallServerQuery
Open ports in the firewall for the TeamSpeak3 serverquery (administration) system. Requires openFirewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/teamspeak3.nix>

services.teamspeak3.queryHttpPort

TCP port opened for ServerQuery connections using the HTTP protocol.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
10080
```

Declared by:

<nixpkgs/nixos/modules/services/networking/teamspeak3.nix>

services.teamspeak3.queryIP

IP on which the server instance will listen for incoming ServerQuery connections. Defaults to any IP.

Type: null or string

Default:

```
null
```

Example:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/teamspeak3.nix>

services.teamspeak3.queryPort

TCP port opened for ServerQuery connections using the raw telnet protocol.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
10011
```

Declared by:

<nixpkgs/nixos/modules/services/networking/teamspeak3.nix>

services.teamspeak3.querySshPort

TCP port opened for ServerQuery connections using the SSH protocol.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
10022
```

Declared by:

<nixpkgs/nixos/modules/services/networking/teamspeak3.nix>

services.teamspeak3.voiceIP

IP on which the server instance will listen for incoming voice connections. Defaults to any IP.

Type: null or string

Default:

```
null
```

Example:

```
"[::]"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/teamspeak3.nix>

services.teamviewer.enable

Whether to enable TeamViewer daemon & system package.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/teamviewer.nix>

services.teamviewer.package

The teamviewer package to use.

Type: package

Default:

```
pkgs.teamviewer
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/teamviewer.nix>

services.technitium−dns−server.enable

Whether to enable Technitium DNS Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/technitium−dns−server.nix>

services.technitium−dns−server.package

The technitium−dns−server package to use.

Type: package

Default:

```
pkgs.technitium-dns-server
```

Declared by:

<nixpkgs/nixos/modules/services/networking/technitium−dns−server.nix>

services.technitium−dns−server.firewallTCPPorts

List of TCP ports to open in firewall. You might want to open ports 443 and 853 if you intend to use DNS over HTTPS or DNS over TLS.

Type: list of signed integer

Default:

```
[
  53
  5380
  53443
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/technitium−dns−server.nix>

services.technitium−dns−server.firewallUDPPorts
List of UDP ports to open in firewall.

Type: list of signed integer

Default:

```
[
  53
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/technitium−dns−server.nix>

services.technitium−dns−server.openFirewall
Whether to open ports in the firewall. Standard ports are 53 (UDP and TCP, for DNS), 5380 and 53443 (TCP, HTTP and HTTPS for web interface). Specify different or additional ports in options firewallUDP-Ports and firewallTCPPorts if necessary.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/technitium−dns−server.nix>

services.tee−supplicant.enable
Whether to enable OP−TEE userspace supplicant.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tee−supplicant>

services.tee−supplicant.package
The optee−client package to use.

Type: package

Default:

```
pkgs.optee−client
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tee−supplicant>

services.tee−supplicant.pluginPath
The directory where plugins will be loaded from on startup.

Type: absolute path

Default:

```
"/run/current−system/sw/lib/tee−supplicant/plugins"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tee−supplicant>

services.tee−supplicant.reeFsParentPath
The directory where the secure filesystem will be stored in the rich execution environment (REE FS).

Type: absolute path

Default:

```
"/var/lib/tee"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tee−supplicant>

services.tee−supplicant.trustedApplications
A list of full paths to trusted applications that will be loaded at runtime by tee−supplicant.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tee−supplicant>

services.teeworlds.enable
Whether to enable Teeworlds Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.package
The teeworlds−server package to use.

Type: package

Default:

```
pkgs.teeworlds−server
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.environmentFile
Environment file as defined in **systemd.exec**(5).

Secrets may be passed to the service without adding them to the world−readable Nix store, by specifying placeholder variables as the option value in Nix and setting these variables accordingly in the environment file.

```
# snippet of teeworlds−related config
services.teeworlds.password = "$TEEWORLDS_PASSWORD";

# content of the environment file
TEEWORLDS_PASSWORD=verysecretpassword
```

Note that this file needs to be available on the host on which ‘teeworlds’ is running.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/teeworlds/teeworlds.env"
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.extraOptions
Extra configuration lines for the *teeworlds.cfg*. See **Teeworlds Documentation**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "sv_map dm1"
  "sv_gametype dm"
]
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.game.enablePowerups
Whether to allow powerups such as the ninja.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.game.enableReadyMode
Whether to enable “ready mode”; where players can pause/unpause the game and start the game in warmup, using their ready state.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.game.enableTeamDamage
Whether to enable team damage; whether to allow team mates to inflict damage on one another.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.game.enableVoteKick
Whether to enable voting to kick players.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.game.gameType
The game type to use on the server.

The default gametypes are ‘dm’, ‘tdm’, ‘ctf’, ‘lms’, and ‘lts’.

Type: string

Default:

```
"dm"
```

Example:

```
"ctf"
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.game.map
The map to use on the server.

Type: string

Default:

```
"dm1"
```

Example:

```
"ctf5"
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.game.playerSlots
The amount of slots to reserve for players (as opposed to spectators).

Type: unsigned integer, meaning >=0

Default:

```
8
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.game.restrictSpectators
Whether to restrict access to information such as health, ammo and armour in spectator mode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.game.scoreLimit
The score limit needed to win a round.

Type: unsigned integer, meaning >=0

Default:

```
20
```

Example:

```
400
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.game.swapTeams
Whether to swap teams each round.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.game.timeLimit
Time limit of the game. In cases of equal points, there will be sudden death. Setting this to 0 disables a time limit.

Type: unsigned integer, meaning >=0

Default:

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.game.tournamentMode
Whether to enable tournament mode. In tournament mode, players join as spectators. If this is set to ‘restrictSpectators’, tournament mode is enabled but spectator chat is restricted.

Type: one of “disable”, “enable”, “restrictSpectators”

Default:

```
"disable"
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.game.voteKickBanTime
The amount of minutes that a player is banned for if they get kicked by a vote.

Type: unsigned integer, meaning >=0

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.game.voteKickMinimumPlayers

The minimum amount of players required to start a kick vote.

Type: unsigned integer, meaning >=0

Default:

```
5
```

Declared by:

<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.motd

The server's message of the day text.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.name

Name of the server.

Type: string

Default:

```
"unnamed server"
```

Declared by:

<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.openPorts

Whether to open firewall ports for Teeworlds.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.password

Password to connect to the server.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.port

Port the server will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8303
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.rconPassword
Password to access the remote console. If not set, a randomly generated one is displayed in the server log.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.register
Whether the server registers as a public server in the global server list. This is disabled by default for privacy reasons.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.server.enableHighBandwidth
Whether to enable high bandwidth mode on LAN servers. This will double the amount of bandwidth required for running the server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.server.enableSpamProtection
Whether to enable chat spam protection.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.server.bindAddr
The address the server will bind to.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.server.hostName
Hostname for the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.server.inactivePenalty
Specify what to do when a client goes inactive (see **services.teeworlds.server.inactiveTime**).

- ‘spectator’: send the client into spectator mode
- ‘spectator/kick’: send the client into a free spectator slot, otherwise kick the client
- ‘kick’: kick the client

Type: one of “spectator”, “spectator/kick”, “kick”

Default:

```
"spectator/kick"
```

Example:

```
"spectator"
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.server.inactiveTime
The amount of minutes a client has to idle before it is considered inactive.

Type: unsigned integer, meaning >=0

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.server.kickInactiveSpectators
Whether to kick inactive spectators.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.server.maxClients
The maximum amount of clients that can be connected to the server at the same time.

Type: unsigned integer, meaning >=0

Default:

```
12
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.server.maxClientsPerIP
The maximum amount of clients with the same IP address that can be connected to the server at the same time.

Type: unsigned integer, meaning >=0

Default:

```
12
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.teeworlds.server.skillLevel
The skill level shown in the server browser.

Type: one of “casual”, “normal”, “competitive”

Default:

```
"normal"
```

Declared by:
<nixpkgs/nixos/modules/services/games/teeworlds.nix>

services.telegraf.enable
Whether to enable telegraf server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/telegraf.nix>

services.telegraf.package
The telegraf package to use.

Type: package

Default:

```
pkgs.telegraf
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/telegraf.nix>

services.telegraf.environmentFiles
File to load as environment file. Environment variables from this file will be interpolated into the config file using envsubst with this syntax: ‘$ENVIRONMENT’ or ‘${VARIABLE}’. This is useful to avoid putting secrets into the nix store.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
```

```
  "/run/keys/telegraf.env"
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/telegraf.nix>

services.telegraf.extraConfig

Extra configuration options for telegraf

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  inputs = {
    statsd = {
      delete_timings = true;
      service_address = ":8125";
    };
  };
  outputs = {
    influxdb = {
      database = "telegraf";
      urls = [
        "http://localhost:8086"
      ];
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/telegraf.nix>

services.telepathy.enable

Whether to enable Telepathy service, a communications framework that enables real−time communication via pluggable protocol backends.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/telepathy.nix>

services.teleport.enable

Whether to enable the Teleport service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/teleport.nix>

services.teleport.package
The teleport package to use.

Type: package

Default:

```
pkgs.teleport
```

Example:

```
teleport_11
```

Declared by:
<nixpkgs/nixos/modules/services/networking/teleport.nix>

services.teleport.diag.enable
Whether to enable endpoints for monitoring purposes.

See **https://goteleport.com/docs/setup/admin/troubleshooting/#troubleshooting/** .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/teleport.nix>

services.teleport.diag.addr
Metrics and diagnostics address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/teleport.nix>

services.teleport.diag.port
Metrics and diagnostics port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/teleport.nix>

services.teleport.insecure.enable
Whether to enable starting teleport in insecure mode.

This is dangerous! Sensitive information will be logged to console and certificates will not be verified. Proceed with caution!

Teleport starts with disabled certificate validation on Proxy Service, validation still occurs on Auth Service .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/teleport.nix>

services.teleport.settings
Contents of the *teleport.yaml* config file. The '--config' arguments will only be passed if this set is not empty.

See **https://goteleport.com/docs/setup/reference/config/**.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  teleport = {
    nodename = "client";
    advertise_ip = "192.168.1.2";
    auth_token = "60bdc117-8ff4-478d-95e4-9914597847eb";
    auth_servers = [ "192.168.1.1:3025" ];
    log.severity = "DEBUG";
  };
  ssh_service = {
    enabled = true;
    labels = {
      role = "client";
    };
  };
  proxy_service.enabled = false;
  auth_service.enabled = false;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/teleport.nix>

services.tempo.enable
Whether to enable Grafana Tempo.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/tracing/tempo.nix>

services.tempo.configFile

Specify a path to a configuration file that Tempo should use.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/tracing/tempo.nix>

services.tempo.extraFlags

Additional flags to pass to the ‘ExecStart=’ in ‘tempo.service’.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "-config.expand-env=true" ]
```

Declared by:

<nixpkgs/nixos/modules/services/tracing/tempo.nix>

services.tempo.settings

Specify the configuration for Tempo in Nix.

See **https://grafana.com/docs/tempo/latest/configuration/** for available options.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/tracing/tempo.nix>

services.temporal.enable

Whether to enable Temporal.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/temporal/default.nix>

services.temporal.package

The Temporal package to use.

Type: package

Default:

```
pkgs.temporal
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/temporal/default.nix>

services.temporal.dataDir
Data directory for Temporal. If you change this, you need to manually create the directory. You also need to create the 'temporal' user and group, or change **services.temporal.user** and **services.temporal.group** to existing ones with access to the directory.

Type: absolute path

Default:

```
"/var/lib/temporal"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/temporal/default.nix>

services.temporal.group
The group temporal runs as. Should be left at default unless you have very specific needs.

Type: string

Default:

```
"temporal"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/temporal/default.nix>

services.temporal.restartIfChanged
Automatically restart the service on config change. This can be set to false to defer restarts on a server or cluster. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/temporal/default.nix>

services.temporal.settings
Temporal configuration.

See **https://docs.temporal.io/references/configuration** for more information about Temporal configuration options

Type: open submodule of (YAML 1.1 value)

Declared by:
<nixpkgs/nixos/modules/services/cluster/temporal/default.nix>

services.temporal.user
The user Temporal runs as. Should be left at default unless you have very specific needs.

Type: string

Default:

```
"temporal"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/temporal/default.nix>

services.terraria.enable

If enabled, starts a Terraria server. The server can be connected to via ‘tmux −S ${config.services.terraria.dataDir}/terraria.sock attach’ for administration by users who are a part of the ‘terraria’ group (use ‘C−b d’ shortcut to detach again).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/games/terraria.nix>

services.terraria.package

The terraria package to use.

Type: package

Default:

```
pkgs.terraria-server
```

Declared by:

<nixpkgs/nixos/modules/services/games/terraria.nix>

services.terraria.autoCreatedWorldSize

Specifies the size of the auto−created world if ‘worldPath’ does not point to an existing world.

Type: one of “small”, “medium”, “large”

Default:

```
"medium"
```

Declared by:

<nixpkgs/nixos/modules/services/games/terraria.nix>

services.terraria.banListPath

The path to the ban list.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/games/terraria.nix>

services.terraria.dataDir

Path to variable state data directory for terraria.

Type: string

Default:

```
"/var/lib/terraria"
```

Example:

```
"/srv/terraria"
```

Declared by:

<nixpkgs/nixos/modules/services/games/terraria.nix>

services.terraria.maxPlayers

Sets the max number of players (between 1 and 255).

Type: 8 bit unsigned integer; between 0 and 255 (both inclusive)

Default:

```
255
```

Declared by:

<nixpkgs/nixos/modules/services/games/terraria.nix>

services.terraria.messageOfTheDay

Set the server message of the day text.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/games/terraria.nix>

services.terraria.noUPnP

Disables automatic Universal Plug and Play.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/games/terraria.nix>

services.terraria.openFirewall

Whether to open ports in the firewall

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/games/terraria.nix>

services.terraria.password

Sets the server password. Leave ‘null’ for no password.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/games/terraria.nix>

services.terraria.port

Specifies the port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7777
```

Declared by:
<nixpkgs/nixos/modules/services/games/terraria.nix>

services.terraria.secure
Adds additional cheat protection to the server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/terraria.nix>

services.terraria.worldPath
The path to the world file (‘.wld’) which should be loaded. If no world exists at this path, one will be created with the size specified by ‘autoCreatedWorldSize’.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/games/terraria.nix>

services.tetrd.enable
Whether to enable tetrd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tetrd.nix>

services.tftpd.enable
Whether to enable tftpd, a Trivial File Transfer Protocol server. The server will be run as an xinetd service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tftpd.nix>

services.tftpd.path
Where the tftp server files are stored.

Type: absolute path

Default:

```
"/srv/tftp"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tftpd.nix>

services.thanos.package
The thanos package to use.

Type: package

Default:

```
pkgs.thanos
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.enable
Whether to enable the Thanos compactor which continuously compacts blocks in an object store bucket.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.arguments
Arguments to the ‘thanos compact’ command.

Defaults to a list of arguments formed by converting the structured options of **services.thanos.compact** to a list of arguments.

Overriding this option will cause none of the structured options to have any effect. So only set this if you know what you’re doing!

Type: list of string

Default: calculated from config.services.thanos.compact

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.compact.concurrency
Number of goroutines to use when compacting groups.

Defaults to ‘1’ in Thanos when set to ‘null’.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.consistency−delay
Minimum age of fresh (non−compacted) blocks before they are being processed. Malformed blocks older than the maximum of consistency−delay and 30m0s will be removed.

Defaults to ‘30m’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.downsampling.disable
Disables downsampling.

This is not recommended as querying long time ranges without non−downsampled data is not efficient and useful e.g it is not possible to render all samples for a human eye anyway

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.http−address
Listen ‘host:port’ for HTTP endpoints.

Defaults to ‘0.0.0.0:10902’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.log.format
Log format to use.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.log.level
Log filtering level.

Defaults to ‘info’ in Thanos when set to ‘null’.

Type: null or one of “debug”, “info”, “warn”, “error”, “fatal”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.objstore.config
Object store configuration.

When not ‘null’ the attribute set gets converted to a YAML file and stored in the Nix store. The option **objstore.config−file** will default to its path.

If **objstore.config−file** is set this option has no effect.

See format details: **https://thanos.io/tip/thanos/storage.md/#configuring−access−to−object−storage**

Type: YAML 1.1 value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.objstore.config−file
Path to YAML file that contains object store configuration.

See format details: **https://thanos.io/tip/thanos/storage.md/#configuring−access−to−object−storage**

Type: null or string

Default:

```
if config.services.thanos.<cmd>.objstore.config == null then null
else toString (format.generate "objstore.yaml" config.services.than \
os.<cmd>.objstore.config);
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.retention.resolution−1h
How long to retain samples of resolution 2 (1 hour) in bucket.

‘0d’ − disables this retention

Defaults to ‘0d’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.retention.resolution−5m
How long to retain samples of resolution 1 (5 minutes) in bucket.

‘0d’ − disables this retention

Defaults to ‘0d’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.retention.resolution−raw
How long to retain raw samples in bucket.

‘0d’ − disables this retention

Defaults to ‘0d’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.startAt
When this option is set to a ‘systemd.time’ specification the Thanos compactor will run at the specified period.

When this option is ‘null’ the Thanos compactor service will run continuously. So it will not exit after all compactions have been processed but wait for new work.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.stateDir
Data directory relative to ‘/var/lib’ in which to cache blocks and process compactions.

Type: string

Default:

```
"thanos-compact"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.tracing.config
Tracing configuration.

When not ‘null’ the attribute set gets converted to a YAML file and stored in the Nix store. The option **tracing.config-file** will default to its path.

If **tracing.config-file** is set this option has no effect.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: YAML 1.1 value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.compact.tracing.config-file
Path to YAML file that contains tracing configuration.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: null or string

Default:

```
if config.services.thanos.<cmd>.tracing.config == null then null
else toString (format.generate "tracing.yaml" config.services.thano \
s.<cmd>.tracing.config);
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.downsample.enable

Whether to enable the Thanos downsampler which continuously downsamples blocks in an object store bucket.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.downsample.arguments

Arguments to the ‘thanos downsample’ command.

Defaults to a list of arguments formed by converting the structured options of **services.thanos.downsample** to a list of arguments.

Overriding this option will cause none of the structured options to have any effect. So only set this if you know what you’re doing!

Type: list of string

Default: calculated from config.services.thanos.downsample

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.downsample.log.format

Log format to use.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.downsample.log.level

Log filtering level.

Defaults to ‘info’ in Thanos when set to ‘null’.

Type: null or one of “debug”, “info”, “warn”, “error”, “fatal”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.downsample.objstore.config

Object store configuration.

When not ‘null’ the attribute set gets converted to a YAML file and stored in the Nix store. The option **objstore.config−file** will default to its path.

If **objstore.config−file** is set this option has no effect.

See format details: **https://thanos.io/tip/thanos/storage.md/#configuring−access−to−object−storage**

Type: YAML 1.1 value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.downsample.objstore.config−file
Path to YAML file that contains object store configuration.

See format details: **https://thanos.io/tip/thanos/storage.md/#configuring−access−to−object−storage**

Type: null or string

Default:

```
if config.services.thanos.<cmd>.objstore.config == null then null
else toString (format.generate "objstore.yaml" config.services.than \
os.<cmd>.objstore.config);
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.downsample.stateDir
Data directory relative to '/var/lib' in which to cache blocks and process downsamplings.

Type: string

Default:

```
"thanos−downsample"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.downsample.tracing.config
Tracing configuration.

When not 'null' the attribute set gets converted to a YAML file and stored in the Nix store. The option **tracing.config−file** will default to its path.

If **tracing.config−file** is set this option has no effect.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: YAML 1.1 value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.downsample.tracing.config−file
Path to YAML file that contains tracing configuration.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: null or string

Default:

```
if config.services.thanos.<cmd>.tracing.config == null then null
else toString (format.generate "tracing.yaml" config.services.thano \
s.<cmd>.tracing.config);
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.enable
Whether to enable the Thanos query node exposing PromQL enabled Query API with data retrieved from multiple store nodes.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.arguments
Arguments to the ‘thanos query’ command.

Defaults to a list of arguments formed by converting the structured options of **services.thanos.query** to a list of arguments.

Overriding this option will cause none of the structured options to have any effect. So only set this if you know what you’re doing!

Type: list of string

Default: calculated from config.services.thanos.query

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.endpoints
Addresses of statically configured Thanos API servers (repeatable).

The scheme may be prefixed with ‘dns+’ or ‘dnssrv+’ to detect Thanos API servers through respective DNS lookups.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.grpc−address
Listen ‘ip:port’ address for gRPC endpoints (StoreAPI).

Make sure this address is routable from other components.

Defaults to ‘0.0.0.0:10901’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.grpc−client−server−name
Server name to verify the hostname on the returned gRPC certificates. See **https://tools.ietf.org/html/rfc4366#section−3.1**

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.grpc−client−tls−ca
TLS CA Certificates to use to verify gRPC servers

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.grpc−client−tls−cert
TLS Certificates to use to identify this client to the server

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.grpc−client−tls−key
TLS Key for the client's certificate

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.grpc−client−tls−secure
Use TLS when talking to the gRPC server

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.grpc−compression
Compression algorithm to use for gRPC requests to other clients.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.grpc−server−tls−cert
TLS Certificate for gRPC server, leave blank to disable TLS

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.grpc−server−tls−client−ca
TLS CA to verify clients against.

If no client CA is specified, there is no client verification on server side. (tls.NoClientCert)

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.grpc−server−tls−key
TLS Key for the gRPC server, leave blank to disable TLS

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.http−address
Listen ‘host:port’ for HTTP endpoints.

Defaults to ‘0.0.0.0:10902’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.log.format
Log format to use.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.log.level

Log filtering level.

Defaults to ‘info’ in Thanos when set to ‘null’.

Type: null or one of “debug”, “info”, “warn”, “error”, “fatal”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.query.auto−downsampling

Enable automatic adjustment (step / 5) to what source of data should be used in store gateways if no ‘max_source_resolution’ param is specified.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.query.default−evaluation−interval

Set default evaluation interval for sub queries.

Defaults to ‘1m’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.query.max−concurrent

Maximum number of queries processed concurrently by query node.

Defaults to ‘20’ in Thanos when set to ‘null’.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.query.partial−response

Enable partial response for queries if no ‘partial_response’ param is specified.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.query.replica−labels

Labels to treat as a replica indicator along which data is deduplicated.

Still you will be able to query without deduplication using ‘dedup=false’ parameter. Data includes time series, recording rules, and alerting rules.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.query.timeout

Maximum time to process query by query node.

Defaults to ‘2m’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.selector−labels

Query selector labels that will be exposed in info endpoint.

Type: attribute set of string

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.store.response−timeout

If a Store doesn’t send any data in this specified duration then a Store will be ignored and partial data will be returned if it’s enabled. ‘0’ disables timeout.

Defaults to ‘0ms’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.store.sd−dns−interval

Interval between DNS resolutions.

Defaults to ‘30s’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.store.sd−files
Path to files that contain addresses of store API servers. The path can be a glob pattern.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.store.sd−interval
Refresh interval to re−read file SD files. It is used as a resync fallback.

Defaults to ‘5m’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.store.unhealthy−timeout
Timeout before an unhealthy store is cleaned from the store UI page.

Defaults to ‘5m’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.tracing.config
Tracing configuration.

When not ‘null’ the attribute set gets converted to a YAML file and stored in the Nix store. The option **tracing.config−file** will default to its path.

If **tracing.config−file** is set this option has no effect.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: YAML 1.1 value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.tracing.config−file
Path to YAML file that contains tracing configuration.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: null or string

Default:

```
if config.services.thanos.<cmd>.tracing.config == null then null
else toString (format.generate "tracing.yaml" config.services.thano \
s.<cmd>.tracing.config);
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.web.external−prefix
Static prefix for all HTML links and redirect URLs in the UI query web interface.

Actual endpoints are still served on / or the **web.route−prefix**. This allows thanos UI to be served behind a reverse proxy that strips a URL sub−path.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.web.prefix−header
Name of HTTP request header used for dynamic prefixing of UI links and redirects.

This option is ignored if the option ‘web.external−prefix’ is set.

Security risk: enable this option only if a reverse proxy in front of thanos is resetting the header.

The setting ‘web.prefix−header="X−Forwarded−Prefix"’ can be useful, for example, if Thanos UI is served via Traefik reverse proxy with ‘PathPrefixStrip’ option enabled, which sends the stripped prefix value in ‘X−Forwarded−Prefix’ header. This allows thanos UI to be served on a sub−path.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query.web.route−prefix
Prefix for API and UI endpoints.

This allows thanos UI to be served on a sub−path. This option is analogous to **web.route−prefix** of Promethus.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query−frontend.enable
Whether to enable the Thanos query frontend implements a service deployed in front of queriers to improve query parallelization and caching…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query−frontend.arguments
Arguments to the ‘thanos query−frontend’ command.

Defaults to a list of arguments formed by converting the structured options of **services.thanos.query−frontend** to a list of arguments.

Overriding this option will cause none of the structured options to have any effect. So only set this if you know what you’re doing!

Type: list of string

Default: calculated from config.services.thanos.query−frontend

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query−frontend.grpc−address
Listen ‘ip:port’ address for gRPC endpoints (StoreAPI).

Make sure this address is routable from other components.

Defaults to ‘0.0.0.0:10901’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query−frontend.grpc−server−tls−cert
TLS Certificate for gRPC server, leave blank to disable TLS

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query−frontend.grpc−server−tls−client−ca
TLS CA to verify clients against.

If no client CA is specified, there is no client verification on server side. (tls.NoClientCert)

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query−frontend.grpc−server−tls−key
TLS Key for the gRPC server, leave blank to disable TLS

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query−frontend.http−address
Listen ‘host:port’ for HTTP endpoints.

Defaults to ‘0.0.0.0:10902’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query−frontend.log.format
Log format to use.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query−frontend.log.level
Log filtering level.

Defaults to ‘info’ in Thanos when set to ‘null’.

Type: null or one of “debug”, “info”, “warn”, “error”, “fatal”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query−frontend.query−frontend.downstream−url
URL of downstream Prometheus Query compatible API.

Defaults to ‘http://localhost:9090’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query−frontend.tracing.config
Tracing configuration.

When not ‘null’ the attribute set gets converted to a YAML file and stored in the Nix store. The option **tracing.config−file** will default to its path.

If **tracing.config−file** is set this option has no effect.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: YAML 1.1 value

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.query−frontend.tracing.config−file

Path to YAML file that contains tracing configuration.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: null or string

Default:

```
if config.services.thanos.<cmd>.tracing.config == null then null
else toString (format.generate "tracing.yaml" config.services.thano \
s.<cmd>.tracing.config);
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.enable

Whether to enable the Thanos receiver which accept Prometheus remote write API requests and write to local tsdb.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.arguments

Arguments to the ‘thanos receive’ command.

Defaults to a list of arguments formed by converting the structured options of **services.thanos.receive** to a list of arguments.

Overriding this option will cause none of the structured options to have any effect. So only set this if you know what you’re doing!

Type: list of string

Default: calculated from config.services.thanos.receive

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.grpc−address

Listen ‘ip:port’ address for gRPC endpoints (StoreAPI).

Make sure this address is routable from other components.

Defaults to ‘0.0.0.0:10901’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.grpc−server−tls−cert
TLS Certificate for gRPC server, leave blank to disable TLS

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.grpc−server−tls−client−ca
TLS CA to verify clients against.

If no client CA is specified, there is no client verification on server side. (tls.NoClientCert)

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.grpc−server−tls−key
TLS Key for the gRPC server, leave blank to disable TLS

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.http−address
Listen ‘host:port’ for HTTP endpoints.

Defaults to ‘0.0.0.0:10902’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.labels
External labels to announce.

This flag will be removed in the future when handling multiple tsdb instances is added.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.log.format

Log format to use.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.log.level

Log filtering level.

Defaults to ‘info’ in Thanos when set to ‘null’.

Type: null or one of “debug”, “info”, “warn”, “error”, “fatal”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.objstore.config

Object store configuration.

When not ‘null’ the attribute set gets converted to a YAML file and stored in the Nix store. The option **objstore.config−file** will default to its path.

If **objstore.config−file** is set this option has no effect.

See format details: **https://thanos.io/tip/thanos/storage.md/#configuring−access−to−object−storage**

Type: YAML 1.1 value

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.objstore.config−file

Path to YAML file that contains object store configuration.

See format details: **https://thanos.io/tip/thanos/storage.md/#configuring−access−to−object−storage**

Type: null or string

Default:

```
if config.services.thanos.<cmd>.objstore.config == null then null
else toString (format.generate "objstore.yaml" config.services.than \
os.<cmd>.objstore.config);
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.receive.grpc−compression

Compression algorithm to use for gRPC requests to other receivers.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.remote−write.address
Address to listen on for remote write requests.

Defaults to '0.0.0.0:19291' in Thanos when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.stateDir
Data directory relative to '/var/lib' of TSDB.

Type: string

Default:

```
"thanos-receive"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.tracing.config
Tracing configuration.

When not 'null' the attribute set gets converted to a YAML file and stored in the Nix store. The option **tracing.config−file** will default to its path.

If **tracing.config−file** is set this option has no effect.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: YAML 1.1 value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.tracing.config−file
Path to YAML file that contains tracing configuration.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: null or string

Default:

```
if config.services.thanos.<cmd>.tracing.config == null then null
else toString (format.generate "tracing.yaml" config.services.thano \
s.<cmd>.tracing.config);
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.receive.tsdb.retention

How long to retain raw samples on local storage.

'0d' − disables this retention

Defaults to '15d' in Thanos when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.enable

Whether to enable the Thanos ruler service which evaluates Prometheus rules against given Query nodes, exposing Store API and storing old blocks in bucket.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.alert.label−drop

Labels by name to drop before sending to alertmanager.

This allows alert to be deduplicated on replica label.

Similar Prometheus alert relabelling

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.alert.query−url

The external Thanos Query URL that would be set in all alerts 'Source' field.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.alertmanagers.send−timeout

Timeout for sending alerts to alertmanager.

Defaults to '10s' in Thanos when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.alertmanagers.urls
Alertmanager replica URLs to push firing alerts.

Ruler claims success if push to at least one alertmanager from discovered succeeds. The scheme may be prefixed with 'dns+' or 'dnssrv+' to detect Alertmanager IPs through respective DNS lookups. The port defaults to '9093' or the SRV record's value. The URL path is used as a prefix for the regular Alertmanager API path.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.arguments
Arguments to the 'thanos rule' command.

Defaults to a list of arguments formed by converting the structured options of **services.thanos.rule** to a list of arguments.

Overriding this option will cause none of the structured options to have any effect. So only set this if you know what you're doing!

Type: list of string

Default: calculated from config.services.thanos.rule

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.eval−interval
The default evaluation interval to use.

Defaults to '1m' in Thanos when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.grpc−address
Listen 'ip:port' address for gRPC endpoints (StoreAPI).

Make sure this address is routable from other components.

Defaults to '0.0.0.0:10901' in Thanos when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.grpc−server−tls−cert

TLS Certificate for gRPC server, leave blank to disable TLS

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.grpc−server−tls−client−ca

TLS CA to verify clients against.

If no client CA is specified, there is no client verification on server side. (tls.NoClientCert)

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.grpc−server−tls−key

TLS Key for the gRPC server, leave blank to disable TLS

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.http−address

Listen ‘host:port’ for HTTP endpoints.

Defaults to ‘0.0.0.0:10902’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.labels

Labels to be applied to all generated metrics.

Similar to external labels for Prometheus, used to identify ruler and its blocks as unique source.

Type: attribute set of string

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.log.format

Log format to use.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.log.level

Log filtering level.

Defaults to ‘info’ in Thanos when set to ‘null’.

Type: null or one of “debug”, “info”, “warn”, “error”, “fatal”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.objstore.config

Object store configuration.

When not ‘null’ the attribute set gets converted to a YAML file and stored in the Nix store. The option **objstore.config−file** will default to its path.

If **objstore.config−file** is set this option has no effect.

See format details: **https://thanos.io/tip/thanos/storage.md/#configuring−access−to−object−storage**

Type: YAML 1.1 value

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.objstore.config−file

Path to YAML file that contains object store configuration.

See format details: **https://thanos.io/tip/thanos/storage.md/#configuring−access−to−object−storage**

Type: null or string

Default:

```
if config.services.thanos.<cmd>.objstore.config == null then null
else toString (format.generate "objstore.yaml" config.services.than \
os.<cmd>.objstore.config);
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.query.addresses

Addresses of statically configured query API servers.

The scheme may be prefixed with ‘dns+’ or ‘dnssrv+’ to detect query API servers through respective DNS lookups.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.query.sd−dns−interval
Interval between DNS resolutions.

Defaults to ‘30s’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.query.sd−files
Path to file that contain addresses of query peers. The path can be a glob pattern.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.query.sd−interval
Refresh interval to re−read file SD files. (used as a fallback)

Defaults to ‘5m’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.rule−files
Rule files that should be used by rule manager. Can be in glob format.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.stateDir
Data directory relative to ‘/var/lib’.

Type: string

Default:

```
"thanos−rule"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.tracing.config

Tracing configuration.

When not ‘null’ the attribute set gets converted to a YAML file and stored in the Nix store. The option **tracing.config−file** will default to its path.

If **tracing.config−file** is set this option has no effect.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: YAML 1.1 value

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.tracing.config−file

Path to YAML file that contains tracing configuration.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: null or string

Default:

```
if config.services.thanos.<cmd>.tracing.config == null then null
else toString (format.generate "tracing.yaml" config.services.thano \
s.<cmd>.tracing.config);
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.tsdb.block−duration

Block duration for TSDB block.

Defaults to ‘2h’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.tsdb.retention

Block retention time on local disk.

Defaults to ‘48h’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.web.external−prefix

Static prefix for all HTML links and redirect URLs in the UI query web interface.

Actual endpoints are still served on / or the **web.route−prefix**. This allows thanos UI to be served behind a reverse proxy that strips a URL sub−path.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.web.prefix−header
Name of HTTP request header used for dynamic prefixing of UI links and redirects.

This option is ignored if the option **web.external−prefix** is set.

Security risk: enable this option only if a reverse proxy in front of thanos is resetting the header.

The header ‘X−Forwarded−Prefix’ can be useful, for example, if Thanos UI is served via Traefik reverse proxy with ‘PathPrefixStrip’ option enabled, which sends the stripped prefix value in ‘X−Forwarded−Prefix’ header. This allows thanos UI to be served on a sub−path.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.rule.web.route−prefix
Prefix for API and UI endpoints.

This allows thanos UI to be served on a sub−path.

This option is analogous to ‘−−web.route−prefix’ of Promethus.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.enable
Whether to enable the Thanos sidecar for Prometheus server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.arguments
Arguments to the ‘thanos sidecar’ command.

Defaults to a list of arguments formed by converting the structured options of **services.thanos.sidecar** to a list of arguments.

Overriding this option will cause none of the structured options to have any effect. So only set this if you know what you’re doing!

Type: list of string

Default: calculated from config.services.thanos.sidecar

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.grpc−address
Listen ‘ip:port’ address for gRPC endpoints (StoreAPI).

Make sure this address is routable from other components.

Defaults to ‘0.0.0.0:10901’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.grpc−server−tls−cert
TLS Certificate for gRPC server, leave blank to disable TLS

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.grpc−server−tls−client−ca
TLS CA to verify clients against.

If no client CA is specified, there is no client verification on server side. (tls.NoClientCert)

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.grpc−server−tls−key
TLS Key for the gRPC server, leave blank to disable TLS

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.http−address
Listen ‘host:port’ for HTTP endpoints.

Defaults to ‘0.0.0.0:10902’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.log.format
Log format to use.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.log.level
Log filtering level.

Defaults to ‘info’ in Thanos when set to ‘null’.

Type: null or one of “debug”, “info”, “warn”, “error”, “fatal”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.objstore.config
Object store configuration.

When not ‘null’ the attribute set gets converted to a YAML file and stored in the Nix store. The option **objstore.config−file** will default to its path.

If **objstore.config−file** is set this option has no effect.

See format details: **https://thanos.io/tip/thanos/storage.md/#configuring−access−to−object−storage**

Type: YAML 1.1 value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.objstore.config−file
Path to YAML file that contains object store configuration.

See format details: **https://thanos.io/tip/thanos/storage.md/#configuring−access−to−object−storage**

Type: null or string

Default:

```
if config.services.thanos.<cmd>.objstore.config == null then null
else toString (format.generate "objstore.yaml" config.services.than \
os.<cmd>.objstore.config);
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.prometheus.url
URL at which to reach Prometheus's API.

For better performance use local network.

Defaults to 'http://localhost:9090' in Thanos when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.reloader.config−envsubst−file
Output file for environment variable substituted config file.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.reloader.config−file
Config file watched by the reloader.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.reloader.rule−dirs
Rule directories for the reloader to refresh.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.tracing.config
Tracing configuration.

When not 'null' the attribute set gets converted to a YAML file and stored in the Nix store. The option **tracing.config−file** will default to its path.

If **tracing.config−file** is set this option has no effect.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: YAML 1.1 value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.tracing.config−file
Path to YAML file that contains tracing configuration.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: null or string

Default:

```
if config.services.thanos.<cmd>.tracing.config == null then null
else toString (format.generate "tracing.yaml" config.services.thano \
s.<cmd>.tracing.config);
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.sidecar.tsdb.path
Data directory of TSDB.

Type: string

Default:

```
"/var/lib/${config.services.prometheus.stateDir}/data"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.enable
Whether to enable the Thanos store node giving access to blocks in a bucket provider.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.arguments
Arguments to the ‘thanos store’ command.

Defaults to a list of arguments formed by converting the structured options of **services.thanos.store** to a list of arguments.

Overriding this option will cause none of the structured options to have any effect. So only set this if you know what you’re doing!

Type: list of string

Default: calculated from config.services.thanos.store

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.block−sync−concurrency

Number of goroutines to use when syncing blocks from object storage.

Defaults to ‘20’ in Thanos when set to ‘null’.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.chunk−pool−size

Maximum size of concurrently allocatable bytes for chunks.

Defaults to ‘2GB’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.grpc−address

Listen ‘ip:port’ address for gRPC endpoints (StoreAPI).

Make sure this address is routable from other components.

Defaults to ‘0.0.0.0:10901’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.grpc−server−tls−cert

TLS Certificate for gRPC server, leave blank to disable TLS

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.grpc−server−tls−client−ca

TLS CA to verify clients against.

If no client CA is specified, there is no client verification on server side. (tls.NoClientCert)

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.grpc−server−tls−key
TLS Key for the gRPC server, leave blank to disable TLS

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.http−address
Listen ‘host:port’ for HTTP endpoints.

Defaults to ‘0.0.0.0:10902’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.index−cache−size
Maximum size of items held in the index cache.

Defaults to ‘250MB’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.log.format
Log format to use.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.log.level
Log filtering level.

Defaults to ‘info’ in Thanos when set to ‘null’.

Type: null or one of “debug”, “info”, “warn”, “error”, “fatal”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.max−time

End of time range limit to serve.

Thanos Store serves only blocks, which happened earlier than this value. Option can be a constant time in RFC3339 format or time duration relative to current time, such as −1d or 2h45m. Valid duration units are ms, s, m, h, d, w, y.

Defaults to ‘9999−12−31T23:59:59Z’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.min−time

Start of time range limit to serve.

Thanos Store serves only metrics, which happened later than this value. Option can be a constant time in RFC3339 format or time duration relative to current time, such as −1d or 2h45m. Valid duration units are ms, s, m, h, d, w, y.

Defaults to ‘0000−01−01T00:00:00Z’ in Thanos when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.objstore.config

Object store configuration.

When not ‘null’ the attribute set gets converted to a YAML file and stored in the Nix store. The option **objstore.config−file** will default to its path.

If **objstore.config−file** is set this option has no effect.

See format details: **https://thanos.io/tip/thanos/storage.md/#configuring−access−to−object−storage**

Type: YAML 1.1 value

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.objstore.config−file

Path to YAML file that contains object store configuration.

See format details: **https://thanos.io/tip/thanos/storage.md/#configuring−access−to−object−storage**

Type: null or string

Default:

```
if config.services.thanos.<cmd>.objstore.config == null then null
else toString (format.generate "objstore.yaml" config.services.than \
os.<cmd>.objstore.config);
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.stateDir
Data directory relative to '/var/lib' in which to cache remote blocks.

Type: string

Default:

```
"thanos-store"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.store.grpc.series-max-concurrency
Maximum number of concurrent Series calls.

Defaults to '20' in Thanos when set to 'null'.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.store.limits.request-samples
The maximum samples allowed for a single Series request. The Series call fails if this limit is exceeded.

'0' means no limit.

NOTE: For efficiency the limit is internally implemented as 'chunks limit' considering each chunk contains a maximum of 120 samples.

Defaults to '0' in Thanos when set to 'null'.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.sync-block-duration
Repeat interval for syncing the blocks between local and remote view.

Defaults to '3m' in Thanos when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.tracing.config
Tracing configuration.

When not 'null' the attribute set gets converted to a YAML file and stored in the Nix store. The option **tracing.config-file** will default to its path.

If **tracing.config-file** is set this option has no effect.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: YAML 1.1 value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thanos.store.tracing.config−file
Path to YAML file that contains tracing configuration.

See format details: **https://thanos.io/tip/thanos/tracing.md/#configuration**

Type: null or string

Default:

```
if config.services.thanos.<cmd>.tracing.config == null then null
else toString (format.generate "tracing.yaml" config.services.thano \
s.<cmd>.tracing.config);
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/thanos.nix>

services.thelounge.enable
Whether to enable The Lounge web IRC client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/thelounge.nix>

services.thelounge.package
The thelounge package to use.

Type: package

Default:

```
pkgs.thelounge
```

Declared by:
<nixpkgs/nixos/modules/services/networking/thelounge.nix>

services.thelounge.extraConfig
The Lounge's *config.js* contents as attribute set (will be converted to JSON to generate the configuration file).

The options defined here will be merged to the default configuration file. Note: In case of duplicate configuration, options from **extraConfig** have priority.

Documentation: **https://thelounge.chat/docs/server/configuration**

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  reverseProxy = true;
  defaults = {
    name = "Your Network";
    host = "localhost";
    port = 6697;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/thelounge.nix>

services.thelounge.plugins
The Lounge plugins to install. Plugins can be found in ‘pkgs.theLoungePlugins.plugins’ and ‘pkgs.theLoungePlugins.themes’.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.theLoungePlugins.themes.solarized ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/thelounge.nix>

services.thelounge.port
TCP port to listen on for http connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/thelounge.nix>

services.thelounge.public
Make your The Lounge instance public. Setting this to ‘false’ will require you to configure user accounts by using the (**thelounge**) command or by adding entries in */var/lib/thelounge/users*. You might need to restart The Lounge after making changes to the state directory.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/thelounge.nix>

services.thermald.enable
Whether to enable thermald, the temperature management daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/thermald.nix>

services.thermald.package
The thermald package to use.

Type: package

Default:

```
pkgs.thermald
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/thermald.nix>

services.thermald.configFile
The thermald manual configuration file.

Leave unspecified to run with the '−−adaptive' flag instead which will have thermald use your computer's DPTF adaptive tables.

See 'man thermald' for more information.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/thermald.nix>

services.thermald.debug
Whether to enable debug logging.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/thermald.nix>

services.thermald.ignoreCpuidCheck
Whether to ignore the cpuid check to allow running on unsupported platforms

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/thermald.nix>

services.thinkfan.enable
Whether to enable thinkfan, a fan control program.

Note
This module targets IBM/Lenovo thinkpads by default, for other hardware you will have configure it more carefully.

Type: boolean

Default:

```
false
```

Related packages:

- ‘pkgs.thinkfan’

Declared by:

<nixpkgs/nixos/modules/services/hardware/thinkfan.nix>

services.thinkfan.extraArgs

A list of extra command line arguments to pass to thinkfan. Check the **thinkfan**(1) manpage for available arguments.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-b"
  "0"
]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/thinkfan.nix>

services.thinkfan.fans

List of fans thinkfan will control.

Note

This section slightly departs from the thinkfan.conf syntax. The type and path must be specified like this:

```
type = "tpacpi";
query = "/proc/acpi/ibm/fan";
```

instead of a single declaration like:

```
- tpacpi: /proc/acpi/ibm/fan
```

Type: list of (open submodule of attribute set of (YAML 1.1 value))

Default:

```
[
  {
    query = "/proc/acpi/ibm/fan";
    type = "tpacpi";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/thinkfan.nix>

services.thinkfan.fans.*.indices

A list of fans to pick in case multiple fans match the query.

Note

Indices start from 0.

Type: null or (list of (unsigned integer, meaning >=0))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/thinkfan.nix>

services.thinkfan.fans.*.query
The query string used to match one or more fans: can be a fullpath to the temperature file (single fan) or a fullpath to a driver directory (multiple fans).

Note
When multiple fans match, the query can be restricted using the **name** or **indices** options.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/hardware/thinkfan.nix>

services.thinkfan.fans.*.type
The fan type, can be ‘hwmon’ for standard fans,

‘atasmart’ to read the temperature via S.M.A.R.T (requires smartSupport to be enabled),

‘tpacpi’ for the legacy thinkpac_acpi driver, or

‘nvml’ for the (proprietary) nVidia driver.

Type: one of “hwmon”, “atasmart”, “tpacpi”, “nvml”

Declared by:
<nixpkgs/nixos/modules/services/hardware/thinkfan.nix>

services.thinkfan.levels
[LEVEL LOW HIGH]

LEVEL is the fan level to use: it can be an integer (0−7 with thinkpad_acpi), “level auto” (to keep the default firmware behavior), “level full−speed” or “level disengaged” (to run the fan as fast as possible). LOW is the temperature at which to step down to the previous level. HIGH is the temperature at which to step up to the next level. All numbers are integers.

Type: list of (tuple of (unsigned integer, meaning >=0, or one of “level auto”, “level full−speed”, “level disengaged”) (unsigned integer, meaning >=0) (unsigned integer, meaning >=0))

Default:

```
[
  [
    0
    0
    55
  ]
  [
    1
    48
    60
  ]
  [
    2
    50
    61
  ]
  [
    3
    52
    63
```

```
    ]
    [
      6
      56
      65
    ]
    [
      7
      60
      85
    ]
    [
      "level auto"
      80
      32767
    ]
  ]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/thinkfan.nix>

services.thinkfan.sensors

List of temperature sensors thinkfan will monitor.

Note

This section slightly departs from the thinkfan.conf syntax. The type and path must be specified like this:

```
type = "tpacpi";
query = "/proc/acpi/ibm/thermal";
```

instead of a single declaration like:

```
- tpacpi: /proc/acpi/ibm/thermal
```

Type: list of (open submodule of attribute set of (YAML 1.1 value))

Default:

```
[
  {
    query = "/proc/acpi/ibm/thermal";
    type = "tpacpi";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/thinkfan.nix>

services.thinkfan.sensors.*.correction

A list of values to be added to the temperature of each sensor, can be used to equalize small discrepancies in temperature ratings.

Type: null or (list of signed integer)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/thinkfan.nix>

services.thinkfan.sensors.*.indices
A list of sensors to pick in case multiple sensors match the query.

Note
Indices start from 0.

Type: null or (list of (unsigned integer, meaning >=0))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/thinkfan.nix>

services.thinkfan.sensors.*.query
The query string used to match one or more sensors: can be a fullpath to the temperature file (single sensor) or a fullpath to a driver directory (multiple sensors).

Note
When multiple sensors match, the query can be restricted using the **name** or **indices** options.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/hardware/thinkfan.nix>

services.thinkfan.sensors.*.type
The sensor type, can be ‘hwmon’ for standard sensors,

‘atasmart’ to read the temperature via S.M.A.R.T (requires smartSupport to be enabled),

‘tpacpi’ for the legacy thinkpac_acpi driver, or

‘nvml’ for the (proprietary) nVidia driver.

Type: one of “hwmon”, “atasmart”, “tpacpi”, “nvml”

Declared by:
<nixpkgs/nixos/modules/services/hardware/thinkfan.nix>

services.thinkfan.settings
Thinkfan settings. Use this option to configure thinkfan settings not exposed in a NixOS option or to bypass one. Before changing this, read the **thinkfan.conf**(5) manpage and take a look at the example config file at **https://github.com/vmatare/thinkfan/blob/master/examples/thinkfan.yaml**

Type: attribute set of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/thinkfan.nix>

services.thinkfan.smartSupport
Whether to build thinkfan with S.M.A.R.T. support to read temperatures directly from hard disks.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/thinkfan.nix>

services.throttled.enable
Whether to enable fix for Intel CPU throttling.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/throttled.nix>

services.throttled.extraConfig
Alternative configuration

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/throttled.nix>

services.tiddlywiki.enable
Whether to enable TiddlyWiki nodejs server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tiddlywiki.nix>

services.tiddlywiki.listenOptions
Parameters passed to '--listen' command. Refer to **https://tiddlywiki.com/#WebServer** for details on supported values.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  credentials = "../credentials.csv";
  port = 3456;
  readers = "(authenticated)";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tiddlywiki.nix>

services.tigerbeetle.enable

Whether to enable TigerBeetle server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/databases/tigerbeetle.nix>

services.tigerbeetle.package

The tigerbeetle package to use.

Type: package

Default:

```
pkgs.tigerbeetle
```

Declared by:

<nixpkgs/nixos/modules/services/databases/tigerbeetle.nix>

services.tigerbeetle.addresses

The addresses of all replicas in the cluster. This should be a list of IPv4/IPv6 addresses with port numbers. Either the address or port number (but not both) may be omitted, in which case a default of 127.0.0.1 or 3001 will be used. The first address in the list corresponds to the address for replica 0, the second address for replica 1, and so on.

Type: list of non−empty string

Default:

```
[
  "3001"
]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/tigerbeetle.nix>

services.tigerbeetle.cacheGridSize

The grid cache size. The grid cache acts like a page cache for TigerBeetle. It is recommended to set this as large as possible.

Type: string matching the pattern [0−9]+(K|M|G)iB

Default:

```
"1GiB"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/tigerbeetle.nix>

services.tigerbeetle.clusterId

The 128−bit cluster ID used to create the replica data file (if needed). Since Nix only supports integers up to 64 bits, you need to pass a string to this if the cluster ID can’t fit in 64 bits. Otherwise, you can pass the cluster ID as either an integer or a string.

Type: unsigned integer, meaning >=0, or string matching the pattern [0−9]+

Default:

Declared by:
<nixpkgs/nixos/modules/services/databases/tigerbeetle.nix>

services.tigerbeetle.replicaCount
The number of replicas participating in replication of the cluster.

Type: unsigned integer, meaning >=0

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/databases/tigerbeetle.nix>

services.tigerbeetle.replicaIndex
The index (starting at 0) of the replica in the cluster.

Type: unsigned integer, meaning >=0

Default:

Declared by:
<nixpkgs/nixos/modules/services/databases/tigerbeetle.nix>

services.tika.enable
Whether to enable Apache Tika server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/search/tika.nix>

services.tika.enableOcr
Whether to enable OCR support by adding the ‘tesseract’ package as a dependency.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/search/tika.nix>

services.tika.package
The tika package to use.

Type: package

Default:

```
pkgs.tika
```

Declared by:
<nixpkgs/nixos/modules/services/search/tika.nix>

services.tika.configFile

The Apache Tika configuration (XML) file to use.

Type: null or absolute path

Default:

```
null
```

Example:

```
./tika/tika-config.xml
```

Declared by:
<nixpkgs/nixos/modules/services/search/tika.nix>

services.tika.listenAddress

The Apache Tika bind address.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/search/tika.nix>

services.tika.openFirewall

Whether to open the firewall for Apache Tika. This adds ‘services.tika.port’ to ‘networking.firewall.allowedTCPPorts’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/search/tika.nix>

services.tika.port

The Apache Tike port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9998
```

Declared by:
<nixpkgs/nixos/modules/services/search/tika.nix>

services.timekpr.enable

Whether to enable Timekpr−nExT, a screen time managing application that helps optimizing time spent at computer for your subordinates, children or even for yourself.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/timekpr.nix>

services.timekpr.package
The timekpr package to use.

Type: package

Default:

```
pkgs.timekpr
```

Declared by:
<nixpkgs/nixos/modules/services/security/timekpr.nix>

services.timekpr.adminUsers
All listed users will become part of the ‘timekpr’ group so they can manage timekpr settings without requiring sudo.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "alice"
  "bob"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/timekpr.nix>

services.timesyncd.enable
Enables the systemd NTP client daemon.

Type: boolean

Default:

```
!config.boot.isContainer
```

Declared by:
<nixpkgs/nixos/modules/system/boot/timesyncd.nix>

services.timesyncd.extraConfig
Extra config options for systemd−timesyncd. See **timesyncd.conf**(5) for available options.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  PollIntervalMaxSec=180
```

Declared by:
<nixpkgs/nixos/modules/system/boot/timesyncd.nix>

services.timesyncd.fallbackServers

The set of fallback NTP servers from which to synchronise.

Setting this option to an empty list will write ‘FallbackNTP=’ to the *timesyncd.conf* file as opposed to setting this option to null which will remove ‘FallbackNTP=’ entirely.

See **timesyncd.conf**(5) for details.

Type: null or (list of string)

Default:

```
config.networking.timeServers
```

Declared by:

<nixpkgs/nixos/modules/system/boot/timesyncd.nix>

services.timesyncd.servers

The set of NTP servers from which to synchronise.

Setting this option to an empty list will write ‘NTP=’ to the *timesyncd.conf* file as opposed to setting this option to null which will remove ‘NTP=’ entirely.

See **timesyncd.conf**(5) for details.

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/system/boot/timesyncd.nix>

services.tinc.networks

Defines the tinc networks which will be started. Each network invokes a different daemon.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.package

The tinc_pre package to use.

Type: package

Default:

```
pkgs.tinc_pre
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.bindToAddress

The ip address to bind to (both listen on and send packets from).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.chroot
Change process root directory to the directory where the config file is located (/etc/tinc/netname/), for added security. The chroot is performed after all the initialization is done, after writing pid files and opening network sockets.

Note that this currently breaks dns resolution and tinc can't run scripts anymore (such as tinc−down or host−up), unless it is setup to be runnable inside chroot environment.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.debugLevel
The amount of debugging information to add to the log. 0 means little logging while 5 is the most logging. **man tincd** for more details.

Type: integer between 0 and 5 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.ed25519PrivateKeyFile
Path of the private ed25519 keyfile.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.extraConfig
Extra lines to add to the tinc service configuration file.

Note that using the declarative **service.tinc.networks.<name>.settings** option is preferred.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.hostSettings
The name of the host in the network as well as the configuration for that host. This name should only contain alphanumerics and underscores.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  host1 = {
    addresses = [
      { address = "192.168.1.42"; }
      { address = "192.168.1.42"; port = 1655; }
    ];
    subnets = [ { address = "10.0.0.42"; } ];
    rsaPublicKey = "...";
    settings = {
      Ed25519PublicKey = "...";
    };
  };
  host2 = {
    subnets = [ { address = "10.0.1.0"; prefixLength = 24; weight = \
 2; } ];
    rsaPublicKey = "...";
    settings = {
      Compression = 10;
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.hostSettings.<name>.addresses

The external address where the host can be reached. This will set this host's **settings.Address** option.

This variable is only required if you want to connect to this host.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.hostSettings.<name>.addresses.*.address

The external IP address or hostname where the host can be reached.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.hostSettings.<name>.addresses.*.port

The port where the host can be reached.

If no port is specified, the default Port is used.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.hostSettings.<name>.rsaPublicKey

Legacy RSA public key of the host in PEM format, including start and end markers.

This will be appended as−is in the host's configuration file.

The ed25519 public key can be specified using the **settings.Ed25519PublicKey** option instead.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.hostSettings.<name>.settings

Configuration for this host.

See **https://tinc−vpn.org/documentation−1.1/Host−configuration−variables.html** for supported values.

Type: open submodule of attribute set of (boolean or string or signed integer or list of (boolean or string or signed integer))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.hostSettings.<name>.subnets

The subnets which this tinc daemon will serve. This will set this host's **settings.Subnet** option.

Tinc tries to look up which other daemon it should send a packet to by searching the appropriate subnet. If the packet matches a subnet, it will be sent to the daemon who has this subnet in his host configuration file.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.hostSettings.<name>.subnets.*.address

The subnet of this host.

Subnets can either be single MAC, IPv4 or IPv6 addresses, in which case a subnet consisting of only that single address is assumed, or they can be a IPv4 or IPv6 network address with a prefix length.

IPv4 subnets are notated like 192.168.1.0/24, IPv6 subnets are notated like fec0:0:0:1::/64. MAC addresses are notated like 0:1a:2b:3c:4d:5e.

Note that subnets like 192.168.1.1/24 are invalid.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.hostSettings.<name>.subnets.*.prefixLength

The prefix length of the subnet.

If null, a subnet consisting of only that single address is assumed.

This conforms to standard CIDR notation as described in RFC1519.

Type: null or integer between 0 and 128 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.hostSettings.<name>.subnets.*.weight

Indicates the priority over identical Subnets owned by different nodes.

Lower values indicate higher priority. Packets will be sent to the node with the highest priority, unless that node is not reachable, in which case the node with the next highest priority will be tried, and so on.

Type: unsigned integer, meaning >=0

Default:

```
10
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.hosts

The name of the host in the network as well as the configuration for that host. This name should only contain alphanumerics and underscores.

Note that using the declarative **service.tinc.networks.<name>.hostSettings** option is preferred.

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.interfaceType

The type of virtual interface used for the network connection.

Type: one of “tun”, “tap”

Default:

```
"tun"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.listenAddress

The ip address to listen on for incoming connections.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.name
The name of the node which is used as an identifier when communicating with the remote nodes in the mesh. If null then the hostname of the system is used to derive a name (note that tinc may replace non−alphanumeric characters in hostnames by underscores).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.rsaPrivateKeyFile
Path of the private RSA keyfile.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinc.networks.<name>.settings
Configuration of the Tinc daemon for this network.

See **https://tinc−vpn.org/documentation−1.1/Main−configuration−variables.html** for supported values.

Type: open submodule of attribute set of (boolean or string or signed integer or list of (boolean or string or signed integer))

Default:

```
{ }
```

Example:

```
{
  Interface = "custom.interface";
  DirectOnly = true;
  Mode = "switch";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinc.nix>

services.tinyauth.enable
Whether to enable Tinyauth server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/tinyauth.nix>

services.tinyauth.package
The tinyauth package to use.

Type: package

Default:

```
pkgs.tinyauth
```

Declared by:
<nixpkgs/nixos/modules/services/security/tinyauth.nix>

services.tinyauth.dataDir
The directory where Tinyauth will store its data.

Type: absolute path

Default:

```
"/var/lib/tinyauth"
```

Declared by:
<nixpkgs/nixos/modules/services/security/tinyauth.nix>

services.tinyauth.environmentFile
Path to an environment file loaded for Tinyauth.

This can be used to securely store tokens and secrets outside of the world−readable Nix store.

Example contents of the file:

```
TINYAUTH_AUTH_USERS=user−hash
TINYAUTH_OAUTH_PROVIDERS_GOOGLE_CLIENTSECRET=client−secret
```

Type: absolute path

Default:

```
"/dev/null"
```

Example:

```
"/var/lib/secrets/tinyauth"
```

Declared by:
<nixpkgs/nixos/modules/services/security/tinyauth.nix>

services.tinyauth.group
Group account under which Tinyauth runs.

Type: string

Default:

```
"tinyauth"
```

Declared by:
<nixpkgs/nixos/modules/services/security/tinyauth.nix>

services.tinyauth.settings
Environment variables that will be passed to Tinyauth. The “TINYAUTH_” prefix will be prepended to the setting names. See **configuration options** for supported values.

Type: open submodule of attribute set of (atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/security/tinyauth.nix>

services.tinyauth.settings.ANALYTICS_ENABLED

Whether to enable anonymous version collection.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/security/tinyauth.nix>

services.tinyauth.settings.APPURL

URL of the app.

Type: string

Example:

```
"https://auth.example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/security/tinyauth.nix>

services.tinyauth.settings.AUTH_LOGINMAXRETRIES

Maximum login attempts before timeout (0 to disable).

Type: unsigned integer, meaning >=0

Default:

```
3
```

Declared by:

<nixpkgs/nixos/modules/services/security/tinyauth.nix>

services.tinyauth.settings.AUTH_LOGINTIMEOUT

Login timeout in seconds after max retries reached (0 to disable).

Type: unsigned integer, meaning >=0

Default:

```
300
```

Declared by:

<nixpkgs/nixos/modules/services/security/tinyauth.nix>

services.tinyauth.settings.AUTH_TRUSTEDPROXIES

Comma−separated list of trusted proxy addresses.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/security/tinyauth.nix>

services.tinyauth.settings.RESOURCES_ENABLED
Whether to enable the resources server.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/tinyauth.nix>

services.tinyauth.settings.SERVER_ADDRESS
Address to bind the server to.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/security/tinyauth.nix>

services.tinyauth.settings.SERVER_PORT
The port to run the server on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/security/tinyauth.nix>

services.tinyauth.user
User account under which Tinyauth runs.

Type: string

Default:

```
"tinyauth"
```

Declared by:
<nixpkgs/nixos/modules/services/security/tinyauth.nix>

services.tinydns.enable
Whether to run the tinydns dns server

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinydns.nix>

services.tinydns.data
The DNS data to serve, in the format described by **tinydns−data**(8)

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinydns.nix>

services.tinydns.ip
IP address on which to listen for connections

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinydns.nix>

services.tinyproxy.enable
Whether to enable Tinyproxy daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinyproxy.nix>

services.tinyproxy.package
The tinyproxy package to use.

Type: package

Default:

```
pkgs.tinyproxy
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinyproxy.nix>

services.tinyproxy.settings
Configuration for **tinyproxy**.

Type: open submodule of attribute set of (atom (null, bool, int, float or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Example:

```
{
  Port 8888;
  Listen 127.0.0.1;
  Timeout 600;
  Allow 127.0.0.1;
  Anonymous = ['"Host"' '"Authorization"'];
  ReversePath = '"/example/" "http://www.example.com/"';
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinyproxy.nix>

services.tinyproxy.settings.Anonymous
If an 'Anonymous' keyword is present, then anonymous proxying is enabled. The headers listed with 'Anonymous' are allowed through, while all others are denied. If no Anonymous keyword is present, then all headers are allowed through. You must include quotes around the headers.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinyproxy.nix>

services.tinyproxy.settings.Filter
Tinyproxy supports filtering of web sites based on URLs or domains. This option specifies the location of the file containing the filter rules, one rule per line.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinyproxy.nix>

services.tinyproxy.settings.Listen
Specify which address to listen to.

Type: null or string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinyproxy.nix>

services.tinyproxy.settings.Port
Specify which port to listen to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8888
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tinyproxy.nix>

services.tlp.enable
Whether to enable the TLP power management daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tlp.nix>

services.tlp.package
The tlp package to use.

Type: package

Default:

```
"pkgs.tlp.override { enableRDW = config.networking.networkmanager.e \
nable; }"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tlp.nix>

services.tlp.extraConfig
Verbatim additional configuration variables for TLP. DEPRECATED: use services.tlp.settings instead.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tlp.nix>

services.tlp.pd.enable
Whether to enable the power−rofiles−daemon like DBus interface for TLP.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tlp.nix>

services.tlp.pd.package
The tlp−pd package to use.

Type: package

Default:

```
pkgs.tlp-pd
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tlp.nix>

services.tlp.settings
Options passed to TLP. See **https://linrunner.de/tlp** for all supported options…

Type: attribute set of (boolean or signed integer or floating point number or string or list of string)

Default:

```
{ }
```

Example:

```
{
  SATA_LINKPWR_ON_BAT = "med_power_with_dipm";
  USB_BLACKLIST_PHONE = 1;
}
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tlp.nix>

services.tlsrpt.enable
Whether to enable the TLSRPT services.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.package
The tlsrpt−reporter package to use.

Type: package

Default:

```
pkgs.tlsrpt-reporter
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.collectd.extraFlags
List of extra flags to pass to the tlsrpt−reportd executable.

See **tlsrpt−collectd**(1) for possible flags.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.collectd.settings
Flags from **tlsrpt−collectd**(1) as key−value pairs.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.collectd.settings.log_level
Level of log messages to emit.

Type: one of “debug”, “info”, “warning”, “error”, “critical”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.collectd.settings.socketmode
Permissions on the UNIX socket.

Type: string

Default:

```
"0220"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.collectd.settings.socketname
Path at which the UNIX socket will be created.

Type: absolute path

Default:

```
"/run/tlsrpt/collectd.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.collectd.settings.storage
Storage backend definition.

Type: string

Default:

```
"sqlite:///var/lib/tlsrpt/collectd.sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.configurePostfix
Whether to configure permissions to allow integration with Postfix.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.fetcher.settings
Flags from **tlsrpt−fetcher**(1) as key−value pairs.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.fetcher.settings.log_level
Level of log messages to emit.

Type: one of “debug”, “info”, “warning”, “error”, “critical”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.fetcher.settings.storage
Path to the collectd sqlite database.

Type: string

Default:

```
config.services.tlsrpt.collectd.settings.storage
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.reportd.extraFlags
List of extra flags to pass to the tlsrpt−reportd executable.

See **tlsrpt−report**(1) for possible flags.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.reportd.settings
Flags from **tlsrpt−reportd**(1) as key−value pairs.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.reportd.settings.contact_info
Contact information embedded into the reports.

Type: string

Example:

```
"smtp-tls-reporting@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.reportd.settings.dbname
Path to the sqlite database.

Type: string

Default:

```
"/var/lib/tlsrpt/reportd.sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.reportd.settings.fetchers
Comma−separated list of fetcher programs that retrieve collectd data.

Type: string

Default:

```
lib.getExe' cfg.package "tlsrpt-fetcher"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.reportd.settings.http_script
Call to an HTTPS client, that accepts the URL on the commandline and the request body from stdin.

Type: null or string

Default:

```
${lib.getExe pkgs.curl} --silent --header 'Content-Type: appli \
cation/tlsrpt+gzip' --data-binary @-
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.reportd.settings.log_level
Level of log messages to emit.

Type: one of “debug”, “info”, “warning”, “error”, “critical”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.reportd.settings.organization_name
Name of the organization sending out the reports.

Type: string

Example:

```
"ACME Corp."
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.reportd.settings.sender_address
Sender address used for reports.

Type: string

Example:

```
"noreply@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tlsrpt.reportd.settings.sendmail_script
Path to a sendmail−compatible executable for delivery reports.

Type: null or string

Default:

```
if config.services.postfix.enable && config.services.postfix.setSen \
dmail then
  "/run/wrappers/bin/sendmail −i −t −f $${cfg.reportd.settings.s \
ender_address}"
else
  null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/tlsrpt.nix>

services.tmate−ssh−server.enable
Whether to enable tmate ssh server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tmate−ssh−server.nix>

services.tmate−ssh−server.package
The tmate−ssh−server package to use.

Type: package

Default:

```
pkgs.tmate−ssh−server
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tmate−ssh−server.nix>

services.tmate−ssh−server.advertisedPort
External port advertised to clients

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/networking/tmate−ssh−server.nix>

services.tmate−ssh−server.host
External host name

Type: string

Default:

```
config.networking.domain or config.networking.hostName
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tmate−ssh−server.nix>

services.tmate−ssh−server.keysDir

Directory containing ssh keys, defaulting to auto−generation

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tmate−ssh−server.nix>

services.tmate−ssh−server.openFirewall

Whether to automatically open the specified ports in the firewall.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tmate−ssh−server.nix>

services.tmate−ssh−server.port

Listen port for the ssh server

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2222
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tmate−ssh−server.nix>

services.todesk.enable

Whether to enable ToDesk daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/todesk.nix>

services.todesk.package

The todesk package to use.

Type: package

Default:

```
pkgs.todesk
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/todesk.nix>

services.tomcat.enable

Whether to enable Apache Tomcat.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.package

The tomcat9 package to use.

Type: package

Default:

```
pkgs.tomcat9
```

Example:

```
tomcat10
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.axis2.enable

Whether to enable Apache Axis2 container.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.axis2.services

List containing AAR files or directories with AAR files which are web services to be deployed on Axis2

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.baseDir

Location where Tomcat stores configuration files, web applications and logfiles. Note that it is partially cleared on each service startup if ‘purifyOnStart’ is enabled.

Type: absolute path

Default:

```
"/var/tomcat"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.catalinaOpts
Parameters to pass to the Java Virtual Machine which spawns the Catalina servlet container

Type: (list of string) or string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.commonLibs
List containing JAR files or directories with JAR files which are libraries shared by the web applications and the servlet container

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.extraConfigFiles
Extra configuration files to pull into the tomcat conf directory

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.extraEnvironment
Environment Variables to pass to the tomcat service

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "ENVIRONMENT=production"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.extraGroups
Defines extra groups to which the tomcat user belongs.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
```

```
  "users"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/tomcat.nix>

services.tomcat.group
Group account under which Apache Tomcat runs.

Type: string

Default:

```
"tomcat"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/tomcat.nix>

services.tomcat.javaOpts
Parameters to pass to the Java Virtual Machine which spawns Apache Tomcat

Type: (list of string) or string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/tomcat.nix>

services.tomcat.jdk
The jdk package to use.

Type: package

Default:

```
pkgs.jdk
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/tomcat.nix>

services.tomcat.logDirs
Directories to create in baseDir/logs/

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/tomcat.nix>

services.tomcat.logPerVirtualHost
Whether to enable logging per virtual host.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/tomcat.nix>

services.tomcat.port

The TCP port Tomcat should listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.purifyOnStart

On startup, the ‘baseDir’ directory is populated with various files, subdirectories and symlinks. If this option is enabled, these items (except for the ‘logs’ and ‘work’ subdirectories) are first removed. This prevents interference from remainders of an old configuration (libraries, webapps, etc.), so it’s recommended to enable this option.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.serverXml

Verbatim server.xml configuration. This is mutually exclusive with the virtualHosts options.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.sharedLibs

List containing JAR files or directories with JAR files which are libraries shared by the web applications

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.user

User account under which Apache Tomcat runs.

Type: string

Default:

```
"tomcat"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.virtualHosts
List consisting of a virtual host name and a list of web applications to deploy on each virtual host

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.virtualHosts.*.aliases
aliases of the virtualhost

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.virtualHosts.*.name
name of the virtualhost

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.virtualHosts.*.webapps
List containing web application WAR files and/or directories containing web applications and configuration files for the virtual host.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tomcat.webapps
List containing WAR files or directories with WAR files which are web applications to be deployed on Tomcat

Type: list of absolute path

Default:

```
[ config.services.tomcat.package.webapps ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/tomcat.nix>

services.tor.enable
Whether to enable Tor daemon. By default, the daemon is run without relay, exit, bridge or client connectivity.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.enableGeoIP
Whether to enable use of GeoIP databases. Disabling this will disable by−country statistics for bridges and relays and some client and third−party software functionality.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.package
The tor package to use.

Type: package

Default:

```
pkgs.tor
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.client.enable
Whether to enable the routing of application connections. You might want to disable this if you plan running a dedicated Tor relay.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.client.dns.enable
Whether to enable DNS resolver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.client.onionServices

See **torrc manual**.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx = {
    clientAuthorizations = [
      "/run/keys/tor/alice.prv.x25519"
    ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.client.onionServices.<name>.clientAuthorizations

Clients' authorizations for a v3 onion service, as a list of files containing each one private key, in the format:

```
descriptor:x25519:<base32-private-key>
```

See **torrc manual**.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/run/keys/tor/alice.prv.x25519"
]
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.client.socksListenAddress

Bind to this address to listen for connections from Socks-speaking applications.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive) or (submodule)

Default:

```
{
  IsolateDestAddr = true;
  addr = "127.0.0.1";
  port = 9050;
}
```

Example:

```
{
  IsolateDestAddr = true;
  addr = "192.168.0.1";
  port = 9090;
}
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.client.transparentProxy.enable
Whether to enable transparent proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.controlSocket.enable
Whether to enable control socket, created in '/run/tor/control'.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.obfs4Package
The obfs4 package to use.

Type: package

Default:

```
pkgs.obfs4
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.openFirewall
Whether to enable opening of the relay port(s) in the firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.enable
Whether to enable relaying of Tor traffic for others.

See **https://www.torproject.org/docs/tor−doc−relay** for details.

Setting this to true requires setting **services.tor.relay.role** and **services.tor.settings.ORPort** options.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices

See **torrc manual**.

Warning

Because ‘tor.service’ runs in its own ‘RootDirectory=’, when using a onion service to reverse−proxy to a Unix socket, you need to make that Unix socket available within the mount namespace of ‘tor.service’.

When you can configure your service to create its socket in ‘/tmp’, this can be done with:

```
systemd.services.${your−service} = {
  unitConfig.JoinsNamespaceOf = [ "tor.service" ];‘
  serviceConfig.PrivateTmp = true;
};
```

Otherwise, you can use:

```
systemd.services.tor.serviceConfig.BindPaths = [ "/path/to/your−se \
rvice/socket/directory" ];
```

but you have to be sure that ‘/path/to/socket/directory’ exists before ‘tor.service’ is started and is not deleted and recreated between restarts of ‘your−service’, or you’ll need to restart ‘tor.service’ to refresh the ‘BindPaths=’.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "example.org/www" = {
    authorizedClients = [
      "descriptor:x25519:XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX \
XXXXXXXXXX"
    ];
    map = [
      80
    ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.authorizeClient

See **torrc manual**.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.authorizeClient.authType
Either ‘"basic"’ for a general−purpose authorization protocol or ‘"stealth"’ for a less scalable protocol that also hides service activity from unauthorized clients.

Type: one of “basic”, “stealth”

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.authorizeClient.clientNames
Only clients that are listed here are authorized to access the hidden service. Generated authorization data can be found in */var/lib/tor/onion/$name/hostname*. Clients need to put this authorization data in their configuration file using **services.tor.settings.HidServAuth**.

Type: non−empty (list of string matching the pattern [A−Za−z0−9±_]+)

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.authorizedClients
Authorized clients for a v3 onion service, as a list of public key, in the format:

```
descriptor:x25519:<base32−public−key>
```

See **torrc manual**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "descriptor:x25519:XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX \
XXXXXX"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.map
See **torrc manual**.

Type: list of (16 bit unsigned integer; between 0 and 65535 (both inclusive) or (submodule))

Default:

```
[ ]
```

Example:

```
[
  {
    port = 9000;
    target = {
      addr = "127.0.0.1";
      port = 9123;
    };
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.path
Path where to store the data files of the hidden service. If the **secretKey** is null this defaults to '/var/lib/tor/onion/$onion', otherwise to '/run/tor/onion/$onion'.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.secretKey
Secret key of the onion service. If null, Tor reuses any preexisting secret key (in **path**) or generates a new one. The associated public key and hostname are deterministically regenerated from this file if they do not exist.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/tor/onion/expyuzz4wqqyqhjn/hs_ed25519_secret_key"
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.settings
Settings of the onion service. See **torrc manual**.

Type: open submodule of settings option

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.settings.HiddenServiceAllowUnknownPorts
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.settings.HiddenServiceDirGroupReadable
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.settings.HiddenServiceExportCircuitID
See **torrc manual**.

Type: null or value “haproxy” (singular enum)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.settings.HiddenServiceMaxStreams
See **torrc manual**.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.settings.HiddenServiceMaxStreamsCloseCircuit
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.settings.HiddenServiceNumIntroductionPoints
See **torrc manual**.

Type: null or integer between 0 and 20 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.settings.HiddenServiceSingleHopMode
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.settings.RendPostPeriod
See **torrc manual**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.onionServices.<name>.version
See **torrc manual**.

Type: null or one of 2, 3

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.relay.role
Your role in Tor network. There're several options:

- 'exit': An exit relay. This allows Tor users to access regular Internet services through your public IP.

  You can specify which services Tor users may access via your exit relay using **settings.ExitPolicy** option.

- 'relay': Regular relay. This allows Tor users to relay onion traffic to other Tor nodes, but not to public Internet.

  See **https://www.torproject.org/docs/tor−doc−relay.html.en** for more info.

- 'bridge': Regular bridge. Works like a regular relay, but doesn't list you in the public relay directory and hides your Tor node behind obfs4proxy.

  Using this option will make Tor advertise your bridge to users through various mechanisms like **https://bridges.torproject.org/**, though.

  See **https://www.torproject.org/docs/bridges.html.en** for more info.

- 'private−bridge': Private bridge. Works like regular bridge, but does not advertise your node in any way.

  Using this role means that you won't contribute to Tor network in any way unless you advertise your node yourself in some way.

  Use this if you want to run a private bridge, for example because you'll give out your bridge addr manually to your friends.

  Switching to this role after measurable time in "bridge" role is pretty useless as some Tor users would have learned about your node already. In the latter case you can still change **port** option.

  See **https://www.torproject.org/docs/bridges.html.en** for more info.

  Important
  Running an exit relay may expose you to abuse complaints. See **https://www.torproject.org/faq.html.en#ExitPolicies** for more info.

  Important
  Note that some misconfigured and/or disrespectful towards privacy sites will block you even if your relay is not an exit relay. That is, just being listed in a public relay directory can have unwanted consequences.

  Which means you might not want to use this role if you browse public Internet from the same network as your relay, unless you want to write e−mails to those sites (you should!).

  Important
  WARNING: THE FOLLOWING PARAGRAPH IS NOT LEGAL ADVICE. Consult with your lawyer when in doubt.

  The 'bridge' role should be safe to use in most situations (unless the act of forwarding traffic for

others is a punishable offence under your local laws, which would be pretty insane as it would make ISP illegal).

Type: one of “exit”, “relay”, “bridge”, “private−bridge”

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings
See **torrc manual** for documentation.

Type: open submodule of settings option

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.AccountingMax
See **torrc manual**.

Type: null or signed integer or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.AccountingStart
See **torrc manual**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.Address
See **torrc manual**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.AssumeReachable
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.AuthDirHasIPv6Connectivity

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.AuthDirListBadExits

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.AuthDirPinKeys

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.AuthDirSharedRandomness

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.AuthDirTestEd25519LinkKeys

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.AuthoritativeDirectory

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.AutomapHostsOnResolve
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.AutomapHostsSuffixes
See **torrc manual**.

Type: list of string

Default:

```
[
  ".onion"
  ".exit"
]
```

Example:

```
[
  ".onion"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.BandwidthBurst
See **torrc manual**.

Type: null or signed integer or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.BandwidthRate
See **torrc manual**.

Type: null or signed integer or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.BridgeAuthoritativeDir
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.BridgeRecordUsageByCountry
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.BridgeRelay
See **torrc manual**.

Type: null or boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.CacheDirectory
See **torrc manual**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.CacheDirectoryGroupReadable
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.CellStatistics
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ClientAutoIPv6ORPort
See **torrc manual**.

Type: null or boolean

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ClientDNSRejectInternalAddresses
See **torrc manual**.

Type: null or boolean

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ClientOnionAuthDir
See **torrc manual**.

Type: null or absolute path

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ClientPreferIPv6DirPort
See **torrc manual**.

Type: null or boolean

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ClientPreferIPv6ORPort
See **torrc manual**.

Type: null or boolean

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ClientRejectInternalAddresses
See **torrc manual**.

Type: null or boolean

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ClientUseIPv4
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ClientUseIPv6
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ConnDirectionStatistics
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ConstrainedSockets
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ContactInfo
See **torrc manual**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ControlPort
See **torrc manual**.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive) or value “auto” (singular enum) or list of (16 bit unsigned integer; between 0 and 65535 (both inclusive) or value “auto” (singular enum) or (submodule))

Default:

```
[ ]
```

Example:

```
[
  {
    port = 9051;
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ControlPortFileGroupReadable
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ControlPortWriteToFile
See **torrc manual**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ControlSocket
See **torrc manual**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ControlSocketsGroupWritable
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.CookieAuthFile
See **torrc manual**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.CookieAuthFileGroupReadable
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.CookieAuthentication
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DNSPort
See **torrc manual**.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive) or value “auto” (singular enum) or (submodule) or list of (16 bit unsigned integer; between 0 and 65535 (both inclusive) or value “auto” (singular enum) or (submodule))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DataDirectory
See **torrc manual**.

Type: null or absolute path

Default:

```
"/var/lib/tor"
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DataDirectoryGroupReadable
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DirAllowPrivateAddresses

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DirCache

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DirPolicy

See **torrc manual**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "accept *:*"
]
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DirPort

See **torrc manual**.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive) or value “auto” (singular enum) or list of (16 bit unsigned integer; between 0 and 65535 (both inclusive) or value “auto” (singular enum) or (submodule))

Default:

```
[ ]
```

Example:

```
443
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DirPortFrontPage

See **torrc manual**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DirReqStatistics
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DisableAllSwap
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DisableDebuggerAttachment
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DisableNetwork
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DisableOOSCheck
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DoSCircuitCreationEnabled
See **torrc manual**.

Type: null or boolean

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DoSConnectionEnabled
See **torrc manual**.

Type: null or boolean

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DoSRefuseSingleHopClientRendezvous
See **torrc manual**.

Type: null or boolean

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DormantCanceledByStartup
See **torrc manual**.

Type: null or boolean

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DormantOnFirstStartup
See **torrc manual**.

Type: null or boolean

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DormantTimeoutDisabledByIdleStreams
See **torrc manual**.

Type: null or boolean

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.DownloadExtraInfo

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.EnforceDistinctSubnets

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.EntryStatistics

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ExitPolicy

See **torrc manual**.

Type: list of string

Default:

```
[
  "reject *:*"
]
```

Example:

```
[
  "accept *:*"
]
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ExitPolicyRejectLocalInterfaces

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ExitPolicyRejectPrivate

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ExitPortStatistics

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ExitRelay

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ExtORPort

See **torrc manual**.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive) or value “auto” (singular enum) or (submodule)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ExtORPortCookieAuthFile

See **torrc manual**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ExtORPortCookieAuthFileGroupReadable

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ExtendAllowPrivateAddresses
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ExtraInfoStatistics
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.FascistFirewall
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.FetchDirInfoEarly
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.FetchDirInfoExtraEarly
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.FetchHidServDescriptors
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.FetchServerDescriptors
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.FetchUselessDescriptors
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.GeoIPFile
See **torrc manual**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.GeoIPv6File
See **torrc manual**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.GuardfractionFile
See **torrc manual**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.HSLayer2Nodes

See **torrc manual**.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.HSLayer3Nodes

See **torrc manual**.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.HTTPTunnelPort

See **torrc manual**.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive) or value “auto” (singular enum) or (submodule) or list of (16 bit unsigned integer; between 0 and 65535 (both inclusive) or value “auto” (singular enum) or (submodule))

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.HidServAuth

See **torrc manual**.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    auth = "xxxxxxxxxxxxxxxxxxxxxx";
    onion = "xxxxxxxxxxxxxxxx.onion";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.HidServAuth.*.auth

Authentication cookie.

Type: string matching the pattern [A−Za−z0−9+/]{22}

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.HidServAuth.*.onion
Onion address.

Type: string matching the pattern [a−z2−7]{16}\.onion

Example:

```
"xxxxxxxxxxxxxxx.onion"
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.HiddenServiceNonAnonymousMode
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.HiddenServiceStatistics
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.IPv6Exit
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.KeyDirectory
See **torrc manual**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.KeyDirectoryGroupReadable
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.LogMessageDomains
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.LongLivedPorts
See **torrc manual**.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.MainloopStats
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.MaxAdvertisedBandwidth
See **torrc manual**.

Type: null or signed integer or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.MaxCircuitDirtiness
See **torrc manual**.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.MaxClientCircuitsPending

See **torrc manual**.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.NATDPort

See **torrc manual**.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive) or value “auto” (singular enum) or (submodule) or list of (16 bit unsigned integer; between 0 and 65535 (both inclusive) or value “auto” (singular enum) or (submodule))

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.NewCircuitPeriod

See **torrc manual**.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.Nickname

See **torrc manual**.

Type: null or string matching the pattern ^[a−zA−Z0−9]{1,19}$

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ORPort

See **torrc manual**.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive) or value “auto” (singular enum) or list of (16 bit unsigned integer; between 0 and 65535 (both inclusive) or value “auto” (singular enum) or (submodule))

Default:

```
[ ]
```

Example:

```
443
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.OfflineMasterKey

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.OptimisticData

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.PaddingStatistics

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.PerConnBWBurst

See **torrc manual**.

Type: null or signed integer or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.PerConnBWRate

See **torrc manual**.

Type: null or signed integer or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.PidFile

See **torrc manual**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ProtocolWarnings
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.PublishHidServDescriptors
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.PublishServerDescriptor
See **torrc manual**.

Type: null or one of false, true, 0, 1, “0”, “1”, “v3”, “bridge”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ReachableAddresses
See **torrc manual**.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ReachableDirAddresses
See **torrc manual**.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ReachableORAddresses
See **torrc manual**.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ReducedExitPolicy

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.RefuseUnknownExits

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.RejectPlaintextPorts

See **torrc manual**.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.RelayBandwidthBurst

See **torrc manual**.

Type: null or signed integer or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.RelayBandwidthRate

See **torrc manual**.

Type: null or signed integer or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.SOCKSPort

See **torrc manual**.

Type: list of (16 bit unsigned integer; between 0 and 65535 (both inclusive) or (submodule))

Default:

```
if config.services.tor.settings.HiddenServiceNonAnonymousMode == tr \
ue
then [ { port = 0; } ]
else [ ]
```

Example:

```
[
  {
    port = 9090;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.Sandbox

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ServerDNSAllowBrokenConfig

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ServerDNSAllowNonRFC953Hostnames

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ServerDNSDetectHijacking

See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ServerDNSRandomizeCase
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ServerDNSResolvConfFile
See **torrc manual**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ServerDNSSearchDomains
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ServerTransportPlugin
See **torrc manual**.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ServerTransportPlugin.exec
Command of pluggable transport.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ServerTransportPlugin.transports
List of pluggable transports.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "obfs2"
  "obfs3"
  "obfs4"
  "scramblesuit"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.ShutdownWaitLength
See **torrc manual**.

Type: signed integer

Default:

```
30
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.SocksPolicy
See **torrc manual**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "accept *:*"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.TestingTorNetwork
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.TransPort
See **torrc manual**.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive) or value “auto” (singular enum) or (submodule) or list of (16 bit unsigned integer; between 0 and 65535 (both inclusive) or value “auto” (singular enum) or (submodule))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.TransProxyType
See **torrc manual**.

Type: null or one of “default”, “TPROXY”, “ipfw”, “pf−divert”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.UnixSocksGroupWritable
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.UseDefaultFallbackDirs
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.UseMicrodescriptors
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.V3AuthUseLegacyKey
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.V3AuthoritativeDirectory
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.VersioningAuthoritativeDirectory
See **torrc manual**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.VirtualAddrNetworkIPv4
See **torrc manual**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.VirtualAddrNetworkIPv6
See **torrc manual**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.settings.WarnPlaintextPorts
See **torrc manual**.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/tor.nix>

services.tor.torsocks.enable
Whether to build '/etc/tor/torsocks.conf' containing the specified global torsocks configuration.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/torsocks.nix>

services.tor.torsocks.allowInbound
Set Torsocks to accept inbound connections. If set to 'true', listen() and accept() will be allowed to be used with non localhost address.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/torsocks.nix>

services.tor.torsocks.fasterServer
IP/Port of the Tor SOCKS server for torsocks−faster wrapper suitable for HTTP. Currently, hostnames are NOT supported by torsocks.

Type: string

Default:

```
"127.0.0.1:9063"
```

Example:

```
"192.168.0.20:1234"
```

Declared by:
<nixpkgs/nixos/modules/services/security/torsocks.nix>

services.tor.torsocks.onionAddrRange
Tor hidden sites do not have real IP addresses. This specifies what range of IP addresses will be handed to the application as “cookies” for .onion names. Of course, you should pick a block of addresses which you aren’t going to ever need to actually connect to. This is similar to the MapAddress feature of the main tor daemon.

Type: string

Default:

```
"127.42.42.0/24"
```

Declared by:
<nixpkgs/nixos/modules/services/security/torsocks.nix>

services.tor.torsocks.server
IP/Port of the Tor SOCKS server. Currently, hostnames are NOT supported by torsocks.

Type: string

Default:

```
"127.0.0.1:9050"
```

Example:

```
"192.168.0.20:1234"
```

Declared by:
<nixpkgs/nixos/modules/services/security/torsocks.nix>

services.tor.torsocks.socks5Password
SOCKS5 password. The ‘TORSOCKS_PASSWORD’ environment variable overrides this option if it is set.

Type: null or string

Default:

```
null
```

Example:

```
"sekret"
```

Declared by:
<nixpkgs/nixos/modules/services/security/torsocks.nix>

services.tor.torsocks.socks5Username
SOCKS5 username. The ‘TORSOCKS_USERNAME’ environment variable overrides this option if it is set.

Type: null or string

Default:

```
null
```

Example:

```
"bob"
```

Declared by:
<nixpkgs/nixos/modules/services/security/torsocks.nix>

services.tor.tsocks.enable
Whether to build tsocks wrapper script to relay application traffic via Tor.

Important
You shouldn’t use this unless you know what you’re doing because your installation of Tor already comes with its own superior (doesn’t leak DNS queries) ‘torsocks’ wrapper which does pretty much exactly the same thing as this.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/torify.nix>

services.tor.tsocks.config
Extra configuration. Contents will be added verbatim to TSocks configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/security/torify.nix>

services.tor.tsocks.server
IP address of TOR client to use.

Type: string

Default:

```
"localhost:9050"
```

Example:

```
"192.168.0.20"
```

Declared by:
<nixpkgs/nixos/modules/services/security/torify.nix>

services.torque.mom.enable
Whether to enable torque computing node.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/computing/torque/mom.nix>

services.torque.mom.serverNode
Hostname running pbs server.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/computing/torque/mom.nix>

services.torque.server.enable
Whether to enable torque server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/computing/torque/server.nix>

services.torrentstream.enable
Whether to enable TorrentStream daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/torrentstream.nix>

services.torrentstream.package
The torrentstream package to use.

Type: package

Default:

```
pkgs.torrentstream
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/torrentstream.nix>

services.torrentstream.address
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/torrentstream.nix>

services.torrentstream.openFirewall
Open ports in the firewall for TorrentStream daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/torrentstream.nix>

services.torrentstream.port
TorrentStream port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5082
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/torrentstream.nix>

services.touchegg.enable
Whether to enable touchegg, a multi−touch gesture recognizer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/touchegg.nix>

services.touchegg.package
The touchegg package to use.

Type: package

Default:

```
pkgs.touchegg
```

Declared by:
<nixpkgs/nixos/modules/services/x11/touchegg.nix>

services.tox−node.enable
Whether to enable Tox Node service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tox−node.nix>

services.tox−node.keysFile
Path to the file where DHT keys are stored.

Type: string

Default:

```
"/var/lib/tox−node/keys"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tox−node.nix>

services.tox−node.lanDiscovery
Enable local network discovery.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tox−node.nix>

services.tox−node.logType
Logging implementation.

Type: one of “Stderr”, “Stdout”, “Syslog”, “None”

Default:

```
"Stderr"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tox−node.nix>

services.tox−node.motd
Message of the day

Type: string

Default:

```
"Hi from tox−rs! I’m up {{uptime}}. TCP: incoming {{tcp_packets_in \
}}, outgoing {{tcp_packets_out}}, UDP: incoming {{udp_packets_in}}, \
 outgoing {{udp_packets_out}}"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tox−node.nix>

services.tox−node.tcpAddresses
TCP addresses to run TCP relay.

Type: list of string

Default:

```
[
  "0.0.0.0:33445"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tox−node.nix>

services.tox−node.tcpConnectionLimit
Maximum number of active TCP connections relay can hold

Type: signed integer

Default:

```
8192
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tox−node.nix>

services.tox−node.threads
Number of threads for execution

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tox−node.nix>

services.tox−node.udpAddress
UDP address to run DHT node.

Type: string

Default:

```
"0.0.0.0:33445"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tox−node.nix>

services.toxBootstrapd.enable
Whether to enable the Tox DHT bootstrap daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tox−bootstrapd.nix>

services.toxBootstrapd.extraConfig
Configuration for bootstrap daemon. See **https://github.com/irungentoo/toxcore/blob/master/other/bootstrap_daemon/tox−bootstrapd.conf** and **https://wiki.tox.chat/users/nodes**.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tox-bootstrapd.nix>

services.toxBootstrapd.keysFile
Node key file.

Type: string

Default:

```
"/var/lib/tox-bootstrapd/keys"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tox-bootstrapd.nix>

services.toxBootstrapd.port
Listening port (UDP).

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
33445
```

Declared by:
<nixpkgs/nixos/modules/services/networking/tox-bootstrapd.nix>

services.toxvpn.enable
Whether to enable toxvpn running on startup.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/toxvpn.nix>

services.toxvpn.auto_add_peers
peers to automatically connect to on startup

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "toxid1"
  "toxid2"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/toxvpn.nix>

services.toxvpn.localip
your ip on the vpn

Type: string

Default:

```
"10.123.123.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/toxvpn.nix>

services.toxvpn.port
udp port for toxcore, port−forward to help with connectivity if you run many nodes behind one NAT

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
33445
```

Declared by:
<nixpkgs/nixos/modules/services/networking/toxvpn.nix>

services.tp−auto−kbbl.enable
Whether to enable auto toggle keyboard back−lighting on Thinkpads (and maybe other laptops) for Linux.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tp−auto−kbbl.nix>

services.tp−auto−kbbl.package
The tp−auto−kbbl package to use.

Type: package

Default:

```
pkgs.tp−auto−kbbl
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tp−auto−kbbl.nix>

services.tp−auto−kbbl.arguments
List of arguments appended to ‘./tp−auto−kbbl −−device [device] [arguments]’

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tp−auto−kbbl.nix>

services.tp−auto−kbbl.device

Device watched for activities.

Type: string

Default:

```
"/dev/input/event0"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/tp−auto−kbbl.nix>

services.traccar.enable

Whether to enable Traccar, an open source GPS tracking system.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/traccar.nix>

services.traccar.environmentFile

File containing environment variables to substitute in the configuration before starting Traccar.

Can be used for storing the secrets without making them available in the world−readable Nix store.

For example, you can set **services.traccar.settings.database.password = "$TRACCAR_DB_PASSWORD"** and then specify 'TRACCAR_DB_PASSWORD="<secret>"' in the environment file. This value will get substituted in the configuration file.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/traccar.nix>

services.traccar.settings

config.xml configuration as a Nix attribute set. This option is ignored if 'settingsFile' is set.

Nested attributes get translated to a properties entry in the traccar configuration. For instance: 'mail.smtp.port = "25"' results in the following entry: '<entry key='mail.smtp.port'>25</entry>'

Secrets should be specified using **environmentFile** instead of this world−readable attribute set. **Traccar − Configuration File**.

Type: unspecified value

Default:

```
{
  database = {
    driver = "org.h2.Driver";
    password = "";
    url = "jdbc:h2:/var/lib/traccar/traccar";
    user = "sa";
  };
  logger = {
```

```
    console = "true";
  };
  web = {
    override = "/var/lib/traccar/override";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/traccar.nix>

services.traccar.settingsFile
File used as configuration for traccar. When specified, **settings** is ignored.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/traccar.nix>

services.traefik.enable
Whether to enable Traefik web server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/traefik.nix>

services.traefik.package
The traefik package to use.

Type: package

Default:

```
pkgs.traefik
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/traefik.nix>

services.traefik.dataDir
Location for any persistent data traefik creates, ie. acme

Type: absolute path

Default:

```
"/var/lib/traefik"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/traefik.nix>

services.traefik.dynamicConfigFile

Path to traefik's dynamic configuration to use. (Using that option has precedence over 'dynamicConfigOptions')

Type: null or absolute path

Default:

```
null
```

Example:

```
/path/to/dynamic_config.toml
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/traefik.nix>

services.traefik.dynamicConfigOptions

Dynamic configuration for Traefik.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  http = {
    routers = {
      router1 = {
        rule = "Host(‘localhost‘)";
        service = "service1";
      };
    };
    services = {
      service1 = {
        loadBalancer = {
          servers = [
            {
              url = "http://localhost:8080";
            }
          ];
        };
      };
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/traefik.nix>

services.traefik.environmentFiles

Files to load as environment file. Environment variables from this file will be substituted into the static configuration file using envsubst.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/run/secrets/traefik.env"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/traefik.nix>

services.traefik.group
Set the group that traefik runs under. For the docker backend this needs to be set to ‘docker’ instead.

Type: string

Default:

```
"traefik"
```

Example:

```
"docker"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/traefik.nix>

services.traefik.staticConfigFile
Path to traefik’s static configuration to use. (Using that option has precedence over ‘staticConfigOptions’ and ‘dynamicConfigOptions’)

Type: null or absolute path

Default:

```
null
```

Example:

```
/path/to/static_config.toml
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/traefik.nix>

services.traefik.staticConfigOptions
Static configuration for Traefik.

Type: TOML value

Default:

```
{
  entryPoints = {
    http = {
      address = ":80";
    };
  };
}
```

Example:

```
{
  api = { };
  entryPoints = {
    http = {
      address = ":80";
    };
    web = {
      address = ":8080";
    };
```

```
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/traefik.nix>

services.trafficserver.enable
Whether to enable Apache Traffic Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/trafficserver/default.nix>

services.trafficserver.cache
Caching rules that overrule the origin's caching policy.

Consult the **upstream documentation** for more details.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
"dest_domain=example.com suffix=js action=never−cache"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/trafficserver/default.nix>

services.trafficserver.hosting
Partition the cache according to origin server or domain

Consult the **upstream documentation** for more details.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
"domain=example.com volume=1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/trafficserver/default.nix>

services.trafficserver.ipAllow
Control client access to Traffic Server and Traffic Server connections to upstream servers.

Consult the **upstream documentation** for more details.

Type: null or YAML 1.1 value

Default: upstream defaults

Example:

```
{
  ip_allow = [{
```

```
      apply = "in";
      ip_addrs = "127.0.0.1";
      action = "allow";
      methods = "ALL";
    }];
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/trafficserver/default.nix>

services.trafficserver.logging
Configure logs.

Consult the **upstream documentation** for more details.

Type: null or YAML 1.1 value

Default: upstream defaults

Example:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/trafficserver/default.nix>

services.trafficserver.parent
Identify the parent proxies used in an cache hierarchy.

Consult the **upstream documentation** for more details.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  dest_domain=. method=get parent="p1.example:8080; p2.example:8080 \
" round_robin=true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/trafficserver/default.nix>

services.trafficserver.plugins
Controls run−time loadable plugins available to Traffic Server, as well as their configuration.

Consult the **upstream documentation** for more details.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/trafficserver/default.nix>

services.trafficserver.plugins.*.arg
arguments to pass to the plugin

Type: string

Default:

```
""
```

Example:

```
"--header=ATS-My-Debug"
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/trafficserver/default.nix>

services.trafficserver.plugins.*.path

Path to plugin. The path can either be absolute, or relative to the plugin directory.

Type: string

Example:

```
"xdebug.so"
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/trafficserver/default.nix>

services.trafficserver.records

List of configurable variables used by Traffic Server.

Consult the **upstream documentation** for more details.

Type: Traffic Server records value

Default:

```
{ }
```

Example:

```
{
  proxy = {
    config = {
      proxy_name = "my_server";
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/trafficserver/default.nix>

services.trafficserver.remap

URL remapping rules used by Traffic Server.

Consult the **upstream documentation** for more details.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"map http://from.example http://origin.example"
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/trafficserver/default.nix>

services.trafficserver.sni

Configure aspects of TLS connection handling for both inbound and outbound connections.

Consult the **upstream documentation** for more details.

Type: null or YAML 1.1 value

Default:

```
null
```

Example:

```
{
  sni = [{
    fqdn = "no-http2.example.com";
    https = "off";
  }];
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/trafficserver/default.nix>

services.trafficserver.splitDns

Specify the DNS server that Traffic Server should use under specific conditions.

Consult the **upstream documentation** for more details.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  dest_domain=internal.corp.example named="255.255.255.255:212 255. \
255.255.254" def_domain=corp.example search_list="corp.example corp \
1.example"
  dest_domain=!internal.corp.example named=255.255.255.253
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/trafficserver/default.nix>

services.trafficserver.sslMulticert

Configure SSL server certificates to terminate the SSL sessions.

Consult the **upstream documentation** for more details.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"dest_ip=* ssl_cert_name=default.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/trafficserver/default.nix>

services.trafficserver.storage

List all the storage that make up the Traffic Server cache.

Consult the **upstream documentation** for more details.

Type: strings concatenated with “\n”

Default:

```
"/var/cache/trafficserver 256M"
```

Example:

```
"/dev/disk/by-id/XXXXX volume=1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/trafficserver/default.nix>

services.trafficserver.strategies
Specify the next hop proxies used in an cache hierarchy and the algorithms used to select the next proxy.

Consult the **upstream documentation** for more details.

Type: null or YAML 1.1 value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/trafficserver/default.nix>

services.trafficserver.volume
Manage cache space more efficiently and restrict disk usage by creating cache volumes of different sizes.

Consult the **upstream documentation** for more details.

Type: null or YAML 1.1 value

Default:

```
""
```

Example:

```
"volume=1 scheme=http size=20%"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/trafficserver/default.nix>

services.transfer−sh.enable
Whether to enable Easy and fast file sharing from the command−line.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/transfer−sh.nix>

services.transfer−sh.package
The transfer−sh package to use.

Type: package

Default:

```
pkgs.transfer−sh
```

Declared by:
<nixpkgs/nixos/modules/services/misc/transfer−sh.nix>

services.transfer−sh.provider
Storage providers to use

Type: one of “local”, “s3”, “storj”, “gdrive”

Default:

```
"local"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/transfer−sh.nix>

services.transfer−sh.secretFile
Path to file containing environment variables. Useful for passing down secrets. Some variables that can be considered secrets are:

- AWS_ACCESS_KEY
- AWS_ACCESS_KEY
- TLS_PRIVATE_KEY
- HTTP_AUTH_HTPASSWD

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/transfer−sh.env"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/transfer−sh.nix>

services.transfer−sh.settings
Additional configuration for transfer−sh, see **https://github.com/dutchcoders/transfer.sh#usage−1** for supported values.

For secrets use secretFile option instead.

Type: open submodule of attribute set of (boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  BASEDIR = "/var/lib/transfer.sh";
  LISTENER = ":8080";
  TLS_LISTENER_ONLY = false;
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/transfer−sh.nix>

services.transmission.enable
Whether to enable the headless Transmission BitTorrent daemon.

Transmission daemon can be controlled via the RPC interface using transmission−remote, the WebUI (http://127.0.0.1:9091/ by default), or other clients like stig or tremc.

Torrents are downloaded to **services.transmission.home**/ Downloads by default and are accessible to users in the “transmission” group.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.package
The transmission package to use.

Type: package

Default:

```
if lib.versionAtLeast config.system.stateVersion "25.11" then
  pkgs.transmission_4
else
  «error message»
```

Example:

```
pkgs.transmission_4
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.credentialsFile
Path to a JSON file to be merged with the settings. Useful to merge a file which is better kept out of the Nix store to set secret config parameters like ‘rpc−password’.

Type: absolute path

Default:

```
"/dev/null"
```

Example:

```
"/var/lib/secrets/transmission/settings.json"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.downloadDirPermissions
If not ‘null’, is used as the permissions set by ‘system.activationScripts.transmission−daemon’ on the directories **services.transmission.settings.download-dir**,

services.transmission.settings.incomplete-dir. and **services.transmission.settings.watch-dir**. Note that you may also want to change **services.transmission.settings.umask**.

Keep in mind, that if the default user is used, the ‘home’ directory is locked behind a ‘750’ permission, which affects all subdirectories as well. There are 3 ways to get around this:

1. (Recommended) add the users that should have access to the group set by **services.transmission.group**
2. Change **services.transmission.settings.download-dir** to be under a directory that has the right permissions
3. Change ‘systemd.services.transmission.serviceConfig.StateDirectoryMode’ to the same value as this option

Type: null or string

Default:

```
null
```

Example:

```
"770"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.extraFlags
Extra flags passed to the transmission command in the service definition.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--log-debug"
]
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.group
Group account under which Transmission runs.

Type: string

Default:

```
"transmission"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.home
The directory where Transmission will create ‘.config/transmission−daemon’. as well as ‘Downloads/’ unless **services.transmission.settings.download-dir** is changed, and ‘.incomplete/’ unless **services.transmission.settings.incomplete-dir** is changed.

Type: absolute path

Default:

```
"/var/lib/transmission"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.openFirewall
Alias of **services.transmission.openPeerPorts**.

Type: boolean

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.openPeerPorts
Whether to enable opening of the peer port(s) in the firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.openRPCPort
Whether to enable opening of the RPC port in the firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.performanceNetParameters
Whether to enable tweaking of kernel parameters to open many more connections at the same time.

Note that you may also want to increase ‘peer−limit−global’. And be aware that these settings are quite aggressive and might not suite your regular desktop use. For instance, SSH sessions may time out more easily.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings
Settings whose options overwrite fields in ‘.config/transmission−daemon/settings.json’ (each time the service starts).

See **Transmission’s documentation** for documentation of settings not explicitly covered by this module.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.download−dir
Directory where to download torrents.

Type: absolute path

Default:

```
"${config.services.transmission.home}/Downloads"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.incomplete−dir

When enabled with services.transmission.home **services.transmission.settings.incomplete-dir-enabled**, new torrents will download the files to this directory. When complete, the files will be moved to download−dir **services.transmission.settings.download-dir**.

Type: absolute path

Default:

```
"${config.services.transmission.home}/.incomplete"
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.incomplete−dir−enabled

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.message−level

Set verbosity of transmission messages.

Type: integer between 0 and 6 (both inclusive)

Default:

```
2
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.peer−port

The peer port to listen for incoming connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
51413
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.peer−port−random−high

The maximum peer port to listen to for incoming connections when **services.transmission.settings.peer-port-random-on-start** is enabled.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
65535
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.peer−port−random−low

The minimal peer port to listen to for incoming connections when **services.transmission.settings.peer-port-random-on-start** is enabled.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
65535
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.peer−port−random−on−start
Randomize the peer port.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.rpc−bind−address
Where to listen for RPC connections. Use ‘0.0.0.0’ to listen on all interfaces.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.rpc−port
The RPC port to listen to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9091
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.script−torrent−done−enabled
Whether to run **services.transmission.settings.script-torrent-done-filename** at torrent completion.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.script−torrent−done−filename
Executable to be run at torrent completion.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.trash−original−torrent−files
Whether to delete torrents added from the **services.transmission.settings.watch-dir**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.umask
Sets transmission's file mode creation mask. See the **umask**(2) manpage for more information. Users who want their saved torrents to be world−writable may want to set this value to 0/‘"000"’.

Type: signed integer or string

Default:

```
"022"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.utp−enabled
Whether to enable **Micro Transport Protocol (µTP)**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.watch−dir
Watch a directory for torrent files and add them to transmission.

Type: absolute path

Default:

```
"${config.services.transmission.home}/watchdir"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.settings.watch−dir−enabled
Whether to enable the **services.transmission.settings.watch-dir**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.user
User account under which Transmission runs.

Type: string

Default:

```
"transmission"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.transmission.webHome
If not ‘null’, sets the value of the ‘TRANSMISSION_WEB_HOME’ environment variable used by the service. Useful for overriding the web interface files, without overriding the transmission package and thus requiring rebuilding it locally. Use this if you want to use an alternative web interface, such as ‘pkgs.flood−for−transmission’.

Type: null or absolute path

Default:

```
null
```

Example:

```
"pkgs.flood-for-transmission"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/transmission.nix>

services.tremor−rs.enable
Whether to enable Tremor event− or stream−processing system.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/tremor−rs.nix>

services.tremor−rs.host
The host tremor should be listening on

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/tremor−rs.nix>

services.tremor−rs.loggerSettings
Tremor logger configuration

Type: YAML 1.1 value

Default:

```
{
  refresh_rate = "30 seconds";
  appenders.stdout.kind = "console";
  root = {
    level = "warn";
    appenders = [ "stdout" ];
  };
  loggers = {
    tremor_runtime = {
      level = "debug";
```

```
        appenders = [ "stdout" ];
        additive = false;
      };
      tremor = {
        level = "debug";
        appenders = [ "stdout" ];
        additive = false;
      };
    };
  }
```

Example:

```
  {
    appenders = {
      stdout = {
        kind = "console";
      };
    };
    loggers = {
      tremor = {
        additive = false;
        appenders = [
          "stdout"
        ];
        level = "debug";
      };
      tremor_runtime = {
        additive = false;
        appenders = [
          "stdout"
        ];
        level = "debug";
      };
    };
    refresh_rate = "30 seconds";
    root = {
      appenders = [
        "stdout"
      ];
      level = "warn";
    };
  }
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/tremor-rs.nix>

services.tremor-rs.port

the port tremor should be listening on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9898
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/tremor−rs.nix>

services.tremor−rs.tremorLibDir
Directory where to find /lib containing tremor script files

Type: absolute path

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/tremor−rs.nix>

services.tremor−rs.troyFileList
List of troy files to load.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/tremor−rs.nix>

services.trezord.enable
Enable Trezor bridge daemon, for use with Trezor hardware bitcoin wallets.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/trezord.nix>

services.trezord.emulator.enable
Enable Trezor emulator support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/trezord.nix>

services.trezord.emulator.port
Listening port for the Trezor emulator.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
21324
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/trezord.nix>

services.trickster.enable
Enable Trickster.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/trickster.nix>

services.trickster.package
The trickster package to use.

Type: package

Default:

```
pkgs.trickster
```

Declared by:
<nixpkgs/nixos/modules/services/networking/trickster.nix>

services.trickster.configFile
Path to configuration file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/trickster.nix>

services.trickster.instance−id
Instance ID for when running multiple processes (default null).

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/trickster.nix>

services.trickster.log−level
Level of Logging to use (debug, info, warn, error) (default “info”).

Type: string

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/trickster.nix>

services.trickster.metrics−port
Port that the /metrics endpoint will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8082
```

Declared by:
<nixpkgs/nixos/modules/services/networking/trickster.nix>

services.trickster.origin−type
Type of origin (prometheus, influxdb)

Type: one of “prometheus”, “influxdb”

Default:

```
"prometheus"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/trickster.nix>

services.trickster.origin−url
URL to the Origin. Enter it like you would in grafana, e.g., http://prometheus:9090 (default http://prometheus:9090).

Type: string

Default:

```
"http://prometheus:9090"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/trickster.nix>

services.trickster.profiler−port
Port that the /debug/pprof endpoint will listen on.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/trickster.nix>

services.trickster.proxy−port
Port that the Proxy server will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9090
```

Declared by:
<nixpkgs/nixos/modules/services/networking/trickster.nix>

services.triggerhappy.enable
Whether to enable the **triggerhappy** hotkey daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/triggerhappy.nix>

services.triggerhappy.bindings
Key bindings for **triggerhappy**.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[ { keys = ["PLAYPAUSE"];  cmd = "${lib.getExe pkgs.mpc} -q toggle \
"; } ]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/triggerhappy.nix>

services.triggerhappy.bindings.*.cmd
What to run.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/hardware/triggerhappy.nix>

services.triggerhappy.bindings.*.event
Event to match.

Type: one of “press”, “hold”, “release”

Default:

```
"press"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/triggerhappy.nix>

services.triggerhappy.bindings.*.keys
List of keys to match. Key names as defined in linux/input-event-codes.h

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/triggerhappy.nix>

services.triggerhappy.extraConfig
Literal contents to append to the end of **triggerhappy** configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/triggerhappy.nix>

services.triggerhappy.user
User account under which **triggerhappy** runs.

Type: string

Default:

```
"nobody"
```

Example:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/triggerhappy.nix>

services.trilium−server.enable
Whether to enable trilium−server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/trilium.nix>

services.trilium−server.package
The trilium−server package to use.

Type: package

Default:

```
pkgs.trilium-server
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/trilium.nix>

services.trilium−server.dataDir
The directory storing the notes database and the configuration.

Type: string

Default:

```
"/var/lib/trilium"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/trilium.nix>

services.trilium−server.environmentFile
File to load as the environment file. This allows you to pass secrets in without writing to the nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/secrets/trilium.env"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/trilium.nix>

services.trilium−server.host
The host address to bind to (defaults to localhost).

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/trilium.nix>

services.trilium−server.instanceName
Instance name used to distinguish between different instances

Type: string

Default:

```
"Trilium"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/trilium.nix>

services.trilium−server.nginx
Configuration for nginx reverse proxy.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/trilium.nix>

services.trilium−server.nginx.enable
Configure the nginx reverse proxy settings.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/trilium.nix>

services.trilium−server.nginx.hostName
The hostname use to setup the virtualhost configuration

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/trilium.nix>

services.trilium−server.noAuthentication
If set to true, no password is required to access the web frontend.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/trilium.nix>

services.trilium−server.noBackup
Disable periodic database backups.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/trilium.nix>

services.trilium−server.port

The port number to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/trilium.nix>

services.tsidp.enable

Whether to enable tsidp server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/tsidp.nix>

services.tsidp.package

The tsidp package to use.

Type: package

Default:

```
pkgs.tsidp
```

Declared by:

<nixpkgs/nixos/modules/services/security/tsidp.nix>

services.tsidp.environmentFile

Path to an environment file loaded for the tsidp service.

This can be used to securely store tokens and secrets outside of the world−readable Nix store.

Example contents of the file:

```
TS_AUTH_KEY=YOUR_TAILSCALE_AUTHKEY
```

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/tsidp"
```

Declared by:

<nixpkgs/nixos/modules/services/security/tsidp.nix>

services.tsidp.settings.enableFunnel

Use Tailscale Funnel to make tsidp available on the public internet so it works with SaaS products.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/tsidp.nix>

services.tsidp.settings.enableSts
Enable OAuth token exchange using RFC 8693.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/tsidp.nix>

services.tsidp.settings.debugAllRequests
For development. Prints all requests and responses.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/tsidp.nix>

services.tsidp.settings.debugTsnet
For development. Enables debug level logging with tsnet connection.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/tsidp.nix>

services.tsidp.settings.hostName
The hostname to use for the tsnet node.

Type: string

Default:

```
"idp"
```

Declared by:
<nixpkgs/nixos/modules/services/security/tsidp.nix>

services.tsidp.settings.localPort
Listen on localhost:<port>.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/tsidp.nix>

services.tsidp.settings.logLevel
Set logging level: debug, info, warn, error.

Type: one of “debug”, “info”, “warn”, “error”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/security/tsidp.nix>

services.tsidp.settings.port
Port to listen on (default: 443).

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
443
```

Declared by:
<nixpkgs/nixos/modules/services/security/tsidp.nix>

services.tsidp.settings.useLocalTailscaled
Use local tailscaled instead of tsnet.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/tsidp.nix>

services.tsmBackup.enable
Whether to enable automatic backups with the IBM Storage Protect (Tivoli Storage Manager, TSM) client. This also enables **programs.tsmClient.enable** .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tsm.nix>

services.tsmBackup.autoTime
The backup service will be invoked automatically at the given date/time, which must be in the format described in **systemd.time**(5). The default ‘null’ disables automatic backups.

Type: null or non−empty string

Default:

```
null
```

Example:

```
"12:00"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tsm.nix>

services.tsmBackup.command
The actual command passed to the ‘dsmc’ executable to start the backup.

Type: non−empty string

Default:

```
"backup"
```

Example:

```
"incr"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tsm.nix>

services.tsmBackup.servername
Create a systemd system service 'tsm−backup.service' that starts a backup based on the given servername's stanza. Note that this server's **passwdDir** will default to */var/lib/tsm−backup/password* (but may be overridden); also, the service will use */var/lib/tsm−backup* as 'HOME' when calling 'dsmc'.

Type: non−empty string

Example:

```
"mainTsmServer"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/tsm.nix>

services.tt−rss.enable
Whether to enable tt−rss.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.enableGZipOutput
Selectively gzip output to improve wire performance. This requires PHP Zlib extension on the server. Enabling this can break tt−rss in several httpd/php configurations, if you experience weird errors and tt−rss failing to start, blank pages after login, or content encoding errors, disable it.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.auth.autoCreate
Allow authentication modules to auto−create users in tt−rss internal database when authenticated successfully.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt-rss.auth.autoLogin

Automatically login user on remote or other kind of externally supplied authentication, otherwise redirect to login form as normal. If set to true, users won't be able to set application language and settings profile.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/tt-rss.nix>

services.tt-rss.database.createLocally

Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/tt-rss.nix>

services.tt-rss.database.host

Host of the database. Leave null to use Unix domain socket.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/tt-rss.nix>

services.tt-rss.database.name

Name of the existing database.

Type: string

Default:

```
"tt_rss"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/tt-rss.nix>

services.tt-rss.database.password

The database user's password.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/tt-rss.nix>

services.tt-rss.database.passwordFile

The database user's password.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.database.port
The database's port. If not set, the default ports will be provided (5432 and 3306 for pgsql and mysql respectively).

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.database.type
Database to store feeds. Supported are pgsql and mysql.

Type: one of "pgsql", "mysql"

Default:

```
"pgsql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.database.user
The database user. The user must exist and has access to the specified database.

Type: string

Default:

```
"tt_rss"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.email.digestSubject
Subject line for email digests.

Type: string

Default:

```
"[tt−rss] New headlines for last 24 hours"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.email.fromAddress
Address for sending outgoing mail. This applies to password reset notifications, digest emails and any other mail.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.email.fromName

Name for sending outgoing mail. This applies to password reset notifications, digest emails and any other mail.

Type: string

Default:

```
"Tiny Tiny RSS"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.email.login

SMTP authentication login used when sending outgoing mail.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.email.password

SMTP authentication password used when sending outgoing mail.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.email.security

Used to select a secure SMTP connection. Allowed values: ssl, tls, or empty.

Type: one of “”, “ssl”, “tls”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.email.server

Hostname:port combination to send outgoing mail. Blank − use system MTA.

Type: string

Default:

```
""
```

Example:

```
"localhost:25"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.extraConfig

Additional lines to append to ‘config.php’.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.feedCryptKey

Key used for encryption of passwords for password−protected feeds in the database. A string of 24 random characters. If left blank, encryption is not used. Requires mcrypt functions. Warning: changing this key will make your stored feed passwords impossible to decrypt.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.forceArticlePurge

When this option is not 0, users ability to control feed purging intervals is disabled and all articles (which are not starred) older than this amount of days are purged.

Type: signed integer

Default:

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.logDestination

Log destination to use. Possible values: sql (uses internal logging you can read in Preferences −> System), syslog − logs to system log. Setting this to blank uses PHP logging (usually to http server error.log).

Type: one of “”, “sql”, “syslog”

Default:

```
"sql"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.phpPackage

php package to use for php fpm and update daemon.

Type: package

Default:

```
"pkgs.php"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.pluginPackages

List of plugins to install. The list elements are expected to be derivations. All elements in this derivation are automatically copied to the ‘plugins.local’ directory.

Type: list of package

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.plugins

List of plugins to load automatically for all users. System plugins have to be specified here. Please enable at least one authentication plugin here (auth_*). Users may enable other user plugins from Preferences/ Plugins but may not disable plugins specified in this list. Disabling auth_internal in this list would automatically disable reset password link on the login form.

Type: list of string

Default:

```
[
  "auth_internal"
  "note"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.pool

Name of existing phpfpm pool that is used to run web−application. If not specified a pool will be created automatically with default values.

Type: string

Default:

```
"tt-rss"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.pubSubHubbub.enable

Enable client PubSubHubbub support in tt−rss. When disabled, tt−rss won’t try to subscribe to PUSH feed updates.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.pubSubHubbub.hub

URL to a PubSubHubbub−compatible hub server. If defined, “Published articles” generated feed would automatically become PUSH−enabled.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.registration.enable
Allow users to register themselves. Please be aware that allowing random people to access your tt−rss installation is a security risk and potentially might lead to data loss or server exploit. Disabled by default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.registration.maxUsers
Maximum amount of users which will be allowed to register on this system. 0 − no limit.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.registration.notifyAddress
Email address to send new user notifications to.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.root
Root of the application.

Type: absolute path

Default:

```
"/var/lib/tt-rss"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.selfUrlPath
Full URL of your tt−rss installation. This should be set to the location of tt−rss directory, e.g. http://example.org/tt−rss/ You need to set this option correctly otherwise several features including PUSH, bookmarklets and browser integration will not work properly.

Type: string

Example:

```
"http://localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.sessionCookieLifetime

Default lifetime of a session (e.g. login) cookie. In seconds, 0 means cookie will be deleted when browser closes.

Type: signed integer

Default:

```
86400
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.simpleUpdateMode

Enables fallback update mode where tt−rss tries to update feeds in background while tt−rss is open in your browser. If you don't have a lot of feeds and don't want to or can't run background processes while not running tt−rss, this method is generally viable to keep your feeds up to date. Still, there are more robust (and recommended) updating methods available, you can read about them here: **https://tt−rss.org/wiki/UpdatingFeeds**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.singleUserMode

Operate in single user mode, disables all functionality related to multiple users and authentication. Enabling this assumes you have your tt−rss directory protected by other means (e.g. http auth).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.sphinx.index

Index names in Sphinx configuration. Example configuration files are available on tt−rss wiki.

Type: list of string

Default:

```
[
  "ttrss"
  "delta"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.sphinx.server

Hostname:port combination for the Sphinx server.

Type: string

Default:

```
"localhost:9312"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.themePackages
List of themes to install. The list elements are expected to be derivations. All elements in this derivation are automatically copied to the ‘themes.local’ directory.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.updateDaemon.commandFlags
Command−line flags passed to the update daemon. The default −−quiet flag mutes all logging, including errors.

Type: string

Default:

```
"−−quiet"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.user
User account under which both the update daemon and the web−application run.

Type: string

Default:

```
"tt_rss"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tt−rss.virtualHost
Name of the nginx virtualhost to use and setup. If null, do not setup any virtualhost.

Type: null or string

Default:

```
"tt−rss"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/tt−rss.nix>

services.tts.servers
TTS server instances.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  english = {
    port = 5300;
    model = "tts_models/en/ljspeech/tacotron2−DDC";
  };
```

```
  german = {
    port = 5301;
    model = "tts_models/de/thorsten/tacotron2-DDC";
  };
  dutch = {
    port = 5302;
    model = "tts_models/nl/mai/tacotron2-DDC";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/audio/tts.nix>

services.tts.servers.<name>.enable
Whether to enable Coqui TTS server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/tts.nix>

services.tts.servers.<name>.extraArgs
Extra arguments to pass to the server commandline.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/audio/tts.nix>

services.tts.servers.<name>.model
Name of the model to download and use for speech synthesis.

Check ‘tts-server --list_models’ for possible values.

Set to ‘null’ to use a custom model.

Type: null or string

Default:

```
"tts_models/en/ljspeech/tacotron2-DDC"
```

Example:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/audio/tts.nix>

services.tts.servers.<name>.port
Port to bind the TTS server to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Example:

```
5000
```

Declared by:
<nixpkgs/nixos/modules/services/audio/tts.nix>

services.tts.servers.<name>.useCuda
Whether to offload computation onto a CUDA compatible GPU.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/tts.nix>

services.ttyd.enable
Whether to enable ttyd daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.enableIPv6
Whether or not to enable IPv6 support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.enableSSL
Whether or not to enable SSL (https) support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.caFile
SSL CA file path for client certificate verification.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.certFile
SSL certificate file path.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.checkOrigin
Whether to allow a websocket connection from a different origin.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.clientOptions
Attribute set of client options for xtermjs. **https://xtermjs.org/docs/api/terminal/interfaces/itermi-naloptions/**

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  fontSize = "16";
  fontFamily = "Fira Code";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.entrypoint
Which command ttyd runs.

Type: list of string

Default:

```
[ "${pkgs.shadow}/bin/login" ]
```

Example:

```
[ (lib.getExe pkgs.htop) ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.indexFile

Custom index.html path

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.interface

Network interface to bind.

Type: null or string

Default:

```
null
```

Example:

```
"eth0"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.keyFile

SSL key file path. For insecurely putting the keyFile in the globally readable store use ‘pkgs.writeText "ttydKeyFile" "SSLKEY"’.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.logLevel

Set log level.

Type: signed integer

Default:

```
7
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.maxClients

Maximum clients to support (0, no limit)

Type: signed integer

Default:

Declared by:

<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.passwordFile

File containing the password to use for basic http authentication. For insecurely putting the password in the globally readable store use ‘pkgs.writeText "ttydpw" "MyPassword"’.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.port
Port to listen on (use 0 for random port)

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7681
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.signal
Signal to send to the command on session close.

Type: 8 bit unsigned integer; between 0 and 255 (both inclusive)

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.socket
UNIX domain socket path to bind.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/run/ttyd.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.terminalType
Terminal type to report.

Type: string

Default:

```
"xterm-256color"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.user
Which unix user ttyd should run as.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.username

Username for basic http authentication.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.ttyd.writeable

Allow clients to write to the TTY.

Type: null or boolean

Default:

```
null
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/ttyd.nix>

services.tuliprox.enable

Whether to enable Tuliprox IPTV playlist processor & proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tuliprox.nix>

services.tuliprox.package

The tuliprox package to use.

Type: package

Default:

```
pkgs.tuliprox
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tuliprox.nix>

services.tuliprox.apiProxySettings

Users and proxy configuration

Refer to the **Tuliprox documentation** for available attributes

Type: YAML 1.1 value

Default:

```
null
```

Example:

```
{
  server = [
```

```
      {
        host = "192.169.1.9";
        message = "Welcome to tuliprox";
        name = "default";
        port = 8901;
        protocol = "http";
        timezone = "Europe/Paris";
      }
      {
        host = "tuliprox.mydomain.tv";
        message = "Welcome to tuliprox";
        name = "external";
        port = 443;
        protocol = "https";
        timezone = "Europe/Paris";
      }
    ];
    user = [
      {
        credentials = [
          {
            exp_date = 1672705545;
            max_connections = 1;
            password = "secret1";
            proxy = "reverse";
            server = "default";
            status = "Active";
            token = "token1";
            username = "test1";

        ];
        target = "xc_m3u";
      }
    ];
  }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tuliprox.nix>

services.tuliprox.extraArgs

Additional command−line arguments for the systemd service.

Refer to the **Tuliprox documentation** for available arguments.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tuliprox.nix>

services.tuliprox.mappingSettings

Templates configuration

Refer to the **Tuliprox documentation** for available attributes

Type: YAML 1.1 value

Default:

```
null
```

Example:

```
{
  mappings = {
    mapping = [
      {
        id = "iptv-org";
        mapper = [
          {
            filter = "!bbc!";
            script = ''
              @Group = "BBC"
            '';
          }
          {
            filter = "!documentary!";
            script = ''
              @Group = "Documentary"
            '';
          }
          {
            filter = "!entertainment!";
            script = ''
              @Group = "Entertainment"
            '';
          }
          {
            filter = "!pluto_tv!";
            script = ''
              @Group = "Pluto TV"
            '';
          }
          {
            filter = "!business!";
            script = ''
              @Group = "News"
            '';
          }
          {
            filter = "Input ~ \"iptv-org\"";
            script = ''
              @Caption = concat(@Caption, " (iptv-org)")
            '';
          }

        };
      }
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/tuliprox.nix>

services.tuliprox.sourceSettings

Source definitions

Refer to the **Tuliprox documentation** for available attributes

Type: YAML 1.1 value

Default:

```
null
```

Example:

```
{
  sources = [
    {
      inputs = [
        {
          name = "iptv-org";
          type = "m3u";
          url = "https://iptv-org.github.io/iptv/countries/uk.m3u" \
;
        }
      ];
      targets = [
        {
          filter = "!final_channel_lineup!";
```

```
                mapping = [

            value = "NOT (Title ~ \"(?i).*red button.*\")";
          }
          {
            name = "not_low_resolution";
            value = "NOT (Title ~ \"(?i).*(360p|240p).*\")";
          }
          {
            name = "all_channels";
            value = "Title ~ \".*\"";
          }
          {
            name = "final_channel_lineup";
            value = "!all_channels! AND !not_red_button! AND !not_low_res \
olution!";
          }
        ];
      }
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/tuliprox.nix>

services.tuliprox.systemSettings

Main config file

Refer to the **Tuliprox documentation** for available attributes

Type: YAML 1.1 value

Default:

```
null
```

Example:

```
{
  api = {
    host = "0.0.0.0";
    port = 8901;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/tuliprox.nix>

services.tumbler.enable

Whether to enable Tumbler, A D−Bus thumbnailer service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/tumbler.nix>

services.tuned.enable

Whether to enable TuneD.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.package

The tuned package to use.

Type: package

Default:

```
pkgs.tuned
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.ppdSettings

Settings for TuneD's power−profiles−daemon compatibility service.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.ppdSettings.battery

Map of PPD battery states to TuneD profiles.

Type: attribute set of string

Default:

```
{
  balanced = "balanced-battery";
}
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.ppdSettings.main

Core configuration for power−profiles−daemon support.

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.ppdSettings.main.battery_detection

Whether to enable battery detection.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.ppdSettings.main.default

Default PPD profile.

Type: string

Default:

```
"balanced"
```

Example:

```
"performance"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.ppdSettings.profiles
Map of PPD profiles to native TuneD profiles.

Type: attribute set of string

Default:

```
{
  balanced = "balanced";
  performance = "throughput-performance";
  power-saver = "powersave";
}
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.ppdSupport
Whether to enable translation of power-profiles-daemon API calls to TuneD.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.profiles
Profiles for TuneD. See **tuned.conf**(5) for details.

Type: attribute set of (open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string)))

Default:

```
{ }
```

Example:

```
{
  my-cool-profile = {
    main = {
      include = "my-other-cool-profile";
    };
    my_sysctl = {
      "net.core.rmem_default" = 262144;
      "net.core.wmem_default" = 262144;
      replace = true;
      type = "sysctl";
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.recommend
TuneD rules for ‘recommend_profile’, written to ‘/etc/tuned/recommend.conf’.

At startup, the daemon evaluates the file in alphabetical order. The first matching entry is applied. Empty profile rules always match.

If ‘services.tuned.ppdSupport’ is ‘true’, settings in ‘services.tuned.ppdSettings’ take precedence over both the default behaviour and ‘services.tuned.recommend’. For example: ‘services.tuned.ppdSettings.main.default = "performance";’ ensures the corresponding PPD profile is applied regardless of ‘services.tuned.recommend’ setting.

If ‘ppdSupport’ is ‘false’, only ‘services.tuned.recommend’ is used; if ‘recommend’ is empty, TuneD’s default behaviour applies.

See **tuned−main.conf**(5) for more details.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
# Enable ‘virtual−guest‘ profile for VM guests
virtual−guest = {
  virt = ".+";
};
# Default to the ‘desktop‘ profile for all other systems
desktop = { };
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.settings
Configuration for TuneD. See **tuned−main.conf**(5) for details.

Type: open submodule of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.settings.daemon
Whether to enable the use of a daemon for TuneD.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.settings.default_instance_priority
Default instance (unit) priority.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.settings.dynamic_tuning
Whether to enable dynamic tuning.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.settings.globalSection
global section of an INI file (attrs of INI atom (null, bool, int, float or string))

Type: section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

services.tuned.settings.profile_dirs
Directories to search for profiles, separated by ‘,’ or ‘;’.

Type: string

Default:

```
"/etc/tuned/profiles"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.settings.reapply_sysctl
Whether to enable the reapplying of global sysctls after TuneD sysctls are applied.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.settings.recommend_command
Whether to enable recommend functionality.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.settings.sections
attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

services.tuned.settings.sleep_interval
Interval in which the TuneD daemon is waken up and checks for events (in seconds).

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuned.settings.update_interval
Update interval for dynamic tuning (in seconds).

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuned.nix>

services.tuptime.enable
Whether to enable the total uptime service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/tuptime.nix>

services.tuptime.timer.enable
Whether to regularly log uptime to detect bad shutdowns.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/tuptime.nix>

services.tuptime.timer.period
systemd calendar event

Type: string

Default:

```
"*:0/5"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/tuptime.nix>

services.turborepo−remote−cache.enable
Enables the daemon for ‘turborepo−remote−cache’, an open source implementation of the Turborepo custom remote cache server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/turborepo−remote−cache.nix>

services.turborepo−remote−cache.package
The turborepo−remote−cache package to use.

Type: package

Default:

```
pkgs.turborepo−remote−cache
```

Declared by:
<nixpkgs/nixos/modules/services/development/turborepo−remote−cache.nix>

services.turborepo−remote−cache.environment
Environment variables to set.

Turborepo−remote−cache is configured through the use of environment variables. The available configuration options can be found in the **documentation**.

Note that all environment variables set through this configuration parameter will be readable by anyone with access to the host machine. Therefore, sensitive information like **TURBO_TOKEN** should never be set using this configuration option, but should instead use **services.turborepo-remote-cache.environmentFile**. See the documentation for that option for more information.

Any environment variables specified in the **services.turborepo-remote-cache.environmentFile** will supersede environment variables specified in this option.

Type: attribute set of (null or boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  NODE_ENV = "production";
  PORT = 8080;
}
```

Declared by:
<nixpkgs/nixos/modules/services/development/turborepo−remote−cache.nix>

services.turborepo−remote−cache.environmentFile
Additional environment file as defined in **systemd.exec**(5).

Secrets like **TURBO_TOKEN** may be passed to the service without making them readable to everyone with access to systemctl by using this configuration parameter.

Note that this file needs to be available on the host on which 'turborepo−remote−cache' is running.

See the **documentation** and the **services.turborepo-remote-cache.environment** configuration parameter for further options.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/turborepo−remote−cache.env"
```

Declared by:
<nixpkgs/nixos/modules/services/development/turborepo−remote−cache.nix>

services.turborepo−remote−cache.openFirewall
Open ports in the firewall for turborepo−remote−cache daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/development/turborepo−remote−cache.nix>

services.turn−rs.enable
Whether to enable turn−rs server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/turn−rs.nix>

services.turn−rs.package
The turn−rs package to use.

Type: package

Default:

```
pkgs.turn−rs
```

Declared by:
<nixpkgs/nixos/modules/services/misc/turn−rs.nix>

services.turn−rs.secretFile

Environment variables from this file will be interpolated into the final config file using envsubst with this syntax: '$ENVIRONMENT' or '${VARIABLE}'. The file should contain lines formatted as 'SECRET_VAR=SECRET_VALUE'. This is useful to avoid putting secrets into the nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/turn−rs.env"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/turn−rs.nix>

services.turn−rs.settings

Turn−rs server config file

Type: open submodule of (TOML value)

Default:

```
{ }
```

Example:

```
{
  auth = {
    static_credentials = {
      user1 = "test";
      user2 = "test";
    };
  };
  turn = {
    interfaces = [
      {
        bind = "127.0.0.1:3478";
        external = "127.0.0.1:3478";
        transport = "udp";
      }
      {
        bind = "127.0.0.1:3478";
        external = "127.0.0.1:3478";
        transport = "tcp";
      }
    ];
    realm = "localhost";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/turn−rs.nix>

services.tusd.enable

Whether to enable tus resumable upload protocol server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/tusd.nix>

services.tusd.basePath

The basepath of the HTTP server.

Type: string

Default:

```
"/files/"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/tusd.nix>

services.tusd.behindProxy

Whether to respect X−Forwarded−* and similar headers which may be set by proxies.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/tusd.nix>

services.tusd.extraArgs

Additional arguments given to tusd.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−verbose"
  "−log−format=json"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/tusd.nix>

services.tusd.hooksEnabledEvents

The list of enabled hook events.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "pre-create"
  "post-finish"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/tusd.nix>

services.tusd.hooksHttp
The HTTP endpoint to which hook events will be sent to.

Type: null or string

Default:

```
null
```

Example:

```
"http://localhost:8081/hooks"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/tusd.nix>

services.tusd.host
The host to bind the HTTP server to.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/tusd.nix>

services.tusd.maxSize
The maximum size of a single upload in bytes.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/tusd.nix>

services.tusd.networkTimeout
The timeout for reading the request and writing the response. If tusd does not receive data for this duration, it will consider the connection dead.

Type: null or string

Default:

```
null
```

Example:

```
"30s"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/tusd.nix>

services.tusd.openFirewall
Whether to open the firewall port for tusd.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/tusd.nix>

services.tusd.port
The port to bind the HTTP server to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/tusd.nix>

services.tusd.uploadDir
The directory to store uploads in.

Type: absolute path

Default:

```
"/var/lib/tusd/data"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/tusd.nix>

services.twingate.enable
Whether to enable Twingate Client daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/twingate.nix>

services.twingate.package
The twingate package to use.

Type: package

Default:

```
pkgs.twingate
```

Declared by:
<nixpkgs/nixos/modules/services/networking/twingate.nix>

services.typesense.enable

Whether to enable typesense.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/search/typesense.nix>

services.typesense.package

The typesense package to use.

Type: package

Default:

```
pkgs.typesense
```

Declared by:

<nixpkgs/nixos/modules/services/search/typesense.nix>

services.typesense.apiKeyFile

Sets the admin api key for typesense. Always use this option instead of **settings.server.api−key** to prevent the key from being written to the world−readable nix store.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/search/typesense.nix>

services.typesense.settings

Typesense configuration. Refer to **the documentation** for supported values.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a non−empty list of them)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/search/typesense.nix>

services.typesense.settings.server.api−address

Address to which Typesense API service binds.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/search/typesense.nix>

services.typesense.settings.server.api−port

Port on which the Typesense API service listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8108
```

Declared by:
<nixpkgs/nixos/modules/services/search/typesense.nix>

services.typesense.settings.server.data−dir
Path to the directory where data will be stored on disk.

Type: string

Default:

```
"/var/lib/typesense"
```

Declared by:
<nixpkgs/nixos/modules/services/search/typesense.nix>

services.tzupdate.enable
Enable the tzupdate timezone updating service. This provides a one−shot service which can be activated with systemctl to update the timezone.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tzupdate.nix>

services.tzupdate.package
The tzupdate package to use.

Type: package

Default:

```
pkgs.tzupdate
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tzupdate.nix>

services.tzupdate.timer.enable
Enable the tzupdate timer to update the timezone automatically.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tzupdate.nix>

services.tzupdate.timer.interval
The interval at which the tzupdate timer should run. See **systemd.time**(7) to understand the format.

Type: string

Default:

```
"hourly"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tzupdate.nix>

services.u9fs.enable

Whether to run the u9fs 9P server for Unix.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/u9fs.nix>

services.u9fs.extraArgs

Extra arguments to pass on invocation, see **man 4 u9fs**

Type: string

Default:

```
""
```

Example:

```
"−a none"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/u9fs.nix>

services.u9fs.listenStreams

Sockets to listen for clients on. See **man 5 systemd.socket** for socket syntax.

Type: list of string

Default:

```
[
  "564"
]
```

Example:

```
[
  "192.168.16.1:564"
]
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/u9fs.nix>

services.u9fs.user

User to run u9fs under.

Type: string

Default:

```
"nobody"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/u9fs.nix>

services.udev.enable

Whether to enable udev, a device manager for the Linux kernel.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/udev.nix>

services.udev.packages

List of packages containing **udev** rules. All files found in *«pkg»/etc/udev/rules.d* and *«pkg»/lib/udev/rules.d* will be included.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/udev.nix>

services.udev.extraHwdb

Additional **hwdb** files. They'll be written into file *99−local.hwdb*. Thus they are read after all other files.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
evdev:input:b0003v05AFp8277*
  KEYBOARD_KEY_70039=leftalt
  KEYBOARD_KEY_700e2=leftctrl
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/udev.nix>

services.udev.extraRules

Additional **udev** rules. They'll be written into file *99−local.rules*. Thus they are read and applied after all other rules.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
  ENV{ID_VENDOR_ID}=="046d", ENV{ID_MODEL_ID}=="0825", ENV{PULSE_IG \
NORE}="1"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/udev.nix>

services.udev.path

Packages added to the **PATH** environment variable when executing programs from Udev rules.

coreutils, gnu{sed,grep}, util−linux and config.systemd.package are automatically included.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/udev.nix>

services.udisks2.enable

Whether to enable udisks2, a DBus service that allows applications to query and manipulate storage devices.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/udisks2.nix>

services.udisks2.package

The udisks package to use.

Type: package

Default:

```
pkgs.udisks
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/udisks2.nix>

services.udisks2.mountOnMedia

When enabled, instructs udisks2 to mount removable drives under '/media/' directory, instead of the default, ACL−controlled '/run/media/$USER/'. Since '/media/' is not mounted as tmpfs by default, it requires cleanup to get rid of stale mountpoints; enabling this option will take care of this at boot.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/udisks2.nix>

services.udisks2.settings

Options passed to udisksd. See **here** and drive configuration in **here** for supported options.

Type: attribute set of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a non−empty list of them)

Default:

```
{
  "udisks2.conf" = {
    defaults = {
      encryption = "luks2";
    };
    udisks2 = {
      modules = [
        "*"
      ];
      modules_load_preference = "ondemand";
    };
  };
}
```

Example:

```
{
  "WDC-WD10EZEX-60M2NA0-WD-WCC3F3SJ0698.conf" = {
    ATA = {
      StandbyTimeout = 50;
    };
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/udisks2.nix>

services.udp-over-tcp.package
The udp-over-tcp package to use.

Type: package

Default:

```
pkgs.udp-over-tcp
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp-over-tcp.nix>

services.udp-over-tcp.tcp2udp
Mapping of TCP listening ports to UDP forwarding ports or configurations.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "0.0.0.0:443" = {
    forward = "127.0.0.1:51820";
    openFirewall = true;
  };
  "0.0.0.0:444" = {
    threads = 2;
    forward = "127.0.0.1:51821";
    bind = "127.0.0.1";
    recvBufferSize = 16384;
    sendBufferSize = 16384;
    recvTimeout = 10;
    fwmark = 1337;
    nodelay = true;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp-over-tcp.nix>

services.udp-over-tcp.tcp2udp.<name>.bind
Which local IP to bind the UDP socket to.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp−over−tcp.tcp2udp.<name>.forward
The IP and port to forward all traffic to.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp−over−tcp.tcp2udp.<name>.fwmark
If given, sets the SO_MARK option on the TCP socket.

Type: null or 32 bit unsigned integer; between 0 and 4294967295 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp−over−tcp.tcp2udp.<name>.nodelay
Enables TCP_NODELAY on the TCP socket.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp−over−tcp.tcp2udp.<name>.openFirewall
Open the appropriate ports in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp−over−tcp.tcp2udp.<name>.recvBufferSize
If given, sets the SO_RCVBUF option on the TCP socket to the given number of bytes. Changes the size of the operating system's receive buffer associated with the socket.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp−over−tcp.tcp2udp.<name>.recvTimeout
An application timeout on receiving data from the TCP socket.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp−over−tcp.tcp2udp.<name>.sendBufferSize
If given, sets the SO_SNDBUF option on the TCP socket to the given number of bytes. Changes the size of the operating system's send buffer associated with the socket.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp−over−tcp.tcp2udp.<name>.threads
Sets the number of worker threads to use. The default value is the number of cores available to the system.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp−over−tcp.udp2tcp
Mapping of UDP listening ports to TCP forwarding ports or configurations.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "0.0.0.0:51820" = {
    forward = "10.0.0.1:443";
    openFirewall = true;
  };
  "0.0.0.0:51821" = {
    forward = "10.0.0.1:444";
    recvBufferSize = 16384;
    sendBufferSize = 16384;
    recvTimeout = 10;
    fwmark = 1337;
    nodelay = true;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp−over−tcp.udp2tcp.<name>.forward
The IP and port to forward all traffic to.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp−over−tcp.udp2tcp.<name>.fwmark
If given, sets the SO_MARK option on the TCP socket.

Type: null or 32 bit unsigned integer; between 0 and 4294967295 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp−over−tcp.udp2tcp.<name>.nodelay
Enables TCP_NODELAY on the TCP socket.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp−over−tcp.udp2tcp.<name>.openFirewall
Open the appropriate ports in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp−over−tcp.udp2tcp.<name>.recvBufferSize
If given, sets the SO_RCVBUF option on the TCP socket to the given number of bytes. Changes the size of the operating system's receive buffer associated with the socket.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp−over−tcp.udp2tcp.<name>.recvTimeout
An application timeout on receiving data from the TCP socket.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/udp−over−tcp.nix>

services.udp-over-tcp.udp2tcp.<name>.sendBufferSize

If given, sets the SO_SNDBUF option on the TCP socket to the given number of bytes. Changes the size of the operating system's send buffer associated with the socket.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/udp-over-tcp.nix>

services.uhub

Uhub ADC hub instances

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/misc/uhub.nix>

services.uhub.<name>.enable

Whether to enable hub instance.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/uhub.nix>

services.uhub.<name>.enableTLS

Whether to enable TLS support.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/uhub.nix>

services.uhub.<name>.plugins

Uhub plugin configuration.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/uhub.nix>

services.uhub.<name>.plugins.*.plugin

Path to plugin file.

Type: absolute path

Example:

```
$${pkgs.uhub}/plugins/mod_auth_sqlite.so
```

Declared by:

<nixpkgs/nixos/modules/services/misc/uhub.nix>

services.uhub.<name>.plugins.*.settings

Settings specific to this plugin.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  file = "/etc/uhub/users.db";
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/uhub.nix>

services.uhub.<name>.settings

Configuration of uhub. See **https://www.uhub.org/doc/config.php** for a list of options.

Type: attribute set of (boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  hub_description = "Yet another ADC hub";
  hub_name = "My Public Hub";
  max_users = 150;
  server_bind_addr = "any";
  server_port = 1511;
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/uhub.nix>

services.ulogd.enable

Whether to enable ulogd, a userspace logging daemon for netfilter/iptables related logging.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/logging/ulogd.nix>

services.ulogd.logLevel
Log level (1 = debug, 3 = info, 5 = notice, 7 = error, 8 = fatal)

Type: one of 1, 3, 5, 7, 8

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/logging/ulogd.nix>

services.ulogd.settings
Configuration for ulogd. See */share/doc/ulogd/* in ‘pkgs.ulogd.doc’.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Example:

```
{
  emu1 = {
    file = "/var/log/ulogd_pkts.log";
    sync = 1;
  };
  global = {
    stack = [
      "log1:NFLOG,base1:BASE,ifi1:IFINDEX,ip2str1:IP2STR,print1:PRI \
NTPKT,emu1:LOGEMU"
      "log1:NFLOG,base1:BASE,pcap1:PCAP"
    ];
  };
  log1 = {
    group = 2;
  };
  pcap1 = {
    file = "/var/log/ulogd.pcap";
    sync = 1;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/logging/ulogd.nix>

services.umami.enable
Whether to enable umami.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/umami.nix>

services.umami.package
The umami package to use.

Type: package

Default:

```
pkgs.umami
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/umami.nix>

services.umami.createPostgresqlDatabase
Whether to automatically create the database for Umami using PostgreSQL. Both the database name and username will be ‘umami’, and the connection is made through unix sockets using peer authentication.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/umami.nix>

services.umami.settings
Additional configuration (environment variables) for Umami, see **https://umami.is/docs/environment−variables** for supported values.

Type: open submodule of attribute set of (boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  APP_SECRET_FILE = "/run/secrets/umamiAppSecret";
  DISABLE_TELEMETRY = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/umami.nix>

services.umami.settings.APP_SECRET_FILE
A file containing a secure random string. This is used for signing user sessions. The contents of the file are read through systemd credentials, therefore the user running umami does not need permissions to read the file. If you wish to set this to a string instead (not recommended since it will be placed world−readable in the Nix store), you can use the APP_SECRET option.

Type: null or string

Default:

```
null
```

Example:

```
"/run/secrets/umamiAppSecret"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/umami.nix>

services.umami.settings.BASE_PATH
Allows you to host Umami under a subdirectory. You may need to update your reverse proxy settings to correctly handle the BASE_PATH prefix.

Type: string

Default:

```
""
```

Example:

```
"/analytics"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/umami.nix>

services.umami.settings.COLLECT_API_ENDPOINT
Allows you to send metrics to a location different than the default '/api/send'.

Type: null or string

Default:

```
null
```

Example:

```
"/api/alternate−send"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/umami.nix>

services.umami.settings.DATABASE_URL
Connection string for the database. Must start with 'postgresql://' or 'postgres://'.

Type: null or string

Default:

```
if config.services.umami.createPostgresqlDatabase then "postgresql: \
//umami@localhost/umami?host=/run/postgresql" else null
```

Example:

```
"postgresql://root:root@localhost/umami"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/umami.nix>

services.umami.settings.DATABASE_URL_FILE
A file containing a connection string for the database. The connection string must start with 'postgresql://' or 'postgres://'. The contents of the file are read through systemd credentials, therefore the user running umami does not need permissions to read the file.

Type: null or string

Default:

```
null
```

Example:

```
"/run/secrets/umamiDatabaseUrl"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/umami.nix>

services.umami.settings.DISABLE_TELEMETRY
Umami collects completely anonymous telemetry data in order help improve the application. You can choose to disable this if you don't want to participate.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/umami.nix>

services.umami.settings.DISABLE_UPDATES
Disables the check for new versions of Umami.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/umami.nix>

services.umami.settings.HOSTNAME
The address to listen on.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/umami.nix>

services.umami.settings.PORT
The port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Example:

```
3010
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/umami.nix>

services.umami.settings.TRACKER_SCRIPT_NAME

Allows you to assign a custom name to the tracker script different from the default ‘script.js’.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "tracker.js"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/umami.nix>

services.umurmur.enable

Whether to enable uMurmur Mumble server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.package

The umurmur package to use.

Type: package

Default:

```
pkgs.umurmur
```

Declared by:

<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.configFile

Configuration file, default is generated from config.service.umurmur.settings

Type: absolute path

Default:

```
"Configuration file, default is generated from config.service.umurm \
ur.settings"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.openFirewall

Open ports in the firewall for the uMurmur Mumble server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.settings
Settings of uMurmur. For reference see **https://github.com/umurmur/umurmur/blob/master/umurmur.conf.example**

Type: open submodule of uMurmur config value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.settings.bindaddr
IPv4 address to bind to. Defaults binding on all addresses.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.settings.bindaddr6
IPv6 address to bind to. Defaults binding on all addresses.

Type: string

Default:

```
"::"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.settings.bindport
Port to bind to (UDP and TCP).

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
64739
```

Declared by:
<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.settings.ca_path
Path to your SSL CA certificate.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.settings.certificate

Path to your SSL certificate. Generates self−signed automatically if not exists.

Type: string

Default:

```
"/var/lib/private/umurmur/cert.crt"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.settings.channel_links

Channel tree definitions.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    destination = "Red team";
    source = "Lobby";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.settings.channels

Channel tree definitions.

Type: list of (attribute set)

Default:

```
[
  {
    description = "Root channel.";
    name = "root";
    noenter = false;
    parent = "";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.settings.default_channel

The channel in which users will appear in when connecting.

Type: string

Default:

```
"root"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.settings.max_bandwidth
Maximum bandwidth (in bits per second) that clients may send speech at.

Type: signed integer

Default:

```
48000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.settings.max_users
Maximum number of concurrent clients allowed.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.settings.password
Required password to join server, if specified.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.settings.private_key
Path to your SSL key. Generates self−signed automatically if not exists.

Type: string

Default:

```
"/var/lib/private/umurmur/key.key"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.umurmur.settings.welcometext
Welcome message for connected clients.

Type: null or string

Default:

```
"Welcome to uMurmur!"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/umurmur.nix>

services.unbound.enable
Whether to enable Unbound domain name server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unbound.nix>

services.unbound.enableRootTrustAnchor
Use and update root trust anchor for DNSSEC validation.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unbound.nix>

services.unbound.package
The unbound−with−systemd package to use.

Type: package

Default:

```
pkgs.unbound-with-systemd
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unbound.nix>

services.unbound.checkconf
Whether to check the resulting config file with unbound checkconf for syntax errors.

If settings.include is used, this options is disabled, as the import can likely not be accessed at build time. If settings.remote−control is used, this option is disabled, too as the control−key−file, server−cert−file and server−key−file cannot be accessed at build time.

Type: boolean

Default:

```
"!services.unbound.settings ? include && !services.unbound.settings \
 ? remote-control"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unbound.nix>

services.unbound.group
Group under which unbound runs.

Type: string

Default:

```
"unbound"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unbound.nix>

services.unbound.localControlSocketPath
When not set to ‘null’ this option defines the path at which the unbound remote control socket should be created at. The socket will be owned by the unbound user (‘unbound’) and group will be ‘nogroup’.

Users that should be permitted to access the socket must be in the ‘config.services.unbound.group’ group.

If this option is ‘null’ remote control will not be enabled. Unbounds default values apply.

Type: null or string

Default:

```
null
```

Example:

```
"/run/unbound/unbound.ctl"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unbound.nix>

services.unbound.resolveLocalQueries
Whether unbound should resolve local queries (i.e. add 127.0.0.1 to /etc/resolv.conf).

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unbound.nix>

services.unbound.settings
Declarative Unbound configuration See the **unbound.conf**(5) manpage for a list of available options.

Type: open submodule of unbound.conf configuration type. The format consist of an attribute set of settings. Each settings can be either one value, a list of values or an attribute set. The allowed values are integers, strings, booleans or floats.

Default:

```
{ }
```

Example:

```
{
  server = {
    interface = [ "127.0.0.1" ];
  };
  forward-zone = [
    {
      name = ".";
      forward-addr = "1.1.1.1@853#cloudflare-dns.com";
    }
    {
      name = "example.org.";
      forward-addr = [
        "1.1.1.1@853#cloudflare-dns.com"
        "1.0.0.1@853#cloudflare-dns.com"
      ];
    }
  ];
  remote-control.control-enable = true;
};
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unbound.nix>

services.unbound.stateDir
Directory holding all state for unbound to run.

Type: absolute path

Default:

```
"/var/lib/unbound"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unbound.nix>

services.unbound.user
User account under which unbound runs.

Type: string

Default:

```
"unbound"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unbound.nix>

services.unclutter.enable
Enable unclutter to hide your mouse cursor when inactive

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/unclutter.nix>

services.unclutter.package
The unclutter package to use.

Type: package

Default:

```
pkgs.unclutter
```

Declared by:
<nixpkgs/nixos/modules/services/x11/unclutter.nix>

services.unclutter.excluded
Names of windows where unclutter should not apply

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  ""
]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/unclutter.nix>

services.unclutter.extraOptions
More arguments to pass to the unclutter command

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "noevent"
  "grab"
]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/unclutter.nix>

services.unclutter.keystroke
Wait for a keystroke before hiding the cursor

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/unclutter.nix>

services.unclutter.threshold
Minimum number of pixels considered cursor movement

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/x11/unclutter.nix>

services.unclutter.timeout
Number of seconds before the cursor is marked inactive

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/x11/unclutter.nix>

services.unclutter-xfixes.enable
Enable unclutter-xfixes to hide your mouse cursor when inactive.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/unclutter-xfixes.nix>

services.unclutter-xfixes.package
The unclutter-xfixes package to use.

Type: package

Default:

```
pkgs.unclutter-xfixes
```

Declared by:
<nixpkgs/nixos/modules/services/x11/unclutter-xfixes.nix>

services.unclutter−xfixes.extraOptions

More arguments to pass to the unclutter−xfixes command.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "exclude-root"
  "ignore-scrolling"
  "fork"
]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/unclutter−xfixes.nix>

services.unclutter−xfixes.threshold

Minimum number of pixels considered cursor movement.

Type: signed integer

Default:

```
1
```

Declared by:

<nixpkgs/nixos/modules/services/x11/unclutter−xfixes.nix>

services.unclutter−xfixes.timeout

Number of seconds before the cursor is marked inactive.

Type: signed integer

Default:

```
1
```

Declared by:

<nixpkgs/nixos/modules/services/x11/unclutter−xfixes.nix>

services.undervolt.enable

Whether to enable Undervolting service for Intel CPUs.

Warning: This service is not endorsed by Intel and may permanently damage your hardware. Use at your own risk .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.undervolt.package
The undervolt package to use.

Type: package

Default:

```
pkgs.undervolt
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.undervolt.analogioOffset
The amount of voltage in mV to offset analogio by.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.undervolt.coreOffset
The amount of voltage in mV to offset the CPU cores by.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.undervolt.gpuOffset
The amount of voltage in mV to offset the GPU by.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.undervolt.p1.limit
The P1 Power Limit in Watts. Both limit and window must be set.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.undervolt.p1.window
The P1 Time Window in seconds. Both limit and window must be set.

Type: null or floating point number or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.undervolt.p2.limit
The P2 Power Limit in Watts. Both limit and window must be set.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.undervolt.p2.window
The P2 Time Window in seconds. Both limit and window must be set.

Type: null or floating point number or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.undervolt.temp
The temperature target in Celsius degrees.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.undervolt.tempAc
The temperature target on AC power in Celsius degrees.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.undervolt.tempBat
The temperature target on battery power in Celsius degrees.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.undervolt.turbo
Changes the Intel Turbo feature status (1 is disabled and 0 is enabled).

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.undervolt.uncoreOffset
The amount of voltage in mV to offset uncore by.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.undervolt.useTimer
Whether to set a timer that applies the undervolt settings every 30s. This will cause spam in the journal but might be required for some hardware under specific conditions. Enable this if your undervolt settings don’t hold.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.undervolt.verbose
Whether to enable verbose logging.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/undervolt.nix>

services.unifi.enable
Whether or not to enable the unifi controller service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unifi.nix>

services.unifi.extraJvmOptions
Set extra options to pass to the JVM.

Type: list of string

Default:

```
[ ]
```

Example:

```
["-Xlog:gc"]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unifi.nix>

services.unifi.initialJavaHeapSize
Set the initial heap size for the JVM in MB. If this option isn't set, the JVM will decide this value at runtime.

Type: null or signed integer

Default:

```
null
```

Example:

```
1024
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unifi.nix>

services.unifi.jrePackage
The jdk package to use. Check the UniFi controller release notes to ensure it is supported.

Type: package

Default:

```
pkgs.jdk25_headless
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unifi.nix>

services.unifi.maximumJavaHeapSize
Set the maximum heap size for the JVM in MB. If this option isn't set, the JVM will decide this value at runtime.

Type: null or signed integer

Default:

```
null
```

Example:

```
4096
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unifi.nix>

services.unifi.mongodbPackage
The mongodb package to use.

Type: package

Default:

```
pkgs.mongodb-7_0
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unifi.nix>

services.unifi.openFirewall
Whether or not to open the minimum required ports on the firewall.

This is necessary to allow firmware upgrades and device discovery to work. For remote login, you should additionally open (or forward) port 8443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unifi.nix>

services.unifi.unifiPackage
The unifi package to use.

Type: package

Default:

```
pkgs.unifi
```

Declared by:
<nixpkgs/nixos/modules/services/networking/unifi.nix>

services.unit.enable
Whether to enable Unit App Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/unit/default.nix>

services.unit.package
The unit package to use.

Type: package

Default:

```
pkgs.unit
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/unit/default.nix>

services.unit.config
Unit configuration in JSON format. More details here **https://unit.nginx.org/configuration**

Type: string

Default:

```
{
  "listeners": {},
  "applications": {}
}
```

Example:

```
{
  "listeners": {
    "*:8300": {
      "application": "example-php-72"
    }
  },
  "applications": {
    "example-php-72": {
```

```
            "type": "php 7.2",
            "processes": 4,
            "user": "nginx",
            "group": "nginx",
            "root": "/var/www",
            "index": "index.php",
            "options": {
              "file": "/etc/php.d/default.ini",
              "admin": {
                "max_execution_time": "30",
                "max_input_time": "30",
                "display_errors": "off",
                "display_startup_errors": "off",
                "open_basedir": "/dev/urandom:/proc/cpuinfo:/proc/memin \
fo:/etc/ssl/certs:/var/www",
                "disable_functions": "exec,passthru,shell_exec,system"
              }
            }
          }
        }
      }
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/unit/default.nix>

services.unit.group
Group account under which unit runs.

Type: string

Default:

```
"unit"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/unit/default.nix>

services.unit.logDir
Unit log directory.

Type: absolute path

Default:

```
"/var/log/unit"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/unit/default.nix>

services.unit.stateDir
Unit data directory.

Type: absolute path

Default:

```
"/var/spool/unit"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/unit/default.nix>

services.unit.user

User account under which unit runs.

Type: string

Default:

```
"unit"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/unit/default.nix>

services.unpoller.enable

Whether to enable unpoller.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.influxdb.db

Database name. Database should exist.

Type: string

Default:

```
"unifi"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.influxdb.disable

Whether to disable the influxdb output plugin.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.influxdb.interval

Setting this lower than the Unifi controller’s refresh interval may lead to zeroes in your database.

Type: string

Default:

```
"30s"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.influxdb.pass
Path of a file containing the password for influxdb. This file needs to be readable by the unifi−poller user.

Type: absolute path

Default:

```
unpoller−influxdb−default.password
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.influxdb.url
URL of the influxdb host.

Type: string

Default:

```
"http://127.0.0.1:8086"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.influxdb.user
Username for the influxdb.

Type: string

Default:

```
"unifipoller"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.influxdb.verify_ssl
Verify the influxdb's certificate.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.loki.interval
How often the events are polled and pushed to Loki.

Type: string

Default:

```
"2m"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.loki.pass
Path of a file containing the password for Loki. This file needs to be readable by the unifi−poller user.

Type: absolute path

Default:

```
"unpoller−influxdb−default.password"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.loki.tenant_id
Tenant ID to use in Loki.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.loki.timeout
Should be increased in case of timeout errors.

Type: string

Default:

```
"10s"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.loki.url
URL of the Loki host.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.loki.user
Username for Loki.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.loki.verify_ssl
Verify Loki's certificate.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.poller.debug
Turns on line numbers, microsecond logging, and a per−device log. This may be noisy if you have a lot of devices. It adds one line per device.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.poller.plugins
Load additional plugins.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.poller.quiet
Turns off per−interval logs. Only startup and error logs will be emitted.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.prometheus.disable
Whether to disable the prometheus output plugin.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.prometheus.http_listen
Bind the prometheus exporter to this IP or hostname.

Type: string

Default:

```
"[::]:9130"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.prometheus.report_errors
Whether to report errors.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.controllers
List of Unifi controllers to poll. Use defaults if empty.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.controllers.*.hash_pii
Hash, with md5, client names and MAC addresses. This attempts to protect personally identifiable information.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.controllers.*.pass
Path of a file containing the password for the unifi service user. This file needs to be readable by the unifi−poller user.

Type: absolute path

Default:

```
unpoller−unifi−default.password
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.controllers.*.save_alarms
Collect and save data from UniFi alarms to influxdb and Loki.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.controllers.*.save_anomalies
Collect and save data from UniFi anomalies to influxdb and Loki.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.controllers.*.save_dpi
Collect and save data from deep packet inspection. Adds around 150 data points and impacts performance.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.controllers.*.save_events
Collect and save data from UniFi events to influxdb and Loki.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.controllers.*.save_ids
Collect and save data from the intrusion detection system to influxdb and Loki.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.controllers.*.save_sites
Collect and save site data.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.controllers.*.sites
List of site names for which statistics should be exported. Or the string “default” for the default site or the string “all” for all sites.

Type: one of “default”, “all” or list of string

Default:

```
"all"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.controllers.*.url
URL of the Unifi controller.

Type: string

Default:

```
"https://unifi:8443"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.controllers.*.user
Unifi service user name.

Type: string

Default:

```
"unifi"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.controllers.*.verify_ssl
Verify the Unifi controller's certificate.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.defaults.hash_pii
Hash, with md5, client names and MAC addresses. This attempts to protect personally identifiable information.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.defaults.pass
Path of a file containing the password for the unifi service user. This file needs to be readable by the unifi−poller user.

Type: absolute path

Default:

```
unpoller−unifi−default.password
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.defaults.save_alarms
Collect and save data from UniFi alarms to influxdb and Loki.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.defaults.save_anomalies
Collect and save data from UniFi anomalies to influxdb and Loki.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.defaults.save_dpi
Collect and save data from deep packet inspection. Adds around 150 data points and impacts performance.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.defaults.save_events
Collect and save data from UniFi events to influxdb and Loki.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.defaults.save_ids
Collect and save data from the intrusion detection system to influxdb and Loki.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.defaults.save_sites
Collect and save site data.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.defaults.sites
List of site names for which statistics should be exported. Or the string “default” for the default site or the string “all” for all sites.

Type: one of “default”, “all” or list of string

Default:

```
"all"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.defaults.url
URL of the Unifi controller.

Type: string

Default:

```
"https://unifi:8443"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.defaults.user
Unifi service user name.

Type: string

Default:

```
"unifi"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.defaults.verify_ssl
Verify the Unifi controller's certificate.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.unpoller.unifi.dynamic
Let prometheus select which controller to poll when scraping. Use with default credentials. See unifi−poller wiki for more.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.upower.enable
Whether to enable Upower, a DBus service that provides power management support to applications.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/upower.nix>

services.upower.enableWattsUpPro
Enable the Watts Up Pro device.

The Watts Up Pro contains a generic FTDI USB device without a specific vendor and product ID. When we probe for WUP devices, we can cause the user to get a perplexing "Device or resource busy" error when attempting to use their non−WUP device.

The generic FTDI device is known to also be used on:

- Sparkfun FT232 breakout board
- Parallax Propeller

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/upower.nix>

services.upower.package
The upower package to use.

Type: package

Default:

```
pkgs.upower
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/upower.nix>

services.upower.allowRiskyCriticalPowerAction
Enable the risky critical power actions “Suspend” and “Ignore”.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/upower.nix>

services.upower.criticalPowerAction
The action to take when ‘timeAction’ or ‘percentageAction’ has been reached for the batteries (UPS or laptop batteries) supplying the computer.

When set to ‘Suspend’ or ‘Ignore’, **services.upower.allowRiskyCriticalPowerAction** must be set to ‘true’.

Type: one of “PowerOff”, “Hibernate”, “HybridSleep”, “Suspend”, “Ignore”

Default:

```
"HybridSleep"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/upower.nix>

services.upower.ignoreLid
Do we ignore the lid state

Some laptops are broken. The lid state is either inverted, or stuck on or off. We can’t do much to fix these problems, but this is a way for users to make the laptop panel vanish, a state that might be used by a couple of user−space daemons. On Linux systems, see also **logind.conf**(5).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/upower.nix>

services.upower.noPollBatteries

Don’t poll the kernel for battery level changes.

Some hardware will send us battery level changes through events, rather than us having to poll for it. This option allows disabling polling for hardware that sends out events.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/upower.nix>

services.upower.percentageAction

When ‘usePercentageForPolicy’ is ‘true’, the levels at which UPower will take action for the critical battery level.

This will also be used for batteries which don’t have time information such as that of peripherals.

If any value (of ‘percentageLow’, ‘percentageCritical’ and ‘percentageAction’) is invalid, or not in descending order, the defaults will be used.

Type: unsigned integer, meaning >=0

Default:

```
2
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/upower.nix>

services.upower.percentageCritical

When ‘usePercentageForPolicy’ is ‘true’, the levels at which UPower will consider the battery critical.

This will also be used for batteries which don’t have time information such as that of peripherals.

If any value (of ‘percentageLow’, ‘percentageCritical’ and ‘percentageAction’) is invalid, or not in descending order, the defaults will be used.

Type: unsigned integer, meaning >=0

Default:

```
5
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/upower.nix>

services.upower.percentageLow

When ‘usePercentageForPolicy’ is ‘true’, the levels at which UPower will consider the battery low.

This will also be used for batteries which don’t have time information such as that of peripherals.

If any value (of ‘percentageLow’, ‘percentageCritical’ and ‘percentageAction’) is invalid, or not in descending order, the defaults will be used.

Type: unsigned integer, meaning >=0

Default:

```
20
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/upower.nix>

services.upower.timeAction

When ‘usePercentageForPolicy’ is ‘false’, the time remaining in seconds at which UPower will take action for the critical battery level.

If any value (of ‘timeLow’, ‘timeCritical’ and ‘timeAction’) is invalid, or not in descending order, the defaults will be used.

Type: unsigned integer, meaning >=0

Default:

```
120
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/upower.nix>

services.upower.timeCritical

When ‘usePercentageForPolicy’ is ‘false’, the time remaining in seconds at which UPower will consider the battery critical.

If any value (of ‘timeLow’, ‘timeCritical’ and ‘timeAction’) is invalid, or not in descending order, the defaults will be used.

Type: unsigned integer, meaning >=0

Default:

```
300
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/upower.nix>

services.upower.timeLow

When ‘usePercentageForPolicy’ is ‘false’, the time remaining in seconds at which UPower will consider the battery low.

If any value (of ‘timeLow’, ‘timeCritical’ and ‘timeAction’) is invalid, or not in descending order, the defaults will be used.

Type: unsigned integer, meaning >=0

Default:

```
1200
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/upower.nix>

services.upower.usePercentageForPolicy

Policy for warnings and action based on battery levels

Whether battery percentage based policy should be used. The default is to use the percentage, which should work around broken firmwares. It is also more reliable than the time left (frantically saving all your files is going to use more battery than letting it rest for example).

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/upower.nix>

services.uptermd.enable

Whether to enable uptermd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/uptermd.nix>

services.uptermd.extraFlags

Extra flags passed to the uptermd command.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--debug"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/uptermd.nix>

services.uptermd.hostKey

Path to SSH host key. If not defined, an ed25519 keypair is generated automatically.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/upterm_host_ed25519_key"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/uptermd.nix>

services.uptermd.listenAddress

Address the server will listen on.

Type: string

Default:

```
"[::]"
```

Example:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/uptermd.nix>

services.uptermd.openFirewall

Whether to open the firewall for the port in **services.uptermd.port**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/uptermd.nix>

services.uptermd.port

Port the server will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2222
```

Declared by:

<nixpkgs/nixos/modules/services/networking/uptermd.nix>

services.uptime−kuma.enable

Whether to enable Uptime Kuma, this assumes a reverse proxy to be set.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/uptime−kuma.nix>

services.uptime−kuma.package

The uptime−kuma package to use.

Type: package

Default:

```
pkgs.uptime−kuma
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/uptime−kuma.nix>

services.uptime−kuma.appriseSupport

Whether to enable apprise support for notifications.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/uptime−kuma.nix>

services.uptime−kuma.settings

Additional configuration for Uptime Kuma, see **https://github.com/louislam/uptime−kuma/wiki/Environment−Variables** for supported values.

Type: open submodule of attribute set of string

Default:

```
{ }
```

Example:

```
{
  NODE_EXTRA_CA_CERTS = {
    _type = "literalExpression";
    text = "config.security.pki.caBundle";
  };
  PORT = "4000";
  UPTIME_KUMA_DB_HOSTNAME = "localhost";
  UPTIME_KUMA_DB_NAME = "uptime−kuma";
  UPTIME_KUMA_DB_PASSWORD = "uptime−kuma";
  UPTIME_KUMA_DB_TYPE = "mariadb";
  UPTIME_KUMA_DB_USERNAME = "uptime−kuma";
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/uptime−kuma.nix>

services.uptimed.enable

Enable ‘uptimed’, allowing you to track your highest uptimes.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/system/uptimed.nix>

services.urserver.enable

Whether to enable urserver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/x11/urserver.nix>

services.urxvtd.enable

Enable urxvtd, the urxvt terminal daemon. To use urxvtd, run “urxvtc”.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/urxvtd.nix>

services.urxvtd.package
The rxvt−unicode package to use.

Type: package

Default:

```
pkgs.rxvt-unicode
```

Declared by:
<nixpkgs/nixos/modules/services/x11/urxvtd.nix>

services.usbguard.enable
Whether to enable USBGuard daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/usbguard.nix>

services.usbguard.package
The usbguard package to use.

Type: package

Default:

```
pkgs.usbguard
```

Declared by:
<nixpkgs/nixos/modules/services/security/usbguard.nix>

services.usbguard.IPCAllowedGroups
A list of groupnames that the daemon will accept IPC connections from.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "wheel"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/usbguard.nix>

services.usbguard.IPCAllowedUsers
A list of usernames that the daemon will accept IPC connections from.

Type: list of string

Default:

```
[
  "root"
```

```
]
```

Example:

```
[
  "root"
  "yourusername"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/usbguard.nix>

services.usbguard.dbus.enable
Whether to enable USBGuard dbus daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/usbguard.nix>

services.usbguard.deviceRulesWithPort
Generate device specific rules including the “via−port” attribute.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/usbguard.nix>

services.usbguard.implicitPolicyTarget
How to treat USB devices that don’t match any rule in the policy. Target should be one of allow, block or reject (logically remove the device node from the system).

Type: one of “allow”, “block”, “reject”

Default:

```
"block"
```

Declared by:
<nixpkgs/nixos/modules/services/security/usbguard.nix>

services.usbguard.insertedDevicePolicy
How to treat USB devices that are already connected after the daemon starts. One of block, reject, apply−policy.

Type: one of “block”, “reject”, “apply−policy”

Default:

```
"apply-policy"
```

Declared by:
<nixpkgs/nixos/modules/services/security/usbguard.nix>

services.usbguard.presentControllerPolicy

How to treat USB controller devices that are already connected when the daemon starts. One of allow, block, reject, keep or apply−policy.

Type: one of “allow”, “block”, “reject”, “keep”, “apply−policy”

Default:

```
"keep"
```

Declared by:

<nixpkgs/nixos/modules/services/security/usbguard.nix>

services.usbguard.presentDevicePolicy

How to treat USB devices that are already connected when the daemon starts. Policy should be one of allow, block, reject, keep (keep whatever state the device is currently in) or apply−policy (evaluate the rule set for every present device).

Type: one of “allow”, “block”, “reject”, “keep”, “apply−policy”

Default:

```
"apply-policy"
```

Declared by:

<nixpkgs/nixos/modules/services/security/usbguard.nix>

services.usbguard.restoreControllerDeviceState

The USBGuard daemon modifies some attributes of controller devices like the default authorization state of new child device instances. Using this setting, you can control whether the daemon will try to restore the attribute values to the state before modification on shutdown.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/security/usbguard.nix>

services.usbguard.ruleFile

This tells the USBGuard daemon which file to load as policy rule set.

The file can be changed manually or via the IPC interface assuming it has the right file permissions.

For more details see **usbguard−rules.conf**(5).

Type: null or absolute path

Default:

```
"/var/lib/usbguard/rules.conf"
```

Example:

```
"/run/secrets/usbguard-rules"
```

Declared by:

<nixpkgs/nixos/modules/services/security/usbguard.nix>

services.usbguard.rules

The USBGuard daemon will load this as the policy rule set. As these rules are NixOS managed they are immutable and can’t be changed by the IPC interface.

If you do not set this option, the USBGuard daemon will load it’s policy rule set from the option configured in ‘services.usbguard.ruleFile’.

Running ‘usbguard generate−policy’ as root will generate a config for your currently plugged in devices.

For more details see **usbguard-rules.conf**(5).

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
allow with-interface equals { 08:*:* }
```

Declared by:
<nixpkgs/nixos/modules/services/security/usbguard.nix>

services.usbmuxd.enable
Enable the usbmuxd ("USB multiplexing daemon") service. This daemon is in charge of multiplexing connections over USB to an iOS device. This is needed for transferring data from and to iOS devices (see ifuse). Also this may enable plug-n-play tethering for iPhones.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/usbmuxd.nix>

services.usbmuxd.package
Which package to use for the usbmuxd daemon.

Type: package

Default:

```
pkgs.usbmuxd
```

Related packages:

- 'pkgs.usbmuxd'
- 'pkgs.usbmuxd2'

Declared by:
<nixpkgs/nixos/modules/services/hardware/usbmuxd.nix>

services.usbmuxd.group
The group usbmuxd should use to run after startup.

Type: string

Default:

```
"usbmux"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/usbmuxd.nix>

services.usbmuxd.user
The user usbmuxd should use to run after startup.

Type: string

Default:

```
"usbmux"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/usbmuxd.nix>

services.usbrelayd.enable
Whether to enable USB Relay MQTT daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/usbrelayd.nix>

services.usbrelayd.broker
Hostname or IP address of your MQTT Broker.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
[
  "mqtt"
  "192.168.1.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/usbrelayd.nix>

services.usbrelayd.clientName
Name, your client connects as.

Type: string

Default:

```
"MyUSBRelay"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/usbrelayd.nix>

services.userborn.enable
Whether to enable userborn.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/userborn.nix>

services.userborn.package

The userborn package to use.

Type: package

Default:

```
pkgs.userborn
```

Declared by:

<nixpkgs/nixos/modules/services/system/userborn.nix>

services.userborn.passwordFilesLocation

The location of the original password files.

If this is not '/etc', the files are symlinked from this location to '/etc'.

The primary motivation for this is an immutable '/etc', where we cannot write the files directly to '/etc'.

However this an also serve other use cases, e.g. when '/etc' is on a 'tmpfs'.

Type: string

Default:

```
if immutableEtc && !config.services.userborn.static then "/var/lib/ \
nixos" else "/etc"
```

Declared by:

<nixpkgs/nixos/modules/services/system/userborn.nix>

services.userborn.static

Whether to generate the password files at build time and store them directly in the system closure, without requiring any services at boot time.

This is STRICTLY intended for embedded appliance images that only have system users with manually managed static user IDs, and CANNOT be used with generation updates.

WARNING: In this mode, you MUST statically manage user IDs yourself, carefully. Beware, UID reuse is a serious security issue and it's your responsibility to avoid it over the entire lifetime of the system.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/system/userborn.nix>

services.userdbd.enable

Whether to enable the systemd JSON user/group record lookup service .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/userdbd.nix>

services.userdbd.enableSSHSupport

Whether to enable exposing OpenSSH public keys defined in userdb. Be aware that this enables modifying public keys at runtime, either by users managed by **services.homed**, or globally via drop−in files .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/userdbd.nix>

services.ustreamer.enable

Whether to enable µStreamer, a lightweight MJPEG−HTTP streamer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/video/ustreamer.nix>

services.ustreamer.package

The ustreamer package to use.

Type: package

Default:

```
pkgs.ustreamer
```

Declared by:

<nixpkgs/nixos/modules/services/video/ustreamer.nix>

services.ustreamer.autoStart

Wether to start µStreamer on boot. Disabling this will use socket activation. The service will stop gracefully after some inactivity. Disabling this will set '−−exit−on−no−clients=300'

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/video/ustreamer.nix>

services.ustreamer.device

The v4l2 device to stream.

Type: absolute path

Default:

```
"/dev/video0"
```

Example:

```
"/dev/v4l/by-id/usb-0000_Dummy_abcdef-video-index0"
```

Declared by:

<nixpkgs/nixos/modules/services/video/ustreamer.nix>

services.ustreamer.extraArgs

Extra arguments to pass to 'ustreamer'. See **ustreamer**(1)

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--resolution=1920x1080"
]
```

Declared by:

<nixpkgs/nixos/modules/services/video/ustreamer.nix>

services.ustreamer.listenAddress

Address to expose the HTTP server. This accepts values for ListenStream= defined in **systemd.socket**(5)

Type: string

Default:

```
"0.0.0.0:8080"
```

Example:

```
"/run/ustreamer.sock"
```

Declared by:

<nixpkgs/nixos/modules/services/video/ustreamer.nix>

services.uvcvideo.dynctrl.enable

Whether to enable **uvcvideo** dynamic controls.

Note that enabling this brings the **uvcdynctrl** tool into your environment and register all dynamic controls from specified **packages** to the **uvcvideo** driver.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/uvcvideo/default.nix>

services.uvcvideo.dynctrl.packages

List of packages containing **uvcvideo** dynamic controls rules. All files found in *«pkg»/share/uvcdynctrl/data* will be included.

Note that these will serve as input to the **libwebcam** package which through its own **udev** rule will register the dynamic controls from specified packages to the **uvcvideo** driver.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[ pkgs.tiscamera ]
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/uvcvideo/default.nix>

services.uwsgi.enable
Enable uWSGI

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/uwsgi.nix>

services.uwsgi.capabilities
Grant capabilities to the uWSGI instance. See the **capabilities**(7) for available values.

Note
uWSGI runs as an unprivileged user (even as Emperor) with the minimal capabilities required. This option can be used to add fine−grained permissions without running the service as root.

When in Emperor mode, any capability to be inherited by a vassal must be specified again in the vassal configuration using ‘cap’. See the uWSGI **docs** for more information.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "CAP_NET_BIND_SERVICE" # bind on ports <1024
  "CAP_NET_RAW"          # open raw sockets
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/uwsgi.nix>

services.uwsgi.group
Group account under which uWSGI runs.

Type: string

Default:

```
"uwsgi"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/uwsgi.nix>

services.uwsgi.instance
uWSGI configuration. It awaits an attribute ‘type’ inside which can be either ‘normal’ or ‘emperor’.

For ‘normal’ mode you can specify ‘pythonPackages’ as a function from libraries set into a list of libraries. ‘pythonpath’ will be set accordingly.

For ‘emperor’ mode, you should use ‘vassals’ attribute which should be either a set of names and configurations or a path to a directory.

Other attributes will be used in configuration file as−is. Notice that you can redefine ‘plugins’ setting here.

Type: Json value or lambda

Default:

```
{
  type = "normal";
}
```

Example:

```
{
  type = "emperor";
  vassals = {
    moin = {
      type = "normal";
      pythonPackages = self: with self; [ moinmoin ];
      socket = "${config.services.uwsgi.runDir}/uwsgi.sock";
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/uwsgi.nix>

services.uwsgi.plugins
Plugins used with uWSGI

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/uwsgi.nix>

services.uwsgi.runDir
Where uWSGI communication sockets can live

Type: absolute path

Default:

```
"/run/uwsgi"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/uwsgi.nix>

services.uwsgi.user
User account under which uWSGI runs.

Type: string

Default:

```
"uwsgi"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/uwsgi.nix>

services.v2ray.enable
Whether to run v2ray server.

Either ‘configFile’ or ‘config’ must be specified.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/v2ray.nix>

services.v2ray.package

The v2ray package to use.

Type: package

Default:

```
pkgs.v2ray
```

Declared by:

<nixpkgs/nixos/modules/services/networking/v2ray.nix>

services.v2ray.config

The configuration object.

Either ‘configFile’ or ‘config’ must be specified.

See **https://www.v2fly.org/en_US/v5/config/overview.html**.

Type: null or JSON value

Default:

```
null
```

Example:

```
{
  inbounds = [
    {
      listen = "127.0.0.1";
      port = 1080;
      protocol = "http";
    }
  ];
  outbounds = [
    {
      protocol = "freedom";
    }
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/v2ray.nix>

services.v2ray.configFile

The absolute path to the configuration file.

Either ‘configFile’ or ‘config’ must be specified.

See **https://www.v2fly.org/en_US/v5/config/overview.html**.

Type: null or string

Default:

```
null
```

Example:

```
"/etc/v2ray/config.json"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/v2ray.nix>

services.v2raya.enable
Whether to enable the v2rayA service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/v2raya.nix>

services.v2raya.package
The v2raya package to use.

Type: package

Default:

```
pkgs.v2raya
```

Declared by:
<nixpkgs/nixos/modules/services/networking/v2raya.nix>

services.v2raya.cliPackage
The v2ray package to use. This is the package used for overriding the value of the ‘v2ray’ attribute in the package set by ‘services.v2raya.package’.

Type: package

Default:

```
pkgs.v2ray
```

Example:

```
pkgs.xray
```

Declared by:
<nixpkgs/nixos/modules/services/networking/v2raya.nix>

services.v4l2-relayd.instances
v4l2−relayd instances to be created.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  example = {
    cardLabel = "Example card";
    input.pipeline = "videotestsrc";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/video/v4l2−relayd.nix>

services.v4l2−relayd.instances.<name>.enable
Whether to enable this v4l2−relayd instance.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/video/v4l2−relayd.nix>

services.v4l2−relayd.instances.<name>.cardLabel
The name the camera will show up as.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/video/v4l2−relayd.nix>

services.v4l2−relayd.instances.<name>.extraPackages
Extra packages to add to **GST_PLUGIN_PATH** for the instance.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/video/v4l2−relayd.nix>

services.v4l2−relayd.instances.<name>.input.format
The video−format to read from input−stream.

Type: string

Default:

```
"YUY2"
```

Declared by:
<nixpkgs/nixos/modules/services/video/v4l2−relayd.nix>

services.v4l2−relayd.instances.<name>.input.framerate
The framerate to read from input−stream.

Type: positive integer, meaning >0

Default:

```
30
```

Declared by:
<nixpkgs/nixos/modules/services/video/v4l2−relayd.nix>

services.v4l2−relayd.instances.<name>.input.height
The height to read from input−stream.

Type: positive integer, meaning >0

Default:

```
720
```

Declared by:
<nixpkgs/nixos/modules/services/video/v4l2−relayd.nix>

services.v4l2−relayd.instances.<name>.input.pipeline
The gstreamer−pipeline to use for the input−stream.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/video/v4l2−relayd.nix>

services.v4l2−relayd.instances.<name>.input.width
The width to read from input−stream.

Type: positive integer, meaning >0

Default:

```
1280
```

Declared by:
<nixpkgs/nixos/modules/services/video/v4l2−relayd.nix>

services.v4l2−relayd.instances.<name>.name
The name of the instance.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/video/v4l2−relayd.nix>

services.v4l2−relayd.instances.<name>.output.format
The video−format to write to output−stream.

Type: string

Default:

```
"YUY2"
```

Declared by:
<nixpkgs/nixos/modules/services/video/v4l2−relayd.nix>

services.varnish.enable
Whether to enable Varnish Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/varnish/default.nix>

services.varnish.enableConfigCheck

Whether to enable checking the config during build time.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/varnish/default.nix>

services.varnish.package

The varnish package to use.

Type: package

Default:

```
pkgs.varnish
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/varnish/default.nix>

services.varnish.config

Verbatim default.vcl configuration.

Type: strings concatenated with “\n”

Declared by:

<nixpkgs/nixos/modules/services/web−servers/varnish/default.nix>

services.varnish.extraCommandLine

Command line switches for varnishd (run ‘varnishd −?’ to get list of options)

Type: string

Default:

```
""
```

Example:

```
"−s malloc,256M"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/varnish/default.nix>

services.varnish.extraModules

Varnish modules (except ‘std’).

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.varnishPackages.geoip ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/varnish/default.nix>

services.varnish.http_address

HTTP listen address and port.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/varnish/default.nix>

services.varnish.listen

Accept for client requests on the specified listen addresses.

Type: list of (submodule)

Default:

```
[ { address="*"; port=6081; } ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/varnish/default.nix>

services.varnish.listen.*.address

If given an IP address, it can be a host name (“localhost”), an IPv4 dotted−quad (“127.0.0.1”) or an IPv6 address enclosed in square brackets (“[::1]”).

(VCL4.1 and higher) If given an absolute Path (“/path/to/listen.sock”) or “@” followed by the name of an abstract socket (“@myvarnishd”) accept connections on a Unix domain socket.

The user, group and mode sub−arguments may be used to specify the permissions of the socket file. These sub−arguments do not apply to abstract sockets.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web−servers/varnish/default.nix>

services.varnish.listen.*.group

Group name who owns the socket file.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/varnish/default.nix>

services.varnish.listen.*.mode

Permission of the socket file (3−digit octal value).

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/varnish/default.nix>

services.varnish.listen.*.name

Name is referenced in logs. If name is not specified, ‘a0’, ‘a1’, etc. is used.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/varnish/default.nix>

services.varnish.listen.*.port

The port to use for IP sockets. If port is not specified, port 80 (http) is used.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/varnish/default.nix>

services.varnish.listen.*.proto

PROTO can be ‘HTTP’ (the default) or ‘PROXY’. Both version 1 and 2 of the proxy protocol can be used.

Type: one of “HTTP”, “PROXY”

Default:

```
"HTTP"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/varnish/default.nix>

services.varnish.listen.*.user

User name who owns the socket file.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/varnish/default.nix>

services.vault.enable

Whether to enable Vault daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/vault.nix>

services.vault.package

The vault package to use.

Type: package

Default:

```
pkgs.vault
```

Declared by:

<nixpkgs/nixos/modules/services/security/vault.nix>

services.vault.address

The name of the ip interface to listen to

Type: string

Default:

```
"127.0.0.1:8200"
```

Declared by:

<nixpkgs/nixos/modules/services/security/vault.nix>

services.vault.dev

In this mode, Vault runs in−memory and starts unsealed. This option is not meant production but for development and testing i.e. for nixos tests.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/security/vault.nix>

services.vault.devRootTokenID

Initial root token. This only applies when **services.vault.dev** is true

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/vault.nix>

services.vault.extraConfig

Extra text appended to *vault.hcl*.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/security/vault.nix>

services.vault.extraSettingsPaths

Configuration files to load besides the immutable one defined by the NixOS module. This can be used to avoid putting credentials in the Nix store, which can be read by any user.

Each path can point to a JSON− or HCL−formatted file, or a directory to be scanned for files with ‘.hcl’ or ‘.json’ extensions.

To upload the confidential file with NixOps, use for example:

```
# https://releases.nixos.org/nixops/latest/manual/manual.html#opt- \
deployment.keys
deployment.keys."vault.hcl" = let db = import ./db-credentials.nix \
; in {
  text = ''
    storage "postgresql" {
      connection_url = "postgres://${db.username}:${db.password}@ho \
st.example.com/exampledb?sslmode=verify-ca"
    }
  '';
  user = "vault";
};
services.vault.extraSettingsPaths = ["/run/keys/vault.hcl"];
services.vault.storageBackend = "postgresql";
users.users.vault.extraGroups = ["keys"];
```

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/security/vault.nix>

services.vault.listenerExtraConfig

Extra text appended to the listener section.

Type: strings concatenated with "\n"

Default:

```
tls_min_version = "tls12"
```

Declared by:

<nixpkgs/nixos/modules/services/security/vault.nix>

services.vault.storageBackend

The name of the type of storage backend

Type: one of "inmem", "file", "consul", "zookeeper", "s3", "azure", "dynamodb", "etcd", "mssql", "mysql", "postgresql", "swift", "gcs", "raft"

Default:

```
"inmem"
```

Declared by:

<nixpkgs/nixos/modules/services/security/vault.nix>

services.vault.storageConfig

HCL configuration to insert in the storageBackend section.

Confidential values should not be specified here because this option's value is written to the Nix store, which is publicly readable. Provide credentials and such in a separate file using **services.vault.extraSettingsPaths**.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault.nix>

services.vault.storagePath
Data directory for file backend

Type: null or absolute path

Default:

```
if config.services.vault.storageBackend == "file" || cfg.storageBac \
kend == "raft"
then "/var/lib/vault"
else null
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault.nix>

services.vault.telemetryConfig
Telemetry configuration

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault.nix>

services.vault.tlsCertFile
TLS certificate file. TLS will be disabled unless this option is set

Type: null or string

Default:

```
null
```

Example:

```
"/path/to/your/cert.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault.nix>

services.vault.tlsKeyFile
TLS private key file. TLS will be disabled unless this option is set

Type: null or string

Default:

```
null
```

Example:

```
"/path/to/your/key.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault.nix>

services.vault−agent.instances
Attribute set of vault−agent instances. Creates independent ‘vault−agent−${name}.service’ systemd units for each instance defined here.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault−agent.nix>

services.vault−agent.instances.<name>.enable
Whether to enable this vault−agent instance.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault−agent.nix>

services.vault−agent.instances.<name>.package
The vault package to use.

Type: package

Default:

```
pkgs.vault
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault−agent.nix>

services.vault−agent.instances.<name>.group
Group under which this instance runs.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault−agent.nix>

services.vault−agent.instances.<name>.settings
Free−form settings written directly to the *config.json* file. Refer to **https://developer.hashicorp.com/vault/docs/agent#configuration−file−options** for supported values.

> **Note**
> Resulting format is JSON not HCL. Refer to **https://www.hcl2json.com/** if you are unsure how to convert HCL options to JSON.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault−agent.nix>

services.vault−agent.instances.<name>.settings.pid_file
Path to use for the pid file.

Type: string

Default:

```
"/run/vault−agent/‹name›.pid"
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault−agent.nix>

services.vault−agent.instances.<name>.user
User under which this instance runs.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault−agent.nix>

services.vaultwarden.enable
Whether to enable vaultwarden.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/vaultwarden/default.nix>

services.vaultwarden.package
The vaultwarden package to use.

Type: package

Default:

```
pkgs.vaultwarden
```

Declared by:
<nixpkgs/nixos/modules/services/security/vaultwarden/default.nix>

services.vaultwarden.backupDir
The directory under which vaultwarden will backup its persistent data.

Type: null or string

Default:

```
null
```

Example:

```
"/var/backup/vaultwarden"
```

Declared by:
<nixpkgs/nixos/modules/services/security/vaultwarden/default.nix>

services.vaultwarden.config
The configuration of vaultwarden is done through environment variables, therefore it is recommended to use upper snake case (e.g. **DISABLE_2FA_REMEMBER**).

However, camel case (e.g. ‘disable2FARemember’) is also supported: The NixOS module will convert it automatically to upper case snake case (e.g. **DISABLE_2FA_REMEMBER**). In this conversion digits (0−9) are handled just like upper case characters, so ‘foo2’ would be converted to **FOO_2**. Names already in this format remain unchanged, so ‘FOO2’ remains ‘FOO2’ if passed as such, even though ‘foo2’ would have been converted to **FOO_2**. This allows working around any potential future conflicting naming conventions.

Based on the attributes passed to this config option an environment file will be generated that is passed to vaultwarden's systemd service.

The available configuration options can be found in **the environment template file**.

See **services.vaultwarden.environmentFile** for how to set up access to the Admin UI to invite initial users.

Type: attribute set of (null or boolean or signed integer or string)

Default:

```
{
  ROCKET_ADDRESS = "::1";
  ROCKET_PORT = 8222;
}
```

Example:

```
{
  DOMAIN = "https://bitwarden.example.com";
  SIGNUPS_ALLOWED = false;
  # Vaultwarden recommends running behind a reverse proxy, the conf \
igureNginx option can be used for that.
  ROCKET_ADDRESS = "127.0.0.1";
  ROCKET_PORT = 8222;
  ROCKET_LOG = "critical";
  # This example assumes a mailserver running on localhost,
  # thus without transport encryption.
  # If you use an external mail server, follow:
  #   https://github.com/dani-garcia/vaultwarden/wiki/SMTP-config \
uration
  SMTP_HOST = "127.0.0.1";
  SMTP_PORT = 25;
  SMTP_SSL = false;
  SMTP_FROM = "admin@bitwarden.example.com";
  SMTP_FROM_NAME = "example.com Bitwarden server";
}
```

Declared by:

<nixpkgs/nixos/modules/services/security/vaultwarden/default.nix>

services.vaultwarden.configureNginx

Whether to configure nginx to serve VaultWarden.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/security/vaultwarden/default.nix>

services.vaultwarden.configurePostgres

Whether to configure a local PostgreSQL server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/vaultwarden/default.nix>

services.vaultwarden.dbBackend
Which database backend vaultwarden will be using.

Type: one of “sqlite”, “mysql”, “postgresql”

Default:

```
"sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/security/vaultwarden/default.nix>

services.vaultwarden.domain
The domain under which VaultWarden will be reachable.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/vaultwarden/default.nix>

services.vaultwarden.environmentFile
Additional environment file or files as defined in **systemd.exec**(5).

Secrets like **ADMIN_TOKEN** and **SMTP_PASSWORD** should be passed to the service without adding them to the world−readable Nix store.

Note that this file needs to be available on the host on which ‘vaultwarden’ is running.

As a concrete example, to make the Admin UI available (from which new users can be invited initially), the secret **ADMIN_TOKEN** needs to be defined as described **here**:

```
# Admin secret token, see
# https://github.com/dani-garcia/vaultwarden/wiki/Enabling-admin \
-page
ADMIN_TOKEN=...copy-paste a unique generated secret token here...
```

Type: (list of absolute path) or absolute path convertible to it

Default:

```
[ ]
```

Example:

```
"/var/lib/vaultwarden.env"
```

Declared by:
<nixpkgs/nixos/modules/services/security/vaultwarden/default.nix>

services.vaultwarden.webVaultPackage
The webvault package to use.

Type: package

Default:

```
pkgs.vaultwarden.webvault
```

Declared by:
<nixpkgs/nixos/modules/services/security/vaultwarden/default.nix>

services.vdirsyncer.enable
Whether to enable vdirsyncer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vdirsyncer.nix>

services.vdirsyncer.package
The vdirsyncer package to use.

Type: package

Default:

```
pkgs.vdirsyncer
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vdirsyncer.nix>

services.vdirsyncer.jobs
vdirsyncer job configurations

Type: attribute set of (submodule)

Declared by:
<nixpkgs/nixos/modules/services/networking/vdirsyncer.nix>

services.vdirsyncer.jobs.<name>.enable
Whether to enable this vdirsyncer job.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vdirsyncer.nix>

services.vdirsyncer.jobs.<name>.additionalGroups
additional groups to add the dynamic user to

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vdirsyncer.nix>

services.vdirsyncer.jobs.<name>.config.general
general configuration

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vdirsyncer.nix>

services.vdirsyncer.jobs.<name>.config.pairs
vdirsyncer pair configurations

Type: attribute set of (attribute set)

Default:

```
{ }
```

Example:

```
{
  my_contacts = {
    a = "my_cloud_contacts";
    b = "my_local_contacts";
    collections = [ "from a" ];
    conflict_resolution = "a wins";
    metadata = [ "color" "displayname" ];
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vdirsyncer.nix>

services.vdirsyncer.jobs.<name>.config.statusPath
vdirsyncer's status path

Type: null or string

Default:

```
/var/lib/vdirsyncer/${attrName}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vdirsyncer.nix>

services.vdirsyncer.jobs.<name>.config.storages
vdirsyncer storage configurations

Type: attribute set of (attribute set)

Default:

```
{ }
```

Example:

```
{
  my_cloud_contacts = {
    type = "carddav";
    url = "https://dav.example.com/";
    read_only = true;
    username = "user";
    "password.fetch" = [ "command" "cat" "/etc/vdirsyncer/cloud.pas \
```

```
swd" ];
  };
  my_local_contacts = {
    type = "carddav";
    url = "https://localhost/";
    username = "user";
    "password.fetch" = [ "command" "cat" "/etc/vdirsyncer/local.pas \
swd" ];
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vdirsyncer.nix>

services.vdirsyncer.jobs.<name>.configFile
existing configuration file

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vdirsyncer.nix>

services.vdirsyncer.jobs.<name>.forceDiscover
Run ‘yes | vdirsyncer discover’ prior to ‘vdirsyncer sync’

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vdirsyncer.nix>

services.vdirsyncer.jobs.<name>.group
group to run vdirsyncer as

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vdirsyncer.nix>

services.vdirsyncer.jobs.<name>.timerConfig
systemd timer configuration

Type: attribute set

Default:

```
{
  OnBootSec = "1h";
  OnUnitActiveSec = "6h";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vdirsyncer.nix>

services.vdirsyncer.jobs.<name>.user

User account to run vdirsyncer as, otherwise as a systemd dynamic user

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vdirsyncer.nix>

services.vdr.enable

Whether to enable VDR, a video disk recorder.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/vdr.nix>

services.vdr.enableLirc

Whether to enable LIRC.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/vdr.nix>

services.vdr.package

The vdr package to use.

Type: package

Default:

```
pkgs.vdr
```

Example:

```
wrapVdr.override { plugins = with pkgs.vdrPlugins; [ hello ]; }
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/vdr.nix>

services.vdr.extraArguments

Additional command line arguments to pass to VDR.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/vdr.nix>

services.vdr.group
Group under which the VDRvdr service runs.

Type: string

Default:

```
"vdr"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/vdr.nix>

services.vdr.user
User under which the VDR service runs.

Type: string

Default:

```
"vdr"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/vdr.nix>

services.vdr.videoDir
Recording directory

Type: absolute path

Default:

```
"/srv/vdr/video"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/vdr.nix>

services.vector.enable
Whether to enable Vector, a high−performance observability data pipeline.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/logging/vector.nix>

services.vector.package
The vector package to use.

Type: package

Default:

```
pkgs.vector
```

Declared by:
<nixpkgs/nixos/modules/services/logging/vector.nix>

services.vector.gracefulShutdownLimitSecs

Set the duration in seconds to wait for graceful shutdown after SIGINT or SIGTERM are received. After the duration has passed, Vector will force shutdown.

Type: positive integer, meaning >0

Default:

```
60
```

Declared by:

<nixpkgs/nixos/modules/services/logging/vector.nix>

services.vector.journaldAccess

Enable Vector to access journald.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/logging/vector.nix>

services.vector.settings

Specify the configuration for Vector in Nix.

Type: JSON value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/logging/vector.nix>

services.vector.validateConfig

Enable the checking of the vector config during build time. This should be disabled when interpolating environment variables.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/logging/vector.nix>

services.veilid.enable

Whether to enable Veilid Headless Node.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.openFirewall

Whether to open firewall on ports 5150/tcp, 5150/udp

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings

Build veilid−server.conf with nix expression. Check <link xlink:href="https://veilid.gitlab.io/developer−book/admin/config.html#configuration−keys">Configuration Keys</link>.

Type: open submodule of (YAML 1.1 value)

Declared by:

<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.client_api.ipc_directory

IPC directory where file sockets are stored.

Type: string

Default:

```
"/var/db/veilid−server/ipc"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.client_api.ipc_enabled

veilid−server will respond to Python and other JSON client requests.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.core.block_store.directory

The filesystem directory to store blocks for the block store.

Type: null or string

Default:

```
"/var/db/veilid−server/block_store"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.core.capabilities.disable

A list of capabilities to disable (for example, DHTV to say you cannot store DHT information).

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "APPM"
```

```
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.core.network.detect_address_changes
Should veilid−core detect and notify on network address changes?

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.core.network.dht.min_peer_count
Minimum number of nodes to keep in the peer table.

Type: null or signed integer or floating point number

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.core.network.routing_table.bootstrap
Host name of existing well−known Veilid bootstrap servers for the network to connect to.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.core.network.routing_table.public_keys
Base64−encoded public key for the node, used as the node's ID.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.core.network.upnp
Should the app try to improve its incoming network connectivity using UPnP?

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.core.protected_store.allow_insecure_fallback
If we can’t use system−provided secure storage, should we proceed anyway?

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.core.protected_store.always_use_insecure_storage
Should we bypass any attempt to use system−provided secure storage?

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.core.protected_store.directory
The filesystem directory to store your protected store in.

Type: string

Default:

```
"/var/db/veilid-server/protected_store"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.core.table_store.directory
The filesystem directory to store your table store within.

Type: string

Default:

```
"/var/db/veilid-server/table_store"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.logging.api.enabled
Events of type ‘api’ will be logged.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.logging.api.level
The minimum priority of api events to be logged.

Type: string

Default:

```
"info"
```

Example:

```
"debug"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.logging.system.enabled
Events of type ‘system’ will be logged.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.logging.system.level
The minimum priority of system events to be logged.

Type: string

Default:

```
"info"
```

Example:

```
"debug"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.logging.terminal.enabled
Events of type ‘terminal’ will be logged.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.veilid.settings.logging.terminal.level
The minimum priority of terminal events to be logged.

Type: string

Default:

```
"info"
```

Example:

```
"debug"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/veilid.nix>

services.victorialogs.enable
Whether to enable VictoriaLogs is an open source user−friendly database for logs from VictoriaMetrics.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victorialogs.nix>

services.victorialogs.package
The victorialogs package to use.

Type: package

Default:

```
pkgs.victorialogs
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victorialogs.nix>

services.victorialogs.basicAuthPasswordFile
File that contains the Basic Auth password used to protect VictoriaLogs instance by authorization

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victorialogs.nix>

services.victorialogs.basicAuthUsername
Basic Auth username used to protect VictoriaLogs instance by authorization

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victorialogs.nix>

services.victorialogs.extraOptions
Extra options to pass to VictoriaLogs. See **victoria-logs -help** for possible options.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-loggerLevel=WARN"
]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victorialogs.nix>

services.victorialogs.listenAddress
TCP address to listen for incoming http requests.

Type: string

Default:

```
":9428"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victorialogs.nix>

services.victorialogs.stateDir
Directory below '/var/lib' to store VictoriaLogs data. This directory will be created automatically using systemd's StateDirectory mechanism.

Type: string

Default:

```
"victorialogs"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victorialogs.nix>

services.victoriametrics.enable
Whether to enable VictoriaMetrics in single−node mode.

VictoriaMetrics is a fast, cost−effective and scalable monitoring solution and time series database.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victoriametrics.nix>

services.victoriametrics.package
The victoriametrics package to use.

Type: package

Default:

```
pkgs.victoriametrics
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victoriametrics.nix>

services.victoriametrics.basicAuthPasswordFile
File that contains the Basic Auth password used to protect VictoriaMetrics instance by authorization

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victoriametrics.nix>

services.victoriametrics.basicAuthUsername
Basic Auth username used to protect VictoriaMetrics instance by authorization

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victoriametrics.nix>

services.victoriametrics.checkConfig

Check configuration.

If you use credentials stored in external files ('environmentFile', etc), they will not be visible and it will report errors, despite a correct configuration.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/databases/victoriametrics.nix>

services.victoriametrics.extraOptions

Extra options to pass to VictoriaMetrics. See the docs: **https://docs.victoriametrics.com/single-server-victoriametrics/#list-of-command-line-flags** or **victoriametrics -help** for more information.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-loggerLevel=WARN"
]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/victoriametrics.nix>

services.victoriametrics.listenAddress

TCP address to listen for incoming http requests.

Type: string

Default:

```
":8428"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/victoriametrics.nix>

services.victoriametrics.prometheusConfig

Config for prometheus style metrics. See the docs: **https://docs.victoriametrics.com/vmagent/#how-to-collect-metrics-in-prometheus-format** for more information.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
{
  scrape_configs = [
    {
      job_name = "postgres-exporter";
      metrics_path = "/metrics";
      static_configs = [
        {
          targets = ["1.2.3.4:9187"];
```

```
            labels.type = "database";
          }
        ];
      }
      {
        job_name = "node-exporter";
        metrics_path = "/metrics";
        static_configs = [
          {
            targets = ["1.2.3.4:9100"];
            labels.type = "node";
          }
          {
            targets = ["5.6.7.8:9100"];
            labels.type = "node";
          }
        ];
      }
    ];
  }
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victoriametrics.nix>

services.victoriametrics.retentionPeriod
How long to retain samples in storage. The minimum retentionPeriod is 24h or 1d. See also −retentionFilter The following optional suffixes are supported: s (second), h (hour), d (day), w (week), y (year). If suffix isn't set, then the duration is counted in months (default 1)

Type: null or string

Default:

```
null
```

Example:

```
"15d"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victoriametrics.nix>

services.victoriametrics.stateDir
Directory below '/var/lib' to store VictoriaMetrics metrics data. This directory will be created automatically using systemd's StateDirectory mechanism.

Type: string

Default:

```
"victoriametrics"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victoriametrics.nix>

services.victoriatraces.enable
Whether to enable VictoriaTraces is an open source distributed traces storage and query engine from VictoriaMetrics.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victoriatraces.nix>

services.victoriatraces.package
The victoriatraces package to use.

Type: package

Default:

```
pkgs.victoriatraces
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victoriatraces.nix>

services.victoriatraces.basicAuthPasswordFile
File that contains the Basic Auth password used to protect VictoriaTraces instance by authorization

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victoriatraces.nix>

services.victoriatraces.basicAuthUsername
Basic Auth username used to protect VictoriaTraces instance by authorization

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victoriatraces.nix>

services.victoriatraces.extraOptions
Extra options to pass to VictoriaTraces. See **victoria-traces -help** for possible options.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-loggerLevel=WARN"
  "-retention.maxDiskSpaceUsageBytes=1073741824"
]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/victoriatraces.nix>

services.victoriatraces.listenAddress

TCP address to listen for incoming http requests.

Type: string

Default:

```
":10428"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/victoriatraces.nix>

services.victoriatraces.retentionPeriod

Retention period for trace data. Data older than retentionPeriod is automatically deleted.

Type: string

Default:

```
"7d"
```

Example:

```
"30d"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/victoriatraces.nix>

services.victoriatraces.stateDir

Directory below ‘/var/lib’ to store VictoriaTraces data. This directory will be created automatically using systemd’s StateDirectory mechanism.

Type: string

Default:

```
"victoriatraces"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/victoriatraces.nix>

services.vikunja.enable

Whether to enable vikunja service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/vikunja.nix>

services.vikunja.package

The vikunja package to use.

Type: package

Default:

```
pkgs.vikunja
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/vikunja.nix>

services.vikunja.address
The IP address to bind to.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/vikunja.nix>

services.vikunja.database.database
Database name.

Type: string

Default:

```
"vikunja"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/vikunja.nix>

services.vikunja.database.host
Database host address. Can also be a socket.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/vikunja.nix>

services.vikunja.database.path
Path to the sqlite3 database file.

Type: string

Default:

```
"/var/lib/vikunja/vikunja.db"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/vikunja.nix>

services.vikunja.database.type
Database engine to use.

Type: one of “sqlite”, “mysql”, “postgres”

Default:

```
"sqlite"
```

Example:

```
"postgres"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/vikunja.nix>

services.vikunja.database.user
Database user.

Type: string

Default:

```
"vikunja"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/vikunja.nix>

services.vikunja.environmentFiles
List of environment files set in the vikunja systemd service. For example passwords should be set in one of these files.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/vikunja.nix>

services.vikunja.frontendHostname
The Hostname under which the frontend is running.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/vikunja.nix>

services.vikunja.frontendScheme
Whether the site is available via http or https.

Type: one of “http”, “https”

Declared by:
<nixpkgs/nixos/modules/services/web−apps/vikunja.nix>

services.vikunja.port
The TCP port exposed by the API.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3456
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/vikunja.nix>

services.vikunja.settings
Vikunja configuration. Refer to **https://vikunja.io/docs/config−options/** for details on supported values.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/vikunja.nix>

services.vinyl−cache.enable
Whether to enable Vinyl Cache.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/vinyl−cache/default.nix>

services.vinyl−cache.enableConfigCheck
Whether to enable checking the config during build time.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/vinyl−cache/default.nix>

services.vinyl−cache.enableFileLogging
Whether to enable file based logging.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/vinyl−cache/default.nix>

services.vinyl−cache.package
The vinyl−cache package to use.

Type: package

Default:

```
pkgs.vinyl−cache
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/vinyl−cache/default.nix>

services.vinyl−cache.config
Verbatim default.vcl configuration.

Type: strings concatenated with “\n”

Declared by:
<nixpkgs/nixos/modules/services/web−servers/vinyl−cache/default.nix>

services.vinyl−cache.extraCommandLine

Command line switches for vinyld (run ‘vinyld −?’ to get list of options)

Type: string

Default:

```
""
```

Example:

```
"−s malloc,256M"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/vinyl−cache/default.nix>

services.vinyl−cache.extraModules

Vinyl Cache modules (except ‘std’).

Type: list of package

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/vinyl−cache/default.nix>

services.vinyl−cache.listen

Accept for client requests on the specified listen addresses.

Type: list of (submodule)

Default:

```
[ { address="*"; port=6081; } ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/vinyl−cache/default.nix>

services.vinyl−cache.listen.*.address

If given an IP address, it can be a host name (“localhost”), an IPv4 dotted−quad (“127.0.0.1”) or an IPv6 address enclosed in square brackets (“[::1]”).

(VCL4.1 and higher) If given an absolute Path (“/path/to/listen.sock”) or “@” followed by the name of an abstract socket (“@myvinyld”) accept connections on a Unix domain socket.

The user, group and mode sub−arguments may be used to specify the permissions of the socket file. These sub−arguments do not apply to abstract sockets.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web−servers/vinyl−cache/default.nix>

services.vinyl−cache.listen.*.group

Group name who owns the socket file.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/vinyl−cache/default.nix>

services.vinyl−cache.listen.*.mode
Permission of the socket file (3−digit octal value).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/vinyl−cache/default.nix>

services.vinyl−cache.listen.*.name
Name is referenced in logs. If name is not specified, ‘a0’, ‘a1’, etc. is used.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/vinyl−cache/default.nix>

services.vinyl−cache.listen.*.port
The port to use for IP sockets. If port is not specified, port 80 (http) is used.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/vinyl−cache/default.nix>

services.vinyl−cache.listen.*.proto
PROTO can be ‘HTTP’ (the default) or ‘PROXY’. Both version 1 and 2 of the proxy protocol can be used.

Type: one of “HTTP”, “PROXY”

Default:

```
"HTTP"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/vinyl−cache/default.nix>

services.vinyl−cache.listen.*.user
User name who owns the socket file.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/vinyl−cache/default.nix>

services.vlagent.enable
Whether to enable VictoriaMetrics’s ‘vlagent’.

‘vlagent’ is a tiny agent which helps you collect logs from various sources and store them in VictoriaLogs .

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vlagent.nix>

services.vlagent.package
The vlagent package to use.

Type: package

Default:

```
pkgs.vlagent
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vlagent.nix>

services.vlagent.extraArgs
Extra args to pass to 'vlagent'. See the docs: **https://docs.victoriametrics.com/vlagent.html#advanced−usage** or **vlagent −help** for more information.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vlagent.nix>

services.vlagent.openFirewall
Whether to open the firewall for the default ports.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vlagent.nix>

services.vlagent.remoteWrite.basicAuthPasswordFile
File that contains the Basic Auth password used to connect to remote_write endpoint

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vlagent.nix>

services.vlagent.remoteWrite.basicAuthUsername
Basic Auth username used to connect to remote_write endpoint

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vlagent.nix>

services.vlagent.remoteWrite.maxDiskUsagePerUrl

The maximum file−based buffer size in bytes. Supports the following optional suffixes for size values: KB, MB, GB, TB, KiB, MiB, GiB, TiB. See docs for more infomations: **https://docs.victoriametrics.com/vlagent.html#advanced−usage**

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/vlagent.nix>

services.vlagent.remoteWrite.url

Endpoint for the victorialogs instance

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/vlagent.nix>

services.vmagent.enable

Whether to enable VictoriaMetrics's 'vmagent'.

'vmagent' efficiently scrape metrics from Prometheus−compatible exporters

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/vmagent.nix>

services.vmagent.package

The vmagent package to use.

Type: package

Default:

```
pkgs.vmagent
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/vmagent.nix>

services.vmagent.checkConfig

Check configuration.

If you use credentials stored in external files ('environmentFile', etc), they will not be visible and it will report errors, despite a correct configuration.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/vmagent.nix>

services.vmagent.extraArgs

Extra args to pass to 'vmagent'. See the docs: **https://docs.victoriametrics.com/vmagent.html#advanced−usage** or **vmagent −help** for more information.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/vmagent.nix>

services.vmagent.openFirewall

Whether to open the firewall for the default ports.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/vmagent.nix>

services.vmagent.prometheusConfig

Config for prometheus style metrics

Type: open submodule of (YAML 1.1 value)

Declared by:

<nixpkgs/nixos/modules/services/monitoring/vmagent.nix>

services.vmagent.remoteWrite.basicAuthPasswordFile

File that contains the Basic Auth password used to connect to remote_write endpoint

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/vmagent.nix>

services.vmagent.remoteWrite.basicAuthUsername

Basic Auth username used to connect to remote_write endpoint

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/vmagent.nix>

services.vmagent.remoteWrite.url

Endpoint for prometheus compatible remote_write

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vmagent.nix>

services.vmalert.package
The victoriametrics package to use.

Type: package

Default:

```
pkgs.victoriametrics
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vmalert.nix>

services.vmalert.instances
Define multiple instances of vmalert.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vmalert.nix>

services.vmalert.instances.<name>.enable
Wether to enable VictoriaMetrics's 'vmalert'.

'vmalert' evaluates alerting and recording rules against a data source, sends notifications via Alertmanager.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vmalert.nix>

services.vmalert.instances.<name>.rules
A list of the given alerting or recording rules against configured '"datasource.url"' compatible with Prometheus HTTP API for 'vmalert' to execute. Refer to **https://github.com/VictoriaMetrics/VictoriaMetrics/blob/master/app/vmalert/README.md#rules** for details on supported values.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  group = [
    {
      name = "TestGroup";
      rules = [
        {
          alert = "ExampleAlertAlwaysFiring";
          expr = ''
            sum by(job)
            (up == 1)
          '';
```

```
          }
        ];
      }
    ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vmalert.nix>

services.vmalert.instances.<name>.settings
'vmalert' configuration, passed via command line flags. Refer to **https://github.com/VictoriaMetrics/VictoriaMetrics/blob/master/app/vmalert/README.md#configuration** for details on supported values.

Type: open submodule of attribute set of (boolean or signed integer or absolute path or string or list of (boolean or signed integer or absolute path or string))

Default:

```
{ }
```

Example:

```
{
  "datasource.disableKeepAlive" = true;
  "datasource.showURL" = false;
  "datasource.url" = "http://localhost:8428";
  rule = [
    "http://<some-server-addr>/path/to/rules"
    "dir/*.yaml"
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vmalert.nix>

services.vmalert.instances.<name>.settings."datasource.url"
Datasource compatible with Prometheus HTTP API.

Type: non−empty string

Example:

```
"http://localhost:8428"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vmalert.nix>

services.vmalert.instances.<name>.settings."notifier.url"
Prometheus Alertmanager URL. List all Alertmanager URLs if it runs in the cluster mode to ensure high availability.

Type: list of non−empty string

Default:

```
[ ]
```

Example:

```
[
  "http://127.0.0.1:9093"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vmalert.nix>

services.vmalert.instances.<name>.settings.rule
Path to the files with alerting and/or recording rules.

Note
Consider using the **services.vmalert.instances.<name>.rules** option as a convenient alternative for declaring rules directly in the ‘nix’ language.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vmalert.nix>

services.vnstat.enable
Whether to enable update of network usage statistics via vnstatd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vnstat.nix>

services.vnstat.package
The vnstat package to use.

Type: package

Default:

```
pkgs.vnstat
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/vnstat.nix>

services.vsftpd.enable
Whether to enable vsftpd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.enableVirtualUsers
Whether to enable the ‘pam_userdb’−based virtual user system

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.allowWriteableChroot

Allow the use of writeable root inside chroot().

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.anonymousMkdirEnable

Whether any uploads are permitted to anonymous users.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.anonymousUmask

Anonymous write umask.

Type: string

Default:

```
"077"
```

Example:

```
"002"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.anonymousUploadEnable

Whether any uploads are permitted to anonymous users.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.anonymousUser

Whether to enable the anonymous FTP user.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.anonymousUserHome

Directory to consider the HOME of the anonymous user.

Type: absolute path

Default:

```
"/home/ftp/"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.anonymousUserNoPassword

Whether to disable the password for the anonymous FTP user.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.chrootlocalUser

Whether local users are confined to their home directory.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.extraConfig

Extra configuration to add at the bottom of the generated configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"ftpd_banner=Hello"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.forceLocalDataSSL

Only applies if **sslEnable** is true. Non anonymous (local) users must use a secure SSL connection for sending/receiving data on data connection.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.forceLocalLoginsSSL

Only applies if **sslEnable** is true. Non anonymous (local) users must use a secure SSL connection to send a password.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.localRoot

This option represents a directory which vsftpd will try to change into after a local (i.e. non− anonymous) login.

Failure is silently ignored.

Type: null or string

Default:

```
null
```

Example:

```
"/var/www/$USER"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.localUsers

Whether to enable FTP for local users.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.portPromiscuous

Set to YES if you want to disable the PORT security check that ensures that outgoing data connections can only connect to the client. Only enable if you know what you are doing!

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.rsaCertFile

RSA certificate file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.rsaKeyFile
RSA private key file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.ssl_sslv2
Only applies if **ssl_enable** is activated. If enabled, this option will permit SSL v2 protocol connections. TLS v1 connections are preferred.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.ssl_sslv3
Only applies if **ssl_enable** is activated. If enabled, this option will permit SSL v3 protocol connections. TLS v1 connections are preferred.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.ssl_tlsv1
Only applies if **ssl_enable** is activated. If enabled, this option will permit TLS v1 protocol connections. TLS v1 connections are preferred.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.userDbPath
Only applies if **enableVirtualUsers** is true. Path pointing to the ‘pam_userdb’ user database used by vsftpd to authenticate the virtual users.

This user list should be stored in the Berkeley DB database format.

To generate a new user database, create a text file, add your users using the following format:

```
user1
password1
user2
password2
```

You can then install ‘pkgs.db’ to generate the Berkeley DB using

```
db_load -T -t hash -f logins.txt userDb.db
```

Caution: ‘pam_userdb’ will automatically append a ‘.db’ suffix to the filename you provide though this option. This option shouldn’t include this filetype suffix.

Type: null or string

Default:

```
null
```

Example:

```
"/etc/vsftpd/userDb"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.userlist
See **userlistFile**.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.userlistDeny
Specifies whether **userlistFile** is a list of user names to allow or deny access. The default ‘false’ means whitelist/allow.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.userlistEnable
Whether users are included.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.userlistFile
Newline separated list of names to be allowed/denied if **userlistEnable** is ‘true’. Meaning see **userlistDeny**.

The default is a file containing the users from **userlist**.

If explicitly set to null userlist_file will not be set in vsftpd’s config file.

Type: absolute path

Default:

```
pkgs.writeText "userlist" (concatMapStrings (x: "${x}\n") cfg.user \
list)
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.virtualUseLocalPrivs
If enabled, virtual users will use the same privileges as local users. By default, virtual users will use the same privileges as anonymous users, which tends to be more restrictive (especially in terms of write access).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsftpd.writeEnable
Whether any write activity is permitted to users.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vsftpd.nix>

services.vsmartcard−vpcd.enable
Whether to enable Virtual smart card driver…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/vsmartcard−vpcd.nix>

services.vsmartcard−vpcd.hostname
Hostname of a waiting vpicc server vpcd will be connecting to. Use /dev/null for listening mode.

Type: string

Default:

```
"/dev/null"
```

Declared by:
<nixpkgs/nixos/modules/services/development/vsmartcard−vpcd.nix>

services.vsmartcard−vpcd.port
Port number vpcd will be listening on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
35963
```

Declared by:
<nixpkgs/nixos/modules/services/development/vsmartcard−vpcd.nix>

services.vwifi.package
The vwifi package to use.

Type: package

Default:

```
pkgs.vwifi
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.client.enable
Whether to enable vwifi client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.client.extraArgs
Extra arguments to pass to vwifi−client. You can use this if you want to bring the radios up using vwifi−client instead of at boot.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−number"
  "3"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.client.serverAddress
The address of the server. If set to null, will try to use the vsock protocol. Note that this assumes that the server is spawned on the host and passed through to QEMU, with something like:

−device vhost−vsock−pci,id=vwifi0,guest−cid=42

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.client.serverPort

The server port port. Set to null if we should leave it unset.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.client.spy

Whether to enable spy mode, useful for wireless monitors.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.module.enable

Whether to enable mac80211_hwsim module.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.module.macPrefix

The prefix for MAC addresses to use, without the trailing ':'. If one radio is created, you can specify the whole MAC address here. The default is defined in vwifi/src/config.h.

Type: string matching the pattern ^(([0−9A−Fa−f]{2}:){0,5}[0−9A−Fa−f]{2})$

Default:

```
"74:F8:F6"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.module.numRadios

The number of virtual radio interfaces to create.

Type: signed integer

Default:

```
1
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.server.enable

Whether to enable vwifi server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.server.extraArgs

Extra arguments to pass to vwifi−server. You can use this for things including changing the ports or inducing packet loss.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--lost-packets"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.server.openFirewall

Whether to enable opening the firewall for the TCP and spy ports.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.server.ports.control

The control interface port. Set to null if we should leave it unset.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.server.ports.spy

The spy interface port. Set to null if we should leave it unset.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.server.ports.tcp
The TCP server port. Set to null if we should leave it unset.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.server.ports.vhost
The vhost port. Set to null if we should leave it unset.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.vwifi.server.vsock.enable
Whether to enable vsock kernel module.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/vwifi.nix>

services.waagent.enable
Whether to enable Windows Azure Linux Agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.package
The waagent package to use.

Type: package

Default:

```
pkgs.waagent
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.extraPackages
Additional packages to add to the waagent **PATH**.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.powershell ]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.settings
The waagent.conf configuration, see **https://learn.microsoft.com/en−us/azure/virtual−machines/extensions/agent−linux** for documentation.

Type: open submodule of attribute set of (atom (bool, string, int or float) or null or a list of them or an attribute set of them)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.settings.AutoUpdate.UpdateToLatestVersion
Whether or not to enable auto−update of the Extension Handler.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.settings.HttpProxy.Host
If you set http proxy, waagent will use is proxy to access the Internet.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.settings.HttpProxy.Port
If you set http proxy, waagent will use this proxy to access the Internet.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.settings.Logs.Verbose
If you set this option, log verbosity is boosted. Waagent logs to '/var/log/waagent.log' and uses the system logrotate functionality to rotate logs.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.settings.OS.EnableRDMA
If enabled, the agent attempts to install and then load an RDMA kernel driver that matches the version of the firmware on the underlying hardware.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.settings.OS.RootDeviceScsiTimeout
Configures the SCSI timeout in seconds on the OS disk and data drives. If set to 'null', the system defaults are used.

Type: null or signed integer

Default:

```
300
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.settings.Provisioning.Agent
Which provisioning agent to use.

Type: one of "auto", "waagent", "cloud−init", "disabled"

Default:

```
"auto"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.settings.Provisioning.Enable
Whether to enable provisioning functionality in the agent.

If provisioning is disabled, SSH host and user keys in the image are preserved and configuration in the Azure provisioning API is ignored.

Set to 'false' if cloud−init is used for provisioning tasks.

Type: boolean

Default:

```
!config.services.cloud-init.enable
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.settings.ResourceDisk.EnableSwap
If enabled, the agent creates a swap file (‘/swapfile’) on the resource disk and adds it to the system swap space.

This configuration has no effect if resource disk is managed by cloud−init.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.settings.ResourceDisk.FileSystem
The file system type for the resource disk. If the string is ‘X’, then ‘mkfs.X’ should be present in the environment. You can add additional filesystem packages using ‘services.waagent.extraPackages’.

This configuration has no effect if resource disk is managed by cloud−init.

Type: string

Default:

```
"ext4"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.settings.ResourceDisk.Format
If set to ‘true’, waagent formats and mounts the resource disk that the platform provides, unless the file system type in ‘ResourceDisk.FileSystem’ is set to ‘ntfs’. The agent makes a single Linux partition (ID 83) available on the disk. This partition isn’t formatted if it can be successfully mounted.

This configuration has no effect if resource disk is managed by cloud−init.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.settings.ResourceDisk.MountOptions
This option specifies disk mount options to be passed to the ‘mount −o’ command. For more information, see the **mount**(8) manual page.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "nodev"
  "nosuid"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.settings.ResourceDisk.MountPoint
This option specifies the path at which the resource disk is mounted. The resource disk is a temporary disk and might be emptied when the VM is deprovisioned.

This configuration has no effect if resource disk is managed by cloud−init.

Type: string

Default:

```
"/mnt/resource"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.waagent.settings.ResourceDisk.SwapSizeMB
Specifies the size of the swap file in MiB (1024×1024 bytes).

This configuration has no effect if resource disk is managed by cloud−init.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/virtualisation/waagent.nix>

services.wakapi.enable
Whether to enable Wakapi.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wakapi.nix>

services.wakapi.package
The wakapi package to use.

Type: package

Default:

```
pkgs.wakapi
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wakapi.nix>

services.wakapi.database.createLocally
Whether to enable automatic database configuration.

Note
Only PostgreSQL is supported for the time being.

.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wakapi.nix>

services.wakapi.database.dialect
The database type to use for Wakapi.

Type: null or one of “postgres”, “sqlite3”, “mysql”, “cockroach”, “mssql”

Default:

```
  Database dialect from settings if {option}‘services.wakatime.sett \
ings.db.dialect‘
  is set, or ‘null‘ otherwise.
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wakapi.nix>

services.wakapi.database.name
The name of the database to use for Wakapi.

Type: string

Default:

```
  Database name from settings if {option}‘services.wakatime.setting \
s.db.name‘
  is set, or "wakapi" otherwise.
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wakapi.nix>

services.wakapi.database.user
The name of the user to use for Wakapi.

Type: string

Default:

```
  User from settings if {option}‘services.wakatime.settings.db.user \
‘
  is set, or "wakapi" otherwise.
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wakapi.nix>

services.wakapi.environmentFiles
Use this to set ‘WAKAPI_PASSWORD_SALT’ and ‘WAKAPI_MAIL_SMTP_PASS’.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wakapi.nix>

services.wakapi.settings
Settings for Wakapi.

See **config.default.yml** for a list of all possible options.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wakapi.nix>

services.wakapi.stateDir
The state directory where data is stored. Will also be used as the working directory for the wakapi service.

Type: absolute path

Default:

```
"/var/lib/wakapi"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wakapi.nix>

services.warpgate.enable
Whether to enable Warpgate. This module will initialize Warpgate base on your config automatically. Please run 'warpgate recover−access' to gain access.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.package
The warpgate package to use.

Type: package

Default:

```
pkgs.warpgate
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.databaseUrlFile
Path to file containing database connection string with credentials. Should be a one line file with: 'database_url: <protocol>://<username>:<password>@<host>/<database>'. See **SeaORM documentation**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings
Warpgate configuration.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
{
  http = {
    listen = "[::]:8011";
  };
  ssh = {
    enable = true;
    listen = "[::]:2211";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.database_url
Database connection string. See **SeaORM documentation**.

Type: null or string

Default:

```
"sqlite:/var/lib/warpgate/db"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.external_host
Configure the domain name of this Warpgate instance. See **HTTP domain binding**. This option is considered legacy, please use protocol specific ‘external_host’ instead.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.http.certificate
Path to HTTPS listener certificate.

Type: string

Default:

```
"/var/lib/warpgate/tls.certificate.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.http.cookie_max_age
How long until logged in cookie expires.

Type: string

Default:

```
"1day"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.http.external_host
The HTTP listener is reachable via this domain name externally.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.http.external_port
The HTTP listener is reachable via this port externally.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.http.key
Path to HTTPS listener private key.

Type: string

Default:

```
"/var/lib/warpgate/tls.key.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.http.listen
Listen endpoint of HTTP listener.

Type: string

Default:

```
"[::]:8888"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.http.session_max_age
How long until a logged in session expires.

Type: string

Default:

```
"30m"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.http.sni_certificates
Certificates for additional domains.

Type: list of (open submodule of (YAML 1.1 value))

Default:

```
[ ]
```

Example:

```
[
  {
    certificate = "/var/lib/warpgate/example.tld.pem";
    key = "/var/lib/warpgate/example.tld.key.pem";
  }
  {
    ...
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.http.sni_certificates.*.certificate
Path to certificate.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.http.sni_certificates.*.key
Path to private key.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.http.trust_x_forwarded_headers
Trust X-Forwarded-* headers. Required when being reverse proxied. See **Running behind a reverse proxy**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.kubernetes.enable
Whether to enable Kubernetes listener.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.kubernetes.certificate
Path to Kubernetes listener certificate.

Type: string

Default:

```
"/var/lib/warpgate/tls.certificate.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.kubernetes.external_host
The Kubernetes listener is reachable via this domain name externally.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.kubernetes.external_port
The Kubernetes listener is reachable via this port externally.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.kubernetes.key
Path to Kubernetes listener private key.

Type: string

Default:

```
"/var/lib/warpgate/tls.key.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.kubernetes.listen
Listen endpoint of Kubernetes listener.

Type: string

Default:

```
"[::]:8443"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.kubernetes.session_max_age
How long until a logged in session expires.

Type: string

Default:

```
"30m"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.log.audit_retention
How long Warpgate keeps its audit logs.

Type: string

Default:

```
"1year"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.log.format
The format Warpgate emits logs in.

Type: one of “text”, “json”

Default:

```
"text"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.log.retention
How long Warpgate keeps its non−audit logs and session recordings.

Type: string

Default:

```
"7days"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.log.send_to
Path of UNIX socket of log forwarder. See **Log forwarding**;

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.mysql.enable
Whether to enable MySQL listener.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.mysql.certificate
Path to MySQL listener certificate.

Type: string

Default:

```
"/var/lib/warpgate/tls.certificate.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.mysql.external_host
The MySQL listener is reachable via this domain name externally.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.mysql.external_port
The MySQL listener is reachable via this port externally.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.mysql.key
Path to MySQL listener private key.

Type: string

Default:

```
"/var/lib/warpgate/tls.key.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.mysql.listen
Listen endpoint of MySQL listener.

Type: string

Default:

```
"[::]:33306"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.postgres.enable
Whether to enable PostgreSQL listener.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.postgres.certificate
Path to PostgreSQL listener certificate.

Type: string

Default:

```
"/var/lib/warpgate/tls.certificate.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.postgres.external_host
The PostgreSQL listener is reachable via this domain name externally.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.postgres.external_port
The PostgreSQL listener is reachable via this port externally.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.postgres.key
Path to PostgreSQL listener private key.

Type: string

Default:

```
"/var/lib/warpgate/tls.key.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.postgres.listen
Listen endpoint of PostgreSQL listener.

Type: string

Default:

```
"[::]:55432"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.recordings.enable
Whether to enable session recording.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.recordings.path
Path to store session recordings.

Type: string

Default:

```
"/var/lib/warpgate/recordings"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.ssh.enable
Whether to enable SSH listener.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.ssh.external_host
The SSH listener is reachable via this domain name externally.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.ssh.external_port
The SSH listener is reachable via this port externally.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.ssh.host_key_verification
Specify host key verification action when connecting to a SSH target with unknown/differing host key.

Type: one of “prompt”, “auto_accept”, “auto_reject”

Default:

```
"prompt"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.ssh.inactivity_timeout
How long can user be inactive until Warpgate terminates the connection.

Type: string

Default:

```
"5m"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.ssh.keepalive_interval
If nothing is received from the client for this amount of time, server will send a keepalive message.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.ssh.keys
Path to store SSH host & client keys.

Type: string

Default:

```
"/var/lib/warpgate/ssh-keys"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.ssh.listen
Listen endpoint of SSH listener.

Type: string

Default:

```
"[::]:2222"
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.sso_providers
Configure OIDC single sign-on providers. Main documentation can be found **here**.

Type: list of (open submodule of (YAML 1.1 value))

Default:

```
[ ]
```

Example:

```
[
  {
    name = "3rd party SSO";
    label = "ACME SSO";
    provider = {
```

```
            type = "custom";
            client_id = "123...";
            client_secret = "BC...";
            issuer_url = "https://sso.acme.inc";
            scopes = ["email"];
          };
        }
        {
          ...
        }
      ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.sso_providers.*.auto_create_users
Whether to create user automatically at first SSO login.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.sso_providers.*.label
SSO provider name displayed on login page.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.sso_providers.*.name
Internal identifier of SSO provider.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.sso_providers.*.provider
SSO provider configurations. See **here** for all acceptable options.

Type: attribute set of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.sso_providers.*.return_domain_whitelist
Controls the SSO return URL supplied to SSO provider. This will also required you to connect to this instance via whitelisted domain when doing SSO login.

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.warpgate.settings.sso_providers.*.return_url_prefix

Controls the SSO return URL supplied to SSO provider. Useful for providers that do not allow the @ sign in the URL (e.g. Azure).

Type: one of “@”, “_”

Default:

```
"@"
```

Declared by:

<nixpkgs/nixos/modules/services/security/warpgate.nix>

services.wasabibackend.enable

Whether to enable Wasabi backend service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wasabibackend.nix>

services.wasabibackend.customConfigFile

Defines the path to a custom configuration file that is copied to the user’s directory. Overrides any config options.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wasabibackend.nix>

services.wasabibackend.dataDir

The data directory for the Wasabi backend node.

Type: absolute path

Default:

```
"/var/lib/wasabibackend"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wasabibackend.nix>

services.wasabibackend.endpoint.ip

IP address for P2P connection to bitcoind.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wasabibackend.nix>

services.wasabibackend.endpoint.port
Port for P2P connection to bitcoind.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8333
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wasabibackend.nix>

services.wasabibackend.group
The group as which to run the wasabibackend node.

Type: string

Default:

```
config.services.wasabibackend.user
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wasabibackend.nix>

services.wasabibackend.network
The network to use for the Wasabi backend service.

Type: one of “mainnet”, “testnet”, “regtest”

Default:

```
"mainnet"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wasabibackend.nix>

services.wasabibackend.rpc.ip
IP address for RPC connection to bitcoind.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wasabibackend.nix>

services.wasabibackend.rpc.password
RPC password for the bitcoin endpoint. Warning: this is stored in cleartext in the Nix store! Use ‘configFile’ or ‘passwordFile’ if needed.

Type: string

Default:

```
"password"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wasabibackend.nix>

services.wasabibackend.rpc.passwordFile
File that contains the password of the RPC user.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wasabibackend.nix>

services.wasabibackend.rpc.port
Port for RPC connection to bitcoind.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8332
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wasabibackend.nix>

services.wasabibackend.rpc.user
RPC user for the bitcoin endpoint.

Type: string

Default:

```
"bitcoin"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wasabibackend.nix>

services.wasabibackend.user
The user as which to run the wasabibackend node.

Type: string

Default:

```
"wasabibackend"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wasabibackend.nix>

services.wastebin.enable
Whether to enable Wastebin, a pastebin service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/wastebin.nix>

services.wastebin.package

The wastebin package to use.

Type: package

Default:

```
pkgs.wastebin
```

Declared by:

<nixpkgs/nixos/modules/services/misc/wastebin.nix>

services.wastebin.secretFile

Path to file containing sensitive environment variables. Some variables that can be considered secrets are:

- WASTEBIN_PASSWORD_SALT: salt used to hash user passwords used for encrypting pastes.
- WASTEBIN_SIGNING_KEY: sets the key to sign cookies. If not set, a random key will be generated which means cookies will become invalid after restarts and paste creators will not be able to delete their pastes anymore.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/wastebin.env"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/wastebin.nix>

services.wastebin.settings

Additional configuration for wastebin, see **https://github.com/matze/wastebin#usage** for supported values. For secrets use secretFile option instead.

Type: open submodule of attribute set of (boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  WASTEBIN_TITLE = "My awesome pastebin";
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/wastebin.nix>

services.wastebin.settings.RUST_LOG

Influences logging. Besides the typical trace, debug, info etc. keys, you can also set the tower_http key to some log level to get additional information request and response logs.

Type: string

Default:

```
"info"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/wastebin.nix>

services.wastebin.settings.WASTEBIN_ADDRESS_PORT
Address and port to bind to

Type: string

Default:

```
"0.0.0.0:8088"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/wastebin.nix>

services.wastebin.settings.WASTEBIN_BASE_URL
Base URL for the QR code display. If not set, the user agent's Host header field is used as an approximation.

Type: string

Default:

```
"http://localhost"
```

Example:

```
"https://myhost.tld"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/wastebin.nix>

services.wastebin.settings.WASTEBIN_CACHE_SIZE
Number of rendered syntax highlight items to cache. Can be disabled by setting to 0.

Type: signed integer

Default:

```
128
```

Declared by:
<nixpkgs/nixos/modules/services/misc/wastebin.nix>

services.wastebin.settings.WASTEBIN_DATABASE_PATH
Path to the sqlite3 database file. If not set, an in−memory database is used.

Type: string

Default:

```
"/var/lib/wastebin/sqlite3.db"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/wastebin.nix>

services.wastebin.settings.WASTEBIN_HTTP_TIMEOUT
Maximum number of seconds a request can be processed until wastebin responds with 408

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/misc/wastebin.nix>

services.wastebin.settings.WASTEBIN_MAX_BODY_SIZE
Number of bytes to accept for POST requests

Type: signed integer

Default:

```
1048576
```

Declared by:
<nixpkgs/nixos/modules/services/misc/wastebin.nix>

services.wastebin.settings.WASTEBIN_TITLE
Overrides the HTML page title

Type: string

Default:

```
"wastebin"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/wastebin.nix>

services.wastebin.stateDir
State directory of the daemon.

Type: absolute path

Default:

```
"/var/lib/wastebin"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/wastebin.nix>

services.watchdogd.enable
Whether to enable watchdogd, an advanced system & process supervisor.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.package
The watchdogd package to use.

Type: package

Default:

```
pkgs.watchdogd
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings

Configuration to put in *watchdogd.conf*. See **watchdogd.conf**(5) for more details.

Type: open submodule of attribute set of (boolean or signed integer or floating point number or string or attribute set of (boolean or signed integer or floating point number or string))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.filenr.enabled

Whether to enable watchdogd plugin filenr.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.filenr.critical

The critical watermark level. Alert sent to log, followed by reboot or script action.

Type: nonnegative integer or floating point number, meaning >=0

Default:

```
1.0
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.filenr.interval

Amount of seconds between every poll.

Type: unsigned integer, meaning >=0

Default:

```
300
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.filenr.logmark

Whether to log current stats every poll interval.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.filenr.warning

The high watermark level. Alert sent to log.

Type: nonnegative integer or floating point number, meaning >=0

Default:

```
0.9
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.interval

The kick interval, i.e. how often **watchdogd**(8) should reset the WDT timer.

Type: unsigned integer, meaning >=0

Default:

```
5
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.loadavg.enabled

Whether to enable watchdogd plugin loadavg.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.loadavg.critical

The critical watermark level. Alert sent to log, followed by reboot or script action.

Type: nonnegative integer or floating point number, meaning >=0

Default:

```
2.0
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.loadavg.interval

Amount of seconds between every poll.

Type: unsigned integer, meaning >=0

Default:

```
300
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.loadavg.logmark
Whether to log current stats every poll interval.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.loadavg.warning
The high watermark level. Alert sent to log.

Type: nonnegative integer or floating point number, meaning >=0

Default:

```
1.0
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.meminfo.enabled
Whether to enable watchdogd plugin meminfo.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.meminfo.critical
The critical watermark level. Alert sent to log, followed by reboot or script action.

Type: nonnegative integer or floating point number, meaning >=0

Default:

```
0.95
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.meminfo.interval
Amount of seconds between every poll.

Type: unsigned integer, meaning >=0

Default:

```
300
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.meminfo.logmark
Whether to log current stats every poll interval.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.meminfo.warning
The high watermark level. Alert sent to log.

Type: nonnegative integer or floating point number, meaning >=0

Default:

```
0.9
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.safe−exit
With *safeExit* enabled, the daemon will ask the driver to disable the WDT before exiting. However, some WDT drivers (or hardware) may not support this.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.watchdogd.settings.timeout
The WDT timeout before reset.

Type: unsigned integer, meaning >=0

Default:

```
15
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/watchdogd.nix>

services.webdav.enable
Whether to enable WebDAV server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/webdav.nix>

services.webdav.package
The webdav package to use.

Type: package

Default:

```
pkgs.webdav
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/webdav.nix>

services.webdav.configFile
Path to config file. If this option is set, it will override any configuration done in options.services.webdav.settings.

Type: absolute path

Default:

```
"Config file generated from services.webdav.settings"
```

Example:

```
"/etc/webdav/config.yaml"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/webdav.nix>

services.webdav.environmentFile
Environment file as defined in **systemd.exec**(5).

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/webdav.nix>

services.webdav.group
Group under which WebDAV runs.

Type: string

Default:

```
"webdav"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/webdav.nix>

services.webdav.settings
Attrset that is converted and passed as config file. Available options can be found at **here**.

This program supports reading username and password configuration from environment variables, so it's strongly recommended to store username and password in a separate **EnvironmentFile**. This prevents adding secrets to the world−readable Nix store.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
    address = "0.0.0.0";
```

```
        port = 8080;
        directory = "/srv/public";
        permissions = "R";
        users = [
          {
            username = "{env}ENV_USERNAME";
            password = "{env}ENV_PASSWORD";
          }
        ];
      }
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/webdav.nix>

services.webdav.user
User account under which WebDAV runs.

Type: string

Default:

```
"webdav"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/webdav.nix>

services.webdav−server−rs.enable
Whether to enable WebDAV server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/webdav−server−rs.nix>

services.webdav−server−rs.configFile
Path to config file. If this option is set, it will override any configuration done in services.webdav−server−rs.settings.

Type: absolute path

Default:

```
"Config file generated from services.webdav−server−rs.settings"
```

Example:

```
"/etc/webdav−server.toml"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/webdav−server−rs.nix>

services.webdav−server−rs.debug
Enable debug mode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/webdav−server−rs.nix>

services.webdav−server−rs.group
Group to run under when setuid is not enabled.

Type: string

Default:

```
"webdav"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/webdav−server−rs.nix>

services.webdav−server−rs.settings
Attrset that is converted and passed as config file. Available options can be found at **here**.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  server.listen = [ "0.0.0.0:4918" "[::]:4918" ];
  accounts = {
    auth−type = "htpasswd.default";
    acct−type = "unix";
  };
  htpasswd.default = {
    htpasswd = "/etc/htpasswd";
  };
  location = [
    {
      route = [ "/public/*path" ];
      directory = "/srv/public";
      handler = "filesystem";
      methods = [ "webdav−ro" ];
      autoindex = true;
      auth = "false";
    }
    {
      route = [ "/user/:user/*path" ];
      directory = "~";
      handler = "filesystem";
      methods = [ "webdav−rw" ];
      autoindex = true;
      auth = "true";
      setuid = true;
    }
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/webdav−server−rs.nix>

services.webdav−server−rs.user

User to run under when setuid is not enabled.

Type: string

Default:

```
"webdav"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/webdav−server−rs.nix>

services.webhook.enable

Whether to enable **Webhook**, a server written in Go that allows you to create HTTP endpoints (hooks), which execute configured commands for any person or service that knows the URL .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.webhook.enableTemplates

Enable the generated hooks file to be parsed as a Go template. See **the documentation** for more information.

Type: boolean

Default:

```
hooksTemplated != {}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.webhook.package

The webhook package to use.

Type: package

Default:

```
pkgs.webhook
```

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.webhook.environment

Extra environment variables passed to webhook.

Type: attribute set of string

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.webhook.extraArgs

These are arguments passed to the webhook command in the systemd service. You can find the available arguments and options in the **documentation**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-secure"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.webhook.group

Webhook will be run under this group.

If set, you must create this group yourself!

Type: string

Default:

```
"webhook"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.webhook.hooks

The actual configuration of which hooks will be served.

Read more on the **project homepage** and on the **hook definition** page. At least one hook needs to be configured.

Type: attribute set of (open submodule of (JSON value))

Default:

```
{ }
```

Example:

```
{
  echo = {
    execute-command = "echo";
    response-message = "Webhook is reachable!";
  };
  redeploy-webhook = {
    command-working-directory = "/var/webhook";
    execute-command = "/var/scripts/redeploy.sh";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.webhook.hooks.<name>.execute-command

The command that should be executed when the hook is triggered.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.webhook.hooks.<name>.id

The ID of your hook. This value is used to create the HTTP endpoint ('protocol://yourserver:port/prefix/${id}').

Type: string

Default:

```
"‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.webhook.hooksTemplated

Same as **hooks**, but these hooks are specified as literal strings instead of Nix values, and hence can include **template syntax** which might not be representable as JSON.

Template syntax requires the **enableTemplates** option to be set to 'true', which is done by default if this option is set.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  echo-template = ''
    {
      "id": "echo-template",
      "execute-command": "echo",
      "response-message": "{{ getenv "MESSAGE" }}"
    }
  '';
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.webhook.ip

The IP webhook should serve hooks on.

The default means it can be reached on any interface if 'openFirewall = true'.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.webhook.openFirewall

Open the configured port in the firewall for external ingress traffic. Preferably the Webhook server is instead put behind a reverse proxy.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.webhook.port

The port webhook should be reachable from.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9000
```

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.webhook.urlPrefix

The URL path prefix to use for served hooks (‘protocol://yourserver:port/${prefix}/hook−id’).

Type: string

Default:

```
"hooks"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.webhook.user

Webhook will be run under this user.

If set, you must create this user yourself!

Type: string

Default:

```
"webhook"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.webhook.verbose

Whether to show verbose output.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/webhook.nix>

services.weblate.enable

Whether to enable Weblate service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/weblate.nix>

services.weblate.package
The weblate package to use.

Type: package

Default:

```
pkgs.weblate
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/weblate.nix>

services.weblate.configurePostgresql
Whether to enable and configure a local PostgreSQL server by creating a user and database for weblate. The default ‘settings’ reference this database, if you disable this option you must provide a database URL in ‘extraConfig’.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/weblate.nix>

services.weblate.djangoSecretKeyFile
Location of the Django secret key.

This should be a path pointing to a file with secure permissions (not /nix/store).

Can be generated with ‘weblate−generate−secret−key’ which is available as the ‘weblate’ user.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/weblate.nix>

services.weblate.extraConfig
Text to append to ‘settings.py’ Weblate configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/weblate.nix>

services.weblate.localDomain
The domain name serving your Weblate instance.

Type: string

Example:

```
"weblate.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/weblate.nix>

services.weblate.smtp.enable
Whether to enable Weblate SMTP support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/weblate.nix>

services.weblate.smtp.from
The from address being used in sent emails.

Type: string

Default:

```
"config.services.weblate.smtp.user"
```

Example:

```
"weblate@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/weblate.nix>

services.weblate.smtp.host
SMTP host used when sending emails to users.

Type: string

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/weblate.nix>

services.weblate.smtp.passwordFile
Location of a file containing the SMTP password.

This should be a path pointing to a file with secure permissions (not /nix/store).

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/weblate.nix>

services.weblate.smtp.port
SMTP port used when sending emails to users.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
587
```

Example:

```
25
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/weblate.nix>

services.weblate.smtp.user
SMTP login name.

Type: null or string

Default:

```
null
```

Example:

```
"weblate@example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/weblate.nix>

services.websurfx.enable
Whether to enable Websurfx, a metasearch engine.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/websurfx.nix>

services.websurfx.package
The websurfx package to use.

Type: package

Default:

```
pkgs.websurfx
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/websurfx.nix>

services.websurfx.openFirewall
Whether to enable Whether to open the used port in the firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/websurfx.nix>

services.websurfx.settings

Configuration options for Websurfx, see **websurfx/config.lua** for supported values.

Type: open submodule of attribute set of lua value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/websurfx.nix>

services.websurfx.settings.binding_ip

IP address on which the server should be launched

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/websurfx.nix>

services.websurfx.settings.port

Port on which the server should be launched

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4567
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/websurfx.nix>

services.weechat.enable

Whether to enable weechat.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/weechat.nix>

services.weechat.package

The weechat package to use.

Type: package

Default:

```
pkgs.weechat
```

Declared by:

<nixpkgs/nixos/modules/services/misc/weechat.nix>

services.weechat.binary
Binary to execute.

Type: absolute path

Default:

```
"${cfg.package}/bin/weechat"
```

Example:

```
"${cfg.package}/bin/weechat-headless"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/weechat.nix>

services.weechat.headless
Allows specifying if weechat should run in TUI or headless mode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/weechat.nix>

services.weechat.root
Weechat state directory.

Type: absolute path

Default:

```
"/var/lib/weechat"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/weechat.nix>

services.weechat.sessionName
Name of the ‘screen’ session for weechat.

Type: string

Default:

```
"weechat-screen"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/weechat.nix>

services.wg-access-server.enable
Whether to enable wg-access-server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg-access-server.nix>

services.wg−access−server.package
The wg−access−server package to use.

Type: package

Default:

```
pkgs.wg−access−server
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−access−server.nix>

services.wg−access−server.secretsFile
yaml file containing all secrets. this needs to be in the same structure as the configuration.

This must to contain the admin password and wireguard private key. As well as the secrets for your auth backend.

Example:

```
adminPassword: <admin password>
wireguard:
  privateKey: <wireguard private key>
auth:
  oidc:
    clientSecret: <client secret>
```

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−access−server.nix>

services.wg−access−server.settings
See **https://www.freie−netze.org/wg−access−server/2−configuration/** for possible options

Type: open submodule of (YAML 1.1 value)

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−access−server.nix>

services.wg−access−server.settings.dns.enabled
Enable/disable the embedded DNS proxy server. This is enabled by default and allows VPN clients to avoid DNS leaks by sending all DNS requests to wg−access−server itself.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−access−server.nix>

services.wg−access−server.settings.storage
A storage backend connection string. See **storage docs**

Type: string

Default:

```
"sqlite3://db.sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−access−server.nix>

services.wg−netmanager.enable
Whether to enable Wireguard network manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−netmanager.nix>

services.wgautomesh.enable
Whether to enable the wgautomesh daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wgautomesh.nix>

services.wgautomesh.enableGossipEncryption
Enable encryption of gossip traffic.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wgautomesh.nix>

services.wgautomesh.enablePersistence
Enable persistence of Wireguard peer info between restarts.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wgautomesh.nix>

services.wgautomesh.gossipSecretFile
File containing the gossip secret, a shared secret key to use for gossip encryption. Required if ‘enableGossipEncryption’ is set. This file may contain any arbitrary−length utf8 string. To generate a new gossip secret, use a command such as ‘openssl rand −base64 32’.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/networking/wgautomesh.nix>

services.wgautomesh.logLevel

wgautomesh log level.

Type: one of “trace”, “debug”, “info”, “warn”, “error”

Default:

```
"info"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wgautomesh.nix>

services.wgautomesh.openFirewall

Automatically open gossip port in firewall (recommended).

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wgautomesh.nix>

services.wgautomesh.settings

Configuration for wgautomesh.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wgautomesh.nix>

services.wgautomesh.settings.gossip_port

wgautomesh gossip port, this MUST be the same number on all nodes in the wgautomesh network.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1666
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wgautomesh.nix>

services.wgautomesh.settings.interface

Wireguard interface to manage (it is NOT created by wgautomesh, you should use another NixOS option to create it such as ‘networking.wireguard.interfaces.wg0 = {...};’).

Type: string

Example:

```
"wg0"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wgautomesh.nix>

services.wgautomesh.settings.lan_discovery

Enable discovery of peers on the same LAN using UDP broadcast.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wgautomesh.nix>

services.wgautomesh.settings.peers
wgautomesh peer list.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wgautomesh.nix>

services.wgautomesh.settings.peers.*.address
Wireguard address of this peer (a single IP address, multiple addresses or address ranges are not supported).

Type: string

Example:

```
"10.0.0.42"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wgautomesh.nix>

services.wgautomesh.settings.peers.*.endpoint
Bootstrap endpoint for connecting to this Wireguard peer if no other address is known or none are working.

Type: null or string

Default:

```
null
```

Example:

```
"wgnode.mydomain.example:51820"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wgautomesh.nix>

services.wgautomesh.settings.peers.*.pubkey
Wireguard public key of this peer.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/wgautomesh.nix>

services.wgautomesh.settings.upnp_forward_external_port
Public port number to try to redirect to this machine's Wireguard daemon using UPnP IGD.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wgautomesh.nix>

services.whisparr.enable

Whether to enable Whisparr.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/whisparr.nix>

services.whisparr.package

The whisparr package to use.

Type: package

Default:

```
pkgs.whisparr
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/whisparr.nix>

services.whisparr.dataDir

The directory where Whisparr stores its data files.

Type: absolute path

Default:

```
"/var/lib/whisparr/.config/Whisparr"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/whisparr.nix>

services.whisparr.environmentFiles

Environment file to pass secret configuration values. Each line must follow the 'WHISPARR__SECTION__KEY=value' pattern. Please consult the documentation at the **wiki**.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/whisparr.nix>

services.whisparr.group

Group under which Whisparr runs.

Type: string

Default:

```
"whisparr"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/whisparr.nix>

services.whisparr.openFirewall

Open ports in the firewall for the Whisparr web interface.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/whisparr.nix>

services.whisparr.settings

Attribute set of arbitrary config options. Please consult the documentation at the **wiki**.

WARNING: this configuration is stored in the world−readable Nix store! For secrets use **services.whisparr.environmentFiles**.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  update.mechanism = "internal";
  server = {
    urlbase = "localhost";
    port = 6969;
    bindaddress = "*";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/whisparr.nix>

services.whisparr.settings.log.analyticsEnabled

Send Anonymous Usage Data

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/whisparr.nix>

services.whisparr.settings.server.port

Port Number

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6969
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/whisparr.nix>

services.whisparr.settings.update.automatically
Automatically download and install updates.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/whisparr.nix>

services.whisparr.settings.update.mechanism
which update mechanism to use

Type: null or one of “external”, “builtIn”, “script”

Default:

```
"external"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/whisparr.nix>

services.whisparr.user
User account under which Whisparr runs.

Type: string

Default:

```
"whisparr"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/whisparr.nix>

services.whitebophir.enable
Whether to enable whitebophir, an online collaborative whiteboard server (persistent state will be maintained under */var/lib/whitebophir*).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/whitebophir.nix>

services.whitebophir.package
The whitebophir package to use.

Type: package

Default:

```
pkgs.whitebophir
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/whitebophir.nix>

services.whitebophir.listenAddress

Address to listen on (use 0.0.0.0 to allow access from any address).

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/whitebophir.nix>

services.whitebophir.port

Port to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5001
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/whitebophir.nix>

services.whoami.enable

Whether to enable whoami.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/whoami.nix>

services.whoami.package

The whoami package to use.

Type: package

Default:

```
pkgs.whoami
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/whoami.nix>

services.whoami.extraArgs

Extra command line arguments to pass to whoami. See **https://github.com/traefik/whoami#flags** for details.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/whoami.nix>

services.whoami.port

The port whoami should listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/whoami.nix>

services.whoogle−search.enable

Whether to enable Whoogle, a metasearch engine.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/whoogle−search.nix>

services.whoogle−search.extraEnv

Extra environment variables to pass to Whoogle, see https://github.com/benbusby/whoogle−search?tab=readme−ov−file#environment−variables

Type: attribute set of string

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/whoogle−search.nix>

services.whoogle−search.listenAddress

Address to listen on for the web interface.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/whoogle−search.nix>

services.whoogle−search.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5000
```

Declared by:

<nixpkgs/nixos/modules/services/networking/whoogle−search.nix>

services.wiki−js.enable
Whether to enable wiki−js.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wiki−js.nix>

services.wiki−js.environmentFile
Environment file to inject e.g. secrets into the configuration.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/root/wiki−js.env"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wiki−js.nix>

services.wiki−js.settings
Settings to configure ‘wiki−js’. This directly corresponds to **the upstream configuration options**.

Secrets can be injected via the environment by

- specifying **services.wiki-js.environmentFile** to contain secrets
- and setting sensitive values to ‘$(ENVIRONMENT_VAR)’ with this value defined in the environment−file.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wiki−js.nix>

services.wiki−js.settings.bindIP
IPs the service should listen to.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wiki−js.nix>

services.wiki−js.settings.db.db
Name of the database to use.

Type: string

Default:

```
"wiki"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wiki−js.nix>

services.wiki−js.settings.db.host
Hostname or socket−path to connect to.

Type: string

Example:

```
"/run/postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wiki−js.nix>

services.wiki−js.settings.db.type
Database driver to use for persistence. Please note that ‘sqlite’ is currently not supported as the build process for it is currently not implemented in ‘pkgs.wiki−js’ and it’s not recommended by upstream for production use.

Type: one of “postgres”, “mysql”, “mariadb”, “mssql”

Default:

```
"postgres"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wiki−js.nix>

services.wiki−js.settings.logLevel
Define how much detail is supposed to be logged at runtime.

Type: one of “error”, “warn”, “info”, “verbose”, “debug”, “silly”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wiki−js.nix>

services.wiki−js.settings.offline
Disable latest file updates and enable **sideloading**.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wiki−js.nix>

services.wiki−js.settings.port
TCP port the process should listen to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wiki−js.nix>

services.wiki−js.stateDirectoryName
Name of the directory in */var/lib*.

Type: string

Default:

```
"wiki−js"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wiki−js.nix>

services.windmill.enable
Whether to enable windmill service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/windmill.nix>

services.windmill.package
The windmill package to use.

Type: package

Default:

```
pkgs.windmill
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/windmill.nix>

services.windmill.baseUrl
The base url that windmill will be served on.

Type: string

Default:

```
"https://localhost:\$\{toString config.services.windmill.serverPo \
rt}";
```

Example:

```
"https://windmill.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/windmill.nix>

services.windmill.database.createLocally
Whether to create a local database automatically.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/windmill.nix>

services.windmill.database.name
Database name.

Type: string

Default:

```
"windmill"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/windmill.nix>

services.windmill.database.url
Database url. Note that any secret here would be world−readable. Use ‘services.windmill.database.urlPath’ unstead to include secrets in the url.

Type: string

Default:

```
"postgres://\$\{config.services.windmill.database.name}?host=/var \
/run/postgresql";
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/windmill.nix>

services.windmill.database.urlPath
Path to the file containing the database url windmill should connect to. This is not deducted from database user and name as it might contain a secret

Type: null or absolute path

Default:

```
null
```

Example:

```
"config.age.secrets.DATABASE_URL_FILE.path"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/windmill.nix>

services.windmill.database.user
Database user.

Type: string

Default:

```
"windmill"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/windmill.nix>

services.windmill.logLevel
Log level

Type: one of “error”, “warn”, “info”, “debug”, “trace”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/windmill.nix>

services.windmill.lspPort
Port the windmill lsp listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3001
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/windmill.nix>

services.windmill.serverPort
Port the windmill server listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8001
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/windmill.nix>

services.wivrn.enable
Whether to enable WiVRn, an OpenXR streaming application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/video/wivrn.nix>

services.wivrn.package
The wivrn package to use.

Type: package

Default:

```
pkgs.wivrn
```

Declared by:
<nixpkgs/nixos/modules/services/video/wivrn.nix>

services.wivrn.autoStart
Whether to enable starting the service by default.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/video/wivrn.nix>

services.wivrn.config.enable
Whether to enable configuration for WiVRn.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/video/wivrn.nix>

services.wivrn.config.json
Configuration for WiVRn. The attributes are serialized to JSON in config.json. The server will fallback to default values for any missing attributes.

Like upstream, the application option is a list including the application and it's flags. In the case of the NixOS module however, the first element of the list must be a package. The module will assert otherwise. The application can be set to a single package because it gets passed to lib.toList, though this will not allow for flags to be passed.

WiVRn has good default configurations and most options can be configured at runtime so it is recommended to leave this empty and try the defaults before attempting manual configuration.

See **https://github.com/WiVRn/WiVRn/blob/master/docs/configuration.md**

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  # left eye, hardware; right eye, software; transparency, hardware
  encoder = [
    {
      encoder = "vulkan";
      codec = "h265";
    }
    {
      encoder = "x264";
      codec = "h264";
    }
    {
      encoder = "vulkan";
      codec = "h265";
    }
  ];
  application = [ pkgs.wayvr ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/video/wivrn.nix>

services.wivrn.extraServerFlags
Flags to add to the wivrn service.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "--no-publish-service" ]
```

Declared by:
<nixpkgs/nixos/modules/services/video/wivrn.nix>

services.wivrn.highPriority
Whether to enable high priority capability for asynchronous reprojection.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/video/wivrn.nix>

services.wivrn.monadoEnvironment
Environment variables to be passed to the Monado environment.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/video/wivrn.nix>

services.wivrn.openFirewall
Whether to enable the default ports in the firewall for the WiVRn server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/video/wivrn.nix>

services.wivrn.steam.enable
Whether to enable Steam support.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/video/wivrn.nix>

services.wivrn.steam.package
The steam package to use.

Type: package

Default:

```
pkgs.steam
```

Declared by:
<nixpkgs/nixos/modules/services/video/wivrn.nix>

services.wivrn.steam.importOXRRuntimes
Whether to enable Sets ‘PRESSURE_VESSEL_IMPORT_OPENXR_1_RUNTIMES’ system−wide to allow Steam to automatically discover the WiVRn server.

Note that you may have to logout for this variable to be visible .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/video/wivrn.nix>

services.wlock.enable
Whether to enable wlock, a Wayland sessionlocker using the ext−session−lock−v1 protocol.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/wlock.nix>

services.wlock.package
The wlock package to use.

Type: package

Default:

```
pkgs.wlock
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/wlock.nix>

services.woodpecker−agents.agents

woodpecker−agents configurations

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  podman = {
    environment = {
      WOODPECKER_SERVER = "localhost:9000";
      WOODPECKER_BACKEND = "docker";
      DOCKER_HOST = "unix:///run/podman/podman.sock";
    };
    extraGroups = [ "podman" ];
    environmentFile = [ "/run/secrets/woodpecker/agent−secret.txt" \
 ];
  };
  exec = {
    environment = {
      WOODPECKER_SERVER = "localhost:9000";
      WOODPECKER_BACKEND = "local";
    };
    environmentFile = [ "/run/secrets/woodpecker/agent−secret.txt" \
 ];
    path = [
      # Needed to clone repos
      git
      git−lfs
      woodpecker−plugin−git
      # Used by the runner as the default shell
      bash
      # Most likely to be used in pipeline definitions
      coreutils
    ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/woodpecker/agents.nix>

services.woodpecker−agents.agents.<name>.enable

Whether to enable this Woodpecker−Agent. Agents execute tasks generated by a Server, every install will need one server and at least one agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/woodpecker/agents.nix>

services.woodpecker-agents.agents.<name>.package
The woodpecker-agent package to use.

Type: package

Default:

```
pkgs.woodpecker-agent
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/woodpecker/agents.nix>

services.woodpecker-agents.agents.<name>.environment
woodpecker-agent config environment variables, for other options read the **documentation**

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  WOODPECKER_SERVER = "localhost:9000";
  WOODPECKER_BACKEND = "docker";
  DOCKER_HOST = "unix:///run/podman/podman.sock";
}
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/woodpecker/agents.nix>

services.woodpecker-agents.agents.<name>.environmentFile
File to load environment variables from. This is helpful for specifying secrets. Example content of environmentFile:

```
WOODPECKER_AGENT_SECRET=your-shared-secret-goes-here
```

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/var/secrets/woodpecker-agent.env"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/woodpecker/agents.nix>

services.woodpecker-agents.agents.<name>.extraGroups
Additional groups for the systemd service.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "podman"
```

```
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/woodpecker/agents.nix>

services.woodpecker-agents.agents.<name>.path
Additional packages that should be added to the agent's 'PATH'. Mostly useful for the 'local' backend.

Type: list of package

Default:

```
[ ]
```

Example:

```
[
  ""
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/woodpecker/agents.nix>

services.woodpecker-server.enable
Whether to enable the Woodpecker-Server, a CI/CD application for automatic builds, deployments and tests.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/woodpecker/server.nix>

services.woodpecker-server.package
The woodpecker-server package to use.

Type: package

Default:

```
pkgs.woodpecker-server
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/woodpecker/server.nix>

services.woodpecker-server.environment
woodpecker-server config environment variables, for other options read the **documentation**

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  WOODPECKER_HOST = "https://woodpecker.example.com";
  WOODPECKER_OPEN = "true";
  WOODPECKER_GITEA = "true";
  WOODPECKER_GITEA_CLIENT = "ffffffff-ffff-ffff-ffff-ffffffffff \
ff";
```

```
  WOODPECKER_GITEA_URL = "https://git.example.com";
}
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/woodpecker/server.nix>

services.woodpecker-server.environmentFile
File to load environment variables from. This is helpful for specifying secrets. Example content of environmentFile:

```
WOODPECKER_AGENT_SECRET=your-shared-secret-goes-here
WOODPECKER_GITEA_SECRET=gto_************************************
```

Type: (list of absolute path) or absolute path convertible to it

Default:

```
[ ]
```

Example:

```
[
  "/root/woodpecker-server.env"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/woodpecker/server.nix>

services.wordpress.sites
Specification of one or more WordPress sites to serve

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/wordpress.nix>

services.wordpress.sites.<name>.package
The wordpress package to use.

Type: package

Default:

```
pkgs.wordpress
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/wordpress.nix>

services.wordpress.sites.<name>.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/wordpress.nix>

services.wordpress.sites.<name>.database.host
Database host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.database.name
Database name.

Type: string

Default:

```
"wordpress"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.database.passwordFile
A file containing the password corresponding to **database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/wordpress−dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.database.socket
Path to the unix socket file to use for authentication.

Type: null or absolute path

Default:

```
/run/mysqld/mysqld.sock
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.database.tablePrefix

The $table_prefix is the value placed in the front of your database tables. Change the value if you want to use something other than wp_ for your database prefix. Typically this is changed if you are installing multiple WordPress blogs in the same database.

See **https://codex.wordpress.org/Editing_wp−config.php#table_prefix**.

Type: string

Default:

```
"wp_"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.database.user

Database user.

Type: string

Default:

```
"wordpress"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.extraConfig

Any additional text to be appended to the wp−config.php configuration file. This is a PHP script. For configuration settings, see **https://codex.wordpress.org/Editing_wp−config.php**.

Note: Please pass structured settings via ‘services.wordpress.sites.‹name›.settings’ instead.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
@ini_set( 'log_errors', 'Off' );
@ini_set( 'display_errors', 'On' );
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.finalPackage

WordPress package with bundled configuration, plugins and themes.

Type: package *(read only)*

Default:

```
pkg name config
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.fontsDir

This directory is used to download fonts from a remote location, e.g. to host google fonts locally.

Type: absolute path

Default:

```
"/var/lib/wordpress/‹name›/fonts"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.languages
List of path(s) to respective language(s) which are copied from the ‘languages’ directory.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  # Let’s package the German language.
  # For other languages try to replace language and country code in \
 the download URL with your desired one.
  # Reference https://translate.wordpress.org for available transla \
tions and
  # codes.
  (pkgs.stdenv.mkDerivation {
    name = "language−de";
    src = pkgs.fetchurl {
      url = "https://de.wordpress.org/wordpress−${pkgs.wordpress.v \
ersion}−de_DE.tar.gz";
      # Name is required to invalidate the hash when wordpress is u \
pdated
      name = "wordpress−${pkgs.wordpress.version}−language−de";
      sha256 = "sha256−dlas0rXTSV4JAl8f/UyMbig57yURRYRhTMtJwF9g8h0 \
=";
    };
    installPhase = "mkdir −p $out; cp −r ./wp−content/languages/ \
* $out/";
  })
];
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.mergedConfig
Read only representation of the final configuration.

Type: unspecified value *(read only)*

Default:

```
{
  DISALLOW_FILE_EDIT = true;
  AUTOMATIC_UPDATER_DISABLED = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.plugins
Path(s) to respective plugin(s) which are copied from the ‘plugins’ directory.

Note
These plugins need to be packaged before use, see example.

Type: (attribute set of absolute path) or (list of absolute path) convertible to it

Default:

```
{ }
```

Example:

```
{
  inherit (pkgs.wordpressPackages.plugins) embed-pdf-viewer-plug \
in;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/wordpress.nix>

services.wordpress.sites.<name>.poolConfig

Options for the WordPress PHP pool. See the documentation on 'php-fpm.conf' for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/wordpress.nix>

services.wordpress.sites.<name>.settings

Structural Wordpress configuration. Refer to **https://developer.wordpress.org/apis/wp-config-php** for details and supported values.

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  WP_DEFAULT_THEME = "twentytwentytwo";
  WP_SITEURL = "https://example.org";
  WP_HOME = "https://example.org";
  WP_DEBUG = true;
  WP_DEBUG_DISPLAY = true;
  WPLANG = "de_DE";
  FORCE_SSL_ADMIN = true;
  AUTOMATIC_UPDATER_DISABLED = true;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/wordpress.nix>

services.wordpress.sites.<name>.themes

Path(s) to respective theme(s) which are copied from the 'theme' directory.

Note

These themes need to be packaged before use, see example.

Type: (attribute set of absolute path) or (list of absolute path) convertible to it

Default:

```
{ inherit (pkgs.wordpressPackages.themes) twentytwentyfive; }
```

Example:

```
{
  inherit (pkgs.wordpressPackages.themes) responsive-theme;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/wordpress.nix>

services.wordpress.sites.<name>.uploadsDir

This directory is used for uploads of pictures. The directory passed here is automatically created and permissions adjusted as required.

Type: absolute path

Default:

```
"/var/lib/wordpress/‹name›/uploads"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost

Apache configuration can be done by adapting **services.httpd.virtualHosts**.

Type: submodule

Example:

```
{
  adminAddr = "webmaster@example.org";
  forceSSL = true;
  enableACME = true;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.enableACME

Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.enableUserDir
Whether to enable serving *~/public_html* as ‘/~«username»’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.acmeRoot
Directory for the acme challenge which is PUBLIC, don’t put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.adminAddr
E−mail address of the server administrator.

Type: null or string

Default:

```
null
```

Example:

```
"admin@example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.documentRoot
The path of Apache’s document root directory. If left undefined, an empty directory in the Nix store will be used as root.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.extraConfig
These lines go to httpd.conf verbatim. They will go after directories and directory aliases defined by default.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
<Directory /home>
  Options FollowSymlinks
  AllowOverride All
</Directory>
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.forceSSL
Whether to add a separate nginx server block that permanently redirects (301) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.globalRedirect
If set, all requests for this host are redirected permanently to the given URL.

Type: null or string

Default:

```
null
```

Example:

```
"http://newserver.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.hostName
Canonical hostname for the server.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.http2

Whether to enable HTTP 2. HTTP/2 is supported in all multi−processing modules that come with httpd. *However, if you use the prefork mpm, there will be severe restrictions.* Refer to **https://httpd.apache.org/docs/2.4/howto/http2.html#mpm−config** for details.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.listen

Listen addresses and ports for this virtual host.

Note

This option overrides ‘addSSL’, ‘forceSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    ip = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    ip = "192.154.1.1";
    port = 80;
  }
  {
    ip = "*";
    port = 8080;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.listen.*.ip

IP to listen on. 0.0.0.0 for IPv4 only, * for all.

Type: string

Default:

```
"*"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.listen.*.port

Port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:

<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.listen.*.ssl

Whether to enable SSL (https) support.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Type: non−empty (list of string)

Default:

```
[
  "*"
]
```

Example:

```
[
  "127.0.0.1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.locations

Declarative location config. See **https://httpd.apache.org/docs/2.4/mod/core.html#location** for details.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
  "/foo/bar.png" = {
    alias = "/home/eelco/some−file.png";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.locations.<name>.alias

Alias directory for requests. See **https://httpd.apache.org/docs/2.4/mod/mod_alias.html#alias**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.locations.<name>.extraConfig

These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.locations.<name>.index

Adds DirectoryIndex directive. See **https://httpd.apache.org/docs/2.4/mod/mod_dir.html#directoryindex**.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.locations.<name>.priority

Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.locations.<name>.proxyPass

Sets up a simple reverse proxy as described by **https://httpd.apache.org/docs/2.4/howto/reverse_proxy.html#simple**.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.logFormat
Log format for Apache's log files. Possible values are: combined, common, referer, agent.

Type: string

Default:

```
"common"
```

Example:

```
"combined"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.robotsEntries
Specification of pages to be ignored by web crawlers. See **http://www.robotstxt.org/** for details.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
"Disallow: /foo/"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.servedDirs
This option provides a simple way to serve static directories.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    dir = "/home/eelco/Dev/nix-homepage";
    urlPath = "/nix";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.servedFiles
This option provides a simple way to serve individual, static files.

Note
This option has been deprecated and will be removed in a future version of NixOS. You can achieve the same result by making use of the ‘locations.<name>.alias’ option.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    file = "/home/eelco/some−file.png";
    urlPath = "/foo/bar.png";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "www.example.org:8080"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.sslServerCert
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.sslServerChain
Path to server SSL chain file.

Type: null or absolute path

Default:

`null`

Example:

`"/var/ca.pem"`

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.sslServerKey
Path to server SSL certificate key.

Type: absolute path

Example:

`"/var/host.key"`

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.wordpress.sites.<name>.virtualHost.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

2. see the **security.acme.certs** option

services.wordpress.webserver
Whether to use apache2 or nginx for virtual host management.

Further nginx configuration can be done by adapting 'services.nginx.virtualHosts.<name>'. See **services.nginx.virtualHosts** for further information.

Further apache2 configuration can be done by adapting 'services.httpd.virtualHosts.<name>'. See **services.httpd.virtualHosts** for further information.

Type: one of "httpd", "nginx", "caddy"

Default:

`"httpd"`

Declared by:
<nixpkgs/nixos/modules/services/web−apps/wordpress.nix>

services.workout−tracker.enable
Whether to enable workout tracking web application for personal use (or family, friends), geared towards running and other GPX−based activities.

Type: boolean

Default:

`false`

Example:

`true`

Declared by:
<nixpkgs/nixos/modules/services/misc/workout−tracker.nix>

services.workout−tracker.package
The workout−tracker package to use.

Type: package

Default:

```
pkgs.workout−tracker
```

Declared by:
<nixpkgs/nixos/modules/services/misc/workout−tracker.nix>

services.workout−tracker.address
Web interface address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/workout−tracker.nix>

services.workout−tracker.environmentFile
An environment file as defined in **systemd.exec**(5).

Secrets like ‘WT_JWT_ENCRYPTION_KEY’ may be passed to the service without adding them to the world−readable Nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/workout−tracker.env"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/workout−tracker.nix>

services.workout−tracker.port
Web interface port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/misc/workout−tracker.nix>

services.workout−tracker.settings
Extra config options.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
```

```
    WT_DATABASE_DRIVER = "sqlite";
    WT_DEBUG = "false";
    WT_DSN = "./database.db";
    WT_LOGGING = "true";
  }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/workout-tracker.nix>

services.writefreely.enable
Whether to enable Writefreely, build a digital writing community.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/writefreely.nix>

services.writefreely.package
The writefreely package to use.

Type: package

Default:

```
pkgs.writefreely
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/writefreely.nix>

services.writefreely.acme.enable
Whether or not to automatically fetch and configure SSL certs.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/writefreely.nix>

services.writefreely.admin.initialPasswordFile
Path to a file containing the initial password for the admin user. If not provided, the default password will be set to ‘nixos’.

Type: absolute path

Default:

```
"/nix/store/xxx-default-admin-pass"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/writefreely.nix>

services.writefreely.admin.name
The name of the first admin user.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.database.createLocally
When **services.writefreely.database.type** is set to ‘"mysql"’, this option will enable the MySQL service locally.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.database.host
The database host to connect to.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.database.migrate
Whether or not to automatically run migrations on startup.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.database.name
The name of the database to store data in.

Type: string

Default:

```
"writefreely"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.database.passwordFile
The file to load the database password from.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.database.port
The port used when connecting to the database host.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.database.tls
Whether or not TLS should be used for the database connection.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.database.type
The database provider to use.

Type: one of “sqlite3”, “mysql”

Default:

```
"sqlite3"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.database.user
The database user to connect as.

Type: null or string

Default:

```
"writefreely"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.group
Group under which Writefreely is ran.

Type: string

Default:

```
"writefreely"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.host
The public host name to serve.

Type: string

Default:

```
""
```

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.nginx.enable
Whether or not to enable and configure nginx as a proxy for WriteFreely.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.nginx.forceSSL
Whether or not to force the use of SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.settings
Writefreely configuration (*config.ini*). Refer to **https://writefreely.org/docs/latest/admin/config** for details.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.settings.app.theme
The theme to apply.

Type: string

Default:

```
"write"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.settings.server.port
The port WriteFreely should listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
"80"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.stateDir
The state directory where keys and data are stored.

Type: absolute path

Default:

```
"/var/lib/writefreely"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.writefreely.user
User under which Writefreely is ran.

Type: string

Default:

```
"writefreely"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/writefreely.nix>

services.wstunnel.enable
Whether to enable wstunnel.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.clients
‘wstunnel’ clients to set up.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  wg-tunnel = {
    connectTo = "wss://wstunnel.server.com:8443";
    localToRemote = [
      "tcp://1212:google.com:443"
      "tcp://2:n.lan:4?proxy_protocol"
    ];
    remoteToLocal = [
      "socks5://[::1]:1212"
      "unix://wstunnel.sock:g.com:443"
    ];
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.clients.<name>.enable
Whether to enable this ‘wstunnel’ instance.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.clients.<name>.package
The wstunnel package to use.

Type: package

Default:

```
pkgs.wstunnel
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.clients.<name>.addNetBind
Whether to enable Whether add CAP_NET_BIND_SERVICE to the tunnel service, this should be enabled if you want to bind port < 1024.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.clients.<name>.autoStart
Whether to enable starting this wstunnel instance automatically.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.clients.<name>.connectTo

Server address and port to connect to.

Type: string

Example:

```
"https://wstunnel.server.com:8443"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.clients.<name>.environmentFile

Environment file to be passed to the systemd service. Useful for passing secrets to the service to prevent them from being world−readable in the Nix store. Note however that the secrets are passed to 'wstunnel' through the command line, which makes them locally readable for all users of the system at runtime.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/secrets/wstunnelSecrets"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.clients.<name>.settings

Command line arguments to pass to 'wstunnel'. Attributes of the form 'argName = true;' will be translated to '−−argName', and 'argName = \"value\"' to '−−argName value'.

Type: open submodule of attribute set of (boolean or signed integer or string or list of string)

Default:

```
{ }
```

Example:

```
{
  someNewOption = true;
  someNewOptionWithValue = "someValue";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.clients.<name>.settings.http−headers

Custom headers to send in the upgrade request

Type: (list of string) or (attribute set of string) convertible to it

Default:

```
{ }
```

Example:

```
{
  X−Some−Header = "some−value";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.servers
'wstunnel' servers to set up.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  wg-tunnel = {
    listen = {
      enableHTTPS = true;
      host = "0.0.0.0";
      port = 8080;
    };
    settings = {
      restrict-to = [
        {
          host = "127.0.0.1";
          port = 51820;
        }
      ];
      tls-certificate = "/var/lib/secrets/fullchain.pem";
      tls-private-key = "/var/lib/secrets/key.pem";
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.servers.<name>.enable
Whether to enable this 'wstunnel' instance.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.servers.<name>.package
The wstunnel package to use.

Type: package

Default:

```
pkgs.wstunnel
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.servers.<name>.autoStart
Whether to enable starting this wstunnel instance automatically.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.servers.<name>.environmentFile
Environment file to be passed to the systemd service. Useful for passing secrets to the service to prevent them from being world−readable in the Nix store. Note however that the secrets are passed to 'wstunnel' through the command line, which makes them locally readable for all users of the system at runtime.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/secrets/wstunnelSecrets"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.servers.<name>.listen
Address and port to listen on. Setting the port to a value below 1024 will also give the process the required 'CAP_NET_BIND_SERVICE' capability.

Type: submodule

Default:

```
{ config, ... }:
{
  host = "0.0.0.0";
  port = if config.enableHTTPS then 443 else 80;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.servers.<name>.listen.enableHTTPS
Use HTTPS for the tunnel server.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.servers.<name>.listen.host

The hostname.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.servers.<name>.listen.port

The port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:

<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.servers.<name>.settings

Command line arguments to pass to ‘wstunnel’. Attributes of the form ‘argName = true;’ will be translated to ‘−−argName’, and ‘argName = \"value\"’ to ‘−−argName value’.

Type: open submodule of attribute set of (boolean or signed integer or string or list of string)

Default:

```
{ }
```

Example:

```
{
  someNewOption = true;
  someNewOptionWithValue = "someValue";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.servers.<name>.settings.restrict−to

Restrictions on the connections that the server will accept. For more flexibility, and the possibility to also allow reverse tunnels, look into the ‘restrict−config’ option that takes a path to a yaml file.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    host = "127.0.0.1";
    port = 51820;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.servers.<name>.settings.restrict−to.*.host

The hostname.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.servers.<name>.settings.restrict−to.*.port
The port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wstunnel.servers.<name>.useACMEHost
Use a certificate generated by the NixOS ACME module for the given host. Note that this will not generate a new certificate − you will need to do so with 'security.acme.certs'.

Type: null or string

Default:

```
null
```

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wstunnel.nix>

services.wyoming.faster−whisper.package
The wyoming−faster−whisper package to use.

Type: package

Default:

```
pkgs.wyoming−faster−whisper
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/faster−whisper.nix>

services.wyoming.faster−whisper.servers
Attribute set of wyoming−faster−whisper instances to spawn.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/faster−whisper.nix>

services.wyoming.faster−whisper.servers.<name>.enable
Whether to enable Wyoming faster−whisper server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/faster−whisper.nix>

services.wyoming.faster−whisper.servers.<name>.beamSize

The number of beams to use in beam search.

The default (‘0’) will use 1 beam on ARM systems (assumes an ARM SBC) and 5 everywhere else.

Type: unsigned integer, meaning >=0

Default:

Example:

```
5
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/wyoming/faster−whisper.nix>

services.wyoming.faster−whisper.servers.<name>.device

Determines the platform faster−whisper is run on. CPU works everywhere, CUDA requires a compatible NVIDIA GPU.

Type: one of “cpu”, “cuda”, “auto”

Default:

```
"cpu"
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/wyoming/faster−whisper.nix>

services.wyoming.faster−whisper.servers.<name>.extraArgs

Extra arguments to pass to the server commandline.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/wyoming/faster−whisper.nix>

services.wyoming.faster−whisper.servers.<name>.initialPrompt

Optional text to provide as a prompt for the first window. This can be used to provide, or “prompt−engineer” a context for transcription, e.g. custom vocabularies or proper nouns to make it more likely to predict those word correctly.

Only supported when the **sttLibrary** is ‘faster−whisper’.

Type: null or string

Default:

```
null
```

Example:

```
The following conversation takes place in the universe of
Wizard of Oz. Key terms include 'Yellow Brick Road' (the path
to follow), 'Emerald City' (the ultimate goal), and 'Ruby
Slippers' (the magical tools to succeed). Keep these in mind as
they guide the journey.
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/wyoming/faster−whisper.nix>

services.wyoming.faster−whisper.servers.<name>.language

The language used to to parse words and sentences.

Type: one of “auto”, “af”, “am”, “ar”, “as”, “az”, “ba”, “be”, “bg”, “bn”, “bo”, “br”, “bs”, “ca”, “cs”, “cy”, “da”, “de”, “el”, “en”, “es”, “et”, “eu”, “fa”, “fi”, “fo”, “fr”, “gl”, “gu”, “ha”, “haw”, “he”, “hi”, “hr”, “ht”, “hu”, “hy”, “id”, “is”, “it”, “ja”, “jw”, “ka”, “kk”, “km”, “kn”, “ko”, “la”, “lb”, “ln”, “lo”, “lt”, “lv”, “mg”, “mi”, “mk”, “ml”, “mn”, “mr”, “ms”, “mt”, “my”, “ne”, “nl”, “nn”, “no”, “oc”, “pa”, “pl”, “ps”, “pt”, “ro”, “ru”, “sa”, “sd”, “si”, “sk”, “sl”, “sn”, “so”, “sq”, “sr”, “su”, “sv”, “sw”, “ta”, “te”, “tg”, “th”, “tk”, “tl”, “tr”, “tt”, “uk”, “ur”, “uz”, “vi”, “yi”, “yue”, “yo”, “zh”

Example:

```
"en"
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/wyoming/faster−whisper.nix>

services.wyoming.faster−whisper.servers.<name>.model

Name of the voice model to use. Can also be a HuggingFace model ID or a path to a custom model directory.

When set to ‘auto’ picks a default based on the **language**,

With **sttLibrary** set to ‘transformers’, a HuggingFace transformers Whisper model ID from HuggingFace like ‘openai/whisper−tiny’ or ‘openai/whisper−base’ must be used.

Compressed models (‘int8’) are slightly less accurate, but smaller and faster. Distilled models are uncompressed and faster and smaller than non−distilled models.

Available models for faster−whisper:

- ‘tiny−int8’ (compressed)
- ‘tiny’
- ‘tiny.en’ (English only)
- ‘base−int8’ (compressed)
- ‘base’
- ‘base.en’ (English only)
- ‘small−int8’ (compressed)
- ‘distil−small.en’ (distilled, English only)
- ‘small’
- ‘small.en’ (English only)
- ‘medium−int8’ (compressed)
- ‘distil−medium.en’ (distilled, English only)
- ‘medium’
- ‘medium.en’ (English only)
- ‘large’
- ‘large−v1’
- ‘distil−large−v2’ (distilled, English only)
- ‘large−v2’
- ‘distil−large−v3’ (distilled, English only)
- ‘large−v3’
- ‘turbo’ (faster than large−v3)

Type: string

Default:

```
"auto"
```

Example:

```
"sherpa−onnx−nemo−parakeet−tdt−0.6b−v3−int8"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/faster−whisper.nix>

services.wyoming.faster−whisper.servers.<name>.sttLibrary
Library used for speech−to−text process.

When set to ‘auto’ picks a default based on the **language**.

Type: one of “auto”, “faster−whisper”, “onnx−asr”, “sherpa”, “transformers”

Default:

```
"auto"
```

Example:

```
"sherpa"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/faster−whisper.nix>

services.wyoming.faster−whisper.servers.<name>.uri
URI to bind the wyoming server to.

Type: string matching the pattern ^(tcp|unix)://.*$

Example:

```
"tcp://0.0.0.0:10300"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/faster−whisper.nix>

services.wyoming.faster−whisper.servers.<name>.zeroconf.enable
Whether to enable zeroconf discovery.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/faster−whisper.nix>

services.wyoming.faster−whisper.servers.<name>.zeroconf.name
The advertised name for zeroconf discovery.

Type: string

Default:

```
"faster−whisper−‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/faster−whisper.nix>

services.wyoming.openwakeword.enable
Whether to enable Wyoming protocol server for openWakeWord wake word detection system.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/openwakeword.nix>

services.wyoming.openwakeword.package
The wyoming−openwakeword package to use.

Type: package

Default:

```
pkgs.wyoming−openwakeword
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/openwakeword.nix>

services.wyoming.openwakeword.customModelsDirectories
Paths to directories with custom wake word models (*.tflite model files).

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/openwakeword.nix>

services.wyoming.openwakeword.extraArgs
Extra arguments to pass to the server commandline.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/openwakeword.nix>

services.wyoming.openwakeword.refractorySeconds
Duration in seconds before a wake word can be detected again.

Type: signed integer or floating point number

Default:

```
2
```

Example:

```
1.5
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/openwakeword.nix>

services.wyoming.openwakeword.threshold
Activation threshold (0.0−1.0), where higher means fewer activations.

See trigger level for the relationship between activations and wake word detections.

Type: integer or floating point number between 0.0 and 1.0 (both inclusive)

Default:

```
0.5
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/openwakeword.nix>

services.wyoming.openwakeword.triggerLevel
Number of activations before a detection is registered.

A higher trigger level means fewer detections.

Type: unsigned integer, meaning >=0

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/openwakeword.nix>

services.wyoming.openwakeword.uri
URI to bind the wyoming server to.

Type: string matching the pattern ^(tcp|unix)://.*$

Default:

```
"tcp://0.0.0.0:10400"
```

Example:

```
"tcp://192.0.2.1:5000"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/openwakeword.nix>

services.wyoming.piper.package
The wyoming−piper package to use.

Type: package

Default:

```
pkgs.wyoming−piper
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/piper.nix>

services.wyoming.piper.servers
Attribute set of wyoming−piper instances to spawn.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/piper.nix>

services.wyoming.piper.servers.<name>.enable
Whether to enable Wyoming Piper server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/piper.nix>

services.wyoming.piper.servers.<name>.extraArgs
Extra arguments to pass to the server commandline.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/piper.nix>

services.wyoming.piper.servers.<name>.lengthScale
Phoneme length value.

Type: floating point number

Default:

```
1.0
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/piper.nix>

services.wyoming.piper.servers.<name>.noiseScale
Generator noise value.

Type: floating point number

Default:

```
0.667
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/piper.nix>

services.wyoming.piper.servers.<name>.noiseWidth
Phoneme width noise value.

Type: floating point number

Default:

```
0.333
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/piper.nix>

services.wyoming.piper.servers.<name>.speaker
ID of a specific speaker in a multi−speaker model.

Type: unsigned integer, meaning >=0

Default:

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/piper.nix>

services.wyoming.piper.servers.<name>.uri
URI to bind the wyoming server to.

Type: string matching the pattern ^(tcp|unix)://.*$

Example:

```
"tcp://0.0.0.0:10200"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/piper.nix>

services.wyoming.piper.servers.<name>.useCUDA
Whether to accelerate the underlying onnxruntime library with CUDA.

Type: boolean

Default:

```
pkgs.config.cudaSupport
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/piper.nix>

services.wyoming.piper.servers.<name>.voice
Name of the voice model to use. See the following website for samples: https://rhasspy.github.io/piper−samples/

Type: string

Example:

```
"en−us−ryan−medium"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/piper.nix>

services.wyoming.piper.servers.<name>.zeroconf.enable
Whether to enable zeroconf discovery.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/piper.nix>

services.wyoming.piper.servers.<name>.zeroconf.name
The advertised name for zeroconf discovery.

Type: string

Default:

```
"piper−‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/piper.nix>

services.wyoming.satellite.enable
Whether to enable Wyoming Satellite.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/satellite.nix>

services.wyoming.satellite.package
The wyoming−satellite package to use.

Type: package

Default:

```
pkgs.wyoming-satellite
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/satellite.nix>

services.wyoming.satellite.area
Area to the satellite.

Type: null or string

Default:

```
null
```

Example:

```
"Kitchen"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/satellite.nix>

services.wyoming.satellite.extraArgs
Extra arguments to pass to the executable.

Check ‘wyoming−satellite −−help’ for possible options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/satellite.nix>

services.wyoming.satellite.group
Group to run wyoming−satellite under.

Type: string

Default:

```
"users"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/satellite.nix>

services.wyoming.satellite.microphone.autoGain
Automatic gain control in dbFS, with 31 being the loudest value. Set to 0 to disable.

Type: integer between 0 and 31 (both inclusive)

Default:

```
5
```

Example:

```
15
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/satellite.nix>

services.wyoming.satellite.microphone.command
Program to run for audio input.

Type: string

Default:

```
"arecord −r 16000 −c 1 −f S16_LE −t raw"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/satellite.nix>

services.wyoming.satellite.microphone.noiseSuppression
Noise suppression level with 4 being the maximum suppression, which may cause audio distortion. Set to 0 to disable.

Type: integer between 0 and 4 (both inclusive)

Default:

```
2
```

Example:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/satellite.nix>

services.wyoming.satellite.name
Name of the satellite.

Type: string

Default:

```
config.networking.hostName
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/satellite.nix>

services.wyoming.satellite.sound.command
Program to run for sound output.

Type: null or string

Default:

```
"aplay −r 22050 −c 1 −f S16_LE −t raw"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/satellite.nix>

services.wyoming.satellite.sounds.awake
Path to audio file in WAV format to play when wake word is detected.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/wyoming/satellite.nix>

services.wyoming.satellite.sounds.done

Path to audio file in WAV format to play when voice command recording has ended.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/wyoming/satellite.nix>

services.wyoming.satellite.uri

URI where wyoming−satellite will bind its socket.

Type: string

Default:

```
"tcp://0.0.0.0:10700"
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/wyoming/satellite.nix>

services.wyoming.satellite.user

User to run wyoming−satellite under.

Type: string

Example:

```
"alice"
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/wyoming/satellite.nix>

services.wyoming.satellite.vad.enable

Whether to enable voice activity detection.

Enabling will result in only streaming audio, when speech gets detected.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/wyoming/satellite.nix>

services.x2goserver.enable

Enables the x2goserver module. NOTE: This will create a good amount of symlinks in ‘/usr/local/bin’

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/x2goserver.nix>

services.x2goserver.package

The x2goserver package to use.

Type: package

Default:

```
pkgs.x2goserver
```

Declared by:

<nixpkgs/nixos/modules/services/networking/x2goserver.nix>

services.x2goserver.nxagentDefaultOptions

List of default nx agent options.

Type: list of string

Default:

```
[
  "-extension GLX"
  "-nolisten tcp"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/x2goserver.nix>

services.x2goserver.settings

x2goserver.conf ini configuration as nix attributes. See ‘x2goserver.conf(5)’ for details

Type: attribute set of (attribute set)

Default:

```
{ }
```

Example:

```
{
  superenicer = {
    "enable" = "yes";
    "idle-nice-level" = 19;
  };
  telekinesis = { "enable" = "no"; };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/x2goserver.nix>

services.x2goserver.superenicer.enable

Enables the SupeReNicer code in x2gocleansessions, this will renice suspended sessions to nice level 19 and renice them to level 0 if the session becomes marked as running again

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/x2goserver.nix>

services.xandikos.enable

Whether to enable Xandikos CalDAV and CardDAV server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xandikos.nix>

services.xandikos.package

The xandikos package to use.

Type: package

Default:

```
pkgs.xandikos
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xandikos.nix>

services.xandikos.address

The IP address on which Xandikos will listen. By default listens on localhost.

Type: string

Default:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xandikos.nix>

services.xandikos.extraOptions

Extra command line arguments to pass to xandikos.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "--autocreate"
  "--defaults"
  "--current-user-principal user"
  "--dump-dav-xml"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xandikos.nix>

services.xandikos.nginx

Configuration for nginx reverse proxy.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xandikos.nix>

services.xandikos.nginx.enable
Configure the nginx reverse proxy settings.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xandikos.nix>

services.xandikos.nginx.hostName
The hostname use to setup the virtualhost configuration

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/xandikos.nix>

services.xandikos.port
The port of the Xandikos web application

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xandikos.nix>

services.xandikos.routePrefix
Path to Xandikos. Useful when Xandikos is behind a reverse proxy.

Type: string

Default:

```
"/"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xandikos.nix>

services.xbanish.enable
Whether to enable xbanish.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xbanish.nix>

services.xbanish.arguments
Arguments to pass to xbanish command

Type: string

Default:

```
""
```

Example:

```
"-d -i shift"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xbanish.nix>

services.xe-guest-utilities.enable
Whether to enable the XenServer guest utilities daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xe-guest-utilities.nix>

services.xfs.enable
Whether to enable the X Font Server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xfs.nix>

services.xinetd.enable
Whether to enable the xinetd super-server daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xinetd.nix>

services.xinetd.extraDefaults
Additional configuration lines added to the default section of xinetd's configuration.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xinetd.nix>

services.xinetd.services

A list of services provided by xinetd.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xinetd.nix>

services.xinetd.services.*.extraConfig

Extra configuration−lines added to the section of the service.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xinetd.nix>

services.xinetd.services.*.flags

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xinetd.nix>

services.xinetd.services.*.name

Name of the service.

Type: string

Example:

```
"login"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xinetd.nix>

services.xinetd.services.*.port

Port number of the service.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

Example:

```
123
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xinetd.nix>

services.xinetd.services.*.protocol

Protocol of the service. Usually ‘tcp’ or ‘udp’.

Type: string

Default:

```
"tcp"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xinetd.nix>

services.xinetd.services.*.server
Path of the program that implements the service.

Type: string

Example:

```
"/foo/bin/ftpd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xinetd.nix>

services.xinetd.services.*.serverArgs
Command−line arguments for the server program.

Type: strings concatenated with " "

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xinetd.nix>

services.xinetd.services.*.unlisted
Whether this server is listed in */etc/services*. If so, the port number can be omitted.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xinetd.nix>

services.xinetd.services.*.user
User account for the service

Type: string

Default:

```
"nobody"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xinetd.nix>

services.xl2tpd.enable
Whether to enable xl2tpd, the Layer 2 Tunnelling Protocol Daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xl2tpd.nix>

services.xl2tpd.clientIpRange

The range from which client IPs are drawn.

Type: string

Default:

```
"10.125.125.2-11"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xl2tpd.nix>

services.xl2tpd.extraPppdOptions

Adds extra lines to the pppd options file.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
ms-dns 8.8.8.8
ms-dns 8.8.4.4
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xl2tpd.nix>

services.xl2tpd.extraXl2tpOptions

Adds extra lines to the xl2tpd configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xl2tpd.nix>

services.xl2tpd.serverIp

The server-side IP address.

Type: string

Default:

```
"10.125.125.1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xl2tpd.nix>

services.xmrig.enable

Whether to enable XMRig Mining Software.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/xmrig.nix>

services.xmrig.package

The xmrig package to use.

Type: package

Default:

```
pkgs.xmrig
```

Example:

```
xmrig-mo
```

Declared by:

<nixpkgs/nixos/modules/services/misc/xmrig.nix>

services.xmrig.settings

XMRig configuration. Refer to **https://xmrig.com/docs/miner/config** for details on supported values.

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  autosave = true;
  cpu = true;
  opencl = false;
  cuda = false;
  pools = [
    {
      url = "pool.supportxmr.com:443";
      user = "your-wallet";
      keepalive = true;
      tls = true;
    }
  ]
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/xmrig.nix>

services.xonotic.enable

Whether to enable Xonotic dedicated server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/games/xonotic.nix>

services.xonotic.package
The xonotic−dedicated package to use.

Type: package

Default:

```
pkgs.xonotic-dedicated
```

Declared by:
<nixpkgs/nixos/modules/services/games/xonotic.nix>

services.xonotic.appendConfig
Literal text to insert at the end of ‘server.cfg’.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/games/xonotic.nix>

services.xonotic.dataDir
Data directory.

Type: absolute path *(read only)*

Default:

```
"/var/lib/xonotic"
```

Declared by:
<nixpkgs/nixos/modules/services/games/xonotic.nix>

services.xonotic.openFirewall
Open the firewall for TCP and UDP on the specified port.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/xonotic.nix>

services.xonotic.prependConfig
Literal text to insert at the start of ‘server.cfg’.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/games/xonotic.nix>

services.xonotic.settings
Generates the ‘server.cfg’ file. Refer to **upstream’s example** for details.

Type: open submodule of attribute set of ((optionally newline−terminated) single−line string or signed integer or floating point number or non−empty (list of ((optionally newline−terminated) single−line string or signed integer or floating point number)))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/games/xonotic.nix>

services.xonotic.settings.hostname
The name that will appear in the server list. ‘$g_xonoticversion’ gets replaced with the current version.

Type: (optionally newline−terminated) single−line string

Default:

```
"Xonotic $g_xonoticversion Server"
```

Declared by:
<nixpkgs/nixos/modules/services/games/xonotic.nix>

services.xonotic.settings.maxplayers
Number of player slots on the server, including spectators.

Type: signed integer

Default:

```
16
```

Declared by:
<nixpkgs/nixos/modules/services/games/xonotic.nix>

services.xonotic.settings.net_address
The address Xonotic will listen on.

Type: (optionally newline−terminated) single−line string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/games/xonotic.nix>

services.xonotic.settings.port
The port Xonotic will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
26000
```

Declared by:
<nixpkgs/nixos/modules/services/games/xonotic.nix>

services.xonotic.settings.sv_motd
Text displayed when players join the server.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/games/xonotic.nix>

services.xonotic.settings.sv_public
Controls whether the server will be publicly listed.

Type: signed integer

Default:

Example:

```
[
  -1
  1
]
```

Declared by:
<nixpkgs/nixos/modules/services/games/xonotic.nix>

services.xonotic.settings.sv_termsofservice_url
URL for the Terms of Service for playing on your server.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/games/xonotic.nix>

services.xray.enable
Whether to run xray server.

Either ‘settingsFile’ or ‘settings’ must be specified.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xray.nix>

services.xray.package
The xray package to use.

Type: package

Default:

```
pkgs.xray
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xray.nix>

services.xray.settings
The configuration object.

Either ‘settingsFile’ or ‘settings’ must be specified.

See **https://www.v2fly.org/en_US/config/overview.html**.

Type: null or (attribute set of unspecified value)

Default:

```
null
```

Example:

```
{
  inbounds = [
    {
      listen = "127.0.0.1";
      port = 1080;
      protocol = "http";
```

```
        }
      ];
      outbounds = [
        {
          protocol = "freedom";
        }
      ];
    }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xray.nix>

services.xray.settingsFile
The absolute path to the configuration file.

Either 'settingsFile' or 'settings' must be specified.

See **https://www.v2fly.org/en_US/config/overview.html**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/xray/config.json"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xray.nix>

services.xrdp.enable
Whether to enable xrdp, the Remote Desktop Protocol server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xrdp.nix>

services.xrdp.package
The xrdp package to use.

Type: package

Default:

```
pkgs.xrdp
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xrdp.nix>

services.xrdp.audio.enable
Whether to enable audio support for xrdp sessions. So far it only works with PulseAudio sessions on the server side. No PipeWire support yet.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xrdp.nix>

services.xrdp.audio.package
The pulseaudio−module−xrdp package to use.

Type: package

Default:

```
pkgs.pulseaudio-module-xrdp
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xrdp.nix>

services.xrdp.defaultWindowManager
The script to run when user log in, usually a window manager, e.g. “icewm”, “xfce4−session” This is per−user overridable, if file ~/startwm.sh exists it will be used instead.

Type: string

Default:

```
"xterm"
```

Example:

```
"xfce4-session"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xrdp.nix>

services.xrdp.extraConfDirCommands
Extra commands to run on the default confDir derivation.

Type: string

Default:

```
""
```

Example:

```
substituteInPlace $out/sesman.ini \
  --replace-fail LogLevel=INFO LogLevel=DEBUG \
  --replace-fail LogFile=/dev/null LogFile=/var/log/xrdp.log
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xrdp.nix>

services.xrdp.openFirewall
Whether to open the firewall for the specified RDP port.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/xrdp.nix>

services.xrdp.port

Specifies on which port the xrdp daemon listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3389
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xrdp.nix>

services.xrdp.sslCert

ssl certificate path A self−signed certificate will be generated if file not exists.

Type: string

Default:

```
"/etc/xrdp/cert.pem"
```

Example:

```
"/path/to/your/cert.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xrdp.nix>

services.xrdp.sslKey

ssl private key path A self−signed certificate will be generated if file not exists.

Type: string

Default:

```
"/etc/xrdp/key.pem"
```

Example:

```
"/path/to/your/key.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/xrdp.nix>

services.xscreensaver.enable

Whether to enable xscreensaver user service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xscreensaver.nix>

services.xscreensaver.package

The xscreensaver package to use.

Type: package

Default:

```
pkgs.xscreensaver
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xscreensaver.nix>

services.xscreensaver.hooks
An attrset of events and commands to run upon each event. Refer to **https://www.jwz.org/xscreensaver/man3.html** for supported events.

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Example:

```
# Reconfigure autorandr on screen wake up
{
  "RUN" = "${lib.getExe pkgs.autorandr} --change --ignore-lid" \
;
};
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xscreensaver.nix>

services.xserver.enable
Whether to enable the X server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.enableCtrlAltBackspace
Whether to enable the DontZap option, which binds Ctrl+Alt+Backspace to forcefully kill X. This can lead to data loss and is disabled by default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.enableTCP
Whether to allow the X server to accept TCP connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.enableTearFree
Whether to enable the TearFree option in the first Device section.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.autoRepeatDelay
Sets the autorepeat delay (length of time in milliseconds that a key must be depressed before autorepeat starts).

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.autoRepeatInterval
Sets the autorepeat interval (length of time in milliseconds that should elapse between autorepeat−generated keystrokes).

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.autorun
Whether to start the X server automatically.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.cmt.enable
Enable chrome multitouch input (cmt). Touchpad drivers that are configured for chromebooks.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/hardware/cmt.nix>

services.xserver.cmt.models
Which models to enable cmt for. Enter the Code Name for your Chromebook. Code Name can be found at **https://www.chromium.org/chromium−os/developer−information−for−chrome−os−devices**.

Type: one of “atlas”, “banjo”, “candy”, “caroline”, “cave”, “celes”, “clapper”, “cyan”, “daisy”, “elan”, “elm”, “enguarde”, “eve”, “expresso”, “falco”, “gandof”, “glimmer”, “gnawty”, “heli”, “kevin”, “kip”, “leon”, “lulu”, “orco”, “pbody”, “peppy”, “pi”, “pit”, “puppy”, “quawks”, “rambi”, “samus”, “snappy”, “spring”, “squawks”, “swanky”, “winky”, “wolf”, “auron_paine”, “auron_yuna”, “daisy_skate”, “nyan_big”, “nyan_blaze”, “veyron_jaq”, “veyron_jerry”, “veyron_mighty”, “veyron_minnie”, “veyron_speedy”

Example:

```
"banjo"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/hardware/cmt.nix>

services.xserver.config
The contents of the configuration file of the X server (*xorg.conf*).

This option is set by multiple modules, and the configs are concatenated together.

In Xorg configs the last config entries take precedence, so you may want to use ‘lib.mkAfter’ on this option to override NixOS’s defaults.

Type: strings concatenated with “\n”

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.defaultDepth
Default colour depth.

Type: signed integer

Default:

Example:

```
8
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.desktopManager.cde.enable
Whether to enable Common Desktop Environment.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/cde.nix>

services.xserver.desktopManager.cde.extraPackages
Extra packages to be installed system wide.

Type: list of package

Default:

```
with pkgs; [
  xclock bitmap xlsfonts xfd xrefresh xload xwininfo xdpyinfo xwd x \
wud
]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/cde.nix>

services.xserver.desktopManager.cinnamon.enable
Whether to enable the cinnamon desktop manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/cinnamon.nix>

services.xserver.desktopManager.cinnamon.extraGSettingsOverridePackages
List of packages for which gsettings are overridden.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/cinnamon.nix>

services.xserver.desktopManager.cinnamon.extraGSettingsOverrides
Additional gsettings overrides.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/cinnamon.nix>

services.xserver.desktopManager.cinnamon.sessionPath
Additional list of packages to be added to the session search path. Useful for GSettings−conditional autostart.

Note that this should be a last resort; patching the package is preferred (see GPaste).

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.gpaste ]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/cinnamon.nix>

services.xserver.desktopManager.enlightenment.enable
Enable the Enlightenment desktop environment.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/enlightenment.nix>

services.xserver.desktopManager.kodi.enable
Enable the kodi multimedia center.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/kodi.nix>

services.xserver.desktopManager.kodi.package
The kodi package to use.

Type: package

Default:

```
pkgs.kodi
```

Example:

```
kodi.withPackages (p: with p; [ jellyfin pvr−iptvsimple vfs−sftp  \
])
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/kodi.nix>

services.xserver.desktopManager.lumina.enable
Enable the Lumina desktop manager

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/lumina.nix>

services.xserver.desktopManager.lxqt.enable
Whether to enable the LXQt desktop manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/lxqt.nix>

services.xserver.desktopManager.lxqt.extraPackages
Extra packages to be installed system wide.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [ xscreensaver ]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/lxqt.nix>

services.xserver.desktopManager.lxqt.iconThemePackage
The package that provides a default icon theme.

Type: package

Default:

```
pkgs.kdePackages.breeze−icons
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/lxqt.nix>

services.xserver.desktopManager.mate.enable
Enable the MATE desktop environment

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/mate.nix>

services.xserver.desktopManager.mate.enableWaylandSession
Whether to enable MATE Wayland session.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/mate.nix>

services.xserver.desktopManager.mate.debug
Whether to enable mate−session debug messages.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/mate.nix>

services.xserver.desktopManager.mate.extraCajaExtensions
Extra extensions to add to caja.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [ caja-extensions ]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop-managers/mate.nix>

services.xserver.desktopManager.mate.extraPanelApplets
Extra applets to add to mate-panel.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [ mate-applets ]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop-managers/mate.nix>

services.xserver.desktopManager.phosh.enable
Enable the Phone Shell.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop-managers/phosh.nix>

services.xserver.desktopManager.phosh.package
The phosh package to use.

Type: package

Default:

```
pkgs.phosh
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop-managers/phosh.nix>

services.xserver.desktopManager.phosh.group
The group to run the Phosh service.

Type: string

Example:

```
"users"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop-managers/phosh.nix>

services.xserver.desktopManager.phosh.phocConfig
Configurations for the Phoc compositor.

Type: strings concatenated with “\n” or absolute path or (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop-managers/phosh.nix>

services.xserver.desktopManager.phosh.user
The user to run the Phosh service.

Type: string

Example:

```
"alice"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop-managers/phosh.nix>

services.xserver.desktopManager.retroarch.enable
Whether to enable RetroArch.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop-managers/retroarch.nix>

services.xserver.desktopManager.retroarch.package
The retroarch package to use.

Type: package

Default:

```
pkgs.retroarch
```

Example:

```
retroarch-full
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop-managers/retroarch.nix>

services.xserver.desktopManager.retroarch.extraArgs
Extra arguments to pass to RetroArch.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--verbose"
  "--host"
]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop-managers/retroarch.nix>

services.xserver.desktopManager.runXdgAutostartIfNone
Whether to run XDG autostart files for sessions without a desktop manager (with only a window manager), these sessions usually don't handle XDG autostart files by default.

Some services like **i18n.inputMethod** and **service.earlyoom** use XDG autostart files to start. If this option is not set to 'true' and you are using a window manager without a desktop manager, you need to

manually start them or running ‘dex’ somewhere.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/none.nix>

services.xserver.desktopManager.surf−display.enable
Whether to enable surf−display as a kiosk browser session.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/surf−display.nix>

services.xserver.desktopManager.surf−display.defaultWwwUri
Default URI to display.

Type: string

Default:

```
"${pkgs.surf−display}/share/surf−display/empty−page.html"
```

Example:

```
"https://www.example.com/"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/surf−display.nix>

services.xserver.desktopManager.surf−display.extraConfig
Extra configuration options to append to ‘/etc/default/surf−display’.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  # Enforce fixed resolution for all displays (default: not set):
  DEFAULT_RESOLUTION="1920x1080"

  # HTTP proxy URL, if needed (default: not set).
  HTTP_PROXY_URL="http://webcache:3128"

  # Configure individual display screens with host specific paramet \
ers:
  DISPLAYS['display−host−0']="www_uri=https://www.displayserver.c \
omany.net/display−1/index.html"
  DISPLAYS['display−host−1']="www_uri=https://www.displayserver.c \
omany.net/display−2/index.html"
  DISPLAYS['display−host−2']="www_uri=https://www.displayserver.c \
```

```
omany.net/display-3/index.html|res=1920x1280"
  DISPLAYS['display-host-3']="www_uri=https://www.displayserver.c \
omany.net/display-4/index.html"|res=1280x1024"
  DISPLAYS['display-host-local-file']="www_uri=file:///usr/share \
/doc/surf-display/empty-page.html"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop-managers/surf-display.nix>

services.xserver.desktopManager.surf-display.hideIdlePointer
Hide idle mouse pointer.

Type: string

Default:

```
"yes"
```

Example:

```
"no"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop-managers/surf-display.nix>

services.xserver.desktopManager.surf-display.inactivityInterval
Setting for internal inactivity timer to restart surf-display if the user goes inactive/idle to get a fresh session for the next user of the kiosk.

If this value is set to zero, the whole feature of restarting due to inactivity is disabled.

Type: signed integer

Default:

```
300
```

Example:

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop-managers/surf-display.nix>

services.xserver.desktopManager.surf-display.pointerButtonMap
Disable right and middle pointer device click in browser sessions while keeping scrolling wheels' functionality intact. See pointer subcommand on 'man xmodmap' for details.

Type: string

Default:

```
"1 0 0 4 5 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop-managers/surf-display.nix>

services.xserver.desktopManager.surf-display.screensaverSettings
Screensaver settings, see 'man 1 xset' for possible options.

Type: strings concatenated with " "

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop-managers/surf-display.nix>

services.xserver.desktopManager.wallpaper.combineScreens
When set to ‘true’ the wallpaper will stretch across all screens. When set to ‘false’ the wallpaper is duplicated to all screens.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/default.nix>

services.xserver.desktopManager.wallpaper.mode
The file *~/.background−image* is used as a background image. This option specifies the placement of this image onto your desktop.

Possible values: ‘center’: Center the image on the background. If it is too small, it will be surrounded by a black border. ‘fill’: Like ‘scale’, but preserves aspect ratio by zooming the image until it fits. Either a horizontal or a vertical part of the image will be cut off. ‘max’: Like ‘fill’, but scale the image to the maximum size that fits the screen with black borders on one side. ‘scale’: Fit the file into the background without repeating it, cutting off stuff or using borders. But the aspect ratio is not preserved either. ‘tile’: Tile (repeat) the image in case it is too small for the screen.

Type: one of “center”, “fill”, “max”, “scale”, “tile”

Default:

```
"scale"
```

Example:

```
"fill"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/default.nix>

services.xserver.desktopManager.xfce.enable
Enable the Xfce desktop environment.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/xfce.nix>

services.xserver.desktopManager.xfce.enableScreensaver
Enable the XFCE screensaver.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/xfce.nix>

services.xserver.desktopManager.xfce.enableWaylandSession
Whether to enable the experimental Xfce Wayland session.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/xfce.nix>

services.xserver.desktopManager.xfce.enableXfwm
Enable the XFWM (default) window manager.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/xfce.nix>

services.xserver.desktopManager.xfce.noDesktop
Don’t install XFCE desktop components (xfdesktop and panel).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/xfce.nix>

services.xserver.desktopManager.xfce.waylandSessionCompositor
Command line to run a Wayland compositor, defaults to ‘labwc −−startup’ if not specified. Note that ‘xfce4−session’ will be passed to it as an argument, see ‘startxfce4 −−help’ for details.

Some compositors do not have an option equivalent to labwc’s ‘−−startup’ and you might have to add xfce4−session somewhere in their configurations.

Type: string

Default:

```
""
```

Example:

```
"wayfire"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/xfce.nix>

services.xserver.desktopManager.xterm.enable
Enable a xterm terminal as a desktop manager.

Type: boolean

Default:

```
versionOlder config.system.stateVersion "19.09" && config.services. \
xserver.enable;
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/xterm.nix>

services.xserver.deviceSection

Contents of the first Device section of the X server configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"VideoRAM 131072"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.digimend.enable

Whether to enable the digimend drivers for Huion/XP−Pen/etc. tablets.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/x11/hardware/digimend.nix>

services.xserver.display

Display number for the X server.

Type: null or signed integer

Default:

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.displayManager.lightdm.enable

Whether to enable lightdm as the display manager.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/x11/display−managers/lightdm.nix>

services.xserver.displayManager.lightdm.autoLogin.timeout

Show the greeter for this many seconds before automatic login occurs.

Type: signed integer

Default:

Declared by:

<nixpkgs/nixos/modules/services/x11/display−managers/lightdm.nix>

services.xserver.displayManager.lightdm.background
The background image or color to use.

Type: absolute path or string matching the pattern ^#[0−9A−Fa−f]{6}$

Default:

```
pkgs.nixos−artwork.wallpapers.simple−dark−gray−bottom.gnomeFile \
Path
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm.nix>

services.xserver.displayManager.lightdm.extraConfig
Extra lines to append to LightDM section.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
user−authority−in−system−dir = true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm.nix>

services.xserver.displayManager.lightdm.extraSeatDefaults
Extra lines to append to SeatDefaults section.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
greeter−show−manual−login=true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm.nix>

services.xserver.displayManager.lightdm.greeter.enable
If set to false, run lightdm in greeterless mode. This only works if autologin is enabled and autoLogin.timeout is zero.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm.nix>

services.xserver.displayManager.lightdm.greeter.package
The LightDM greeter to login via. The package should be a directory containing a .desktop file matching the name in the ‘name’ option.

Type: package

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm.nix>

services.xserver.displayManager.lightdm.greeter.name
The name of a .desktop file in the directory specified in the ‘package’ option.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm.nix>

services.xserver.displayManager.lightdm.greeters.enso.enable
Whether to enable enso−os−greeter as the lightdm greeter

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/enso−os.nix>

services.xserver.displayManager.lightdm.greeters.enso.blur
Whether or not to enable blur

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/enso−os.nix>

services.xserver.displayManager.lightdm.greeters.enso.brightness
Brightness

Type: signed integer

Default:

```
7
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/enso−os.nix>

services.xserver.displayManager.lightdm.greeters.enso.cursorTheme.package
The capitaine−cursors package to use.

Type: package

Default:

```
pkgs.capitaine−cursors
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/enso−os.nix>

services.xserver.displayManager.lightdm.greeters.enso.cursorTheme.name
Name of the cursor theme to use for the lightdm−enso−os−greeter

Type: string

Default:

```
"capitane−cursors"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/enso−os.nix>

services.xserver.displayManager.lightdm.greeters.enso.extraConfig
Extra configuration that should be put in the greeter.conf configuration file

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/enso−os.nix>

services.xserver.displayManager.lightdm.greeters.enso.iconTheme.package
The papirus−icon−theme package to use.

Type: package

Default:

```
pkgs.papirus-icon-theme
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/enso−os.nix>

services.xserver.displayManager.lightdm.greeters.enso.iconTheme.name
Name of the icon theme to use for the lightdm−enso−os−greeter

Type: string

Default:

```
"ePapirus"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/enso−os.nix>

services.xserver.displayManager.lightdm.greeters.enso.theme.package
The gnome−themes−extra package to use.

Type: package

Default:

```
pkgs.gnome-themes-extra
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/enso−os.nix>

services.xserver.displayManager.lightdm.greeters.enso.theme.name
Name of the theme to use for the lightdm−enso−os−greeter

Type: string

Default:

```
"Adwaita"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/enso−os.nix>

services.xserver.displayManager.lightdm.greeters.gtk.enable
Whether to enable lightdm−gtk−greeter as the lightdm greeter.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/gtk.nix>

services.xserver.displayManager.lightdm.greeters.gtk.clock−format
Clock format string (as expected by strftime, e.g. “%H:%M”) to use with the lightdm gtk greeter panel.

If set to null the default clock format is used.

Type: null or string

Default:

```
null
```

Example:

```
"%F"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/gtk.nix>

services.xserver.displayManager.lightdm.greeters.gtk.cursorTheme.package
The adwaita−icon−theme package to use.

Type: package

Default:

```
pkgs.adwaita-icon-theme
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/gtk.nix>

services.xserver.displayManager.lightdm.greeters.gtk.cursorTheme.name
Name of the cursor theme to use for the lightdm−gtk−greeter.

Type: string

Default:

```
"Adwaita"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/gtk.nix>

services.xserver.displayManager.lightdm.greeters.gtk.cursorTheme.size
Size of the cursor theme to use for the lightdm−gtk−greeter.

Type: signed integer

Default:

```
16
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/gtk.nix>

services.xserver.displayManager.lightdm.greeters.gtk.extraConfig
Extra configuration that should be put in the lightdm−gtk−greeter.conf configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/gtk.nix>

services.xserver.displayManager.lightdm.greeters.gtk.iconTheme.package
The adwaita−icon−theme package to use.

Type: package

Default:

```
pkgs.adwaita-icon-theme
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/gtk.nix>

services.xserver.displayManager.lightdm.greeters.gtk.iconTheme.name
Name of the icon theme to use for the lightdm−gtk−greeter.

Type: string

Default:

```
"Adwaita"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/gtk.nix>

services.xserver.displayManager.lightdm.greeters.gtk.indicators
List of allowed indicator modules to use for the lightdm gtk greeter panel.

Built−in indicators include “~a11y”, “~language”, “~session”, “~power”, “~clock”, “~host”, “~spacer”. Unity indicators can be represented by short name (e.g. “sound”, “power”), service file name, or absolute path.

If set to null the default indicators are used.

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "~host"
  "~spacer"
  "~clock"
  "~spacer"
  "~session"
  "~language"
  "~a11y"
  "~power"
]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/gtk.nix>

services.xserver.displayManager.lightdm.greeters.gtk.theme.package
The gnome−themes−extra package to use.

Type: package

Default:

```
pkgs.gnome-themes-extra
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/gtk.nix>

services.xserver.displayManager.lightdm.greeters.gtk.theme.name
Name of the theme to use for the lightdm−gtk−greeter.

Type: string

Default:

```
"Adwaita"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/gtk.nix>

services.xserver.displayManager.lightdm.greeters.lomiri.enable
Whether to enable lomiri's greeter as the lightdm greeter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/lomiri.nix>

services.xserver.displayManager.lightdm.greeters.mini.enable
Whether to enable lightdm−mini−greeter as the lightdm greeter.

Note that this greeter starts only the default X session. You can configure the default X session using **services.displayManager.defaultSession**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/mini.nix>

services.xserver.displayManager.lightdm.greeters.mini.extraConfig
Extra configuration that should be put in the lightdm−mini−greeter.conf configuration file.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/mini.nix>

services.xserver.displayManager.lightdm.greeters.mini.user
The user to login as.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/mini.nix>

services.xserver.displayManager.lightdm.greeters.mobile.enable
Whether to enable lightdm−mobile−greeter as the lightdm greeter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/mobile.nix>

services.xserver.displayManager.lightdm.greeters.pantheon.enable
Whether to enable elementary−greeter as the lightdm greeter.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/pantheon.nix>

services.xserver.displayManager.lightdm.greeters.slick.enable
Whether to enable lightdm−slick−greeter as the lightdm greeter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/slick.nix>

services.xserver.displayManager.lightdm.greeters.slick.cursorTheme.package
The adwaita−icon−theme package to use.

Type: package

Default:

```
pkgs.adwaita-icon-theme
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/slick.nix>

services.xserver.displayManager.lightdm.greeters.slick.cursorTheme.name
Name of the cursor theme to use for the lightdm−slick−greeter.

Type: string

Default:

```
"Adwaita"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/slick.nix>

services.xserver.displayManager.lightdm.greeters.slick.cursorTheme.size
Size of the cursor theme to use for the lightdm−slick−greeter.

Type: signed integer

Default:

```
24
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/slick.nix>

services.xserver.displayManager.lightdm.greeters.slick.draw−user−backgrounds
Whether to enable draw user backgrounds.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/slick.nix>

services.xserver.displayManager.lightdm.greeters.slick.extraConfig
Extra configuration that should be put in the lightdm−slick−greeter.conf configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/slick.nix>

services.xserver.displayManager.lightdm.greeters.slick.font.package
The ubuntu−classic package to use.

Type: package

Default:

```
pkgs.ubuntu-classic
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/slick.nix>

services.xserver.displayManager.lightdm.greeters.slick.font.name
Name of the font to use.

Type: string

Default:

```
"Ubuntu 11"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/slick.nix>

services.xserver.displayManager.lightdm.greeters.slick.iconTheme.package
The adwaita−icon−theme package to use.

Type: package

Default:

```
pkgs.adwaita-icon-theme
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/slick.nix>

services.xserver.displayManager.lightdm.greeters.slick.iconTheme.name
Name of the icon theme to use for the lightdm−slick−greeter.

Type: string

Default:

```
"Adwaita"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/slick.nix>

services.xserver.displayManager.lightdm.greeters.slick.theme.package
The gnome−themes−extra package to use.

Type: package

Default:

```
pkgs.gnome-themes-extra
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/slick.nix>

services.xserver.displayManager.lightdm.greeters.slick.theme.name
Name of the theme to use for the lightdm−slick−greeter.

Type: string

Default:

```
"Adwaita"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/slick.nix>

services.xserver.displayManager.lightdm.greeters.tiny.enable
Whether to enable lightdm−tiny−greeter as the lightdm greeter.

Note that this greeter starts only the default X session. You can configure the default X session using **services.displayManager.defaultSession**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/tiny.nix>

services.xserver.displayManager.lightdm.greeters.tiny.extraConfig
Section to describe style and ui.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/tiny.nix>

services.xserver.displayManager.lightdm.greeters.tiny.label.pass

The string to represent the pass_text label.

Type: string

Default:

```
"Password"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/tiny.nix>

services.xserver.displayManager.lightdm.greeters.tiny.label.user

The string to represent the user_text label.

Type: string

Default:

```
"Username"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/display−managers/lightdm−greeters/tiny.nix>

services.xserver.displayManager.session

List of sessions supported with the command used to start each session. Each session script can set the *waitPID* shell variable to make this script wait until the end of the user session. Each script is used to define either a window manager or a desktop manager. These can be differentiated by setting the attribute *manage* either to ‘"window"’ or ‘"desktop"’.

The list of desktop manager and window manager should appear inside the display manager with the desktop manager name followed by the window manager name.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[ { manage = "desktop";
    name = "xterm";
    start = ''
      ${pkgs.xterm}/bin/xterm −ls &
      waitPID=$!
    '';
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/display−managers/default.nix>

services.xserver.displayManager.sessionCommands

Shell commands executed just before the window or desktop manager is started. These commands are not currently sourced for Wayland sessions.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
xmessage "Hello World!" &
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/default.nix>

services.xserver.displayManager.setupCommands
Shell commands executed just after the X server has started.

This option is only effective for display managers for which this feature is supported; currently these are LightDM, GDM and SDDM.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/default.nix>

services.xserver.displayManager.startx.enable
Whether to enable the dummy “startx” pseudo−display manager, which allows users to start X manually via the ‘startx’ command from a virtual terminal.

Note
The X server will run under the current user, not as root.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/startx.nix>

services.xserver.displayManager.startx.extraCommands
Shell commands to be added to the system−wide xinitrc script.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/startx.nix>

services.xserver.displayManager.startx.generateScript
Whether to generate the system−wide xinitrc script (/etc/X11/xinit/xinitrc). This script will take care of setting up the session for systemd user services, running the window manager and cleaning up on exit.

Note
This script will only be used by ‘startx’ when both ‘.xinitrc’ does not exists and the ‘XINITRC’ environment variable is unset.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/startx.nix>

services.xserver.displayManager.sx.enable

Whether to enable the “sx” pseudo−display manager, which allows users to start manually via the “sx” command from a vt shell. The X server runs under the user’s id, not as root. The user must provide a ~/.config/sx/sxrc file containing session startup commands, see **sx**(1). This is not automatically generated from the desktopManager and windowManager settings. sx doesn’t have a way to directly set X server flags, but it can be done by overriding its xorg−server dependency.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/x11/display−managers/sx.nix>

services.xserver.displayManager.sx.package

The sx package to use.

Type: package

Default:

```
pkgs.sx
```

Declared by:

<nixpkgs/nixos/modules/services/x11/display−managers/sx.nix>

services.xserver.displayManager.sx.addAsSession

Whether to add sx as a display manager session. Keep in mind that sx expects to be run from a TTY, so it may not work in your display manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/x11/display−managers/sx.nix>

services.xserver.displayManager.xpra.enable

Whether to enable xpra as display manager.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/x11/display−managers/xpra.nix>

services.xserver.displayManager.xpra.auth

Authentication to use when connecting to xpra

Type: string

Default:

```
"pam"
```

Example:

```
"password:value=mysecret"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/xpra.nix>

services.xserver.displayManager.xpra.bindTcp
Bind xpra to TCP

Type: null or string

Default:

```
"127.0.0.1:10000"
```

Example:

```
"0.0.0.0:10000"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/xpra.nix>

services.xserver.displayManager.xpra.desktop
Start a desktop environment instead of seamless mode

Type: null or string

Default:

```
null
```

Example:

```
"gnome−shell"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/xpra.nix>

services.xserver.displayManager.xpra.extraOptions
Extra xpra options

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/xpra.nix>

services.xserver.displayManager.xpra.pulseaudio
Whether to enable pulseaudio audio streaming.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/display−managers/xpra.nix>

services.xserver.displayManager.xserverArgs

List of arguments for the X server.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-ac"
  "-logverbose"
  "-verbose"
  "-nolisten tcp"
]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/display-managers/default.nix>

services.xserver.displayManager.xserverBin

Path to the X server used by display managers.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/x11/display-managers/default.nix>

services.xserver.dpi

Force global DPI resolution to use for X server. It's recommended to use this only when DPI is detected incorrectly; also consider using 'Monitor' section in configuration file instead.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.excludePackages

Which X11 packages to exclude from the default environment

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.xterm ]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.exportConfiguration

Whether to symlink the X server configuration under */etc/X11/xorg.conf*.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.extraConfig
Additional contents (sections) included in the X server configuration file

Type: strings concatenated with “\n”

Default:
```
""
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.extraDisplaySettings
Lines to be added to every Display subsection of the Screen section.

Type: strings concatenated with “\n”

Default:
```
""
```

Example:
```
"Virtual 2048 2048"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.filesSection
Contents of the first ‘Files’ section of the X server configuration file.

Type: strings concatenated with “\n”

Default:
```
""
```

Example:
```
"FontPath \"/path/to/my/fonts\""
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.fontPath
Set the X server FontPath. Defaults to null, which means the compiled in defaults will be used. See man xorg.conf for details.

Type: null or string

Default:
```
null
```

Example:
```
"unix/:7100"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.imwheel.enable

Whether to enable IMWheel service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/x11/imwheel.nix>

services.xserver.imwheel.extraOptions

Additional command−line arguments to pass to **imwheel**.

Type: list of string

Default:

```
[
  "--buttons=45"
]
```

Example:

```
[
  "--debug"
]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/imwheel.nix>

services.xserver.imwheel.rules

Window class translation rules. /etc/X11/imwheelrc is generated based on this config which means this config is global for all users. See **official man pages** for more information.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  ".*" = ''
    None,      Up,   Button4, 8
    None,      Down, Button5, 8
    Shift_L,   Up,   Shift_L|Button4, 4
    Shift_L,   Down, Shift_L|Button5, 4
    Control_L, Up,   Control_L|Button4
    Control_L, Down, Control_L|Button5
  '';
}
```

Declared by:

<nixpkgs/nixos/modules/services/x11/imwheel.nix>

services.xserver.inputClassSections

Content of additional InputClass sections of the X server configuration file.

Type: list of strings concatenated with “\n”

Default:

```
[ ]
```

Example:

```
[ ''
    Identifier      "Trackpoint Wheel Emulation"
    MatchProduct    "ThinkPad USB Keyboard with TrackPoint"
    Option          "EmulateWheel"          "true"
    Option          "EmulateWheelButton"    "2"
    Option          "Emulate3Buttons"       "false"
  ''
]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.logFile

Controls the file Xorg logs to.

The default of ‘/dev/null’ is set so that systemd services (like ‘displayManagers’) only log to the journal and don’t create their own log files.

Setting this to ‘null’ will not pass the ‘−logfile’ argument to Xorg which allows it to log to its default log-file locations instead (see ‘man Xorg’). You probably only want this behaviour when running Xorg manually (e.g. via ‘startx’).

Type: null or string

Default:

```
"/dev/null"
```

Example:

```
"/var/log/Xorg.0.log"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.moduleSection

Contents of the Module section of the X server configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  SubSection "extmod"
  EndSubsection
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.modules

Packages to be added to the module search path of the X server.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[ pkgs.xf86-input-wacom ]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.monitorSection

Contents of the first Monitor section of the X server configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"HorizSync 28-49"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.resolutions

The screen resolutions for the X server. The first element is the default resolution. If this list is empty, the X server will automatically configure the resolution.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    x = 1600;
    y = 1200;
  }
  {
    x = 1024;
    y = 786;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.screenSection

Contents of the first Screen section of the X server configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
Option "RandRRotation" "on"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.serverFlagsSection
Contents of the ServerFlags section of the X server configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
Option "BlankTime" "0"
Option "StandbyTime" "0"
Option "SuspendTime" "0"
Option "OffTime" "0"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.serverLayoutSection
Contents of the ServerLayout section of the X server configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
Option "AIGLX" "true"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.synaptics.enable
Whether to enable touchpad support. Deprecated: Consider services.libinput.enable.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.accelFactor
Cursor acceleration (how fast speed increases from minSpeed to maxSpeed).

Type: null or string

Default:

```
"0.001"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.additionalOptions

Additional options for synaptics touchpad driver.

Type: string

Default:

```
""
```

Example:

```
Option "RTCornerButton" "2"
Option "RBCornerButton" "3"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.buttonsMap

Remap touchpad buttons.

Type: list of signed integer

Default:

```
[
  1
  2
  3
]
```

Example:

```
[
  1
  3
  2
]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.dev

Path for touchpad device. Set to null to apply to any auto−detected touchpad.

Type: null or string

Default:

```
null
```

Example:

```
"/dev/input/event0"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.fingersMap

Remap several−fingers taps.

Type: list of signed integer

Default:

```
[
  1
  2
```

```
  3
]
```

Example:

```
[
  1
  3
  2
]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.horizEdgeScroll
Whether to enable horizontal edge drag−scrolling.

Type: boolean

Default:

```
! config.services.xserver.synaptics.horizTwoFingerScroll
```

Declared by:
<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.horizTwoFingerScroll
Whether to enable horizontal two−finger drag−scrolling.

Type: boolean

Default:

```
config.services.xserver.synaptics.twoFingerScroll
```

Declared by:
<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.horizontalScroll
Whether to enable horizontal scrolling (on touchpad)

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.maxSpeed
Cursor speed factor for highest−speed finger motion.

Type: null or string

Default:

```
"1.0"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.minSpeed

Cursor speed factor for precision finger motion.

Type: null or string

Default:

```
"0.6"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.palmDetect

Whether to enable palm detection (hardware support required)

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.palmMinWidth

Minimum finger width at which touch is considered a palm

Type: null or signed integer

Default:

```
null
```

Example:

```
5
```

Declared by:

<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.palmMinZ

Minimum finger pressure at which touch is considered a palm

Type: null or signed integer

Default:

```
null
```

Example:

```
20
```

Declared by:

<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.scrollDelta

Move distance of the finger for a scroll event.

Type: null or signed integer

Default:

```
null
```

Example:

```
75
```

Declared by:
<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.tapButtons
Whether to enable tap buttons.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.twoFingerScroll
Whether to enable two−finger drag−scrolling. Overridden by horizTwoFingerScroll and vertTwoFinger-Scroll.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.vertEdgeScroll
Whether to enable vertical edge drag−scrolling.

Type: boolean

Default:

```
! config.services.xserver.synaptics.vertTwoFingerScroll
```

Declared by:
<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.synaptics.vertTwoFingerScroll
Whether to enable vertical two−finger drag−scrolling.

Type: boolean

Default:

```
config.services.xserver.synaptics.twoFingerScroll
```

Declared by:
<nixpkgs/nixos/modules/services/x11/hardware/synaptics.nix>

services.xserver.terminateOnReset
Whether to terminate X upon server reset.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.updateDbusEnvironment

Whether to update the DBus activation environment after launching the desktop manager.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.upscaleDefaultCursor

Upscale the default X cursor to be more visible on high−density displays. Requires ‘config.services.xserver.dpi’ to be set.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.verbose

Controls verbosity of X logging.

Type: null or signed integer

Default:

```
3
```

Example:

```
7
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.videoDriver

The name of the video driver for your graphics card. This option is obsolete; please set the **services.xserver.videoDrivers** instead.

Type: null or string

Default:

```
null
```

Example:

```
"i810"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.videoDrivers

The names of the video drivers the configuration supports. They will be tried in order until one that supports your card is found. Don’t combine those with “incompatible” OpenGL implementations, e.g. free ones (mesa−based) with proprietary ones.

For unfree “nvidia*”, the supported GPU lists are on https://www.nvidia.com/object/unix.html

Type: list of string

Default:

```
[
```

```
    "modesetting"
    "fbdev"
  ]
```

Example:

```
  [
    "nvidia"
    "amdgpu"
  ]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.virtualScreen

Virtual screen size for Xrandr.

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  x = 2048;
  y = 2048;
}
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.wacom.enable

Whether to enable the Wacom touchscreen/digitizer/tablet. If you ever have any issues such as, try switching to terminal (ctrl−alt−F1) and back which will make Xorg reconfigure the device ?

If you're not satisfied by the default behaviour you can override **environment.etc."X11/xorg.conf.d/70−wacom.conf"** in configuration.nix easily.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/x11/hardware/wacom.nix>

services.xserver.windowManager."2bwm".enable

Whether to enable 2bwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/x11/window−managers/2bwm.nix>

services.xserver.windowManager.afterstep.enable

Whether to enable afterstep.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/x11/window−managers/afterstep.nix>

services.xserver.windowManager.awesome.enable
Whether to enable Awesome window manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/awesome.nix>

services.xserver.windowManager.awesome.package
The awesome package to use.

Type: package

Default:

```
pkgs.awesome
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/awesome.nix>

services.xserver.windowManager.awesome.luaModules
List of lua packages available for being used in the Awesome configuration.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.luaPackages.vicious ]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/awesome.nix>

services.xserver.windowManager.awesome.noArgb
Disable client transparency support, which can be greatly detrimental to performance in some setups

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/awesome.nix>

services.xserver.windowManager.berry.enable
Whether to enable berry.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/berry.nix>

services.xserver.windowManager.bspwm.enable
Whether to enable bspwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/bspwm.nix>

services.xserver.windowManager.bspwm.package
The bspwm package to use.

Type: package

Default:

```
pkgs.bspwm
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/bspwm.nix>

services.xserver.windowManager.bspwm.configFile
Path to the bspwm configuration file. If null, $HOME/.config/bspwm/bspwmrc will be used.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.bspwm}/share/doc/bspwm/examples/bspwmrc"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/bspwm.nix>

services.xserver.windowManager.bspwm.sxhkd.package
The sxhkd package to use.

Type: package

Default:

```
pkgs.sxhkd
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/bspwm.nix>

services.xserver.windowManager.bspwm.sxhkd.configFile
Path to the sxhkd configuration file. If null, $HOME/.config/sxhkd/sxhkdrc will be used.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.bspwm}/share/doc/bspwm/examples/sxhkdrc"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/bspwm.nix>

services.xserver.windowManager.clfswm.enable
Whether to enable clfswm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/clfswm.nix>

services.xserver.windowManager.clfswm.package
The clfswm package to use.

Type: package

Default:

```
pkgs.sbclPackages.clfswm
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/clfswm.nix>

services.xserver.windowManager.cwm.enable
Whether to enable cwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/cwm.nix>

services.xserver.windowManager.dk.enable
Whether to enable dk.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/dk.nix>

services.xserver.windowManager.dk.package
The dk package to use.

Type: package

Default:

```
pkgs.dk
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/dk.nix>

services.xserver.windowManager.dwm.enable
Whether to enable dwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/dwm.nix>

services.xserver.windowManager.dwm.package
The dwm package to use.

Type: package

Default:

```
pkgs.dwm
```

Example:

```
pkgs.dwm.overrideAttrs (oldAttrs: rec {
  patches = [
    (super.fetchpatch {
      url = "https://dwm.suckless.org/patches/steam/dwm−steam−6.2 \
.diff";
      sha256 = "sha256−f3lffBjz7+0Khyn9c9orzReoLTqBb/9gVGshYARGdVc \
=";
    })
  ];
})
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/dwm.nix>

services.xserver.windowManager.dwm.extraSessionCommands
Shell commands executed just before dwm is started.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/dwm.nix>

services.xserver.windowManager.e16.enable
Whether to enable e16.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/e16.nix>

services.xserver.windowManager.evilwm.enable
Whether to enable evilwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/evilwm.nix>

services.xserver.windowManager.exwm.enable
Whether to enable exwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/exwm.nix>

services.xserver.windowManager.exwm.package
The Emacs package to use.

Type: package

Default:

```
pkgs.emacs
```

Example:

```
pkgs.emacs−gtk
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/exwm.nix>

services.xserver.windowManager.exwm.extraPackages
Extra packages available to Emacs. The value must be a function which receives the attrset defined in *emacs.pkgs* as the sole argument.

Type: function that evaluates to a(n) list of package

Default:

```
epkgs: []
```

Example:

```
epkgs: [
  epkgs.emms
  epkgs.magit
  epkgs.proofgeneral
]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/exwm.nix>

services.xserver.windowManager.exwm.loadScript
Emacs lisp code to be run after loading the user’s init file.

Type: strings concatenated with “\n”

Default:

```
"(require 'exwm)"
```

Example:

```
(require 'exwm)
(exwm-enable)
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/exwm.nix>

services.xserver.windowManager.fluxbox.enable
Whether to enable fluxbox.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/fluxbox.nix>

services.xserver.windowManager.fvwm2.enable
Whether to enable Fvwm2 window manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/fvwm2.nix>

services.xserver.windowManager.fvwm2.gestures
Whether or not to enable libstroke for gesture support

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/fvwm2.nix>

services.xserver.windowManager.fvwm3.enable
Whether to enable Fvwm3 window manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/fvwm3.nix>

services.xserver.windowManager.hackedbox.enable
Whether to enable hackedbox.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/hackedbox.nix>

services.xserver.windowManager.herbstluftwm.enable
Whether to enable herbstluftwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/herbstluftwm.nix>

services.xserver.windowManager.herbstluftwm.package
The herbstluftwm package to use.

Type: package

Default:

```
pkgs.herbstluftwm
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/herbstluftwm.nix>

services.xserver.windowManager.herbstluftwm.configFile
Path to the herbstluftwm configuration file. If left at the default value, $XDG_CONFIG_HOME/herbstluftwm/autostart will be used.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/herbstluftwm.nix>

services.xserver.windowManager.hypr.enable
Whether to enable hypr.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/hypr.nix>

services.xserver.windowManager.i3.enable
Whether to enable i3 window manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/i3.nix>

services.xserver.windowManager.i3.package
The i3 package to use.

Type: package

Default:

```
pkgs.i3
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/i3.nix>

services.xserver.windowManager.i3.configFile
Path to the i3 configuration file. If left at the default value, $HOME/.i3/config will be used.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/i3.nix>

services.xserver.windowManager.i3.extraPackages
Extra packages to be installed system wide.

Type: list of package

Default:

```
with pkgs; [
  dmenu
  i3status
]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/i3.nix>

services.xserver.windowManager.i3.extraSessionCommands
Shell commands executed just before i3 is started.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/i3.nix>

services.xserver.windowManager.i3.updateSessionEnvironment
Whether to run dbus−update−activation−environment and systemctl import−environment before session start. Required for xdg portals to function properly.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/i3.nix>

services.xserver.windowManager.icewm.enable
Whether to enable icewm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/icewm.nix>

services.xserver.windowManager.jwm.enable
Whether to enable jwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/jwm.nix>

services.xserver.windowManager.katriawm.enable
Whether to enable katriawm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/katriawm.nix>

services.xserver.windowManager.katriawm.package
The katriawm package to use.

Type: package

Default:

```
pkgs.katriawm
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/katriawm.nix>

services.xserver.windowManager.leftwm.enable
Whether to enable leftwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/leftwm.nix>

services.xserver.windowManager.lwm.enable
Whether to enable lwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/lwm.nix>

services.xserver.windowManager.metacity.enable
Whether to enable metacity.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/metacity.nix>

services.xserver.windowManager.mlvwm.enable
Whether to enable Macintosh−like Virtual Window Manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/mlvwm.nix>

services.xserver.windowManager.mlvwm.configFile
Path to the mlvwm configuration file. If left at the default value, $HOME/.mlvwmrc will be used.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/mlvwm.nix>

services.xserver.windowManager.mwm.enable
Whether to enable mwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/mwm.nix>

services.xserver.windowManager.nimdow.enable
Whether to enable nimdow.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/nimdow.nix>

services.xserver.windowManager.nimdow.package
The nimdow package to use.

Type: package

Default:

```
pkgs.nimdow
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/nimdow.nix>

services.xserver.windowManager.notion.enable
Whether to enable notion.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/notion.nix>

services.xserver.windowManager.openbox.enable
Whether to enable openbox.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/openbox.nix>

services.xserver.windowManager.oxwm.enable
Whether to enable oxwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/oxwm.nix>

services.xserver.windowManager.oxwm.package
The oxwm package to use.

Type: package

Default:

```
pkgs.oxwm
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/oxwm.nix>

services.xserver.windowManager.pekwm.enable
Whether to enable pekwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/pekwm.nix>

services.xserver.windowManager.qtile.enable
Whether to enable qtile.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/qtile.nix>

services.xserver.windowManager.qtile.package
The qtile package to use.

Type: package

Default:

```
pkgs.python3.pkgs.qtile
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/qtile.nix>

services.xserver.windowManager.qtile.configFile
Path to the qtile configuration file. If null, $XDG_CONFIG_HOME/qtile/config.py will be used.

Type: null or absolute path

Default:

```
null
```

Example:

```
./your_config.py
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/qtile.nix>

services.xserver.windowManager.qtile.extraPackages
Extra Python packages available to Qtile. An example would be to include ‘python3Packages.qtile−extras’ for additional unofficial widgets.

Type: function that evaluates to a(n) list of package

Default:

```
python3Packages: with python3Packages; [];
```

Example:

```
python3Packages: with python3Packages; [
  qtile−extras
];
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/qtile.nix>

services.xserver.windowManager.ragnarwm.enable
Whether to enable ragnarwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/ragnarwm.nix>

services.xserver.windowManager.ragnarwm.package
The ragnarwm package to use.

Type: package

Default:

```
pkgs.ragnarwm
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/ragnarwm.nix>

services.xserver.windowManager.ratpoison.enable
Whether to enable ratpoison.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/ratpoison.nix>

services.xserver.windowManager.sawfish.enable
Whether to enable sawfish.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/sawfish.nix>

services.xserver.windowManager.smallwm.enable
Whether to enable smallwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/smallwm.nix>

services.xserver.windowManager.spectrwm.enable
Whether to enable spectrwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/spectrwm.nix>

services.xserver.windowManager.stumpwm.enable
Whether to enable stumpwm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/stumpwm.nix>

services.xserver.windowManager.stumpwm.package
The stumpwm package to use.

Type: package

Default:

```
pkgs.stumpwm
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/stumpwm.nix>

services.xserver.windowManager.tinywm.enable
Whether to enable tinywm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/tinywm.nix>

services.xserver.windowManager.twm.enable
Whether to enable twm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/twm.nix>

services.xserver.windowManager.windowlab.enable
Whether to enable windowlab.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/windowlab.nix>

services.xserver.windowManager.windowmaker.enable
Whether to enable windowmaker.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/windowmaker.nix>

services.xserver.windowManager.wmderland.enable
Whether to enable wmderland.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/wmderland.nix>

services.xserver.windowManager.wmderland.extraPackages
Extra packages to be installed system wide.

Type: list of package

Default:

```
with pkgs; [
```

```
    rofi
    dunst
    light
    hsetroot
    feh
    rxvt-unicode
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window-managers/wmderland.nix>

services.xserver.windowManager.wmderland.extraSessionCommands
Shell commands executed just before wmderland is started.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window-managers/wmderland.nix>

services.xserver.windowManager.wmii.enable
Whether to enable wmii.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window-managers/wmii.nix>

services.xserver.windowManager.xmonad.enable
Whether to enable xmonad.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window-managers/xmonad.nix>

services.xserver.windowManager.xmonad.enableConfiguredRecompile
Enable recompilation even if **config** is set to a non-null value. This adds the necessary Haskell dependencies (GHC with packages) to the xmonad binary's environment.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/xmonad.nix>

services.xserver.windowManager.xmonad.enableContribAndExtras
Enable xmonad−{contrib,extras} in Xmonad.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/window−managers/xmonad.nix>

services.xserver.windowManager.xmonad.config
Configuration from which XMonad gets compiled. If no value is specified, a vanilla xmonad binary is put in PATH, which will attempt to recompile and exec your xmonad config from $HOME/.xmonad. This setup is then analogous to other (non−NixOS) linux distributions.

If you do set this option, you likely want to use “launch” as your entry point for xmonad (as in the example), to avoid xmonad’s recompilation logic on startup. Doing so will render the default “mod+q” restart key binding dysfunctional though, because that attempts to call your binary with the “–restart” command line option, unless you implement that yourself. You way mant to bind “mod+q” to ‘(restart "xmonad" True)’ instead, which will just restart xmonad from PATH. This allows e.g. switching to the new xmonad binary after rebuilding your system with nixos−rebuild. For the same reason, ghc is not added to the environment when this option is set, unless **enableConfiguredRecompile** is set to ‘true’.

If you actually want to run xmonad with a config specified here, but also be able to recompile and restart it from a copy of that source in $HOME/.xmonad on the fly, set **enableConfiguredRecompile** to ‘true’ and implement something like “compileRestart” from the example. This should allow you to switch at will between the local xmonad and the one NixOS puts in your PATH.

Type: null or absolute path or string

Default:

```
null
```

Example:

```
import XMonad
import XMonad.Util.EZConfig (additionalKeys)
import Control.Monad (when)
import Text.Printf (printf)
import System.Posix.Process (executeFile)
import System.Info (arch,os)
import System.Environment (getArgs)
import System.FilePath ((</>))

compiledConfig = printf "xmonad−%s−%s" arch os

myConfig = defaultConfig
  { modMask = mod4Mask −− Use Super instead of Alt
  , terminal = "urxvt" }
  `additionalKeys`
  [ ( (mod4Mask,xK_r), compileRestart True)
  , ( (mod4Mask,xK_q), restart "xmonad" True ) ]

compileRestart resume = do
  dirs  <− asks directories
```

```
    whenX (recompile dirs True) $ do
      when resume writeStateToFile
      catchIO
          ( do
              args <- getArgs
              executeFile (cacheDir dirs </> compiledConfig) False  \
args Nothing
          )

  main = getDirectories >>= launch myConfig

  ------------------------------- \
-----------
  {- For versions before 0.17.0 use this instead -}
  ------------------------------- \
-----------
  -- compileRestart resume =
  --   whenX (recompile True) $
  --     when resume writeStateToFile
  --       *> catchIO
  --         ( do
  --             dir <- getXMonadDataDir
  --             args <- getArgs
  --             executeFile (dir </> compiledConfig) False args  \
Nothing
  --         )
  --
  -- main = launch myConfig
  ------------------------------- \
-----------
```

Declared by:

<nixpkgs/nixos/modules/services/x11/window-managers/xmonad.nix>

services.xserver.windowManager.xmonad.extraPackages

Extra packages available to ghc when rebuilding Xmonad. The value must be a function which receives the attrset defined in *haskellPackages* as the sole argument.

Type: function that evaluates to a(n) list of package

Default:

```
self: []
```

Example:

```
haskellPackages: [
  haskellPackages.xmonad-contrib
  haskellPackages.monad-logger
]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/window-managers/xmonad.nix>

services.xserver.windowManager.xmonad.ghcArgs

Command line arguments passed to the compiler (ghc) invocation when xmonad.config is set.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/window−managers/xmonad.nix>

services.xserver.windowManager.xmonad.haskellPackages

haskellPackages used to build Xmonad and other packages. This can be used to change the GHC version used to build Xmonad and the packages listed in *extraPackages*.

Type: attribute set

Default:

```
pkgs.haskellPackages
```

Example:

```
pkgs.haskell.packages.ghc910
```

Declared by:

<nixpkgs/nixos/modules/services/x11/window−managers/xmonad.nix>

services.xserver.windowManager.xmonad.xmonadCliArgs

Command line arguments passed to the xmonad binary.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/window−managers/xmonad.nix>

services.xserver.xautolock.enable

Whether to enable xautolock.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xautolock.nix>

services.xserver.xautolock.enableNotifier

Whether to enable the notifier feature of xautolock. This publishes a notification before the autolock.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xautolock.nix>

services.xserver.xautolock.extraOptions
Additional command−line arguments to pass to **xautolock**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−detectsleep"
]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xautolock.nix>

services.xserver.xautolock.killer
The script to use when nothing has happened for as long as **killtime**

Type: null or string

Default:

```
null
```

Example:

```
"/run/current−system/systemd/bin/systemctl suspend"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xautolock.nix>

services.xserver.xautolock.killtime
Minutes xautolock waits until it executes the script specified in **killer** (Has to be at least 10 minutes)

Type: signed integer

Default:

```
20
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xautolock.nix>

services.xserver.xautolock.locker
The script to use when automatically locking the computer.

Type: string

Default:

```
"${pkgs.xlockmore}/bin/xlock"
```

Example:

```
"${pkgs.i3lock}/bin/i3lock −i /path/to/img"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xautolock.nix>

services.xserver.xautolock.notifier

Notification script to be used to warn about the pending autolock.

Type: null or string

Default:

```
null
```

Example:

```
"${pkgs.libnotify}/bin/notify-send 'Locking in 10 seconds'"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xautolock.nix>

services.xserver.xautolock.notify

Time (in seconds) before the actual lock when the notification about the pending lock should be published.

Type: signed integer

Default:

```
10
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xautolock.nix>

services.xserver.xautolock.nowlocker

The script to use when manually locking the computer with **xautolock -locknow**.

Type: null or string

Default:

```
null
```

Example:

```
"${pkgs.i3lock}/bin/i3lock -i /path/to/img"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xautolock.nix>

services.xserver.xautolock.time

Idle time (in minutes) to wait until xautolock locks the computer.

Type: signed integer

Default:

```
15
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xautolock.nix>

services.xserver.xkb.dir

Path used for -xkbdir xserver parameter.

Type: absolute path

Default:

```
"${pkgs.xkeyboard_config}/etc/X11/xkb"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.xkb.extraLayouts

Extra custom layouts that will be included in the xkb configuration. Information on how to create a new layout can be found here: **https://www.x.org/releases/current/doc/xorg−docs/input/XKB−Enhancing.html#Defining_New_Layouts**. For more examples see **https://wiki.archlinux.org/index.php/X_KeyBoard_extension#Basic_examples**

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  mine = {
    description = "My custom xkb layout.";
    languages = [ "eng" ];
    symbolsFile = /path/to/my/layout;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/x11/extra−layouts.nix>

services.xserver.xkb.extraLayouts.<name>.compatFile

The path to the xkb compat file. This file sets the compatibility state, used to preserve compatibility with xkb−unaware programs. It must contain a ‘xkb_compat "name" { ... }’ block.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/x11/extra−layouts.nix>

services.xserver.xkb.extraLayouts.<name>.description

A short description of the layout.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/x11/extra−layouts.nix>

services.xserver.xkb.extraLayouts.<name>.geometryFile

The path to the xkb geometry file. This (completely optional) file describes the physical layout of keyboard, which maybe be used by programs to depict it. It must contain a ‘xkb_geometry "name" { ... }’ block.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/x11/extra−layouts.nix>

services.xserver.xkb.extraLayouts.<name>.keycodesFile

The path to the xkb keycodes file. This file specifies the range and the interpretation of the raw keycodes sent by the keyboard. It must contain a ‘xkb_keycodes "name" { ... }’ block.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/x11/extra−layouts.nix>

services.xserver.xkb.extraLayouts.<name>.languages

A list of languages provided by the layout. (Use ISO 639−2 codes, for example: “eng” for english)

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/extra−layouts.nix>

services.xserver.xkb.extraLayouts.<name>.symbolsFile

The path to the xkb symbols file. This is the most important file: it defines which symbol or action maps to each key and must contain a ‘xkb_symbols "name" { ... }’ block.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/x11/extra−layouts.nix>

services.xserver.xkb.extraLayouts.<name>.typesFile

The path to the xkb types file. This file specifies the key types that can be associated with the various keyboard keys. It must contain a ‘xkb_types "name" { ... }’ block.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/x11/extra−layouts.nix>

services.xserver.xkb.layout

X keyboard layout, or multiple keyboard layouts separated by commas.

Type: string

Default:

```
"us"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.xkb.model

X keyboard model.

Type: string

Default:

```
"pc104"
```

Example:

```
"presario"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.xkb.options

X keyboard options; layout switching goes here.

Type: strings concatenated with ","

Default:

```
"terminate:ctrl_alt_bksp"
```

Example:

```
"grp:caps_toggle,grp_led:scroll"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.xkb.variant

X keyboard variant.

Type: string

Default:

```
""
```

Example:

```
"colemak"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.xrandrHeads

Multiple monitor configuration, just specify a list of XRandR outputs. The individual elements should be either simple strings or an attribute set of output options.

If the element is a string, it is denoting the physical output for a monitor, if it's an attribute set, you must at least provide the **output** option.

The monitors will be mapped from left to right in the order of the list.

By default, the first monitor will be set as the primary monitor if none of the elements contain an option that has set **primary** to 'true'.

Note
Only one monitor is allowed to be primary.

Be careful using this option with multiple graphic adapters or with drivers that have poor support for XRandR, unexpected things might happen with those.

Type: list of ((submodule) or string convertible to it)

Default:

```
[ ]
```

Example:

```
[
  "HDMI-0"
  {
    output = "DVI-0";
    primary = true;
  }
  {
    monitorConfig = "Option \"Rotate\" \"left\"";
    output = "DVI-1";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.xrandrHeads.*.monitorConfig

Extra lines to append to the 'Monitor' section verbatim. Available options are documented in the MONITOR section in **xorg.conf**(5).

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
DisplaySize 408 306
Option "DPMS" "false"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.xrandrHeads.*.output

The output name of the monitor, as shown by **xrandr**(1) invoked without arguments.

Type: string

Example:

```
"DVI-0"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xserver.xrandrHeads.*.primary

Whether this head is treated as the primary monitor,

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/xserver.nix>

services.xtreemfs.enable

Whether to enable XtreemFS.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.dir.enable

Whether to enable XtreemFS DIR service.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.dir.address

If specified, it defines the interface to listen on. If not specified, the service will listen on all interfaces (any).

Type: string

Default:

```
""
```

Example:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.dir.extraConfig

Configuration of XtreemFS DIR service. WARNING: configuration is saved as plaintext inside nix store. For more options: **https://www.xtreemfs.org/xtfs−guide−1.5.1/index.html**

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  # specify whether SSL is required
  ssl.enabled = true
  ssl.service_creds.pw = passphrase
  ssl.service_creds.container = pkcs12
  ssl.service_creds = /etc/xos/xtreemfs/truststore/certs/dir.p12
  ssl.trusted_certs = /etc/xos/xtreemfs/truststore/certs/trusted.jk \
s
  ssl.trusted_certs.pw = jks_passphrase
  ssl.trusted_certs.container = jks
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.dir.httpPort
Specifies the listen port for the HTTP service that returns the status page.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
30638
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.dir.port
The port to listen on for incoming connections (TCP).

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
32638
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.dir.replication.enable
Whether to enable XtreemFS DIR replication plugin.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.dir.replication.extraConfig
Configuration of XtreemFS DIR replication plugin. WARNING: configuration is saved as plaintext inside nix store. For more options: **https://www.xtreemfs.org/xtfs−guide−1.5.1/index.html**

Type: strings concatenated with “\n”

Example:

```
  # participants of the replication including this replica
  babudb.repl.participant.0 = 192.168.0.10
  babudb.repl.participant.0.port = 35676
  babudb.repl.participant.1 = 192.168.0.11
  babudb.repl.participant.1.port = 35676
  babudb.repl.participant.2 = 192.168.0.12
  babudb.repl.participant.2.port = 35676

  # number of servers that at least have to be up to date
  # To have a fault−tolerant system, this value has to be set to t \
he
  # majority of nodes i.e., if you have three replicas, set this to \
 2
  # Please note that a setup with two nodes provides no fault−tole \
rance.
```

```
  babudb.repl.sync.n = 2

  # specify whether SSL is required
  babudb.ssl.enabled = true

  babudb.ssl.protocol = tlsv12

  # server credentials for SSL handshakes
  babudb.ssl.service_creds = /etc/xos/xtreemfs/truststore/certs/osd \
.p12
  babudb.ssl.service_creds.pw = passphrase
  babudb.ssl.service_creds.container = pkcs12

  # trusted certificates for SSL handshakes
  babudb.ssl.trusted_certs = /etc/xos/xtreemfs/truststore/certs/tru \
sted.jks
  babudb.ssl.trusted_certs.pw = jks_passphrase
  babudb.ssl.trusted_certs.container = jks

  babudb.ssl.authenticationWithoutEncryption = false
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.dir.syncMode

The sync mode influences how operations are committed to the disk log before the operation is acknowledged to the caller.

−ASYNC mode the writes to the disk log are buffered in memory by the operating system. This is the fastest mode but will lead to data loss in case of a crash, kernel panic or power failure. −SYNC_WRITE_METADATA opens the file with O_SYNC, the system will not buffer any writes. The operation will be acknowledged when data has been safely written to disk. This mode is slow but offers maximum data safety. However, BabuDB cannot influence the disk drive caches, this depends on the OS and hard disk model. −SYNC_WRITE similar to SYNC_WRITE_METADATA but opens file with O_DSYNC which means that only the data is commit to disk. This can lead to some data loss depending on the implementation of the underlying file system. Linux does not implement this mode. −FDATASYNC is similar to SYNC_WRITE but opens the file in asynchronous mode and calls fdatasync() after writing the data to disk. −FSYNC is similar to SYNC_WRITE_METADATA but opens the file in asynchronous mode and calls fsync() after writing the data to disk.

For best throughput use ASYNC, for maximum data safety use FSYNC.

(If xtreemfs.dir.replication.enable is true then FDATASYNC is forced)

Type: one of “ASYNC”, “SYNC_WRITE_METADATA”, “SYNC_WRITE”, “FDATASYNC”, “FSYNC”

Default:

```
"FSYNC"
```

Example:

```
"FDATASYNC"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.dir.uuid

Must be set to a unique identifier, preferably a UUID according to RFC 4122. UUIDs can be generated with ‘uuidgen’ command, found in the ‘util−linux’ package.

Type: string

Example:

```
"eacb6bab−f444−4ebf−a06a−3f72d7465e40"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.homeDir

XtreemFS home dir for the xtreemfs user.

Type: absolute path

Default:

```
"/var/lib/xtreemfs"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.mrc.enable

Whether to enable XtreemFS MRC service.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.mrc.address

If specified, it defines the interface to listen on. If not specified, the service will listen on all interfaces (any).

Type: string

Default:

```
""
```

Example:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.mrc.extraConfig

Configuration of XtreemFS MRC service. WARNING: configuration is saved as plaintext inside nix store. For more options: **https://www.xtreemfs.org/xtfs−guide−1.5.1/index.html**

Type: strings concatenated with “\n”

Example:

```
  osd_check_interval = 300
  no_atime = true
  local_clock_renewal = 0
  remote_time_sync = 30000

```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.mrc.httpPort

Specifies the listen port for the HTTP service that returns the status page.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
30636
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.mrc.port

The port to listen on for incoming connections (TCP).

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
32636
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.mrc.replication.enable

Whether to enable XtreemFS MRC replication plugin.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.mrc.replication.extraConfig

Configuration of XtreemFS MRC replication plugin. WARNING: configuration is saved as plaintext inside nix store. For more options: **https://www.xtreemfs.org/xtfs−guide−1.5.1/index.html**

Type: strings concatenated with "\n"

Example:

```
  # participants of the replication including this replica
  babudb.repl.participant.0 = 192.168.0.10
  babudb.repl.participant.0.port = 35678
  babudb.repl.participant.1 = 192.168.0.11
  babudb.repl.participant.1.port = 35678
  babudb.repl.participant.2 = 192.168.0.12
  babudb.repl.participant.2.port = 35678

  # number of servers that at least have to be up to date
  # To have a fault−tolerant system, this value has to be set to t \
he
  # majority of nodes i.e., if you have three replicas, set this to \
 2
  # Please note that a setup with two nodes provides no fault−tole \
rance.
  babudb.repl.sync.n = 2

  # specify whether SSL is required
  babudb.ssl.enabled = true

  babudb.ssl.protocol = tlsv12

  # server credentials for SSL handshakes
  babudb.ssl.service_creds = /etc/xos/xtreemfs/truststore/certs/osd \
.p12
  babudb.ssl.service_creds.pw = passphrase
  babudb.ssl.service_creds.container = pkcs12

  # trusted certificates for SSL handshakes
  babudb.ssl.trusted_certs = /etc/xos/xtreemfs/truststore/certs/tru \
sted.jks
  babudb.ssl.trusted_certs.pw = jks_passphrase
  babudb.ssl.trusted_certs.container = jks

  babudb.ssl.authenticationWithoutEncryption = false
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.mrc.syncMode

The sync mode influences how operations are committed to the disk log before the operation is acknowledged to the caller.

−ASYNC mode the writes to the disk log are buffered in memory by the operating system. This is the fastest mode but will lead to data loss in case of a crash, kernel panic or power failure. −SYNC_WRITE_METADATA opens the file with O_SYNC, the system will not buffer any writes. The

operation will be acknowledged when data has been safely written to disk. This mode is slow but offers maximum data safety. However, BabuDB cannot influence the disk drive caches, this depends on the OS and hard disk model. −SYNC_WRITE similar to SYNC_WRITE_METADATA but opens file with O_DSYNC which means that only the data is commit to disk. This can lead to some data loss depending on the implementation of the underlying file system. Linux does not implement this mode. −FDATASYNC is similar to SYNC_WRITE but opens the file in asynchronous mode and calls fdatasync() after writing the data to disk. −FSYNC is similar to SYNC_WRITE_METADATA but opens the file in asynchronous mode and calls fsync() after writing the data to disk.

For best throughput use ASYNC, for maximum data safety use FSYNC.

(If xtreemfs.mrc.replication.enable is true then FDATASYNC is forced)

Type: one of “ASYNC”, “SYNC_WRITE_METADATA”, “SYNC_WRITE”, “FDATASYNC”, “FSYNC”

Default:

```
"FSYNC"
```

Example:

```
"FDATASYNC"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.mrc.uuid
Must be set to a unique identifier, preferably a UUID according to RFC 4122. UUIDs can be generated with ‘uuidgen’ command, found in the ‘util−linux’ package.

Type: string

Example:

```
"eacb6bab−f444−4ebf−a06a−3f72d7465e41"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.osd.enable
Whether to enable XtreemFS OSD service.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.osd.address
If specified, it defines the interface to listen on. If not specified, the service will listen on all interfaces (any).

Type: string

Default:

```
""
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.osd.extraConfig
Configuration of XtreemFS OSD service. WARNING: configuration is saved as plaintext inside nix store. For more options: **https://www.xtreemfs.org/xtfs−guide−1.5.1/index.html**

Type: strings concatenated with "\n"

Example:

```
local_clock_renewal = 0
remote_time_sync = 30000
report_free_space = true
capability_secret = iNG8UuQJrJ6XVDTe

dir_service.host = 192.168.0.10
dir_service.port = 32638

# if replication is used
dir_service.1.host = 192.168.0.11
dir_service.1.port = 32638
dir_service.2.host = 192.168.0.12
dir_service.2.port = 32638

# specify whether SSL is required
ssl.enabled = true
ssl.service_creds.pw = passphrase
ssl.service_creds.container = pkcs12
ssl.service_creds = /etc/xos/xtreemfs/truststore/certs/osd.p12
ssl.trusted_certs = /etc/xos/xtreemfs/truststore/certs/trusted.jk \
s
ssl.trusted_certs.pw = jks_passphrase
ssl.trusted_certs.container = jks
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.osd.httpPort
Specifies the listen port for the HTTP service that returns the status page.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
30640
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.osd.port
The port to listen on for incoming connections (TCP and UDP).

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
32640
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.xtreemfs.osd.uuid
Must be set to a unique identifier, preferably a UUID according to RFC 4122. UUIDs can be generated with ‘uuidgen’ command, found in the ‘util−linux’ package.

Type: string

Example:

```
"eacb6bab−f444−4ebf−a06a−3f72d7465e42"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/xtreemfs.nix>

services.yandex−disk.enable
Whether to enable Yandex−disk client. See **https://disk.yandex.ru/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/yandex−disk.nix>

services.yandex−disk.directory
The directory to use for Yandex.Disk storage

Type: absolute path

Default:

```
"/home/Yandex.Disk"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/yandex−disk.nix>

services.yandex−disk.excludes
Comma−separated list of directories which are excluded from synchronization.

Type: strings concatenated with “,”

Default:

```
""
```

Example:

```
"data,backup"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/yandex−disk.nix>

services.yandex−disk.password
Your yandex.com password. Warning: it will be world−readable in /nix/store.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/yandex−disk.nix>

services.yandex−disk.user
The user the yandex−disk daemon should run as.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/yandex−disk.nix>

services.yandex−disk.username
Your yandex.com login name.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/yandex−disk.nix>

services.yarr.enable
Whether to enable Yet another rss reader.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/yarr.nix>

services.yarr.package
The yarr package to use.

Type: package

Default:

```
pkgs.yarr
```

Declared by:
<nixpkgs/nixos/modules/services/misc/yarr.nix>

services.yarr.address
Address to run server on.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/yarr.nix>

services.yarr.authFilePath

Path to a file containing username:password. ‘null’ means no authentication required to use the service.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/misc/yarr.nix>

services.yarr.baseUrl

Base path of the service url.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/misc/yarr.nix>

services.yarr.environmentFile

Environment file for specifying additional settings such as secrets.

See ‘yarr −help’ for all available options.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/misc/yarr.nix>

services.yarr.port

Port to run server on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7070
```

Declared by:

<nixpkgs/nixos/modules/services/misc/yarr.nix>

services.yggdrasil.enable

Whether to enable the yggdrasil system service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/yggdrasil.nix>

services.yggdrasil.package

The yggdrasil package to use.

Type: package

Default:

```
pkgs.yggdrasil
```

Declared by:

<nixpkgs/nixos/modules/services/networking/yggdrasil.nix>

services.yggdrasil.denyDhcpcdInterfaces

Disable the DHCP client for any interface whose name matches any of the shell glob patterns in this list. Use this option to prevent the DHCP client from broadcasting requests on the yggdrasil network. It is only necessary to do so when yggdrasil is running in TAP mode, because TUN interfaces do not support broadcasting.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "tap*"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/yggdrasil.nix>

services.yggdrasil.extraArgs

Extra command line arguments.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-loglevel"
  "info"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/yggdrasil.nix>

services.yggdrasil.group

Group to grant access to the Yggdrasil control socket. If ‘null’, only root can access the socket.

Type: null or string

Default:

```
null
```

Example:

```
"wheel"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/yggdrasil.nix>

services.yggdrasil.openMulticastPort
Whether to open the UDP port used for multicast peer discovery. The NixOS firewall blocks link−local communication, so in order to make incoming local peering work you will also need to configure 'MulticastInterfaces' in your Yggdrasil configuration (**settings**). You will then have to add the ports that you configure there to your firewall configuration (**networking.firewall.allowedTCPPorts** or **networking.firewall.interfaces.<name>.allowedTCPPorts**).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/yggdrasil.nix>

services.yggdrasil.persistentKeys
Whether to enable automatic generation and persistence of keys. If enabled, a private key will be generated on first startup and stored at /var/lib/yggdrasil/private.pem. This ensures the Yggdrasil node retains the same IPv6 address across reboots.

If you have existing keys from a previous installation (in the old keys.json format at /var/lib/yggdrasil/keys.json), they will be automatically migrated to the new PEM format on first startup.

Note: This option is mutually exclusive with **settings.PrivateKeyPath**. If you want to use externally managed keys, use **settings.PrivateKeyPath** instead .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/yggdrasil.nix>

services.yggdrasil.settings
Configuration for yggdrasil, as a structured Nix attribute set.

If you specify settings here, they will be used as persistent configuration and Yggdrasil will retain the same configuration (including IPv6 address if keys are provided) across restarts.

If no settings are specified, ephemeral keys are generated and the Yggdrasil interface will have a random IPv6 address each time the service is started.

Use **settings.PrivateKeyPath** to securely load private keys from files owned by root via systemd credentials.

The most important options have dedicated NixOS options above. You can also specify any other yggdrasil configuration option directly.

For a complete list of available options, see: https://yggdrasil−network.github.io/configurationref.html

You can use the command 'nix−shell −p yggdrasil −−run "yggdrasil −genconf"' to generate default configuration values with documentation.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Example:

```
{
  IfMTU = 65535;
  IfName = "ygg0";
  Listen = [
    "tcp://0.0.0.0:xxxxx"
  ];
  Peers = [
    "tcp://aa.bb.cc.dd:eeeee"
    "tcp://[aaaa:bbbb:cccc:dddd::eeee]:fffff"
  ];
  PrivateKeyPath = "/run/secrets/yggdrasil-key";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/yggdrasil.nix>

services.yggdrasil.settings.AllowedPublicKeys

List of peer public keys to allow incoming peering connections from. If left empty, all connections are allowed by default.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/yggdrasil.nix>

services.yggdrasil.settings.Listen

Listen addresses for incoming connections. You need listeners to accept incoming peerings from non-local nodes.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "tcp://0.0.0.0:xxxxx"
  "tls://[::]:yyyyy"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/yggdrasil.nix>

services.yggdrasil.settings.Peers

List of outbound peer connection strings. Connection strings can contain options, see the yggdrasil documentation.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
```

```
    "tcp://aa.bb.cc.dd:eeeee"
    "tcp://[aaaa:bbbb:cccc:dddd::eeee]:fffff"
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/yggdrasil.nix>

services.yggdrasil.settings.PrivateKeyPath
Path to the private key file on the host system. When specified, the key will be loaded via systemd credentials for secure access by the yggdrasil service.

Warning: Do not put private keys directly in the Nix store as they would be world−readable!

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/yggdrasil-private-key"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/yggdrasil.nix>

services.yggdrasil−jumper.enable
Whether to enable the Yggdrasil Jumper system service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/yggdrasil−jumper.nix>

services.yggdrasil−jumper.package
The yggdrasil−jumper package to use.

Type: package

Default:

```
pkgs.yggdrasil-jumper
```

Declared by:
<nixpkgs/nixos/modules/services/networking/yggdrasil−jumper.nix>

services.yggdrasil−jumper.appendListenAddresses
Append Yggdrasil router configuration with listeners on loopback addresses (‘127.0.0.1’) and preselected ports to support peering using client−server protocols like ‘quic’ and ‘tls’.

See ‘Listen’ option in Yggdrasil router configuration.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/yggdrasil−jumper.nix>

services.yggdrasil−jumper.detectWireguard
Control whether ‘settings.wireguard = true’ should automatically provide CAP_NET_ADMIN capability and make the necessary packages available to Yggdrasil Jumper service.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/yggdrasil−jumper.nix>

services.yggdrasil−jumper.extraArgs
Extra command line arguments for Yggdrasil Jumper.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/yggdrasil−jumper.nix>

services.yggdrasil−jumper.extraConfig
Configuration for Yggdrasil Jumper in plaintext.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
listen_port = 9999;
whitelist = [
  "<IPv6 address of a remote node>"
];
```

Declared by:
<nixpkgs/nixos/modules/services/networking/yggdrasil−jumper.nix>

services.yggdrasil−jumper.logLevel
Set logging verbosity for Yggdrasil Jumper.

Type: one of “off”, “error”, “warn”, “info”, “debug”, “trace”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/yggdrasil−jumper.nix>

services.yggdrasil−jumper.retrieveListenAddresses
Automatically retrieve listen addresses from the Yggdrasil router configuration.

See ‘yggdrasil_listen’ option in Yggdrasil Jumper configuration.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/yggdrasil−jumper.nix>

services.yggdrasil−jumper.settings
Configuration for Yggdrasil Jumper as a Nix attribute set.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  listen_port = 9999;
  whitelist = [
    "<IPv6 address of a remote node>"
  ];
  wireguard = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/yggdrasil−jumper.nix>

services.ympd.enable
Whether to enable ympd, the MPD Web GUI.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/ympd.nix>

services.ympd.mpd.host
The host where MPD is listening.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/ympd.nix>

services.ympd.mpd.port
The port where MPD is listening.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
config.services.mpd.settings.port
```

Example:

```
6600
```

Declared by:
<nixpkgs/nixos/modules/services/audio/ympd.nix>

services.ympd.webPort
The port where ympd's web interface will be available.

Type: string or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
"8080"
```

Example:

```
"ssl://8080:/path/to/ssl-private-key.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/ympd.nix>

services.your_spotify.enable
Whether to enable your_spotify.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/your_spotify.nix>

services.your_spotify.enableLocalDB
Whether to enable a local mongodb instance.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/your_spotify.nix>

services.your_spotify.package
The your_spotify package to use.

Type: package

Default:

```
pkgs.your_spotify
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/your_spotify.nix>

services.your_spotify.clientPackage
Client package to use.

Type: package

Declared by:
<nixpkgs/nixos/modules/services/web−apps/your_spotify.nix>

services.your_spotify.nginxVirtualHost
If set creates an nginx virtual host for the client. In most cases this should be the CLIENT_ENDPOINT without protocol prefix.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/your_spotify.nix>

services.your_spotify.settings
Your Spotify Configuration. Refer to **Your Spotify** for definitions and values.

Type: open submodule of attribute set of string

Example:

```
{
  CLIENT_ENDPOINT = "https://example.com";
  API_ENDPOINT = "https://api.example.com";
  SPOTIFY_PUBLIC = "spotify_client_id";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/your_spotify.nix>

services.your_spotify.settings.API_ENDPOINT
The endpoint of your server This api has to be reachable from the device you use the website from not from the server. This means that for example you may need two nginx virtual hosts if you want to expose this on the internet. Has to include a protocol Prefix (e.g. ‘http://’)

Type: string

Example:

```
"https://localhost:3000"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/your_spotify.nix>

services.your_spotify.settings.CLIENT_ENDPOINT
The endpoint of your web application. Has to include a protocol Prefix (e.g. ‘http://’)

Type: string

Example:

```
"https://your_spotify.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/your_spotify.nix>

services.your_spotify.settings.MONGO_ENDPOINT
The endpoint of the Mongo database.

Type: string

Default:

```
"mongodb://localhost:27017/your_spotify"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/your_spotify.nix>

services.your_spotify.settings.PORT
The port of the api server

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/your_spotify.nix>

services.your_spotify.settings.SPOTIFY_PUBLIC
The public client ID of your Spotify application. Refer to: **Creating the Spotify Application**

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/your_spotify.nix>

services.your_spotify.spotifySecretFile
A file containing the secret key of your Spotify application. Refer to: **Creating the Spotify Application**.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/your_spotify.nix>

services.youtrack.enable
Whether to enable YouTrack service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/youtrack.nix>

services.youtrack.package
The youtrack package to use.

Type: package

Default:

```
pkgs.youtrack
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/youtrack.nix>

services.youtrack.address
The interface youtrack will listen on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/youtrack.nix>

services.youtrack.autoUpgrade
Whether YouTrack should auto upgrade it without showing the upgrade dialog.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/youtrack.nix>

services.youtrack.environmentalParameters
Environmental configuration parameters, set imperatively. The values doesn't get removed, when removed in Nix. See **https://www.jetbrains.com/help/youtrack/server/2023.3/youtrack−java−start−parameters.html#environmental−parameters** for more information.

Type: open submodule of attribute set of (signed integer or string or 16 bit unsigned integer; between 0 and 65535 (both inclusive))

Default:

```
{ }
```

Example:

```
{
  secure-mode = "tls";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/youtrack.nix>

services.youtrack.environmentalParameters.listen−address
The interface YouTrack will listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/youtrack.nix>

services.youtrack.environmentalParameters.listen−port
The port YouTrack will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/youtrack.nix>

services.youtrack.generalParameters
General configuration parameters and other JVM options. See **https://www.jetbrains.com/help/youtrack/server/2023.3/youtrack−java−start−parameters.html#general−parameters** for more information.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-Djetbrains.youtrack.admin.restore=true"
  "-Xmx1024m"
];
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/youtrack.nix>

services.youtrack.statePath
Path were the YouTrack state is stored. To this path the base version (e.g. 2023_1) of the used package will be appended.

Type: absolute path

Default:

```
"/var/lib/youtrack"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/youtrack.nix>

services.youtrack.virtualHost
Name of the nginx virtual host to use and setup. If null, do not setup anything.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/youtrack.nix>

services.ytdl-sub.package
The ytdl-sub package to use.

Type: package

Default:

```
pkgs.ytdl-sub
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ytdl-sub.nix>

services.ytdl-sub.group
Group under which ytdl-sub runs.

Type: string

Default:

```
"ytdl-sub"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ytdl-sub.nix>

services.ytdl-sub.instances
Configuration for ytdl-sub instances.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ytdl−sub.nix>

services.ytdl−sub.instances.<name>.enable
Whether to enable ytdl−sub instance.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ytdl−sub.nix>

services.ytdl−sub.instances.<name>.config
Configuration for ytdl−sub. See **https://ytdl−sub.readthedocs.io/en/latest/config_reference/config_yaml.html** for more information.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  presets = {
    "YouTube Playlist" = {
      download = "{subscription_value}";
      output_options = {
        file_name = "{channel}/{playlist_title}/{playlist_index_pad \
ded}_{title}.{ext}";
        maintain_download_archive = true;
        output_directory = "YouTube";
      };
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ytdl−sub.nix>

services.ytdl−sub.instances.<name>.readWritePaths
List of paths that ytdl−sub can write to.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ytdl−sub.nix>

services.ytdl−sub.instances.<name>.schedule

How often to run ytdl−sub. See **systemd.time**(7) for the format.

Type: null or string

Default:

```
null
```

Example:

```
"0/6:0"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/ytdl−sub.nix>

services.ytdl−sub.instances.<name>.subscriptions

Subscriptions for ytdl−sub. See **https://ytdl−sub.readthedocs.io/en/latest/config_reference/subscription_yaml.html** for more information.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  "YouTube Playlist" = {
    "Some Playlist" = "https://www.youtube.com/playlist?list=...";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/ytdl−sub.nix>

services.ytdl−sub.user

User account under which ytdl−sub runs.

Type: string

Default:

```
"ytdl−sub"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/ytdl−sub.nix>

services.yubikey−agent.enable

Whether to start yubikey−agent when you log in. Also sets SSH_AUTH_SOCK to point at yubikey−agent.

Note that yubikey−agent will use whatever pinentry is specified in programs.gnupg.agent.pinentryPackage.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/security/yubikey−agent.nix>

services.yubikey−agent.package
The yubikey−agent package to use.

Type: package

Default:

```
pkgs.yubikey−agent
```

Declared by:
<nixpkgs/nixos/modules/services/security/yubikey−agent.nix>

services.zabbixAgent.enable
Whether to enable the Zabbix Agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix−agent.nix>

services.zabbixAgent.package
The agent package to use.

Type: package

Default:

```
pkgs.zabbix.agent
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix−agent.nix>

services.zabbixAgent.extraPackages
Packages to be added to the Zabbix **PATH**. Typically used to add executables for scripts, but can be anything.

Type: list of package

Default:

```
with pkgs; [ net−tools ]
```

Example:

```
with pkgs; [ net−tools mysql ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix−agent.nix>

services.zabbixAgent.listen.ip
List of comma delimited IP addresses that the agent should listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix−agent.nix>

services.zabbixAgent.listen.port

Agent will listen on this port for connections from the server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
10050
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/zabbix-agent.nix>

services.zabbixAgent.modules

A set of modules to load.

Type: attribute set of package

Default:

```
{ }
```

Example:

```
{
  "dummy.so" = pkgs.stdenv.mkDerivation {
    name = "zabbix-dummy-module-${cfg.package.version}";
    src = cfg.package.src;
    buildInputs = [ cfg.package ];
    sourceRoot = "zabbix-${cfg.package.version}/src/modules/dummy" \
;
    installPhase = ''
      mkdir -p $out/lib
      cp dummy.so $out/lib/
    '';
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/zabbix-agent.nix>

services.zabbixAgent.openFirewall

Open ports in the firewall for the Zabbix Agent.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/zabbix-agent.nix>

services.zabbixAgent.server

The IP address or hostname of the Zabbix server to connect to.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/monitoring/zabbix-agent.nix>

services.zabbixAgent.settings

Zabbix Agent configuration. Refer to **https://www.zabbix.com/documentation/current/manual/appendix/config/zabbix_agentd** for details on supported values.

Type: attribute set of (signed integer or string or list of string)

Default:

```
{ }
```

Example:

```
{
  DebugLevel = 4;
  Hostname = "example.org";
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/zabbix-agent.nix>

services.zabbixProxy.enable

Whether to enable the Zabbix Proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.package

The Zabbix package to use.

Type: package

Default:

```
pkgs.zabbix.proxy-pgsql
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.database.createLocally

Whether to create a local database automatically.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.database.host

Database host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.database.name
Database name.

Type: string

Default:

```
zabbix
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.database.passwordFile
A file containing the password corresponding to **database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/zabbix-dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
if config.services.zabbixProxy.database.type == "mysql"
then config.services.mysql.port
else config.services.postgresql.settings.port
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.database.socket
Path to the unix socket file to use for authentication.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.database.type
Database engine to use.

Type: one of “mysql”, “pgsql”, “sqlite”

Default:

```
"pgsql"
```

Example:

```
"mysql"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.database.user
Database user.

Type: string

Default:

```
"zabbix"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.extraPackages
Packages to be added to the Zabbix **PATH**. Typically used to add executables for scripts, but can be anything.

Type: list of package

Default:

```
[ net-tools nmap traceroute ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.listen.ip
List of comma delimited IP addresses that the trapper should listen on. Trapper will listen on all network interfaces if this parameter is missing.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.listen.port
Listen port for trapper.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
10051
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.modules
A set of modules to load.

Type: attribute set of package

Default:

```
{ }
```

Example:

```
{
  "dummy.so" = pkgs.stdenv.mkDerivation {
```

```
            name = "zabbix-dummy-module-${cfg.package.version}";
            src = cfg.package.src;
            buildInputs = [ cfg.package ];
            sourceRoot = "zabbix-${cfg.package.version}/src/modules/dummy" \
          ;
            installPhase = ''
              mkdir -p $out/lib
              cp dummy.so $out/lib/
            '';
          };
        }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.openFirewall
Open ports in the firewall for the Zabbix Proxy.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.server
The IP address or hostname of the Zabbix server to connect to.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixProxy.settings
Zabbix Proxy configuration. Refer to **https://www.zabbix.com/documentation/current/manual/appendix/config/zabbix_proxy** for details on supported values.

Type: attribute set of (signed integer or string or list of string)

Default:

```
{ }
```

Example:

```
{
  CacheSize = "1G";
  SSHKeyLocation = "/var/lib/zabbix/.ssh";
  StartPingers = 32;
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-proxy.nix>

services.zabbixServer.enable
Whether to enable the Zabbix Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-server.nix>

services.zabbixServer.package
The Zabbix package to use.

Type: package

Default:

```
pkgs.zabbix.server-pgsql
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-server.nix>

services.zabbixServer.database.createLocally
Whether to create a local database automatically.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-server.nix>

services.zabbixServer.database.host
Database host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-server.nix>

services.zabbixServer.database.name
Database name.

Type: string

Default:

```
"zabbix"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-server.nix>

services.zabbixServer.database.passwordFile
A file containing the password corresponding to **database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/zabbix-dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-server.nix>

services.zabbixServer.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
if config.services.zabbixServer.database.type == "mysql"
then config.services.mysql.port
else config.services.postgresql.settings.port
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-server.nix>

services.zabbixServer.database.socket
Path to the unix socket file to use for authentication.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-server.nix>

services.zabbixServer.database.type
Database engine to use.

Type: one of “mysql”, “pgsql”

Default:

```
"pgsql"
```

Example:

```
"mysql"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-server.nix>

services.zabbixServer.database.user
Database user.

Type: string

Default:

```
"zabbix"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix-server.nix>

services.zabbixServer.extraPackages
Packages to be added to the Zabbix **PATH**. Typically used to add executables for scripts, but can be anything.

Type: list of package

Default:

```
[ net-tools nmap traceroute ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix−server.nix>

services.zabbixServer.listen.ip
List of comma delimited IP addresses that the trapper should listen on. Trapper will listen on all network interfaces if this parameter is missing.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix−server.nix>

services.zabbixServer.listen.port
Listen port for trapper.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
10051
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix−server.nix>

services.zabbixServer.modules
A set of modules to load.

Type: attribute set of package

Default:

```
{ }
```

Example:

```
{
  "dummy.so" = pkgs.stdenv.mkDerivation {
    name = "zabbix−dummy−module−${cfg.package.version}";
    src = cfg.package.src;
    buildInputs = [ cfg.package ];
    sourceRoot = "zabbix−${cfg.package.version}/src/modules/dummy" \
;
    installPhase = ''
      mkdir −p $out/lib
      cp dummy.so $out/lib/
    '';
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix−server.nix>

services.zabbixServer.openFirewall
Open ports in the firewall for the Zabbix Server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix−server.nix>

services.zabbixServer.settings
Zabbix Server configuration. Refer to **https://www.zabbix.com/documentation/current/manual/appendix/config/zabbix_server** for details on supported values.

Type: attribute set of (signed integer or string or list of string)

Default:

```
{ }
```

Example:

```
{
  CacheSize = "1G";
  SSHKeyLocation = "/var/lib/zabbix/.ssh";
  StartPingers = 32;
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/zabbix−server.nix>

services.zabbixWeb.enable
Whether to enable the Zabbix web interface.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.package
The web package to use.

Type: package

Default:

```
pkgs.zabbix.web
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.database.host
Database host address.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.database.name
Database name.

Type: string

Default:

```
"zabbix"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.database.passwordFile
A file containing the password corresponding to **database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/zabbix−dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
if config.services.zabbixWeb.database.type == "mysql" then config.s \
ervices.mysql.port
else if config.services.zabbixWeb.database.type == "pgsql" then con \
fig.services.postgresql.settings.port
else 1521
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.database.socket
Path to the unix socket file to use for authentication.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.database.type
Database engine to use.

Type: one of “mysql”, “pgsql”, “oracle”

Default:

```
"pgsql"
```

Example:

```
"mysql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.database.user
Database user.

Type: string

Default:

```
"zabbix"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.extraConfig
Additional configuration to be copied verbatim into *zabbix.conf.php*.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.frontend
Frontend server to use.

Type: one of “nginx”, “httpd”

Default:

```
"httpd"
```

Example:

```
"nginx"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.hostname
Hostname for either nginx or httpd.

Type: string

Default:

```
"zabbix.local"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost
Apache configuration can be done by adapting ‘services.httpd.virtualHosts.<name>’. See **services.httpd.virtualHosts** for further information.

Type: submodule

Default:

```
{ }
```

Example:

```
{
```

```
  hostName = "zabbix.example.org";
  adminAddr = "webmaster@example.org";
  forceSSL = true;
  enableACME = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.enableUserDir
Whether to enable serving *~/public_html* as '/~«username»'.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.acmeRoot
Directory for the acme challenge which is PUBLIC, don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.adminAddr
E−mail address of the server administrator.

Type: null or string

Default:

```
null
```

Example:

```
"admin@example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.documentRoot

The path of Apache's document root directory. If left undefined, an empty directory in the Nix store will be used as root.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.extraConfig

These lines go to httpd.conf verbatim. They will go after directories and directory aliases defined by default.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
<Directory /home>
  Options FollowSymlinks
  AllowOverride All
</Directory>
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.forceSSL

Whether to add a separate nginx server block that permanently redirects (301) all plain HTTP traffic to HTTPS. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.globalRedirect

If set, all requests for this host are redirected permanently to the given URL.

Type: null or string

Default:

```
null
```

Example:

```
"http://newserver.example.org/"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.hostName

Canonical hostname for the server.

Type: string

Default:

```
"‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.http2

Whether to enable HTTP 2. HTTP/2 is supported in all multi−processing modules that come with httpd. *However, if you use the prefork mpm, there will be severe restrictions.* Refer to **https://httpd.apache.org/docs/2.4/howto/http2.html#mpm−config** for details.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.listen

Listen addresses and ports for this virtual host.

Note

This option overrides ‘addSSL’, ‘forceSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    ip = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    ip = "192.154.1.1";
    port = 80;
  }
  {
    ip = "*";
    port = 8080;
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.listen.*.ip
IP to listen on. 0.0.0.0 for IPv4 only, * for all.

Type: string

Default:

```
"*"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.listen.*.port
Port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.listen.*.ssl
Whether to enable SSL (https) support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Type: non−empty (list of string)

Default:

```
[
  "*"
]
```

Example:

```
[
  "127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.locations
Declarative location config. See **https://httpd.apache.org/docs/2.4/mod/core.html#location** for details.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
```

```
      proxyPass = "http://localhost:3000";
    };
    "/foo/bar.png" = {
      alias = "/home/eelco/some-file.png";
    };
  };
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.locations.<name>.alias
Alias directory for requests. See **https://httpd.apache.org/docs/2.4/mod/mod_alias.html#alias**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.locations.<name>.index
Adds DirectoryIndex directive. See **https://httpd.apache.org/docs/2.4/mod/mod_dir.html#directoryindex**.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.locations.<name>.proxyPass
Sets up a simple reverse proxy as described by **https://httpd.apache.org/docs/2.4/howto/reverse_proxy.html#simple**.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.logFormat
Log format for Apache's log files. Possible values are: combined, common, referer, agent.

Type: string

Default:

```
"common"
```

Example:

```
"combined"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.robotsEntries
Specification of pages to be ignored by web crawlers. See **http://www.robotstxt.org/** for details.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
"Disallow: /foo/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.servedDirs

This option provides a simple way to serve static directories.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    dir = "/home/eelco/Dev/nix-homepage";
    urlPath = "/nix";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.servedFiles

This option provides a simple way to serve individual, static files.

Note

This option has been deprecated and will be removed in a future version of NixOS. You can achieve the same result by making use of the ‘locations.<name>.alias’ option.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    file = "/home/eelco/some-file.png";
    urlPath = "/foo/bar.png";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "www.example.org:8080"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.sslServerCert
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.sslServerChain
Path to server SSL chain file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/ca.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.sslServerKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.httpd.virtualHost.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

2. see the **security.acme.certs** option

services.zabbixWeb.nginx.virtualHost
Nginx configuration can be done by adapting 'services.nginx.virtualHosts.<name>'. See **services.nginx.virtualHosts** for further information.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  forceSSL = true;
  sslCertificateKey = "/etc/ssl/zabbix.key";
  sslCertificate = "/etc/ssl/zabbix.crt";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.default

Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.extraConfig

These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.forceSSL

Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with 'redirectCode') to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.http2
Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.http3
Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.http3_hq
Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides ‘addSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.listen.*.addr

Listen address.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.listen.*.extraParameters

Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
```

```
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.listen.*.ssl
Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations.<name>.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations.<name>.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.rejectSSL
Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.reuseport
Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.root
The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.serverName
Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.nginx.virtualHost.useACMEHost
A host of an existing Let’s Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

2. see the **security.acme.certs** option

services.zabbixWeb.poolConfig
Options for the Zabbix PHP pool. See the documentation on ‘php−fpm.conf’ for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.server.address
The IP address or hostname of the Zabbix server to connect to.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zabbixWeb.server.port
The port of the Zabbix server to connect to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
10051
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zabbix.nix>

services.zammad.enable
Whether to enable Zammad, a web−based, open source user support/ticketing solution.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.package
The zammad package to use.

Type: package

Default:

```
pkgs.zammad
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.dataDir
Path to a folder that will contain Zammad working directory.

Type: absolute path

Default:

```
"/var/lib/zammad"
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.database.createLocally
Whether to create a local database automatically.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.database.host
Database host address.

Type: string

Default:

```
"/run/postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.database.name
Database name.

Type: string

Default:

```
"zammad"
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.database.passwordFile
A file containing the password for **services.zammad.database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/zammad-dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.database.port
Database port. Use ‘null’ for default port.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.database.settings
The *database.yml* configuration file as key value set. See <TODO> for list of configuration parameters.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
}
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.database.user
Database user.

Type: null or string

Default:

```
"zammad"
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.group
Name of the Zammad group.

Type: string

Default:

```
"zammad"
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.host
Host address.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"192.168.23.42"
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.nginx.configure
Whether to configure a local nginx for Zammad.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.nginx.domain
The domain under which zammad will be reachable.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.port
Web service port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.redis.createLocally
Whether to create a local redis automatically.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.redis.host
Redis server address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.redis.name
Name of the redis server. Only used if ‘createLocally’ is set to true.

Type: string

Default:

```
"zammad"
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.redis.port
Port of the redis server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6379
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.secretKeyBaseFile
The path to a file containing the ‘secret_key_base’ secret.

Zammad uses ‘secret_key_base’ to encrypt the cookie store, which contains session data, and to digest user auth tokens.

Needs to be a 64 byte long string of hexadecimal characters. You can generate one by running

```
openssl rand -hex 64 >/path/to/secret_key_base_file
```

This should be a string, not a nix path, since nix paths are copied into the world-readable nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/secret_key_base"
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.user
Name of the Zammad user.

Type: string

Default:

```
"zammad"
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zammad.websocketPort
Websocket service port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6042
```

Declared by:
<nixpkgs/nixos/modules/services/development/zammad.nix>

services.zapret.enable

Whether to enable the Zapret DPI bypass service…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zapret.nix>

services.zapret.package

The zapret package to use.

Type: package

Default:

```
pkgs.zapret
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zapret.nix>

services.zapret.blacklist

Specify a list of domains NOT to bypass. All other domains will be bypassed. You can specify either whitelist or blacklist, but not both. If neither are specified, then bypass all domains.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "example.com"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zapret.nix>

services.zapret.configureFirewall

Whether to setup firewall routing so that system http(s) traffic is forwarded via this service. Disable if you want to set it up manually.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zapret.nix>

services.zapret.httpMode

By default this service only changes the first packet sent, which is enough in most cases. But there are DPIs that monitor the whole traffic within a session. That requires full processing of every packet, which increases the CPU usage.

Set the mode to ‘full’ if http doesn’t work.

Type: one of “first”, “full”

Default:

```
"first"
```

Example:

```
"full"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zapret.nix>

services.zapret.httpSupport
Whether to route http traffic on port 80. Http bypass rarely works and you might want to disable it if you don't utilise http connections.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zapret.nix>

services.zapret.params
Specify the bypass parameters for Zapret binary. There are no universal parameters as they vary between different networks, so you'll have to find them yourself.

This can be done by running the 'blockcheck' binary from zapret package, i.e. 'nix−shell −p nftables zapret −−command blockcheck' (or 'iptables' instead of 'nftables' if that is what your firewall is using). It'll try different params and then tell you which params are working for your network.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--dpi-desync=fake,disorder2"
  "--dpi-desync-ttl=1"
  "--dpi-desync-autottl=2"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zapret.nix>

services.zapret.qnum
Routing queue number. Only change this if you already use the default queue number somewhere else.

Type: signed integer

Default:

```
200
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zapret.nix>

services.zapret.udpPorts
List of UDP ports to route. Port ranges are delimited with a colon like this "50000:50099".

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "50000:50099"
  "1234"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zapret.nix>

services.zapret.udpSupport
Enable UDP routing. This requires you to specify ‘udpPorts’ and ‘−−dpi−desync−any−protocol’ parameter.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zapret.nix>

services.zapret.whitelist
Specify a list of domains to bypass. All other domains will be ignored. You can specify either whitelist or blacklist, but not both. If neither are specified, then bypass all domains.

It is recommended to specify the whitelist. This will make sure that other resources won’t be affected by this service.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "youtube.com"
  "googlevideo.com"
  "ytimg.com"
  "youtu.be"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zapret.nix>

services.zeitgeist.enable
Whether to enable zeitgeist, a service which logs the users’ activities and events.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/zeitgeist.nix>

services.zenohd.enable

Whether to enable Zenoh daemon…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zenohd.nix>

services.zenohd.package

The zenoh package to use.

Type: package

Default:

```
pkgs.zenoh
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zenohd.nix>

services.zenohd.backends

Storage backend packages to add to zenohd search paths.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.zenoh-backend-rocksdb ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zenohd.nix>

services.zenohd.env

Set environment variables consumed by zenohd and its plugins.

Type: attribute set of string

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zenohd.nix>

services.zenohd.extraOptions

Extra command line options for zenohd.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zenohd.nix>

services.zenohd.home

Base directory for zenohd related files defined via ZENOH_HOME.

Type: string

Default:

```
"/var/lib/zenoh"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zenohd.nix>

services.zenohd.plugins

Plugin packages to add to zenohd search paths.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.zenoh-plugin-mqtt ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zenohd.nix>

services.zenohd.settings

Config options for 'zenoh.json5' configuration file.

See **https://github.com/eclipse-zenoh/zenoh/blob/main/DEFAULT_CONFIG.json5** for more information.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zenohd.nix>

services.zerobin.enable

Whether to enable 0bin.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zerobin.nix>

services.zerobin.dataDir

Path to the 0bin data directory

Type: string

Default:

```
"/var/lib/zerobin"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zerobin.nix>

services.zerobin.extraConfig
Extra configuration to be appended to the 0bin config file (see **https://0bin.readthedocs.org/en/latest/en/options.html**)

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
MENU = (
('Home', '/'),
)
COMPRESSED_STATIC_FILE = True
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zerobin.nix>

services.zerobin.group
The group 0bin should run as

Type: string

Default:

```
"zerobin"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zerobin.nix>

services.zerobin.listenAddress
The address zerobin should listen to

Type: string

Default:

```
"localhost"
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zerobin.nix>

services.zerobin.listenPort
The port zerobin should listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8000
```

Example:

```
1357
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zerobin.nix>

services.zerobin.user

The user 0bin should run as

Type: string

Default:

```
"zerobin"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zerobin.nix>

services.zeronet.enable

Whether to enable zeronet.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zeronet.nix>

services.zeronet.package

The zeronet package to use.

Type: package

Default:

```
pkgs.zeronet
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zeronet.nix>

services.zeronet.fileserverPort

Zeronet fileserver port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
12261
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zeronet.nix>

services.zeronet.port

Optional zeronet web UI port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
43110
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zeronet.nix>

services.zeronet.settings

zeronet.conf configuration. Refer to **https://zeronet.readthedocs.io/en/latest/faq/#is-it-possible-to-use-a-configuration-file** for details on supported values;

Type: attribute set of attribute set of (string or signed integer or boolean or list of string)

Default:

```
{ }
```

Example:

```
{ global.tor = enable; }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zeronet.nix>

services.zeronet.tor

Use TOR for zeronet traffic where possible.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zeronet.nix>

services.zeronet.torAlways

Use TOR for all zeronet traffic.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zeronet.nix>

services.zeronsd.servedNetworks

ZeroTier Networks to start zeronsd instances for.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  a8a2c3c10c1a68de = {
    settings = {
      token = "/var/lib/zeronsd/apitoken";
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zeronsd.nix>

services.zeronsd.servedNetworks.<name>.package
The zeronsd package to use.

Type: package

Default:

```
pkgs.zeronsd
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zeronsd.nix>

services.zeronsd.servedNetworks.<name>.settings
Settings for zeronsd

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zeronsd.nix>

services.zeronsd.servedNetworks.<name>.settings.domain
Domain under which ZeroTier records will be available.

Type: (optionally newline−terminated) single−line string

Default:

```
"home.arpa"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zeronsd.nix>

services.zeronsd.servedNetworks.<name>.settings.log_level
Log Level.

Type: one of “off”, “error”, “warn”, “info”, “debug”, “trace”

Default:

```
"warn"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zeronsd.nix>

services.zeronsd.servedNetworks.<name>.settings.token
Path to a file containing the API Token for ZeroTier Central.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/networking/zeronsd.nix>

services.zeronsd.servedNetworks.<name>.settings.wildcard
Whether to serve a wildcard record for ZeroTier Nodes.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zeronsd.nix>

services.zerotierone.enable

Whether to enable ZeroTierOne.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zerotierone.nix>

services.zerotierone.package

The zerotierone package to use.

Type: package

Default:

```
pkgs.zerotierone
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zerotierone.nix>

services.zerotierone.joinNetworks

List of ZeroTier Network IDs to join on startup. Note that networks are only ever joined, but not automatically left after removing them from the list. To remove networks, use the ZeroTier CLI: 'zerotier−cli leave <network−id>'

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "a8a2c3c10c1a68de"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/zerotierone.nix>

services.zerotierone.localConf

Optional configuration to be written to the Zerotier JSON−based local.conf. If set, the configuration will be symlinked to '/var/lib/zerotier−one/local.conf' at build time. To understand the configuration format, refer to **https://docs.zerotier.com/config/#local−configuration−options**.

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  settings = {
    allowTcpFallbackRelay = false;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zerotierone.nix>

services.zerotierone.port
Network port used by ZeroTier.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9993
```

Declared by:
<nixpkgs/nixos/modules/services/networking/zerotierone.nix>

services.zeyple.enable
Whether to enable Zeyple, an utility program to automatically encrypt outgoing emails with GPG.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/zeyple.nix>

services.zeyple.group
Group to use to run Zeyple.

Note
If left as the default value this group will automatically be created on system activation, otherwise the sysadmin is responsible for ensuring the user exists.

Type: string

Default:

```
"zeyple"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/zeyple.nix>

services.zeyple.keys
List of public key files that will be imported by gpg.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/zeyple.nix>

services.zeyple.rotateLogs
Whether to enable rotation of log files.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/zeyple.nix>

services.zeyple.settings
Zeyple configuration. refer to **https://github.com/infertux/zeyple/blob/master/zeyple/zeyple.conf.example** for details on supported values.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/zeyple.nix>

services.zeyple.user
User to run Zeyple as.

Note
If left as the default value this user will automatically be created on system activation, otherwise the sysadmin is responsible for ensuring the user exists.

Type: string

Default:

```
"zeyple"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/zeyple.nix>

services.zfs.autoReplication.enable
Whether to enable ZFS snapshot replication.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/zfs−replication.nix>

services.zfs.autoReplication.package
The zfs−replicate package to use.

Type: package

Default:

```
pkgs.zfs−replicate
```

Declared by:
<nixpkgs/nixos/modules/services/backup/zfs−replication.nix>

services.zfs.autoReplication.followDelete
Remove remote snapshots that don’t have a local correspondent.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/zfs−replication.nix>

services.zfs.autoReplication.host
Remote host where snapshots should be sent. ‘lz4’ is expected to be installed on this host.

Type: string

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/zfs−replication.nix>

services.zfs.autoReplication.identityFilePath
Path to SSH key used to login to host.

Type: absolute path

Example:

```
"/home/username/.ssh/id_rsa"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/zfs−replication.nix>

services.zfs.autoReplication.localFilesystem
Local ZFS filesystem from which snapshots should be sent. Defaults to the attribute name.

Type: string

Example:

```
"pool/file/path"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/zfs−replication.nix>

services.zfs.autoReplication.recursive
Recursively discover snapshots to send.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/zfs−replication.nix>

services.zfs.autoReplication.remoteFilesystem
Remote ZFS filesystem where snapshots should be sent.

Type: string

Example:

```
"pool/file/path"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/zfs−replication.nix>

services.zfs.autoReplication.username
Username used by SSH to login to remote host.

Type: string

Example:

```
"username"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/zfs−replication.nix>

services.zfs.autoScrub.enable
Whether to enable periodic scrubbing of ZFS pools.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.autoScrub.interval
Systemd calendar expression when to scrub ZFS pools. See **systemd.time**(7).

Type: string

Default:

```
"monthly"
```

Example:

```
"quarterly"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.autoScrub.pools
List of ZFS pools to periodically scrub. If empty, all pools will be scrubbed.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "tank"
]
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.autoScrub.randomizedDelaySec
Add a randomized delay before each ZFS autoscrub. The delay will be chosen between zero and this value. This value must be a time span in the format specified by **systemd.time**(7)

Type: string

Default:

```
"6h"
```

Example:

```
"12h"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.autoSnapshot.enable
Enable the (OpenSolaris−compatible) ZFS auto−snapshotting service. Note that you must set the 'com.sun:auto−snapshot' property to 'true' on all datasets which you wish to auto−snapshot.

You can override a child dataset to use, or not use auto−snapshotting by setting its flag with the given interval: 'zfs set com.sun:auto−snapshot:weekly=false DATASET'

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.autoSnapshot.daily
Number of daily auto−snapshots that you wish to keep.

Type: signed integer

Default:

```
7
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.autoSnapshot.flags
Flags to pass to the zfs−auto−snapshot command.

Run 'zfs−auto−snapshot' (without any arguments) to see available flags.

If it's not too inconvenient for snapshots to have timestamps in UTC, it is suggested that you append '−−utc' to the list of default options (see example).

Otherwise, snapshot names can cause name conflicts or apparent time reversals due to daylight savings, timezone or other date/time changes.

Type: string

Default:

```
"−k −p"
```

Example:

```
"−k −p −−utc"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.autoSnapshot.frequent
Number of frequent (15−minute) auto−snapshots that you wish to keep.

Type: signed integer

Default:

```
4
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.autoSnapshot.hourly

Number of hourly auto−snapshots that you wish to keep.

Type: signed integer

Default:

```
24
```

Declared by:

<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.autoSnapshot.monthly

Number of monthly auto−snapshots that you wish to keep.

Type: signed integer

Default:

```
12
```

Declared by:

<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.autoSnapshot.weekly

Number of weekly auto−snapshots that you wish to keep.

Type: signed integer

Default:

```
4
```

Declared by:

<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.expandOnBoot

After importing, expand each device in the specified pools.

Set the value to the plain string “all” to expand all pools on boot:

```
services.zfs.expandOnBoot = "all";
```

or set the value to a list of pools to expand the disks of specific pools:

```
services.zfs.expandOnBoot = [ "tank" "dozer" ];
```

Type: one of “disabled”, “all” or list of string

Default:

```
"disabled"
```

Example:

```
[
  "tank"
  "dozer"
]
```

Declared by:

<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.trim.enable

Whether to enable periodic TRIM on all ZFS pools.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.trim.interval
How often we run trim. For most desktop and server systems a sufficient trimming frequency is once a week.

The format is described in **systemd.time**(7).

Type: string

Default:

```
"weekly"
```

Example:

```
"daily"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.trim.randomizedDelaySec
Add a randomized delay before each ZFS trim. The delay will be chosen between zero and this value. This value must be a time span in the format specified by **systemd.time**(7)

Type: string

Default:

```
"6h"
```

Example:

```
"12h"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.zed.enableMail
Whether to enable ZED's ability to send emails.

Type: boolean

Default:

```
config.services.mail.sendmailSetuidWrapper != null
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zfs.zed.settings
ZFS Event Daemon /etc/zfs/zed.d/zed.rc content

See **zed**(8) for details on ZED and the scripts in /etc/zfs/zed.d to find the possible variables

Type: attribute set of (string or signed integer or boolean or list of string)

Default:

```
{ }
```

Example:

```
{
```

```
  ZED_DEBUG_LOG = "/tmp/zed.debug.log";
  ZED_EMAIL_ADDR = [ "root" ];
  ZED_EMAIL_PROG = "mail";
  ZED_EMAIL_OPTS = "-s '@SUBJECT@' @ADDRESS@";
  ZED_NOTIFY_INTERVAL_SECS = 3600;
  ZED_NOTIFY_VERBOSE = false;
  ZED_USE_ENCLOSURE_LEDS = true;
  ZED_SCRUB_AFTER_RESILVER = false;
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

services.zigbee2mqtt.enable
Whether to enable zigbee2mqtt service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/zigbee2mqtt.nix>

services.zigbee2mqtt.package
The zigbee2mqtt package to use.

Type: package

Default:

```
pkgs.zigbee2mqtt
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/zigbee2mqtt.nix>

services.zigbee2mqtt.dataDir
Zigbee2mqtt data directory

Type: absolute path

Default:

```
"/var/lib/zigbee2mqtt"
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/zigbee2mqtt.nix>

services.zigbee2mqtt.settings
Your *configuration.yaml* as a Nix attribute set. Check the **documentation** for possible options.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  homeassistant.enabled = config.services.home-assistant.enable;
  permit_join = true;
```

```
  serial = {
    port = "/dev/ttyACM1";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/zigbee2mqtt.nix>

services.zipline.enable
Whether to enable Zipline.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/zipline.nix>

services.zipline.package
The zipline package to use.

Type: package

Default:

```
pkgs.zipline
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/zipline.nix>

services.zipline.database.createLocally
Whether to enable and configure a local PostgreSQL database server.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/zipline.nix>

services.zipline.environmentFiles
Files to load environment variables from (in addition to **services.zipline.settings**). This is useful to avoid putting secrets into the nix store. See **https://zipline.diced.sh/docs/config** for more information.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/run/secrets/zipline.env"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/zipline.nix>

services.zipline.settings

Configuration of Zipline. See **https://zipline.diced.sh/docs/config** for more information.

Type: open submodule of attribute set of (string or signed integer)

Default:

```
{ }
```

Example:

```
{
  CORE_HOSTNAME = "0.0.0.0";
  CORE_PORT = "3000";
  CORE_SECRET = "changethis";
  DATABASE_URL = "postgres://postgres:postgres@postgres/postgres";
  DATASOURCE_LOCAL_DIRECTORY = "/var/lib/zipline/uploads";
  DATASOURCE_TYPE = "local";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zipline.nix>

services.zipline.settings.CORE_HOSTNAME

The hostname to listen on.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zipline.nix>

services.zipline.settings.CORE_PORT

The port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Example:

```
8000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/zipline.nix>

services.zitadel.enable

Whether to enable ZITADEL, a user and identity access management platform.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.zitadel.package
The ZITADEL package to use.

Type: package

Default:

```
pkgs.zitadel
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.zitadel.extraSettingsPaths
A list of paths to extra settings files. These will override the values set in **settings**. Useful if you want to keep sensitive secrets out of the Nix store.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.zitadel.extraStepsPaths
A list of paths to extra steps files. These will override the values set in **steps**. Useful if you want to keep sensitive secrets out of the Nix store.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.zitadel.group
The group to run ZITADEL under.

Type: string

Default:

```
"zitadel"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.zitadel.masterKeyFile
Path to a file containing a master encryption key for ZITADEL. The key must be 32 bytes.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.zitadel.openFirewall
Whether to open the port specified in ‘listenPort’ in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.zitadel.settings
Contents of the runtime configuration file. See **https://zitadel.com/docs/self−hosting/manage/configure** for more details.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
{
  Port = 8123;
  ExternalDomain = "example.com";
  TLS = {
    CertPath = "/path/to/cert.pem";
    KeyPath = "/path/to/cert.key";
  };
  Database.cockroach.Host = "db.example.com";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.zitadel.settings.Port
The port that ZITADEL listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.zitadel.settings.TLS.Cert
The TLS certificate, as a base64−encoded string.

Note that the contents of this option will be added to the Nix store as world−readable plain text. Set **CertPath** instead if this is undesired.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.zitadel.settings.TLS.CertPath
Path to the TLS certificate.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.zitadel.settings.TLS.Key
The TLS certificate private key, as a base64−encoded string.

Note that the contents of this option will be added to the Nix store as world−readable plain text. Set **KeyPath** instead if this is undesired.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.zitadel.settings.TLS.KeyPath
Path to the TLS certificate private key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.zitadel.steps
Contents of the database initialization config file. See **https://zitadel.com/docs/self−hosting/manage/configure** for more details.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  FirstInstance = {
    InstanceName = "Example";
    Org.Human = {
      UserName = "foobar";
      FirstName = "Foo";
      LastName = "Bar";
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.zitadel.tlsMode
The TLS mode to use. Options are:

- enabled: ZITADEL accepts HTTPS connections directly. You must configure TLS if this option is selected.
- external: ZITADEL forces HTTPS connections, with TLS terminated at a reverse proxy.
- disabled: ZITADEL accepts HTTP connections only. Should only be used for testing.

Type: one of “external”, “enabled”, “disabled”

Default:

```
"external"
```

Example:

```
"enabled"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.zitadel.user
The user to run ZITADEL under.

Type: string

Default:

```
"zitadel"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/zitadel.nix>

services.znapzend.enable
Whether to enable ZnapZend ZFS backup daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.autoCreation
Automatically create the destination dataset if it does not exist.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.features.compressed
Whether to enable compressed feature which adds the options '−Lce' to the **zfs send** command. When this is enabled, make sure that both the sending and receiving pool have the same relevant features enabled. Using '−c' will skip unnecessary decompress−compress stages, '−L' is for large block support and −e is for embedded data support. see **znapzend**(1) and **zfs**(8) for more info .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.features.lowmemRecurse
Whether to enable use lowmemRecurse on systems where you have too many datasets, so a recursive listing of attributes to find backup plans exhausts the memory available to **znapzend**: instead, go the slower way to first list all impacted dataset names, and then query their configs one by one .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.features.oracleMode
Whether to enable destroying snapshots one by one instead of using one long argument list. If source and destination are out of sync for a long time, you may have so many snapshots to destroy that the argument gets is too long and the command fails .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.features.recvu
Whether to enable recvu feature which uses '−u' on the receiving end to keep the destination filesystem unmounted .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.features.sendRaw
Whether to enable sendRaw feature which adds the options '−w' to the **zfs send** command. For encrypted source datasets this instructs zfs not to decrypt before sending which results in a remote backup that can't be read without the encryption key/passphrase, useful when the remote isn't fully trusted or not physically secure. This option must be used consistently, raw incrementals cannot be based on non−raw snapshots and vice versa .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.features.skipIntermediates

Whether to enable the skipIntermediates feature to send a single increment between latest common snapshot and the newly made one. It may skip several source snaps if the destination was offline for some time, and it should skip snapshots not managed by znapzend. Normally for online destinations, the new snapshot is sent as soon as it is created on the source, so there are no automatic increments to skip .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.features.zfsGetType

Whether to enable using zfsGetType if your **zfs get** supports a '−t' argument for filtering by dataset type at all AND lists properties for snapshots by default when recursing, so that there is too much data to process while searching for backup plans. If these two conditions apply to your system, the time needed for a '−−recursive' search for backup plans can literally differ by hundreds of times (depending on the amount of snapshots in that dataset tree… and a decent backup plan will ensure you have a lot of those), so you would benefit from requesting this feature .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.logLevel

The log level when logging to file. Any of debug, info, warning, err, alert. Default in daemonized form is debug.

Type: one of "debug", "info", "warning", "err", "alert"

Default:

```
"debug"
```

Example:

```
"warning"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.logTo

Where to log to (syslog::<facility> or <filepath>).

Type: string

Default:

```
"syslog::daemon"
```

Example:

```
"/var/log/znapzend.log"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.mailErrorSummaryTo

Email address to send a summary to if “send task(s) failed”.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.noDestroy

Does all changes to the filesystem except destroy.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.pure

Do not persist any stateful znapzend setups. If this option is enabled, your previously set znapzend setups will be cleared and only the ones defined with this module will be applied.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup

Znapzend configuration.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "tank/home" = {
    # Make snapshots of tank/home every hour, keep those for 1 day,
    # keep every days snapshot for 1 month, etc.
    plan = "1d=>1h,1m=>1d,1y=>1m";
```

```
    recursive = true;
    # Send all those snapshots to john@example.com:rtank/john as we \
ll
    destinations.remote = {
      host = "john@example.com";
      dataset = "rtank/john";
    };
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.enable
Whether to enable this source.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.dataset
The dataset to use for this source.

Type: string

Example:

```
"tank/home"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.destinations
Additional destinations.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  local = {
    dataset = "btank/backup";
    presend = "zpool import -N btank";
    postsend = "zpool export btank";
  };
  remote = {
    host = "john@example.com";
    dataset = "tank/john";
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.destinations.<name>.dataset
Dataset name to send snapshots to.

Type: string

Example:

```
"tank/main"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.destinations.<name>.host
Host to use for the destination dataset. Can be prefixed with 'user@' to specify the ssh user.

Type: null or string

Default:

```
null
```

Example:

```
"john@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.destinations.<name>.label
Label for this destination. Defaults to the attribute name.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.destinations.<name>.plan
The znapzend backup plan to use for the source.

The plan specifies how often to backup and for how long to keep the backups. It consists of a series of retention periods to interval associations:

```
  retA=>intA,retB=>intB,...
```

Both intervals and retention periods are expressed in standard units of time or multiples of them. You can use both the full name or a shortcut according to the following listing:

```
  second|sec|s, minute|min, hour|h, day|d, week|w, month|mon|m, yea \
r|y
```

See **znapzendzetup**(1) for more info.

Type: string

Example:

```
"1h=>10min,1d=>1h,1w=>1d,1m=>1w,1y=>1m"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.destinations.<name>.postsend
Command to run after sending the snapshot to the destination. Intended to run a remote script via **ssh** on the destination, e.g. to bring up a backup disk or server or to put a zpool online/offline. See also **presend**.

Type: null or string

Default:

```
null
```

Example:

```
"ssh root@bserv zpool export tank"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.destinations.<name>.presend

Command to run before sending the snapshot to the destination. Intended to run a remote script via **ssh** on the destination, e.g. to bring up a backup disk or server or to put a zpool online/offline. See also **postsend**.

Type: null or string

Default:

```
null
```

Example:

```
"ssh root@bserv zpool import -Nf tank"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.mbuffer.enable

Whether to use **mbuffer**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.mbuffer.port

Port to use for **mbuffer**.

If this is null, it will run **mbuffer** through ssh.

If this is not null, it will run **mbuffer** directly through TCP, which is not encrypted but faster. In that case the given port needs to be open on the destination host.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.mbuffer.size

The size for **mbuffer**. Supports the units b, k, M, G.

Type: string of the form number{b|k|M|G}

Default:

```
"1G"
```

Example:

```
"128M"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.plan
The znapzend backup plan to use for the source.

The plan specifies how often to backup and for how long to keep the backups. It consists of a series of retention periods to interval associations:

```
retA=>intA,retB=>intB,...
```

Both intervals and retention periods are expressed in standard units of time or multiples of them. You can use both the full name or a shortcut according to the following listing:

```
second|sec|s, minute|min, hour|h, day|d, week|w, month|mon|m, yea \
r|y
```

See **znapzendzetup**(1) for more info.

Type: string

Example:

```
"1h=>10min,1d=>1h,1w=>1d,1m=>1w,1y=>1m"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.postsnap
Command to run after snapshots are taken on the source dataset, e.g. for database unlocking. See also **presnap**.

Type: null or string

Default:

```
null
```

Example:

```
"${pkgs.coreutils}/bin/kill ‘${pkgs.coreutils}/bin/cat /tmp/mariadb \
lock.pid‘;${pkgs.coreutils}/bin/rm /tmp/mariadblock.pid"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.presnap
Command to run before snapshots are taken on the source dataset, e.g. for database locking/flushing. See also **postsnap**.

Type: null or string

Default:

```
null
```

Example:

```
’’${pkgs.mariadb}/bin/mysql −e "set autocommit=0;flush tables with \
 read lock;\\! ${pkgs.coreutils}/bin/sleep 600" &  ${pkgs.coreuti \
ls}/bin/echo $! > /tmp/mariadblock.pid ; sleep 10’’
```

Declared by:
<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.recursive

Whether to do recursive snapshots.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.sendDelay

Specify delay (in seconds) before sending snaps to the destination. May be useful if you want to control sending time.

Type: signed integer

Default:

Example:

```
60
```

Declared by:

<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znapzend.zetup.<name>.timestampFormat

The timestamp format to use for constructing snapshot names. The syntax is ‘strftime’−like. The string must consist of the mandatory ‘%Y %m %d %H %M %S’. Optionally ‘− _ . :’ characters as well as any alphanumeric character are allowed. If suffixed by a ‘Z’, times will be in UTC.

Type: string containing all of the characters %Y, %m, %d, %H, %M, %S

Default:

```
"%Y-%m-%d-%H%M%S"
```

Example:

```
"znapzend-%m.%d.%Y-%H%M%SZ"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/znapzend.nix>

services.znc.enable

Whether to enable ZNC.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/znc/default.nix>

services.znc.confOptions.extraZncConf

Extra config to *znc.conf* file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.modules
A list of modules to include in the *znc.conf* file.

Type: list of string

Default:

```
[
  "webadmin"
  "adminlog"
]
```

Example:

```
[
  "partyline"
  "webadmin"
  "adminlog"
  "log"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.networks
IRC networks to connect the user to.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "libera" = {
    server = "irc.libera.chat";
    port = 6697;
    useSSL = true;
    modules = [ "simple_away" ];
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.networks.<name>.channels
IRC channels to join.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "nixos"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.networks.<name>.extraConf
Extra config for the network. Consider using **services.znc.config** instead.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
Encoding = ^UTF-8
FloodBurst = 4
FloodRate = 1.00
IRCConnectEnabled = true
Ident = johntron
JoinDelay = 0
Nick = johntron
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.networks.<name>.hasBitlbeeControlChannel
Whether to add the special Bitlbee operations channel.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.networks.<name>.modules
ZNC network modules to load.

Type: list of string

Default:

```
[
  "simple_away"
]
```

Example:

```
[ "simple_away" "sasl" ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.networks.<name>.password
IRC server password, such as for a Slack gateway.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.networks.<name>.port
IRC server port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6697
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.networks.<name>.server
IRC server address.

Type: string

Example:

```
"irc.libera.chat"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.networks.<name>.useSSL
Whether to use SSL to connect to the IRC server.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.nick
The IRC nick.

Type: string

Default:

```
"znc-user"
```

Example:

```
"john"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.passBlock
Generate with **nix-shell -p znc --command "znc --makepass"**. This is the password used to log in to the ZNC web admin interface. You can also set this through **services.znc.config.User.<username>.Pass.Method** and co.

Type: string

Example:

```
  &lt;Pass password&gt;
     Method = sha256
     Hash = e2ce303c7ea75c571d80d8540a8699b46535be6a085be3414947d63 \
8e48d9e93
     Salt = l5Xryew4g*!oa(ECfX2o
```

```
&lt;/Pass&gt;
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.port
Specifies the port on which to listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.uriPrefix
An optional URI prefix for the ZNC web interface. Can be used to make ZNC available behind a reverse proxy.

Type: null or string

Default:

```
null
```

Example:

```
"/znc/"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.useSSL
Indicates whether the ZNC server should use SSL when listening on the specified port. A self−signed certificate will be generated.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.userModules
A list of user modules to include in the *znc.conf* file.

Type: list of string

Default:

```
[
  "chansaver"
  "controlpanel"
]
```

Example:

```
[
  "chansaver"
  "controlpanel"
  "fish"
  "push"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.confOptions.userName
The user name used to log in to the ZNC web admin interface.

Type: string

Default:

```
"znc"
```

Example:

```
"johntron"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.config
Configuration for ZNC, see **https://wiki.znc.in/Configuration** for details. The Nix value declared here will be translated directly to the xml−like format ZNC expects. This is much more flexible than the legacy options under **services.znc.confOptions.***, but also can't do any type checking.

You can use **nix−instantiate −−eval −−strict '<nixpkgs/nixos>' −A config.services.znc.config** to view the current value. By default it contains a listener for port 5000 with SSL enabled.

Nix attributes called 'extraConfig' will be inserted verbatim into the resulting config file.

If **services.znc.useLegacyConfig** is turned on, the option values in **services.znc.confOptions.*** will be gracefully be applied to this option.

If you intend to update the configuration through this option, be sure to disable **services.znc.mutable**, otherwise none of the changes here will be applied after the initial deploy.

Type: attribute set of (znc values (null, atoms (str, int, bool), list of atoms, or attrsets of znc values))

Default:

```
{ }
```

Example:

```
{
  LoadModule = [ "webadmin" "adminlog" ];
  User.paul = {
    Admin = true;
    Nick = "paul";
    AltNick = "paul1";
    LoadModule = [ "chansaver" "controlpanel" ];
    Network.libera = {
      Server = "irc.libera.chat +6697";
      LoadModule = [ "simple_away" ];
      Chan = {
        "#nixos" = { Detached = false; };
        "##linux" = { Disabled = true; };
      };
    };
    Pass.password = {
      Method = "sha256";
      Hash = "e2ce303c7ea75c571d80d8540a8699b46535be6a085be3414947d \
638e48d9e93";
      Salt = "l5Xryew4g*!oa(ECfX2o";
```

```
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/default.nix>

services.znc.configFile
Configuration file for ZNC. It is recommended to use the **config** option instead.

Setting this option will override any auto−generated config file through the **confOptions** or **config** options.

Type: absolute path

Example:

```
~/.znc/configs/znc.conf
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/default.nix>

services.znc.dataDir
The state directory for ZNC. The config and the modules will be linked to from this directory as well.

Type: absolute path

Default:

```
"/var/lib/znc"
```

Example:

```
"/home/john/.znc"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/default.nix>

services.znc.extraFlags
Extra arguments to use for executing znc.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--debug"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/default.nix>

services.znc.group
Group to own the ZNC process.

Type: string

Default:

```
"znc"
```

Example:

```
"users"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/default.nix>

services.znc.modulePackages
A list of global znc module packages to add to znc.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.zncModules.fish pkgs.zncModules.push ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/default.nix>

services.znc.mutable
Indicates whether to allow the contents of the ‘dataDir’ directory to be changed by the user at run−time.

If enabled, modifications to the ZNC configuration after its initial creation are not overwritten by a NixOS rebuild. If disabled, the ZNC configuration is rebuilt on every NixOS rebuild.

If the user wants to manage the ZNC service using the web admin interface, this option should be enabled.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/default.nix>

services.znc.openFirewall
Whether to open ports in the firewall for ZNC. Does work with ports for listeners specified in **services.znc.config.Listener**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/default.nix>

services.znc.useLegacyConfig
Whether to propagate the legacy options under **services.znc.confOptions.*** to the znc config. If this is turned on, the znc config will contain a user with the default name “znc”, global modules “webadmin” and “adminlog” will be enabled by default, and more, all controlled through the **services.znc.confOptions.*** options. You can use **nix−instantiate −−eval −−strict '<nixpkgs/nixos>' −A config.services.znc.config** to view the current value of the config.

In any case, if you need more flexibility, **services.znc.config** can be used to override/add to all of the legacy options.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/options.nix>

services.znc.user
The name of an existing user account to use to own the ZNC server process. If not specified, a default user will be created.

Type: string

Default:

```
"znc"
```

Example:

```
"john"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/znc/default.nix>

services.zoneminder.enable
Whether to enable ZoneMinder.

If you intend to run the database locally, you should set ‘config.services.zoneminder.database.createLocally’ to true. Otherwise, when set to ‘false’ (the default), you will have to create the database and database user as well as populate the database yourself. Additionally, you will need to run ‘zmupdate.pl’ yourself when upgrading to a newer version .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zoneminder.nix>

services.zoneminder.cameras
Set this to the number of cameras you expect to support.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zoneminder.nix>

services.zoneminder.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zoneminder.nix>

services.zoneminder.database.host
Hostname hosting the database.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zoneminder.nix>

services.zoneminder.database.name
Name of database.

Type: string

Default:

```
"zm"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zoneminder.nix>

services.zoneminder.database.password
Username for accessing the database. Not used if ‘createLocally’ is set.

Type: string

Default:

```
"zmpass"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zoneminder.nix>

services.zoneminder.database.username
Username for accessing the database.

Type: string

Default:

```
"zmuser"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zoneminder.nix>

services.zoneminder.extraConfig
Additional configuration added verbatim to the configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zoneminder.nix>

services.zoneminder.hostname
The hostname on which to listen.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zoneminder.nix>

services.zoneminder.openFirewall
Open the firewall port(s).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zoneminder.nix>

services.zoneminder.port
The port on which to listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8095
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zoneminder.nix>

services.zoneminder.storageDir
ZoneMinder can generate quite a lot of data, so in case you don't want to use the default /var/lib/zoneminder, you can override the path here.

Type: null or string

Default:

```
null
```

Example:

```
"/storage/tank"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zoneminder.nix>

services.zoneminder.webserver
The webserver to configure for the PHP frontend.

Set it to 'none' if you want to configure it yourself. PRs are welcome for support for other web servers.

Type: one of "nginx", "none"

Default:

```
"nginx"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zoneminder.nix>

services.zookeeper.enable
Whether to enable Zookeeper.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zookeeper.nix>

services.zookeeper.package
The zookeeper package to use.

Type: package

Default:

```
pkgs.zookeeper
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zookeeper.nix>

services.zookeeper.dataDir
Data directory for Zookeeper

Type: absolute path

Default:

```
"/var/lib/zookeeper"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zookeeper.nix>

services.zookeeper.extraCmdLineOptions
Extra command line options for the Zookeeper launcher.

Type: list of string

Default:

```
[
  "-Dcom.sun.management.jmxremote"
  "-Dcom.sun.management.jmxremote.local.only=true"
]
```

Example:

```
[
  "-Djava.net.preferIPv4Stack=true"
  "-Dcom.sun.management.jmxremote"
  "-Dcom.sun.management.jmxremote.local.only=true"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zookeeper.nix>

services.zookeeper.extraConf
Extra configuration for Zookeeper.

Type: strings concatenated with “\n”

Default:

```
initLimit=5
syncLimit=2
tickTime=2000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/zookeeper.nix>

services.zookeeper.id

Zookeeper ID.

Type: signed integer

Default:

Declared by:

<**nixpkgs/nixos/modules/services/misc/zookeeper.nix**>

services.zookeeper.jre

The JRE with which to run Zookeeper

Type: package

Default:

```
pkgs.zookeeper.jre
```

Example:

```
pkgs.jre
```

Declared by:

<**nixpkgs/nixos/modules/services/misc/zookeeper.nix**>

services.zookeeper.logging

Zookeeper logging configuration, logback.xml.

Type: strings concatenated with “\n”

Default:

```
  <configuration>
    <property name="zookeeper.console.threshold" value="INFO" />
    <property name="zookeeper.log.dir" value="." />
    <property name="zookeeper.log.file" value="zookeeper.log" />
    <property name="zookeeper.log.threshold" value="INFO" />
    <property name="zookeeper.log.maxfilesize" value="256MB" />
    <property name="zookeeper.log.maxbackupindex" value="20" />
    <appender name="CONSOLE" class="ch.qos.logback.core.ConsoleAppe \
nder">
      <encoder>
        <pattern>%d{ISO8601} [myid:%X{myid}] - %-5p [%t:%C{1}@%L] \
 - %m%n</pattern>
      </encoder>
      <filter class="ch.qos.logback.classic.filter.ThresholdFilter" \
>
        <level>''${zookeeper.console.threshold}</level>
      </filter>
    </appender>
    <root level="INFO">
      <appender-ref ref="CONSOLE" />
    </root>
  </configuration>
```

Declared by:

<**nixpkgs/nixos/modules/services/misc/zookeeper.nix**>

services.zookeeper.port

Zookeeper Client port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2181
```

Declared by:

<nixpkgs/nixos/modules/services/misc/zookeeper.nix>

services.zookeeper.preferIPv4

Add the −Djava.net.preferIPv4Stack=true flag to the Zookeeper server.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/zookeeper.nix>

services.zookeeper.purgeInterval

The time interval in hours for which the purge task has to be triggered. Set to a positive integer (1 and above) to enable the auto purging.

Type: signed integer

Default:

```
1
```

Declared by:

<nixpkgs/nixos/modules/services/misc/zookeeper.nix>

services.zookeeper.servers

All Zookeeper Servers.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
server.0=host0:2888:3888
server.1=host1:2888:3888
server.2=host2:2888:3888
```

Declared by:

<nixpkgs/nixos/modules/services/misc/zookeeper.nix>

services.zram−generator.enable

Whether to enable Systemd unit generator for zram devices.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/zram−generator.nix>

services.zram−generator.package
The zram−generator package to use.

Type: package

Default:

```
pkgs.zram-generator
```

Declared by:
<nixpkgs/nixos/modules/services/system/zram−generator.nix>

services.zram−generator.settings
Configuration for zram−generator, see **https://github.com/systemd/zram−generator** for documentation.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/system/zram−generator.nix>

services.zrepl.enable
Whether to enable zrepl.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/zrepl.nix>

services.zrepl.package
The zrepl package to use.

Type: package

Default:

```
pkgs.zrepl
```

Declared by:
<nixpkgs/nixos/modules/services/backup/zrepl.nix>

services.zrepl.settings
Configuration for zrepl. See **https://zrepl.github.io/configuration.html** for more information.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/zrepl.nix>

services.zwave−js.enable

Whether to enable the zwave−js server on boot.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/zwave−js.nix>

services.zwave−js.package

The zwave−js−server package to use.

Type: package

Default:

```
pkgs.zwave−js−server
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/zwave−js.nix>

services.zwave−js.extraFlags

Extra flags to pass to command

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−mock−driver"
]
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/zwave−js.nix>

services.zwave−js.port

Port for the server to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/zwave−js.nix>

services.zwave−js.secretsConfigFile

JSON file containing secret keys. A dummy example:

```
{
  "securityKeys": {
    "S0_Legacy": "AAAAAAAAAAAAAAAAAAAAAAAAAAAAAA",
    "S2_Unauthenticated": "BBBBBBBBBBBBBBBBBBBBBBBBBBBBBB",
    "S2_Authenticated": "CCCCCCCCCCCCCCCCCCCCCCCCCCCCCC",
    "S2_AccessControl": "DDDDDDDDDDDDDDDDDDDDDDDDDDDDDD"
  }
```

```
}
```

See **https://zwave-js.github.io/node-zwave-js/#/getting-started/security-s2** for details. This file will be merged with the module-generated config file (taking precedence).

Z-Wave keys can be generated with:

< /dev/urandom tr -dc A-F0-9 | head -c32 ;echo

Warning
A file in the nix store should not be used since it will be readable to all users.

Type: absolute path

Example:

```
"/secrets/zwave-js-keys.json"
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/zwave-js.nix>

services.zwave-js.serialPort
Serial port device path for Z-Wave controller.

Type: absolute path

Example:

```
"/dev/ttyUSB0"
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/zwave-js.nix>

services.zwave-js.settings
Configuration settings for the generated config file.

This config is combined with the contents of 'secretsConfigFile' and passed to zwave-js-server via '--config'. The project's README **1** states that the config must follow the Z-Wave JS config format **2**.

Warning
Secrets should go in 'secretsConfigFile'. The contents of 'settings' is written to the nix store, which is world-readable.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/zwave-js.nix>

services.zwave-js.settings.storage.cacheDir
Cache directory

Type: absolute path *(read only)*

Default:

```
"/var/cache/zwave-js"
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/zwave-js.nix>

services.zwave−js−ui.enable

Whether to enable zwave−js−ui.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/zwave−js−ui.nix>

services.zwave−js−ui.package

The zwave−js−ui package to use.

Type: package

Default:

```
pkgs.zwave−js−ui
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/zwave−js−ui.nix>

services.zwave−js−ui.serialPort

Serial port for the Z−Wave controller.

Only used to grant permissions to the device; must be additionally configured in the application

Type: absolute path

Example:

```
"/dev/serial/by−id/usb−example"
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/zwave−js−ui.nix>

services.zwave−js−ui.settings

Extra environment variables passed to the zwave−js−ui process.

Check **https://zwave−js.github.io/zwave−js−ui/#/guide/env−vars** for possible options

Type: open submodule of attribute set of (null or string or absolute path or package)

Example:

```
{
  HOST = "::";
  PORT = "8091";
}
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/zwave−js−ui.nix>

specialisation

Additional configurations to build. If ‘inheritParentConfig’ is true, the system will be based on the overall system configuration.

To switch to a specialised configuration (e.g. ‘fewJobsManyCores’) at runtime, run:

```
sudo /run/current−system/specialisation/fewJobsManyCores/bin/switc \
h−to−configuration test
```

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{ fewJobsManyCores.configuration = { nix.settings = { core = 0; max \
−jobs = 1; }; }; }
```

Declared by:
<nixpkgs/nixos/modules/system/activation/specialisation.nix>

specialisation.<name>.configuration
Arbitrary NixOS configuration.

Anything you can add to a normal NixOS configuration, you can add here, including imports and config values, although nested specialisations will be ignored.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/activation/specialisation.nix>

specialisation.<name>.inheritParentConfig
Include the entire system's configuration. Set to false to make a completely differently configured system.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/activation/specialisation.nix>

swapDevices
The swap devices and swap files. These must have been initialised using **mkswap**. Each element should be an attribute set specifying either the path of the swap device or file ('device') or the label of the swap device ('label', see **mkswap −L**). Using a label is recommended.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    device = "/dev/hda7";
  }
  {
    device = "/var/swapfile";
  }
  {
    label = "bigswap";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/tasks/encrypted−devices.nix>
<nixpkgs/nixos/modules/config/swap.nix>

swapDevices.*.device
Path of the device or swap file.

Type: non−empty string

Example:

```
"/dev/sda3"
```

Declared by:
<nixpkgs/nixos/modules/config/swap.nix>

swapDevices.*.discardPolicy
Specify the discard policy for the swap device. If “once”, then the whole swap space is discarded at swapon invocation. If “pages”, asynchronous discard on freed pages is performed, before returning to the available pages pool. With “both”, both policies are activated. See **swapon**(8) for more information.

Type: null or one of “once”, “pages”, “both”

Default:

```
null
```

Example:

```
"once"
```

Declared by:
<nixpkgs/nixos/modules/config/swap.nix>

swapDevices.*.encrypted.enable
The block device is backed by an encrypted one, adds this device as a initrd luks entry.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/encrypted−devices.nix>

swapDevices.*.encrypted.blkDev
Location of the backing encrypted device.

Type: null or string

Default:

```
null
```

Example:

```
"/dev/sda1"
```

Declared by:
<nixpkgs/nixos/modules/tasks/encrypted−devices.nix>

swapDevices.*.encrypted.keyFile
Path to a keyfile used to unlock the backing encrypted device. When systemd stage 1 is not enabled, at the time this keyfile is accessed, the ‘neededForBoot’ filesystems (see ‘utils.fsNeededForBoot’) will have been mounted under ‘/mnt−root’, so the keyfile path should usually start with “/mnt−root/”. When systemd stage 1 is enabled, ‘fsNeededForBoot’ file systems will be mounted as needed under ‘/sysroot’, and the keyfile will not be accessed until its requisite mounts are done.

Type: null or string

Default:

```
null
```

Example:

```
"/mnt-root/root/.swapkey"
```

Declared by:
<nixpkgs/nixos/modules/tasks/encrypted-devices.nix>

swapDevices.*.encrypted.label
Label of the unlocked encrypted device. Set ‘fileSystems.<name?>.device’ to ‘/dev/mapper/<label>’ to mount the unlocked device.

Type: null or string

Default:

```
null
```

Example:

```
"rootfs"
```

Declared by:
<nixpkgs/nixos/modules/tasks/encrypted-devices.nix>

swapDevices.*.label
Label of the device. Can be used instead of *device*.

Type: string

Example:

```
"swap"
```

Declared by:
<nixpkgs/nixos/modules/config/swap.nix>

swapDevices.*.options
Options used to mount the swap.

Type: list of non-empty string

Default:

```
[
  "defaults"
]
```

Example:

```
[
  "nofail"
]
```

Declared by:
<nixpkgs/nixos/modules/config/swap.nix>

swapDevices.*.priority
Specify the priority of the swap device. Priority is a value between 0 and 32767. Higher numbers indicate higher priority. null lets the kernel choose a priority, which will show up as a negative value.

Type: null or signed integer

Default:

```
null
```

Example:

```
2048
```

Declared by:
<nixpkgs/nixos/modules/config/swap.nix>

swapDevices.*.randomEncryption
Encrypt swap device with a random key. This way you won't have a persistent swap device.

HINT: run "cryptsetup benchmark" to test cipher performance on your machine.

WARNING: Don't try to hibernate when you have at least one swap partition with this option enabled! We have no way to set the partition into which hibernation image is saved, so if your image ends up on an encrypted one you would lose it!

WARNING #2: Do not use /dev/disk/by−uuid/… or /dev/disk/by−label/… as your swap device when using randomEncryption as the UUIDs and labels will get erased on every boot when the partition is encrypted. Best to use /dev/disk/by−partuuid/…

Type: (submodule) or boolean convertible to it

Default:

```
false
```

Example:

```
{
  cipher = "serpent-xts-plain64";
  enable = true;
  source = "/dev/random";
}
```

Declared by:
<nixpkgs/nixos/modules/config/swap.nix>

swapDevices.*.randomEncryption.enable
Encrypt swap device with a random key. This way you won't have a persistent swap device.

WARNING: Don't try to hibernate when you have at least one swap partition with this option enabled! We have no way to set the partition into which hibernation image is saved, so if your image ends up on an encrypted one you would lose it!

WARNING #2: Do not use /dev/disk/by−uuid/… or /dev/disk/by−label/… as your swap device when using randomEncryption as the UUIDs and labels will get erased on every boot when the partition is encrypted. Best to use /dev/disk/by−partuuid/…

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/swap.nix>

swapDevices.*.randomEncryption.allowDiscards
Whether to allow TRIM requests to the underlying device. This option has security implications; please read the LUKS documentation before activating it.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/swap.nix>

swapDevices.*.randomEncryption.cipher
Use specified cipher for randomEncryption.

Hint: Run “cryptsetup benchmark” to see which one is fastest on your machine.

Type: string

Default:

```
"aes-xts-plain64"
```

Example:

```
"serpent-xts-plain64"
```

Declared by:
<nixpkgs/nixos/modules/config/swap.nix>

swapDevices.*.randomEncryption.keySize
Set the encryption key size for the plain device.

If not specified, the amount of data to read from ‘source’ will be determined by cryptsetup.

See **cryptsetup-open**(8) for details.

Type: null or signed integer

Default:

```
null
```

Example:

```
"512"
```

Declared by:
<nixpkgs/nixos/modules/config/swap.nix>

swapDevices.*.randomEncryption.sectorSize
Set the sector size for the plain encrypted device type.

If not specified, the default sector size is determined from the underlying block device.

See **cryptsetup-open**(8) for details.

Type: null or signed integer

Default:

```
null
```

Example:

```
"4096"
```

Declared by:
<nixpkgs/nixos/modules/config/swap.nix>

swapDevices.*.randomEncryption.source
Define the source of randomness to obtain a random key for encryption.

Type: string

Default:

```
"/dev/urandom"
```

Example:

```
"/dev/random"
```

Declared by:

<nixpkgs/nixos/modules/config/swap.nix>

swapDevices.*.size

If this option is set, 'device' is interpreted as the path of a swapfile that will be created automatically with the indicated size in MiB (1024×1024 bytes).

Type: null or signed integer

Default:

```
null
```

Example:

```
2048
```

Declared by:

<nixpkgs/nixos/modules/config/swap.nix>

system.activatable

Whether to add the activation script to the system profile.

The default, to have the script available all the time, is what we normally do, but for image based systems, this may not be needed or not be desirable.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/activation/activatable−system.nix>

system.activationScripts

A set of shell script fragments that are executed when a NixOS system configuration is activated. Examples are updating /etc, creating accounts, and so on. Since these are executed every time you boot the system or run **nixos−rebuild**, it's important that they are idempotent and fast.

Type: attribute set of (string or (submodule))

Default:

```
{ }
```

Example:

```
{
  stdio = {
    # Run after /dev has been mounted
    deps = [ "specialfs" ];
    text =
      ''
        # Needed by some programs.
        ln −sfn /proc/self/fd /dev/fd
        ln −sfn /proc/self/fd/0 /dev/stdin
        ln −sfn /proc/self/fd/1 /dev/stdout
        ln −sfn /proc/self/fd/2 /dev/stderr
      '';
  };
}
```

Declared by:
<nixpkgs/nixos/modules/system/activation/activation−script.nix>

system.autoUpgrade.enable
Whether to periodically upgrade NixOS to the latest version. If enabled, a systemd timer will run ‘nixos−rebuild switch −−upgrade’ once a day.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/auto−upgrade.nix>

system.autoUpgrade.allowReboot
Reboot the system into the new generation instead of a switch if the new generation uses a different kernel, kernel modules or initrd than the booted system. See **rebootWindow** for configuring the times at which a reboot is allowed.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/auto−upgrade.nix>

system.autoUpgrade.channel
The URI of the NixOS channel to use for automatic upgrades. By default, this is the channel set using **nix−channel** (run ‘nix−channel −−list’ to see the current value).

Type: null or string

Default:

```
null
```

Example:

```
"https://channels.nixos.org/nixos−14.12−small"
```

Declared by:
<nixpkgs/nixos/modules/tasks/auto−upgrade.nix>

system.autoUpgrade.dates
How often or when upgrade occurs. For most desktop and server systems a sufficient upgrade frequency is once a day.

The format is described in **systemd.time**(7).

Type: string

Default:

```
"04:40"
```

Example:

```
"daily"
```

Declared by:
<nixpkgs/nixos/modules/tasks/auto−upgrade.nix>

system.autoUpgrade.fixedRandomDelay

Make the randomized delay consistent between runs. This reduces the jitter between automatic upgrades. See **randomizedDelaySec** for configuring the randomized delay.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/tasks/auto−upgrade.nix>

system.autoUpgrade.flags

Any additional flags passed to **nixos−rebuild**.

If you are using flakes and use a local repo you can add **["−−update−input" "nixpkgs" "−−commit−lock−file"]** to update nixpkgs.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−I"
  "stuff=/home/alice/nixos−stuff"
  "−−option"
  "extra−binary−caches"
  "http://my−cache.example.org/"
]
```

Declared by:

<nixpkgs/nixos/modules/tasks/auto−upgrade.nix>

system.autoUpgrade.flake

The Flake URI of the NixOS configuration to build. Disables the option **system.autoUpgrade.channel**.

Type: null or string

Default:

```
null
```

Example:

```
"github:kloenk/nix"
```

Declared by:

<nixpkgs/nixos/modules/tasks/auto−upgrade.nix>

system.autoUpgrade.operation

Whether to run ‘nixos−rebuild switch −−upgrade’ or run ‘nixos−rebuild boot −−upgrade’

Type: one of “switch”, “boot”

Default:

```
"switch"
```

Example:

```
"boot"
```

Declared by:

<nixpkgs/nixos/modules/tasks/auto−upgrade.nix>

system.autoUpgrade.persistent

Takes a boolean argument. If true, the time when the service unit was last triggered is stored on disk. When the timer is activated, the service unit is triggered immediately if it would have been triggered at least once during the time when the timer was inactive. Such triggering is nonetheless subject to the delay imposed by RandomizedDelaySec=. This is useful to catch up on missed runs of the service when the system was powered down.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/tasks/auto−upgrade.nix>

system.autoUpgrade.randomizedDelaySec

Add a randomized delay before each automatic upgrade. The delay will be chosen between zero and this value. This value must be a time span in the format specified by **systemd.time**(7)

Type: string

Default:

```
"0"
```

Example:

```
"45min"
```

Declared by:

<nixpkgs/nixos/modules/tasks/auto−upgrade.nix>

system.autoUpgrade.rebootWindow

Define a lower and upper time value (in HH:MM format) which constitute a time window during which reboots are allowed after an upgrade. This option only has an effect when **allowReboot** is enabled. The default value of ‘null’ means that reboots are allowed at any time.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  lower = "01:00";
  upper = "05:00";
}
```

Declared by:

<nixpkgs/nixos/modules/tasks/auto−upgrade.nix>

system.autoUpgrade.rebootWindow.lower
Lower limit of the reboot window

Type: string matching the pattern [[:digit:]]{2}:[[:digit:]]{2}

Example:

```
"01:00"
```

Declared by:
<nixpkgs/nixos/modules/tasks/auto−upgrade.nix>

system.autoUpgrade.rebootWindow.upper
Upper limit of the reboot window

Type: string matching the pattern [[:digit:]]{2}:[[:digit:]]{2}

Example:

```
"05:00"
```

Declared by:
<nixpkgs/nixos/modules/tasks/auto−upgrade.nix>

system.autoUpgrade.runGarbageCollection
Whether to automatically run ‘nix−gc.service’ after a successful system upgrade.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/auto−upgrade.nix>

system.autoUpgrade.upgrade
Disable adding the ‘−−upgrade’ parameter when ‘channel’ is not set, such as when upgrading to the latest version of a flake honouring its lockfile.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/auto−upgrade.nix>

system.build
Attribute set of derivations used to set up the system.

Type: open submodule of lazy attribute set of unspecified value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/build.nix>
<nixpkgs/nixos/modules/hardware/facter/debug.nix>
<nixpkgs/nixos/modules/system/activation/top−level.nix>
<nixpkgs/nixos/modules/system/activation/activation−script.nix>
<nixpkgs/nixos/modules/system/activation/activatable−system.nix>
<nixpkgs/nixos/modules/image/images.nix>

system.build.images

Different target images generated for this NixOS configuration.

Type: lazy attribute set of raw value *(read only)*

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/image/images.nix>

system.build.noFacter

A version of the system closure with facter disabled

Type: unspecified value

Declared by:

<nixpkgs/nixos/modules/hardware/facter/debug.nix>

system.build.separateActivationScript

A separate activation script package that's not part of the system profile.

This is useful for configurations where 'system.activatable' is 'false'. Otherwise, you can just use 'system.build.toplevel'.

Type: package

Declared by:

<nixpkgs/nixos/modules/system/activation/activatable−system.nix>

system.build.toplevel

This option contains the store path that typically represents a NixOS system.

You can read this path in a custom deployment tool for example.

Type: package *(read only)*

Declared by:

<nixpkgs/nixos/modules/system/activation/top−level.nix>

system.checks

Packages that are added as dependencies of the system's build, usually for the purpose of validating some part of the configuration.

Unlike 'system.extraDependencies', these store paths do not become part of the built system configuration.

Type: list of package

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/activation/top−level.nix>

system.configurationRevision

The Git revision of the top−level flake from which this configuration was built.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/misc/version.nix>

system.copySystemConfiguration
If enabled, copies the NixOS configuration file (usually */etc/nixos/configuration.nix*) and symlinks it from the resulting system (getting to */run/current−system/configuration.nix*). Note that only this single file is copied, even if it imports others. Warning: This feature cannot be used when the system is configured by a flake

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/activation/top−level.nix>

system.etc.overlay.enable
Mount ‘/etc’ as an overlayfs instead of generating it via a perl script.

Note: This is currently experimental. Only enable this option if you’re confident that you can recover your system if it breaks.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/etc/etc.nix>

system.etc.overlay.mutable
Whether to mount ‘/etc’ mutably (i.e. read−write) or immutably (i.e. read−only).

If this is false, only the immutable lowerdir is mounted. If it is true, a writable upperdir is mounted on top.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/etc/etc.nix>

system.extraDependencies
A list of paths that should be included in the system closure but generally not visible to users.

This option has also been used for build−time checks, but the ‘system.checks’ option is more appropriate for that purpose as checks should not leave a trace in the built system configuration.

Type: list of path in the Nix store

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/activation/top−level.nix>

system.forbiddenDependenciesRegexes

POSIX Extended Regular Expressions that match store paths that should not appear in the system closure, with the exception of **system.extraDependencies**, which is not checked.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-dev$"
]
```

Declared by:

<nixpkgs/nixos/modules/system/activation/top-level.nix>

system.image.id

Image identifier.

This corresponds to the 'IMAGE_ID' field in **os-release**(5). See the upstream docs for more details on valid characters for this field: **https://www.freedesktop.org/software/systemd/man/latest/os-release.html#IMAGE_ID=**

You would only want to set this option if you're build NixOS appliance images.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/misc/version.nix>

system.image.version

Image version.

This corresponds to the 'IMAGE_VERSION' field in **os-release**(5). See the upstream docs for more details on valid characters for this field: **https://www.freedesktop.org/software/systemd/man/latest/os-release.html#IMAGE_VERSION=**

You would only want to set this option if you're build NixOS appliance images.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/misc/version.nix>

system.includeBuildDependencies

Whether to include the build closure of the whole system in its runtime closure. This can be useful for making changes fully offline, as it includes all sources, patches, and intermediate outputs required to build all the derivations that the system depends on.

Note that this includes *all* the derivations, down from the included applications to their sources, the compilers used to build them, and even the bootstrap compiler used to compile the compilers. This increases the size of the system and the time needed to download its dependencies drastically: a minimal configuration with no extra services enabled grows from ~670MiB in size to 13.5GiB, and takes proportionally longer to download.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/activation/top−level.nix>

system.name

The name of the system used in the **system.build.toplevel** derivation.

That derivation has the following name: ‘"nixos−system−${config.system.name}−${config.system.nixos.label}"’

Type: string

Default:

```
if config.networking.hostName == ""
then "unnamed"
else config.networking.hostName;
```

Declared by:

<nixpkgs/nixos/modules/system/activation/top−level.nix>

system.nixos.codeName

The NixOS release code name (e.g. ‘Emu’).

Type: string *(read only)*

Default:

```
"Yarara"
```

Declared by:

<nixpkgs/nixos/modules/misc/version.nix>

system.nixos.label

NixOS version name to be used in the names of generated outputs and boot labels.

If you ever wanted to influence the labels in your GRUB menu, this is the option for you.

It can only contain letters, numbers and the following symbols: ‘:’, ‘_’, ‘.’ and ‘−’.

The default is **system.nixos.tags** separated by “−” + “−” + **NIXOS_LABEL_VERSION** environment variable (defaults to the value of **system.nixos.version**).

Can be overridden by setting **NIXOS_LABEL**.

Useful for not loosing track of configurations built from different nixos branches/revisions, e.g.:

```
#!/bin/sh
today=‘date +%Y%m%d‘
branch=‘(cd nixpkgs ; git branch 2>/dev/null | sed −n ’/^\* /  \
{ s|^\* ||; p; }’)‘
revision=‘(cd nixpkgs ; git rev−parse HEAD)‘
export NIXOS_LABEL_VERSION="$today.$branch−${revision:0:7}"
nixos−rebuild switch
```

Type: string matching the pattern [a−zA−Z0−9:_\.−]*

Declared by:

<nixpkgs/nixos/modules/misc/label.nix>

system.nixos.release

The NixOS release (e.g. ‘16.03’).

Type: string *(read only)*

Default:

```
"26.05"
```

Declared by:

<nixpkgs/nixos/modules/misc/version.nix>

system.nixos.tags

Strings to prefix to the default **system.nixos.label**.

Useful for not losing track of configurations built with different options, e.g.:

```
{
  system.nixos.tags = [ "with-xen" ];
  virtualisation.xen.enable = true;
}
```

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "with-xen"
]
```

Declared by:

<nixpkgs/nixos/modules/misc/label.nix>

system.nixos.variantName

A string identifying a specific variant or edition of the operating system suitable for presentation to the user

Type: null or string

Default:

```
null
```

Example:

```
"NixOS Installer Image"
```

Declared by:

<nixpkgs/nixos/modules/misc/version.nix>

system.nixos.variant_id

A lower-case string identifying a specific variant or edition of the operating system

Type: null or string matching the pattern ^[a-z0-9._-]+$

Default:

```
null
```

Example:

```
"installer"
```

Declared by:
<nixpkgs/nixos/modules/misc/version.nix>

system.nixos−init.enable
Whether to enable nixos−init, a system for bashless initialization.

This doesn't use any 'activationScripts'. Anything set in these options is a no−op here. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/activation/nixos−init.nix>

system.nixos−init.package
The nixos−init package to use.

Type: package

Default:

```
pkgs.nixos−init
```

Declared by:
<nixpkgs/nixos/modules/system/activation/nixos−init.nix>

system.nssDatabases.group
List of group entries to configure in */etc/nsswitch.conf*.

Note that "files" is always prepended while "systemd" is appended if nscd is enabled.

This option only takes effect if nscd is enabled.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/config/nsswitch.nix>

system.nssDatabases.hosts
List of hosts entries to configure in */etc/nsswitch.conf*.

Note that "files" is always prepended, and "dns" and "myhostname" are always appended.

This option only takes effect if nscd is enabled.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/config/nsswitch.nix>

system.nssDatabases.passwd

List of passwd entries to configure in */etc/nsswitch.conf*.

Note that “files” is always prepended while “systemd” is appended if nscd is enabled.

This option only takes effect if nscd is enabled.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/config/nsswitch.nix>

system.nssDatabases.services

List of services entries to configure in */etc/nsswitch.conf*.

Note that “files” is always prepended.

This option only takes effect if nscd is enabled.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/config/nsswitch.nix>

system.nssDatabases.shadow

List of shadow entries to configure in */etc/nsswitch.conf*.

Note that “files” is always prepended.

This option only takes effect if nscd is enabled.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/config/nsswitch.nix>

system.nssDatabases.subgid

List of subgid entries to configure in */etc/nsswitch.conf*.

Note that “files” is always prepended.

This option only takes effect if nscd is enabled.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/config/nsswitch.nix>

system.nssDatabases.subuid

List of subuid entries to configure in */etc/nsswitch.conf*.

Note that “files” is always prepended.

This option only takes effect if nscd is enabled.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/config/nsswitch.nix>

system.nssDatabases.sudoers

List of sudoers entries to configure in */etc/nsswitch.conf*.

Note that “files” is always prepended.

This option only takes effect if nscd is enabled.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/config/nsswitch.nix>

system.preSwitchChecks

A set of shell script fragments that are executed before the switch to a new NixOS system configuration. A failure in any of these fragments will cause the switch to fail and exit early. The scripts receive the new configuration path and the action verb passed to switch−to−configuration, as the first and second positional arguments (meaning that you can access them using ‘$1’ and ‘$2’, respectively).

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{ failsEveryTime =
  ''
    false
  '';
}
```

Declared by:

<nixpkgs/nixos/modules/system/activation/pre−switch−check.nix>

system.replaceDependencies.cutoffPackages

Packages to which no replacements should be applied. The initrd is matched by default, because its structure renders the replacement process ineffective and prone to breakage.

Type: list of package

Default:

```
lib.optionals config.boot.initrd.enable [ config.system.build.initi \
alRamdisk ]
```

Declared by:

<nixpkgs/nixos/modules/system/activation/top−level.nix>

system.replaceDependencies.replacements

List of packages to override without doing a full rebuild. The original derivation and replacement derivation must have the same name length, and ideally should have close−to−identical directory layout.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[ ({ oldDependency = pkgs.openssl; newDependency = pkgs.callPackage \
 /path/to/openssl { }; }) ]
```

Declared by:
<nixpkgs/nixos/modules/system/activation/top−level.nix>

system.replaceDependencies.replacements.*.newDependency
The replacement package.

Type: package

Declared by:
<nixpkgs/nixos/modules/system/activation/top−level.nix>

system.replaceDependencies.replacements.*.oldDependency
The original package to override.

Type: package

Declared by:
<nixpkgs/nixos/modules/system/activation/top−level.nix>

system.services
A collection of NixOS **modular services** that are configured as systemd services.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/service/systemd/system.nix>

system.stateVersion
This option defines the first version of NixOS you have installed on this particular machine, and is used to maintain compatibility with application data (e.g. databases) created on older NixOS versions.

For example, if NixOS version XX.YY ships with AwesomeDB version N by default, and is then upgraded to version XX.YY+1, which ships AwesomeDB version N+1, the existing databases may no longer be compatible, causing applications to fail, or even leading to data loss.

The ‘stateVersion’ mechanism avoids this situation by making the default version of such packages conditional on the first version of NixOS you’ve installed (encoded in ‘stateVersion’), instead of simply always using the latest one.

Note that this generally only affects applications that can’t upgrade their data automatically − applications and services supporting automatic migrations will remain on latest versions when you upgrade.

Most users should **never** change this value after the initial install, for any reason, even if you’ve upgraded your system to a new NixOS release.

This value does **not** affect the Nixpkgs version your packages and OS are pulled from, so changing it will **not** upgrade your system.

This value being lower than the current NixOS release does **not** mean your system is out of date, out of support, or vulnerable.

Do **not** change this value unless you have manually inspected all the changes it would make to your configuration, and migrated your data accordingly.

Type: string

Default:

```
config.system.nixos.release
```

Declared by:

<nixpkgs/nixos/modules/misc/version.nix>

system.switch.enable

Whether to include the capability to switch configurations.

Disabling this makes the system unable to be reconfigured via ‘nixos−rebuild’.

This is good for image based appliances where updates are handled outside the image. Reducing features makes the image lighter and slightly more secure.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/activation/switchable−system.nix>

system.switch.inhibitors

Attribute set of strings that will prevent switching into a configuration when they change. The switch can be manually forced on the command line if required.

Type: attribute set of string

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/activation/switchable−system.nix>

system.tools.nixos−build−vms.enable

Whether to enable nixos−build−vms script.

Type: boolean

Default:

```
"config.nix.enable && !config.system.disableInstallerTools"
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/installer/tools/tools.nix>

system.tools.nixos−enter.enable

Whether to enable nixos−enter script.

Type: boolean

Default:

```
"config.nix.enable && !config.system.disableInstallerTools"
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/installer/tools/tools.nix>

system.tools.nixos−generate−config.enable
Whether to enable nixos−generate−config script.

Type: boolean

Default:

```
"config.nix.enable && !config.system.disableInstallerTools"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/installer/tools/tools.nix>

system.tools.nixos−install.enable
Whether to enable nixos−install script.

Type: boolean

Default:

```
"config.nix.enable && !config.system.disableInstallerTools"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/installer/tools/tools.nix>

system.tools.nixos−option.enable
Whether to enable nixos−option script.

Type: boolean

Default:

```
"config.nix.enable && !config.system.disableInstallerTools"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/installer/tools/tools.nix>

system.tools.nixos−rebuild.enable
Whether to enable nixos−rebuild script.

Type: boolean

Default:

```
"config.nix.enable && !config.system.disableInstallerTools"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/installer/tools/tools.nix>

system.tools.nixos−version.enable
Whether to enable nixos−version script.

Type: boolean

Default:

```
"config.nix.enable && !config.system.disableInstallerTools"
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/installer/tools/tools.nix>

system.userActivationScripts

A set of shell script fragments that are executed by a systemd user service when a NixOS system configuration is activated. Examples are rebuilding the .desktop file cache for showing applications in the menu. Since these are executed every time you run **nixos−rebuild**, it's important that they are idempotent and fast.

Type: attribute set of (string or (submodule))

Default:

```
{ }
```

Example:

```
{ plasmaSetup = {
    text = ''
      ${pkgs.libsForQt5.kservice}/bin/kbuildsycoca5"
    '';
    deps = [];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/system/activation/activation−script.nix>

systemd.enableEmergencyMode

Whether to enable emergency mode, which is an **sulogin** shell started on the console if mounting a filesystem fails. Since some machines (like EC2 instances) have no console of any kind, emergency mode doesn't make sense, and it's better to continue with the boot insofar as possible.

For initrd emergency access, use boot.initrd.systemd.emergencyAccess instead.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/emergency−mode.nix>

systemd.enableStrictShellChecks

Whether to run 'shellcheck' on the generated scripts for systemd units.

When enabled, all systemd scripts generated by NixOS will be checked with 'shellcheck' and any errors or warnings will cause the build to fail.

This affects all scripts that have been created through the 'script', 'reload', 'preStart', 'postStart', 'preStop' and 'postStop' options for systemd services. This does not affect command lines passed directly to 'ExecStart', 'ExecReload', 'ExecStartPre', 'ExecStartPost', 'ExecStop' or 'ExecStopPost'.

It therefore also does not affect systemd units that are coming from packages and that are not defined through the NixOS config. This option is disabled by default, and although some services have already been fixed, it is still likely that you will encounter build failures when enabling this.

We encourage people to enable this option when they are willing and able to submit fixes for potential build failures to Nixpkgs. The option can also be enabled or disabled for individual services using the 'enableStrictShellChecks' option on the service itself, which will take precedence over the global setting.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.package
The systemd package to use.

Type: package

Default:

```
pkgs.systemd
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.packages
Packages providing systemd units and hooks.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.systemd-cryptsetup-generator ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.additionalUpstreamSystemUnits
Additional units shipped with systemd that shall be enabled.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "debug-shell.service"
  "systemd-quotacheck.service"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts
Definition of systemd automount units; see **systemd.automount**(5).

This is a list instead of an attrSet, because systemd mandates the names to be derived from the ‘where’ attribute.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.enable

If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. ‘serial−getty@ttyS0’) from being started. Note that ‘enable=true’ does not make a unit start by default at boot; if you want that, see ‘wantedBy’.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.after

If the specified units are started at the same time as this unit, delay this unit until they have started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.aliases

Aliases of that unit.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.automountConfig

Each attribute in this set specifies an option in the ‘[Automount]’ section of the unit. See **systemd.automount**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  DirectoryMode = "0775";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.before

If the specified units are started at the same time as this unit, delay them until this unit has started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.bindsTo

Like ‘requires’, but in addition, if the specified units unexpectedly disappear, this unit will be stopped as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.conflicts

If the specified units are started, then this unit is stopped and vice versa.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.description

Description of this unit used in systemd messages and progress indicators.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.documentation

A list of URIs referencing documentation for this unit or its configuration.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.name

The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.onFailure

A list of one or more units that are activated when this unit enters the “failed” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.onSuccess

A list of one or more units that are activated when this unit enters the “inactive” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.overrideStrategy

Defines how unit configuration is provided for systemd:

‘asDropinIfExists’ creates a unit file when no unit file is provided by the package otherwise it creates a drop−in file named ‘overrides.conf’.

‘asDropin’ creates a drop−in file named ‘overrides.conf’. Mainly needed to define instances for systemd template units (e.g. ‘systemd−nspawn@mycontainer.service’).

See also **systemd.unit**(5).

Type: one of “asDropinIfExists”, “asDropin”

Default:

```
"asDropinIfExists"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.partOf

If the specified units are stopped or restarted, then this unit is stopped or restarted as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.reloadTriggers
An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be reloaded. If anything but a reload trigger changes in the unit file, the unit will be restarted instead.

Type: list of (systemd option)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.requiredBy
Units that require (i.e. depend on and need to go down with) this unit. As discussed in the 'wantedBy' option description this also creates '.requires' symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.requires
Start the specified units when this unit is started, and stop this unit when the specified units are stopped or fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.requisite
Similar to requires. However if the units listed are not started, they will not be started and the transaction will fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.restartTriggers
An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be restarted.

Type: list of unspecified value

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.startLimitBurst

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.startLimitIntervalSec

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.unitConfig

Each attribute in this set specifies an option in the '[Unit]' section of the unit. See **systemd.unit**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  RequiresMountsFor = "/data";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.upheldBy

Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.upholds

Keeps the specified running while this unit is running. A continuous version of 'wants'.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.wantedBy
Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to ‘["multi−user.target"]’ for system services. Likewise for user units (‘systemd.user.<name>.*’) set it to ‘["default.target"]’ to make a unit start by default when the user ‘<name>’ logs on.

This option creates a ‘.wants’ symlink in the given target that exists statelessly without the need for running ‘systemctl enable’. The ‘[Install]’ section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.wants
Start the specified units when this unit is started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.automounts.*.where
Absolute path of a directory of the mount point. Will be created if it doesn’t exist. (Mandatory)

Type: string

Example:

```
"/mnt"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.coredump.enable
Whether core dumps should be processed by **systemd−coredump**. If disabled, core dumps appear in the current directory of the crashing process.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/coredump.nix>

systemd.coredump.settings.Coredump

Settings for systemd−coredump. See **coredump.conf**(5) for available options.

Type: open submodule of attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Storage = "journal";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/coredump.nix>

systemd.ctrlAltDelUnit

Target that should be started when Ctrl−Alt−Delete is pressed; see **systemd.special**(7).

Type: string

Default:

```
"reboot.target"
```

Example:

```
"poweroff.target"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.defaultUnit

Default unit started when the system boots; see **systemd.special**(7).

Type: string

Default:

```
"multi−user.target"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.generatorEnvironment

Environment variables for systemd generators.

The ‘PATH’ environment variable is populated via ‘systemd.generatorPath’.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  MY_VAR = "my−value";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.generatorPath

Packages added to the ‘PATH’ environment variable of all systemd generators.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.hello ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.generators

Definition of systemd generators; see **systemd.generator**(5).

For each ‘NAME = VALUE’ pair of the attrSet, a link is generated from ‘/etc/systemd/system−generators/NAME’ to ‘VALUE’.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  systemd-gpt-auto-generator = "/dev/null";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.globalEnvironment

Environment variables passed to *all* systemd units.

Type: attribute set of (null or string or absolute path or package)

Default:

```
{ }
```

Example:

```
{
  TZ = "CET";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.managerEnvironment

Environment variables of PID 1. These variables are *not* passed to started units.

Type: attribute set of (null or string or absolute path or package)

Default:

```
{ }
```

Example:

```
{
  SYSTEMD_LOG_LEVEL = "debug";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts
Definition of systemd mount units; see **systemd.mount**(5).

This is a list instead of an attrSet, because systemd mandates the names to be derived from the 'where' attribute.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.enable
If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. 'serial−getty@ttyS0') from being started. Note that 'enable=true' does not make a unit start by default at boot; if you want that, see 'wantedBy'.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.after
If the specified units are started at the same time as this unit, delay this unit until they have started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.aliases
Aliases of that unit.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.before
If the specified units are started at the same time as this unit, delay them until this unit has started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.bindsTo
Like ‘requires’, but in addition, if the specified units unexpectedly disappear, this unit will be stopped as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.conflicts
If the specified units are started, then this unit is stopped and vice versa.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.description
Description of this unit used in systemd messages and progress indicators.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.documentation
A list of URIs referencing documentation for this unit or its configuration.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.mountConfig
Each attribute in this set specifies an option in the ‘[Mount]’ section of the unit. See **systemd.mount**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  DirectoryMode = "0775";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.name
The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.onFailure
A list of one or more units that are activated when this unit enters the “failed” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.onSuccess
A list of one or more units that are activated when this unit enters the “inactive” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.options
Options used to mount the file system.

Type: strings concatenated with “,”

Default:

```
""
```

Example:

```
"noatime"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.overrideStrategy
Defines how unit configuration is provided for systemd:

‘asDropinIfExists’ creates a unit file when no unit file is provided by the package otherwise it creates a drop−in file named ‘overrides.conf’.

‘asDropin’ creates a drop−in file named ‘overrides.conf’. Mainly needed to define instances for systemd template units (e.g. ‘systemd−nspawn@mycontainer.service’).

See also **systemd.unit**(5).

Type: one of “asDropinIfExists”, “asDropin”

Default:

```
"asDropinIfExists"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.partOf
If the specified units are stopped or restarted, then this unit is stopped or restarted as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.reloadTriggers
An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be reloaded. If anything but a reload trigger changes in the unit file, the unit will be restarted instead.

Type: list of (systemd option)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.requiredBy
Units that require (i.e. depend on and need to go down with) this unit. As discussed in the ‘wantedBy’ option description this also creates ‘.requires’ symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.requires
Start the specified units when this unit is started, and stop this unit when the specified units are stopped or fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.requisite
Similar to requires. However if the units listed are not started, they will not be started and the transaction will fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.restartTriggers

An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be restarted.

Type: list of unspecified value

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.startLimitBurst

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.startLimitIntervalSec

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.type

File system type.

Type: string

Default:

```
""
```

Example:

```
"ext4"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.unitConfig

Each attribute in this set specifies an option in the ‘[Unit]’ section of the unit. See **systemd.unit**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  RequiresMountsFor = "/data";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.upheldBy
Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.upholds
Keeps the specified running while this unit is running. A continuous version of ‘wants’.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.wantedBy
Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to ‘["multi−user.target"]’ for system services. Likewise for user units (‘systemd.user.<name>.*’) set it to ‘["default.target"]’ to make a unit start by default when the user ‘<name>’ logs on.

This option creates a ‘.wants’ symlink in the given target that exists statelessly without the need for running ‘systemctl enable’. The ‘[Install]’ section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.wants
Start the specified units when this unit is started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.what

Absolute path of device node, file or other resource. (Mandatory)

Type: string

Example:

```
"/dev/sda1"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.mounts.*.where

Absolute path of a directory of the mount point. Will be created if it doesn't exist. (Mandatory)

Type: string

Example:

```
"/mnt"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.network.enable

Whether to enable networkd or not.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.config

Definition of global systemd network config.

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.config.addRouteTablesToIPRoute2

If true and routeTables are set, then the specified route tables will also be installed into /etc/iproute2/rt_tables.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.config.dhcpV4Config

Each attribute in this set specifies an option in the '[DHCPv4]' section of the networkd config. See **networkd.conf**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  DUIDType = "vendor";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.config.dhcpV6Config

Each attribute in this set specifies an option in the '[DHCPv6]' section of the networkd config. See **networkd.conf**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  DUIDType = "vendor";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.config.networkConfig

Each attribute in this set specifies an option in the '[Network]' section of the networkd config. See **networkd.conf**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{
  IPv6PrivacyExtensions = true;
}
```

Example:

```
{
  ManageForeignRoutingPolicyRules = false;
  SpeedMeter = true;
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.config.routeTables

Defines route table names as an attrset of name to number. See **networkd.conf**(5) for details.

Type: attribute set of signed integer

Default:

```
{ }
```

Example:

```
{
  foo = 27;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.links
Definition of systemd network links.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.links.<name>.enable
Whether to enable this .link unit. It's handled by udev no matter if **systemd−networkd** is enabled or not

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.links.<name>.extraConfig
Extra configuration append to unit

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.links.<name>.linkConfig
Each attribute in this set specifies an option in the '[Link]' section of the unit. See **systemd.link**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  MACAddress = "00:ff:ee:aa:cc:dd";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.links.<name>.matchConfig

Each attribute in this set specifies an option in the '[Match]' section of the unit. See **systemd.link**(5) **systemd.netdev**(5) **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Name = "eth0";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs

Definition of systemd network devices.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.enable

Whether to manage network configuration using **systemd−network**.

This also enables **systemd.network.enable**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.bareUDPConfig

Each attribute in this set specifies an option in the '[BareUDP]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  DestinationPort = 1234;
  EtherType = "ipv4";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.batmanAdvancedConfig

Each attribute in this set specifies an option in the '[BatmanAdvanced]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  GatewayMode = "server";
  RoutingAlgorithm = "batman-v";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.bondConfig

Each attribute in this set specifies an option in the '[Bond]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Mode = "802.3ad";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.bridgeConfig

Each attribute in this set specifies an option in the '[Bridge]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  STP = true;
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.extraConfig

Extra configuration append to unit

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.fooOverUDPConfig
Each attribute in this set specifies an option in the '[FooOverUDP]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Port = 9001;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.geneveConfig
Each attribute in this set specifies an option in the '[GENEVE]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Id = 1;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.hsrConfig
Each attribute in this set specifies an option in the '[HSR]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Ports = [
    "eth1"
    "eth2"
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.ipoibConfig

Each attribute in this set specifies an option in the '[IPoIB]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  PartitionKey = 1;
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.ipvlanConfig

Each attribute in this set specifies an option in the '[IPVLAN]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Flags = "private";
  Mode = "L2";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.ipvtapConfig

Each attribute in this set specifies an option in the '[IPVTAP]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Flags = "vepa";
  Mode = "L3";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.l2tpConfig

Each attribute in this set specifies an option in the '[L2TP]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  EncapsulationType = "ip";
  Local = "static";
  PeerTunnelId = 12;
  Remote = "192.168.30.101";
  TunnelId = 10;
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.l2tpSessions

Each item in this array specifies an option in the '[L2TPSession]' section of the unit. See **systemd.netdev**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    Name = "l2tp-sess";
    PeerSessionId = 26;
    SessionId = 25;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.macsecConfig

Each attribute in this set specifies an option in the '[MACsec]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Port = 1234;
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.macsecReceiveAssociations

Each item in this array specifies an option in the '[MACsecReceiveAssociation]' section of the unit. See **systemd.netdev**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    MACAddress = "ab:cd:de:ef:ab:cd";
    Port = 1234;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.macsecReceiveChannels

Each item in this array specifies an option in the '[MACsecReceiveChannel]' section of the unit. See **systemd.netdev**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    MACAddress = "ab:cd:de:ef:ab:cd";
    Port = 1234;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.macsecTransmitAssociations

Each item in this array specifies an option in the '[MACsecTransmitAssociation]' section of the unit. See **systemd.netdev**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    Activate = true;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.macvlanConfig

Each attribute in this set specifies an option in the '[MACVLAN]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Mode = "private";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.macvtapConfig
Each attribute in this set specifies an option in the '[MACVTAP]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Mode = "private";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.matchConfig
Each attribute in this set specifies an option in the '[Match]' section of the unit. See **systemd.link**(5) **systemd.netdev**(5) **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Name = "eth0";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.netdevConfig
Each attribute in this set specifies an option in the '[Netdev]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Kind = "bridge";
  Name = "mybridge";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.peerConfig

Each attribute in this set specifies an option in the '[Peer]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Name = "veth2";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.tapConfig

Each attribute in this set specifies an option in the '[Tap]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  User = "openvpn";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.tunConfig

Each attribute in this set specifies an option in the '[Tun]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  User = "openvpn";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.tunnelConfig

Each attribute in this set specifies an option in the '[Tunnel]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Remote = "192.168.1.1";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.vlanConfig
Each attribute in this set specifies an option in the '[VLAN]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Id = 4;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.vrfConfig
Each attribute in this set specifies an option in the '[VRF]' section of the unit. See **systemd.netdev**(5) for details. A detailed explanation about how VRFs work can be found in the **kernel docs**.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Table = 2342;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.vxcanConfig
Each attribute in this set specifies an option in the '[VXCAN]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Peer = "vxcanpeer";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.vxlanConfig

Each attribute in this set specifies an option in the '[VXLAN]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.wireguardConfig

Each attribute in this set specifies an option in the '[WireGuard]' section of the unit. See **systemd.netdev**(5) for details. Use 'PrivateKeyFile' instead of 'PrivateKey': the nix store is world−readable.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  FirewallMark = 42;
  ListenPort = 51820;
  PrivateKeyFile = "/etc/wireguard/secret.key";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.wireguardPeers

Each item in this array specifies an option in the '[WireGuardPeer]' section of the unit. See **systemd.netdev**(5) for details. Use 'PresharedKeyFile' instead of 'PresharedKey': the nix store is world−readable.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    AllowedIPs = [
      "10.0.0.1/32"
    ];
    Endpoint = "192.168.1.1:51820";
    PersistentKeepalive = 15;
    PresharedKeyFile = "/etc/wireguard/psk.key";
    PublicKey = "27s0OvaBBdHoJYkH9osZpjpgSOVNw+RaKfboT/Sfq0g=";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.wlanConfig

Each attribute in this set specifies an option in the '[WLAN]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  PhysicalDevice = 0;
  Type = "station";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.netdevs.<name>.xfrmConfig

Each attribute in this set specifies an option in the '[Xfrm]' section of the unit. See **systemd.netdev**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  InterfaceId = 1;
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks

Definition of systemd networks.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.enable

Whether to manage network configuration using **systemd−network**.

This also enables **systemd.network.enable**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.DHCP

Whether to enable DHCP on the interfaces matched.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.address

A list of addresses to be added to the network section of the unit. See **systemd.network**(5) for details.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.addresses

A list of '[Address]' sections to be added to the unit. See **systemd.network**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    Address = "192.168.0.100/24";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.bandMultiQueueingConfig

Each attribute in this set specifies an option in the '[BandMultiQueueing]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Parent = "root";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.bfifoConfig

Each attribute in this set specifies an option in the '[BFIFO]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  LimitBytes = "20K";
  Parent = "ingress";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.bond

A list of bond interfaces to be added to the network section of the unit. See **systemd.network**(5) for details.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.bridge

A list of bridge interfaces to be added to the network section of the unit. See **systemd.network**(5) for details.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.bridgeConfig

Each attribute in this set specifies an option in the '[Bridge]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Cost = 20;
  MulticastFlood = false;
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.bridgeFDBs

A list of BridgeFDB sections to be added to the unit. See **systemd.network**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    Destination = "192.168.100.4";
    MACAddress = "90:e2:ba:43:fc:71";
    VNI = 3600;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.bridgeMDBs

A list of BridgeMDB sections to be added to the unit. See **systemd.network**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    MulticastGroupAddress = "ff02::1:2:3:4";
    VLANId = 10;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.bridgeVLANs

A list of BridgeVLAN sections to be added to the unit. See **systemd.network**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    VLAN = "10-20";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.cakeConfig

Each attribute in this set specifies an option in the '[CAKE]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Bandwidth = "40M";
  CompensationMode = "ptm";
  OverheadBytes = 8;
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.canConfig

Each attribute in this set specifies an option in the '[CAN]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.classfulMultiQueueingConfig

Each attribute in this set specifies an option in the '[ClassfulMultiQueueing]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Parent = "root";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.controlledDelayConfig

Each attribute in this set specifies an option in the '[ControlledDelay]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Parent = "ingress";
  TargetSec = "20msec";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.deficitRoundRobinSchedulerClassConfig
Each attribute in this set specifies an option in the '[DeficitRoundRobinSchedulerClass]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Parent = "root";
  QuantumBytes = "300k";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.deficitRoundRobinSchedulerConfig
Each attribute in this set specifies an option in the '[DeficitRoundRobinScheduler]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Parent = "root";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.dhcpPrefixDelegationConfig
Each attribute in this set specifies an option in the '[DHCPPrefixDelegation]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Announce = true;
  SubnetId = "auto";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.dhcpServerConfig
Each attribute in this set specifies an option in the '[DHCPServer]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  EmitDNS = false;
  PoolOffset = 50;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.dhcpServerStaticLeases
A list of DHCPServerStaticLease sections to be added to the unit. See **systemd.network**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    Address = "192.168.1.42";
    MACAddress = "65:43:4a:5b:d8:5f";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.dhcpV4Config
Each attribute in this set specifies an option in the '[DHCPv4]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  UseDNS = true;
  UseRoutes = true;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.dhcpV6Config

Each attribute in this set specifies an option in the '[DHCPv6]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  UseDNS = true;
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.dns

A list of dns servers to be added to the network section of the unit. See **systemd.network**(5) for details.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.domains

A list of domains to pass to the network config.

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.enhancedTransmissionSelectionConfig

Each attribute in this set specifies an option in the '[EnhancedTransmissionSelection]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Bands = 3;
  Parent = "root";
  PriorityMap = "100 200 300";
  QuantumBytes = "300k";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.extraConfig

Extra configuration append to unit

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.fairQueueingConfig

Each attribute in this set specifies an option in the ‘[FairQueueing]’ section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  FlowLimit = 5;
  Parent = "root";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.fairQueueingControlledDelayConfig

Each attribute in this set specifies an option in the ‘[FairQueueingControlledDelay]’ section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Flows = 5;
  Parent = "root";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.flowQueuePIEConfig

Each attribute in this set specifies an option in the ‘[FlowQueuePIE]’ section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  PacketLimit = "3847";
  Parent = "ingress";
```

```
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.gateway

A list of gateways to be added to the network section of the unit. See **systemd.network**(5) for details.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.genericRandomEarlyDetectionConfig

Each attribute in this set specifies an option in the '[GenericRandomEarlyDetection]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  DefaultVirtualQueue = 3;
  Parent = "root";
  VirtualQueues = 5;
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.heavyHitterFilterConfig

Each attribute in this set specifies an option in the '[HeavyHitterFilter]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  PacketLimit = 10000;
  Parent = "root";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.hierarchyTokenBucketClassConfig

Each attribute in this set specifies an option in the '[HierarchyTokenBucketClass]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Parent = "root";
  Rate = "10M";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.hierarchyTokenBucketConfig

Each attribute in this set specifies an option in the '[HierarchyTokenBucket]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Parent = "root";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.ipoIBConfig

Each attribute in this set specifies an option in the '[IPoIB]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.ipv6AcceptRAConfig

Each attribute in this set specifies an option in the '[IPv6AcceptRA]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  DHCPv6Client = "always";
  UseDNS = true;
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.ipv6AddressLabels

A list of '[IPv6AddressLabel]' sections to be added to the unit. See **systemd.network**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    Label = 0;
    Prefix = "3fff::/20";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.ipv6PREF64Prefixes

A list of IPv6PREF64Prefix sections to be added to the unit. See **systemd.network**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    Prefix = "64:ff9b::/96";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.ipv6Prefixes

A list of ipv6Prefix sections to be added to the unit. See **systemd.network**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    AddressAutoconfiguration = true;
    OnLink = true;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.ipv6RoutePrefixes

A list of ipv6RoutePrefix sections to be added to the unit. See **systemd.network**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    LifetimeSec = 3600;
    Route = "fd00::/64";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.ipv6SendRAConfig

Each attribute in this set specifies an option in the '[IPv6SendRA]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  EmitDNS = true;
  Managed = true;
  OtherInformation = true;
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.ipvlan

A list of ipvlan interfaces to be added to the network section of the unit. See **systemd.network**(5) for details.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.linkConfig

Each attribute in this set specifies an option in the '[Link]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Unmanaged = true;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.lldpConfig
Each attribute in this set specifies an option in the '[LLDP]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  MUDURL = "https://things.example.org/product_abc123/v5";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.macvlan
A list of macvlan interfaces to be added to the network section of the unit. See **systemd.network**(5) for details.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.macvtap
A list of macvtap interfaces to be added to the network section of the unit. See **systemd.network**(5) for details.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.matchConfig
Each attribute in this set specifies an option in the '[Match]' section of the unit. See **systemd.link**(5) **systemd.netdev**(5) **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Name = "eth0";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.mobileNetworkConfig
Each attribute in this set specifies an option in the '[MobileNetwork]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  APN = "access-point-name";
  AllowRoaming = false;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.name
The name of the network interface to match against.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.neighbors
A list of '[Neighbor]' sections to be added to the unit. See **systemd.network**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    Address = "192.168.0.100/24";
    LinkLayerAddress = "aa:bb:cc:dd:ee:ff";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.networkConfig
Each attribute in this set specifies an option in the '[Network]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Description = "My Network";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.networkEmulatorConfig

Each attribute in this set specifies an option in the '[NetworkEmulator]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  DelaySec = "20msec";
  Parent = "ingress";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.nextHops

A list of NextHop sections to be added to the unit. See **systemd.network**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    Gateway = "192.168.1.1";
    Id = 10;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.ntp

A list of ntp servers to be added to the network section of the unit. See **systemd.network**(5) for details.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.pfifoConfig

Each attribute in this set specifies an option in the '[PFIFO]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  PacketLimit = "300";
  Parent = "ingress";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.pfifoFastConfig

Each attribute in this set specifies an option in the '[PFIFOFast]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Parent = "ingress";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.pfifoHeadDropConfig

Each attribute in this set specifies an option in the '[PFIFOHeadDrop]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  PacketLimit = "300";
  Parent = "ingress";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.pieConfig

Each attribute in this set specifies an option in the '[PIE]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  PacketLimit = "3847";
  Parent = "ingress";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.qdiscConfig
Each attribute in this set specifies an option in the '[QDisc]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Parent = "ingress";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.quickFairQueueingConfig
Each attribute in this set specifies an option in the '[QuickFairQueueing]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Parent = "root";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.quickFairQueueingConfigClass
Each attribute in this set specifies an option in the '[QuickFairQueueingClass]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Parent = "root";
  Weight = 133;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.routes

A list of route sections to be added to the unit. See **systemd.network**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    Gateway = "192.168.0.1";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.routingPolicyRules

A list of routing policy rules sections to be added to the unit. See **systemd.network**(5) for details.

Type: list of attribute set of (systemd option)

Default:

```
[ ]
```

Example:

```
[
  {
    Family = "both";
    IncomingInterface = "eth1";
    Table = 10;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.sriovConfig

Each attribute in this set specifies an option in the '[SR−IOV]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  VLANId = 1;
  VirtualFunction = 1;
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.stochasticFairBlueConfig

Each attribute in this set specifies an option in the '[StochasticFairBlue]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  PacketLimit = "3847";
  Parent = "ingress";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.stochasticFairnessQueueingConfig

Each attribute in this set specifies an option in the '[StochasticFairnessQueueing]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Parent = "ingress";
  PerturbPeriodSec = "30";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.tokenBucketFilterConfig

Each attribute in this set specifies an option in the '[TokenBucketFilter]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Parent = "ingress";
  Rate = "100k";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.trivialLinkEqualizerConfig

Each attribute in this set specifies an option in the '[TrivialLinkEqualizer]' section of the unit. See **systemd.network**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Id = 0;
  Parent = "root";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.tunnel
A list of tunnel interfaces to be added to the network section of the unit. See **systemd.network**(5) for details.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.vlan
A list of vlan interfaces to be added to the network section of the unit. See **systemd.network**(5) for details.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.vrf
A list of vrf interfaces to be added to the network section of the unit. See **systemd.network**(5) for details.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.vxlan
A list of vxlan interfaces to be added to the network section of the unit. See **systemd.network**(5) for details.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.networks.<name>.xfrm

A list of xfrm interfaces to be added to the network section of the unit. See **systemd.network**(5) for details.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.wait−online.enable

Whether to enable the systemd−networkd−wait−online service.

systemd−networkd−wait−online can timeout and fail if there are no network interfaces available for it to manage. When systemd−networkd is enabled but a different service is responsible for managing the system's internet connection (for example, NetworkManager or connman are used to manage WiFi connections), this service is unnecessary and can be disabled.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.wait−online.anyInterface

Whether to consider the network online when any interface is online, as opposed to all of them. This is useful on portable machines with a wired and a wireless interface, for example.

This is on by default if **networking.useDHCP** is enabled.

Type: boolean

Default:

```
"config.networking.useDHCP"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.wait−online.extraArgs

Extra command−line arguments to pass to systemd−networkd−wait−online. These also affect per−interface 'systemd−network−wait−online@' services.

See **systemd−networkd−wait−online.service**(8) for all available options.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.wait−online.ignoredInterfaces

Network interfaces to be ignored when deciding if the system is online.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "wg0"
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.network.wait−online.timeout

Time to wait for the network to come online, in seconds. Set to 0 to disable.

Type: unsigned integer, meaning >=0

Default:

```
120
```

Example:

Declared by:

<nixpkgs/nixos/modules/system/boot/networkd.nix>

systemd.nspawn

Definition of systemd−nspawn configurations.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/nspawn.nix>

systemd.nspawn.<name>.enable

If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. ‘serial−getty@ttyS0’) from being started. Note that ‘enable=true’ does not make a unit start by default at boot; if you want that, see ‘wantedBy’.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/nspawn.nix>

systemd.nspawn.<name>.execConfig

Each attribute in this set specifies an option in the ‘[Exec]’ section of this unit. See **systemd.nspawn**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Parameters = "/bin/sh";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/nspawn.nix>

systemd.nspawn.<name>.filesConfig
Each attribute in this set specifies an option in the '[Files]' section of this unit. See **systemd.nspawn**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Bind = [
    "/home/alice"
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/nspawn.nix>

systemd.nspawn.<name>.networkConfig
Each attribute in this set specifies an option in the '[Network]' section of this unit. See **systemd.nspawn**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  Private = false;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/nspawn.nix>

systemd.oomd.enable
Whether to enable the 'systemd−oomd' OOM killer.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/oomd.nix>

systemd.oomd.enableRootSlice

Whether to enable oomd on the root slice (‘−.slice’).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/oomd.nix>

systemd.oomd.enableSystemSlice

Whether to enable oomd on the system slice (‘system.slice’).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/oomd.nix>

systemd.oomd.enableUserSlices

Whether to enable oomd on all user slices (‘user@.slice’) and all user owned slices.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/oomd.nix>

systemd.oomd.settings.OOM

Settings option for systemd−oomd. See **oomd.conf**(5) for available options.

Type: open submodule of attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  DefaultMemoryPressureLimit = "60%";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/oomd.nix>

systemd.paths

Definition of systemd path units; see **systemd.path**(5).

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.enable

If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. ‘serial−getty@ttyS0’) from being started. Note that ‘enable=true’ does not make a unit start by default at boot; if you want that, see ‘wantedBy’.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.after

If the specified units are started at the same time as this unit, delay this unit until they have started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.aliases

Aliases of that unit.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.before

If the specified units are started at the same time as this unit, delay them until this unit has started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.bindsTo

Like ‘requires’, but in addition, if the specified units unexpectedly disappear, this unit will be stopped as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.conflicts

If the specified units are started, then this unit is stopped and vice versa.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.description

Description of this unit used in systemd messages and progress indicators.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.documentation

A list of URIs referencing documentation for this unit or its configuration.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.name

The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.onFailure

A list of one or more units that are activated when this unit enters the “failed” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.onSuccess
A list of one or more units that are activated when this unit enters the “inactive” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.overrideStrategy
Defines how unit configuration is provided for systemd:

‘asDropinIfExists’ creates a unit file when no unit file is provided by the package otherwise it creates a drop−in file named ‘overrides.conf’.

‘asDropin’ creates a drop−in file named ‘overrides.conf’. Mainly needed to define instances for systemd template units (e.g. ‘systemd−nspawn@mycontainer.service’).

See also **systemd.unit**(5).

Type: one of “asDropinIfExists”, “asDropin”

Default:

```
"asDropinIfExists"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.partOf
If the specified units are stopped or restarted, then this unit is stopped or restarted as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.pathConfig
Each attribute in this set specifies an option in the ‘[Path]’ section of the unit. See **systemd.path**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  PathChanged = "/some/path";
  Unit = "changedpath.service";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.reloadTriggers
An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be reloaded. If anything but a reload trigger changes in the unit file, the unit will be restarted instead.

Type: list of (systemd option)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.requiredBy
Units that require (i.e. depend on and need to go down with) this unit. As discussed in the ‘wantedBy’ option description this also creates ‘.requires’ symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.requires
Start the specified units when this unit is started, and stop this unit when the specified units are stopped or fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.requisite
Similar to requires. However if the units listed are not started, they will not be started and the transaction will fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.restartTriggers
An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be restarted.

Type: list of unspecified value

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.startLimitBurst

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.startLimitIntervalSec

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.unitConfig

Each attribute in this set specifies an option in the '[Unit]' section of the unit. See **systemd.unit**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  RequiresMountsFor = "/data";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.upheldBy

Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.upholds

Keeps the specified running while this unit is running. A continuous version of 'wants'.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.wantedBy
Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to '["multi−user.target"]' for system services. Likewise for user units ('systemd.user.<name>.*') set it to '["default.target"]' to make a unit start by default when the user '<name>' logs on.

This option creates a '.wants' symlink in the given target that exists statelessly without the need for running 'systemctl enable'. The '[Install]' section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.paths.<name>.wants
Start the specified units when this unit is started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.repart.enable
Grow and add partitions to a partition table. systemd−repart only works with GPT partition tables.

To run systemd−repart while in the initrd, see 'options.boot.initrd.systemd.repart.enable'.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/repart.nix>

systemd.repart.partitions
Specify partitions as a set of the names of the definition files as the key and the partition configuration as its value. The partition configuration can use all upstream options. See **repart.d**(5) for all available options.

Type: attribute set of attribute set of (string or signed integer or boolean or list of string)

Default:

```
{ }
```

Example:

```
{
```

```
    "10-root" = {
      Type = "root";
    };
    "20-home" = {
      SizeMaxBytes = "2G";
      SizeMinBytes = "512M";
      Type = "home";
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/repart.nix>

systemd.services
Definition of systemd service units; see **systemd.service**(5).

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/testing/service-runner.nix>
<nixpkgs/nixos/modules/system/boot/systemd.nix>
<nixpkgs/nixos/modules/security/systemd-confinement.nix>

systemd.services.<name>.enable
If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. ‘serial-getty@ttyS0’) from being started. Note that ‘enable=true’ does not make a unit start by default at boot; if you want that, see ‘wantedBy’.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.enableDefaultPath
Whether to append a minimal default **PATH** environment variable to the service, containing common system utilities.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.enableStrictShellChecks
Enable running ‘shellcheck’ on the generated scripts for this unit.

When enabled, scripts generated by the unit will be checked with ‘shellcheck’ and any errors or warnings will cause the build to fail.

This affects all scripts that have been created through the ‘script’, ‘reload’, ‘preStart’, ‘postStart’, ‘preStop’ and ‘postStop’ options for systemd services. This does not affect command lines passed directly to ‘ExecStart’, ‘ExecReload’, ‘ExecStartPre’, ‘ExecStartPost’, ‘ExecStop’ or ‘ExecStopPost’.

Type: boolean

Default:

```
config.systemd.enableStrictShellChecks
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.after

If the specified units are started at the same time as this unit, delay this unit until they have started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.aliases

Aliases of that unit.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.before

If the specified units are started at the same time as this unit, delay them until this unit has started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.bindsTo

Like ‘requires’, but in addition, if the specified units unexpectedly disappear, this unit will be stopped as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.confinement.enable

If set, all the required runtime store paths for this service are bind−mounted into a ‘tmpfs’−based **chroot**(2).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/systemd−confinement.nix>

systemd.services.<name>.confinement.packages
Additional packages or strings with context to add to the closure of the chroot. By default, this includes all the packages from the **serviceConfig.ExecReload**, **serviceConfig.ExecStartPost**, **serviceConfig.ExecStartPre**, **serviceConfig.ExecStop**, **serviceConfig.ExecStopPost** and **serviceConfig.ExecStart** options. If you want to have all the dependencies of this systemd unit, you can use **confinement.fullUnit**.

Note
The store paths listed in **path** are **not** included in the closure as well as paths from other options except those listed above.

Type: list of (string or package)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/systemd−confinement.nix>

systemd.services.<name>.confinement.binSh
The program to make available as */bin/sh* inside the chroot. If this is set to ‘null’, no */bin/sh* is provided at all.

This is useful for some applications, which for example use the **system**(3) library function to execute commands.

Type: null or absolute path

Default:

```
config.environment.binsh
```

Example:

```
"${pkgs.dash}/bin/dash"
```

Declared by:
<nixpkgs/nixos/modules/security/systemd−confinement.nix>

systemd.services.<name>.confinement.fullUnit
Whether to include the full closure of the systemd unit file into the chroot, instead of just the dependencies for the executables.

Warning
While it may be tempting to just enable this option to make things work quickly, please be aware that this might add paths to the closure of the chroot that you didn’t anticipate. It’s better to use **confinement.packages** to **explicitly** add additional store paths to the chroot.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/systemd−confinement.nix>

systemd.services.<name>.confinement.mode
The value ‘full−apivfs’ (the default) sets up private */dev*, */proc*, */sys*, */tmp* and */var/tmp* file systems in a separate user name space.

If this is set to ‘chroot−only’, only the file system name space is set up along with the call to **chroot**(2).

In all cases, unless ‘serviceConfig.PrivateTmp=true’ is set, both */tmp* and */var/tmp* paths are added to

‘InaccessiblePaths=’. This is to overcome options like ‘DynamicUser=true’ implying ‘PrivateTmp=true’ without letting it being turned off. Beware however that giving processes the ‘CAP_SYS_ADMIN’ and ‘@mount’ privileges can let them undo the effects of ‘InaccessiblePaths=’.

Note
This doesn’t cover network namespaces and is solely for file system level isolation.

Type: one of “full−apivfs”, “chroot−only”

Default:

```
"full-apivfs"
```

Declared by:
<nixpkgs/nixos/modules/security/systemd−confinement.nix>

systemd.services.<name>.conflicts
If the specified units are started, then this unit is stopped and vice versa.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.description
Description of this unit used in systemd messages and progress indicators.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.documentation
A list of URIs referencing documentation for this unit or its configuration.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.environment
Environment variables passed to the service’s processes.

Type: attribute set of (null or string or absolute path or package)

Default:

```
{ }
```

Example:

```
{
  LANG = "nl_NL.UTF-8";
  PATH = "/foo/bar/bin";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.name
The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.notSocketActivated
If set, a changed unit is never assumed to be socket−activated on configuration switch, even if it might have associated socket units. Instead, the unit will be restarted (or stopped/started) as if it had no associated sockets.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.onFailure
A list of one or more units that are activated when this unit enters the “failed” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.onSuccess
A list of one or more units that are activated when this unit enters the “inactive” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.overrideStrategy
Defines how unit configuration is provided for systemd:

‘asDropinIfExists’ creates a unit file when no unit file is provided by the package otherwise it creates a drop−in file named ‘overrides.conf’.

‘asDropin’ creates a drop−in file named ‘overrides.conf’. Mainly needed to define instances for systemd template units (e.g. ‘systemd−nspawn@mycontainer.service’).

See also **systemd.unit**(5).

Type: one of “asDropinIfExists”, “asDropin”

Default:

```
"asDropinIfExists"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.partOf
If the specified units are stopped or restarted, then this unit is stopped or restarted as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.path
Packages added to the service's **PATH** environment variable. Both the *bin* and *sbin* subdirectories of each package are added.

Type: list of (package or string)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.postStart
Shell commands executed after the service's main process is started.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.postStop
Shell commands executed after the service's main process has exited.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.preStart
Shell commands executed before the service's main process is started.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.preStop

Shell commands executed to stop the service.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.reload

Shell commands executed when the service’s main process is reloaded.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.reloadIfChanged

Whether the service should be reloaded during a NixOS configuration switch if its definition has changed. If enabled, the value of **restartIfChanged** is ignored.

This option should not be used anymore in favor of **reloadTriggers** which allows more granular control of when a service is reloaded and when a service is restarted.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.reloadTriggers

An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be reloaded. If anything but a reload trigger changes in the unit file, the unit will be restarted instead.

Type: list of (systemd option)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.requiredBy

Units that require (i.e. depend on and need to go down with) this unit. As discussed in the ‘wantedBy’ option description this also creates ‘.requires’ symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.requires
Start the specified units when this unit is started, and stop this unit when the specified units are stopped or fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.requisite
Similar to requires. However if the units listed are not started, they will not be started and the transaction will fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.restartIfChanged
Whether the service should be restarted during a NixOS configuration switch if its definition has changed.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.restartTriggers
An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be restarted.

Type: list of unspecified value

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.script
Shell commands executed as the service’s main process.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.scriptArgs
Arguments passed to the main process script. Can contain specifiers ('%' placeholders expanded by systemd, see **systemd.unit**(5)).

Type: string

Default:
```
""
```

Example:
```
"%i"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.serviceConfig
Each attribute in this set specifies an option in the '[Service]' section of the unit. See **systemd.service**(5) for details.

Type: attribute set of (systemd option)

Default:
```
{ }
```

Example:
```
{
  RestartSec = 5;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.startAt
Automatically start this unit at the given date/time, which must be in the format described in **systemd.time**(7). This is equivalent to adding a corresponding timer unit with **OnCalendar** set to the value given here.

Type: string or list of string

Default:
```
[ ]
```

Example:
```
"Sun 14:00:00"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.startLimitBurst
Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.startLimitIntervalSec

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.stopIfChanged

If set, a changed unit is restarted by calling **systemctl stop** in the old configuration, then **systemctl start** in the new one. Otherwise, it is restarted in a single step using **systemctl restart** in the new configuration. The latter is less correct because it runs the 'ExecStop' commands from the new configuration.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.unitConfig

Each attribute in this set specifies an option in the '[Unit]' section of the unit. See **systemd.unit**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  RequiresMountsFor = "/data";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.upheldBy

Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.upholds

Keeps the specified running while this unit is running. A continuous version of 'wants'.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.wantedBy
Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to '["multi−user.target"]' for system services. Likewise for user units ('systemd.user.<name>.*') set it to '["default.target"]' to make a unit start by default when the user '<name>' logs on.

This option creates a '.wants' symlink in the given target that exists statelessly without the need for running 'systemctl enable'. The '[Install]' section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.services.<name>.wants
Start the specified units when this unit is started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.settings.Manager
Options for the global systemd service manager. See **systemd−system.conf**(5) man page for available options.

Type: open submodule of attribute set of (systemd option)

Default:

```
{
  DefaultIOAccounting = true;
  DefaultIPAccounting = true;
}
```

Example:

```
{
  KExecWatchdogSec = "5min";
  RebootWatchdogSec = "10min";
  RuntimeWatchdogSec = "30s";
  WatchdogDevice = "/dev/watchdog";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.shutdown

Definition of systemd shutdown executables. For each ‘NAME = VALUE’ pair of the attrSet, a link is generated from ‘/etc/systemd/system−shutdown/NAME’ to ‘VALUE’.

Type: attribute set of absolute path

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.shutdownRamfs.enable

Whether to enable pivoting back to an initramfs for shutdown.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/shutdown.nix>

systemd.shutdownRamfs.contents

Set of files that have to be linked into the shutdown ramfs

Type: attribute set of (submodule)

Example:

```
{
  "/lib/systemd/system−shutdown/zpool−sync−shutdown".source = wr \
iteShellScript "zpool" "exec ${zfs}/bin/zpool sync"
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/shutdown.nix>

systemd.shutdownRamfs.contents.<name>.enable

Whether to enable copying of this file and symlinking it.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/shutdown.nix>

systemd.shutdownRamfs.contents.<name>.dlopen.features

Features to enable via dlopen ELF notes. These will be in addition to anything included via ‘usePriority’, regardless of their priority.

Type: list of (optionally newline−terminated) single−line string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/shutdown.nix>

systemd.shutdownRamfs.contents.<name>.dlopen.usePriority
Priority of dlopen ELF notes to include. “required” is minimal, “recommended” includes “required”, and “suggested” includes “recommended”.

See: **https://systemd.io/ELF_DLOPEN_METADATA/**

Type: one of “required”, “recommended”, “suggested”

Default:

```
"recommended"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/shutdown.nix>

systemd.shutdownRamfs.contents.<name>.source
Path of the source file.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/shutdown.nix>

systemd.shutdownRamfs.contents.<name>.target
Path of the symlink.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/shutdown.nix>

systemd.shutdownRamfs.contents.<name>.text
Text of the file.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/shutdown.nix>

systemd.shutdownRamfs.storePaths
Store paths to copy into the shutdown ramfs as well.

Type: list of ((submodule) or ((optionally newline−terminated) single−line string or package) convertible to it)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/shutdown.nix>

systemd.shutdownRamfs.storePaths.*.enable

Whether to enable copying of this file and symlinking it.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/shutdown.nix>

systemd.shutdownRamfs.storePaths.*.dlopen.features

Features to enable via dlopen ELF notes. These will be in addition to anything included via ‘usePriority’, regardless of their priority.

Type: list of (optionally newline−terminated) single−line string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/shutdown.nix>

systemd.shutdownRamfs.storePaths.*.dlopen.usePriority

Priority of dlopen ELF notes to include. “required” is minimal, “recommended” includes “required”, and “suggested” includes “recommended”.

See: **https://systemd.io/ELF_DLOPEN_METADATA/**

Type: one of “required”, “recommended”, “suggested”

Default:

```
"recommended"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/shutdown.nix>

systemd.shutdownRamfs.storePaths.*.source

Path of the source file.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/shutdown.nix>

systemd.shutdownRamfs.storePaths.*.target

Path of the symlink.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/shutdown.nix>

systemd.sleep.settings.Sleep

Options for systemd sleep state logic. See **sleep.conf.d**(5) man page for available options.

Type: open submodule of attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  HibernateDelaySec = "1h";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices

Definition of slice configurations; see **systemd.slice**(5).

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.enable

If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. ‘serial−getty@ttyS0’) from being started. Note that ‘enable=true’ does not make a unit start by default at boot; if you want that, see ‘wantedBy’.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.after

If the specified units are started at the same time as this unit, delay this unit until they have started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.aliases

Aliases of that unit.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.before
If the specified units are started at the same time as this unit, delay them until this unit has started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.bindsTo
Like ‘requires’, but in addition, if the specified units unexpectedly disappear, this unit will be stopped as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.conflicts
If the specified units are started, then this unit is stopped and vice versa.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.description
Description of this unit used in systemd messages and progress indicators.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.documentation
A list of URIs referencing documentation for this unit or its configuration.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.name

The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.onFailure

A list of one or more units that are activated when this unit enters the “failed” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.onSuccess

A list of one or more units that are activated when this unit enters the “inactive” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.overrideStrategy

Defines how unit configuration is provided for systemd:

‘asDropinIfExists’ creates a unit file when no unit file is provided by the package otherwise it creates a drop−in file named ‘overrides.conf’.

‘asDropin’ creates a drop−in file named ‘overrides.conf’. Mainly needed to define instances for systemd template units (e.g. ‘systemd−nspawn@mycontainer.service’).

See also **systemd.unit**(5).

Type: one of “asDropinIfExists”, “asDropin”

Default:

```
"asDropinIfExists"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.partOf

If the specified units are stopped or restarted, then this unit is stopped or restarted as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.reloadTriggers
An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be reloaded. If anything but a reload trigger changes in the unit file, the unit will be restarted instead.

Type: list of (systemd option)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.requiredBy
Units that require (i.e. depend on and need to go down with) this unit. As discussed in the ‘wantedBy’ option description this also creates ‘.requires’ symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.requires
Start the specified units when this unit is started, and stop this unit when the specified units are stopped or fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.requisite
Similar to requires. However if the units listed are not started, they will not be started and the transaction will fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.restartTriggers
An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be restarted.

Type: list of unspecified value

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.sliceConfig

Each attribute in this set specifies an option in the '[Slice]' section of the unit. See **systemd.slice**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  MemoryMax = "2G";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.startLimitBurst

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.startLimitIntervalSec

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.unitConfig

Each attribute in this set specifies an option in the '[Unit]' section of the unit. See **systemd.unit**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  RequiresMountsFor = "/data";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.upheldBy

Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.upholds

Keeps the specified running while this unit is running. A continuous version of ‘wants’.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.wantedBy

Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to ‘["multi−user.target"]’ for system services. Likewise for user units (‘systemd.user.<name>.*’) set it to ‘["default.target"]’ to make a unit start by default when the user ‘<name>’ logs on.

This option creates a ‘.wants’ symlink in the given target that exists statelessly without the need for running ‘systemctl enable’. The ‘[Install]’ section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.slices.<name>.wants

Start the specified units when this unit is started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets

Definition of systemd socket units; see **systemd.socket**(5).

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.enable

If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. ‘serial−getty@ttyS0’) from being started. Note that ‘enable=true’ does not make a unit start by default at boot; if you want that, see ‘wantedBy’.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.after

If the specified units are started at the same time as this unit, delay this unit until they have started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.aliases

Aliases of that unit.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.before

If the specified units are started at the same time as this unit, delay them until this unit has started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.bindsTo

Like ‘requires’, but in addition, if the specified units unexpectedly disappear, this unit will be stopped as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.conflicts
If the specified units are started, then this unit is stopped and vice versa.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.description
Description of this unit used in systemd messages and progress indicators.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.documentation
A list of URIs referencing documentation for this unit or its configuration.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.listenDatagrams
For each item in this list, a ‘ListenDatagram’ option in the ‘[Socket]’ section will be created.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "0.0.0.0:993"
  "/run/my−socket"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.listenStreams
For each item in this list, a ‘ListenStream’ option in the ‘[Socket]’ section will be created.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "0.0.0.0:993"
  "/run/my-socket"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.name
The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.onFailure
A list of one or more units that are activated when this unit enters the “failed” state.

Type: list of string matching the pattern [a-zA-Z0-9@%:_.\\-]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.onSuccess
A list of one or more units that are activated when this unit enters the “inactive” state.

Type: list of string matching the pattern [a-zA-Z0-9@%:_.\\-]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.overrideStrategy
Defines how unit configuration is provided for systemd:

‘asDropinIfExists’ creates a unit file when no unit file is provided by the package otherwise it creates a drop-in file named ‘overrides.conf’.

‘asDropin’ creates a drop-in file named ‘overrides.conf’. Mainly needed to define instances for systemd template units (e.g. ‘systemd-nspawn@mycontainer.service’).

See also **systemd.unit**(5).

Type: one of “asDropinIfExists”, “asDropin”

Default:

```
"asDropinIfExists"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.partOf

If the specified units are stopped or restarted, then this unit is stopped or restarted as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.reloadTriggers

An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be reloaded. If anything but a reload trigger changes in the unit file, the unit will be restarted instead.

Type: list of (systemd option)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.requiredBy

Units that require (i.e. depend on and need to go down with) this unit. As discussed in the ‘wantedBy’ option description this also creates ‘.requires’ symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.requires

Start the specified units when this unit is started, and stop this unit when the specified units are stopped or fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.requisite

Similar to requires. However if the units listed are not started, they will not be started and the transaction will fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.restartTriggers
An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be restarted.

Type: list of unspecified value

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.socketConfig
Each attribute in this set specifies an option in the '[Socket]' section of the unit. See **systemd.socket**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  ListenStream = "/run/my-socket";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.startLimitBurst
Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.startLimitIntervalSec
Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.unitConfig
Each attribute in this set specifies an option in the '[Unit]' section of the unit. See **systemd.unit**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  RequiresMountsFor = "/data";
```

```
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.upheldBy

Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.upholds

Keeps the specified running while this unit is running. A continuous version of ‘wants’.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.wantedBy

Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to ‘["multi−user.target"]’ for system services. Likewise for user units (‘systemd.user.<name>.*’) set it to ‘["default.target"]’ to make a unit start by default when the user ‘<name>’ logs on.

This option creates a ‘.wants’ symlink in the given target that exists statelessly without the need for running ‘systemctl enable’. The ‘[Install]’ section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sockets.<name>.wants

Start the specified units when this unit is started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.suppressedSystemUnits

A list of units to skip when generating system systemd configuration directory. This has priority over upstream units, **systemd.units**, and **systemd.additionalUpstreamSystemUnits**. The main purpose of this is to prevent a upstream systemd unit from being added to the initrd with any modifications made to it by other NixOS modules.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "systemd-backlight@.service"
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.sysupdate.enable

Atomically update the host OS, container images, portable service images or other sources.

If enabled, updates are triggered in regular intervals via a ‘systemd.timer’ unit.

Please see **systemd-sysupdate**(8) for more details.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/sysupdate.nix>

systemd.sysupdate.reboot.enable

Whether to automatically reboot after an update.

If set to ‘true’, the system will automatically reboot via a ‘systemd.timer’ unit but only after a new version was installed.

This uses a unit completely separate from the one performing the update because it is typically advisable to download updates regularly while the system is up, but delay reboots until the appropriate time (i.e. typically at night).

Set this to ‘false’ if you do not want to reboot after an update. This is useful when you update a container image or another source where rebooting is not necessary in order to finalize the update.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/sysupdate.nix>

systemd.sysupdate.reboot.timerConfig

The timer configuration for rebooting after an update.

By default, the upstream configuration is used: **https://github.com/systemd/systemd/blob/main/units/systemd−sysupdate−reboot.timer**

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  OnCalendar = "Sun 14:00:00";
  Unit = "foo.service";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/sysupdate.nix>

systemd.sysupdate.timerConfig

The timer configuration for performing the update.

By default, the upstream configuration is used: **https://github.com/systemd/systemd/blob/main/units/systemd−sysupdate.timer**

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  OnCalendar = "Sun 14:00:00";
  Unit = "foo.service";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/sysupdate.nix>

systemd.sysupdate.transfers

Specify transfers as a set of the names of the transfer files as the key and the configuration as its value. The configuration can use all upstream options. See **sysupdate.d**(5) for all available options.

Type: attribute set of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a non−empty list of them)

Default:

```
{ }
```

Example:

```
{
  "10−uki" = {
    Source = {
      MatchPattern = [
        "nixos_@v+@l−@d.efi"
        "nixos_@v+@l.efi"
        "nixos_@v.efi"
      ];
      Path = "https://download.example.com/";
```

```
            Type = "url-file";
          };
          Target = {
            InstancesMax = 2;
            MatchPattern = ''
              nixos_@v+@l-@d.efi"; \
              nixos_@v+@l.efi \
              nixos_@v.efi
            '';
            Mode = "0444";
            Path = "/EFI/Linux";
            PathRelativeTo = "boot";
            TriesDone = 0;
            TriesLeft = 3;
            Type = "regular-file";
          };
          Transfer = {
            ProtectVersion = "%A";
          };
        };
      }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/sysupdate.nix>

systemd.sysusers.enable

If enabled, users are created with systemd-sysusers instead of with the custom 'update-users-groups.pl' script.

Note: This is experimental.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/sysusers.nix>

systemd.targets

Definition of systemd target units; see **systemd.target**(5)

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.enable

If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. 'serial-getty@ttyS0') from being started. Note that 'enable=true' does not make a unit start by default at boot; if you want that, see 'wantedBy'.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.after
If the specified units are started at the same time as this unit, delay this unit until they have started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.aliases
Aliases of that unit.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.before
If the specified units are started at the same time as this unit, delay them until this unit has started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.bindsTo
Like ‘requires’, but in addition, if the specified units unexpectedly disappear, this unit will be stopped as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.conflicts
If the specified units are started, then this unit is stopped and vice versa.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.description
Description of this unit used in systemd messages and progress indicators.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.documentation
A list of URIs referencing documentation for this unit or its configuration.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.name
The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.onFailure
A list of one or more units that are activated when this unit enters the “failed” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.onSuccess
A list of one or more units that are activated when this unit enters the “inactive” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.overrideStrategy

Defines how unit configuration is provided for systemd:

'asDropinIfExists' creates a unit file when no unit file is provided by the package otherwise it creates a drop−in file named 'overrides.conf'.

'asDropin' creates a drop−in file named 'overrides.conf'. Mainly needed to define instances for systemd template units (e.g. 'systemd−nspawn@mycontainer.service').

See also **systemd.unit**(5).

Type: one of "asDropinIfExists", "asDropin"

Default:

```
"asDropinIfExists"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.partOf

If the specified units are stopped or restarted, then this unit is stopped or restarted as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.reloadTriggers

An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be reloaded. If anything but a reload trigger changes in the unit file, the unit will be restarted instead.

Type: list of (systemd option)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.requiredBy

Units that require (i.e. depend on and need to go down with) this unit. As discussed in the 'wantedBy' option description this also creates '.requires' symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.requires

Start the specified units when this unit is started, and stop this unit when the specified units are stopped or fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.requisite

Similar to requires. However if the units listed are not started, they will not be started and the transaction will fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.restartTriggers

An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be restarted.

Type: list of unspecified value

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.startLimitBurst

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.startLimitIntervalSec

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.unitConfig

Each attribute in this set specifies an option in the ‘[Unit]’ section of the unit. See **systemd.unit**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  RequiresMountsFor = "/data";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.upheldBy
Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.upholds
Keeps the specified running while this unit is running. A continuous version of ‘wants’.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.wantedBy
Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to ‘["multi−user.target"]’ for system services. Likewise for user units (‘systemd.user.<name>.*’) set it to ‘["default.target"]’ to make a unit start by default when the user ‘<name>’ logs on.

This option creates a ‘.wants’ symlink in the given target that exists statelessly without the need for running ‘systemctl enable’. The ‘[Install]’ section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.targets.<name>.wants
Start the specified units when this unit is started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers

Definition of systemd timer units; see **systemd.timer**(5).

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.enable

If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. ‘serial−getty@ttyS0’) from being started. Note that ‘enable=true’ does not make a unit start by default at boot; if you want that, see ‘wantedBy’.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.after

If the specified units are started at the same time as this unit, delay this unit until they have started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.aliases

Aliases of that unit.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.before

If the specified units are started at the same time as this unit, delay them until this unit has started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.bindsTo

Like ‘requires’, but in addition, if the specified units unexpectedly disappear, this unit will be stopped as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.conflicts

If the specified units are started, then this unit is stopped and vice versa.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.description

Description of this unit used in systemd messages and progress indicators.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.documentation

A list of URIs referencing documentation for this unit or its configuration.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.name

The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.onFailure

A list of one or more units that are activated when this unit enters the “failed” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.onSuccess
A list of one or more units that are activated when this unit enters the “inactive” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.overrideStrategy
Defines how unit configuration is provided for systemd:

‘asDropinIfExists’ creates a unit file when no unit file is provided by the package otherwise it creates a drop−in file named ‘overrides.conf’.

‘asDropin’ creates a drop−in file named ‘overrides.conf’. Mainly needed to define instances for systemd template units (e.g. ‘systemd−nspawn@mycontainer.service’).

See also **systemd.unit**(5).

Type: one of “asDropinIfExists”, “asDropin”

Default:

```
"asDropinIfExists"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.partOf
If the specified units are stopped or restarted, then this unit is stopped or restarted as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.reloadTriggers
An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be reloaded. If anything but a reload trigger changes in the unit file, the unit will be restarted instead.

Type: list of (systemd option)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.requiredBy

Units that require (i.e. depend on and need to go down with) this unit. As discussed in the 'wantedBy' option description this also creates '.requires' symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.requires

Start the specified units when this unit is started, and stop this unit when the specified units are stopped or fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.requisite

Similar to requires. However if the units listed are not started, they will not be started and the transaction will fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.restartTriggers

An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be restarted.

Type: list of unspecified value

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.startLimitBurst

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.startLimitIntervalSec

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.timerConfig

Each attribute in this set specifies an option in the '[Timer]' section of the unit. See **systemd.timer**(5) and **systemd.time**(7) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  OnCalendar = "Sun 14:00:00";
  Unit = "foo.service";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.unitConfig

Each attribute in this set specifies an option in the '[Unit]' section of the unit. See **systemd.unit**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  RequiresMountsFor = "/data";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.upheldBy

Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.upholds

Keeps the specified running while this unit is running. A continuous version of ‘wants’.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.wantedBy

Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to ‘["multi−user.target"]’ for system services. Likewise for user units (‘systemd.user.<name>.*’) set it to ‘["default.target"]’ to make a unit start by default when the user ‘<name>’ logs on.

This option creates a ‘.wants’ symlink in the given target that exists statelessly without the need for running ‘systemctl enable’. The ‘[Install]’ section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.timers.<name>.wants

Start the specified units when this unit is started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.tmpfiles.packages

List of packages containing **systemd−tmpfiles** rules.

All files ending in .conf found in *«pkg»/lib/tmpfiles.d* will be included. If this folder does not exist or does not contain any files an error will be returned instead.

If a *lib* output is available, rules are searched there and only there. If there is no *lib* output it will fall back to *out* and if that does not exist either, the default output will be used.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.lvm2 ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

systemd.tmpfiles.rules
Rules for creation, deletion and cleaning of volatile and temporary files automatically. See **tmpfiles.d**(5) for the exact format.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "d /tmp 1777 root root 10d"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

systemd.tmpfiles.settings
Declare systemd−tmpfiles rules to create, delete, and clean up volatile and temporary files and directories.

Even though the service is called ‘*tmp*files’ you can also create persistent files.

Type: attribute set of attribute set of attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "10−mypackage" = {
    "/var/lib/my−service/statefolder" = {
      d = {
        group = "root";
        mode = "0755";
        user = "root";
      };
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

systemd.tmpfiles.settings.<config−name>.<path>.<tmpfiles−type>.age
Delete a file when it reaches a certain age.

If a file or directory is older than the current time minus the age field, it is deleted.

If set to ‘"−"’ no automatic clean−up is done.

Type: string

Default:

```
"−"
```

Example:

```
"10d"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

systemd.tmpfiles.settings.<config−name>.<path>.<tmpfiles−type>.argument
An argument whose meaning depends on the type of operation.

Please see the upstream documentation for the meaning of this parameter in different situations: **tmpfiles.d**(5)

Type: string

Default:
`""`

Example:
`""`

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

systemd.tmpfiles.settings.<config−name>.<path>.<tmpfiles−type>.group
The group of the file.

This may either be a numeric ID or a user/group name.

If omitted or when set to '"−"', the user and group of the user who invokes systemd−tmpfiles is used.

Type: string

Default:
`"-"`

Example:
`"root"`

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

systemd.tmpfiles.settings.<config−name>.<path>.<tmpfiles−type>.mode
The file access mode to use when creating this file or directory.

Type: string

Default:
`"-"`

Example:
`"0755"`

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

systemd.tmpfiles.settings.<config−name>.<path>.<tmpfiles−type>.type
The type of operation to perform on the file.

The type consists of a single letter and optionally one or more modifier characters.

Please see the upstream documentation for the available types and more details: **tmpfiles.d**(5)

Type: string

Default:
`"‹tmpfiles-type›"`

Example:

```
"d"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

systemd.tmpfiles.settings.<config−name>.<path>.<tmpfiles−type>.user
The user of the file.

This may either be a numeric ID or a user/group name.

If omitted or when set to '"−"', the user and group of the user who invokes systemd−tmpfiles is used.

Type: string

Default:

```
"−"
```

Example:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

systemd.tpm2.enable
Whether to enable systemd TPM2 support.

Type: boolean

Default:

```
"systemd.package.withTpm2Units"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/tpm2.nix>

systemd.units
Definition of systemd units; see **systemd.unit**(5).

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.units.<name>.enable
If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. 'serial−getty@ttyS0') from being started. Note that 'enable=true' does not make a unit start by default at boot; if you want that, see 'wantedBy'.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.units.<name>.aliases

Aliases of that unit.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.units.<name>.name

The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.units.<name>.overrideStrategy

Defines how unit configuration is provided for systemd:

‘asDropinIfExists’ creates a unit file when no unit file is provided by the package otherwise it creates a drop−in file named ‘overrides.conf’.

‘asDropin’ creates a drop−in file named ‘overrides.conf’. Mainly needed to define instances for systemd template units (e.g. ‘systemd−nspawn@mycontainer.service’).

See also **systemd.unit**(5).

Type: one of “asDropinIfExists”, “asDropin”

Default:

```
"asDropinIfExists"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.units.<name>.requiredBy

Units that require (i.e. depend on and need to go down with) this unit. As discussed in the ‘wantedBy’ option description this also creates ‘.requires’ symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.units.<name>.text

Text of this systemd unit.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.units.<name>.upheldBy
Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.units.<name>.wantedBy
Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to '["multi−user.target"]' for system services. Likewise for user units ('systemd.user.<name>.*') set it to '["default.target"]' to make a unit start by default when the user '<name>' logs on.

This option creates a '.wants' symlink in the given target that exists statelessly without the need for running 'systemctl enable'. The '[Install]' section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd.nix>

systemd.user.extraConfig
Extra config options for systemd user instances. See **systemd−user.conf**(5) for available options.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
"DefaultTimeoutStartSec=60"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.generators
Definition of systemd generators; see **systemd.generator**(5).

For each 'NAME = VALUE' pair of the attrSet, a link is generated from '/etc/systemd/user−generators/NAME' to 'VALUE'.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
```

```
  systemd-gpt-auto-generator = "/dev/null";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths
Definition of systemd per-user path units.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.enable
If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. 'serial-getty@ttyS0') from being started. Note that 'enable=true' does not make a unit start by default at boot; if you want that, see 'wantedBy'.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.after
If the specified units are started at the same time as this unit, delay this unit until they have started.

Type: list of string matching the pattern [a-zA-Z0-9@%:_.\\-]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.aliases
Aliases of that unit.

Type: list of string matching the pattern [a-zA-Z0-9@%:_.\\-]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.before
If the specified units are started at the same time as this unit, delay them until this unit has started.

Type: list of string matching the pattern [a-zA-Z0-9@%:_.\\-]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.bindsTo
Like ‘requires’, but in addition, if the specified units unexpectedly disappear, this unit will be stopped as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.conflicts
If the specified units are started, then this unit is stopped and vice versa.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.description
Description of this unit used in systemd messages and progress indicators.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.documentation
A list of URIs referencing documentation for this unit or its configuration.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.name
The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.onFailure

A list of one or more units that are activated when this unit enters the “failed” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.onSuccess

A list of one or more units that are activated when this unit enters the “inactive” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.overrideStrategy

Defines how unit configuration is provided for systemd:

‘asDropinIfExists’ creates a unit file when no unit file is provided by the package otherwise it creates a drop−in file named ‘overrides.conf’.

‘asDropin’ creates a drop−in file named ‘overrides.conf’. Mainly needed to define instances for systemd template units (e.g. ‘systemd−nspawn@mycontainer.service’).

See also **systemd.unit**(5).

Type: one of “asDropinIfExists”, “asDropin”

Default:

```
"asDropinIfExists"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.partOf

If the specified units are stopped or restarted, then this unit is stopped or restarted as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.pathConfig

Each attribute in this set specifies an option in the ‘[Path]’ section of the unit. See **systemd.path**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  PathChanged = "/some/path";
  Unit = "changedpath.service";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.reloadTriggers

An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be reloaded. If anything but a reload trigger changes in the unit file, the unit will be restarted instead.

Type: list of (systemd option)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.requiredBy

Units that require (i.e. depend on and need to go down with) this unit. As discussed in the ‘wantedBy’ option description this also creates ‘.requires’ symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.requires

Start the specified units when this unit is started, and stop this unit when the specified units are stopped or fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.requisite

Similar to requires. However if the units listed are not started, they will not be started and the transaction will fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.restartTriggers
An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be restarted.

Type: list of unspecified value

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.startLimitBurst
Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.startLimitIntervalSec
Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.unitConfig
Each attribute in this set specifies an option in the '[Unit]' section of the unit. See **systemd.unit**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  RequiresMountsFor = "/data";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.upheldBy
Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.upholds
Keeps the specified running while this unit is running. A continuous version of ‘wants’.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.wantedBy
Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to ‘["multi−user.target"]’ for system services. Likewise for user units (‘systemd.user.<name>.*’) set it to ‘["default.target"]’ to make a unit start by default when the user ‘<name>’ logs on.

This option creates a ‘.wants’ symlink in the given target that exists statelessly without the need for running ‘systemctl enable’. The ‘[Install]’ section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.paths.<name>.wants
Start the specified units when this unit is started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services
Definition of systemd per−user service units.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.enable

If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. ‘serial−getty@ttyS0’) from being started. Note that ‘enable=true’ does not make a unit start by default at boot; if you want that, see ‘wantedBy’.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.enableDefaultPath

Whether to append a minimal default **PATH** environment variable to the service, containing common system utilities.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.enableStrictShellChecks

Enable running ‘shellcheck’ on the generated scripts for this unit.

When enabled, scripts generated by the unit will be checked with ‘shellcheck’ and any errors or warnings will cause the build to fail.

This affects all scripts that have been created through the ‘script’, ‘reload’, ‘preStart’, ‘postStart’, ‘preStop’ and ‘postStop’ options for systemd services. This does not affect command lines passed directly to ‘ExecStart’, ‘ExecReload’, ‘ExecStartPre’, ‘ExecStartPost’, ‘ExecStop’ or ‘ExecStopPost’.

Type: boolean

Default:

```
config.systemd.enableStrictShellChecks
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.after

If the specified units are started at the same time as this unit, delay this unit until they have started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.aliases

Aliases of that unit.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.before
If the specified units are started at the same time as this unit, delay them until this unit has started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.bindsTo
Like ‘requires’, but in addition, if the specified units unexpectedly disappear, this unit will be stopped as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.conflicts
If the specified units are started, then this unit is stopped and vice versa.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.description
Description of this unit used in systemd messages and progress indicators.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.documentation
A list of URIs referencing documentation for this unit or its configuration.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.environment

Environment variables passed to the service's processes.

Type: attribute set of (null or string or absolute path or package)

Default:

```
{ }
```

Example:

```
{
  LANG = "nl_NL.UTF-8";
  PATH = "/foo/bar/bin";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.name

The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.notSocketActivated

If set, a changed unit is never assumed to be socket−activated on configuration switch, even if it might have associated socket units. Instead, the unit will be restarted (or stopped/started) as if it had no associated sockets.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.onFailure

A list of one or more units that are activated when this unit enters the "failed" state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.onSuccess

A list of one or more units that are activated when this unit enters the "inactive" state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.overrideStrategy
Defines how unit configuration is provided for systemd:

'asDropinIfExists' creates a unit file when no unit file is provided by the package otherwise it creates a drop−in file named 'overrides.conf'.

'asDropin' creates a drop−in file named 'overrides.conf'. Mainly needed to define instances for systemd template units (e.g. 'systemd−nspawn@mycontainer.service').

See also **systemd.unit**(5).

Type: one of "asDropinIfExists", "asDropin"

Default:

```
"asDropinIfExists"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.partOf
If the specified units are stopped or restarted, then this unit is stopped or restarted as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.path
Packages added to the service's **PATH** environment variable. Both the *bin* and *sbin* subdirectories of each package are added.

Type: list of (package or string)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.postStart
Shell commands executed after the service's main process is started.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.postStop
Shell commands executed after the service's main process has exited.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.preStart
Shell commands executed before the service's main process is started.

Type: strings concatenated with "\n"

Default:
```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.preStop
Shell commands executed to stop the service.

Type: strings concatenated with "\n"

Default:
```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.reload
Shell commands executed when the service's main process is reloaded.

Type: strings concatenated with "\n"

Default:
```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.reloadIfChanged
Whether the service should be reloaded during a NixOS configuration switch if its definition has changed. If enabled, the value of **restartIfChanged** is ignored.

This option should not be used anymore in favor of **reloadTriggers** which allows more granular control of when a service is reloaded and when a service is restarted.

Type: boolean

Default:
```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.reloadTriggers
An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be reloaded. If anything but a reload trigger changes in the unit file, the unit will be restarted instead.

Type: list of (systemd option)

Default:
```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.requiredBy
Units that require (i.e. depend on and need to go down with) this unit. As discussed in the 'wantedBy' option description this also creates '.requires' symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.requires
Start the specified units when this unit is started, and stop this unit when the specified units are stopped or fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.requisite
Similar to requires. However if the units listed are not started, they will not be started and the transaction will fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.restartIfChanged
Whether the service should be restarted during a NixOS configuration switch if its definition has changed.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.restartTriggers
An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be restarted.

Type: list of unspecified value

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.script
Shell commands executed as the service's main process.

Type: strings concatenated with "\n"

Default:
```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.scriptArgs
Arguments passed to the main process script. Can contain specifiers ('%' placeholders expanded by systemd, see **systemd.unit**(5)).

Type: string

Default:
```
""
```

Example:
```
"%i"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.serviceConfig
Each attribute in this set specifies an option in the '[Service]' section of the unit. See **systemd.service**(5) for details.

Type: attribute set of (systemd option)

Default:
```
{ }
```

Example:
```
{
  RestartSec = 5;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.startAt
Automatically start this unit at the given date/time, which must be in the format described in **systemd.time**(7). This is equivalent to adding a corresponding timer unit with **OnCalendar** set to the value given here.

Type: string or list of string

Default:
```
[ ]
```

Example:
```
"Sun 14:00:00"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.startLimitBurst
Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.startLimitIntervalSec
Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.stopIfChanged
If set, a changed unit is restarted by calling **systemctl stop** in the old configuration, then **systemctl start** in the new one. Otherwise, it is restarted in a single step using **systemctl restart** in the new configuration. The latter is less correct because it runs the 'ExecStop' commands from the new configuration.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.unitConfig
Each attribute in this set specifies an option in the '[Unit]' section of the unit. See **systemd.unit**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  RequiresMountsFor = "/data";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.upheldBy
Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.upholds
Keeps the specified running while this unit is running. A continuous version of ‘wants’.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.wantedBy
Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to ‘["multi−user.target"]’ for system services. Likewise for user units (‘systemd.user.<name>.*’) set it to ‘["default.target"]’ to make a unit start by default when the user ‘<name>’ logs on.

This option creates a ‘.wants’ symlink in the given target that exists statelessly without the need for running ‘systemctl enable’. The ‘[Install]’ section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.services.<name>.wants
Start the specified units when this unit is started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices
Definition of systemd per−user slice units.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.enable

If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. ‘serial−getty@ttyS0’) from being started. Note that ‘enable=true’ does not make a unit start by default at boot; if you want that, see ‘wantedBy’.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.after

If the specified units are started at the same time as this unit, delay this unit until they have started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.aliases

Aliases of that unit.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.before

If the specified units are started at the same time as this unit, delay them until this unit has started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.bindsTo

Like ‘requires’, but in addition, if the specified units unexpectedly disappear, this unit will be stopped as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.conflicts
If the specified units are started, then this unit is stopped and vice versa.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.description
Description of this unit used in systemd messages and progress indicators.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.documentation
A list of URIs referencing documentation for this unit or its configuration.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.name
The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.onFailure
A list of one or more units that are activated when this unit enters the “failed” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.onSuccess

A list of one or more units that are activated when this unit enters the “inactive” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.overrideStrategy

Defines how unit configuration is provided for systemd:

‘asDropinIfExists’ creates a unit file when no unit file is provided by the package otherwise it creates a drop−in file named ‘overrides.conf’.

‘asDropin’ creates a drop−in file named ‘overrides.conf’. Mainly needed to define instances for systemd template units (e.g. ‘systemd−nspawn@mycontainer.service’).

See also **systemd.unit**(5).

Type: one of “asDropinIfExists”, “asDropin”

Default:

```
"asDropinIfExists"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.partOf

If the specified units are stopped or restarted, then this unit is stopped or restarted as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.reloadTriggers

An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be reloaded. If anything but a reload trigger changes in the unit file, the unit will be restarted instead.

Type: list of (systemd option)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.requiredBy

Units that require (i.e. depend on and need to go down with) this unit. As discussed in the ‘wantedBy’ option description this also creates ‘.requires’ symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.requires

Start the specified units when this unit is started, and stop this unit when the specified units are stopped or fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.requisite

Similar to requires. However if the units listed are not started, they will not be started and the transaction will fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.restartTriggers

An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be restarted.

Type: list of unspecified value

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.sliceConfig

Each attribute in this set specifies an option in the ‘[Slice]’ section of the unit. See **systemd.slice**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  MemoryMax = "2G";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.startLimitBurst

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.startLimitIntervalSec

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.unitConfig

Each attribute in this set specifies an option in the '[Unit]' section of the unit. See **systemd.unit**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  RequiresMountsFor = "/data";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.upheldBy

Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.upholds

Keeps the specified running while this unit is running. A continuous version of 'wants'.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.wantedBy

Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to ‘["multi−user.target"]’ for system services. Likewise for user units (‘systemd.user.<name>.*’) set it to ‘["default.target"]’ to make a unit start by default when the user ‘<name>’ logs on.

This option creates a ‘.wants’ symlink in the given target that exists statelessly without the need for running ‘systemctl enable’. The ‘[Install]’ section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.slices.<name>.wants

Start the specified units when this unit is started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets

Definition of systemd per−user socket units.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.enable

If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. ‘serial−getty@ttyS0’) from being started. Note that ‘enable=true’ does not make a unit start by default at boot; if you want that, see ‘wantedBy’.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.after

If the specified units are started at the same time as this unit, delay this unit until they have started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.aliases

Aliases of that unit.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.before

If the specified units are started at the same time as this unit, delay them until this unit has started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.bindsTo

Like ‘requires’, but in addition, if the specified units unexpectedly disappear, this unit will be stopped as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.conflicts

If the specified units are started, then this unit is stopped and vice versa.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.description

Description of this unit used in systemd messages and progress indicators.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.documentation
A list of URIs referencing documentation for this unit or its configuration.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.listenDatagrams
For each item in this list, a 'ListenDatagram' option in the '[Socket]' section will be created.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "0.0.0.0:993"
  "/run/my-socket"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.listenStreams
For each item in this list, a 'ListenStream' option in the '[Socket]' section will be created.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "0.0.0.0:993"
  "/run/my-socket"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.name
The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.onFailure

A list of one or more units that are activated when this unit enters the “failed” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.onSuccess

A list of one or more units that are activated when this unit enters the “inactive” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.overrideStrategy

Defines how unit configuration is provided for systemd:

‘asDropinIfExists’ creates a unit file when no unit file is provided by the package otherwise it creates a drop−in file named ‘overrides.conf’.

‘asDropin’ creates a drop−in file named ‘overrides.conf’. Mainly needed to define instances for systemd template units (e.g. ‘systemd−nspawn@mycontainer.service’).

See also **systemd.unit**(5).

Type: one of “asDropinIfExists”, “asDropin”

Default:

```
"asDropinIfExists"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.partOf

If the specified units are stopped or restarted, then this unit is stopped or restarted as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.reloadTriggers

An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be reloaded. If anything but a reload trigger changes in the unit file, the unit will be restarted instead.

Type: list of (systemd option)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.requiredBy
Units that require (i.e. depend on and need to go down with) this unit. As discussed in the 'wantedBy' option description this also creates '.requires' symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.requires
Start the specified units when this unit is started, and stop this unit when the specified units are stopped or fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.requisite
Similar to requires. However if the units listed are not started, they will not be started and the transaction will fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.restartTriggers
An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be restarted.

Type: list of unspecified value

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.socketConfig
Each attribute in this set specifies an option in the '[Socket]' section of the unit. See **systemd.socket**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  ListenStream = "/run/my-socket";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.startLimitBurst
Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.startLimitIntervalSec
Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.unitConfig
Each attribute in this set specifies an option in the '[Unit]' section of the unit. See **systemd.unit**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  RequiresMountsFor = "/data";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.upheldBy
Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a-zA-Z0-9@%:_.\\-]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.upholds
Keeps the specified running while this unit is running. A continuous version of 'wants'.

Type: list of string matching the pattern [a-zA-Z0-9@%:_.\\-]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.wantedBy

Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to '["multi−user.target"]' for system services. Likewise for user units ('systemd.user.<name>.*') set it to '["default.target"]' to make a unit start by default when the user '<name>' logs on.

This option creates a '.wants' symlink in the given target that exists statelessly without the need for running 'systemctl enable'. The '[Install]' section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.sockets.<name>.wants

Start the specified units when this unit is started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets

Definition of systemd per−user target units.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.enable

If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. 'serial−getty@ttyS0') from being started. Note that 'enable=true' does not make a unit start by default at boot; if you want that, see 'wantedBy'.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.after

If the specified units are started at the same time as this unit, delay this unit until they have started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.aliases

Aliases of that unit.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.before

If the specified units are started at the same time as this unit, delay them until this unit has started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.bindsTo

Like ‘requires’, but in addition, if the specified units unexpectedly disappear, this unit will be stopped as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.conflicts

If the specified units are started, then this unit is stopped and vice versa.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.description

Description of this unit used in systemd messages and progress indicators.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.documentation

A list of URIs referencing documentation for this unit or its configuration.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.name

The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.onFailure

A list of one or more units that are activated when this unit enters the “failed” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.onSuccess

A list of one or more units that are activated when this unit enters the “inactive” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.overrideStrategy

Defines how unit configuration is provided for systemd:

‘asDropinIfExists’ creates a unit file when no unit file is provided by the package otherwise it creates a drop−in file named ‘overrides.conf’.

‘asDropin’ creates a drop−in file named ‘overrides.conf’. Mainly needed to define instances for systemd template units (e.g. ‘systemd−nspawn@mycontainer.service’).

See also **systemd.unit**(5).

Type: one of “asDropinIfExists”, “asDropin”

Default:

```
"asDropinIfExists"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.partOf
If the specified units are stopped or restarted, then this unit is stopped or restarted as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.reloadTriggers
An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be reloaded. If anything but a reload trigger changes in the unit file, the unit will be restarted instead.

Type: list of (systemd option)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.requiredBy
Units that require (i.e. depend on and need to go down with) this unit. As discussed in the ‘wantedBy’ option description this also creates ‘.requires’ symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.requires
Start the specified units when this unit is started, and stop this unit when the specified units are stopped or fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.requisite

Similar to requires. However if the units listed are not started, they will not be started and the transaction will fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.restartTriggers

An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be restarted.

Type: list of unspecified value

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.startLimitBurst

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.startLimitIntervalSec

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.unitConfig

Each attribute in this set specifies an option in the ‘[Unit]’ section of the unit. See **systemd.unit**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  RequiresMountsFor = "/data";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.upheldBy

Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.upholds

Keeps the specified running while this unit is running. A continuous version of ‘wants’.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.wantedBy

Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to ‘["multi−user.target"]’ for system services. Likewise for user units (‘systemd.user.<name>.*’) set it to ‘["default.target"]’ to make a unit start by default when the user ‘<name>’ logs on.

This option creates a ‘.wants’ symlink in the given target that exists statelessly without the need for running ‘systemctl enable’. The ‘[Install]’ section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.targets.<name>.wants

Start the specified units when this unit is started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers

Definition of systemd per−user timer units.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.enable

If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. ‘serial−getty@ttyS0’) from being started. Note that ‘enable=true’ does not make a unit start by default at boot; if you want that, see ‘wantedBy’.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.after

If the specified units are started at the same time as this unit, delay this unit until they have started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.aliases

Aliases of that unit.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.before

If the specified units are started at the same time as this unit, delay them until this unit has started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.bindsTo

Like ‘requires’, but in addition, if the specified units unexpectedly disappear, this unit will be stopped as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.conflicts
If the specified units are started, then this unit is stopped and vice versa.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.description
Description of this unit used in systemd messages and progress indicators.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.documentation
A list of URIs referencing documentation for this unit or its configuration.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.name
The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.onFailure
A list of one or more units that are activated when this unit enters the “failed” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.onSuccess

A list of one or more units that are activated when this unit enters the “inactive” state.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.overrideStrategy

Defines how unit configuration is provided for systemd:

‘asDropinIfExists’ creates a unit file when no unit file is provided by the package otherwise it creates a drop−in file named ‘overrides.conf’.

‘asDropin’ creates a drop−in file named ‘overrides.conf’. Mainly needed to define instances for systemd template units (e.g. ‘systemd−nspawn@mycontainer.service’).

See also **systemd.unit**(5).

Type: one of “asDropinIfExists”, “asDropin”

Default:

```
"asDropinIfExists"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.partOf

If the specified units are stopped or restarted, then this unit is stopped or restarted as well.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.reloadTriggers

An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be reloaded. If anything but a reload trigger changes in the unit file, the unit will be restarted instead.

Type: list of (systemd option)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.requiredBy

Units that require (i.e. depend on and need to go down with) this unit. As discussed in the ‘wantedBy’ option description this also creates ‘.requires’ symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.requires

Start the specified units when this unit is started, and stop this unit when the specified units are stopped or fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.requisite

Similar to requires. However if the units listed are not started, they will not be started and the transaction will fail.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.restartTriggers

An arbitrary list of items such as derivations. If any item in the list changes between reconfigurations, the service will be restarted.

Type: list of unspecified value

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.startLimitBurst

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.startLimitIntervalSec

Configure unit start rate limiting. Units which are started more than startLimitBurst times within an interval time interval are not permitted to start any more.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.timerConfig

Each attribute in this set specifies an option in the '[Timer]' section of the unit. See **systemd.timer**(5) and **systemd.time**(7) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  OnCalendar = "Sun 14:00:00";
  Unit = "foo.service";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.unitConfig

Each attribute in this set specifies an option in the '[Unit]' section of the unit. See **systemd.unit**(5) for details.

Type: attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  RequiresMountsFor = "/data";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.upheldBy

Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.upholds

Keeps the specified running while this unit is running. A continuous version of 'wants'.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.wantedBy

Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to ‘["multi−user.target"]’ for system services. Likewise for user units (‘systemd.user.<name>.*’) set it to ‘["default.target"]’ to make a unit start by default when the user ‘<name>’ logs on.

This option creates a ‘.wants’ symlink in the given target that exists statelessly without the need for running ‘systemctl enable’. The ‘[Install]’ section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.timers.<name>.wants

Start the specified units when this unit is started.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.tmpfiles.enable

Whether to enable systemd user units systemd−tmpfiles−setup.service and systemd−tmpfiles−clean.timer.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.tmpfiles.rules

Global user rules for creation, deletion and cleaning of volatile and temporary files automatically. See **tmpfiles.d**(5) for the exact format.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "D %C - - - 7d"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.tmpfiles.users
Per−user rules for creation, deletion and cleaning of volatile and temporary files automatically.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.tmpfiles.users.<name>.rules
Per−user rules for creation, deletion and cleaning of volatile and temporary files automatically. See **tmpfiles.d**(5) for the exact format.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "D %C − − − 7d"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.units
Definition of systemd per−user units.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.units.<name>.enable
If set to false, this unit will be a symlink to /dev/null. This is primarily useful to prevent specific template instances (e.g. ‘serial−getty@ttyS0’) from being started. Note that ‘enable=true’ does not make a unit start by default at boot; if you want that, see ‘wantedBy’.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.units.<name>.aliases
Aliases of that unit.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.units.<name>.name
The name of this systemd unit, including its extension. This can be used to refer to this unit from other systemd units.

Type: string

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.units.<name>.overrideStrategy
Defines how unit configuration is provided for systemd:

‘asDropinIfExists’ creates a unit file when no unit file is provided by the package otherwise it creates a drop−in file named ‘overrides.conf’.

‘asDropin’ creates a drop−in file named ‘overrides.conf’. Mainly needed to define instances for systemd template units (e.g. ‘systemd−nspawn@mycontainer.service’).

See also **systemd.unit**(5).

Type: one of “asDropinIfExists”, “asDropin”

Default:

```
"asDropinIfExists"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.units.<name>.requiredBy
Units that require (i.e. depend on and need to go down with) this unit. As discussed in the ‘wantedBy’ option description this also creates ‘.requires’ symlinks automatically.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.units.<name>.text
Text of this systemd unit.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.units.<name>.upheldBy
Keep this unit running as long as the listed units are running. This is a continuously enforced version of wantedBy.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

systemd.user.units.<name>.wantedBy
Units that want (i.e. depend on) this unit. The default method for starting a unit by default at boot time is to set this option to '["multi−user.target"]' for system services. Likewise for user units ('systemd.user.<name>.*') set it to '["default.target"]' to make a unit start by default when the user '<name>' logs on.

This option creates a '.wants' symlink in the given target that exists statelessly without the need for running 'systemctl enable'. The '[Install]' section described in **systemd.unit**(5) however is not supported because it is a stateful process that does not fit well into the NixOS design.

Type: list of string matching the pattern [a−zA−Z0−9@%:_.\\−]+[.](service|socket|device|mount|automount|swap|target|path|timer|scope|slice)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/user.nix>

time.hardwareClockInLocalTime
If set, keep the hardware clock in local time instead of UTC.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/locale.nix>

time.timeZone
The time zone used when displaying times and dates. See **https://en.wikipedia.org/wiki/List_of_tz_database_time_zones** for a comprehensive list of possible values for this setting.

If null, the timezone will default to UTC and can be set imperatively using timedatectl.

Type: null or string without spaces

Default:

```
null
```

Example:

```
"America/New_York"
```

Declared by:
<nixpkgs/nixos/modules/config/locale.nix>

users.allowNoPasswordLogin
Disable checking that at least the 'root' user or a user in the 'wheel' group can log in using a password or an SSH key.

WARNING: enabling this can lock you out of your system. Enable this only if you know what are you doing.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.defaultUserHome
The default home directory for normal users.

Type: string

Default:

```
"/home"
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.defaultUserShell
This option defines the default shell assigned to user accounts. This can be either a full system path or a shell package.

This must not be a store path, since the path is used outside the store (in particular in /etc/passwd).

Type: absolute path or package

Default:

```
"/bin/sh"
```

Example:

```
pkgs.zsh
```

Declared by:
<nixpkgs/nixos/modules/programs/shadow.nix>

users.enforceIdUniqueness
Whether to require that no two users/groups share the same uid/gid.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraGroups
Alias of **users.groups**.

Type: attribute set of (submodule)

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraGroups.<name>.gid
The group GID. If the GID is null, a free GID is picked on activation.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraGroups.<name>.members
The user names of the group members, added to the '/etc/group' file.

Type: list of (string, not containing newlines or colons)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraGroups.<name>.name
The name of the group. If undefined, the name of the attribute set will be used.

Type: string, not containing newlines or colons

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers
Alias of **users.users**.

Type: attribute set of (submodule)

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.enable
If set to false, the user account will not be created. This is useful for when you wish to conditionally disable user accounts.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.packages
The set of packages that should be made available to the user. This is in contrast to **environment.systemPackages**, which adds packages to all users.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.firefox pkgs.thunderbird ]
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.autoSubUidGidRange
Automatically allocate subordinate user and group ids for this user. Allocated range is currently always of size 65536.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.createHome
Whether to create the home directory and ensure ownership as well as permissions to match the user.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.cryptHomeLuks
Path to encrypted luks device that contains the user's home directory.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.description
A short description of the user account, typically the user's full name. This is actually the "GECOS" or "comment" field in */etc/passwd*.

Type: string, not containing newlines or colons

Default:

```
""
```

Example:

```
"Alice Q. User"
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.expires
Set the date on which the user's account will no longer be accessible. The date is expressed in the format YYYY−MM−DD, or null to disable the expiry. A user whose account is locked must contact the system administrator before being able to use the system again.

Type: null or string matching the pattern [[:digit:]]{4}−[[:digit:]]{2}−[[:digit:]]{2}

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.extraGroups

The user's auxiliary groups.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.group

The user's primary group.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.hashedPassword

Specifies the hashed password for the user.

The **initialHashedPassword**, **hashedPassword**, **initialPassword**, **password** and **hashedPasswordFile** options all control what password is set for the user.

In a system where **systemd.sysusers.enable** is 'false', typically only one of **hashedPassword**, **password**, or **hashedPasswordFile** will be set.

In a system where **systemd.sysusers.enable** or **services.userborn.enable** is 'true', typically only one of **initialPassword**, **initialHashedPassword**, or **hashedPasswordFile** will be set.

If the option **users.mutableUsers** is true, the password defined in one of the above password options will only be set when the user is created for the first time. After that, you are free to change the password with the ordinary user management commands. If **users.mutableUsers** is false, you cannot change user passwords, they will always be set according to the password options.

If none of the password options are set, then no password is assigned to the user, and the user will not be able to do password−based logins.

If multiple of these password options are set at the same time then a specific order of precedence is followed, which can lead to surprising results. The order of precedence differs depending on whether the **users.mutableUsers** option is set.

If the option **users.mutableUsers** is 'false', then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **hashedPassword** −> **initialPassword** −> **password** −> **hashedPasswordFile**

If the option **users.mutableUsers** is 'true', then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **initialPassword** −> **hashedPassword** −> **password** −> **hashedPasswordFile**

To generate a hashed password run 'mkpasswd'.

If set to an empty string ('""'), this user will be able to log in without being asked for a password (but not via remote services such as SSH, or indirectly via **su** or **sudo**). This should only be used for e.g. bootable live systems. Note: this is different from setting an empty password, which can be achieved using **users.users.<name?>.password**.

If set to 'null' (default) this user will not be able to log in using a password (i.e. via **login** command).

Type: null or (string, not containing newlines or colons)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.hashedPasswordFile

The full path to a file that contains the hash of the user's password. The password file is read on each system activation. The file should contain exactly one line, the salted password hash produced by 'mkpasswd'.

The **initialHashedPassword**, **hashedPassword**, **initialPassword**, **password** and **hashedPasswordFile** options all control what password is set for the user.

In a system where **systemd.sysusers.enable** is 'false', typically only one of **hashedPassword**, **password**, or **hashedPasswordFile** will be set.

In a system where **systemd.sysusers.enable** or **services.userborn.enable** is 'true', typically only one of **initialPassword**, **initialHashedPassword**, or **hashedPasswordFile** will be set.

If the option **users.mutableUsers** is true, the password defined in one of the above password options will only be set when the user is created for the first time. After that, you are free to change the password with the ordinary user management commands. If **users.mutableUsers** is false, you cannot change user passwords, they will always be set according to the password options.

If none of the password options are set, then no password is assigned to the user, and the user will not be able to do password−based logins.

If multiple of these password options are set at the same time then a specific order of precedence is followed, which can lead to surprising results. The order of precedence differs depending on whether the **users.mutableUsers** option is set.

If the option **users.mutableUsers** is 'false', then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **hashedPassword** −> **initialPassword** −> **password** −> **hashedPasswordFile**

If the option **users.mutableUsers** is 'true', then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **initialPassword** −> **hashedPassword** −> **password** −> **hashedPasswordFile**

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.home

The user's home directory.

Type: absolute path, not containing newlines or colons

Default:

```
"/var/empty"
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.homeMode

The user's home directory mode in numeric format. See **chmod**(1). The mode is only applied if **users.users.<name>.createHome** is true.

Type: string matching the pattern [0−7]{1,5}

Default:

```
"700"
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.ignoreShellProgramCheck

By default, nixos will check that programs.SHELL.enable is set to true if the user has a custom shell specified. If that behavior isn't required and there are custom overrides in place to make sure that the shell is functional, set this to true.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.initialHashedPassword

Specifies the initial hashed password for the user, i.e. the hashed password assigned if the user does not already exist. If **users.mutableUsers** is true, the password can be changed subsequently using the **passwd** command. Otherwise, it's equivalent to setting the **hashedPassword** option.

The **initialHashedPassword**, **hashedPassword**, **initialPassword**, **password** and **hashedPasswordFile** options all control what password is set for the user.

In a system where **systemd.sysusers.enable** is 'false', typically only one of **hashedPassword**, **password**, or **hashedPasswordFile** will be set.

In a system where **systemd.sysusers.enable** or **services.userborn.enable** is 'true', typically only one of **initialPassword**, **initialHashedPassword**, or **hashedPasswordFile** will be set.

If the option **users.mutableUsers** is true, the password defined in one of the above password options will only be set when the user is created for the first time. After that, you are free to change the password with the ordinary user management commands. If **users.mutableUsers** is false, you cannot change user passwords, they will always be set according to the password options.

If none of the password options are set, then no password is assigned to the user, and the user will not be able to do password−based logins.

If multiple of these password options are set at the same time then a specific order of precedence is followed, which can lead to surprising results. The order of precedence differs depending on whether the **users.mutableUsers** option is set.

If the option **users.mutableUsers** is 'false', then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **hashedPassword** −> **initialPassword** −> **password** −> **hashedPasswordFile**

If the option **users.mutableUsers** is 'true', then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **initialPassword** −> **hashedPassword** −> **password** −> **hashedPasswordFile**

To generate a hashed password run 'mkpasswd'.

If set to an empty string (''''), this user will be able to log in without being asked for a password (but not via remote services such as SSH, or indirectly via **su** or **sudo**). This should only be used for e.g. bootable

live systems. Note: this is different from setting an empty password, which can be achieved using **users.users.<name?>.password**.

If set to 'null' (default) this user will not be able to log in using a password (i.e. via **login** command).

Type: null or (string, not containing newlines or colons)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.initialPassword

Specifies the initial password for the user, i.e. the password assigned if the user does not already exist. If **users.mutableUsers** is true, the password can be changed subsequently using the **passwd** command. Otherwise, it's equivalent to setting the **password** option. The same caveat applies: the password specified here is world−readable in the Nix store, so it should only be used for guest accounts or passwords that will be changed promptly.

The **initialHashedPassword**, **hashedPassword**, **initialPassword**, **password** and **hashedPasswordFile** options all control what password is set for the user.

In a system where **systemd.sysusers.enable** is 'false', typically only one of **hashedPassword**, **password**, or **hashedPasswordFile** will be set.

In a system where **systemd.sysusers.enable** or **services.userborn.enable** is 'true', typically only one of **initialPassword**, **initialHashedPassword**, or **hashedPasswordFile** will be set.

If the option **users.mutableUsers** is true, the password defined in one of the above password options will only be set when the user is created for the first time. After that, you are free to change the password with the ordinary user management commands. If **users.mutableUsers** is false, you cannot change user passwords, they will always be set according to the password options.

If none of the password options are set, then no password is assigned to the user, and the user will not be able to do password−based logins.

If multiple of these password options are set at the same time then a specific order of precedence is followed, which can lead to surprising results. The order of precedence differs depending on whether the **users.mutableUsers** option is set.

If the option **users.mutableUsers** is 'false', then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **hashedPassword** −> **initialPassword** −> **password** −> **hashedPasswordFile**

If the option **users.mutableUsers** is 'true', then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **initialPassword** −> **hashedPassword** −> **password** −> **hashedPasswordFile**

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.isNormalUser

Indicates whether this is an account for a “real” user. This automatically sets **group** to ‘users’, **createHome** to ‘true’, **home** to */home/«username»*, **useDefaultShell** to ‘true’, and **isSystemUser** to ‘false’. Exactly one of ‘isNormalUser’ and ‘isSystemUser’ must be true.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.isSystemUser

Indicates if the user is a system user or not. This option only has an effect if **uid** is **null**, in which case it determines whether the user’s UID is allocated in the range for system users (below 1000) or in the range for normal users (starting at 1000). Exactly one of ‘isNormalUser’ and ‘isSystemUser’ must be true.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.linger

Whether to enable or disable lingering for this user. Without lingering, user units will not be started until the user logs in, and may be stopped on logout depending on the settings in *logind.conf*.

By default, NixOS will not manage lingering, new users will default to not lingering, and lingering can be configured imperatively using ‘loginctl enable−linger’ or ‘loginctl disable−linger’. Setting this option to ‘true’ or ‘false’ is the declarative equivalent of running ‘loginctl enable−linger’ or ‘loginctl disable−linger’ respectively.

Type: null or boolean

Default:

```
null
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.name

The name of the user account. If undefined, the name of the attribute set will be used.

Type: string, not containing newlines or colons

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.openssh.authorizedKeys.keyFiles

A list of files each containing one OpenSSH public key that should be added to the user’s authorized keys. The contents of the files are read at build time and added to a file that the SSH daemon reads in addition to the the user’s authorized_keys file. You can combine the ‘keyFiles’ and ‘keys’ options.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

users.extraUsers.<name>.openssh.authorizedKeys.keys

A list of verbatim OpenSSH public keys that should be added to the user's authorized keys. The keys are added to a file that the SSH daemon reads in addition to the the user's authorized_keys file. You can combine the 'keys' and 'keyFiles' options. Warning: If you are using 'NixOps' then don't use this option since it will replace the key required for deployment via ssh.

Type: list of (optionally newline−terminated) single−line string

Default:

```
[ ]
```

Example:

```
[
  "ssh-rsa AAAAB3NzaC1yc2etc/etc/etcjwrsh8e596z6J0l7 example@host"
  "ssh-ed25519 AAAAC3NzaCetcetera/etceteraJZMfk3QPfQ foo@bar"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

users.extraUsers.<name>.openssh.authorizedPrincipals

A list of verbatim principal names that should be added to the user's authorized principals.

Type: list of (optionally newline−terminated) single−line string

Default:

```
[ ]
```

Example:

```
[
  "example@host"
  "foo@bar"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

users.extraUsers.<name>.pamMount

Attributes for user's entry in *pam_mount.conf.xml*. Useful attributes might include 'path', 'options', 'fstype', and 'server'. See **https://pam−mount.sourceforge.net/pam_mount.conf.5.html** for more information.

Type: attribute set of string

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.password

Specifies the (clear text) password for the user. Warning: do not set confidential information here because it is world−readable in the Nix store. This option should only be used for public accounts.

The **initialHashedPassword**, **hashedPassword**, **initialPassword**, **password** and **hashedPasswordFile** options all control what password is set for the user.

In a system where **systemd.sysusers.enable** is ‘false’, typically only one of **hashedPassword**, **password**, or **hashedPasswordFile** will be set.

In a system where **systemd.sysusers.enable** or **services.userborn.enable** is ‘true’, typically only one of **initialPassword**, **initialHashedPassword**, or **hashedPasswordFile** will be set.

If the option **users.mutableUsers** is true, the password defined in one of the above password options will only be set when the user is created for the first time. After that, you are free to change the password with the ordinary user management commands. If **users.mutableUsers** is false, you cannot change user passwords, they will always be set according to the password options.

If none of the password options are set, then no password is assigned to the user, and the user will not be able to do password−based logins.

If multiple of these password options are set at the same time then a specific order of precedence is followed, which can lead to surprising results. The order of precedence differs depending on whether the **users.mutableUsers** option is set.

If the option **users.mutableUsers** is ‘false’, then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **hashedPassword** −> **initialPassword** −> **password** −> **hashedPasswordFile**

If the option **users.mutableUsers** is ‘true’, then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **initialPassword** −> **hashedPassword** −> **password** −> **hashedPasswordFile**

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.shell

The path to the user’s shell. Can use shell derivations, like ‘pkgs.bashInteractive’. Don’t forget to enable your shell in ‘programs’ if necessary, like ‘programs.zsh.enable = true;’.

Type: null or package or (absolute path, not containing newlines or colons)

Default:

```
pkgs.shadow
```

Example:

```
pkgs.bashInteractive
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.subGidRanges

Subordinate group ids that user is allowed to use. They are set into */etc/subgid* and are used by ‘newgidmap’ for user namespaces.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    count = 1;
```

```
    startGid = 100;
  }
  {
    count = 999;
    startGid = 1001;
  }
]
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.subGidRanges.*.count
Count of subordinate group ids

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.subGidRanges.*.startGid
Start of the range of subordinate group ids that user is allowed to use.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.subUidRanges
Subordinate user ids that user is allowed to use. They are set into */etc/subuid* and are used by ‘newuidmap’ for user namespaces.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    count = 1;
    startUid = 1000;
  }
  {
    count = 65534;
    startUid = 100001;
  }
]
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.subUidRanges.*.count
Count of subordinate user ids

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.subUidRanges.*.startUid
Start of the range of subordinate user ids that user is allowed to use.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.uid
The account UID. If the UID is null, a free UID is picked on activation.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.extraUsers.<name>.useDefaultShell
If true, the user's shell will be set to **users.defaultUserShell**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.groups
Additional groups to be created automatically by the system.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  hackers = { };
  students = {
    gid = 1001;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.groups.<name>.gid
The group GID. If the GID is null, a free GID is picked on activation.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.groups.<name>.members
The user names of the group members, added to the ‘/etc/group’ file.

Type: list of (string, not containing newlines or colons)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.groups.<name>.name
The name of the group. If undefined, the name of the attribute set will be used.

Type: string, not containing newlines or colons

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.ldap.enable
Whether to enable authentication against an LDAP server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/ldap.nix>

users.ldap.base
The distinguished name of the search base.

Type: string

Example:

```
"dc=example,dc=org"
```

Declared by:
<nixpkgs/nixos/modules/config/ldap.nix>

users.ldap.bind.distinguishedName
The distinguished name to bind to the LDAP server with. If this is not specified, an anonymous bind will be done.

Type: string

Default:

```
""
```

Example:

```
"cn=admin,dc=example,dc=com"
```

Declared by:
<nixpkgs/nixos/modules/config/ldap.nix>

users.ldap.bind.passwordFile

The path to a file containing the credentials to use when binding to the LDAP server (if not binding anonymously).

Type: string

Default:

```
"/etc/ldap/bind.password"
```

Declared by:

<nixpkgs/nixos/modules/config/ldap.nix>

users.ldap.bind.policy

Specifies the policy to use for reconnecting to an unavailable LDAP server. The default is ‘hard_open’, which reconnects if opening the connection to the directory server failed. By contrast, ‘hard_init’ reconnects if initializing the connection failed. Initializing may not actually contact the directory server, and it is possible that a malformed configuration file will trigger reconnection. If ‘soft’ is specified, then ‘nss_ldap’ will return immediately on server failure. All hard reconnect policies block with exponential backoff before retrying.

Type: one of “hard_open”, “hard_init”, “soft”

Default:

```
"hard_open"
```

Declared by:

<nixpkgs/nixos/modules/config/ldap.nix>

users.ldap.bind.timeLimit

Specifies the time limit (in seconds) to use when connecting to the directory server. This is distinct from the time limit specified in **users.ldap.timeLimit** and affects the initial server connection only.

Type: signed integer

Default:

```
30
```

Declared by:

<nixpkgs/nixos/modules/config/ldap.nix>

users.ldap.daemon.enable

Whether to let the nslcd daemon (nss−pam−ldapd) handle the LDAP lookups for NSS and PAM. This can improve performance, and if you need to bind to the LDAP server with a password, it increases security, since only the nslcd user needs to have access to the bindpw file, not everyone that uses NSS and/or PAM. If this option is enabled, a local nscd user is created automatically, and the nslcd service is started automatically when the network get up.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/config/ldap.nix>

users.ldap.daemon.extraConfig

Extra configuration options that will be added verbatim at the end of the nslcd configuration file (**nslcd.conf**(5)).

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/config/ldap.nix>

users.ldap.daemon.rootpwmoddn
The distinguished name to use to bind to the LDAP server when the root user tries to modify a user's password.

Type: string

Default:

```
""
```

Example:

```
"cn=admin,dc=example,dc=com"
```

Declared by:
<nixpkgs/nixos/modules/config/ldap.nix>

users.ldap.daemon.rootpwmodpwFile
The path to a file containing the credentials with which to bind to the LDAP server if the root user tries to change a user's password.

Type: string

Default:

```
""
```

Example:

```
"/run/keys/nslcd.rootpwmodpw"
```

Declared by:
<nixpkgs/nixos/modules/config/ldap.nix>

users.ldap.extraConfig
Extra configuration options that will be added verbatim at the end of the ldap configuration file (**ldap.conf**(5)). If **users.ldap.daemon** is enabled, this configuration will not be used. In that case, use **users.ldap.daemon.extraConfig** instead.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/config/ldap.nix>

users.ldap.loginPam
Whether to include authentication against LDAP in login PAM.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/ldap.nix>

users.ldap.nsswitch
Whether to include lookup against LDAP in NSS.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/ldap.nix>

users.ldap.server
The URL of the LDAP server.

Type: string

Example:

```
"ldap://ldap.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/config/ldap.nix>

users.ldap.timeLimit
Specifies the time limit (in seconds) to use when performing searches. A value of zero (0), which is the default, is to wait indefinitely for searches to be completed.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/config/ldap.nix>

users.ldap.useTLS
If enabled, use TLS (encryption) over an LDAP (port 389) connection. The alternative is to specify an LDAPS server (port 636) in **users.ldap.server** or to forego security.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/ldap.nix>

users.manageLingering
Whether to manage whether users linger or not.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.motd

Message of the day shown to users when they log in.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"Today is Sweetmorn, the 4th day of The Aftermath in the YOLD 3178. \
"
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

users.motdFile

A file containing the message of the day shown to users when they log in.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/motd"
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

users.mutableUsers

If set to ‘true’, you are free to add new users and groups to the system with the ordinary ‘useradd’ and ‘groupadd’ commands. On system activation, the existing contents of the ‘/etc/passwd’ and ‘/etc/group’ files will be merged with the contents generated from the ‘users.users’ and ‘users.groups’ options. The initial password for a user will be set according to ‘users.users’, but existing passwords will not be changed.

Warning
If set to ‘false’, the contents of the user and group files will simply be replaced on system activation. This also holds for the user passwords; all changed passwords will be reset according to the ‘users.users’ configuration on activation.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.mysql.enable

Whether to enable authentication against a MySQL/MariaDB database.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.database
The name of the database containing the users

Type: string

Example:

```
"auth"
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.host
The hostname of the MySQL/MariaDB server

Type: string

Example:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.nss
Settings for ‘libnss−mysql’.

All examples are from the **minimal example** of ‘libnss−mysql’, but they are modified with NixOS paths for bash.

Type: submodule

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.nss.getgrent
SQL query for the **getgrent** syscall.

Type: null or string

Default:

```
null
```

Example:

```
SELECT name,password,gid FROM groups
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.nss.getgrgid
SQL query for the **getgrgid** syscall.

Type: null or string

Default:

```
null
```

Example:

```
SELECT name,password,gid FROM groups WHERE gid='%1$u' LIMIT 1
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.nss.getgrnam
SQL query for the **getgrnam** syscall.

Type: null or string

Default:

```
null
```

Example:

```
SELECT name,password,gid FROM groups WHERE name='%1$s' LIMIT 1
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.nss.getpwent
SQL query for the **getpwent** syscall.

Type: null or string

Default:

```
null
```

Example:

```
SELECT username,'x',uid,'5000','MySQL User', CONCAT('/home/',userna \
me),'/run/sw/current-system/bin/bash' FROM users
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.nss.getpwnam
SQL query for the **getpwnam** syscall.

Type: null or string

Default:

```
null
```

Example:

```
SELECT username,'x',uid,'5000','MySQL User', CONCAT('/home/',userna \
me),'/run/sw/current-system/bin/bash' \
FROM users \
WHERE username='%1$s' \
LIMIT 1
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.nss.getpwuid
SQL query for the **getpwuid** syscall.

Type: null or string

Default:

```
null
```

Example:

```
SELECT username,'x',uid,'5000','MySQL User', CONCAT('/home/',userna \
me),'/run/sw/current-system/bin/bash' \
```

```
FROM users \
WHERE uid='%1$u' \
LIMIT 1
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.nss.getspent
SQL query for the **getspent** syscall.

Type: null or string

Default:

```
null
```

Example:

```
SELECT username,password,'1','0','99999','0','0','-1','0' FROM use \
rs
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.nss.getspnam
SQL query for the **getspnam** syscall.

Type: null or string

Default:

```
null
```

Example:

```
SELECT username,password,'1','0','99999','0','0','-1','0' \
FROM users \
WHERE username='%1$s' \
LIMIT 1
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.nss.gidsbymem
SQL query for the **gidsbymem** syscall.

Type: null or string

Default:

```
null
```

Example:

```
SELECT gid FROM grouplist WHERE username='%1$s'
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.nss.memsbygid
SQL query for the **memsbygid** syscall.

Type: null or string

Default:

```
null
```

Example:

```
SELECT username FROM grouplist WHERE gid='%1$u'
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam
Settings for 'pam_mysql'

Type: submodule

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.cryptDefault
The default encryption method to use for 'passwordCrypt = 1'.

Type: null or one of "md5", "sha256", "sha512", "blowfish"

Default:

```
null
```

Example:

```
"blowfish"
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.disconnectEveryOperation
By default, 'pam_mysql' keeps the connection to the MySQL database until the session is closed. If this option is set to true it disconnects every time the PAM operation has finished. This option may be useful in case the session lasts quite long.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.logging.enable
Enables logging of authentication attempts in the MySQL database.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.logging.hostColumn
The name of the column in the log table to which the name of the user being authenticated is stored.

Type: string

Example:

```
"host"
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.logging.msgColumn

The name of the column in the log table to which the description of the performed operation is stored.

Type: string

Example:

```
"msg"
```

Declared by:

<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.logging.pidColumn

The name of the column in the log table to which the pid of the process utilising the 'pam_mysql' authentication service is stored.

Type: string

Example:

```
"pid"
```

Declared by:

<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.logging.rHostColumn

The name of the column in the log table to which the name of the remote host that initiates the session is stored. The value is supposed to be set by the PAM−aware application with 'pam_set_item(PAM_RHOST)'.

Type: string

Example:

```
"rhost"
```

Declared by:

<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.logging.table

The name of the table to which logs are written.

Type: string

Example:

```
"logs"
```

Declared by:

<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.logging.timeColumn

The name of the column in the log table to which the timestamp of the log entry is stored.

Type: string

Example:

```
"timestamp"
```

Declared by:

<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.logging.userColumn

The name of the column in the log table to which the name of the user being authenticated is stored.

Type: string

Example:

```
"user"
```

Declared by:

<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.passwordColumn

The name of the column that contains a (encrypted) password string.

Type: string

Example:

```
"password"
```

Declared by:

<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.passwordCrypt

The method to encrypt the user's password:

- '0' (or '"plain"'): No encryption. Passwords are stored in plaintext. HIGHLY DISCOURAGED.
- '1' (or '"Y"'): Use **crypt**(3) function.
- '2' (or '"mysql"'): Use the MySQL PASSWORD() function. It is possible that the encryption function used by 'pam_mysql' is different from that of the MySQL server, as 'pam_mysql' uses the function defined in MySQL's C−client API instead of using PASSWORD() SQL function in the query.
- '3' (or '"md5"'): Use plain hex MD5.
- '4' (or '"sha1"'): Use plain hex SHA1.
- '5' (or '"drupal7"'): Use Drupal7 salted passwords.
- '6' (or '"joomla15"'): Use Joomla15 salted passwords.
- '7' (or '"ssha"'): Use ssha hashed passwords.
- '8' (or '"sha512"'): Use sha512 hashed passwords.
- '9' (or '"sha256"'): Use sha256 hashed passwords.

Type: one of "0", "plain", "1", "Y", "2", "mysql", "3", "md5", "4", "sha1", "5", "drupal7", "6", "joomla15", "7", "ssha", "8", "sha512", "9", "sha256"

Example:

```
"2"
```

Declared by:

<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.statusColumn

The name of the column or an SQL expression that indicates the status of the user. The status is expressed by the combination of two bitfields shown below:

- 'bit 0 (0x01)': if flagged, 'pam_mysql' deems the account to be expired and returns 'PAM_ACCT_EXPIRED'. That is, the account is supposed to no longer be available. Note this doesn't mean that 'pam_mysql' rejects further authentication operations.
- 'bit 1 (0x02)': if flagged, 'pam_mysql' deems the authentication token (password) to be expired and returns 'PAM_NEW_AUTHTOK_REQD'. This ends up requiring that the user enter a new password.

Type: null or string

Default:

```
null
```

Example:

```
"status"
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.table
The name of table that maps unique login names to the passwords.

Type: string

Example:

```
"users"
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.updateTable
The name of the table used for password alteration. If not defined, the value of the ‘table’ option will be used instead.

Type: null or string

Default:

```
null
```

Example:

```
"users_updates"
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.userColumn
The name of the column that contains a unix login name.

Type: string

Example:

```
"username"
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.verbose
If enabled, produces logs with detailed messages that describes what ‘pam_mysql’ is doing. May be useful for debugging.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.pam.where
Additional criteria for the query.

Type: null or string

Default:

```
null
```

Example:

```
"host.name='web' AND user.active=1"
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.passwordFile
The path to the file containing the password for the user

Type: absolute path

Example:

```
"/run/secrets/mysql-auth-db-passwd"
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.mysql.user
The username to use when connecting to the database

Type: string

Example:

```
"nss-user"
```

Declared by:
<nixpkgs/nixos/modules/config/mysql.nix>

users.users
Additional user accounts to be created automatically by the system. This can also be used to set options for root.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  alice = {
    createHome = true;
    description = "Alice Q. User";
    extraGroups = [
      "wheel"
    ];
    group = "users";
    home = "/home/alice";
    shell = "/bin/sh";
    uid = 1234;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>
<nixpkgs/nixos/modules/config/users-groups.nix>

users.users.<name>.enable

If set to false, the user account will not be created. This is useful for when you wish to conditionally disable user accounts.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.packages

The set of packages that should be made available to the user. This is in contrast to **environment.systemPackages**, which adds packages to all users.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.firefox pkgs.thunderbird ]
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.autoSubUidGidRange

Automatically allocate subordinate user and group ids for this user. Allocated range is currently always of size 65536.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.createHome

Whether to create the home directory and ensure ownership as well as permissions to match the user.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.cryptHomeLuks

Path to encrypted luks device that contains the user's home directory.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/users-groups.nix>

users.users.<name>.description
A short description of the user account, typically the user's full name. This is actually the "GECOS" or "comment" field in */etc/passwd*.

Type: string, not containing newlines or colons

Default:

```
""
```

Example:

```
"Alice Q. User"
```

Declared by:
<nixpkgs/nixos/modules/config/users-groups.nix>

users.users.<name>.expires
Set the date on which the user's account will no longer be accessible. The date is expressed in the format YYYY-MM-DD, or null to disable the expiry. A user whose account is locked must contact the system administrator before being able to use the system again.

Type: null or string matching the pattern [[:digit:]]{4}-[[:digit:]]{2}-[[:digit:]]{2}

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/users-groups.nix>

users.users.<name>.extraGroups
The user's auxiliary groups.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/config/users-groups.nix>

users.users.<name>.group
The user's primary group.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/config/users-groups.nix>

users.users.<name>.hashedPassword
Specifies the hashed password for the user.

The **initialHashedPassword**, **hashedPassword**, **initialPassword**, **password** and **hashedPasswordFile** options all control what password is set for the user.

In a system where **systemd.sysusers.enable** is 'false', typically only one of **hashedPassword**, **password**, or **hashedPasswordFile** will be set.

In a system where **systemd.sysusers.enable** or **services.userborn.enable** is ‘true’, typically only one of **initialPassword**, **initialHashedPassword**, or **hashedPasswordFile** will be set.

If the option **users.mutableUsers** is true, the password defined in one of the above password options will only be set when the user is created for the first time. After that, you are free to change the password with the ordinary user management commands. If **users.mutableUsers** is false, you cannot change user passwords, they will always be set according to the password options.

If none of the password options are set, then no password is assigned to the user, and the user will not be able to do password−based logins.

If multiple of these password options are set at the same time then a specific order of precedence is followed, which can lead to surprising results. The order of precedence differs depending on whether the **users.mutableUsers** option is set.

If the option **users.mutableUsers** is ‘false’, then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **hashedPassword** −> **initialPassword** −> **password** −> **hashedPasswordFile**

If the option **users.mutableUsers** is ‘true’, then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **initialPassword** −> **hashedPassword** −> **password** −> **hashedPasswordFile**

To generate a hashed password run ‘mkpasswd’.

If set to an empty string (‘""’), this user will be able to log in without being asked for a password (but not via remote services such as SSH, or indirectly via **su** or **sudo**). This should only be used for e.g. bootable live systems. Note: this is different from setting an empty password, which can be achieved using **users.users.<name?>.password**.

If set to ‘null’ (default) this user will not be able to log in using a password (i.e. via **login** command).

Type: null or (string, not containing newlines or colons)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.hashedPasswordFile

The full path to a file that contains the hash of the user’s password. The password file is read on each system activation. The file should contain exactly one line, the salted password hash produced by ‘mkpasswd’.

The **initialHashedPassword**, **hashedPassword**, **initialPassword**, **password** and **hashedPasswordFile** options all control what password is set for the user.

In a system where **systemd.sysusers.enable** is ‘false’, typically only one of **hashedPassword**, **password**, or **hashedPasswordFile** will be set.

In a system where **systemd.sysusers.enable** or **services.userborn.enable** is ‘true’, typically only one of **initialPassword**, **initialHashedPassword**, or **hashedPasswordFile** will be set.

If the option **users.mutableUsers** is true, the password defined in one of the above password options will only be set when the user is created for the first time. After that, you are free to change the password with the ordinary user management commands. If **users.mutableUsers** is false, you cannot change user passwords, they will always be set according to the password options.

If none of the password options are set, then no password is assigned to the user, and the user will not be able to do password−based logins.

If multiple of these password options are set at the same time then a specific order of precedence is

followed, which can lead to surprising results. The order of precedence differs depending on whether the **users.mutableUsers** option is set.

If the option **users.mutableUsers** is ‘false’, then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **hashedPassword** −> **initialPassword** −> **password** −> **hashedPasswordFile**

If the option **users.mutableUsers** is ‘true’, then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **initialPassword** −> **hashedPassword** −> **password** −> **hashedPasswordFile**

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.home
The user’s home directory.

Type: absolute path, not containing newlines or colons

Default:

```
"/var/empty"
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.homeMode
The user’s home directory mode in numeric format. See **chmod**(1). The mode is only applied if **users.users.<name>.createHome** is true.

Type: string matching the pattern [0−7]{1,5}

Default:

```
"700"
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.ignoreShellProgramCheck
By default, nixos will check that programs.SHELL.enable is set to true if the user has a custom shell specified. If that behavior isn’t required and there are custom overrides in place to make sure that the shell is functional, set this to true.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.initialHashedPassword
Specifies the initial hashed password for the user, i.e. the hashed password assigned if the user does not already exist. If **users.mutableUsers** is true, the password can be changed subsequently using the **passwd** command. Otherwise, it’s equivalent to setting the **hashedPassword** option.

The **initialHashedPassword**, **hashedPassword**, **initialPassword**, **password** and **hashedPasswordFile** options all control what password is set for the user.

In a system where **systemd.sysusers.enable** is ‘false’, typically only one of **hashedPassword**, **password**, or **hashedPasswordFile** will be set.

In a system where **systemd.sysusers.enable** or **services.userborn.enable** is ‘true’, typically only one of **initialPassword**, **initialHashedPassword**, or **hashedPasswordFile** will be set.

If the option **users.mutableUsers** is true, the password defined in one of the above password options will only be set when the user is created for the first time. After that, you are free to change the password with the ordinary user management commands. If **users.mutableUsers** is false, you cannot change user passwords, they will always be set according to the password options.

If none of the password options are set, then no password is assigned to the user, and the user will not be able to do password−based logins.

If multiple of these password options are set at the same time then a specific order of precedence is followed, which can lead to surprising results. The order of precedence differs depending on whether the **users.mutableUsers** option is set.

If the option **users.mutableUsers** is ‘false’, then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **hashedPassword** −> **initialPassword** −> **password** −> **hashedPasswordFile**

If the option **users.mutableUsers** is ‘true’, then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **initialPassword** −> **hashedPassword** −> **password** −> **hashedPasswordFile**

To generate a hashed password run ‘mkpasswd’.

If set to an empty string (‘""’), this user will be able to log in without being asked for a password (but not via remote services such as SSH, or indirectly via **su** or **sudo**). This should only be used for e.g. bootable live systems. Note: this is different from setting an empty password, which can be achieved using **users.users.<name?>.password**.

If set to ‘null’ (default) this user will not be able to log in using a password (i.e. via **login** command).

Type: null or (string, not containing newlines or colons)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.initialPassword

Specifies the initial password for the user, i.e. the password assigned if the user does not already exist. If **users.mutableUsers** is true, the password can be changed subsequently using the **passwd** command. Otherwise, it’s equivalent to setting the **password** option. The same caveat applies: the password specified here is world−readable in the Nix store, so it should only be used for guest accounts or passwords that will be changed promptly.

The **initialHashedPassword**, **hashedPassword**, **initialPassword**, **password** and **hashedPasswordFile** options all control what password is set for the user.

In a system where **systemd.sysusers.enable** is ‘false’, typically only one of **hashedPassword**, **password**, or **hashedPasswordFile** will be set.

In a system where **systemd.sysusers.enable** or **services.userborn.enable** is ‘true’, typically only one of **initialPassword**, **initialHashedPassword**, or **hashedPasswordFile** will be set.

If the option **users.mutableUsers** is true, the password defined in one of the above password options will only be set when the user is created for the first time. After that, you are free to change the password with the ordinary user management commands. If **users.mutableUsers** is false, you cannot change user passwords, they will always be set according to the password options.

If none of the password options are set, then no password is assigned to the user, and the user will not be able to do password−based logins.

If multiple of these password options are set at the same time then a specific order of precedence is followed, which can lead to surprising results. The order of precedence differs depending on whether the **users.mutableUsers** option is set.

If the option **users.mutableUsers** is ‘false’, then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **hashedPassword** −> **initialPassword** −> **password** −> **hashedPasswordFile**

If the option **users.mutableUsers** is ‘true’, then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **initialPassword** −> **hashedPassword** −> **password** −> **hashedPasswordFile**

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.isNormalUser

Indicates whether this is an account for a “real” user. This automatically sets **group** to ‘users’, **createHome** to ‘true’, **home** to */home/«username»*, **useDefaultShell** to ‘true’, and **isSystemUser** to ‘false’. Exactly one of ‘isNormalUser’ and ‘isSystemUser’ must be true.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.isSystemUser

Indicates if the user is a system user or not. This option only has an effect if **uid** is **null**, in which case it determines whether the user’s UID is allocated in the range for system users (below 1000) or in the range for normal users (starting at 1000). Exactly one of ‘isNormalUser’ and ‘isSystemUser’ must be true.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.linger

Whether to enable or disable lingering for this user. Without lingering, user units will not be started until the user logs in, and may be stopped on logout depending on the settings in *logind.conf*.

By default, NixOS will not manage lingering, new users will default to not lingering, and lingering can be configured imperatively using ‘loginctl enable−linger’ or ‘loginctl disable−linger’. Setting this option to ‘true’ or ‘false’ is the declarative equivalent of running ‘loginctl enable−linger’ or ‘loginctl disable−linger’ respectively.

Type: null or boolean

Default:

```
null
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.name
The name of the user account. If undefined, the name of the attribute set will be used.

Type: string, not containing newlines or colons

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.openssh.authorizedKeys.keyFiles
A list of files each containing one OpenSSH public key that should be added to the user's authorized keys. The contents of the files are read at build time and added to a file that the SSH daemon reads in addition to the the user's authorized_keys file. You can combine the 'keyFiles' and 'keys' options.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

users.users.<name>.openssh.authorizedKeys.keys
A list of verbatim OpenSSH public keys that should be added to the user's authorized keys. The keys are added to a file that the SSH daemon reads in addition to the the user's authorized_keys file. You can combine the 'keys' and 'keyFiles' options. Warning: If you are using 'NixOps' then don't use this option since it will replace the key required for deployment via ssh.

Type: list of (optionally newline−terminated) single−line string

Default:

```
[ ]
```

Example:

```
[
  "ssh−rsa AAAAB3NzaC1yc2etc/etc/etcjwrsh8e596z6J0l7 example@host"
  "ssh−ed25519 AAAAC3NzaCetcetera/etceteraJZMfk3QPfQ foo@bar"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

users.users.<name>.openssh.authorizedPrincipals
A list of verbatim principal names that should be added to the user's authorized principals.

Type: list of (optionally newline−terminated) single−line string

Default:

```
[ ]
```

Example:

```
[
  "example@host"
  "foo@bar"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

users.users.<name>.pamMount
Attributes for user's entry in *pam_mount.conf.xml*. Useful attributes might include 'path', 'options', 'fstype', and 'server'. See **https://pam−mount.sourceforge.net/pam_mount.conf.5.html** for more information.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.password
Specifies the (clear text) password for the user. Warning: do not set confidential information here because it is world−readable in the Nix store. This option should only be used for public accounts.

The **initialHashedPassword**, **hashedPassword**, **initialPassword**, **password** and **hashedPasswordFile** options all control what password is set for the user.

In a system where **systemd.sysusers.enable** is 'false', typically only one of **hashedPassword**, **password**, or **hashedPasswordFile** will be set.

In a system where **systemd.sysusers.enable** or **services.userborn.enable** is 'true', typically only one of **initialPassword**, **initialHashedPassword**, or **hashedPasswordFile** will be set.

If the option **users.mutableUsers** is true, the password defined in one of the above password options will only be set when the user is created for the first time. After that, you are free to change the password with the ordinary user management commands. If **users.mutableUsers** is false, you cannot change user passwords, they will always be set according to the password options.

If none of the password options are set, then no password is assigned to the user, and the user will not be able to do password−based logins.

If multiple of these password options are set at the same time then a specific order of precedence is followed, which can lead to surprising results. The order of precedence differs depending on whether the **users.mutableUsers** option is set.

If the option **users.mutableUsers** is 'false', then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **hashedPassword** −> **initialPassword** −> **password** −> **hashedPasswordFile**

If the option **users.mutableUsers** is 'true', then the order of precedence is as shown below, where values on the left are overridden by values on the right: **initialHashedPassword** −> **initialPassword** −> **hashedPassword** −> **password** −> **hashedPasswordFile**

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.shell

The path to the user's shell. Can use shell derivations, like 'pkgs.bashInteractive'. Don't forget to enable your shell in 'programs' if necessary, like 'programs.zsh.enable = true;'.

Type: null or package or (absolute path, not containing newlines or colons)

Default:

```
pkgs.shadow
```

Example:

```
pkgs.bashInteractive
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.subGidRanges

Subordinate group ids that user is allowed to use. They are set into */etc/subgid* and are used by 'newgidmap' for user namespaces.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    count = 1;
    startGid = 100;
  }
  {
    count = 999;
    startGid = 1001;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.subGidRanges.*.count

Count of subordinate group ids

Type: signed integer

Default:

```
1
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.subGidRanges.*.startGid

Start of the range of subordinate group ids that user is allowed to use.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.subUidRanges

Subordinate user ids that user is allowed to use. They are set into */etc/subuid* and are used by ‘newuidmap’ for user namespaces.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    count = 1;
    startUid = 1000;
  }
  {
    count = 65534;
    startUid = 100001;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.subUidRanges.*.count

Count of subordinate user ids

Type: signed integer

Default:

```
1
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.subUidRanges.*.startUid

Start of the range of subordinate user ids that user is allowed to use.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.uid

The account UID. If the UID is null, a free UID is picked on activation.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

users.users.<name>.useDefaultShell

If true, the user’s shell will be set to **users.defaultUserShell**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/users-groups.nix>

virtualisation.additionalPaths
A list of paths whose closure should be made available to the VM.

When 9p is used, the closure is registered in the Nix database in the VM. All other paths in the host Nix store appear in the guest Nix store as well, but are considered garbage (because they are not registered in the Nix database of the guest).

When **virtualisation.useNixStoreImage** is set, the closure is copied to the Nix store image.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.allInterfaces
All network interfaces for the container or VM. Combines **virtualisation.vlans** and **virtualisation.interfaces**.

Type: attribute set of (submodule) *(read only)*

Default:

```
{
  eth1 = {
    assignIP = true;
    name = "eth1";
    vlan = 1;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/guest-networking-options.nix>

virtualisation.allInterfaces.<name>.assignIP
Automatically assign an IP address to the network interface using the same scheme as virtualisation.vlans.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/guest-networking-options.nix>

virtualisation.allInterfaces.<name>.name
Interface name

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/guest-networking-options.nix>

virtualisation.allInterfaces.<name>.vlan
VLAN to which the network interface is connected.

Type: unsigned integer, meaning >=0

Declared by:
<nixpkgs/nixos/modules/virtualisation/guest−networking−options.nix>

virtualisation.appvm.enable
This enables AppVMs and related virtualisation settings.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/appvm.nix>

virtualisation.appvm.user
AppVM user login. Currently only AppVMs are supported for a single user only.

Type: string

Declared by:
<nixpkgs/nixos/modules/virtualisation/appvm.nix>

virtualisation.bios
An alternate BIOS (such as ‘qboot’) with which to start the VM. Should contain a file named ‘bios.bin’. If ‘null’, QEMU’s builtin SeaBIOS will be used.

Type: null or package

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.bootLoaderDevice
The path (inside th VM) to the device to boot from when legacy booting.

Type: absolute path

Default:

```
/dev/disk/by−id/virtio−root
```

Example:

```
"/dev/disk/by−id/virtio−boot−loader−device"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.bootPartition
The path (inside the VM) to the device containing the EFI System Partition (ESP).

If you are *not* booting from a UEFI firmware, this value is, by default, ‘null’. The ESP is mounted to ‘boot.loader.efi.efiSysMountpoint’.

Type: null or absolute path

Default:

```
if cfg.useEFIBoot then "/dev/disk/by−label/ESP"
else if cfg.useBIOSBoot then "/dev/disk/by−label/BOOT"
```

```
else null
```

Example:

```
"/dev/disk/by-label/esp"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.containerd.enable
Whether to enable containerd container runtime.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/containerd.nix>

virtualisation.containerd.args
extra args to append to the containerd cmdline

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/containerd.nix>

virtualisation.containerd.configFile
Path to containerd config file. Setting this option will override any configuration applied by the settings option.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/containerd.nix>

virtualisation.containerd.settings
Verbatim lines to add to containerd.toml

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/containerd.nix>

virtualisation.containers.enable
This option enables the common /etc/containers configuration module.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/containers.nix>

virtualisation.containers.containersConf.cniPlugins
CNI plugins to install on the system.

Type: list of package

Default:

```
[
  pkgs.cni-plugins
]
```

Example:

```
[
  pkgs.cniPlugins.dnsname
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/containers.nix>

virtualisation.containers.containersConf.settings
containers.conf configuration

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/containers.nix>

virtualisation.containers.ociSeccompBpfHook.enable
Enable the OCI seccomp BPF hook

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/containers.nix>

virtualisation.containers.policy
Signature verification policy file. If this option is empty the default policy file from ‘skopeo’ will be used.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  default = [ { type = "insecureAcceptAnything"; } ];
  transports = {
    docker-daemon = {
      "" = [ { type = "insecureAcceptAnything"; } ];
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/containers.nix>

virtualisation.containers.registries.block
List of blocked repositories.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/containers.nix>

virtualisation.containers.registries.insecure
List of insecure repositories.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/containers.nix>

virtualisation.containers.registries.search
List of repositories to search.

Type: list of string

Default:

```
[
  "docker.io"
  "quay.io"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/containers.nix>

virtualisation.containers.storage.settings
storage.conf configuration

Type: TOML value

Declared by:
<nixpkgs/nixos/modules/virtualisation/containers.nix>

virtualisation.cores
Specify the number of cores the guest is permitted to use. The number can be higher than the available cores on the host system.

Type: positive integer, meaning >0

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.credentials

Credentials to pass to the VM using systemd's credential system.

See **systemd.exec**(5) , **systemd−creds**(1) and https://systemd.io/CREDENTIALS/ for more information about systemd credentials.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  binary−key = {
    mechanism = "fw_cfg";
    source = "./private.der";
  };
  config−file = {
    mechanism = "smbios";
    text = ''
      [database]
      host=localhost
      port=5432
    '';
  };
  database−password = {
    text = "my−secret−password";
  };
  ssl−cert = {
    source = "./cert.pem";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.credentials.<name>.mechanism

The mechanism used to pass the credential to the VM.

Type: one of "fw_cfg", "smbios"

Default:

```
if pkgs.stdenv.hostPlatform.isx86 then "smbios" else "fw_cfg"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.credentials.<name>.source

Source file on the host containing the credential data.

Type: null or path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.credentials.<name>.text

Text content of the credential.

For binary data or when the credential content should come from an existing file, use ‘source’ instead.

Warning
The text here is stored in the host’s nix store as a file.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.cri−o.enable

Whether to enable Container Runtime Interface for OCI (CRI−O).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/cri−o.nix>

virtualisation.cri−o.extraPackages

Extra packages to be installed in the CRI−O wrapper.

Type: list of package

Default:

```
[ ]
```

Example:

```
[
  pkgs.gvisor
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/cri−o.nix>

virtualisation.cri−o.logLevel

Log level to be used

Type: one of “trace”, “debug”, “info”, “warn”, “error”, “fatal”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/cri−o.nix>

virtualisation.cri−o.pauseCommand

Override the default pause command

Type: null or string

Default:

```
null
```

Example:

```
"/pause"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/cri-o.nix>

virtualisation.cri-o.pauseImage
Override the default pause image for pod sandboxes

Type: null or string

Default:

```
null
```

Example:

```
"k8s.gcr.io/pause:3.2"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/cri-o.nix>

virtualisation.cri-o.runtime
Override the default runtime

Type: null or string

Default:

```
null
```

Example:

```
"crun"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/cri-o.nix>

virtualisation.cri-o.settings
Configuration for cri-o, see **https://github.com/cri-o/cri-o/blob/master/docs/crio.conf.5.md**.

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/cri-o.nix>

virtualisation.cri-o.storageDriver
Storage driver to be used

Type: one of “aufs”, “btrfs”, “devmapper”, “overlay”, “vfs”, “zfs”

Default:

```
"overlay"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/cri-o.nix>

virtualisation.directBoot.enable

If enabled, the virtual machine will boot directly into the kernel instead of through a bootloader. Read more about this feature in the **QEMU documentation on Direct Linux Boot**

This is enabled by default. If you want to test netboot, consider disabling this option. Enable a bootloader with **virtualisation.useBootLoader** if you need.

Relevant parameters such as those set in 'boot.initrd' and 'boot.kernelParams' are also passed to QEMU. Additional parameters can be supplied on invocation through the environment variable '$QEMU_KERNEL_PARAMS'. They are added to the '−append' option, see **QEMU User Documentation** for details For example, to let QEMU use the parent terminal as the serial console, set 'QEMU_KERNEL_PARAMS="console=ttyS0"'.

This will not (re−)boot correctly into a system that has switched to a different configuration on disk.

Type: boolean

Default:

```
"!cfg.useBootLoader"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.directBoot.initrd

In direct boot situations, you may want to influence the initrd to load to use your own customized payload.

This is useful if you want to test the netboot image without testing the firmware or the loading part.

Type: string

Default:

```
"\${config.system.build.initialRamdisk}/\${config.system.boot.loa \
der.initrdFile}"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.diskImage

Path to the disk image containing the root filesystem. The image will be created on startup if it does not exist.

If null, a tmpfs will be used as the root filesystem and the VM's state will not be persistent.

Type: null or string

Default:

```
"./${config.system.name}.qcow2"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.diskSize

The disk size in MiB (1024×1024 bytes) of the virtual machine.

Type: value "auto" (singular enum) or (positive integer, meaning >0)

Default:

```
if virtualisation.diskSizeAutoSupported then "auto" else 1024
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/disk−size−option.nix>

virtualisation.docker.enable
This option enables docker, a daemon that manages linux containers. Users in the “docker” group can interact with the daemon (e.g. to start or stop containers) using the **docker** command line tool.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.enableNvidia
Deprecated, please use **hardware.nvidia−container−toolkit.enable** instead.

Enable Nvidia GPU support inside docker containers.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.enableOnBoot
When enabled dockerd is started on boot. This is required for containers which are created with the ‘−−restart=always’ flag to work. If this option is disabled, docker might be started on demand by socket activation.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.package
The docker package to use.

Type: package

Default:

```
pkgs.docker
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.autoPrune.enable
Whether to periodically prune Docker resources. If enabled, a systemd timer will run ‘docker system prune −f’ as specified by the ‘dates’ option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.autoPrune.dates
Specification (in the format described by **systemd.time**(7)) of the time at which the prune will occur.

Type: string

Default:

```
"weekly"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.autoPrune.flags
Any additional flags passed to **docker system prune**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--all"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.autoPrune.persistent
Takes a boolean argument. If true, the time when the service unit was last triggered is stored on disk. When the timer is activated, the service unit is triggered immediately if it would have been triggered at least once during the time when the timer was inactive. Such triggering is nonetheless subject to the delay imposed by RandomizedDelaySec=. This is useful to catch up on missed runs of the service when the system was powered down.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.autoPrune.randomizedDelaySec
Add a randomized delay before each auto prune. The delay will be chosen between zero and this value. This value must be a time span in the format specified by **systemd.time**(7)

Type: (optionally newline−terminated) single−line string

Default:

```
"0"
```

Example:

```
"45min"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.daemon.settings
Configuration for docker daemon. The attributes are serialized to JSON used as daemon.conf. See **https://docs.docker.com/engine/reference/commandline/dockerd/#daemon−configuration−file**

Type: open submodule of (JSON value)

Default:

```
{ }
```

Example:

```
{
  fixed−cidr−v6 = "fd00::/80";
  ipv6 = true;
  live−restore = true;
}
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.daemon.settings.live−restore
Allow dockerd to be restarted without affecting running container. This option is incompatible with docker swarm.

Type: boolean

Default:

```
lib.versionOlder config.system.stateVersion "24.11"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.extraOptions
The extra command−line options to pass to **docker** daemon.

Type: strings concatenated with " "

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.extraPackages
Extra packages to add to PATH for the docker daemon process.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [ criu ]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.listenOptions

A list of unix and tcp docker should listen to. The format follows ListenStream as described in **systemd.socket**(5).

Type: list of string

Default:

```
[
  "/run/docker.sock"
]
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.liveRestore

Alias of **virtualisation.docker.daemon.settings.live−restore**.

Type: submodule

Declared by:

<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.logDriver

This option determines which Docker log driver to use.

Type: one of “none”, “json−file”, “syslog”, “journald”, “gelf”, “fluentd”, “awslogs”, “splunk”, “etwlogs”, “gcplogs”, “local”

Default:

```
"journald"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.docker.rootless.enable

This option enables docker in a rootless mode, a daemon that manages linux containers. To interact with the daemon, one needs to set **DOCKER_HOST=unix://$XDG_RUNTIME_DIR/docker.sock**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/docker−rootless.nix>

virtualisation.docker.rootless.package

The docker package to use.

Type: package

Default:

```
pkgs.docker
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/docker−rootless.nix>

virtualisation.docker.rootless.daemon.settings

Configuration for docker daemon. The attributes are serialized to JSON used as daemon.conf. See **https://docs.docker.com/engine/reference/commandline/dockerd/#daemon−configuration−file**

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  fixed-cidr-v6 = "fd00::/80";
  ipv6 = true;
}
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker-rootless.nix>

virtualisation.docker.rootless.extraPackages
Extra packages to add to PATH for the docker daemon process.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker-rootless.nix>

virtualisation.docker.rootless.setSocketVariable
Point **DOCKER_HOST** to rootless Docker instance for normal users by default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker-rootless.nix>

virtualisation.docker.storageDriver
This option determines which Docker **storage driver** to use. By default it lets docker automatically choose the preferred storage driver. However, it is recommended to specify a storage driver explicitly, as docker's default varies over versions.

Warning
Changing the storage driver will cause any existing containers and images to become inaccessible.

Type: null or one of "aufs", "btrfs", "devicemapper", "overlay", "overlay2", "zfs"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/docker.nix>

virtualisation.efi.OVMF
OVMF firmware package, defaults to OVMF configured with secure boot if needed.

Type: package

Default:

```
(pkgs.OVMF.override {
          secureBoot = cfg.useSecureBoot;
        }).fd''
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.efi.firmware
Firmware binary for EFI implementation, defaults to OVMF.

Type: absolute path

Default:

```
cfg.efi.OVMF.firmware
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.efi.keepVariables
Whether to keep EFI variable values from the generated system image

Type: boolean

Default:

```
cfg.useBootLoader
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.efi.variables
Platform−specific flash binary for EFI variables, implementation−dependent to the EFI firmware. Defaults to OVMF.

Type: absolute path

Default:

```
cfg.efi.OVMF.variables
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.emptyDiskImages
Additional disk images to provide to the VM. The value is a list of size in MiB (1024×1024 bytes) of each disk. These disks are writeable by the VM.

Type: list of ((submodule) or (positive integer, meaning >0) convertible to it)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.emptyDiskImages.*.driveConfig
Drive configuration to pass to **virtualisation.qemu.drives**

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.emptyDiskImages.*.driveConfig.deviceExtraOpts
Extra options passed to device flag.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.emptyDiskImages.*.driveConfig.driveExtraOpts
Extra options passed to drive flag.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.emptyDiskImages.*.driveConfig.name
A name for the drive. Must be unique in the drives list. Not passed to qemu.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.emptyDiskImages.*.size
The size of the disk in MiB

Type: positive integer, meaning >0

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.fileSystems
The file systems to be mounted. It must include an entry for the root directory (‘mountPoint = "/"’). Each entry in the list is an attribute set with the following fields: ‘mountPoint’, ‘device’, ‘fsType’ (a file system type recognised by **mount**), and ‘options’ (the mount options passed to **mount** using the **-o** flag; defaults to ‘["defaults"]’).

Instead of specifying ‘device’, you can also specify a volume label (‘label’) for file systems that support it, such as ext2/ext3 (see **mke2fs -L**).

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/".device = "/dev/hda1";
  "/data" = {
    device = "/dev/hda2";
    fsType = "ext3";
    options = [ "data=journal" ];
```

```
  };
  "/bigdisk".label = "bigdisk";
}
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.fileSystems.<name>.enable
Whether to enable the filesystem mount.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

virtualisation.fileSystems.<name>.autoFormat
If the device does not currently contain a filesystem (as determined by **blkid**), then automatically format it with the filesystem type specified in **fsType**. Use with caution.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

virtualisation.fileSystems.<name>.autoResize
If set, the filesystem is grown to its maximum size before being mounted. (This is typically the size of the containing partition.) This is currently only supported for ext2/3/4 filesystems that are mounted during early boot.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

virtualisation.fileSystems.<name>.depends
List of paths that should be mounted before this one. This filesystem's **device** and **mountPoint** are always checked and do not need to be included explicitly. If a path is added to this list, any other filesystem whose mount point is a parent of the path will be mounted before this filesystem. The paths do not need to actually be the **mountPoint** of some other filesystem.

This is useful for mounts which require keys and/or configuration files residing on another filesystem.

Type: list of string (with check: non−empty without trailing slash)

Default:

```
[ ]
```

Example:

```
[
  "/persist"
```

```
]
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

virtualisation.fileSystems.<name>.device
The device as passed to ‘mount’.

This can be any of:

- a filename of a block special device such as ‘/dev/sdc3’
- a tag such as ‘UUID=fdd68895−c307−4549−8c9c−90e44c71f5b7’
- (for bind mounts only) the source path
- something else depending on the **fsType**. For example, ‘nfs’ device may look like ‘knuth.cwi.nl:/dir’

This is called ‘device’ in **mount**(8) and ‘fs_spec’ in **fstab**(5).

Type: null or string (with check: non−empty)

Default:

```
null
```

Example:

```
"/dev/sda"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

virtualisation.fileSystems.<name>.encrypted.enable
The block device is backed by an encrypted one, adds this device as a initrd luks entry.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/encrypted−devices.nix>

virtualisation.fileSystems.<name>.encrypted.blkDev
Location of the backing encrypted device.

Type: null or string

Default:

```
null
```

Example:

```
"/dev/sda1"
```

Declared by:
<nixpkgs/nixos/modules/tasks/encrypted−devices.nix>

virtualisation.fileSystems.<name>.encrypted.keyFile
Path to a keyfile used to unlock the backing encrypted device. When systemd stage 1 is not enabled, at the time this keyfile is accessed, the ‘neededForBoot’ filesystems (see ‘utils.fsNeededForBoot’) will have been mounted under ‘/mnt−root’, so the keyfile path should usually start with “/mnt−root/”. When systemd stage 1 is enabled, ‘fsNeededForBoot’ file systems will be mounted as needed under ‘/sysroot’, and the keyfile will not be accessed until its requisite mounts are done.

Type: null or string

Default:

```
null
```

Example:

```
"/mnt-root/root/.swapkey"
```

Declared by:
<nixpkgs/nixos/modules/tasks/encrypted-devices.nix>

virtualisation.fileSystems.<name>.encrypted.label
Label of the unlocked encrypted device. Set ‘fileSystems.<name?>.device’ to ‘/dev/mapper/<label>’ to mount the unlocked device.

Type: null or string

Default:

```
null
```

Example:

```
"rootfs"
```

Declared by:
<nixpkgs/nixos/modules/tasks/encrypted-devices.nix>

virtualisation.fileSystems.<name>.fsType
Type of the file system.

This is the ‘fstype’ passed to ‘-t’ in the **mount**(8) command, and is called ‘fs_vfstype’ in **fstab**(5).

Type: string (with check: non-empty)

Example:

```
"ext3"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

virtualisation.fileSystems.<name>.label
Label of the device. This simply sets **device** to ‘/dev/disk/by-label/${label}’. Note that devices will not have a label unless they contain a filesystem which supports labels, such as ext4 or fat32.

Type: null or string (with check: non-empty)

Default:

```
null
```

Example:

```
"root-partition"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

virtualisation.fileSystems.<name>.mountPoint
Location where the file system will be mounted.

This is called ‘mountpoint’ in **mount**(8) and ‘fs_file’ in **fstab**(5)

Type: string (with check: non-empty without trailing slash)

Default:

```
"‹name›"
```

Example:

```
"/mnt/usb"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

virtualisation.fileSystems.<name>.neededForBoot
If set, this file system will be mounted in the initial ramdisk. Note that the file system will always be mounted in the initial ramdisk if its mount point is one of the following: */*, */nix*, */nix/store*, */var*, */var/log*, */var/lib*, */var/lib/nixos*, */etc*, */usr*.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/stage−1.nix>

virtualisation.fileSystems.<name>.noCheck
Disable running fsck on this filesystem.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

virtualisation.fileSystems.<name>.options
Options used to mount the file system.

This is called ‘options’ in **mount**(8) and ‘fs_mntops’ in **fstab**(5)

Some options that can be used for all mounts are documented in **mount**(8) under ‘FILESYSTEM−INDEPENDENT MOUNT OPTIONS’.

Options that systemd understands are documented in **systemd.mount**(5) under ‘FSTAB’.

Each filesystem supports additional options, see the docs for that filesystem.

Type: non−empty (list of string (with check: non−empty))

Default:

```
[
  "defaults"
]
```

Example:

```
[
  "data=journal"
]
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

virtualisation.fileSystems.<name>.overlay.lowerdir
The list of path(s) to the lowerdir(s).

To create a writable overlay, you MUST provide an ‘upperdir’ and a ‘workdir’.

You can create a read−only overlay when you provide multiple (at least 2!) lowerdirs and neither an ‘upperdir’ nor a ‘workdir’.

Type: null or (non−empty (list of (string or path in the Nix store)))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/overlayfs.nix>

virtualisation.fileSystems.<name>.overlay.upperdir
The path to the upperdir.

If this is null, a read−only overlay is created using the lowerdir.

If the filesystem is ‘neededForBoot’, this will be prefixed with ‘/sysroot’, unless ‘useStage1BaseDirectories’ is set to ‘true’.

If you set this to some value you MUST also set ‘workdir’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/overlayfs.nix>

virtualisation.fileSystems.<name>.overlay.useStage1BaseDirectories
If enabled, ‘lowerdir’, ‘upperdir’ and ‘workdir’ will be prefixed with ‘/sysroot’.

Disabling this can be useful to create an overlay over directories which aren’t on the real root.

Disabling this does not work with the scripted (i.e. non−systemd) initrd.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/overlayfs.nix>

virtualisation.fileSystems.<name>.overlay.workdir
The path to the workdir.

If the filesystem is ‘neededForBoot’, this will be prefixed with ‘/sysroot’, unless ‘useStage1BaseDirectories’ is set to ‘true’.

This MUST be set if you set ‘upperdir’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/overlayfs.nix>

virtualisation.fileSystems.<name>.stratis.poolUuid
UUID of the stratis pool that the fs is located in

This is only relevant if you are using **stratis**.

Type: null or string

Default:

```
null
```

Example:

```
"04c68063−90a5−4235−b9dd−6180098a20d9"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

virtualisation.forwardPorts
When using the SLiRP user networking (default), this option allows to forward ports to/from the host/guest.

Warning
If the NixOS firewall on the virtual machine is enabled, you also have to open the guest ports to enable the traffic between host and guest.

Note
Currently QEMU supports only IPv4 forwarding.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[ # forward local port 2222 -> 22, to ssh into the VM
  { from = "host"; host.port = 2222; guest.port = 22; }
  # forward local port 80 -> 10.0.2.10:80 in the VLAN
  { from = "guest";
    guest.address = "10.0.2.10"; guest.port = 80;
    host.address = "127.0.0.1"; host.port = 80;
  }
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.forwardPorts.*.from
Controls the direction in which the ports are mapped:

- ‘"host"’ means traffic from the host ports is forwarded to the given guest port.
- ‘"guest"’ means traffic from the guest ports is forwarded to the given host port.

Type: one of “host”, “guest”

Default:

```
"host"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.forwardPorts.*.guest.address
The IPv4 address on the guest VLAN.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.forwardPorts.*.guest.port
The guest port to be mapped.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.forwardPorts.*.host.address
The IPv4 address of the host.

Type: string

Default:
```
""
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.forwardPorts.*.host.port
The host port to be mapped.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.forwardPorts.*.proto
The protocol to forward.

Type: one of “tcp”, “udp”

Default:
```
"tcp"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.graphics
Whether to run QEMU with a graphics window, or in nographic mode. Serial console will be enabled on both settings, but this will change the preferred console.

Type: boolean

Default:
```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.host.pkgs
Package set to use for the host−specific packages of the VM runner. Changing this to e.g. a Darwin package set allows running NixOS VMs on Darwin.

Type: An evaluation of Nixpkgs; the top level attribute set of packages

Default:
```
pkgs
```

Example:
```
import pkgs.path { system = "x86_64−darwin"; }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.hypervGuest.enable
Whether to enable Hyper−V Guest Support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/hyperv−guest.nix>

virtualisation.incus.enable
Whether to enable incusd, a daemon that manages containers and virtual machines.

Users in the “incus−admin” group can interact with the daemon (e.g. to start or stop containers) using the **incus** command line tool, among others. Users in the “incus” group can also interact with the daemon, but with lower permissions (i.e. administrative operations are forbidden). .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/incus.nix>

virtualisation.incus.package
The incus−lts package to use.

Type: package

Default:

```
pkgs.incus-lts
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/incus.nix>

virtualisation.incus.agent.enable
Whether to enable Incus agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/incus−agent.nix>

virtualisation.incus.bucketSupport

Enable bucket support using minio, which is an insecure and unmaintained S3 provider.

Type: boolean

Default:

```
if lib.versionAtLeast config.system.stateVersion "26.11" then false \
 else null;
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/incus.nix>

virtualisation.incus.clientPackage

The incus client package to use. This package is added to PATH.

Type: package

Default:

```
config.virtualisation.incus.package.client
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/incus.nix>

virtualisation.incus.lxcPackage

The lxc package to use.

Type: package

Default:

```
config.virtualisation.lxc.package
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/incus.nix>

virtualisation.incus.preseed

Configuration for Incus preseed, see **https://linuxcontainers.org/incus/docs/main/howto/initialize/#non−interactive−configuration** for supported values.

Changes to this will be re−applied to Incus which will overwrite existing entities or create missing ones, but entities will *not* be removed by preseed.

Type: null or (open submodule of (YAML 1.1 value))

Default:

```
null
```

Example:

```
{
  networks = [
    {
      config = {
        "ipv4.address" = "10.0.100.1/24";
        "ipv4.nat" = "true";
      };
      name = "incusbr0";
      type = "bridge";
    }
  ];
  profiles = [
    {
      devices = {
```

```
            eth0 = {
              name = "eth0";
              network = "incusbr0";
              type = "nic";
            };
            root = {
              path = "/";
              pool = "default";
              size = "35GiB";
              type = "disk";
            };
          };
          name = "default";
        }
      ];
      storage_pools = [
        {
          config = {
            source = "/var/lib/incus/storage-pools/default";
          };
          driver = "dir";
          name = "default";
        }
      ];
    }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/incus.nix>

virtualisation.incus.socketActivation
Whether to enable socket−activation for starting incus.service. Enabling this option will stop incus.service from starting automatically on boot. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/incus.nix>

virtualisation.incus.softDaemonRestart
Allow for incus.service to be stopped without affecting running instances.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/incus.nix>

virtualisation.incus.startTimeout

Time to wait (in seconds) for incusd to become ready to process requests. If incusd does not reply within the configured time, ‘incus.service’ will be considered failed and systemd will attempt to restart it.

Type: unsigned integer, meaning >=0

Default:

```
600
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/incus.nix>

virtualisation.incus.ui.enable

Whether to enable Incus Web UI.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/incus.nix>

virtualisation.incus.ui.package

The incus−ui−canonical package to use.

Type: package

Default:

```
pkgs.incus-ui-canonical
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/incus.nix>

virtualisation.incus.useACMEHost

Host of an existing Let’s Encrypt certificate to use for TLS. *Note that this option does not create any certificates and it doesn’t add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**.

Type: null or string

Default:

```
null
```

Example:

```
"incus.example.com"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/incus.nix>

virtualisation.installBootLoader

Install boot loader to target image.

This is best−effort and may break with unconventional partition setups. Use ‘virtualisation.useDefaultFilesystems’ for a known−working configuration.

Type: boolean

Default:

```
"cfg.useBootLoader && cfg.useDefaultFilesystems"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.interfaces
Extra network interfaces to add to the container or VM in addition to the ones created by **virtualisation.vlans**.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  enp1s0 = {
    vlan = 1;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/guest−networking−options.nix>

virtualisation.interfaces.<name>.assignIP
Automatically assign an IP address to the network interface using the same scheme as virtualisation.vlans.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/guest−networking−options.nix>

virtualisation.interfaces.<name>.name
Interface name

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/guest−networking−options.nix>

virtualisation.interfaces.<name>.vlan
VLAN to which the network interface is connected.

Type: unsigned integer, meaning >=0

Declared by:
<nixpkgs/nixos/modules/virtualisation/guest−networking−options.nix>

virtualisation.kvmgt.enable
Whether to enable KVMGT (iGVT−g) VGPU support. Allows Qemu/KVM guests to share host's Intel integrated graphics card. Currently only one graphical device can be shared. To allow users to access the device without root add them to the kvm group: 'users.extraUsers.<yourusername>.extraGroups = ["kvm"];' .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/kvmgt.nix>

virtualisation.kvmgt.device
PCI ID of graphics card. You can figure it with **ls /sys/class/mdev_bus**.

Type: string

Default:

```
"0000:00:02.0"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/kvmgt.nix>

virtualisation.kvmgt.vgpus
Virtual GPUs to be used in Qemu. You can find devices via **ls /sys/bus/pci/devices/*/mdev_supported_types** and find info about device via **cat /sys/bus/pci/devices/*/mdev_supported_types/i915-GVTg_V5_4/description**

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  i915-GVTg_V5_8 = {
    uuid = [
      "a297db4a-f4c2-11e6-90f6-d3b88d6c9525"
    ];
  };
}
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/kvmgt.nix>

virtualisation.kvmgt.vgpus.<name>.uuid
UUID(s) of VGPU device. You can generate one with ‘libossp_uuid’.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/kvmgt.nix>

virtualisation.libvirtd.enable
This option enables libvirtd, a daemon that manages virtual machines. Users in the “libvirtd” group can interact with the daemon (e.g. to start or stop VMs) using the **virsh** command line tool, among others.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.package
The libvirt package to use.

Type: package

Default:

```
pkgs.libvirt
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.allowedBridges
List of bridge devices that can be used by qemu:///session

Type: list of string

Default:

```
[
  "virbr0"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.dbus.enable
Whether to enable exposing libvirtd APIs over D−Bus.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.dbus.package
The libvirt−dbus package to use.

Type: package

Default:

```
pkgs.libvirt-dbus
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.extraConfig
Extra contents appended to the libvirtd configuration file, libvirtd.conf.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.extraOptions
Extra command line arguments passed to libvirtd on startup.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--verbose"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.firewallBackend
The backend used to setup virtual network firewall rules.

Type: one of “iptables”, “nftables”

Default:

```
if config.networking.nftables.enable then "nftables" else "iptables \
"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.hooks
Hooks related options.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.hooks.daemon
Hooks that will be placed under /var/lib/libvirt/hooks/daemon.d/ and called for daemon start/shutdown/ SIGHUP events. Please see **https://libvirt.org/hooks.html** for documentation.

Type: attribute set of absolute path

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.hooks.libxl
Hooks that will be placed under /var/lib/libvirt/hooks/libxl.d/ and called for libxl−handled xen domains begin/end events. Please see **https://libvirt.org/hooks.html** for documentation.

Type: attribute set of absolute path

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.hooks.lxc
Hooks that will be placed under /var/lib/libvirt/hooks/lxc.d/ and called for lxc domains begin/end events. Please see **https://libvirt.org/hooks.html** for documentation.

Type: attribute set of absolute path

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.hooks.network
Hooks that will be placed under /var/lib/libvirt/hooks/network.d/ and called for networks begin/end events. Please see **https://libvirt.org/hooks.html** for documentation.

Type: attribute set of absolute path

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.hooks.qemu
Hooks that will be placed under /var/lib/libvirt/hooks/qemu.d/ and called for qemu domains begin/end/ migrate events. Please see **https://libvirt.org/hooks.html** for documentation.

Type: attribute set of absolute path

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.nss
libvirt NSS module options.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.nss.enable
This option enables the older libvirt NSS module. This method uses DHCP server records, therefore is dependent on the hostname provided by the guest. Please see **https://libvirt.org/nss.html** for more information.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.nss.enableGuest
This option enables the newer libvirt_guest NSS module. This module uses the libvirt guest name instead of the hostname of the guest. Please see **https://libvirt.org/nss.html** for more information.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.onBoot
Specifies the action to be done to / on the guests when the host boots. The “start” option starts all guests that were running prior to shutdown regardless of their autostart settings. The “ignore” option will not start the formerly running guest on boot. However, any guest marked as autostart will still be automatically started by libvirtd.

Type: one of “start”, “ignore”

Default:

```
"start"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.onShutdown
When shutting down / restarting the host what method should be used to gracefully halt the guests. Setting to “shutdown” will cause an ACPI shutdown of each guest. “suspend” will attempt to save the state of the guests ready to restore on boot.

Type: one of “shutdown”, “suspend”

Default:

```
"suspend"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.parallelShutdown
Number of guests that will be shutdown concurrently, taking effect when onShutdown is set to “shutdown”. If set to 0, guests will be shutdown one after another. Number of guests on shutdown at any time will not exceed number set in this variable.

Type: unsigned integer, meaning >=0

Default:

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.qemu
QEMU related options.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.qemu.package
The qemu package to use. ‘pkgs.qemu’ can emulate alien architectures (e.g. aarch64 on x86) ‘pkgs.qemu_kvm’ saves disk space allowing to emulate only host architectures.

Type: package

Default:

```
pkgs.qemu
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.qemu.runAsRoot
If true, libvirtd runs qemu as root. If false, libvirtd runs qemu as unprivileged user qemu−libvirtd. Changing this option to false may cause file permission issues for existing guests. To fix these, manually change ownership of affected files in /var/lib/libvirt/qemu to qemu−libvirtd.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.qemu.swtpm
QEMU’s swtpm options.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.qemu.swtpm.enable
Allows libvirtd to use swtpm to create an emulated TPM.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.qemu.swtpm.package
The swtpm package to use.

Type: package

Default:

```
pkgs.swtpm
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.qemu.verbatimConfig

Contents written to the qemu configuration file, qemu.conf. Make sure to include a proper namespace configuration when supplying custom configuration.

Type: strings concatenated with “\n”

Default:

```
namespaces = []
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.qemu.vhostUserPackages

Packages containing out−of−tree vhost−user drivers.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.virtiofsd ]
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.shutdownTimeout

Number of seconds we’re willing to wait for a guest to shut down. If parallel shutdown is enabled, this timeout applies as a timeout for shutting down all guests on a single URI defined in the variable URIS. If this is 0, then there is no time out (use with caution, as guests might not respond to a shutdown request).

Type: unsigned integer, meaning >=0

Default:

```
300
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.sshProxy

Whether to configure OpenSSH to use the **SSH Proxy**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.libvirtd.startDelay

Number of seconds to wait between each guest start. If set to 0, all guests will start up in parallel.

Type: unsigned integer, meaning >=0

Default:

Declared by:

<nixpkgs/nixos/modules/virtualisation/libvirtd.nix>

virtualisation.lxc.enable

This enables Linux Containers (LXC), which provides tools for creating and managing system or application containers on Linux.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/lxc.nix>

virtualisation.lxc.package

The lxc package to use.

Type: package

Default:

```
pkgs.lxc
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/lxc.nix>

virtualisation.lxc.bridgeConfig

This is the config file for override lxc−net bridge default settings.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/lxc.nix>

virtualisation.lxc.defaultConfig

Default config (default.conf) for new containers, i.e. for network config. See **lxc.container.conf**(5).

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/lxc.nix>

virtualisation.lxc.lxcfs.enable

This enables LXCFS, a FUSE filesystem for LXC. To use lxcfs in include the following configuration in your container configuration:

```
virtualisation.lxc.defaultConfig = "lxc.include = ${pkgs.lxcfs}/sha \
re/lxc/config/common.conf.d/00−lxcfs.conf";
```

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/lxcfs.nix>

virtualisation.lxc.systemConfig

This is the system−wide LXC config. See **lxc.system.conf**(5).

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/lxc.nix>

virtualisation.lxc.unprivilegedContainers

Whether to enable support for unprivileged users to launch containers.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/lxc.nix>

virtualisation.lxc.usernetConfig

This is the config file for managing unprivileged user network administration access in LXC. See **lxc−usernet**(5).

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/lxc.nix>

virtualisation.memorySize

The memory size of the virtual machine in MiB (1024×1024 bytes).

Type: positive integer, meaning >0

Default:

```
1024
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.mountHostNixStore

Mount the host Nix store as a 9p mount.

Type: boolean

Default:

```
!cfg.useNixStoreImage && !cfg.useBootLoader
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.msize

The msize (maximum packet size) option passed to 9p file systems, in bytes. Increasing this should increase performance significantly, at the cost of higher RAM usage.

Type: positive integer, meaning >0

Default:

```
16384
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.nixStore9pCache

Type of 9p cache to use when mounting host nix store. “none” provides no caching. “loose” enables Linux’s local VFS cache. “fscache” uses Linux’s fscache subsystem.

This option is only respected when **virtualisation.mountHostNixStore** is enabled.

Type: one of “loose”, “none”, “fscache”

Default:

```
"loose"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.oci−containers.backend

The underlying Docker implementation to use.

Type: one of “podman”, “docker”

Default:

```
"podman"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers

OCI (Docker) containers to run as systemd services.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.autoRemoveOnStop

Automatically remove the container when it is stopped or killed

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.autoStart

When enabled, the container is automatically started on boot. If this option is set to false, the container has to be started on−demand via its service.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.capabilities

Capabilities to configure for the container. When set to true, capability is added to the container. When set to false, capability is dropped from the container. When null, default runtime settings apply.

Type: lazy attribute set of (null or boolean)

Default:

```
{ }
```

Example:

```
{
  SYS_ADMIN = true;
  SYS_WRITE = false;
}
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.cmd

Commandline arguments to pass to the image's entrypoint.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−port=9000"
]
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.dependsOn

Define which other containers this one depends on. They will be added to both After and Requires for the unit.

Use the same name as the attribute under 'virtualisation.oci−containers.containers'.

Type: list of string

Default:

```
[ ]
```

Example:

```
virtualisation.oci−containers.containers = {
  node1 = {};
  node2.dependsOn = [ "node1" ];
```

```
};
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.devices

List of devices to attach to this container.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/dev/dri:/dev/dri"
]
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.entrypoint

Override the default entrypoint of the image.

Type: null or string

Default:

```
null
```

Example:

```
"/bin/my−app"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.environment

Environment variables to set for this container.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  DATABASE_HOST = "db.example.com";
  DATABASE_PORT = "3306";
}
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.environmentFiles

Environment files for this container.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
```

```
    "/path/to/.env"
    "/path/to/.env.secret"
  ]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.extraOptions
Extra options for **podman run**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−network=host"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.hostname
The hostname of the container.

Type: null or string

Default:

```
null
```

Example:

```
"hello−world"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.image
OCI image to run.

Type: string

Example:

```
"library/hello−world"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.imageFile
Path to an image file to load before running the image. This can be used to bypass pulling the image from the registry.

The ‘image’ attribute must match the name and tag of the image contained in this file, as they will be used to run the container with that image. If they do not match, the image will be pulled from the registry as usual.

Type: null or path in the Nix store

Default:

```
null
```

Example:

```
pkgs.dockerTools.buildImage {...};
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.imageStream
Path to a script that streams the desired image on standard output.

This option is mainly intended for use with ‘pkgs.dockerTools.streamLayeredImage’ so that the intermediate image archive does not need to be stored in the Nix store. For larger images this optimization can significantly reduce Nix store churn compared to using the ‘imageFile’ option, because you don’t have to store a new copy of the image archive in the Nix store every time you change the image. Instead, if you stream the image then you only need to build and store the layers that differ from the previous image.

Type: null or package

Default:

```
null
```

Example:

```
pkgs.dockerTools.streamLayeredImage {...};
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.labels
Labels to attach to the container at runtime.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "traefik.https.routers.example.rule" = "Host(‘example.container‘) \
";
}
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.log−driver
Logging driver for the container. The default of ‘"journald"’ means that the container’s logs will be handled as part of the systemd unit.

For more details and a full list of logging drivers, refer to respective backends documentation.

For Docker: **Docker engine documentation**

For Podman: Refer to the **docker−run**(1) man page.

Type: string

Default:

```
"journald"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.login.passwordFile
Path to file containing password.

Type: null or string

Default:

```
null
```

Example:

```
"/etc/nixos/dockerhub−password.txt"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.login.registry
Registry where to login to.

Type: null or string

Default:

```
null
```

Example:

```
"https://docker.pkg.github.com"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.login.username
Username for login.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.networks
Networks to attach the container to

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.podman
Podman−specific settings in OCI containers. These must be null when using the ‘docker’ backend.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.podman.sdnotify

Determines how ‘podman’ should notify systemd that the unit is ready. There are **three options**:

- ‘conmon’: marks the unit as ready when the container has started.
- ‘healthy’: marks the unit as ready when the **container’s healthcheck** passes.
- ‘container’: ‘NOTIFY_SOCKET’ is passed into the container and the process inside the container needs to indicate on its own that it’s ready.

Type: one of “conmon”, “healthy”, “container”

Default:

```
"conmon"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.podman.user

The user under which the container should run.

Type: string

Default:

```
"root"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.ports

Network ports to publish from the container to the outer host.

Valid formats:

- ‘<ip>:<hostPort>:<containerPort>’
- ‘<ip>::<containerPort>’
- ‘<hostPort>:<containerPort>’
- ‘<containerPort>’

Both ‘hostPort’ and ‘containerPort’ can be specified as a range of ports. When specifying ranges for both, the number of container ports in the range must match the number of host ports in the range. Example: ‘1234−1236:1234−1236/tcp’

When specifying a range for ‘hostPort’ only, the ‘containerPort’ must *not* be a range. In this case, the container port is published somewhere within the specified ‘hostPort’ range. Example: ‘1234−1236:1234/tcp’

Publishing a port bypasses the NixOS firewall. If the port is not supposed to be shared on the network, make sure to publish the port to localhost. Example: ‘127.0.0.1:1234:1234’

Refer to the **Docker engine documentation** for full details.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1:8080:9000"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.preRunExtraOptions
Extra options for **podman** that go before the 'run' argument.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−runtime"
  "runsc"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.privileged
Give extended privileges to the container

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.pull
Image pull policy for the container. Must be one of: always, missing, never, newer

Type: one of "always", "missing", "never", "newer"

Default:

```
"missing"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.serviceName
Systemd service name that manages the container

Type: string

Default:

```
"<backend>−<name>"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.user
Override the username or UID (and optionally groupname or GID) used in the container.

Type: null or string

Default:

```
null
```

Example:

```
"alice:users"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.volumes
List of volumes to attach to this container.

Note that this is a list of ‘"src:dst"’ strings to allow for ‘src’ to refer to ‘/nix/store’ paths, which would be difficult with an attribute set. There are also a variety of mount options available as a third field; please refer to the **docker engine documentation** for details.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "volume_name:/path/inside/container"
  "/path/on/host:/path/inside/container"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.oci−containers.containers.<name>.workdir
Override the default working directory for the container.

Type: null or string

Default:

```
null
```

Example:

```
"/var/lib/hello_world"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/oci−containers.nix>

virtualisation.podman.enable
This option enables Podman, a daemonless container engine for developing, managing, and running OCI Containers on your Linux System.

It is a drop−in replacement for the **docker** command.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/podman/default.nix>

virtualisation.podman.enableNvidia
Deprecated, please use **hardware.nvidia−container−toolkit.enable** instead.

Enable use of Nvidia GPUs from within podman containers.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/podman/default.nix>

virtualisation.podman.package
The podman package to use. This package will automatically include extra packages and runtimes.

Type: package

Default:

```
pkgs.podman
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/podman/default.nix>

virtualisation.podman.autoPrune.enable
Whether to periodically prune Podman resources. If enabled, a systemd timer will run ‘podman system prune −f’ as specified by the ‘dates’ option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/podman/default.nix>

virtualisation.podman.autoPrune.dates
Specification (in the format described by **systemd.time**(7)) of the time at which the prune will occur.

Type: string

Default:

```
"weekly"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/podman/default.nix>

virtualisation.podman.autoPrune.flags
Any additional flags passed to **podman system prune**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--all"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/podman/default.nix>

virtualisation.podman.defaultNetwork.settings
Settings for podman’s default network.

Type: JSON value

Default:

```
{ }
```

Example:

```
{ dns_enabled = true; }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/podman/default.nix>

virtualisation.podman.dockerCompat
Create an alias mapping **docker** to **podman**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/podman/default.nix>

virtualisation.podman.dockerSocket.enable
Make the Podman socket available in place of the Docker socket, so Docker tools can find the Podman socket.

Podman implements the Docker API.

Users must be in the ‘podman’ group in order to connect. As with Docker, members of this group can gain root access.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/podman/default.nix>

virtualisation.podman.extraPackages
Extra dependencies for podman to be placed on $PATH in the wrapper.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/podman/default.nix>

virtualisation.podman.extraRuntimes
Extra runtime packages to be installed in the Podman wrapper. Those are then placed in libexec/podman, i.e. are seen as podman internal commands.

Type: list of package

Default:

```
lib.optionals pkgs.stdenv.hostPlatform.isLinux [ pkgs.runc ]
```

Example:

```
[
  pkgs.gvisor
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/podman/default.nix>

virtualisation.podman.networkSocket.enable

Make the Podman and Docker compatibility API available over the network with TLS client certificate authentication.

This allows Docker clients to connect with the equivalents of the Docker CLI '−H' and '−−tls*' family of options.

For certificate setup, see **https://docs.docker.com/engine/security/protect−access/**

This option is independent of **virtualisation.podman.dockerSocket.enable**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/podman/network−socket.nix>

virtualisation.podman.networkSocket.listenAddress

Interface address for receiving TLS connections.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/podman/network−socket.nix>

virtualisation.podman.networkSocket.openFirewall

Whether to open the port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/podman/network−socket.nix>

virtualisation.podman.networkSocket.port

TCP port number for receiving TLS connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2376
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/podman/network−socket.nix>

virtualisation.podman.networkSocket.server

Choice of TLS proxy server.

Type: value "ghostunnel" (singular enum)

Example:

```
"ghostunnel"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/podman/network−socket−ghostunnel.nix>
<nixpkgs/nixos/modules/virtualisation/podman/network−socket.nix>

virtualisation.podman.networkSocket.tls.cacert
Path to CA certificate to use for client authentication.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/virtualisation/podman/network−socket.nix>

virtualisation.podman.networkSocket.tls.cert
Path to certificate describing the server.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/virtualisation/podman/network−socket.nix>

virtualisation.podman.networkSocket.tls.key
Path to the private key corresponding to the server certificate.

Use a string for this setting. Otherwise it will be copied to the Nix store first, where it is readable by any system process.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/virtualisation/podman/network−socket.nix>

virtualisation.qemu.enableSharedMemory
Whether to enable shared memory.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.qemu.package
QEMU package to use.

Type: package

Default:

```
if hostPkgs.stdenv.hostPlatform.qemuArch == pkgs.stdenv.hostPlatfor \
m.qemuArch then config.virtualisation.host.pkgs.qemu_kvm else confi \
g.virtualisation.host.pkgs.qemu
```

Example:

```
pkgs.qemu_test
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.qemu.consoles
The output console devices to pass to the kernel command line via the ‘console’ parameter, the primary console is the last item of this list.

By default it enables both serial console and ‘tty0’. The preferred console (last one) is based on the value of **virtualisation.graphics**.

Type: list of string

Default:

```
[
  "ttyS0,115200n8"
  "tty0"
]
```

Example:

```
[
  "console=tty1"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.qemu.diskInterface
The interface used for the virtual hard disks.

Type: one of “virtio”, “scsi”, “ide”

Default:

```
"virtio"
```

Example:

```
"scsi"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.qemu.drives
Drives passed to qemu.

Type: list of (submodule)

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.qemu.drives.*.deviceExtraOpts
Extra options passed to device flag.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.qemu.drives.*.driveExtraOpts
Extra options passed to drive flag.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.qemu.drives.*.file

The file image used for this drive.

Type: string

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.qemu.drives.*.name

A name for the drive. Must be unique in the drives list. Not passed to qemu.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.qemu.forceAccel

Whether to force the use of hardware−accelerated virtualisation. When enabled, QEMU will not fall back to the slower software emulation (TCG) and will instead error out if the accelerator is not available.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.qemu.guestAgent.enable

Enable the Qemu guest agent.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.qemu.networkingOptions

Networking−related command−line options that should be passed to qemu. The default is to use user-space networking (SLiRP). See the **QEMU Wiki on Networking** for details.

If you override this option, be advised to keep '${QEMU_NET_OPTS:+,$QEMU_NET_OPTS}' (as seen in the example) to keep the default runtime behaviour.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−net nic,netdev=user.0,model=virtio"
  "−netdev user,id=user.0,\${QEMU_NET_OPTS:+,$QEMU_NET_OPTS}"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.qemu.options
Options passed to QEMU. See **QEMU User Documentation** for a complete list.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−vga std"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.qemu.virtioKeyboard
Enable the virtio−keyboard device.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.resolution
The resolution of the virtual machine display.

Type: attribute set

Default:

```
{
  x = 1024;
  y = 768;
}
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.restrictNetwork
If this option is enabled, the guest will be isolated, i.e. it will not be able to contact the host and no guest IP packets will be routed over the host to the outside. This option does not affect any explicitly set forwarding rules.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.rootDevice

The path (inside the VM) to the device containing the root filesystem.

Type: null or absolute path

Default:

```
/dev/disk/by-label/nixos
```

Example:

```
"/dev/disk/by-label/nixos"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.rosetta.enable

Whether to enable **Rosetta** support.

This feature requires the system to be a virtualised guest on an Apple silicon host.

The default settings are suitable for the **UTM** virtualisation **package**. Make sure to select 'Apple Virtualization' as the virtualisation engine and then tick the 'Enable Rosetta' option.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/rosetta.nix>

virtualisation.rosetta.mountTag

The VirtioFS mount tag for the Rosetta runtime, exposed by the host's virtualisation software.

If supported, your virtualisation software should provide instructions on how register the Rosetta runtime inside Linux guests. These instructions should mention the name of the mount tag used for the VirtioFS directory share that contains the Rosetta runtime.

Type: string

Default:

```
"rosetta"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/rosetta.nix>

virtualisation.sharedDirectories

An attributes set of directories that will be shared with the virtual machine using VirtFS (9P filesystem over VirtIO). The attribute name will be used as the 9P mount tag.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  my-share = {
    source = "/path/to/be/shared";
    target = "/mnt/shared";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.sharedDirectories.<name>.securityModel
The security model to use for this share:

- ‘passthrough’: files are stored using the same credentials as they are created on the guest (this requires QEMU to run as root)
- ‘mapped−xattr’: some of the file attributes like uid, gid, mode bits and link target are stored as file attributes
- ‘mapped−file’: the attributes are stored in the hidden .virtfs_metadata directory. Directories exported by this security model cannot interact with other unix tools
- ‘none’: same as “passthrough” except the sever won’t report failures if it fails to set file attributes like ownership

Type: one of “passthrough”, “mapped−xattr”, “mapped−file”, “none”

Default:

```
"mapped-xattr"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.sharedDirectories.<name>.source
The path of the directory to share, can be a shell variable

Type: string

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.sharedDirectories.<name>.target
The mount point of the directory inside the virtual machine

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.spiceUSBRedirection.enable
Install the SPICE USB redirection helper with setuid privileges. This allows unprivileged users to pass USB devices connected to this machine to libvirt VMs, both local and remote. Note that this allows users arbitrary access to USB devices.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/spice−usb−redirection.nix>

virtualisation.tpm.enable
Whether to enable a TPM device in the virtual machine with a driver, using swtpm.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.tpm.package
The swtpm package to use.

Type: package

Default:

```
pkgs.swtpm
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.tpm.deviceModel
QEMU device model for the TPM, uses the appropriate default based on th guest platform system and the package passed.

Type: string

Default:

```
Based on the guest platform Linux system:

− ‘tpm−tis‘ for (i686, x86_64)
− ‘tpm−spapr‘ for ppc64
− ‘tpm−tis−device‘ for (armv7, aarch64)
```

Example:

```
"tpm−tis−device"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.tpm.provisioning
Script to provision the TPM before control is handed off to the VM.

‘TPM2TOOLS_TCTI’ will be provided to configure tpm2−tools to use the swtpm instance transparently. ‘TCTI’ is also provided as a generic value, consumer is expected to re−export it however it may need (‘TPM2OPENSSL_TCTI’, ‘TPM2_PKCS11_TCTI’, …).

Type: null or string

Default:

```
null
```

Example:

```
tpm2_nvdefine 0xcafecafe \
  −C o \
  −a "ownerread|policyread|policywrite|ownerwrite|authread|authwri \
te"
echo "foobar" | tpm2_nvwrite 0xcafecafe −C o
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.useBIOSBoot
If enabled for legacy MBR VMs, the VM image will have a separate boot partition mounted at /boot. useBIOSBoot is ignored if useEFIBoot == true.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.useBootLoader
Use a boot loader to boot the system. This allows, among other things, testing the boot loader.

If disabled, the kernel and initrd are directly booted, forgoing any bootloader.

Check the documentation on **virtualisation.directBoot.enable** for details.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.useDefaultFilesystems
If enabled, the boot disk of the virtual machine will be formatted and mounted with the default filesystems for testing. Swap devices and LUKS will be disabled.

If disabled, a root filesystem has to be specified and formatted (for example in the initial ramdisk).

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.useEFIBoot
If enabled, the virtual machine will provide a EFI boot manager. useEFIBoot is ignored if useBootLoader == false.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.useHostCerts
If enabled, when 'NIX_SSL_CERT_FILE' is set on the host, pass the CA certificates from the host to the VM.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-vm.nix>

virtualisation.useNixStoreImage

Build and use a disk image for the Nix store, instead of accessing the host's one through 9p.

For applications which do a lot of reads from the store, this can drastically improve performance, but at the cost of disk space and image build time.

The Nix store image is built just−in−time right before the VM is started. Because it does not produce another derivation, the image is not cached between invocations and never lands in the store or binary cache.

If you want a full disk image with a partition table and a root filesystem instead of only a store image, enable **virtualisation.useBootLoader** instead.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.useSecureBoot

Enable Secure Boot support in the EFI firmware.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.virtualbox.guest.enable

Whether to enable the VirtualBox service and other guest additions.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/virtualbox−guest.nix>

virtualisation.virtualbox.guest.clipboard

Whether to enable clipboard support.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/virtualbox−guest.nix>

virtualisation.virtualbox.guest.dragAndDrop

Whether to enable drag and drop support.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/virtualbox−guest.nix>

virtualisation.virtualbox.guest.seamless
Whether to enable seamless mode. When activated windows from the guest appear next to the windows of the host.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/virtualbox−guest.nix>

virtualisation.virtualbox.guest.use3rdPartyModules
Whether to use the kernel modules provided by VirtualBox instead of the ones from the upstream kernel.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/virtualbox−guest.nix>

virtualisation.virtualbox.guest.vboxsf
Whether to load vboxsf

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/virtualbox−guest.nix>

virtualisation.virtualbox.guest.verbose
Whether to verbose logging for guest services.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/virtualbox−guest.nix>

virtualisation.virtualbox.host.enable
Whether to enable VirtualBox.

Note
In order to pass USB devices from the host to the guests, the user needs to be in the ‘vboxusers’ group.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/virtualbox−host.nix>

virtualisation.virtualbox.host.enableExtensionPack
Whether to install the Oracle Extension Pack for VirtualBox.

Important
You must set ‘nixpkgs.config.allowUnfree = true’ in order to use this. This requires you accept the VirtualBox PUEL.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/virtualbox−host.nix>

virtualisation.virtualbox.host.enableHardening
Enable hardened VirtualBox, which ensures that only the binaries in the system path get access to the devices exposed by the kernel modules instead of all users in the vboxusers group.

Important
Disabling this can put your system’s security at risk, as local users in the vboxusers group can tamper with the VirtualBox device files.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/virtualbox−host.nix>

virtualisation.virtualbox.host.enableKvm
Enable KVM support for VirtualBox. This increases compatibility with Linux kernel versions, because the VirtualBox kernel modules are not required.

This option is incompatible with ‘addNetworkInterface’.

Note: This is experimental. Please check **https://github.com/cyberus−technology/virtualbox−kvm/issues**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/virtualbox−host.nix>

virtualisation.virtualbox.host.enableWebService
Build VirtualBox web service tool (vboxwebsrv) to allow managing VMs via other webpage frontend tools. Useful for headless servers.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/virtualbox−host.nix>

virtualisation.virtualbox.host.package
The virtualbox package to use.

Type: package

Default:

```
pkgs.virtualbox
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/virtualbox−host.nix>

virtualisation.virtualbox.host.addNetworkInterface
Automatically set up a vboxnet0 host−only network interface.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/virtualbox−host.nix>

virtualisation.virtualbox.host.headless
Use VirtualBox installation without GUI and Qt dependency. Useful to enable on servers and when virtual machines are controlled only via SSH.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/virtualbox−host.nix>

virtualisation.vlans
Virtual networks to which the container or VM is connected. Each number «N» in this list causes the container to have a virtual Ethernet interface attached to a separate virtual network on which it will be assigned IP address ‘192.168.«N».«M»’, where «M» is the index of this container in the list of containers.

Type: list of (unsigned integer, meaning >=0)

Default:

```
if config.virtualisation.interfaces == {} then [ 1 ] else [ ]
```

Example:

```
[
  1
  2
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/guest−networking−options.nix>

virtualisation.vmVariant
Machine configuration to be added for the vm script produced by ‘nixos−rebuild build−vm’.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/build−vm.nix>

virtualisation.vmVariantWithBootLoader
Machine configuration to be added for the vm script produced by ‘nixos−rebuild build−vm−with−bootloader’.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/build−vm.nix>

virtualisation.vmware.guest.enable
Whether to enable VMWare Guest Support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/vmware−guest.nix>

virtualisation.vmware.guest.package
Package providing open−vm−tools.

Type: package

Default:

```
if config.virtualisation.vmware.headless then pkgs.open−vm−tools \
−headless else pkgs.open−vm−tools;
```

Example:

```
pkgs.open−vm−tools
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/vmware−guest.nix>

virtualisation.vmware.guest.headless
Whether to disable X11−related features.

Type: boolean

Default:

```
!config.services.xserver.enable
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/vmware−guest.nix>

virtualisation.vmware.host.enable
This enables VMware host virtualisation for running VMs.

Important
‘vmware−vmx’ will cause kcompactd0 due to ‘Transparent Hugepages’ feature in kernel. Apply ‘["transparent_hugepage=never"]’ in option **boot.kernelParams** to disable them.

Note

If that didn't work disable 'TRANSPARENT_HUGEPAGE', 'COMPACTION' configs and recompile kernel.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/vmware−host.nix>

virtualisation.vmware.host.package
The vmware−workstation package to use.

Type: package

Default:

```
pkgs.vmware−workstation
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/vmware−host.nix>

virtualisation.vmware.host.extraConfig
Add extra config to /etc/vmware/config

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
  # Allow unsupported device's OpenGL and Vulkan acceleration for g \
uest vGPU
  mks.gl.allowUnsupportedDrivers = "TRUE"
  mks.vk.allowUnsupportedDevices = "TRUE"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/vmware−host.nix>

virtualisation.vmware.host.extraPackages
Extra packages to be used with VMware host.

Type: list of package

Default:

```
[ ]
```

Example:

```
"with pkgs; [ ntfs3g ]"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/vmware−host.nix>

virtualisation.vswitch.enable
Whether to enable Open vSwitch. A configuration daemon (ovs−server) will be started.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/openvswitch.nix>

virtualisation.vswitch.package
The openvswitch package to use.

Type: package

Default:

```
pkgs.openvswitch
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/openvswitch.nix>

virtualisation.vswitch.resetOnStart
Whether to reset the Open vSwitch configuration database to a default configuration on every start of the systemd ‘ovsdb.service’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/openvswitch.nix>

virtualisation.waydroid.enable
Whether to enable Waydroid.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waydroid.nix>

virtualisation.waydroid.package
The waydroid package to use.

Type: package

Default:

```
if config.networking.nftables.enable then pkgs.waydroid-nftables e \
lse pkgs.waydroid
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/waydroid.nix>

virtualisation.writableStore
If enabled, the Nix store in the VM is made writable by layering an overlay filesystem on top of the host’s Nix store.

By default, this is enabled if you mount a host Nix store.

Type: boolean

Default:

```
cfg.mountHostNixStore
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.writableStoreUseTmpfs
Use a tmpfs for the writable store instead of writing to the VM's own filesystem.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu−vm.nix>

virtualisation.xen.enable
Whether to enable the Xen Project Hypervisor, a virtualisation technology defined as a *type−1 hypervisor*, which allows multiple virtual machines, known as *domains*, to run concurrently on the physical machine. NixOS runs as the privileged *Domain 0*. This option requires a reboot into a Xen kernel to take effect.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.package
The Xen Hypervisor package to use.

Type: package

Default:

```
pkgs.xen
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.boot.bios.path
Path to the Xen 'multiboot' binary used for BIOS booting. Unless you're building your own Xen derivation, you should leave this option as the default value.

Type: absolute path

Default:

```
${config.virtualisation.xen.package.boot}/${config.virtualisation.x \
en.package.multiboot}
```

Example:

```
${config.virtualisation.xen.package}/boot/xen−${config.virtualisat \
ion.xen.package.upstreamVersion}
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.boot.builderVerbosity

The boot entry builder script should be called with exactly one of the following arguments in order to specify its verbosity:

- ‘quiet’ supresses all messages.
- ‘default’ adds a simple “Installing Xen Project Hypervisor boot entries…done.” message to the script.
- ‘info’ is the same as ‘default’, but it also prints a diff with information on which generations were altered.
  - This option adds two extra dependencies to the script: ‘diffutils’ and ‘bat’.
- ‘debug’ prints information messages for every single step of the script.

This option does not alter the actual functionality of the script, just the number of messages printed when rebuilding the system.

Type: one of “default”, “info”, “debug”, “quiet”

Default:

```
"default"
```

Example:

```
"info"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/xen-dom0.nix>

virtualisation.xen.boot.efi.path

Path to xen.efi. ‘pkgs.xen’ is patched to install the xen.efi file on ‘$boot/boot/xen.efi’, but an unpatched Xen build may install it somewhere else, such as ‘$out/boot/efi/efi/nixos/xen.efi’. Unless you’re building your own Xen derivation, you should leave this option as the default value.

Type: absolute path

Default:

```
${config.virtualisation.xen.package.boot}/${config.virtualisation.x \
en.package.efi}
```

Example:

```
${config.virtualisation.xen.package}/boot/efi/efi/nixos/xen-${conf \
ig.virtualisation.xen.package.upstreamVersion}.efi
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/xen-dom0.nix>

virtualisation.xen.boot.params

Xen Command Line parameters passed to Domain 0 at boot time.

> **Note**
> Note: these are different from **boot.kernelParams**. See the **Xen documentation** for more information.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "iommu=force:true,qinval:true,debug:true"
  "noreboot=true"
```

```
  "vga=ask"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen-dom0.nix>

virtualisation.xen.debug
Whether to enable Xen debug features for Domain 0. This option enables some hidden debugging tests and features, and should not be used in production.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen-dom0.nix>

virtualisation.xen.dom0Resources.maxMemory
Maximum amount of memory (in MiB) that Domain 0 can dynamically allocate to itself. Does nothing if set to the same amount as virtualisation.xen.memory, or if that option is set to 0.

Type: unsigned integer, meaning >=0

Default:

```
config.virtualisation.xen.dom0Resources.memory
```

Example:

```
1024
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen-dom0.nix>

virtualisation.xen.dom0Resources.maxVCPUs
Amount of virtual CPU cores allocated to Domain 0 on boot. If set to 0, all cores are assigned to Domain 0, and unprivileged domains will compete with Domain 0 for CPU time.

Type: unsigned integer, meaning >=0

Default:

Example:

```
4
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen-dom0.nix>

virtualisation.xen.dom0Resources.memory
Amount of memory (in MiB) allocated to Domain 0 on boot. If set to 0, all memory is assigned to Domain 0, and unprivileged domains will compete with Domain 0 for free RAM.

Type: unsigned integer, meaning >=0

Default:

Example:

```
512
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.domains.extraConfig
Options defined here will override the defaults for xendomains. The default options can be seen in the file included from /etc/default/xendomains.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
XENDOMAINS_SAVE=/persist/xen/save
XENDOMAINS_RESTORE=false
XENDOMAINS_CREATE_USLEEP=10000000
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.qemu.package
The QEMU (with Xen Hypervisor support) package to use.

Type: package

Default:

```
pkgs.qemu_xen
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.qemu.pidFile
Path to the QEMU PID file.

Type: absolute path

Default:

```
"/run/xen/qemu−dom0.pid"
```

Example:

```
"/var/run/xen/qemu−dom0.pid"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.path
Path to the Xen Store Daemon. This option is useful to switch between the legacy C−based Xen Store Daemon, and the newer OCaml−based Xen Store Daemon, ‘oxenstored’.

Type: absolute path

Default:

```
${config.virtualisation.xen.package}/bin/oxenstored
```

Example:

```
${config.virtualisation.xen.package}/bin/xenstored
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.settings

The OCaml−based Xen Store Daemon configuration. This option does nothing with the C−based ‘xenstored’.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  conflict = {
    burstLimit = 15.0;
    maxHistorySeconds = 0.12;
  };
  enableMerge = false;
  quota = {
    enable = true;
    maxWatchEvents = 2048;
  };
  xenstored = {
    log = {
      file = "/dev/null";
      level = "info";
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.settings.enableMerge

Whether to enable transaction merge support.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.settings.conflict.burstLimit

Limits applied to domains whose writes cause other domains’ transaction commits to fail. Must include decimal point.

The burst limit is the number of conflicts a domain can cause to fail in a short period; this value is used for both the initial and the maximum value of each domain’s conflict−credit, which falls by one point for each conflict caused, and when it reaches zero the domain’s requests are ignored.

Type: nonnegative floating point number, meaning >=0

Default:

```
5.0
```

Example:

```
15.0
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.settings.conflict.maxHistorySeconds
Limits applied to domains whose writes cause other domains' transaction commits to fail. Must include decimal point.

The conflict−credit is replenished over time: one point is issued after each conflict.maxHistorySeconds, so this is the minimum pause−time during which a domain will be ignored.

Type: nonnegative floating point number, meaning >=0

Default:

```
0.05
```

Example:

```
1.0
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.settings.conflict.rateLimitIsAggregate
If the conflict.rateLimitIsAggregate option is 'true', then after each tick one point of conflict−credit is given to just one domain: the one at the front of the queue. If 'false', then after each tick each domain gets a point of conflict−credit.

In environments where it is known that every transaction will involve a set of nodes that is writable by at most one other domain, then it is safe to set this aggregate limit flag to 'false' for better performance. (This can be determined by considering the layout of the xenstore tree and permissions, together with the content of the transactions that require protection.)

A transaction which involves a set of nodes which can be modified by multiple other domains can suffer conflicts caused by any of those domains, so the flag must be set to 'true'.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.settings.perms.enable
Whether to enable the node permission system.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.settings.perms.enableWatch

Whether to enable the watch permission system.

When this is set to ‘true’, unprivileged guests can only get watch events for xenstore entries that they would’ve been able to read.

When this is set to ‘false’, unprivileged guests may get watch events for xenstore entries that they cannot read. The watch event contains only the entry name, not the value. This restores behaviour prior to **XSA−115**.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.settings.persistent

Whether to activate the filed base backend.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.settings.pidFile

Path to the Xen Store Daemon PID file.

Type: absolute path

Default:

```
"/run/xen/xenstored.pid"
```

Example:

```
"/var/run/xen/xenstored.pid"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.settings.quota.enable

Whether to enable the quota system.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.settings.quota.maxEntity
Entity limit for transactions.

Type: positive integer, meaning >0

Default:

```
1000
```

Example:

```
1024
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.settings.quota.maxOutstanding
Maximum outstanding requests, i.e. in−flight requests / domain.

Type: positive integer, meaning >0

Default:

```
1024
```

Example:

```
1024
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.settings.quota.maxPath
Path limit for the quota system.

Type: positive integer, meaning >0

Default:

```
1024
```

Example:

```
1024
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.settings.quota.maxRequests
Maximum number of requests per transaction.

Type: positive integer, meaning >0

Default:

```
1024
```

Example:

```
1024
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

virtualisation.xen.store.settings.quota.maxSize
Size limit for transactions.

Type: positive integer, meaning >0

Default:

```
2048
```

Example:

```
4096
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen-dom0.nix>

virtualisation.xen.store.settings.quota.maxWatch
Maximum number of watches by the Xenstore Watchdog.

Type: positive integer, meaning >0

Default:

```
100
```

Example:

```
256
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen-dom0.nix>

virtualisation.xen.store.settings.quota.maxWatchEvents
Maximum number of outstanding watch events per watch.

Type: positive integer, meaning >0

Default:

```
1024
```

Example:

```
2048
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen-dom0.nix>

virtualisation.xen.store.settings.quota.transaction
Maximum number of transactions.

Type: positive integer, meaning >0

Default:

```
10
```

Example:

```
50
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen-dom0.nix>

virtualisation.xen.store.settings.ringScanInterval
Perodic scanning for all the rings as a safenet for lazy clients. Define the interval in seconds; set to a negative integer to disable.

Type: nonzero signed integer, meaning !=0

Default:

```
20
```

Example:

```
30
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen-dom0.nix>

virtualisation.xen.store.settings.xenstored.accessLog.file
Path to the Xen Store access log file.

Type: absolute path

Default:

```
"/var/log/xen/xenstored-access.log"
```

Example:

```
"/var/log/security/xenstored-access.log"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen-dom0.nix>

virtualisation.xen.store.settings.xenstored.log.file
Path to the Xen Store log file.

Type: absolute path

Default:

```
"/var/log/xen/xenstored.log"
```

Example:

```
"/dev/null"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen-dom0.nix>

virtualisation.xen.store.settings.xenstored.log.level
Logging level for the Xen Store.

Type: null or one of “debug”, “info”, “warn”, “error”

Default:

```
if (config.virtualisation.xen.trace == true) then "debug" else null
```

Example:

```
"error"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen-dom0.nix>

virtualisation.xen.trace
Whether to enable Xen debug tracing and logging for Domain 0.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/xen−dom0.nix>

xdg.autostart.enable
Whether to install files to support the **XDG Autostart specification**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/xdg/autostart.nix>

xdg.icons.enable
Whether to install files to support the **XDG Icon Theme specification**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/xdg/icons.nix>

xdg.icons.fallbackCursorThemes
Names of the fallback cursor themes, in order of preference, to be used when no other icon source can be found. Set to '[]' to disable the fallback entirely.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/config/xdg/icons.nix>

xdg.menus.enable
Whether to install files to support the **XDG Desktop Menu specification**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/xdg/menus.nix>

xdg.mime.enable
Whether to install files to support the **XDG Shared MIME−info specification** and the **XDG MIME Applications specification**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/xdg/mime.nix>

xdg.mime.addedAssociations

Adds associations between mimetypes and applications. See the **specifications** for more information. Globs in all variations are supported.

Type: attribute set of (string or ((list of string) or string) convertible to it)

Default:

```
{ }
```

Example:

```
{
  "application/pdf" = "firefox.desktop";
  "text/*" = [
    "nvim.desktop"
    "codium.desktop"
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/config/xdg/mime.nix>

xdg.mime.defaultApplications

Sets the default applications for given mimetypes. See the **specifications** for more information. Globs in all variations are supported.

Type: attribute set of (string or ((list of string) or string) convertible to it)

Default:

```
{ }
```

Example:

```
{
  "application/pdf" = "firefox.desktop";
  "image/*" = [
    "sxiv.desktop"
    "gimp.desktop"
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/config/xdg/mime.nix>

xdg.mime.removedAssociations

Removes associations between mimetypes and applications. See the **specifications** for more information. Globs in all variations are supported.

Type: attribute set of (string or ((list of string) or string) convertible to it)

Default:

```
{ }
```

Example:

```
{
  "audio/*" = [
    "mpv.desktop"
    "umpv.desktop"
  ];
  "inode/directory" = "codium.desktop";
```

```
}
```

Declared by:

<nixpkgs/nixos/modules/config/xdg/mime.nix>

xdg.portal.enable

Whether to enable **xdg desktop integration**.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/xdg/portal.nix>

xdg.portal.config

Sets which portal backend should be used to provide the implementation for the requested interface. For details check **portals.conf**(5).

Configs will be linked to */etc/xdg/xdg-desktop-portal/* with the name *$desktop-portals.conf* for *xdg.portal.config.$desktop* and *portals.conf* for *xdg.portal.config.common* as an exception.

Type: attribute set of attribute set of (string or ((list of string) or string) convertible to it)

Default:

```
{ }
```

Example:

```
{
  common = {
    default = [
      "gtk"
    ];
  };
  pantheon = {
    default = [
      "pantheon"
      "gtk"
    ];
    "org.freedesktop.impl.portal.Secret" = [
      "gnome-keyring"
    ];
  };
  x-cinnamon = {
    default = [
      "xapp"
      "gtk"
    ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/config/xdg/portal.nix>

xdg.portal.configPackages

List of packages that provide XDG desktop portal configuration, usually in the form of *share/xdg−desktop−portal/$desktop−portals.conf*.

Note that configs in ‘xdg.portal.config’ will be preferred if set.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.gnome-session ]
```

Declared by:

<nixpkgs/nixos/modules/config/xdg/portal.nix>

xdg.portal.extraPortals

List of additional portals to add to path. Portals allow interaction with system, like choosing files or taking screenshots. At minimum, a desktop portal implementation should be listed. GNOME and KDE already adds ‘xdg−desktop−portal−gtk’; and ‘xdg−desktop−portal−kde’ respectively. On other desktop environments you probably want to add them yourself.

Type: list of package

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/config/xdg/portal.nix>

xdg.portal.lxqt.enable

Whether to enable the desktop portal for the LXQt desktop environment.

This will add the ‘lxqt.xdg−desktop−portal−lxqt’ package (with the extra Qt styles) into the **xdg.portal.extraPortals** option .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/xdg/portals/lxqt.nix>

xdg.portal.lxqt.styles

Extra Qt styles that will be available to the ‘lxqt.xdg−desktop−portal−lxqt’.

Type: list of package

Default:

```
[ ]
```

Example:

```
[
  pkgs.libsForQt5.qtstyleplugin-kvantum
  pkgs.breeze-qt5
  pkgs.qtcurve
];
```

Declared by:
<nixpkgs/nixos/modules/config/xdg/portals/lxqt.nix>

xdg.portal.wlr.enable
Whether to enable desktop portal for wlroots−based desktops.

This will add the ‘xdg−desktop−portal−wlr’ package into the **xdg.portal.extraPortals** option, and provide the configuration file .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/xdg/portals/wlr.nix>

xdg.portal.wlr.settings
Configuration for ‘xdg−desktop−portal−wlr’.

See **xdg−desktop−portal−wlr**(5) for supported values.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  screencast = {
    output_name = "HDMI−A−1";
    max_fps = 30;
    exec_before = "disable_notifications.sh";
    exec_after = "enable_notifications.sh";
    chooser_type = "simple";
    chooser_cmd = "${pkgs.slurp}/bin/slurp −f 'Monitor: %o' −or";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/config/xdg/portals/wlr.nix>

xdg.portal.xdgOpenUsePortal
Sets environment variable ‘NIXOS_XDG_OPEN_USE_PORTAL’ to ‘1’ This will make ‘xdg−open’ use the portal to open programs, which resolves bugs involving programs opening inside FHS envs or with unexpected env vars set from wrappers. See **#160923** for more info.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/xdg/portal.nix>

xdg.sounds.enable

Whether to install files to support the **XDG Sound Theme specification**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/xdg/sounds.nix>

xdg.terminal−exec.enable

Whether to enable xdg−terminal−exec, the **proposed** Default Terminal Execution Specification.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/xdg/terminal−exec.nix>

xdg.terminal−exec.package

The xdg−terminal−exec package to use.

Type: package

Default:

```
pkgs.xdg−terminal−exec
```

Declared by:

<nixpkgs/nixos/modules/config/xdg/terminal−exec.nix>

xdg.terminal−exec.settings

Configuration options for the Default Terminal Execution Specification.

The keys are the desktop environments that are matched (case−insensitively) against '$XDG_CURRENT_DESKTOP', or 'default' which is used when the current desktop environment is not found in the configuration. The values are a list of terminals' **desktop file IDs** to try in order of decreasing priority.

Type: attribute set of list of string

Default:

```
{ }
```

Example:

```
{
  GNOME = [
    "com.raggesilver.BlackBox.desktop"
    "org.gnome.Terminal.desktop"
  ];
  default = [
    "kitty.desktop"
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/config/xdg/terminal−exec.nix>

zramSwap.enable
Enable in−memory compressed devices and swap space provided by the zram kernel module. See **https://www.kernel.org/doc/Documentation/blockdev/zram.txt**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/zram.nix>

zramSwap.algorithm
Compression algorithm. ‘lzo’ has good compression, but is slow. ‘lz4’ has bad compression, but is fast. ‘zstd’ is both good compression and fast, but requires newer kernel. You can check what other algorithms are supported by your zram device with **cat /sys/class/block/zram*/comp_algorithm**

Type: one of “842”, “lzo”, “lzo−rle”, “lz4”, “lz4hc”, “zstd” or string

Default:

```
"zstd"
```

Example:

```
"lz4"
```

Declared by:
<nixpkgs/nixos/modules/config/zram.nix>

zramSwap.memoryMax
Maximum total amount of memory (in bytes) that can be stored in the zram swap devices. If set, the smaller one of this option and memoryPercent would be used. This doesn’t define how much memory will be used by the zram swap devices.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/zram.nix>

zramSwap.memoryPercent
Maximum total amount of memory that can be stored in the zram swap devices (as a percentage of your total memory). Defaults to 1/2 of your total RAM. Run ‘zramctl’ to check how good memory is compressed. This doesn’t define how much memory will be used by the zram swap devices.

Type: positive integer, meaning >0

Default:

```
50
```

Declared by:
<nixpkgs/nixos/modules/config/zram.nix>

zramSwap.priority

Priority of the zram swap devices. It should be a number higher than the priority of your disk−based swap devices (so that the system will fill the zram swap devices before falling back to disk swap).

Type: signed integer

Default:

```
5
```

Declared by:

<nixpkgs/nixos/modules/config/zram.nix>

zramSwap.swapDevices

Number of zram devices to be used as swap, recommended is 1.

Type: signed integer

Default:

```
1
```

Declared by:

<nixpkgs/nixos/modules/config/zram.nix>

zramSwap.writebackDevice

Write incompressible pages to this device, as there’s no gain from keeping them in RAM.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/dev/zvol/tarta−zoot/swap−writeback"
```

Declared by:

<nixpkgs/nixos/modules/config/zram.nix>
