Default:

```
python3Packages: with python3Packages; [];
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netbox.port
Port the server will listen on. Ignored if ‘unixSocket’ is set.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8001
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netbox.secretKeyFile
Path to a file containing the secret key.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netbox.settings
Configuration options to set in ‘configuration.py’. See the **documentation** for more possible options.

Type: open submodule of attribute set of (Python value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netbox.settings.ALLOWED_HOSTS
A list of valid fully−qualified domain names (FQDNs) and/or IP addresses that can be used to reach the NetBox service.

Type: list of string

Default:

```
[
  "*"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netbox.unixSocket
Enable Unix Socket for the server to listen on. ‘listenAddress’ and ‘port’ will be ignored.

Type: null or string

Default:

```
null
```

Example:

```
"/run/netbox/netbox.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netclient.enable
Whether to enable Netclient Daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netclient.nix>

services.netclient.package
The netclient package to use.

Type: package

Default:

```
pkgs.netclient
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netclient.nix>

services.netdata.enable
Whether to enable netdata.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/netdata.nix>

services.netdata.enableAnalyticsReporting
Enable reporting of anonymous usage statistics to Netdata Inc. via either Google Analytics (in versions prior to 1.29.4), or Netdata Inc.'s self−hosted PostHog (in versions 1.29.4 and later). See: **https://learn.netdata.cloud/docs/agent/anonymous−statistics**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/netdata.nix>

services.netdata.package
The netdata package to use.

Type: package

Default:

```
pkgs.netdata
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/netdata.nix>

services.netdata.claimTokenFile
If set, automatically registers the agent using the given claim token file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/netdata.nix>

services.netdata.config
netdata.conf configuration as nix attributes. cannot be combined with configText.

Type: attribute set of (attribute set)

Default:

```
{ }
```

Example:

```
global = {
  "debug log" = "syslog";
  "access log" = "syslog";
  "error log" = "syslog";
};
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/netdata.nix>

services.netdata.configDir
Complete netdata config directory except netdata.conf. The default configuration is merged with changes defined in this option. Each top−level attribute denotes a path in the configuration directory as in environment.etc. Its value is the absolute path and must be readable by netdata. Cannot be combined with configText.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
"health_alarm_notify.conf" = pkgs.writeText "health_alarm_notify.co \
nf" ''
  sendmail="/path/to/sendmail"
"health.d" = "/run/secrets/netdata/health.d";
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/netdata.nix>

services.netdata.configText
Verbatim netdata.conf, cannot be combined with config.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
  [global]
  debug log = syslog
  access log = syslog
  error log = syslog
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/netdata.nix>

services.netdata.deadlineBeforeStopSec

In order to detect when netdata is misbehaving, we run a concurrent task pinging netdata (wait−for−netdata−up) in the systemd unit.

If after a while, this task does not succeed, we stop the unit and mark it as failed.

You can control this deadline in seconds with this option, it's useful to bump it if you have (1) a lot of data (2) doing upgrades (3) have low IOPS/throughput.

Type: signed integer

Default:

```
120
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/netdata.nix>

services.netdata.extraNdsudoPackages

Extra packages to add to 'PATH' to make available to 'ndsudo'.

Warning
'ndsudo' has SUID privileges, be careful what packages you list here.

Note
'cfg.package' must be built with 'withNdsudo = true'

Type: list of package

Default:

```
[ ]
```

Example:

```
[
  pkgs.smartmontools
  pkgs.nvme-cli
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/netdata.nix>

services.netdata.extraPluginPaths

Extra paths to add to the netdata global "plugins directory" option. Useful for when you want to include your own collection scripts.

Details about writing a custom netdata plugin are available at: **https://docs.netdata.cloud/collectors/plugins.d/**

Cannot be combined with configText.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[ "/path/to/plugins.d" ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/netdata.nix>

services.netdata.group

Group under which netdata runs.

Type: string

Default:

```
"netdata"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/netdata.nix>

services.netdata.python.enable

Whether to enable python−based plugins

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/netdata.nix>

services.netdata.python.extraPackages

Extra python packages available at runtime to enable additional python plugins.

Type: function that evaluates to a(n) list of package

Default:

```
ps: []
```

Example:

```
ps: [
  ps.psycopg2
  ps.docker
  ps.dnspython
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/netdata.nix>

services.netdata.python.recommendedPythonPackages

Whether to enable a set of recommended Python plugins by installing extra Python packages.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/netdata.nix>

services.netdata.user

User account under which netdata runs.

Type: string

Default:

```
"netdata"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/netdata.nix>

services.netfoil.enable

Enable Netfoil, a minimal, filtering, DNS proxy

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.config

Additional configuration options for Netfoil

Type: attribute set of string

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.doHIPs

The DoH IPs to use for upstream DNS queries

Type: string

Default:

```
"1.1.1.2,1.0.0.2"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.doHUrl

The DoH URL to use for upstream DNS queries

Type: string

Default:

```
"https://security.cloudflare-dns.com/dns-query"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.listen.ipAddress

IP address on which Netfoil listens for incoming connections

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.listen.port

Port on which Netfoil listens for incoming connections

Type: signed integer

Default:

```
53
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.logAllowed
Log allowed DNS queries

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.logDenied
Log denied DNS queries

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.rules.allow.exact
List of exact domain names to allow

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.rules.allow.ipv4
List of ipv4 CIDR ranges to allow

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.rules.allow.ipv6
List of ipv6 CIDR ranges to allow

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.rules.allow.tld
List of TLDs to allow

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.rules.deny.exact

List of exact domain names to deny

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.rules.deny.ipv4

List of ipv4 CIDR ranges to deny

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.rules.deny.ipv6

List of ipv6 CIDR ranges to deny

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.rules.deny.tld

List of TLDs to deny

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.rules.known.knownTlds

List of known TLDs

Type: list of string

Default:

```
[
  ".com"
  ".net"
  ".org"
  ".edu"
  ".gov"
  ".mil"
  ".int"
```

```
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.rules.pin.a

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.netfoil.rules.pin.responseDomain

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netfoil.nix>

services.networkaudiod.enable
Whether to enable Networkaudiod (NAA).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/networkaudiod.nix>

services.networkd−dispatcher.enable
Whether to enable Networkd−dispatcher service for systemd−networkd connection status change. See **upstream instructions** for usage .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/networkd−dispatcher.nix>

services.networkd−dispatcher.extraArgs
Extra arguments to pass to the networkd−dispatcher command.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/networkd−dispatcher.nix>

services.networkd−dispatcher.rules
Declarative configuration of networkd−dispatcher rules. See **upstream instructions** for an introduction and example scripts.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{ "restart-tor" = {
    onState = ["routable" "off"];
    script = ''
      #!${pkgs.runtimeShell}
      if [[ $IFACE == "wlan0" && $AdministrativeState == "configure \
d" ]]; then
        echo "Restarting Tor ..."
        systemctl restart tor
      fi
      exit 0
    '';
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/networking/networkd−dispatcher.nix>

services.networkd−dispatcher.rules.<name>.onState
List of names of the systemd−networkd operational states which should trigger the script. See **networkctl**(1) for a description of the specific state type.

Type: list of (one of “routable”, “dormant”, “no−carrier”, “off”, “carrier”, “degraded”, “configuring”, “configured”, “enslaved”)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/networkd−dispatcher.nix>

services.networkd−dispatcher.rules.<name>.script
Shell commands executed on specified operational states.

Type: strings concatenated with “\n”

Declared by:
<nixpkgs/nixos/modules/services/networking/networkd−dispatcher.nix>

services.networking.websockify.enable
Whether to enable websockify to forward websocket connections to TCP connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/websockify.nix>

services.networking.websockify.portMap
Ports to map by default.

Type: attribute set of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/websockify.nix>

services.networking.websockify.sslCert
Path to the SSL certificate.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/networking/websockify.nix>

services.networking.websockify.sslKey
Path to the SSL key.

Type: absolute path

Default:

```
config.services.networking.websockify.sslCert
```

Declared by:
<nixpkgs/nixos/modules/services/networking/websockify.nix>

services.newt.enable
Whether to enable Newt, user space tunnel client for Pangolin.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/newt.nix>

services.newt.package
The fosrl−newt package to use.

Type: package

Default:

```
pkgs.fosrl-newt
```

Declared by:
<nixpkgs/nixos/modules/services/networking/newt.nix>

services.newt.blueprint
Blueprint for declarative settings, see **Newt Blueprint docs** for more information.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  proxy-resources = {
    jellyfin = {
      auth = {
        sso-enabled = true;
      };
      full-domain = "jfn.example.com";
      name = "Jellyfin";
      protocol = "http";
      targets = [
        {
          hostname = "localhost";
          method = "http";
          port = 8096;
        }
      ];
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/newt.nix>

services.newt.environmentFile

Path to a file containing sensitive environment variables for Newt. See **Client credentials** for more information. These will overwrite anything defined in the config. The file should contain environment-variable assignments like: NEWT_ID=2ix2t8xk22ubpfy NEWT_SECRET=nnisrfsdfc7prqsp9ewo1dvtvci50j5uiqotez00dgap0ii2

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/newt.nix>

services.newt.settings

Settings for Newt module, see **Newt CLI docs** for more information.

Type: value coercible to CLI argument

Default:

```
{ }
```

Example:

```
{
  endpoint = "pangolin.example.com";
  id = "8yfsghj438a20ol";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/newt.nix>

services.nextcloud.enable

Whether to enable nextcloud.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.enableImagemagick

Whether to enable the ImageMagick module for PHP. This is used by the theming app and for generating previews of certain images (e.g. SVG and HEIF). You may want to disable it for increased security. In that case, previews will still be available for some images (e.g. JPEG and PNG). See **https://github.com/nextcloud/server/issues/13099** .

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.package

Which package to use for the Nextcloud instance.

Type: package

Related packages:

- ‘pkgs.nextcloud32’
- ‘pkgs.nextcloud33’

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.appstoreEnable

Allow the installation and updating of apps from the Nextcloud appstore. Enabled by default unless there are packages in **services.nextcloud.extraApps**. Set this to true to force enable the store even if **services.nextcloud.extraApps** is used. Set this to false to disable the installation of apps from the global appstore. App management is always enabled regardless of this setting.

Type: null or boolean

Default:

```
null
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.autoUpdateApps.enable

Run a regular auto−update of all apps installed from the Nextcloud app store.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.autoUpdateApps.startAt

When to run the update. See ‘systemd.services.<name>.startAt’.

Type: string or list of string

Default:

```
"05:00:00"
```

Example:

```
"Sun 14:00:00"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.caching.apcu

Whether to load the APCu module into PHP.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.caching.memcached

Whether to load the Memcached module into PHP. You still need to enable Memcached in your config.php. See **https://docs.nextcloud.com/server/latest/admin_manual/configuration_server/caching_configuration.html**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.caching.redis

Whether to load the Redis module into PHP. You still need to enable Redis in your config.php. See **https://docs.nextcloud.com/server/latest/admin_manual/configuration_server/caching_configuration.html**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.cli.memoryLimit

The 'memory_limit' of PHP is equal to **services.nextcloud.maxUploadSize**. The value can be customized for 'nextcloud−cron.service' using this option.

Type: null or string

Default:

```
null
```

Example:

```
"1G"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.adminpassFile

The full path to a file that contains the admin's password. The password is set only in the initial setup of Nextcloud by the systemd service 'nextcloud−setup.service'.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.adminuser

Username for the admin account. The username is only set during the initial setup of Nextcloud! Since the username also acts as unique ID internally, it cannot be changed later!

Type: null or string

Default:

```
"root"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.dbhost

Database host (+port) or socket path. If **services.nextcloud.database.createLocally** is true and **services.nextcloud.config.dbtype** is either 'pgsql' or 'mysql', defaults to the correct Unix socket instead.

Type: null or string

Default:

```
"localhost"
```

Example:

```
"localhost:5000"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.dbname

Database name.

Type: null or string

Default:

```
"nextcloud"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.dbpassFile
The full path to a file that contains the database password.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.dbtableprefix
Table prefix in Nextcloud's database.

Note: since Nextcloud 20 it's not an option anymore to create a database schema with a custom table prefix. This option only exists for backwards compatibility with installations that were originally provisioned with Nextcloud <20.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.dbtype
Database type.

Type: null or one of "sqlite", "pgsql", "mysql"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.dbuser
Database user.

Type: null or string

Default:

```
"nextcloud"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.objectstore.s3.enable
Whether to enable S3 object storage as primary storage.

This mounts a bucket on an Amazon S3 object storage or compatible implementation into the virtual filesystem.

Further details about this feature can be found in the **upstream documentation** .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.objectstore.s3.bucket
The name of the S3 bucket.

Type: string

Example:

```
"nextcloud"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.objectstore.s3.hostname
Required for some non−Amazon implementations.

Type: null or string

Default:

```
null
```

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.objectstore.s3.key
The access key for the S3 bucket.

Type: string

Example:

```
"EJ39ITYZEUH5BGWDRUFY"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.objectstore.s3.port
Required for some non−Amazon implementations.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.objectstore.s3.region
Required for some non−Amazon implementations.

Type: null or string

Default:

```
null
```

Example:

```
"REGION"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.objectstore.s3.secretFile
The full path to a file that contains the access secret.

Type: string

Example:

```
"/var/nextcloud-objectstore-s3-secret"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.objectstore.s3.sseCKeyFile
If provided this is the full path to a file that contains the key to enable **server−side encryption with customer−provided keys** (SSE−C).

The file must contain a random 32−byte key encoded as a base64 string, e.g. generated with the command

```
openssl rand 32 | base64
```

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/nextcloud-objectstore-s3-sse-c-key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.objectstore.s3.usePathStyle
Required for some non−Amazon S3 implementations.

Ordinarily, requests will be made with ‘http://bucket.hostname.domain/’, but with path style enabled requests are made with ‘http://hostname.domain/bucket’ instead.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.objectstore.s3.useSsl
Use SSL for objectstore access.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.config.objectstore.s3.verify_bucket_exists

Create the objectstore bucket if it does not exist.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.configureRedis

Whether to configure Nextcloud to use the recommended Redis settings for small instances.

Note

The Nextcloud system check recommends to configure either Redis or Memcache for file lock caching.

Note

The 'notify_push' app requires Redis to be configured. If this option is turned off, this must be configured manually.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.database.createLocally

Whether to create the database and database user locally.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.datadir

Nextcloud's data storage path. Will be **services.nextcloud.home** by default. This folder will be populated with a config.php file and a data folder which contains the state of the instance (excluding the database).";

Type: string

Default:

```
config.services.nextcloud.home
```

Example:

```
"/mnt/nextcloud−file"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.extraApps

Extra apps to install. Should be an attrSet of appid to packages generated by fetchNextcloudApp. The appid must be identical to the "id" value in the apps appinfo/info.xml. Using this will disable the appstore to prevent Nextcloud from updating these apps (see **services.nextcloud.appstoreEnable**).

Type: attribute set of package

Default:

```
{ }
```

Example:

```
{
  inherit (pkgs.nextcloud31Packages.apps) mail calendar contacts;
  phonetrack = pkgs.fetchNextcloudApp {
    appName = "phonetrack";
    appVersion = "0.8.2";
    license = "agpl3Plus";
    sha512 = "f67902d1b48def9a244383a39d7bec95bb4215054963a9751f99d \
ae9bd2f2740c02d2ef97b3b76d69a36fa95f8a9374dd049440b195f4dad2f0c4bca \
645de228";
    url = "https://github.com/julien-nc/phonetrack/releases/downlo \
ad/v0.8.2/phonetrack-0.8.2.tar.gz";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/nextcloud.nix>

services.nextcloud.extraAppsEnable

Automatically enable the apps in **services.nextcloud.extraApps** every time Nextcloud starts. If set to false, apps need to be enabled in the Nextcloud web user interface or with 'nextcloud-occ app:enable'.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/nextcloud.nix>

services.nextcloud.fastcgiTimeout

FastCGI timeout for database connection in seconds.

Type: signed integer

Default:

```
120
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/nextcloud.nix>

services.nextcloud.finalPackage

Package to the finalized Nextcloud package, including all installed apps. This is automatically set by the module.

Type: package *(read only)*

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.home
Storage path of nextcloud.

Type: string

Default:

```
"/var/lib/nextcloud"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.hostName
FQDN for the nextcloud instance.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.https
Use HTTPS for generated links.

Be aware that this also enables HTTP Strict Transport Security (HSTS) headers.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.imaginary.enable
Whether to enable Imaginary.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.maxUploadSize
The upload limit for files. This changes the relevant options in php.ini and nginx if enabled.

Type: string

Default:

```
"512M"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.nginx.enableFastcgiRequestBuffering

Whether to buffer requests against fastcgi requests. This is a workaround for ‘PUT’ requests with the ‘Transfer−Encoding: chunked’ header set and an unspecified ‘Content−Length’. Without request buffering for these requests, Nextcloud will create files with zero bytes length as described in **nextcloud/server#7995**.

> **Note**
> Please keep in mind that upstream suggests to not enable this as it might lead to timeouts on large files being uploaded as described in the **administrator manual**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.nginx.hstsMaxAge

Value for the ‘max−age’ directive of the HTTP ‘Strict−Transport−Security’ header.

See section 6.1.1 of IETF RFC 6797 for detailed information on this directive and header.

Type: positive integer, meaning >0

Default:

```
15552000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.notify_push.enable

Whether to enable Notify push.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud−notify_push.nix>

services.nextcloud.notify_push.package

The nextcloud−notify_push package to use.

Type: package

Default:

```
pkgs.nextcloud-notify_push
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud−notify_push.nix>

services.nextcloud.notify_push.bendDomainToLocalhost

Whether to add an entry to ‘/etc/hosts’ for the configured nextcloud domain to point to ‘localhost’ and add ‘localhost ’to nextcloud’s ‘trusted_proxies’ config option.

This is useful when nextcloud’s domain is not a static IP address and when the reverse proxy cannot be bypassed because the backend connection is done via unix socket.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud−notify_push.nix>

services.nextcloud.notify_push.dbhost
Database host (+port) or socket path. If **services.nextcloud.database.createLocally** is true and **services.nextcloud.config.dbtype** is either 'pgsql' or 'mysql', defaults to the correct Unix socket instead.

Type: null or string

Default:

```
config.services.nextcloud.config.dbhost
```

Example:

```
"localhost:5000"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud−notify_push.nix>

services.nextcloud.notify_push.dbname
Database name.

Type: null or string

Default:

```
config.services.nextcloud.config.dbname
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud−notify_push.nix>

services.nextcloud.notify_push.dbpassFile
The full path to a file that contains the database password.

Type: null or string

Default:

```
config.services.nextcloud.config.dbpassFile
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud−notify_push.nix>

services.nextcloud.notify_push.dbtableprefix
Table prefix in Nextcloud's database.

Note: since Nextcloud 20 it's not an option anymore to create a database schema with a custom table prefix. This option only exists for backwards compatibility with installations that were originally provisioned with Nextcloud <20.

Type: null or string

Default:

```
config.services.nextcloud.config.dbtableprefix
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud−notify_push.nix>

services.nextcloud.notify_push.dbtype
Database type.

Type: null or one of “sqlite”, “pgsql”, “mysql”

Default:

```
config.services.nextcloud.config.dbtype
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud−notify_push.nix>

services.nextcloud.notify_push.dbuser
Database user.

Type: null or string

Default:

```
config.services.nextcloud.config.dbuser
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud−notify_push.nix>

services.nextcloud.notify_push.logLevel
Log level

Type: one of “error”, “warn”, “info”, “debug”, “trace”

Default:

```
"error"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud−notify_push.nix>

services.nextcloud.notify_push.nextcloudUrl
Configure the nextcloud URL notify_push tries to connect to.

Type: string

Default:

```
"http${lib.optionalString config.services.nextcloud.https "s"}://${ \
config.services.nextcloud.hostName}"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud−notify_push.nix>

services.nextcloud.notify_push.socketPath
Socket path to use for notify_push

Type: string

Default:

```
"/run/nextcloud−notify_push/sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud−notify_push.nix>

services.nextcloud.occ
The nextcloud−occ program preconfigured to target this Nextcloud instance.

Type: package

Default: generated script

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.phpExtraExtensions
Additional PHP extensions to use for Nextcloud. By default, only extensions necessary for a vanilla Nextcloud installation are enabled, but you may choose from the list of available extensions and add further ones. This is sometimes necessary to be able to install a certain Nextcloud app that has additional requirements.

Type: function that evaluates to a(n) list of package

Default:

```
all: []
```

Example:

```
all: [ all.pdlib all.bz2 ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.phpOptions
Options for PHP's php.ini file for nextcloud.

Please note that this option is *additive* on purpose while the attribute values inside the default are option defaults: that means that

```
{
  services.nextcloud.phpOptions."opcache.interned_strings_buffer" = \
 "23";
}
```

will override the 'php.ini' option 'opcache.interned_strings_buffer' without discarding the rest of the defaults.

Overriding all of 'phpOptions' (including 'upload_max_filesize', 'post_max_size' and 'memory_limit' which all point to **services.nextcloud.maxUploadSize** by default) can be done like this:

```
{
  services.nextcloud.phpOptions = lib.mkForce {
    /* ... */
  };
}
```

Type: attribute set of (string or signed integer)

Default:

```
{
  catch_workers_output = "yes";
  display_errors = "stderr";
  error_reporting = "E_ALL & ~E_DEPRECATED & ~E_STRICT";
  expose_php = "Off";
  "opcache.fast_shutdown" = "1";
  "opcache.interned_strings_buffer" = "8";
  "opcache.max_accelerated_files" = "10000";
  "opcache.memory_consumption" = "128";
  "opcache.revalidate_freq" = "1";
  "openssl.cafile" = {
    _type = "literalExpression";
    text = "config.security.pki.caBundle";
  };
```

```
  output_buffering = "0";
  short_open_tag = "Off";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.phpPackage
The php package to use.

Type: package

Default:

```
pkgs.php84
```

Example:

```
php82
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.poolConfig
Options for Nextcloud's PHP pool. See the documentation on 'php−fpm.conf' for details on configuration directives.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.poolSettings
Options for nextcloud's PHP pool. See the documentation on 'php−fpm.conf' for details on configuration directives. The above are recommended for a server with 4GiB of RAM.

It's advisable to read the **section about PHPFPM tuning in the upstream manual** and consider customizing the values.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = "120";
  "pm.max_requests" = "500";
  "pm.max_spare_servers" = "18";
  "pm.min_spare_servers" = "6";
  "pm.start_servers" = "12";
  "pm.status_path" = "/status";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.secretFile

Secret options which will be appended to Nextcloud's config.php file (written as JSON, in the same form as the **services.nextcloud.settings** option), for example '{"redis":{"password":"secret"}}'.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.secrets

Secret files to read into entries in 'config.php'. This uses 'nix_read_secret' and LoadCredential to read the contents of the file into the entry in 'config.php'.

Type: attribute set of absolute path not in the Nix store

Default:

```
{ }
```

Example:

```
{
  oidc_login_client_secret = "/run/secrets/nextcloud_oidc_secret";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings

Extra options which should be appended to Nextcloud's config.php file.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Example:

```
{
  redis = {
    host = "/run/redis/redis.sock";
    port = 0;
    dbindex = 0;
    password = "secret";
    timeout = 1.5;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.enabledPreviewProviders

The preview providers that should be explicitly enabled.

Type: list of string

Default:

```
[
  "OC\\Preview\\PNG"
  "OC\\Preview\\JPEG"
```

```
      "OC\\Preview\\GIF"
      "OC\\Preview\\BMP"
      "OC\\Preview\\XBitmap"
      "OC\\Preview\\Krita"
      "OC\\Preview\\WebP"
      "OC\\Preview\\MarkDown"
      "OC\\Preview\\TXT"
      "OC\\Preview\\OpenDocument"
    ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.default_phone_region

An **ISO 3166−1** country code which replaces automatic phone−number detection without a country code.

As an example, with 'DE' set as the default phone region, the '+49' prefix can be omitted for phone numbers.

Type: string

Default:

```
""
```

Example:

```
"DE"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.log_type

Logging backend to use. systemd automatically adds the php−systemd extensions to services.nextcloud.phpExtraExtensions. See the **nextcloud documentation** for details.

Type: one of "errorlog", "file", "syslog", "systemd"

Default:

```
"syslog"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.loglevel

Log level value between 0 (DEBUG) and 4 (FATAL).

- 0 (debug): Log all activity.
- 1 (info): Log activity such as user logins and file activities, plus warnings, errors, and fatal errors.
- 2 (warn): Log successful operations, as well as warnings of potential problems, errors and fatal errors.
- 3 (error): Log failed operations and fatal errors.
- 4 (fatal): Log only fatal errors that cause the server to stop.

Type: integer between 0 and 4 (both inclusive)

Default:

```
2
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.mail_domain
The return address that you want to appear on emails sent by the Nextcloud server, for example ‘nc−admin@example.com’, substituting your own domain, of course.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.mail_from_address
FROM address that overrides the built−in ‘sharing−noreply’ and ‘lostpassword−noreply’ FROM addresses. Defaults to different FROM addresses depending on the feature.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.mail_send_plaintext_only
Email will be sent by default with an HTML and a plain text body. This option allows sending only plain text emails.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.mail_sendmailmode
For ‘smtp’, the sendmail binary is started with the parameter ‘−bs’: Use the SMTP protocol on standard input and output. For ‘pipe’, the binary is started with the parameters ‘−t’: Read message from STDIN and extract recipients.

Type: one of “smtp”, “pipe”

Default:

```
"smtp"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.mail_smtpauth
This depends on ‘mail_smtpmode’. Change this to ‘true’ if your mail server requires authentication.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.mail_smtpdebug
Enable SMTP class debugging. 'loglevel' will likely need to be adjusted too. **See docs**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.mail_smtphost
This depends on 'mail_smtpmode'. Specify the IP address of your mail server host. This may contain multiple hosts separated by a semicolon. If you need to specify the port number, append it to the IP address separated by a colon, like this: '127.0.0.1:24'.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.mail_smtpmode
Which mode to use for sending mail. If you are using local or remote SMTP, set this to 'smtp'. For the 'sendmail' option, you need an installed and working email system on the server, with your local 'sendmail' installation. For 'qmail', the binary is /var/qmail/bin/sendmail, and it must be installed on your Unix system. Use the string null to send no mails (disable mail delivery). This can be useful if mails should be sent via APIs and rendering messages is not necessary.

Type: one of "sendmail", "smtp", "qmail", "null"

Default:

```
"smtp"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.mail_smtpname
This depends on 'mail_smtpauth'. Specify the username for authenticating to the SMTP server.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.mail_smtpport
This depends on 'mail_smtpmode'. Specify the port for sending mail.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
25
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.mail_smtpsecure
This depends on ‘mail_smtpmode’. Specify ‘ssl’ when you are using SSL/TLS. Any other value will be ignored. If the server advertises STARTTLS capabilities, they might be used, but they cannot be enforced by this config option.

Type: one of “”, “ssl”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.mail_smtpstreamoptions
This depends on ‘mail_smtpmode’. Array of additional streams options that will be passed to underlying Swift mailer implementation.

Type: attribute set of attribute set of anything

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.mail_smtptimeout
This depends on ‘mail_smtpmode’. This sets the SMTP server timeout, in seconds. You may need to increase this if you are running an anti−malware or spam scanner.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.mail_template_class
Replaces the default mail template layout. This can be utilized if the options to modify the mail texts with the theming app are not enough. The class must extend ‘\OC\Mail\EMailTemplate’

Type: string

Default:

```
"\\OC\\Mail\\EMailTemplate"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.overwriteprotocol
Force Nextcloud to always use HTTP or HTTPS i.e. for link generation. Nextcloud uses the currently used protocol by default, but when behind a reverse−proxy, it may use ‘http’ for everything although Nextcloud may be served via HTTPS.

Type: one of “”, “http”, “https”

Default:

```
""
```

Example:

```
"https"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings."profile.enabled"
Makes user−profiles globally available under 'nextcloud.tld/u/user.name'. Even though it's enabled by default in Nextcloud, it must be explicitly enabled here because it has the side−effect that personal information is even accessible to unauthenticated users by default. By default, the following properties are set to "Show to everyone" if this flag is enabled:

- About
- Full name
- Headline
- Organisation
- Profile picture
- Role
- Twitter
- Website Only has an effect in Nextcloud 23 and later.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.skeletondirectory
The directory where the skeleton files are located. These files will be copied to the data directory of new users. Leave empty to not copy any skeleton files.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.trusted_domains
Trusted domains, from which the nextcloud installation will be accessible. You don't need to add 'services.nextcloud.hostname' here.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.settings.trusted_proxies
Trusted proxies, to provide if the nextcloud installation is being proxied to secure against e.g. spoofing.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud.webfinger
Enable this option if you plan on using the webfinger plugin. The appropriate nginx rewrite rules will be added to your configuration.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nextcloud.nix>

services.nextcloud−spreed−signaling.enable
Whether to enable Spreed standalone signaling server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.package
The nextcloud−spreed−signaling package to use.

Type: package

Default:

```
pkgs.nextcloud−spreed−signaling
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.backends
A list of backends from which clients are allowed to connect from. The name of the attribute will be used as the backend id.

Each backend will have isolated rooms, i.e. clients connecting to room “abc12345” on backend 1 will be in a different room than clients connected to a room with the same name on backend 2. Also sessions connected from different backends will not be able to communicate with each other.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  nextcloud = {
    secretFile = "/run/secrets/nextcloud−secret";
    urls = [
      "https://cloud.example.com"
    ];
  };
```

```
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.backends.<name>.secretFile
The path to the file containing the value for ‘backends.<name>.secret’.

Shared secret for requests from and to the backend servers.

This must be the same value as configured in the Nextloud Talk admin UI.

Type: absolute path

Example:

```
"/run/secrets/backends.<name>.secret"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.backends.<name>.urls
List of URLs of the Nextcloud instance

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.configureNginx
Whether to set up and configure an nginx virtual host according to upstream’s recommendations.

The virtualHost domain must be specified under ‘config.services.nextcloud−spreed−signaling.hostName’ if this is enabled.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.group
Group under which to run the Spreed signaling server.

Type: string

Default:

```
"nextcloud−spreed−signaling"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.hostName

The host name to bind the nginx virtual host to, if ‘config.services.nextcloud−spreed−signaling.configureNginx’ is set to ‘true’.

Type: null or string

Default:

```
null
```

Example:

```
"talk.mydomain.org"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.settings

Declarative configuration. Refer to **https://github.com/strukturag/nextcloud−spreed−signaling/blob/master/server.conf.in** for a list of available options.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.settings.app.debug

Set to “true” to install pprof debug handlers. Access will only be possible from IPs allowed through IPs declared in ‘config.services.nextcloud−spreed−signaling.settings.stats.allowed_ips’.

See “https://golang.org/pkg/net/http/pprof/” for further information.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.settings.backend.allowall

Allow any hostname as backend endpoint. This is insecure and not advised.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.settings.backend.backendtype

Type of backend configuration. Defaults to “static”.

Possible values:

- static: A comma−separated list of backends is given in the “backends” option (derived from ‘config.services.nextcloud−spreed−signaling.backends’)

- etcd: Backends are retrieved from an etcd cluster.

Type: one of “static”, “etcd”

Default:

```
"static"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud-spreed-signaling.nix>

services.nextcloud-spreed-signaling.settings.backend.connectionsperhost
Maximum number of concurrent backend connections per host

Type: positive integer, meaning >0

Default:

```
8
```

Example:

```
12
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud-spreed-signaling.nix>

services.nextcloud-spreed-signaling.settings.backend.timeout
Timeout in seconds for requests to the backend

Type: positive integer, meaning >0

Default:

```
10
```

Example:

```
30
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud-spreed-signaling.nix>

services.nextcloud-spreed-signaling.settings.clients.internalsecretFile
The path to the file containing the value for ‘clients.internalsecret’.

Shared secret for connections from internal clients. This must be the same value as configured in the respective internal services.

Type: absolute path

Example:

```
"/run/secrets/clients.internalsecret"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud-spreed-signaling.nix>

services.nextcloud-spreed-signaling.settings.etcd.endpoints
List of static etcd endpoints to connect to.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1:2379"
```

```
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.settings.grpc.listen
IP and port to listen on for GRPC requests. Leave ‘null’ to disable the listener.

Type: null or string

Default:

```
null
```

Example:

```
"127.0.0.1:9090"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.settings.grpc.targets
For target type ‘static’: List of GRPC targets to connect to for clustering mode.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "192.168.0.1:9090"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.settings.http.listen
IP and port to listen on for HTTP requests, in the format of ‘ip:port’.

If set to ‘null’, will not spawn a HTTP listener at all.

Type: null or string

Default:

```
null
```

Example:

```
"127.0.0.1:8080"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.settings.https.certificate
Path to the certificate used for the HTTPS listener. Must be set if ‘config.services.nextcloud−spreed−signaling.settings.https.listen’ is not ‘null’.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/nginx/ssl/server.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.settings.https.key
Path to the private key used for the HTTPS listener. Must be set if ‘config.services.nextcloud−spreed−signaling.settings.https.listen’ is not ‘null’.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/nginx/ssl/server.key"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.settings.https.listen
IP and port to listen on for HTTPS requests, in the format of ‘ip:port’.

If set, must also specify ‘config.services.nextcloud−spreed−signaling.settings.https.certificate’ and ‘config.services.nextcloud−spreed−signaling.settings.https.key’. If set to ‘null’, will not spawn a HTTPS listener at all.

Type: null or string

Default:

```
null
```

Example:

```
"127.0.0.1:8443"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.settings.mcu.type
The type of MCU to use. Leave empty to disable MCU functionality.

Type: null or one of “janus”, “proxy”

Default:

```
null
```

Example:

```
"janus"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud−spreed−signaling.nix>

services.nextcloud−spreed−signaling.settings.nats.url
URL of one or more NATS backends to use.

This can be set to ‘nats://loopback’ to process NATS messages internally instead.

Type: list of string

Default:

```
[
  "nats://loopback"
]
```

Example:

```
[
  "nats://localhost:4222"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud-spreed-signaling.nix>

services.nextcloud-spreed-signaling.settings.sessions.blockkeyFile
The path to the file containing the value for 'sessions.blockkey'.

Key for encrypting data in the sessions. Must be either 16, 24, or 32 bytes. Generate one using 'openssl rand -hex 16'

Type: absolute path

Example:

```
"/run/secrets/sessions.blockkey"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud-spreed-signaling.nix>

services.nextcloud-spreed-signaling.settings.sessions.hashkeyFile
The path to the file containing the value for 'sessions.hashkey'.

Secret value used to generate the checksums of sessions. This should be a random string of 32 or 64 bytes. Generate one using 'openssl rand -hex 32'

Type: absolute path

Example:

```
"/run/secrets/sessions.hashkey"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud-spreed-signaling.nix>

services.nextcloud-spreed-signaling.settings.stats.allowed_ips
List of IP addresses that are allowed to access the debug, stats and metrics endpoints.

Leave empty or 'null' to only allow access from localhost.

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud-spreed-signaling.nix>

services.nextcloud-spreed-signaling.settings.turn.apikeyFile
The path to the file containing the value for 'turn.apikey'.

API key that the MCU will need to send when requesting TURN credentials.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/turn.apikey"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud-spreed-signaling.nix>

services.nextcloud-spreed-signaling.settings.turn.secretFile
The path to the file containing the value for 'turn.secret'.

The shared secret to use for generating TURN credentials. This must be the same as on the TURN server.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/turn.secret"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud-spreed-signaling.nix>

services.nextcloud-spreed-signaling.settings.turn.servers
A list of TURN servers to use. Leave empty to disable the TURN REST API.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "turn:1.2.3.4:9991?transport=udp"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud-spreed-signaling.nix>

services.nextcloud-spreed-signaling.stateDir
Directory used for state & config files.

Type: absolute path

Default:

```
"/var/lib/nextcloud-spreed-signaling"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud-spreed-signaling.nix>

services.nextcloud-spreed-signaling.user
User account under which to run the Spreed signaling server.

Type: string

Default:

```
"nextcloud-spreed-signaling"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextcloud-spreed-signaling.nix>

services.nextcloud−whiteboard−server.enable

Whether to enable Nextcloud backend server for the Whiteboard app.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud−whiteboard−server.nix>

services.nextcloud−whiteboard−server.secrets

A list of files containing the various secrets. Should be in the format expected by systemd's 'EnvironmentFile' directory.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud−whiteboard−server.nix>

services.nextcloud−whiteboard−server.settings

Settings to configure backend server. Especially the Nextcloud host url has to be set. The required environment variable 'JWT_SECRET_KEY' should be set via the secrets option.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  NEXTCLOUD_URL = "https://nextcloud.example.org";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nextcloud−whiteboard−server.nix>

services.nextdns.enable

Whether to enable the NextDNS DNS/53 to DoH Proxy service.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nextdns.nix>

services.nextdns.arguments

Additional arguments to be passed to nextdns run.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-config"
  "10.0.3.0/24=abcdef"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nextdns.nix>

services.nextjs-ollama-llm-ui.enable
Whether to enable Simple Ollama web UI service; an easy to use web frontend for a Ollama backend service. Run state-of-the-art AI large language models (LLM) similar to ChatGPT locally with privacy on your personal computer. This service is stateless and doesn't store any data on the server; all data is kept locally in your web browser. See **https://github.com/jakobhoeg/nextjs-ollama-llm-ui**.

Required: You need the Ollama backend service running by having "services.nextjs-ollama-llm-ui.ollamaUrl" point to the correct url. You can host such a backend service with NixOS through "services.ollama". .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/nextjs-ollama-llm-ui.nix>

services.nextjs-ollama-llm-ui.package
The nextjs-ollama-llm-ui package to use.

Type: package

Default:

```
pkgs.nextjs-ollama-llm-ui
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/nextjs-ollama-llm-ui.nix>

services.nextjs-ollama-llm-ui.hostname
The hostname under which the Ollama UI interface should be accessible. By default it uses localhost/127.0.0.1 to be accessible only from the local machine. Change to "0.0.0.0" to make it directly accessible from the local network.

Note: You should keep it at 127.0.0.1 and only serve to the local network or internet from a (home) server behind a reverse-proxy and secured encryption. See **https://wiki.nixos.org/wiki/Nginx** for instructions on how to set up a reverse-proxy.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"ui.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/nextjs-ollama-llm-ui.nix>

services.nextjs-ollama-llm-ui.ollamaUrl

The address (including host and port) under which we can access the Ollama backend server. !Note that if the the UI service is running under a domain “https://ui.example.org”, the Ollama backend service must allow “CORS” requests from this domain, e.g. by adding “services.ollama.environment.OLLAMA_ORIGINS = [… “https://ui.example.org”];”!

Type: string

Default:

```
"http://127.0.0.1:11434"
```

Example:

```
"https://ollama.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/nextjs-ollama-llm-ui.nix>

services.nextjs-ollama-llm-ui.port

The port under which the Ollama UI interface should be accessible.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Example:

```
3000
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/nextjs-ollama-llm-ui.nix>

services.nexus.enable

Whether to enable Sonatype Nexus3 OSS service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/nexus.nix>

services.nexus.package

The nexus package to use.

Type: package

Default:

```
pkgs.nexus
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/nexus.nix>

services.nexus.group

Group which runs Nexus3.

Type: string

Default:

```
"nexus"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nexus.nix>

services.nexus.home
Home directory of the Nexus3 instance.

Type: string

Default:

```
"/var/lib/sonatype−work"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nexus.nix>

services.nexus.jdkPackage
The openjdk8 package to use.

Type: package

Default:

```
pkgs.openjdk8
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nexus.nix>

services.nexus.jvmOpts
Options for the JVM written to ‘nexus.jvmopts’. Please refer to the docs (https://help.sonatype.com/repo-manager3/installation/configuring−the−runtime−environment) for further information.

Type: strings concatenated with “\n”

Default:

```
−Xms1200M
−Xmx1200M
−XX:MaxDirectMemorySize=2G
−XX:+UnlockDiagnosticVMOptions
−XX:+UnsyncloadClass
−XX:+LogVMOutput
−XX:LogFile=${home}/nexus3/log/jvm.log
−XX:−OmitStackTraceInFastThrow
−Djava.net.preferIPv4Stack=true
−Dkaraf.home=${package}
−Dkaraf.base=${package}
−Dkaraf.etc=${package}/etc/karaf
−Djava.util.logging.config.file=${package}/etc/karaf/java.util.l \
ogging.properties
−Dkaraf.data=${home}/nexus3
−Djava.io.tmpdir=${home}/nexus3/tmp
−Dkaraf.startLocalConsole=false
−Djava.endorsed.dirs=${package}/lib/endorsed
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nexus.nix>

services.nexus.listenAddress
Address to listen on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nexus.nix>

services.nexus.listenPort
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8081
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nexus.nix>

services.nexus.user
User which runs Nexus3.

Type: string

Default:

```
"nexus"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nexus.nix>

services.nezha−agent.enable
Whether to enable Agent of Nezha Monitoring.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha−agent.nix>

services.nezha−agent.package
The nezha−agent package to use.

Type: package

Default:

```
pkgs.nezha−agent
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha−agent.nix>

services.nezha−agent.clientSecretFile
Path to the file contained the client_secret of the dashboard.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha−agent.nix>

services.nezha−agent.debug
Whether to enable verbose log.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha−agent.nix>

services.nezha−agent.genUuid
Whether to generate uuid from fqdn automatically. Please note that changes in hostname/domain will result in different uuid.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha−agent.nix>

services.nezha−agent.settings
Generate to *config.json* as a Nix attribute set. Check the **guide** for possible options.

Type: open submodule of (JSON value)

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha−agent.nix>

services.nezha−agent.settings.disable_command_execute
Disable executing the command from dashboard.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha−agent.nix>

services.nezha−agent.settings.disable_nat
Disable NAT penetration.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha-agent.nix>

services.nezha-agent.settings.disable_send_query
Disable sending TCP/ICMP/HTTP requests.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha-agent.nix>

services.nezha-agent.settings.gpu
Enable GPU monitoring.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha-agent.nix>

services.nezha-agent.settings.report_delay
The interval between system status reportings. The value must be an integer from 1 to 4.

Type: integer between 1 and 4 (both inclusive)

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha-agent.nix>

services.nezha-agent.settings.server
Address to the dashboard.

Type: string

Example:

```
"127.0.0.1:8008"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha-agent.nix>

services.nezha-agent.settings.skip_connection_count
Do not monitor the number of connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha-agent.nix>

services.nezha-agent.settings.skip_procs_count
Do not monitor the number of processes.

Type: boolean

Default:

`false`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha−agent.nix>

services.nezha−agent.settings.temperature
Enable temperature monitoring.

Type: boolean

Default:

`true`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha−agent.nix>

services.nezha−agent.settings.tls
Enable SSL/TLS encryption.

Type: boolean

Default:

`false`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha−agent.nix>

services.nezha−agent.settings.use_ipv6_country_code
Use ipv6 countrycode to report location.

Type: boolean

Default:

`true`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha−agent.nix>

services.nezha−agent.settings.uuid
Must be set to a unique identifier, preferably a UUID according to RFC 4122. UUIDs can be generated with ‘uuidgen’ command, found in the ‘util−linux’ package.

Set **services.nezha−agent.genUuid** to true to generate uuid from **networking.fqdn** automatically.

Type: null or string

Default:

`null`

Example:

`"6ba7b810−9dad−11d1−80b4−00c04fd430c8"`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nezha−agent.nix>

services.nfs.extraConfig
Extra nfs−utils configuration.

Type: strings concatenated with “\n”

Default:

`""`

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/nfs.nix>

services.nfs.idmapd.settings
libnfsidmap configuration. Refer to **https://linux.die.net/man/5/idmapd.conf** for details.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  Translation = {
    GSS-Methods = "static,nsswitch";
  };
  Static = {
    "root/hostname.domain.com@REALM.COM" = "root";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/nfs.nix>

services.nfs.server.enable
Whether to enable the kernel's NFS server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network-filesystems/nfsd.nix>

services.nfs.server.createMountPoints
Whether to create the mount points in the exports file at startup time.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network-filesystems/nfsd.nix>

services.nfs.server.exports
Contents of the /etc/exports file. See **exports**(5) for the format.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/network-filesystems/nfsd.nix>

services.nfs.server.extraNfsdConfig

Extra configuration options for the [nfsd] section of /etc/nfs.conf.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/nfsd.nix>

services.nfs.server.hostName

Hostname or address on which NFS requests will be accepted. Default is all. See the **−H** option in **nfsd**(8).

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/nfsd.nix>

services.nfs.server.lockdPort

Use a fixed port for the NFS lock manager kernel module (‘lockd/nlockmgr’). This is useful if the NFS server is behind a firewall.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Example:

```
4001
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/nfsd.nix>

services.nfs.server.mountdPort

Use fixed port for rpc.mountd, useful if server is behind firewall.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Example:

```
4002
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/nfsd.nix>

services.nfs.server.nproc

Number of NFS server threads. Defaults to the recommended value of 8.

Type: signed integer

Default:

```
8
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/nfsd.nix>

services.nfs.server.statdPort
Use a fixed port for **rpc.statd**. This is useful if the NFS server is behind a firewall.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Example:

```
4000
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/nfsd.nix>

services.nfs.settings
General configuration for NFS daemons and tools. See **nfs.conf**(5) and related man pages for details.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  mountd.manage-gids = true;
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/nfs.nix>

services.nghttpx.enable
Whether to enable nghttpx.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.backend−address−family
Specify address family of backend connections. If “auto” is given, both IPv4 and IPv6 are considered. If “IPv4” is given, only IPv4 address is considered. If “IPv6” is given, only IPv6 address is considered.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−−backend−address−family**

Type: one of “auto”, “IPv4”, “IPv6”

Default:

```
"auto"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.backends
A list of backend specifications.

Type: list of (submodule)

Example:

```
[
  {
    params = {
      proto = "http/1.1";
      redirect-if-not-tls = true;
    };
    patterns = [
      "/"
    ];
    server = {
      host = "172.16.0.22";
      port = 8443;
    };
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.backends.*.params
Parameters to configure a backend.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  proto = "h2";
  tls = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.backends.*.params.affinity
If “ip” is given, client IP based session affinity is enabled. If “none” is given, session affinity is disabled.

Session affinity is enabled (by nghttpx) per−backend pattern. If at least one backend has a non−“none” affinity, then session affinity is enabled for all backend servers sharing the same pattern.

It is advised to set affinity on all backends explicitly if session affinity is desired. The session affinity may break if one of the backend gets unreachable, or backend settings are reloaded or replaced by API.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−b** for more detail.

Type: one of “ip”, “none”

Default:

```
"none"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.backends.*.params.dns
Name resolution of a backends host name is done at start up, or configuration reload. If “dns” is true, name resolution takes place dynamically.

This is useful if a backends address changes frequently. If “dns” is true, name resolution of a backend’s host name at start up, or configuration reload is skipped.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−b** for more detail.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.backends.*.params.fall
If nghttpx cannot connect to the backend N times in a row, the backend is assumed to be offline and is excluded from load balancing. If N is 0 the backend is never excluded from load balancing.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−b** for more detail.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.backends.*.params.proto
This option configures the protocol the backend server expects to use.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−b** for more detail.

Type: one of “h2”, “http/1.1”

Default:

```
"http/1.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.backends.*.params.redirect−if−not−tls
If true, a backend match requires the frontend connection be TLS encrypted. If it is not, nghttpx responds to the request with a 308 status code and https URI the client should use instead in the Location header.

The port number in the redirect URI is 443 by default and can be changed using ‘services.nghttpx.redirect−https−port’ option.

If at least one backend has “redirect−if−not−tls” set to true, this feature is enabled for all backend servers with the same pattern. It is advised to set “redirect−if−no−tls” parameter to all backends explicitly if this feature is desired.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−b** for more detail.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.backends.*.params.rise
If the backend is excluded from load balancing, nghttpx will periodically attempt to make a connection to the backend. If the connection is successful N times in a row the backend is re−included in load balancing. If N is 0 a backend is never reconsidered for load balancing once it falls.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−b** for more detail.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.backends.*.params.sni
Override the TLS SNI field value. This value (in nghttpx) defaults to the host value of the backend configuration.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−b** for more detail.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.backends.*.params.tls
This option determines whether nghttpx will negotiate its connection with a backend server using TLS or not. The burden is on the backend server to provide the TLS certificate!

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−b** for more detail.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.backends.*.patterns
List of nghttpx backend patterns.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−b** for more information on the pattern syntax and nghttpxs behavior.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "*.host.net/v1/"
  "host.org/v2/mypath"
  "/somepath"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.backends.*.server
Backend server location specified as either a host:port pair or a unix domain docket.

Type: (submodule) or absolute path

Default:

```
{
  host = "127.0.0.1";
  port = 80;
}
```

Example:

```
{
  host = "127.0.0.1";
  port = 8888;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.backlog
Listen backlog size.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−−backlog**

Type: signed integer

Default:

```
65536
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.extraConfig
Extra configuration options to be appended to the generated configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.frontends
A list of frontend listener specifications.

Type: list of (submodule)

Example:

```
[
  {
    params = {
      tls = "no-tls";
    };
    server = {
      host = "*";
      port = 80;
```

```
    };
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.frontends.*.params
Parameters to configure a backend.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  tls = "tls";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.frontends.*.params.api
Enable API access for this frontend. This enables you to dynamically modify nghttpx at run−time therefore this feature is disabled by default and should be turned on with care.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−f** for more detail.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.frontends.*.params.healthmon
Make this frontend a health monitor endpoint. Any request received on this frontend is responded to with a 200 OK.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−f** for more detail.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.frontends.*.params.proxyproto
Accept PROXY protocol version 1 on frontend connection.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−f** for more detail.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.frontends.*.params.sni−fwd
When performing a match to select a backend server, SNI host name received from the client is used instead of the request host. See −−backend option about the pattern match.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−f** for more detail.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.frontends.*.params.tls
Enable or disable TLS. If true (enabled) the key and certificate must be configured for nghttpx.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−f** for more detail.

Type: one of “tls”, “no−tls”

Default:

```
"tls"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.frontends.*.server
Frontend server interface binding specification as either a host:port pair or a unix domain docket.

NB: a host of “*” listens on all interfaces and includes IPv6 addresses.

Type: (submodule) or absolute path

Default:

```
{
  host = "127.0.0.1";
  port = 80;
}
```

Example:

```
{
  host = "127.0.0.1";
  port = 8888;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.rlimit−nofile
Set maximum number of open files (RLIMIT_NOFILE) to <N>. If 0 is given, nghttpx does not set the limit.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−−rlimit−nofile**

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.single−process
Run this program in a single process mode for debugging purpose. Without this option, nghttpx creates at least 2 processes: master and worker processes. If this option is used, master and worker are unified into a single process. nghttpx still spawns additional process if neverbleed is used. In the single process mode, the signal handling feature is disabled.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−−single−process**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.single−thread
Run everything in one thread inside the worker process. This feature is provided for better debugging experience, or for the platforms which lack thread support. If threading is disabled, this option is always enabled.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−−single−thread**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.tls
TLS certificate and key paths. Note that this does not enable TLS for a frontend listener, to do so, a frontend specification must set ‘params.tls’ to true.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  crt = "/etc/ssl/certs/server.crt";
  key = "/etc/ssl/keys/server.key";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.tls.crt
Path to the TLS certificate file.

Type: string

Default:

```
"/etc/ssl/certs/server.crt"
```

Example:

```
"/etc/ssl/certs/mycert.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.tls.key
Path to the TLS key file.

Type: string

Default:

```
"/etc/ssl/keys/server.key"
```

Example:

```
"/etc/ssl/keys/mykeyfile.key"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nghttpx.workers
Set the number of worker threads.

Please see **https://nghttp2.org/documentation/nghttpx.1.html#cmdoption−nghttpx−n**

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nghttpx/nghttpx−options.nix>

services.nginx.enable
Whether to enable Nginx Web Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.enableQuicBPF
Enables routing of QUIC packets using eBPF. When enabled, this allows to support QUIC connection migration. The directive is only supported on Linux 5.7+. Note that enabling this option will make nginx run with extended capabilities that are usually limited to processes running as root namely ‘CAP_SYS_ADMIN’ and ‘CAP_NET_ADMIN’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.enableReload

Reload nginx when configuration file changes (instead of restart). The configuration file is exposed at */etc/nginx/nginx.conf*. See also 'systemd.services.*.restartIfChanged'.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.package

Nginx package to use. This defaults to the stable version. Note that the nginx team recommends to use the mainline version which available in nixpkgs as 'nginxMainline'. Supported Nginx forks include 'angie', 'openresty' and 'tengine'.

Type: package

Default:

```
pkgs.nginxStable
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.additionalModules

Additional **third−party nginx modules** to install. Packaged modules are available in 'pkgs.nginxModules'.

Type: list of attribute set of anything

Default:

```
[ ]
```

Example:

```
[ pkgs.nginxModules.echo ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.appendConfig

Configuration lines appended to the generated Nginx configuration file. Commonly used by different modules providing http snippets. **appendConfig** can be specified more than once and its value will be concatenated (contrary to **config** which can be set only once).

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.appendHttpConfig

Configuration lines to be appended to the generated http block. This is mutually exclusive with using config and httpConfig for specifying the whole http block verbatim.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.clientMaxBodySize
Set nginx global client_max_body_size.

Type: string

Default:

```
"10m"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.commonHttpConfig
With nginx you must provide common http context definitions before they are used, e.g. log_format, resolver, etc. inside of server or location contexts. Use this attribute to set these definitions at the appropriate location.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
resolver 127.0.0.1 valid=5s;

log_format myformat '$remote_addr − $remote_user [$time_local] '
                    '"$request" $status $body_bytes_sent '
                    '"$http_referer" "$http_user_agent"';
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.config
Verbatim *nginx.conf* configuration. This is mutually exclusive to any other config option for *nginx.conf* except for

- **services.nginx.appendConfig**
- **services.nginx.httpConfig**
- **services.nginx.logError**

If additional verbatim config in addition to other options is needed, **services.nginx.appendConfig** should be used instead.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.defaultHTTPListenPort
If vhosts do not specify listen.port, use these ports for HTTP by default.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
80
```

Example:

```
8080
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.defaultListen

If vhosts do not specify listen, use these addresses by default. This option takes precedence over **defaultListenAddresses** and other listen−related defaults options.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  { addr = "10.0.0.12"; proxyProtocol = true; ssl = true; }
  { addr = "0.0.0.0"; }
  { addr = "[::0]"; }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.defaultListen.*.addr

IP address.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.defaultListen.*.extraParameters

Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.defaultListen.*.port

Port number.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.defaultListen.*.proxyProtocol

Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.defaultListen.*.ssl

Enable SSL.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.defaultListenAddresses

If vhosts do not specify listenAddresses, use these addresses by default. This is akin to writing ‘defaultListen = [{ addr = "0.0.0.0" }]’.

Type: list of string

Default:

```
[ "0.0.0.0" ] ++ lib.optional config.networking.enableIPv6 "[::0]"
```

Example:

```
[ "10.0.0.12" "[2002:a00:1::]" ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.defaultMimeTypes

Default MIME types for NGINX, as MIME types definitions from NGINX are very incomplete, we use by default the ones bundled in the mailcap package, used by most of the other Linux distributions.

Type: absolute path

Default:

```
$''{pkgs.mailcap}/etc/nginx/mime.types
```

Example:

```
$''{pkgs.nginx}/conf/mime.types
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.defaultSSLListenPort

If vhosts do not specify listen.port, use these ports for SSL by default.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
443
```

Example:

```
8443
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.eventsConfig
Configuration lines to be set inside the events block.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.experimentalZstdSettings
Enable alpha quality zstd module with recommended settings. Learn more about compression in Zstd format **here**.

This adds ‘pkgs.nginxModules.zstd’ to ‘services.nginx.additionalModules’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.gitweb.enable
If true, enable gitweb in nginx.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/gitweb.nix>

services.nginx.gitweb.group
Group that the CGI process will belong to. (Set to ‘config.services.gitolite.group’ if you are using gitolite.)

Type: string

Default:

```
"nginx"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/gitweb.nix>

services.nginx.gitweb.location
Location to serve gitweb on.

Type: string

Default:

```
"/gitweb"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/gitweb.nix>

services.nginx.gitweb.user

Existing user that the CGI process will belong to. (Default almost surely will do.)

Type: string

Default:

```
"nginx"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/gitweb.nix>

services.nginx.gitweb.virtualHost

VirtualHost to serve gitweb on. Default is catch−all.

Type: string

Default:

```
"_"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/gitweb.nix>

services.nginx.group

Group account under which nginx runs.

Type: string

Default:

```
"nginx"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.httpConfig

Configuration lines to be set inside the http block. This is mutually exclusive with the structured configuration via virtualHosts and the recommendedXyzSettings configuration options. See appendHttpConfig for appending to the generated http block.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.logError

Configures logging. The first parameter defines a file that will store the log. The special value stderr selects the standard error file. Logging to syslog can be configured by specifying the “syslog:” prefix. The second parameter determines the level of logging, and can be one of the following: debug, info, notice, warn, error, crit, alert, or emerg. Log levels above are listed in the order of increasing severity. Setting a certain log level will cause all messages of the specified and more severe log levels to be logged. If this parameter is omitted then error is used.

Type: string

Default:

```
"stderr"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.mapHashBucketSize
Sets the bucket size for the map variables hash tables. Default value depends on the processor's cache line size.

Refer to **the nginx docs on hashes** for more information.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.mapHashMaxSize
Sets the maximum size of the map variables hash tables.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.preStart
Shell commands executed before the service's nginx is started.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.prependConfig
Configuration lines prepended to the generated Nginx configuration file. Can for example be used to load modules. **prependConfig** can be specified more than once and its value will be concatenated (contrary to **config** which can be set only once).

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.proxyCachePath
Configure a proxy cache path entry. See **https://nginx.org/en/docs/http/ngx_http_proxy_module.html#proxy_cache_path** for documentation.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.proxyCachePath.<name>.enable
Whether to enable this proxy cache path entry.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.proxyCachePath.<name>.inactive
Cached data that has not been accessed for the time specified by the inactive parameter is removed from the cache, regardless of its freshness.

Type: string

Default:

```
"10m"
```

Example:

```
"1d"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.proxyCachePath.<name>.keysZoneName
Set name to shared memory zone.

Type: string

Default:

```
"cache"
```

Example:

```
"my_cache"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.proxyCachePath.<name>.keysZoneSize
Set size to shared memory zone.

Type: string

Default:

```
"10m"
```

Example:

```
"32m"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.proxyCachePath.<name>.levels

The levels parameter defines structure of subdirectories in cache: from 1 to 3, each level accepts values 1 or 2. Can be used any combination of 1 and 2 in these formats: x, x:x and x:x:x.

Type: string

Default:

```
"1:2"
```

Example:

```
"1:2:2"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.proxyCachePath.<name>.maxSize

Set maximum cache size

Type: string

Default:

```
"1g"
```

Example:

```
"2048m"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.proxyCachePath.<name>.useTempPath

Nginx first writes files that are destined for the cache to a temporary storage area, and the use_temp_path=off directive instructs Nginx to write them to the same directories where they will be cached. Recommended that you set this parameter to off to avoid unnecessary copying of data between file systems.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.proxyResolveWhileRunning

Resolves domains of proxyPass targets at runtime and not only at startup. This can be used as a workaround if nginx fails to start because of not−yet−working DNS.

:::{.warn} ‘services.nginx.resolver’ must be set for this option to work. :::

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.proxyTimeout

Change the proxy related timeouts in recommendedProxySettings.

Type: string

Default:

```
"60s"
```

Example:

```
"20s"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.recommendedBrotliSettings

Enable recommended brotli settings. Learn more about compression in Brotli format **here**.

This adds ‘pkgs.nginxModules.brotli’ to ‘services.nginx.additionalModules’.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.recommendedGzipSettings

Enable recommended gzip settings. Learn more about compression in Gzip format **here**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.recommendedOptimisation

Enable recommended optimisation settings.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.recommendedProxySettings

Whether to enable recommended proxy settings if a vhost does not specify the option manually.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.recommendedTlsSettings
Enable recommended TLS settings.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.recommendedUwsgiSettings
Whether to enable recommended uwsgi settings if a vhost does not specify the option manually.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.resolver
Configures name servers used to resolve names of upstream servers into addresses

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.resolver.addresses
List of resolvers to use

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "[::1]" "127.0.0.1:5353" ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.resolver.ipv4
By default, nginx will look up both IPv4 and IPv6 addresses while resolving. If looking up of IPv4 addresses is not desired, the ipv4=off parameter can be specified.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.resolver.ipv6

By default, nginx will look up both IPv4 and IPv6 addresses while resolving. If looking up of IPv6 addresses is not desired, the ipv6=off parameter can be specified.

Type: boolean

Default:

```
config.networking.enableIPv6
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.resolver.valid

By default, nginx caches answers using the TTL value of a response. An optional valid parameter allows overriding it

Type: string

Default:

```
""
```

Example:

```
"30s"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.serverNamesHashBucketSize

Sets the bucket size for the server names hash tables. Default value depends on the processor’s cache line size.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.serverNamesHashMaxSize

Sets the maximum size of the server names hash tables.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.serverTokens

Show nginx version in headers and error pages.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.sslCiphers

List of available cipher suites to choose from when negotiating TLS sessions.

:::{.warn} This option only handles cipher suites up to TLSv1.2. Use ‘ssl_conf_command CipherSuites’ to configure TLSv1.3 cipher suites. :::

Type: null or string or list of string

Default:

```
[
  "ECDHE-ECDSA-AES128-GCM-SHA256"
  "ECDHE-RSA-AES128-GCM-SHA256"
  "ECDHE-ECDSA-AES256-GCM-SHA384"
  "ECDHE-RSA-AES256-GCM-SHA384"
  "ECDHE-ECDSA-CHACHA20-POLY1305"
  "ECDHE-RSA-CHACHA20-POLY1305"
  "DHE-RSA-AES128-GCM-SHA256"
  "DHE-RSA-AES256-GCM-SHA384"
  "DHE-RSA-CHACHA20-POLY1305"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/nginx/default.nix>

services.nginx.sslDhparam

Path to DH parameters file, or ‘true’ to generate with ‘security.dhparms.params.nginx’.

Type: absolute path or boolean

Default:

```
false
```

Example:

```
"/path/to/dhparams.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/nginx/default.nix>

services.nginx.sslProtocols

Allowed TLS protocol versions.

Type: string

Default:

```
"TLSv1.2 TLSv1.3"
```

Example:

```
"TLSv1.3"
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/nginx/default.nix>

services.nginx.sso.enable

Whether to enable nginx-sso service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/nginx-sso.nix>

services.nginx.sso.package
The nginx-sso package to use.

Type: package

Default:

```
pkgs.nginx-sso
```

Declared by:
<nixpkgs/nixos/modules/services/security/nginx-sso.nix>

services.nginx.sso.configuration
nginx-sso configuration (**documentation**) as a Nix attribute set.

Options containing secret data should be set to an attribute set with the singleton attribute '_secret' - a string value set to the path to the file containing the secret value which should be used in the configuration.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  listen = { addr = "127.0.0.1"; port = 8080; };
  providers.token.tokens = {
    myuser = {
      _secret = "/path/to/secret/token.txt"; # File content should  \
be the secret token
    };
  };
  acl = {
    rule_sets = [
      {
        rules = [ { field = "x-application"; equals = "MyApp"; } ] \
;
        allow = [ "myuser" ];
      }
    ];
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/security/nginx-sso.nix>

services.nginx.statusPage
Enable status page reachable from localhost on http://127.0.0.1/nginx_status.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.streamConfig
Configuration lines to be set inside the stream block.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
server {
  listen 127.0.0.1:53 udp reuseport;
  proxy_timeout 20s;
  proxy_pass 192.168.0.1:53535;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.tailscaleAuth.enable
Whether to enable tailscale.nginx−auth, to authenticate nginx users via tailscale.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/tailscale−auth.nix>

services.nginx.tailscaleAuth.package
Alias of **services.tailscaleAuth.package**.

Type: package

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/tailscale−auth.nix>

services.nginx.tailscaleAuth.expectedTailnet
If you want to prevent node sharing from allowing users to access services across tailnets, declare your expected tailnets domain here.

Type: null or string

Default:

```
""
```

Example:

```
"tailnet012345.ts.net"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/tailscale−auth.nix>

services.nginx.tailscaleAuth.group

Alias of **services.tailscaleAuth.group**.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/tailscale−auth.nix>

services.nginx.tailscaleAuth.socketPath

Alias of **services.tailscaleAuth.socketPath**.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/tailscale−auth.nix>

services.nginx.tailscaleAuth.user

Alias of **services.tailscaleAuth.user**.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/tailscale−auth.nix>

services.nginx.tailscaleAuth.virtualHosts

A list of nginx virtual hosts to put behind tailscale.nginx−auth

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/tailscale−auth.nix>

services.nginx.typesHashMaxSize

Sets the maximum size of the types hash tables (‘types_hash_max_size’). It is recommended that the minimum size possible size is used. If **recommendedOptimisation** is disabled, nginx would otherwise fail to start since the mailmap ‘mime.types’ database has more entries than the nginx default value 1024.

Type: positive integer, meaning >0

Default:

```
if config.services.nginx.defaultMimeTypes == "${pkgs.mailcap}/etc/n \
ginx/mime.types" then 2688 else 1024
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.upstreams

Defines a group of servers to use as proxy target.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  backend = {
    extraConfig = ''
      keepalive 16;
    '';
```

```
      servers = {
        "backend1.example.com:8080" = {
          weight = 5;
        };
        "backend2.example.com" = {
          fail_timeout = "30s";
          max_fails = 3;
        };
        "backend3.example.com" = { };
        "backup1.example.com" = {
          backup = true;
        };
        "backup2.example.com" = {
          backup = true;
        };
      };
    };
    memcached = {
      servers = {
        "unix:/run/memcached/memcached.sock" = { };
      };
    };
  }
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.upstreams.<name>.extraConfig

These lines go to the end of the upstream verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.upstreams.<name>.servers

Defines the address and other parameters of the upstream servers. See **the documentation** for the available parameters.

Type: attribute set of (open submodule of attribute set of (boolean or signed integer or string))

Default:

```
{ }
```

Example: see **services.nginx.upstreams**

Declared by:

<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.upstreams.<name>.servers.<name>.backup

Marks the server as a backup server. It will be passed requests when the primary servers are unavailable.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.user
User account under which nginx runs.

Type: string

Default:

```
"nginx"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.uwsgiResolveWhileRunning
Resolves domains of uwsgi targets at runtime and not only at start, you have to set services.nginx.resolver, too.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.uwsgiTimeout
Change the uwsgi related timeouts in recommendedUwsgiSettings.

Type: string

Default:

```
"60s"
```

Example:

```
"20s"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.validateConfigFile
Whether to enable validating configuration with pkgs.writeNginxConfig.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts
Declarative vhost config

Type: attribute set of (submodule)

Default:

```
{
  localhost = { };
}
```

Example:

```
{
  "hydra.example.com" = {
    forceSSL = true;
    enableACME = true;
    locations."/" = {
      proxyPass = "http://localhost:3000";
    };
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme-challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with 'redirectCode') to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.http2
Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.http3
Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.http3_hq
Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.kTLS
Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.listen
Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides ‘addSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.listen.*.ssl
Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations
Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations.<name>.alias
Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations.<name>.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for ‘listen’ to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.redirectCode
HTTP status used by ‘globalRedirect’ and ‘forceSSL’. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.rejectSSL
Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.reuseport
Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.root
The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.serverName
Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

services.nginx.virtualHosts.<name>.useACMEHost
A host of an existing Let’s Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/nginx/default.nix>

2. see the **security.acme.certs** option

services.ngircd.enable
Whether to enable the ngircd IRC server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ngircd.nix>

services.ngircd.package
The ngircd package to use.

Type: package

Default:

```
pkgs.ngircd
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ngircd.nix>

services.ngircd.config
The ngircd configuration (see **ngircd.conf**(5)).

Type: strings concatenated with “\n”

Declared by:
<nixpkgs/nixos/modules/services/networking/ngircd.nix>

services.nifi.enable
Whether to enable Apache NiFi.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nifi.nix>

services.nifi.enableHTTPS
Enable HTTPS protocol. Don`t use in production.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nifi.nix>

services.nifi.package
The nifi package to use.

Type: package

Default:

```
pkgs.nifi
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nifi.nix>

services.nifi.group
Group account where Apache NiFi runs.

Type: string

Default:

```
"nifi"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nifi.nix>

services.nifi.initJavaHeapSize
Set the initial heap size for the JVM in MB.

Type: null or signed integer

Default:

```
null
```

Example:

```
1024
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nifi.nix>

services.nifi.initPasswordFile
nitial password for Apache NiFi. Password must be at least 12 characters.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/nifi/password−nifi"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nifi.nix>

services.nifi.initUser
Initial user account for Apache NiFi. Username must be at least 4 characters.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nifi.nix>

services.nifi.listenHost

Bind to an ip for Apache NiFi web−ui.

Type: string

Default:

```
if config.services.nifi.enableHTTPS
then "0.0.0.0"
else "127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nifi.nix>

services.nifi.listenPort

Bind to a port for Apache NiFi web−ui.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
if config.services.nifi.enableHTTPS
then "8443"
else "8000"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nifi.nix>

services.nifi.maxJavaHeapSize

Set the initial heap size for the JVM in MB.

Type: null or signed integer

Default:

```
null
```

Example:

```
2048
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nifi.nix>

services.nifi.proxyHost

Allow requests from a specific host.

Type: null or string

Default:

```
if config.services.nifi.enableHTTPS
then "0.0.0.0"
else null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/nifi.nix>

services.nifi.proxyPort

Allow requests from a specific port.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
if config.services.nifi.enableHTTPS
then "8443"
else null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nifi.nix>

services.nifi.user
User account where Apache NiFi runs.

Type: string

Default:

```
"nifi"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nifi.nix>

services.nipap.enable
Whether to enable global Neat IP Address Planner (NIPAP) configuration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.authBackendSettings
auth.backends options to set in /etc/nipap/nipap.conf.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{
  local = {
    db_path = "/var/lib/nipap/local_auth.db";
    type = "SqliteAuth";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.nipap−www.enable
Whether to enable nipap−www server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.nipap−www.package
The nipap−www package to use.

Type: package

Default:

```
pkgs.nipap−www
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.nipap−www.host
Host to bind to.

Type: null or string

Default:

```
"::"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.nipap−www.port
Port to bind to.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
21337
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.nipap−www.umask
umask for files written by Gunicorn, including UNIX socket.

Type: string

Default:

```
"0"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.nipap−www.unixSocket
Path to UNIX socket to bind to.

Type: null or string

Default:

```
null
```

Example:

```
"/run/nipap/nipap−www.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.nipap−www.workers
Number of worker processes for Gunicorn to fork.

Type: signed integer

Default:

```
4
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.nipap−www.xmlrpcURIFile
Path to file containing XMLRPC URI for use by web UI − this is a secret, since it contains auth credentials. If null, it will be initialized assuming that the auth database is local.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.nipapd.enable
Whether to enable nipapd server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.nipapd.package
The nipap package to use.

Type: package

Default:

```
pkgs.nipap
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.nipapd.database.createLocally
Create a nipap database automatically.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.settings
Configuration options to set in /etc/nipap/nipap.conf.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.settings.auth.auth_cache_timeout
Seconds to store cached auth entries for.

Type: signed integer

Default:

```
3600
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.settings.auth.default_backend
Name of auth backend to use by default.

Type: string

Default:

```
"local"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.settings.nipapd.db_host
PostgreSQL host to connect to. Empty means use UNIX socket.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.settings.nipapd.db_name
Name of database to use on PostgreSQL server.

Type: string

Default:

```
"nipap"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.settings.nipapd.debug
Enable debug logging.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.settings.nipapd.foreground
Remain in foreground rather than forking to background.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.settings.nipapd.listen
IP address to bind nipapd to.

Type: string

Default:

```
"::1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.settings.nipapd.port
Port to bind nipapd to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1337
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nipap.user
User to use for running NIPAP services.

Type: string

Default:

```
"nipap"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nipap.nix>

services.nitter.enable
Whether to enable Nitter, an alternative Twitter front−end.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.package
The nitter package to use.

Type: package

Default:

```
pkgs.nitter
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.cache.listMinutes
How long to cache list info (not the tweets, so keep it high).

Type: signed integer

Default:

```
240
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.cache.redisConnections
Redis connection pool size.

Type: signed integer

Default:

```
20
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.cache.redisHost
Redis host.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.cache.redisMaxConnections
Maximum number of connections to Redis.

New connections are opened when none are available, but if the pool size goes above this, they are closed when released, do not worry about this unless you receive tons of requests per second.

Type: signed integer

Default:

```
30
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.cache.redisPort
Redis port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6379
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.cache.rssMinutes
How long to cache RSS queries.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.config.enableDebug
Whether to enable request logs and debug endpoints.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.config.enableRSS
Whether to enable RSS feeds.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.config.base64Media
Use base64 encoding for proxied media URLs.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.config.proxy
URL to a HTTP/HTTPS proxy.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.config.proxyAuth
Credentials for proxy.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.config.tokenCount
Minimum amount of usable tokens.

Tokens are used to authorize API requests, but they expire after ~1 hour, and have a limit of 187 requests. The limit gets reset every 15 minutes, and the pool is filled up so there is always at least tokenCount usable tokens. Only increase this if you receive major bursts all the time.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.openFirewall
Open ports in the firewall for Nitter web interface.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.autoplayGifs
Autoplay GIFs.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.bidiSupport
Support bidirectional text (makes clicking on tweets harder).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.hideBanner
Hide profile banner.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.hidePins
Hide pinned tweets.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.hideReplies
Hide tweet replies.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.hideTweetStats
Hide tweet stats (replies, retweets, likes).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.hlsPlayback
Enable HLS video streaming (requires JavaScript).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.infiniteScroll
Infinite scrolling (requires JavaScript, experimental!).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.mp4Playback
Enable MP4 video playback.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.muteVideos
Mute videos by default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.proxyVideos
Proxy video streaming through the server (might be slow).

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.replaceReddit
Replace Reddit links with links to this instance (blank to disable).

Type: string

Default:

```
""
```

Example:

```
"teddit.net"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.replaceTwitter
Replace Twitter links with links to this instance (blank to disable).

Type: string

Default:

```
""
```

Example:

```
"nitter.net"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.replaceYouTube
Replace YouTube links with links to this instance (blank to disable).

Type: string

Default:
`""`

Example:
`"piped.kavin.rocks"`

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.squareAvatars
Square profile pictures.

Type: boolean

Default:
`false`

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.stickyProfile
Make profile sidebar stick to top.

Type: boolean

Default:
`true`

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.preferences.theme
Instance theme.

Type: string

Default:
`"Nitter"`

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.redisCreateLocally
Configure local Redis server for Nitter.

Type: boolean

Default:
`true`

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.server.address
The address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.server.hostname
Hostname of the instance.

Type: string

Default:

```
"localhost"
```

Example:

```
"nitter.net"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.server.httpMaxConnections
Maximum number of HTTP connections.

Type: signed integer

Default:

```
100
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.server.https
Set secure attribute on cookies. Keep it disabled to enable cookies when not using HTTPS.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.server.port
The port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Example:

```
8000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.server.staticDir
Path to the static files directory.

Type: absolute path

Default:

```
"${config.services.nitter.package}/share/nitter/public"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.server.title
Title of the instance.

Type: string

Default:

```
"nitter"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.sessionsFile
Path to the session tokens file.

This file contains a list of session tokens that can be used to access the instance without logging in. The file is in JSONL format, where each line is a JSON object with the following fields:

{“oauth_token”:“some_token”,“oauth_token_secret”:“some_secret_key”}

See **https://github.com/zedeus/nitter/wiki/Creating-session-tokens** for more information on session tokens and how to generate them.

Type: absolute path

Default:

```
"/var/lib/nitter/sessions.jsonl"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nitter.settings
Add settings here to override NixOS module generated settings.

Check the official repository for the available settings: **https://github.com/zedeus/nitter/blob/master/nitter.example.conf**

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nitter.nix>

services.nix-serve.enable
Whether to enable nix-serve, the standalone Nix binary cache server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nix-serve.nix>

services.nix-serve.package
The nix-serve package to use.

Type: package

Default:

```
pkgs.nix-serve
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nix-serve.nix>

services.nix-serve.bindAddress
IP address where nix-serve will bind its listening socket.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nix-serve.nix>

services.nix-serve.extraParams
Extra command line parameters for nix-serve.

Type: strings concatenated with " "

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nix-serve.nix>

services.nix-serve.openFirewall
Open ports in the firewall for nix-serve.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nix-serve.nix>

services.nix-serve.port
Port number where nix-serve will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nix-serve.nix>

services.nix−serve.secretKeyFile

The path to the file used for signing derivation data. Generate with:

```
nix−store −−generate−binary−cache−key key−name secret−key− \
file public−key−file
```

For more details see **nix−store**(1).

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nix−serve.nix>

services.nix−store−gcs−proxy

An attribute set describing an HTTP to GCS proxy that allows us to use GCS bucket via HTTP protocol.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nix−store−gcs−proxy.nix>

services.nix−store−gcs−proxy.<name>.enable

Whether to enable proxy for this bucket

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nix−store−gcs−proxy.nix>

services.nix−store−gcs−proxy.<name>.address

The address of the proxy.

Type: string

Example:

```
"localhost:3000"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nix−store−gcs−proxy.nix>

services.nix−store−gcs−proxy.<name>.bucketName

Name of Google storage bucket

Type: string

Default:

```
"‹name›"
```

Example:

```
"my−bucket−name"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nix−store−gcs−proxy.nix>

services.nixops−dns.enable
Whether to enable the nixops−dns resolution of NixOps virtual machines via dnsmasq and fake domain name.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nixops−dns.nix>

services.nixops−dns.dnsmasq
Enable dnsmasq forwarding to nixops−dns. This allows to use nixops−dns for ‘services.nixops−dns.domain’ resolution while forwarding the rest of the queries to original resolvers.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nixops−dns.nix>

services.nixops−dns.domain
Fake domain name to resolve to NixOps virtual machines.

For example “ops” will resolve “vm.ops”.

Type: string

Default:

```
"ops"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nixops−dns.nix>

services.nixops−dns.user
The user the nixops−dns daemon should run as. This should be the user, which is also used for nixops and have the .nixops directory in its home.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/nixops−dns.nix>

services.nixseparatedebuginfod2.enable
Whether to enable nixseparatedebuginfod2, a debuginfod server providing source and debuginfo for nix packages.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/nixseparatedebuginfod2.nix>

services.nixseparatedebuginfod2.package
The nixseparatedebuginfod2 package to use.

Type: package

Default:

```
pkgs.nixseparatedebuginfod2
```

Declared by:
<nixpkgs/nixos/modules/services/development/nixseparatedebuginfod2.nix>

services.nixseparatedebuginfod2.cacheExpirationDelay
keep unused cache entries for this long. A number followed by a unit

Type: string

Default:

```
"1d"
```

Declared by:
<nixpkgs/nixos/modules/services/development/nixseparatedebuginfod2.nix>

services.nixseparatedebuginfod2.port
port to listen

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1949
```

Declared by:
<nixpkgs/nixos/modules/services/development/nixseparatedebuginfod2.nix>

services.nixseparatedebuginfod2.substituters
nix substituter to fetch debuginfo from. Either http/https/file substituters, or ‘local:’ to use debuginfo present in the local store.

Type: list of string

Default:

```
[
  "local:"
  "https://cache.nixos.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/development/nixseparatedebuginfod2.nix>

services.nmtrust.enable
Whether to enable network trust management.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nmtrust.nix>

services.nmtrust.evalFailurePolicy
How to handle trust evaluation failures (D−Bus errors, NM unavailable). ‘"untrusted"’ (default) is fail−closed: trusted−only units stop. ‘"offline"’ allows units with **allowOffline** to run.

Type: one of “untrusted”, “offline”

Default:

```
"untrusted"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nmtrust.nix>

services.nmtrust.excludedConnectionPatterns
Glob patterns matched against connection names at runtime using fnmatch(3) with FNM_NOESCAPE. Connection names are treated as literal strings (no backslash interpretation). Matching connections are ignored when computing trust state.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nmtrust.nix>

services.nmtrust.mixedPolicy
How to treat mixed trust state (some connections trusted, some untrusted).

Type: one of “trusted”, “untrusted”

Default:

```
"untrusted"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nmtrust.nix>

services.nmtrust.systemUnits
System units to bind to the trusted network target. Keys are systemd unit names.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nmtrust.nix>

services.nmtrust.systemUnits.<name>.allowOffline
Whether this unit should also run when offline.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nmtrust.nix>

services.nmtrust.trustedConnections

List of NetworkManager profile names from **networking.networkmanager.ensureProfiles**. UUIDs are resolved at evaluation time.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nmtrust.nix>

services.nmtrust.trustedUUIDsExtra

Additional trusted connection UUIDs not managed via **networking.networkmanager.ensureProfiles**. Must be valid UUID format.

Type: list of string matching the pattern [0−9a−fA−F]{8}−[0−9a−fA−F]{4}−[0−9a−fA−F]{4}−[0−9a−fA−F]{4}−[0−9a−fA−F]{12}

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nmtrust.nix>

services.nmtrust.userUnits

Per−user units to bind to the trusted network target. Outer keys are usernames, inner keys are systemd unit names. Users must have linger enabled (**users.users.<name>.linger**).

Type: attribute set of attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  alice = {
    "etesync-dav.service" = { };
    "syncthing.service" = { allowOffline = true; };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nmtrust.nix>

services.nmtrust.userUnits.<name>.<name>.allowOffline

Whether this unit should also run when offline.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nmtrust.nix>

services.nncp.caller.enable

Whether to enable cron'ed NNCP TCP daemon caller. The daemon will take configuration from **programs.nncp.settings** .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nncp.nix>

services.nncp.caller.extraArgs

Extra command−line arguments to pass to caller.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-autotoss"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nncp.nix>

services.nncp.daemon.enable

Whether to enable NNCP TCP synronization daemon. The daemon will take configuration from **programs.nncp.settings** .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nncp.nix>

services.nncp.daemon.extraArgs

Extra command−line arguments to pass to daemon.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-autotoss"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nncp.nix>

services.nncp.daemon.socketActivation.enable
Whether to enable socket activation for nncp−daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nncp.nix>

services.nncp.daemon.socketActivation.listenStreams
TCP sockets to bind to. See **systemd.sockets.<name>.listenStreams**.

Type: list of string

Default:

```
[
  "5400"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nncp.nix>

services.nntp−proxy.enable
Whether to enable NNTP−Proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp−proxy.nix>

services.nntp−proxy.listenAddress
Proxy listen address (IPv6 literal addresses need to be enclosed in “[” and “]” characters)

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"[::]"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp−proxy.nix>

services.nntp−proxy.port
Proxy listen port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5555
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp−proxy.nix>

services.nntp−proxy.prohibitPosting
Whether to prohibit posting to the upstream server

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp−proxy.nix>

services.nntp−proxy.sslCert
Proxy ssl certificate path

Type: string

Default:

```
"cert.pem"
```

Example:

```
"/path/to/your/cert.file"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp−proxy.nix>

services.nntp−proxy.sslKey
Proxy ssl key path

Type: string

Default:

```
"key.pem"
```

Example:

```
"/path/to/your/key.file"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp−proxy.nix>

services.nntp−proxy.upstreamMaxConnections
Upstream server maximum allowed concurrent connections

Type: signed integer

Default:

```
20
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp−proxy.nix>

services.nntp−proxy.upstreamPassword
Upstream server password

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp−proxy.nix>

services.nntp−proxy.upstreamPort
Upstream server port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
563
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp−proxy.nix>

services.nntp−proxy.upstreamServer
Upstream server address

Type: string

Default:

```
""
```

Example:

```
"ssl−eu.astraweb.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp−proxy.nix>

services.nntp−proxy.upstreamUser
Upstream server username

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp−proxy.nix>

services.nntp−proxy.users
NNTP−Proxy user configuration

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "user1" = {
    passwordHash = "$6$1l0t5Kn2Dk$appzivc./9l/kjq57eg5UCsBKlcfyCr0z \
NWYNerKoPsI1d7eAwiT0SVsOVx/CTgaBNT/u4fi2vN.iGlPfv1ek0";
    maxConnections = 5;
  };
```

```
  "anotheruser" = {
    passwordHash = "$6$6lwEsWB.TmsS$W7m1riUx4QrA8pKJz8hvff0dnF1NwtZ \
XgdjmGqA1Dx2MDPj07tI9GNcb0SWlMglE.2/hBgynDdAd/XqqtRqVQ0";
    maxConnections = 7;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp-proxy.nix>

services.nntp-proxy.users.<name>.maxConnections
Maximum number of concurrent connections to the proxy for this user

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp-proxy.nix>

services.nntp-proxy.users.<name>.passwordHash
SHA-512 password hash (can be generated by 'mkpasswd -m sha-512 <password>')

Type: string

Example:

```
"$6$GtzE7FrpE$wwuVgFYU.TZH4Rz.Snjxk9XGua89IeVwPQ/fEUD8eujr40q5Y021y \
hn0aNcsQ2Ifw.BLclyzvzgegopgKcneL0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp-proxy.nix>

services.nntp-proxy.users.<name>.username
Username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp-proxy.nix>

services.nntp-proxy.verbosity
Verbosity level

Type: one of "error", "warning", "notice", "info", "debug"

Default:

```
"info"
```

Example:

```
"error"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nntp-proxy.nix>

services.node-red.enable
Whether to enable the Node-RED service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/node−red.nix>

services.node−red.package
The node−red package to use.

Type: package

Default:

```
pkgs.node−red
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/node−red.nix>

services.node−red.configFile
Path to the JavaScript configuration file. See **https://github.com/node−red/node−red/blob/master/packages/node_modules/node−red/settings.js** for a configuration example.

Type: absolute path

Default:

```
"${package}/lib/node_modules/node−red/packages/node_modules/node− \
red/settings.js"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/node−red.nix>

services.node−red.define
List of settings.js overrides to pass via −D to Node−RED.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  "logging.console.level" = "trace";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/node−red.nix>

services.node−red.group
Group under which Node−RED runs.If left as the default value this group will automatically be created on system activation, otherwise the sysadmin is responsible for ensuring the group exists.

Type: string

Default:

```
"node−red"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/node−red.nix>

services.node−red.openFirewall

Open ports in the firewall for the server.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/node−red.nix>

services.node−red.port

Listening port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1880
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/node−red.nix>

services.node−red.safe

Whether to launch Node−RED in −−safe mode.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/node−red.nix>

services.node−red.user

User under which Node−RED runs.If left as the default value this user will automatically be created on system activation, otherwise the sysadmin is responsible for ensuring the user exists.

Type: string

Default:

```
"node-red"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/node−red.nix>

services.node−red.userDir

The directory to store all user data, such as flow and credential files and all library data. If left as the default value this directory will automatically be created before the node−red service starts, otherwise the sysadmin is responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: absolute path

Default:

```
"/var/lib/node-red"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/node−red.nix>

services.node−red.withNpmAndGcc

Give Node−RED access to npm and GCC at runtime, so ‘Nodes’ can be downloaded and managed imperatively via the ‘Palette Manager’.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/node−red.nix>

services.nohang.enable

Whether to enable nohang, a daemon that keeps system responsiveness when Linux is out of memory.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/system/nohang.nix>

services.nohang.package

The nohang package to use.

Type: package

Default:

```
pkgs.nohang
```

Declared by:

<nixpkgs/nixos/modules/services/system/nohang.nix>

services.nohang.configPath

Configuration file to use with nohang. The default and desktop example configurations in the nohang repository can be used by setting this to “basic” or “desktop” (which is the default). Otherwise, you can set it to the path of a custom configuration file.

Type: one of “basic”, “desktop” or absolute path

Default:

```
"desktop"
```

Example:

```
./my−nohang−config.conf
```

Declared by:

<nixpkgs/nixos/modules/services/system/nohang.nix>

services.nomad.enable

Whether to enable Nomad, a distributed, highly available, datacenter−aware scheduler.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nomad.nix>

services.nomad.enableDocker
Enable Docker support. Needed for Nomad's docker driver.

Note that the docker group membership is effectively equivalent to being root, see **https://github.com/moby/moby/issues/9976**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nomad.nix>

services.nomad.package
The nomad package to use.

Type: package

Default:

```
pkgs.nomad
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nomad.nix>

services.nomad.credentials
Credentials envs used to configure nomad secrets.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  logs_remote_write_password = "/run/keys/nomad_write_password";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nomad.nix>

services.nomad.dropPrivileges
Whether the nomad agent should be run as a non−root nomad user.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nomad.nix>

services.nomad.extraPackages
Extra packages to add to **PATH** for the Nomad agent process.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [ cni-plugins ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nomad.nix>

services.nomad.extraSettingsPaths

Additional settings paths used to configure nomad. These can be files or directories.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[ "/etc/nomad-mutable.json" "/run/keys/nomad-with-secrets.json"  \
"/etc/nomad/config.d" ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nomad.nix>

services.nomad.extraSettingsPlugins

Additional plugins dir used to configure nomad.

Type: list of (package or absolute path)

Default:

```
[ ]
```

Example:

```
[ "<pluginDir>" pkgs.nomad-driver-nix pkgs.nomad-driver-podman  \
 ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nomad.nix>

services.nomad.settings

Configuration for Nomad. See the **documentation** for supported values.

Notes about ‘data_dir’:

If ‘data_dir’ is set to a value other than the default value of ‘"/var/lib/nomad"’ it is the Nomad cluster manager’s responsibility to make sure that this directory exists and has the appropriate permissions.

Additionally, if ‘dropPrivileges’ is ‘true’ then ‘data_dir’ *cannot* be customized. Setting ‘dropPrivileges’ to ‘true’ enables the ‘DynamicUser’ feature of systemd which directly manages and operates on ‘StateDirectory’.

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  # A minimal config example:
  server = {
    enabled = true;
    bootstrap_expect = 1; # for demo; no fault tolerance
  };
  client = {
```

```
    enabled = true;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nomad.nix>

services.nominatim.enable
Whether to enable nominatim.

Also enables nginx virtual host management. Further nginx configuration can be done by adapting ‘services.nginx.virtualHosts.<name>’. See **services.nginx.virtualHosts**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/search/nominatim.nix>

services.nominatim.package
The nominatim−api package to use.

Type: package

Default:

```
pkgs.nominatim-api
```

Declared by:
<nixpkgs/nixos/modules/services/search/nominatim.nix>

services.nominatim.database.apiUser
Postgresql database user with read−only permissions used for Nominatim web API service.

Type: string

Default:

```
"nominatim-api"
```

Declared by:
<nixpkgs/nixos/modules/services/search/nominatim.nix>

services.nominatim.database.dbname
Name of the postgresql database.

Type: string

Default:

```
"nominatim"
```

Declared by:
<nixpkgs/nixos/modules/services/search/nominatim.nix>

services.nominatim.database.extraConnectionParams
Extra Nominatim database connection parameters.

Format: <param1>=<value1>;<param2>=<value2>

See **https://www.postgresql.org/docs/current/libpq−connect.html#LIBPQ−PARAMKEYWORDS**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/search/nominatim.nix>

services.nominatim.database.host
Host of the postgresql server. If not set to 'localhost', Nominatim database and postgresql superuser with appropriate permissions must exist on target host.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/search/nominatim.nix>

services.nominatim.database.passwordFile
Password file used for Nominatim database connection. Must be readable only for the Nominatim web API user.

The file must be a valid '.pgpass' file as described in: **https://www.postgresql.org/docs/current/libpq-pgpass.html**

In most cases, the following will be enough:

```
*:*:*:*:<password>
```

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/search/nominatim.nix>

services.nominatim.database.port
Port of the postgresql database.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5432
```

Declared by:
<nixpkgs/nixos/modules/services/search/nominatim.nix>

services.nominatim.database.superUser
Postgresql database superuser used to create Nominatim database and import data. If 'database.host' is set to 'localhost', a unix user and group of the same name will be automatically created.

Type: string

Default:

```
"nominatim"
```

Declared by:
<nixpkgs/nixos/modules/services/search/nominatim.nix>

services.nominatim.hostName
Hostname to use for the nginx vhost.

Type: string

Example:

```
"nominatim.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/search/nominatim.nix>

services.nominatim.settings
Nominatim configuration settings. For the list of available configuration options see **https://nominatim.org/release-docs/latest/customize/Settings**.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  NOMINATIM_REPLICATION_URL = "https://planet.openstreetmap.org/rep \
lication/minute";
  NOMINATIM_REPLICATION_MAX_DIFF = "100";
}
```

Declared by:
<nixpkgs/nixos/modules/services/search/nominatim.nix>

services.nominatim.ui.package
The nominatim-ui package to use.

Type: package

Default:

```
pkgs.nominatim-ui
```

Declared by:
<nixpkgs/nixos/modules/services/search/nominatim.nix>

services.nominatim.ui.config
Nominatim UI configuration placed to theme/config.theme.js file.

For the list of available configuration options see **https://github.com/osm-search/nominatim-ui/blob/master/dist/config.defaults.js**.

Type: null or string

Default:

```
null
```

Example:

```
  Nominatim_Config.Page_Title='My Nominatim instance';
  Nominatim_Config.Nominatim_API_Endpoint='https://localhost/';
```

Declared by:
<nixpkgs/nixos/modules/services/search/nominatim.nix>

services.nostr-rs-relay.enable
Whether to enable nostr-rs-relay.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nostr−rs−relay.nix>

services.nostr−rs−relay.package
The nostr−rs−relay package to use.

Type: package

Default:

```
pkgs.nostr-rs-relay
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nostr−rs−relay.nix>

services.nostr−rs−relay.dataDir
Directory for SQLite files.

Type: absolute path

Default:

```
"/var/lib/nostr-rs-relay"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nostr−rs−relay.nix>

services.nostr−rs−relay.port
Listen on this port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
12849
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nostr−rs−relay.nix>

services.nostr−rs−relay.settings
See **https://git.sr.ht/~gheartsfield/nostr−rs−relay/#configuration** for documentation.

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/nostr−rs−relay.nix>

services.novacomd.enable
Whether to enable Novacom service for connecting to WebOS devices.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/novacomd.nix>

services.nscd.enable

Whether to enable the Name Service Cache Daemon. Disabling this is strongly discouraged, as this effectively disables NSS Lookups from all non−glibc NSS modules, including the ones provided by systemd.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/system/nscd.nix>

services.nscd.enableNsncd

Whether to use nsncd instead of nscd from glibc. This is a nscd−compatible daemon, that proxies lookups, without any caching. Using nscd from glibc is discouraged.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/system/nscd.nix>

services.nscd.package

package containing the nscd binary to be used by the service. Ignored when enableNsncd is set to true.

Type: package

Default:

```
if pkgs.stdenv.hostPlatform.libc == "glibc"
  then pkgs.stdenv.cc.libc.bin
  else pkgs.glibc.bin;
```

Declared by:

<nixpkgs/nixos/modules/services/system/nscd.nix>

services.nscd.config

Configuration to use for Name Service Cache Daemon. Only used in case glibc−nscd is used.

Type: strings concatenated with “\n”

Default:

```
  # We basically use nscd as a proxy for forwarding nss requests to \
 appropriate
  # nss modules, as we run nscd with LD_LIBRARY_PATH set to the dir \
ectory
  # containing all such modules
  # Note that we can not use ‘enable−cache no‘ As this will actual \
ly cause nscd
  # to just reject the nss requests it receives, which then causes  \
glibc to
  # fallback to trying to handle the request by itself. Which won’t \
 work as glibc
  # is not aware of the path in which the nss modules live.  As a w \
orkaround, we
  # have ‘enable−cache yes‘ with an explicit ttl of 0
  server−user             nscd

  enable−cache            passwd          yes
```

```
positive-time-to-live   passwd          0
negative-time-to-live   passwd          0
shared                  passwd          yes

enable-cache            group           yes
positive-time-to-live   group           0
negative-time-to-live   group           0
shared                  group           yes

enable-cache            netgroup        yes
positive-time-to-live   netgroup        0
negative-time-to-live   netgroup        0
shared                  netgroup        yes

enable-cache            hosts           yes
positive-time-to-live   hosts           0
negative-time-to-live   hosts           0
shared                  hosts           yes

enable-cache            services        yes
positive-time-to-live   services        0
negative-time-to-live   services        0
shared                  services        yes
```

Declared by:
<nixpkgs/nixos/modules/services/system/nscd.nix>

services.nscd.group
User group under which nscd runs.

Type: string

Default:

```
"nscd"
```

Declared by:
<nixpkgs/nixos/modules/services/system/nscd.nix>

services.nscd.user
User account under which nscd runs.

Type: string

Default:

```
"nscd"
```

Declared by:
<nixpkgs/nixos/modules/services/system/nscd.nix>

services.nsd.enable
Whether to enable NSD authoritative DNS server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.bind8Stats
Whether to enable BIND8 like statistics.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.dnssecInterval
How often to check whether dnssec key rollover is required

Type: string

Default:

```
"1h"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.extraConfig
Extra nsd config.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.hideVersion
Whether NSD should answer VERSION.BIND and VERSION.SERVER CHAOS class queries.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.identity
Identify the server (CH TXT ID.SERVER entry).

Type: string

Default:

```
"unidentified server"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.interfaces

What addresses the server should listen to.

Type: list of string

Default:

```
[
  "127.0.0.0"
  "::1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.ipFreebind

Whether to bind to nonlocal addresses and interfaces that are down. Similar to ip−transparent.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.ipTransparent

Allow binding to non local addresses.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.ipv4

Whether to listen on IPv4 connections.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.ipv4EDNSSize

Preferred EDNS buffer size for IPv4.

Type: signed integer

Default:

```
4096
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.ipv6

Whether to listen on IPv6 connections.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.ipv6EDNSSize

Preferred EDNS buffer size for IPv6.

Type: signed integer

Default:

```
4096
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.keys

Define your TSIG keys here.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{ "tsig.example.org" = {
    algorithm = "hmac-md5";
    keyFile = "/path/to/my/key";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.keys.<name>.algorithm

Authentication algorithm for this key.

Type: string

Default:

```
"hmac-sha256"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.keys.<name>.keyFile

Path to the file which contains the actual base64 encoded key. The key will be copied into “/var/lib/nsd/private” before NSD starts. The copied file is only accessibly by the NSD user.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.logTimeAscii

Log time in ascii, if false then in unix epoch seconds.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.nsid

NSID identity (hex string, or “ascii_somestring”).

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.port

Port the service should bind do.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
53
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.ratelimit.enable

Whether to enable ratelimit capabilities.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.ratelimit.ipv4PrefixLength

IPv4 prefix length. Addresses are grouped by netblock.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.ratelimit.ipv6PrefixLength

IPv6 prefix length. Addresses are grouped by netblock.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.ratelimit.ratelimit

Max qps allowed from any query source. 0 means unlimited. With an verbosity of 2 blocked and unblocked subnets will be logged.

Type: signed integer

Default:

```
200
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.ratelimit.size

Size of the hashtable. More buckets use more memory but lower the chance of hash hash collisions.

Type: signed integer

Default:

```
1000000
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.ratelimit.slip

Number of packets that get discarded before replying a SLIP response. 0 disables SLIP responses. 1 will make every response a SLIP response.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.ratelimit.whitelistRatelimit

Max qps allowed from whitelisted sources. 0 means unlimited. Set the rrl−whitelist option for specific queries to apply this limit instead of the default to them.

Type: signed integer

Default:

```
2000
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.remoteControl.enable

Whether to enable remote control via nsd−control.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.remoteControl.controlCertFile

Path to the client certificate signed with the server certificate. This file is used by nsd−control and generated by nsd−control−setup.

Type: absolute path

Default:

```
"/etc/nsd/nsd_control.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.remoteControl.controlKeyFile

Path to the client private key, which is used by nsd−control but not by the server. This file is generated by nsd−control−setup.

Type: absolute path

Default:

```
"/etc/nsd/nsd_control.key"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.remoteControl.interfaces

Which interfaces NSD should bind to for remote control.

Type: list of string

Default:

```
[
  "127.0.0.1"
  "::1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.remoteControl.port

Port number for remote control operations (uses TLS over TCP).

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8952
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.remoteControl.serverCertFile
Path to the server self signed certificate, which is used by the server but and by nsd−control. This file is generated by nsd−control−setup.

Type: absolute path

Default:

```
"/etc/nsd/nsd_server.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.remoteControl.serverKeyFile
Path to the server private key, which is used by the server but not by nsd−control. This file is generated by nsd−control−setup.

Type: absolute path

Default:

```
"/etc/nsd/nsd_server.key"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.reuseport
Whether to enable SO_REUSEPORT on all used sockets. This lets multiple processes bind to the same port. This speeds up operation especially if the server count is greater than one and makes fast restarts less prone to fail

Type: boolean

Default:

```
pkgs.stdenv.hostPlatform.isLinux
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.rootServer
Whether this server will be a root server (a DNS root server, you usually don’t want that).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.roundRobin
Whether to enable round robin rotation of records.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.serverCount
Number of NSD servers to fork. Put the number of CPUs to use here.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.statistics
Statistics are produced every number of seconds. Prints to log. If null no statistics are logged.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.tcpCount
Maximum number of concurrent TCP connections per server.

Type: signed integer

Default:

```
100
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.tcpQueryCount
Maximum number of queries served on a single TCP connection. 0 means no maximum.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.tcpTimeout
TCP timeout in seconds.

Type: signed integer

Default:

```
120
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.verbosity
Verbosity level.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.version
The version string replied for CH TXT version.server and version.bind queries. Will use the compiled package version on null. See hideVersion for enabling/disabling this responses.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.xfrdReloadTimeout
Number of seconds between reloads triggered by xfrd.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zonefilesCheck
Whether to check mtime of all zone files on start and sighup.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zonefilesWrite
Write changed secondary zones to their zonefile every N seconds. If the zone (pattern) configuration has “” zonefile, it is not written. Zones that have received zone transfer updates are written to their zonefile. 0 disables writing to zone files.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones
Define your zones here. Zones can cascade other zones and therefore inherit settings from parent zones. Look at the definition of children to learn about inheritance and child zones. The given example will define 3 zones (example.(com|org|net).). Both example.com. and example.org. inherit their configuration from serverGroup1.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{ "serverGroup1" = {
    provideXFR = [ "10.1.2.3 NOKEY" ];
```

```
      children = {
        "example.com." = {
          data = ''
            $ORIGIN example.com.
            $TTL    86400
            @ IN SOA a.ns.example.com. admin.example.com. (
            ...
          '';
        };
        "example.org." = {
          data = ''
            $ORIGIN example.org.
            $TTL    86400
            @ IN SOA a.ns.example.com. admin.example.com. (
            ...
          '';
        };
      };
      "example.net." = {
        provideXFR = [ "10.3.2.1 NOKEY" ];
        data = ''
          ...
        '';
      };
    }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.allowAXFRFallback

If NSD as secondary server should be allowed to AXFR if the primary server does not allow IXFR.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.allowNotify

Listed primary servers are allowed to notify this secondary server.

Format: ‘<ip> <key−name | NOKEY | BLOCKED>’

‘<ip>’ either a plain IPv4/IPv6 address or range. Valid patters for ranges:

- ‘10.0.0.0/24’: via subnet size
- ‘10.0.0.0&255.255.255.0’: via subnet mask
- ‘10.0.0.1−10.0.0.254’: via range

A optional port number could be added with a ‘@’:

- ‘2001:1234::1@1234’

‘<key−name | NOKEY | BLOCKED>’

- ‘<key−name>’ will use the specified TSIG key
- ‘NOKEY’ no TSIG signature is required

- ‘BLOCKED’notifies from non−listed or blocked IPs will be ignored

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "192.0.2.0/24 NOKEY"
  "10.0.0.1−10.0.0.5 my_tsig_key_name"
  "10.0.3.4&255.255.0.0 BLOCKED"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.children

Children zones inherit all options of their parents. Attributes defined in a child will overwrite the ones of its parent. Only leaf zones will be actually served. This way it’s possible to define maybe zones which share most attributes without duplicating everything. This mechanism replaces nsd’s patterns in a save and functional way.

Type: attribute set of anything

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.data

The actual zone data. This is the content of your zone file. Use imports or pkgs.lib.readFile if you don’t want this data in your config file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.dnssec

Whether to enable DNSSEC.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.dnssecPolicy.algorithm

Which algorithm to use for DNSSEC

Type: string

Default:

```
"RSASHA256"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.dnssecPolicy.coverage

The length of time to ensure that keys will be correct; no action will be taken to create new keys to be activated after this time.

Type: string

Default:

```
"1y"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.dnssecPolicy.keyttl

TTL for dnssec records

Type: string

Default:

```
"1h"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.dnssecPolicy.ksk

Key policy for key signing keys

Type: submodule

Default:

```
{
  keySize = 4096;
  postPublish = "1mo";
  prePublish = "1mo";
  rollPeriod = "0";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.dnssecPolicy.ksk.keySize

Key size in bits

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.dnssecPolicy.ksk.postPublish
How long after deactivation to keep a key in the zone

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.dnssecPolicy.ksk.prePublish
How long in advance to publish new keys

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.dnssecPolicy.ksk.rollPeriod
How frequently to change keys

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.dnssecPolicy.zsk
Key policy for zone signing keys

Type: submodule

Default:

```
{
  keySize = 2048;
  postPublish = "1w";
  prePublish = "1w";
  rollPeriod = "1mo";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.dnssecPolicy.zsk.keySize
Key size in bits

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.dnssecPolicy.zsk.postPublish
How long after deactivation to keep a key in the zone

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.dnssecPolicy.zsk.prePublish
How long in advance to publish new keys

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.dnssecPolicy.zsk.rollPeriod

How frequently to change keys

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.maxRefreshSecs

Limit refresh time for secondary zones. This is the timer which checks to see if the zone has to be refetched when it expires. Normally the value from the SOA record is used, but this option restricts that value.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.maxRetrySecs

Limit retry time for secondary zones. This is the timeout after a failed fetch attempt for the zone. Normally the value from the SOA record is used, but this option restricts that value.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.minRefreshSecs

Limit refresh time for secondary zones.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.minRetrySecs

Limit retry time for secondary zones.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.multiMasterCheck

If enabled, checks all masters for the last zone version. It uses the higher version from all configured masters. Useful if you have multiple masters that have different version numbers served.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.notify
This primary server will notify all given secondary servers about zone changes.

Format: '<ip> <key−name | NOKEY>'

'<ip>' a plain IPv4/IPv6 address with on optional port number (ip@port)

'<key−name | NOKEY>'

- '<key−name>' sign notifies with the specified key
- 'NOKEY' don't sign notifies

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "10.0.0.1@3721 my_key"
  "::5 NOKEY"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.notifyRetry
Specifies the number of retries for failed notifies. Set this along with notify.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.outgoingInterface
This address will be used for zone−transfer requests if configured as a secondary server or notifications in case of a primary server. Supply either a plain IPv4 or IPv6 address with an optional port number (ip@port).

Type: null or string

Default:

```
null
```

Example:

```
"2000::1@1234"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.provideXFR
Allow these IPs and TSIG to transfer zones, addr TSIG|NOKEY|BLOCKED address range 192.0.2.0/24, 1.2.3.4&255.255.0.0, 3.0.2.20−3.0.2.40

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "192.0.2.0/24 NOKEY"
  "192.0.2.0/24 my_tsig_key_name"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.requestXFR
Format: '[AXFR|UDP] <ip−address> <key−name | NOKEY>'

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.rrlWhitelist
Whitelists the given rrl−types.

Type: list of (one of "nxdomain", "error", "referral", "any", "rrsig", "wildcard", "nodata", "dnskey", "positive", "all")

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.nsd.zones.<name>.zoneStats
When set to something distinct to null NSD is able to collect statistics per zone. All statistics of this zone(s) will be added to the group specified by this given name. Use "%s" to use the zones name as the group. The groups are output from nsd−control stats and stats_noreset.

Type: null or string

Default:

```
null
```

Example:

```
"%s"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nsd.nix>

services.ntfy−sh.enable
Whether to enable **ntfy−sh**, a push notification service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ntfy-sh.nix>

services.ntfy-sh.package
The ntfy-sh package to use.

Type: package

Default:

```
pkgs.ntfy-sh
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ntfy-sh.nix>

services.ntfy-sh.environmentFile
Path to a file containing extra ntfy environment variables in the systemd 'EnvironmentFile' format. Refer to the **documentation** for config options.

This can be used to pass secrets such as creating declarative users or token without putting them in the Nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/ntfy"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ntfy-sh.nix>

services.ntfy-sh.group
Primary group of ntfy-sh user.

Type: string

Default:

```
"ntfy-sh"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ntfy-sh.nix>

services.ntfy-sh.settings
Configuration for ntfy.sh, supported values are **here**.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
{
  listen-http = ":8080";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ntfy-sh.nix>

services.ntfy−sh.settings.base−url

Public facing base URL of the service

This setting is required for any of the following features:

- attachments (to return a download URL)
- e−mail sending (for the topic URL in the email footer)
- iOS push notifications for self−hosted servers (to calculate the Firebase poll_request topic)
- Matrix Push Gateway (to validate that the pushkey is correct)

Type: string

Example:

```
"https://ntfy.example"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/ntfy−sh.nix>

services.ntfy−sh.user

User the ntfy−sh server runs under.

Type: string

Default:

```
"ntfy−sh"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/ntfy−sh.nix>

services.ntopng.enable

Enable ntopng, a high−speed web−based traffic analysis and flow collection tool.

With the default configuration, ntopng monitors all network interfaces and displays its findings at http://localhost:${toString config.services.ntopng.http−port}. Default username and password is admin/admin.

See the **ntopng**(8) manual page and http://www.ntop.org/products/ntop/ for more info.

Note that enabling ntopng will also enable redis (key−value database server) for persistent data storage.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ntopng.nix>

services.ntopng.configText

Overridable configuration file contents to use for ntopng. By default, use the contents automatically generated by NixOS.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
−−interface=any
−−http−port=3000
−−disable−login
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntopng.nix>

services.ntopng.extraConfig
Configuration lines that will be appended to the generated ntopng configuration file. Note that this mechanism does not work when the manual **configText** option is used.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntopng.nix>

services.ntopng.httpPort
Sets the HTTP port of the embedded web server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntopng.nix>

services.ntopng.interfaces
List of interfaces to monitor. Use “any” to monitor all interfaces.

Type: list of string

Default:

```
[
  "any"
]
```

Example:

```
[
  "eth0"
  "wlan0"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntopng.nix>

services.ntopng.redis.address
Redis address − may be a Unix socket or a network host and port.

Type: string

Example:

```
config.services.redis.ntopng.unixSocket
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntopng.nix>

services.ntopng.redis.createInstance
Local Redis instance name. Set to ‘null’ to disable local Redis instance. Defaults to ‘""’ for ‘system.stateVersion’ older than 22.05.

Type: null or string

Default:

```
"ntopng"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntopng.nix>

services.ntp.enable
Whether to synchronise your machine's time using ntpd, as a peer in the NTP network.

Disables 'systemd.timesyncd' if enabled.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/ntpd.nix>

services.ntp.extraConfig
Additional text appended to *ntp.conf*.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
fudge 127.127.1.0 stratum 10
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/ntpd.nix>

services.ntp.extraFlags
Extra flags passed to the ntpd command.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "--interface=eth0" ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/ntpd.nix>

services.ntp.restrictDefault
The restriction flags to be set by default.

The default flags prevent external hosts from using ntpd as a DDoS reflector, setting system time, and querying OS/ntpd version. As recommended in section 6.5.1.1.3, answer "No" of https://support.ntp.org/Support/AccessRestrictions

Type: list of string

Default:

```
[
  "limited"
  "kod"
  "nomodify"
  "notrap"
  "noquery"
  "nopeer"
```

```
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ntp/ntpd.nix>

services.ntp.restrictSource

The restriction flags to be set on source.

The default flags allow peers to be added by ntpd from configured pool(s), but not by other means.

Type: list of string

Default:

```
[
  "limited"
  "kod"
  "nomodify"
  "notrap"
  "noquery"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ntp/ntpd.nix>

services.ntp.servers

The set of NTP servers from which to synchronise.

Type: list of string

Default:

```
config.networking.timeServers
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ntp/ntpd.nix>

services.ntpd−rs.enable

Whether to enable Network Time Service (ntpd−rs).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ntp/ntpd−rs.nix>

services.ntpd−rs.package

The ntpd−rs package to use.

Type: package

Default:

```
pkgs.ntpd-rs
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ntp/ntpd−rs.nix>

services.ntpd−rs.metrics.enable

Whether to enable ntpd−rs Prometheus Metrics Exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/ntpd−rs.nix>

services.ntpd−rs.settings

Settings to write to *ntp.toml*

See **https://docs.ntpd−rs.pendulum−project.org/man/ntp.toml.5** for more information about available options.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/ntpd−rs.nix>

services.ntpd−rs.useNetworkingTimeServers

Use source time servers from *networking.timeServers* in config.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/ntpd−rs.nix>

services.nullidentdmod.enable

Whether to enable the nullidentdmod identd daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nullidentdmod.nix>

services.nullidentdmod.userid

User ID to return. Set to null to return a random string each time.

Type: null or string

Default:

```
null
```

Example:

```
"alice"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nullidentdmod.nix>

services.nullmailer.enable
Whether to enable nullmailer daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.config.adminaddr
If set, all recipients to users at either “localhost” (the literal string) or the canonical host name (from the me control attribute) are remapped to this address. This is provided to allow local daemons to be able to send email to “somebody@localhost” and have it go somewhere sensible instead of being bounced by your relay host. To send to multiple addresses, put them all on one line separated by a comma.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.config.allmailfrom
If set, content will override the envelope sender on all messages.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.config.defaultdomain
The content of this attribute is appended to any host name that does not contain a period (except localhost), including defaulthost and idhost. Defaults to the value of the me attribute, if it exists, otherwise the literal name defauldomain.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.config.defaulthost
The content of this attribute is appended to any address that is missing a host name. Defaults to the value of the me control attribute, if it exists, otherwise the literal name defaulthost.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.config.doublebounceto
If the original sender was empty (the original message was a delivery status or disposition notification), the double bounce is sent to the address in this attribute.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.config.helohost
Sets the environment variable $HELOHOST which is used by the SMTP protocol module to set the parameter given to the HELO command. Defaults to the value of the me configuration attribute.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.config.idhost
The content of this attribute is used when building the message−id string for the message. Defaults to the canonicalized value of defaulthost.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.config.maxpause
The maximum time to pause between successive queue runs, in seconds. Defaults to 24 hours (86400).

Type: null or string or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.config.me
The fully−qualifiled host name of the computer running nullmailer. Defaults to the literal name me.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.config.pausetime

The minimum time to pause between successive queue runs when there are messages in the queue, in seconds. Defaults to 1 minute (60). Each time this timeout is reached, the timeout is doubled to a maximum of maxpause. After new messages are injected, the timeout is reset. If this is set to 0, nullmailer−send will exit immediately after going through the queue once (one−shot mode).

Type: null or string or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.config.remotes

A list of remote servers to which to send each message. Each line contains a remote host name or address followed by an optional protocol string, separated by white space.

See ‘man 8 nullmailer−send’ for syntax and available options.

WARNING: This is stored world−readable in the nix store. If you need to specify any secret credentials here, consider using the ‘remotesFile’ option instead.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.config.sendtimeout

The time to wait for a remote module listed above to complete sending a message before killing it and trying again, in seconds. Defaults to 1 hour (3600). If this is set to 0, nullmailer−send will wait forever for messages to complete sending.

Type: null or string or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.group

Group to use to run nullmailer−send.

Type: string

Default:

```
"nullmailer"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.remotesFile

Path to the ‘remotes’ control file. This file contains a list of remote servers to which to send each message.

See ‘man 8 nullmailer−send’ for syntax and available options.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.setSendmail
Whether to set the system sendmail to nullmailer's.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nullmailer.user
User to use to run nullmailer−send.

Type: string

Default:

```
"nullmailer"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/nullmailer.nix>

services.nvme−rs.enable
Whether to enable nvme−rs, a monitoring service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme−rs.nix>

services.nvme−rs.package
The nvme−rs package to use.

Type: package

Default:

```
pkgs.nvme−rs
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme−rs.nix>

services.nvme−rs.settings
Configuration for nvme−rs in TOML format. See the config.toml example for all available options.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme−rs.nix>

services.nvme−rs.settings.check_interval_secs
Check interval in seconds

Type: signed integer

Default:

```
3600
```

Example:

```
86400
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme−rs.nix>

services.nvme−rs.settings.email
Email notification configuration

Type: null or (open submodule of (TOML value))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme−rs.nix>

services.nvme−rs.settings.email.from
Sender email address

Type: string

Example:

```
"nvme−monitor@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme−rs.nix>

services.nvme−rs.settings.email.smtp_password_file
File containing SMTP password

Type: absolute path

Example:

```
"/run/secrets/smtp−password"
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme−rs.nix>

services.nvme−rs.settings.email.smtp_port
SMTP server port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
587
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme−rs.nix>

services.nvme-rs.settings.email.smtp_server
SMTP server address

Type: string

Default:

```
"smtp.gmail.com"
```

Example:

```
"mail.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme-rs.nix>

services.nvme-rs.settings.email.smtp_username
SMTP username

Type: string

Example:

```
"your-email@gmail.com"
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme-rs.nix>

services.nvme-rs.settings.email.to
Recipient email address

Type: string

Example:

```
"admin@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme-rs.nix>

services.nvme-rs.settings.email.use_tls
Use TLS for SMTP connection

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme-rs.nix>

services.nvme-rs.settings.thresholds
Threshold configuration for NVMe monitoring

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme-rs.nix>

services.nvme−rs.settings.thresholds.error_threshold
Error count warning threshold

Type: signed integer

Default:

```
100
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme−rs.nix>

services.nvme−rs.settings.thresholds.spare_warning
Available spare warning threshold (%)

Type: signed integer

Default:

```
50
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme−rs.nix>

services.nvme−rs.settings.thresholds.temp_critical
Temperature critical threshold (°C)

Type: signed integer

Default:

```
65
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme−rs.nix>

services.nvme−rs.settings.thresholds.temp_warning
Temperature warning threshold (°C)

Type: signed integer

Default:

```
55
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme−rs.nix>

services.nvme−rs.settings.thresholds.wear_critical
Wear critical threshold (%)

Type: signed integer

Default:

```
50
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme−rs.nix>

services.nvme−rs.settings.thresholds.wear_warning
Wear warning threshold (%)

Type: signed integer

Default:

```
20
```

Declared by:
<nixpkgs/nixos/modules/services/system/nvme−rs.nix>

services.nylon.<name>.enable
Enables nylon as a running service upon activation.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nylon.nix>

services.nylon.<name>.acceptInterface
Tell nylon which interface to listen for client requests on, default is “lo”.

Type: string

Default:

```
"lo"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nylon.nix>

services.nylon.<name>.allowedIPRanges
Allowed client IP ranges are evaluated first, defaults to ARIN IPv4 private ranges: [“192.168.0.0/16” “127.0.0.0/8” “172.16.0.0/12” “10.0.0.0/8”]

Type: list of string

Default:

```
[
  "192.168.0.0/16"
  "127.0.0.1/8"
  "172.16.0.1/12"
  "10.0.0.0/8"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nylon.nix>

services.nylon.<name>.bindInterface
Tell nylon which interface to use as an uplink, default is “enp3s0f0”.

Type: string

Default:

```
"enp3s0f0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nylon.nix>

services.nylon.<name>.deniedIPRanges
Denied client IP ranges, these gets evaluated after the allowed IP ranges, defaults to all IPv4 addresses: [“0.0.0.0/0”] To block all other access than the allowed.

Type: list of string

Default:

```
[
  "0.0.0.0/0"
```

```
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nylon.nix>

services.nylon.<name>.logging

Enable logging, default is no logging.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nylon.nix>

services.nylon.<name>.name

The name of this nylon instance.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nylon.nix>

services.nylon.<name>.nrConnections

The number of allowed simultaneous connections to the daemon, default 10.

Type: signed integer

Default:

```
10
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nylon.nix>

services.nylon.<name>.port

What port to listen for client requests, default is 1080.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1080
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nylon.nix>

services.nylon.<name>.verbosity

Enable verbose output, default is to not be verbose.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nylon.nix>

services.nzbget.enable

Whether to enable NZBGet, for downloading files from news servers.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/nzbget.nix>

services.nzbget.package

The nzbget package to use.

Type: package

Default:

```
pkgs.nzbget
```

Declared by:

<nixpkgs/nixos/modules/services/misc/nzbget.nix>

services.nzbget.group

Group under which NZBGet runs

Type: string

Default:

```
"nzbget"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/nzbget.nix>

services.nzbget.settings

NZBGet configuration, passed via command line using switch −o. Refer to **https://github.com/nzbget-com/nzbget/blob/develop/nzbget.conf** for details on supported values.

Type: attribute set of (boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  MainDir = "/data";
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/nzbget.nix>

services.nzbget.user

User account under which NZBGet runs

Type: string

Default:

```
"nzbget"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nzbget.nix>

services.nzbhydra2.enable
Whether to enable NZBHydra2, Usenet meta search.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nzbhydra2.nix>

services.nzbhydra2.package
The nzbhydra2 package to use.

Type: package

Default:

```
pkgs.nzbhydra2
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nzbhydra2.nix>

services.nzbhydra2.dataDir
The directory where NZBHydra2 stores its data files.

Type: string

Default:

```
"/var/lib/nzbhydra2"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nzbhydra2.nix>

services.nzbhydra2.openFirewall
Open ports in the firewall for the NZBHydra2 web interface.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nzbhydra2.nix>

services.oauth2−proxy.enable
Whether to enable oauth2−proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.package
The oauth2−proxy package to use.

Type: package

Default:

```
pkgs.oauth2−proxy
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.approvalPrompt
OAuth approval_prompt.

Type: one of “force”, “auto”

Default:

```
"force"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.azure.resource
The resource that is protected.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.azure.tenant
Go to a tenant−specific or common (tenant−independent) endpoint.

Type: string

Default:

```
"common"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.basicAuthPassword
The password to set when passing the HTTP Basic Auth header.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.clientID
The OAuth Client ID.

Type: null or string

Default:

```
null
```

Example:

```
"123456.apps.googleusercontent.com"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2-proxy.nix>

services.oauth2-proxy.clientSecretFile
The path to a file containing the OAuth Client Secret.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/oauth2-client-secret"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2-proxy.nix>

services.oauth2-proxy.cookie.domain
Optional cookie domains to force cookies to (ie: '.yourcompany.com'). The longest domain matching the request's host will be used (or the shortest cookie domain if there is no match).

Type: null or string

Default:

```
null
```

Example:

```
".yourcompany.com"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2-proxy.nix>

services.oauth2-proxy.cookie.expire
Expire timeframe for cookie.

Type: string

Default:

```
"168h0m0s"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2-proxy.nix>

services.oauth2-proxy.cookie.httpOnly
Set HttpOnly cookie flag.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2-proxy.nix>

services.oauth2-proxy.cookie.name
The name of the cookie that the oauth_proxy creates.

Type: string

Default:

```
"_oauth2_proxy"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.cookie.refresh
Refresh the cookie after this duration; 0 to disable.

Type: null or string

Default:

```
null
```

Example:

```
"168h0m0s"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.cookie.secretFile
The path to a file containing the seed string for secure cookies.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/oauth2−cookie−secret"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.cookie.secure
Set secure (HTTPS) cookie flag.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.customTemplatesDir
Path to custom HTML templates.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.email.addresses
Line−separated email addresses that are allowed to authenticate.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.email.domains
Authenticate emails with the specified domains. Use '*' to authenticate any email.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.extraConfig
Extra config to pass to oauth2−proxy.

Type: attribute set of anything

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.github.org
Restrict logins to members of this organisation.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.github.team
Restrict logins to members of this team.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.google.adminEmail
The Google Admin to impersonate for API calls.

Only users with access to the Admin APIs can access the Admin SDK Directory API, thus the service account needs to impersonate one of those users to access the Admin SDK Directory API.

See **https://developers.google.com/admin−sdk/directory/v1/guides/delegation#delegate_domain−wide_authority_to_your_service_account**.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.google.groups
Restrict logins to members of these Google groups.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.google.serviceAccountJSON
The path to the service account JSON credentials.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.htpasswd.displayForm
Display username / password login form if an htpasswd file is provided.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.htpasswd.file
Additionally authenticate against a htpasswd file. Entries must be created with ‘htpasswd −s’ for SHA encryption.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.httpAddress
HTTPS listening address. This module does not expose the port by default. If you want this URL to be accessible to other machines, please add the port to ‘networking.firewall.allowedTCPPorts’.

Type: string

Default:

```
"http://127.0.0.1:4180"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.keyFile
oauth2−proxy allows passing sensitive configuration via environment variables. Make a file that contains lines like OAUTH2_PROXY_CLIENT_SECRET=asdfasdfasdf.apps.googleuserscontent.com and specify the path here.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/oauth2-proxy"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2-proxy.nix>

services.oauth2-proxy.loginURL
Authentication endpoint.

You only need to set this if you are using a self-hosted provider (e.g. Github Enterprise). If you're using a publicly hosted provider (e.g github.com), then the default works.

Type: null or string

Default:

```
null
```

Example:

```
"https://provider.example.com/oauth/authorize"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2-proxy.nix>

services.oauth2-proxy.nginx.domain
The domain under which the oauth2-proxy will be accesible and the path of cookies are set to. This setting must be set to ensure back-redirects are working properly if oauth2-proxy is configured with **services.oauth2-proxy.cookie.domain** or multiple **services.oauth2-proxy.nginx.virtualHosts** that are not on the same domain.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2-proxy-nginx.nix>

services.oauth2-proxy.nginx.proxy
The address of the reverse proxy endpoint for oauth2-proxy

Type: string

Default:

```
config.services.oauth2-proxy.httpAddress
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2-proxy-nginx.nix>

services.oauth2-proxy.nginx.virtualHosts
Nginx virtual hosts to put behind the oauth2 proxy. You can exclude specific locations by setting 'auth_request off;' in the locations extraConfig setting.

Type: (attribute set of (submodule)) or (list of string) convertible to it

Default:

```
{ }
```

Example:

```
{
  "protected.foo.com" = {
    allowed_emails = [
      "boss@foo.com"
    ];
    allowed_groups = [
```

```
        "admins"
      ];
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2-proxy-nginx.nix>

services.oauth2-proxy.nginx.virtualHosts.<name>.allowed_email_domains
List of email domains to allow access to this vhost, or null to allow all.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2-proxy-nginx.nix>

services.oauth2-proxy.nginx.virtualHosts.<name>.allowed_emails
List of emails to allow access to this vhost, or null to allow all.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2-proxy-nginx.nix>

services.oauth2-proxy.nginx.virtualHosts.<name>.allowed_groups
List of groups to allow access to this vhost, or null to allow all.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2-proxy-nginx.nix>

services.oauth2-proxy.oidcIssuerUrl
The OAuth issuer URL.

Type: null or string

Default:

```
null
```

Example:

```
"https://login.microsoftonline.com/{TENANT_ID}/v2.0"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2-proxy.nix>

services.oauth2-proxy.passAccessToken
Pass OAuth access_token to upstream via X-Forwarded-Access-Token header.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.passBasicAuth
Pass HTTP Basic Auth, X−Forwarded−User and X−Forwarded−Email information to upstream.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.passHostHeader
Pass the request Host Header to upstream.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.profileURL
Profile access endpoint.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.provider
OAuth provider.

Type: one of “adfs”, “azure”, “bitbucket”, “digitalocean”, “facebook”, “github”, “gitlab”, “google”, “keycloak”, “keycloak−oidc”, “linkedin”, “login.gov”, “nextcloud”, “oidc”

Default:

```
"google"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.proxyPrefix
The url root path that this proxy should be nested under.

Type: string

Default:

```
"/oauth2"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.redeemURL
Token redemption endpoint.

You only need to set this if you are using a self−hosted provider (e.g. Github Enterprise). If you're using a publicly hosted provider (e.g github.com), then the default works.

Type: null or string

Default:

```
null
```

Example:

```
"https://provider.example.com/oauth/token"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.redirectURL
The OAuth2 redirect URL.

Type: null or string

Default:

```
null
```

Example:

```
"https://internalapp.yourcompany.com/oauth2/callback"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.requestLogging
Log requests to stdout.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.reverseProxy
In case when running behind a reverse proxy, controls whether headers like 'X−Real−Ip' are accepted. Usage behind a reverse proxy will require this flag to be set to avoid logging the reverse proxy IP address.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.scope
OAuth scope specification.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.setXauthrequest
Set X−Auth−Request−User and X−Auth−Request−Email response headers (useful in Nginx auth_request mode). Setting this to ‘null’ means using the upstream default (false).

Type: null or boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.signatureKey
GAP−Signature request signature key.

Type: null or string

Default:

```
null
```

Example:

```
"sha1:secret0"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.skipAuthRegexes
Skip authentication for requests matching any of these regular expressions.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.tls.enable
Whether to serve over TLS.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.tls.certificate
Path to certificate file.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.tls.httpsAddress
‘addr:port’ to listen on for HTTPS clients.

Remember to add ‘port’ to ‘allowedTCPPorts’ if you want other machines to be able to connect to it.

Type: string

Default:

```
":443"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.tls.key
Path to private key file.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.upstream
The http url(s) of the upstream endpoint or ‘file://’ paths for static files. Routing is based on the path.

Type: (list of string) or string convertible to it

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.oauth2−proxy.validateURL
Access token validation endpoint.

You only need to set this if you are using a self−hosted provider (e.g. Github Enterprise). If you’re using a publicly hosted provider (e.g github.com), then the default works.

Type: null or string

Default:

```
null
```

Example:

```
"https://provider.example.com/user/emails"
```

Declared by:
<nixpkgs/nixos/modules/services/security/oauth2−proxy.nix>

services.ocis.enable
Whether to enable ownCloud Infinite Scale.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ocis.nix>

services.ocis.package

Which package to use for the ownCloud Infinite Scale instance.

Type: package

Related packages:

- ‘pkgs.ocis_5−bin’

Declared by:

<nixpkgs/nixos/modules/services/web−apps/ocis.nix>

services.ocis.address

Web interface address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/ocis.nix>

services.ocis.configDir

Path to directory containing oCIS config file.

Example config can be generated by ‘ocis init −−config−path fileName −−admin−password "adminPass"’. Add ‘−−insecure true’ if SSL certificates are generated and managed externally (e.g. using oCIS behind reverse proxy).

Note: This directory must contain at least a *ocis.yaml*. Ensure **user** has read/write access to it. In some circumstances you may need to add additional oCIS configuration files (e.g., *proxy.yaml*) to this directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/ocis/config"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/ocis.nix>

services.ocis.environment

Extra config options.

See **the documentation** for available options. See **notes for environment variables** for more information.

Note that all the attributes here will be copied to /nix/store/ and will be world readable. Options like *_PASSWORD or *_SECRET should be part of **environmentFile** instead, and are only provided here for illustrative purpose.

Configuration here will override those from **environmentFile** and will have highest precedence, at the cost of security. Do NOT put security sensitive stuff here.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  CS3_ALLOW_INSECURE = "true";
  GATEWAY_STORAGE_USERS_MOUNT_ID = "123";
  GRAPH_APPLICATION_ID = "1234";
  IDM_IDPSVC_PASSWORD = "password";
  IDM_REVASVC_PASSWORD = "password";
  IDM_SVC_PASSWORD = "password";
  IDP_ISS = "https://localhost:9200";
  IDP_TLS = "false";
  OCIS_INSECURE = "false";
  OCIS_INSECURE_BACKENDS = "true";
  OCIS_JWT_SECRET = "super_secret";
  OCIS_LDAP_BIND_PASSWORD = "password";
  OCIS_LOG_LEVEL = "error";
  OCIS_MACHINE_AUTH_API_KEY = "foo";
  OCIS_MOUNT_ID = "123";
  OCIS_SERVICE_ACCOUNT_ID = "foo";
  OCIS_SERVICE_ACCOUNT_SECRET = "foo";
  OCIS_STORAGE_USERS_MOUNT_ID = "123";
  OCIS_SYSTEM_USER_API_KEY = "foo";
  OCIS_SYSTEM_USER_ID = "123";
  OCIS_TRANSFER_SECRET = "foo";
  STORAGE_USERS_MOUNT_ID = "123";
  TLS_INSECURE = "true";
  TLS_SKIP_VERIFY_CLIENT_CERT = "true";
  WEBDAV_ALLOW_INSECURE = "true";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/ocis.nix>

services.ocis.environmentFile

An environment file as defined in **systemd.exec**(5).

Configuration provided in this file will override those from **configDir**/ ocis.yaml.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/ocis.env"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/ocis.nix>

services.ocis.group

The group to run oCIS under. By default, a group named ‘ocis’ will be created.

Type: string

Default:

```
"ocis"
```

Example:

```
"yourGroup"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ocis.nix>

services.ocis.port
Web interface port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9200
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ocis.nix>

services.ocis.stateDir
ownCloud data directory.

Type: string

Default:

```
"/var/lib/ocis"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ocis.nix>

services.ocis.url
Web interface address.

Type: string

Default:

```
"https://localhost:9200"
```

Example:

```
"https://some−hostname−or−ip:9200"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ocis.nix>

services.ocis.user
The user to run oCIS as. By default, a user named ‘ocis’ will be created whose home directory is **stateDir**.

Type: string

Default:

```
"ocis"
```

Example:

```
"yourUser"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ocis.nix>

services.ocserv.enable
Whether to enable ocserv.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ocserv.nix>

services.ocserv.config

Configuration content to start an OCServ server.

For a full configuration reference,please refer to the online documentation (https://ocserv.gitlab.io/www/manual.html), the openconnect recipes (https://github.com/openconnect/recipes) or ‘man ocserv’.

Type: strings concatenated with “\n”

Example:

```
  # configuration examples from $out/doc without explanatory commen \
ts.
  # for a full reference please look at the installed man pages.
  auth = "plain[passwd=./sample.passwd]"
  tcp-port = 443
  udp-port = 443
  run-as-user = ocserv
  run-as-group = ocserv
  socket-file = /run/ocserv-socket
  server-cert = certs/server-cert.pem
  server-key = certs/server-key.pem
  keepalive = 32400
  dpd = 90
  mobile-dpd = 1800
  switch-to-tcp-timeout = 25
  try-mtu-discovery = false
  cert-user-oid = 0.9.2342.19200300.100.1.1
  tls-priorities = "NORMAL:%SERVER_PRECEDENCE:%COMPAT:-VERS-SSL3 \
.0"
  auth-timeout = 240
  min-reauth-time = 300
  max-ban-score = 80
  ban-reset-time = 1200
  cookie-timeout = 300
  deny-roaming = false
  rekey-time = 172800
  rekey-method = ssl
  use-occtl = true
  pid-file = /run/ocserv.pid
  device = vpns
  predictable-ips = true
  default-domain = example.com
  ipv4-network = 192.168.1.0
  ipv4-netmask = 255.255.255.0
  dns = 192.168.1.2
  ping-leases = false
  route = 10.10.10.0/255.255.255.0
  route = 192.168.0.0/255.255.0.0
  no-route = 192.168.5.0/255.255.255.0
  cisco-client-compat = true
  dtls-legacy = true
```

```
[vhost:www.example.com]
auth = "certificate"
ca-cert = certs/ca.pem
server-cert = certs/server-cert-secp521r1.pem
server-key = cersts/certs/server-key-secp521r1.pem
ipv4-network = 192.168.2.0
ipv4-netmask = 255.255.255.0
cert-user-oid = 0.9.2342.19200300.100.1.1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ocserv.nix>

services.ocsinventory-agent.enable
Whether to enable OCS Inventory Agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ocsinventory-agent.nix>

services.ocsinventory-agent.package
The ocsinventory-agent package to use.

Type: package

Default:

```
pkgs.ocsinventory-agent
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ocsinventory-agent.nix>

services.ocsinventory-agent.interval
How often we run the ocsinventory-agent service. Runs by default every daily.

The format is described in **systemd.time**(7).

Type: string

Default:

```
"daily"
```

Example:

```
"06:00"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ocsinventory-agent.nix>

services.ocsinventory-agent.settings
Configuration for /etc/ocsinventory-agent/ocsinventory-agent.cfg.

Refer to **ocsinventory-agent**(1) for available options.

Type: open submodule of (atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  debug = true;
  server = "https://ocsinventory.localhost:8080/ocsinventory";
  tag = "01234567890123";
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ocsinventory-agent.nix>

services.ocsinventory-agent.settings.ca
Path to CA certificates file in PEM format, for server SSL certificate validation.

Type: absolute path

Default:

```
config.security.pki.caBundle
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ocsinventory-agent.nix>

services.ocsinventory-agent.settings.debug
Whether to enable debug mode.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ocsinventory-agent.nix>

services.ocsinventory-agent.settings.local
If specified, the OCS Inventory Agent will run in offline mode and the resulting inventory file will be stored in the specified path.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/ocsinventory-agent/reports"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ocsinventory-agent.nix>

services.ocsinventory-agent.settings.server
The URI of the OCS Inventory server where to send the inventory file.

This option is ignored if **services.ocsinventory-agent.settings.local** is set.

Type: null or string

Default:

```
null
```

Example:

```
"https://ocsinventory.localhost:8080/ocsinventory"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ocsinventory-agent.nix>

services.ocsinventory-agent.settings.tag
Tag for the generated inventory.

Type: null or string

Default:

```
null
```

Example:

```
"01234567890123"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ocsinventory-agent.nix>

services.octoprint.enable
Whether to enable OctoPrint, web interface for 3D printers.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/octoprint.nix>

services.octoprint.package
The octoprint package to use.

Type: package

Default:

```
pkgs.octoprint
```

Declared by:
<nixpkgs/nixos/modules/services/misc/octoprint.nix>

services.octoprint.extraConfig
Extra options which are added to OctoPrint's YAML configuration file.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/octoprint.nix>

services.octoprint.group
Group for the daemon.

Type: string

Default:

```
"octoprint"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/octoprint.nix>

services.octoprint.host
Host to bind OctoPrint to.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/octoprint.nix>

services.octoprint.openFirewall
Open ports in the firewall for OctoPrint.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/octoprint.nix>

services.octoprint.plugins
Additional plugins to be used. Available plugins are passed through the plugins input.

Type: function that evaluates to a(n) list of package

Default:

```
plugins: []
```

Example:

```
plugins: with plugins; [ themeify stlviewer ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/octoprint.nix>

services.octoprint.port
Port to bind OctoPrint to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/octoprint.nix>

services.octoprint.stateDir
State directory of the daemon.

Type: absolute path

Default:

```
"/var/lib/octoprint"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/octoprint.nix>

services.octoprint.user
User for the daemon.

Type: string

Default:

```
"octoprint"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/octoprint.nix>

services.odoo.enable
Whether to enable odoo, an open source ERP and CRM system.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/finance/odoo.nix>

services.odoo.package
Which package to use for the Odoo instance.

Type: package

Related packages:

- ‘pkgs.odoo17’
- ‘pkgs.odoo18’
- ‘pkgs.odoo19’

Declared by:
<nixpkgs/nixos/modules/services/finance/odoo.nix>

services.odoo.addons
Odoo addons.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.odoo_enterprise ]
```

Declared by:
<nixpkgs/nixos/modules/services/finance/odoo.nix>

services.odoo.autoInit
Whether to enable automatically initialize the DB.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/finance/odoo.nix>

services.odoo.autoInitExtraFlags
Extra flags passed to odoo when run for the first time by autoInit

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "--without-demo=all" ]
```

Declared by:
<nixpkgs/nixos/modules/services/finance/odoo.nix>

services.odoo.domain
Domain to host Odoo with nginx

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/finance/odoo.nix>

services.odoo.settings
Odoo configuration settings. For more details see **https://www.odoo.com/documentation/15.0/administration/install/deploy.html**

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
options = {
  db_user = "odoo";
  db_password="odoo";
};
```

Declared by:
<nixpkgs/nixos/modules/services/finance/odoo.nix>

services.offlineimap.enable
Whether to enable OfflineIMAP, a software to dispose your mailbox(es) as a local Maildir(s).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/offlineimap.nix>

services.offlineimap.package

The offlineimap package to use.

Type: package

Default:

```
pkgs.offlineimap
```

Declared by:

<nixpkgs/nixos/modules/services/mail/offlineimap.nix>

services.offlineimap.install

Whether to install a user service for Offlineimap. Once the service is started, emails will be fetched automatically.

The service must be manually started for each user with "systemctl −−user start offlineimap" or globally through *services.offlineimap.enable*.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/mail/offlineimap.nix>

services.offlineimap.onCalendar

How often is offlineimap started. Default is '*:0/3' meaning every 3 minutes. See **systemd.time**(7) for more information about the format.

Type: string

Default:

```
"*:0/3"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/offlineimap.nix>

services.offlineimap.path

List of derivations to put in Offlineimap's path.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[ pkgs.pass pkgs.bash pkgs.notmuch ]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/offlineimap.nix>

services.offlineimap.timeoutStartSec

How long waiting for offlineimap before killing it. Default is '120sec' meaning every 2 minutes. See **systemd.time**(7) for more information about the format.

Type: string

Default:

```
"120sec"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/offlineimap.nix>

services.ofono.enable
Whether to enable Ofono.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ofono.nix>

services.ofono.plugins
The list of plugins to install.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.modem-manager-gui ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ofono.nix>

services.oidentd.enable
Whether to enable ‘oidentd’, an implementation of the Ident protocol (RFC 1413). It allows remote systems to identify the name of the user associated with a TCP connection.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/oidentd.nix>

services.oink.enable
Whether to enable Oink, a dynamic DNS client for Porkbun.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/oink.nix>

services.oink.package

The oink package to use.

Type: package

Default:

```
pkgs.oink
```

Declared by:

<nixpkgs/nixos/modules/services/networking/oink.nix>

services.oink.apiKeyFile

Path to a file containing the API key to use when modifying DNS records.

Type: absolute path

Example:

```
"/run/keys/oink-api-key"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/oink.nix>

services.oink.domains

List of attribute sets containing configuration for each domain.

Each attribute set must have two attributes, one named *domain* and another named *subdomain*. The domain attribute must specify the root domain that you want to configure, and the subdomain attribute must specify its subdomain if any. If you want to configure the root domain rather than a subdomain, leave the subdomain attribute as an empty string.

Additionally, you can use attributes from *services.oink.settings* to override settings per-domain.

Every domain listed here *must* have API access enabled in Porkbun's control panel.

Type: list of attribute set of anything

Default:

```
[ ]
```

Example:

```
[
  {
    domain = "nixos.org";
    subdomain = "";
    ttl = 1200;
  }
  {
    domain = "nixos.org";
    subdomain = "hydra";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/oink.nix>

services.oink.secretApiKeyFile

Path to a file containing the secret API key to use when modifying DNS records.

Type: absolute path

Example:

```
"/run/keys/oink-secret-api-key"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/oink.nix>

services.oink.settings.interval
Seconds to wait before sending another request.

Type: integer between 60 and 172800 (both inclusive)

Default:

```
900
```

Declared by:
<nixpkgs/nixos/modules/services/networking/oink.nix>

services.oink.settings.ttl
The TTL (“Time to Live”) value to set for your DNS records.

The TTL controls how long in seconds your records will be cached for. A smaller value will allow the record to update quicker.

Type: integer between 600 and 172800 (both inclusive)

Default:

```
600
```

Declared by:
<nixpkgs/nixos/modules/services/networking/oink.nix>

services.olivetin.enable
Whether to enable OliveTin.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/olivetin.nix>

services.olivetin.package
The olivetin package to use.

Type: package

Default:

```
if lib.versionAtLeast config.system.stateVersion "26.05"
then pkgs.olivetin-3k
else pkgs.olivetin
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/olivetin.nix>

services.olivetin.extraConfigFiles
Config files to merge into the settings defined in **services.olivetin.settings**. This is useful to avoid putting secrets into the nix store. See **https://docs.olivetin.app/config.html** for more information.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/run/secrets/olivetin.yaml"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/olivetin.nix>

services.olivetin.group
The group under which OliveTin runs.

Type: string

Default:

```
"olivetin"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/olivetin.nix>

services.olivetin.path
Packages added to the service's **PATH**.

Type: list of (package or string)

Default:

```
with pkgs; [ bash ]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/olivetin.nix>

services.olivetin.settings
Configuration of OliveTin. See **https://docs.olivetin.app/config.html** for more information.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/olivetin.nix>

services.olivetin.settings.ListenAddressSingleHTTPFrontend
The address to listen on for the internal "microproxy" frontend.

Type: string

Default:

```
"127.0.0.1:8000"
```

Example:

```
"0.0.0.0:8000"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/olivetin.nix>

services.olivetin.user
The user account under which OliveTin runs.

Type: string

Default:

```
"olivetin"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/olivetin.nix>

services.ollama.enable
Whether to enable ollama server for local large language models.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ollama.nix>

services.ollama.package
The ollama package to use. Different packages use different hardware acceleration.

- ‘ollama’: default behavior; usually equivalent to ‘ollama−cpu’
  - if ‘nixpkgs.config.rocmSupport’ is enabled, is equivalent to ‘ollama−rocm’
  - if ‘nixpkgs.config.cudaSupport’ is enabled, is equivalent to ‘ollama−cuda’
  - otherwise defaults to ‘ollama−cpu’
- ‘ollama−cpu’: disable GPU; only use CPU
- ‘ollama−rocm’: supported by most modern AMD GPUs
  - may require overriding gpu type with ‘services.ollama.rocmOverrideGfx’ if rocm doesn’t detect your AMD gpu
- ‘ollama−cuda’: supported by most modern NVIDIA GPUs
- ‘ollama−vulkan’: supported by most GPUs

Type: package

Default:

```
pkgs.ollama
```

Example:

```
pkgs.ollama-rocm
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ollama.nix>

services.ollama.environmentVariables
Set arbitrary environment variables for the ollama service.

Be aware that these are only seen by the ollama server (systemd service), not normal invocations like ‘ollama run’. Since ‘ollama run’ is mostly a shell around the ollama server, this is usually sufficient.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  HIP_VISIBLE_DEVICES = "0,1";
  OLLAMA_LLM_LIBRARY = "cpu";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ollama.nix>

services.ollama.group
Group under which to run ollama. Only used when ‘services.ollama.user’ is set.

The group will automatically be created, if this option is set to a non−null value.

Type: null or string

Default:

```
config.services.ollama.user
```

Example:

```
"ollama"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ollama.nix>

services.ollama.home
The home directory that the ollama service is started in.

Type: string

Default:

```
"/var/lib/ollama"
```

Example:

```
"/home/foo"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ollama.nix>

services.ollama.host
The host address which the ollama server HTTP interface listens to.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"[::]"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ollama.nix>

services.ollama.loadModels
Download these models using ‘ollama pull’ as soon as ‘ollama.service’ has started.

This creates a systemd unit ‘ollama−model−loader.service’. Use ‘services.ollama.syncModels’ to automatically remove any models not currently declared here.

Search for models of your choice from: **https://ollama.com/library**

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "dolphin3"
```

```
  "gemma3"
  "gemma3:27b"
  "deepseek-r1:latest"
  "deepseek-r1:1.5b"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ollama.nix>

services.ollama.models
The directory that the ollama service will read models from and download new models to.

Type: string

Default:

```
"\${config.services.ollama.home}/models"
```

Example:

```
"/path/to/ollama/models"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ollama.nix>

services.ollama.openFirewall
Whether to open the firewall for ollama.

This adds ‘services.ollama.port’ to ‘networking.firewall.allowedTCPPorts’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ollama.nix>

services.ollama.port
Which port the ollama server listens to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
11434
```

Example:

```
11111
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ollama.nix>

services.ollama.rocmOverrideGfx
Override what rocm will detect your gpu model as. For example, if you have an RX 5700 XT, try setting this to ‘"10.1.0"’ (gfx 1010).

This sets the value of ‘HSA_OVERRIDE_GFX_VERSION’. See **ollama’s docs** for details.

Type: null or string

Default:

```
null
```

Example:

```
"10.3.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ollama.nix>

services.ollama.syncModels
Synchronize all currently installed models with those declared in ‘services.ollama.loadModels’, removing any models that are installed but not currently declared there.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ollama.nix>

services.ollama.user
User account under which to run ollama. Defaults to ‘DynamicUser’ when set to ‘null’.

The user will automatically be created, if this option is set to a non−null value.

Type: null or string

Default:

```
null
```

Example:

```
"ollama"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ollama.nix>

services.ombi.enable
Whether to enable Ombi, a web application that automatically gives your shared Plex or Emby users the ability to request content by themselves!

Optionally see **https://docs.ombi.app/info/reverse−proxy** on how to set up a reverse proxy .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ombi.nix>

services.ombi.package
The ombi package to use.

Type: package

Default:

```
pkgs.ombi
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ombi.nix>

services.ombi.dataDir

The directory where Ombi stores its data files.

Type: string

Default:

```
"/var/lib/ombi"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/ombi.nix>

services.ombi.group

Group under which Ombi runs.

Type: string

Default:

```
"ombi"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/ombi.nix>

services.ombi.openFirewall

Open ports in the firewall for the Ombi web interface.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/ombi.nix>

services.ombi.port

The port for the Ombi web interface.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5000
```

Declared by:

<nixpkgs/nixos/modules/services/misc/ombi.nix>

services.ombi.user

User account under which Ombi runs.

Type: string

Default:

```
"ombi"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/ombi.nix>

services.omnom.enable

Whether to enable Omnom, a webpage bookmarking and snapshotting service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.package
The omnom package to use.

Type: package

Default:

```
pkgs.omnom
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.dataDir
The directory where Omnom stores its data files.

Type: absolute path

Default:

```
"/var/lib/omnom"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.group
The Omnom service group.

Type: non−empty string

Default:

```
"omnom"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.openFirewall
Whether to open ports in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.passwordFile
File containing the password for the SMTP user.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.port

The Omnom service port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7331
```

Declared by:

<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings

Configuration options for the /etc/omnom/config.yml file.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.activitypub.privkey

ActivityPub private key. Will be generated, by default.

Type: absolute path

Default:

```
"${config.services.omnom.dataDir}/private.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.activitypub.pubkey

ActivityPub public key. Will be generated, by default.

Type: absolute path

Default:

```
"${config.services.omnom.dataDir}/public.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.app.debug

Whether to enable debug mode.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.app.disable_signup
Whether to enable restricting user creation.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.app.results_per_page
Number of results per page.

Type: signed integer

Default:

```
20
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.db.connection
Database connection URI.

Type: string

Default:

```
"${config.services.omnom.dataDir}/db.sqlite3"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.db.type
Database type.

Type: value “sqlite” (singular enum)

Default:

```
"sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.server.address
Server address.

Type: string

Default:

```
"127.0.0.1:${config.services.omnom.port}"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.server.secure_cookie
Whether to limit cookies to a secure channel.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.smtp.connection_timeout
Connection timeout duration in seconds.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.smtp.host
SMTP server hostname.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.smtp.port
SMTP server port address.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
25
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.smtp.send_timeout
Send timeout duration in seconds.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.smtp.sender
Omnom sender e−mail.

Type: string

Default:

```
"Omnom <omnom@127.0.0.1>"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.smtp.tls
Whether to enable Whether TLS encryption should be used…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.smtp.tls_allow_insecure
Whether to enable Whether to allow insecure TLS…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.settings.storage.type
Storage type.

Type: string

Default:

```
"fs"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.omnom.user
The Omnom service user.

Type: non−empty string

Default:

```
"omnom"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/omnom.nix>

services.oncall.enable
Whether to enable Oncall web app.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/oncall.nix>

services.oncall.package
The oncall package to use.

Type: package

Default:

```
pkgs.oncall
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/oncall.nix>

services.oncall.database.createLocally
Whether to enable Create the database and database user locally…

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/oncall.nix>

services.oncall.secretFile
A YAML file containing secrets such as database or user passwords. Some variables that can be considered secrets are:

- db.conn.kwargs.password: Password used to authenticate to the database.
- session.encrypt_key: Key for encrypting/signing session cookies. Change to random long values in production.
- session.sign_key: Key for encrypting/signing session cookies. Change to random long values in production.

Type: absolute path not in the Nix store

Example:

```
"/run/keys/oncall−dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/oncall.nix>

services.oncall.settings
Extra configuration options to append or override. For available and default option values see **upstream configuration file** and the administration part in the **offical documentation**.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/oncall.nix>

services.oncall.settings.db.conn.kwargs.database
Database name.

Type: string

Default:

```
"oncall"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/oncall.nix>

services.oncall.settings.db.conn.kwargs.host
Database host.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/oncall.nix>

services.oncall.settings.db.conn.kwargs.user
Database user.

Type: string

Default:

```
"oncall"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/oncall.nix>

services.oncall.settings.db.conn.require_auth
Whether authentication is required to access the web app.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/oncall.nix>

services.oncall.settings.db.conn.str
Database connection scheme. The default specifies the connection through a local socket.

Type: string

Default:

```
"%(scheme)s://%(user)s@%(host)s:%(port)s/%(database)s?charset=%(cha \
rset)s&unix_socket=/run/mysqld/mysqld.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/oncall.nix>

services.oncall.settings.oncall_host
FQDN for the Oncall instance.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/oncall.nix>

services.onedrive.enable
Whether to enable OneDrive service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/onedrive.nix>

services.onedrive.package
The onedrive package to use.

Type: package

Default:

```
pkgs.onedrive
```

Declared by:
<nixpkgs/nixos/modules/services/networking/onedrive.nix>

services.onlyoffice.enable
Whether to enable OnlyOffice DocumentServer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.enableExampleServer
Whether to enable OnlyOffice example server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.package
The onlyoffice−documentserver package to use.

Type: package

Default:

```
pkgs.onlyoffice−documentserver
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.allowLocalConnections
Whether to allow the document server to download files from private IP addresses.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.examplePort
Port the OnlyOffice example server should listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.hostname
FQDN for the OnlyOffice instance.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.jwtSecretFile
Path to a file that contains the secret to sign web requests using JSON Web Tokens. If left at the default value null signing is disabled.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.loglevel
Default loglevel to use for documentserver and converter

Type: string

Default:

```
"WARN"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.port

Port the OnlyOffice document server should listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.postgresHost

The Postgresql hostname or socket path OnlyOffice should connect to.

Type: string

Default:

```
"/run/postgresql"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.postgresName

The name of database OnlyOffice should use.

Type: string

Default:

```
"onlyoffice"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.postgresPasswordFile

Path to a file that contains the password OnlyOffice should use to connect to Postgresql. Unused when using socket authentication.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.postgresUser

The username OnlyOffice should use to connect to Postgresql. Unused when using socket authentication.

Type: string

Default:

```
"onlyoffice"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.rabbitmqUrl

The Rabbitmq in amqp URI style OnlyOffice should connect to.

Type: string

Default:

```
"amqp://guest:guest@localhost:5672"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.securityNonceFile
File holding nginx configuration that sets the nonce used to create secret links.

Example:

```
set $secure_link_secret "changeme";
```

This file must be readable both by nginx and by the onlyoffice documentserver. Since nginx is added to the onlyoffice group, you may want to make the file readable to the onlyoffice group.

NOTE: The file must be a valid nginx configuration file. The secret must not contain '$' characters, as they will be interpreted as variables by nginx.

Type: string

Example:

```
"/run/keys/onlyoffice−nginx−nonce.conf"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.wopi
Whether to enable Enable WOPI support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.onlyoffice.x2t
The onlyoffice−documentserver.passthru.x2t package to use.

Type: package

Default:

```
pkgs."onlyoffice−documentserver.passthru.x2t"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/onlyoffice.nix>

services.open−web−calendar.enable
Whether to enable OpenWebCalendar service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/open−web−calendar.nix>

services.open−web−calendar.package
The open−web−calendar package to use.

Type: package

Default:

```
pkgs.open−web−calendar
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/open−web−calendar.nix>

services.open−web−calendar.calendarSettings
Configure the default calendar.

See the documentation options in **https://open−web−calendar.quelltext.eu/host/configure/#configuring−the−default−calendar** and **https://github.com/niccokunzmann/open−web−calendar/blob/master/open_web_calendar/default_specification.yml**.

Individual calendar instances can be further configured outside this module, by specifying the 'specification_url' parameter.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/open−web−calendar.nix>

services.open−web−calendar.domain
The domain under which open−web−calendar is made available

Type: string

Example:

```
"open−web−calendar.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/open−web−calendar.nix>

services.open−web−calendar.settings
Configuration for the server. These are set as environment variables to the gunicorn/flask service.

See the documentation options in **https://open−web−calendar.quelltext.eu/host/configure/#configuring−the−server**.

Type: open submodule of attribute set of (atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/open−web−calendar.nix>

services.open−web−calendar.settings.ALLOWED_HOSTS
The hosts that the Open Web Calendar permits. This is required to mitigate the Host Header Injection vulnerability.

We always set this to the empty list, as Nginx already checks the Host header.

Type: string *(read only)*

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/open−web−calendar.nix>

services.open−webui.enable
Whether to enable Open−WebUI server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/open−webui.nix>

services.open−webui.package
The open−webui package to use.

Type: package

Default:

```
pkgs.open-webui
```

Declared by:
<nixpkgs/nixos/modules/services/misc/open−webui.nix>

services.open−webui.environment
Extra environment variables for Open−WebUI. For more details see **https://docs.openwebui.com/reference/env−configuration**

Type: attribute set of string

Default:

```
{
  ANONYMIZED_TELEMETRY = "False";
  DO_NOT_TRACK = "True";
  SCARF_NO_ANALYTICS = "True";
}
```

Example:

```
{
  OLLAMA_API_BASE_URL = "http://127.0.0.1:11434";
  # Disable authentication
  WEBUI_AUTH = "False";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/open−webui.nix>

services.open−webui.environmentFile
Environment file to be passed to the systemd service. Useful for passing secrets to the service to prevent them from being world−readable in the Nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/secrets/openWebuiSecrets"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/open-webui.nix>

services.open-webui.host
The host address which the Open-WebUI server HTTP interface listens to.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/open-webui.nix>

services.open-webui.openFirewall
Whether to open the firewall for Open-WebUI. This adds ‘services.open-webui.port’ to ‘networking.firewall.allowedTCPPorts’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/open-webui.nix>

services.open-webui.port
Which port the Open-WebUI server listens to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Example:

```
11111
```

Declared by:
<nixpkgs/nixos/modules/services/misc/open-webui.nix>

services.open-webui.stateDir
State directory of Open-WebUI.

Type: absolute path

Default:

```
"/var/lib/open-webui"
```

Example:

```
"/home/foo"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/open-webui.nix>

services.openafsClient.enable
Whether to enable the OpenAFS client.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.packages.module
OpenAFS kernel module package. MUST match the userland package!

Type: package

Default:

```
config.boot.kernelPackages.openafs
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.packages.programs
OpenAFS programs package. MUST match the kernel module package!

Type: package

Default:

```
getBin pkgs.openafs
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.afsdb
Resolve cells via AFSDB DNS records.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.cache.blocks
Cache size in 1KB blocks.

Type: signed integer

Default:

```
100000
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.cache.chunksize
Size of each cache chunk given in powers of 2. ‘0’ resets the chunk size to its default values (13 (8 KB) for memcache, 18−20 (256 KB to 1 MB) for diskcache). Maximum value is 30. Important performance parameter. Set to higher values when dealing with large files.

Type: integer between 0 and 30 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.cache.directory
Cache directory.

Type: string

Default:

```
"/var/cache/openafs"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.cache.diskless
Use in−memory cache for diskless machines. Has no real performance benefit anymore.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.cellName
Cell name.

Type: string

Default:

```
""
```

Example:

```
"grand.central.org"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.cellServDB
This cell’s database server records, added to the global CellServDB. See **CellServDB**(5) man page for syntax. Ignored when ‘afsdb’ is set to ‘true’.

Type: (attribute set of list of (submodule)) or (list of anything) convertible to it

Default:

```
{ }
```

Example:

```
{
  "dns.fqdn.org" = [
    {
      dnsname = "first.afsdb.server.dns.fqdn.org";
      ip = "1.2.3.4";
    }
    {
      dnsname = "second.afsdb.server.dns.fqdn.org";
      ip = "2.3.4.5";
    }
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.cellServDB.<name>.*.dnsname
DNS full−qualified domain name of a database server

Type: string

Default:
```
""
```

Example:
```
"afs.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.cellServDB.<name>.*.ip
IP Address of a database server

Type: string

Default:
```
""
```

Example:
```
"1.2.3.4"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.crypt
Whether to enable (weak) protocol encryption.

Type: boolean

Default:
```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.daemons
Number of daemons to serve user requests. Numbers higher than 6 usually do no increase performance. Default is sufficient for up to five concurrent users.

Type: signed integer

Default:
```
2
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.fakestat
Return fake data on stat() calls. If ‘true’, always do so. If ‘false’, only do so for cross−cell mounts (as these are potentially expensive).

Type: boolean

Default:
```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.globalCellServDBFile
Global CellServDB file to be deployed. Set to ‘null’ to only deploy the cells in ‘cellServDB’. Any cells defined in ‘cellServDB’ will override cells in the global file.

Type: null or path in the Nix store

Default:

```
pkgs.openafs.cellservdb
```

Example:

```
./CellServDB
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.inumcalc
Inode calculation method. ‘compat’ is computationally less expensive, but ‘md5’ greatly reduces the likelihood of inode collisions in larger scenarios involving multiple cells mounted into one AFS space.

Type: string matching the pattern compat|md5

Default:

```
"compat"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.mountPoint
Mountpoint of the AFS file tree, conventionally ‘/afs’. When set to a different value, only cross−cells that use the same value can be accessed.

Type: string

Default:

```
"/afs"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.sparse
Minimal cell list in /afs.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsClient.startDisconnected
Start up in disconnected mode. You need to execute ‘fs disco online’ (as root) to switch to connected mode. Useful for roaming devices.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/client.nix>

services.openafsServer.enable
Whether to enable the OpenAFS server. An OpenAFS server needs a complex setup. So, be aware that enabling this service and setting some options does not give you a turn−key−ready solution. You need at least a running Kerberos 5 setup, as OpenAFS relies on it for authentication. See the Guide "QuickStartUnix" coming with 'pkgs.openafs.doc' for complete setup instructions.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.package
The openafs package to use.

Type: package

Default:

```
pkgs.openafs
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.advertisedAddresses
List of IP addresses this server is advertised under. See **NetInfo**(5)

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.cellName
Cell name, this server will serve.

Type: string

Default:

```
""
```

Example:

```
"grand.central.org"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.cellServDB
Definition of all cell−local database server machines. If a single list is provided, it will be used as the servers for 'cellName'.

Type: (attribute set of list of (submodule)) or (list of anything) convertible to it

Default:

```
{ }
```

Example:

```
[
  {
    dnsname = "first.afsdb.server.dns.fqdn.org";
    ip = "1.2.3.4";
  }
  {
    dnsname = "second.afsdb.server.dns.fqdn.org";
    ip = "2.3.4.5";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.cellServDB.<name>.*.dnsname
DNS full−qualified domain name of a database server

Type: string

Default:

```
""
```

Example:

```
"afs.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.cellServDB.<name>.*.ip
IP Address of a database server

Type: string

Default:

```
""
```

Example:

```
"1.2.3.4"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.dottedPrincipals
If enabled, allow principal names containing (.) dots. Enabling this has security implications!

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.roles.backup.enable
Whether to enable the backup server role. When using OpenAFS built−in buserver, use in conjunction with the ‘database’ role to maintain the Backup Database. Normally only used in conjunction with tape storage or IBM’s Tivoli Storage Manager.

For a modern backup server, enable this role and see **enableFabs** .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.roles.backup.enableFabs

Whether to enable FABS, the flexible AFS backup system. It stores volumes as dump files, relying on other pre−existing backup solutions for handling them .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.roles.backup.buserverArgs

Arguments to the buserver process. See its man page.

Type: string

Default:

```
""
```

Example:

```
"−p 8"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.roles.backup.cellServDB

Definition of all cell−local backup database server machines. Use this when your cell uses less backup database servers than other database server machines.

Type: (attribute set of list of (submodule)) or (list of anything) convertible to it

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.roles.backup.cellServDB.<name>.*.dnsname

DNS full−qualified domain name of a database server

Type: string

Default:

```
""
```

Example:

```
"afs.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.roles.backup.cellServDB.<name>.*.ip
IP Address of a database server

Type: string

Default:

```
""
```

Example:

```
"1.2.3.4"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.roles.backup.fabsArgs
Arguments to the fabsys process. See **fabsys_server**(1) and **fabsys_config**(1).

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.roles.backup.fabsExtraConfig
Additional configuration parameters for the FABS backup server.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  afs.localauth = true;
  afs.keytab = config.sops.secrets.fabsKeytab.path;
}
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.roles.database.enable
Database server role, maintains the Volume Location Database, Protection Database (and Backup Database, see ‘backup’ role). There can be multiple servers in the database role for replication, which then need reliable network connection to each other.

Servers in this role appear in AFSDB DNS records or the CellServDB.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.roles.database.ptserverArgs
Arguments to the ptserver process. See its man page.

Type: string

Default:

```
""
```

Example:

```
"-restricted -default_access S---- S-M---"
```

Declared by:
<nixpkgs/nixos/modules/services/network-filesystems/openafs/server.nix>

services.openafsServer.roles.database.vlserverArgs
Arguments to the vlserver process. See its man page.

Type: string

Default:

```
""
```

Example:

```
"-rxbind"
```

Declared by:
<nixpkgs/nixos/modules/services/network-filesystems/openafs/server.nix>

services.openafsServer.roles.fileserver.enable
Fileserver role, serves files and volumes from its local storage.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network-filesystems/openafs/server.nix>

services.openafsServer.roles.fileserver.fileserverArgs
Arguments to the dafileserver process. See its man page.

Type: string

Default:

```
"-vattachpar 128 -vhashsize 11 -L -rxpck 400 -cb 1000000"
```

Declared by:
<nixpkgs/nixos/modules/services/network-filesystems/openafs/server.nix>

services.openafsServer.roles.fileserver.salvagerArgs
Arguments to the dasalvager process. See its man page.

Type: string

Default:

```
""
```

Example:

```
"-showlog -showmounts"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.roles.fileserver.salvageserverArgs
Arguments to the salvageserver process. See its man page.

Type: string

Default:
```
""
```

Example:
```
"−showlog"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.roles.fileserver.volserverArgs
Arguments to the davolserver process. See its man page.

Type: string

Default:
```
""
```

Example:
```
"−sync never"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openafsServer.udpPacketSize
UDP packet size to use in Bytes. Higher values can speed up communications. The default of 1 MB is a sufficient in most cases. Make sure to increase the kernel's UDP buffer size accordingly via 'net.core(w|r|opt)mem_max' sysctl.

Type: signed integer

Default:
```
1310720
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/openafs/server.nix>

services.openarena.enable
Whether to enable OpenArena game server.

Type: boolean

Default:
```
false
```

Example:
```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/openarena.nix>

services.openarena.package

The openarena package to use.

Type: package

Default:

```
pkgs.openarena
```

Declared by:

<nixpkgs/nixos/modules/services/games/openarena.nix>

services.openarena.extraFlags

Extra flags to pass to **oa_ded**

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "+set dedicated 2"
  "+set sv_hostname 'My NixOS OpenArena Server'"
  "+map oa_dm1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/games/openarena.nix>

services.openarena.openPorts

Whether to open firewall ports for OpenArena

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/games/openarena.nix>

services.openbao.enable

Whether to enable OpenBao daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/openbao.nix>

services.openbao.package

The openbao package to use.

Type: package

Default:

```
pkgs.openbao
```

Example:

```
pkgs.openbao.override { withHsm = false; withUi = false; }
```

Declared by:
<nixpkgs/nixos/modules/services/security/openbao.nix>

services.openbao.extraArgs
Additional arguments given to OpenBao.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/openbao.nix>

services.openbao.settings
Settings of OpenBao.

See **documentation** for more details.

Type: open submodule of (JSON value)

Example:

```
{
  ui = true;
  listener.default = {
    type = "tcp";
    tls_acme_email = config.security.acme.defaults.email;
    tls_acme_domains = [ "example.com" ];
    tls_acme_disable_http_challenge = true;
  };
  cluster_addr = "http://127.0.0.1:8201";
  api_addr = "https://example.com";
  storage.raft.path = "/var/lib/openbao";
}
```

Declared by:
<nixpkgs/nixos/modules/services/security/openbao.nix>

services.openbao.settings.listener
Configure a listener for responding to requests.

Type: attribute set of (open submodule of (JSON value))

Declared by:
<nixpkgs/nixos/modules/services/security/openbao.nix>

services.openbao.settings.listener.<name>.address
The TCP address or UNIX socket path to listen on.

Type: string

Default:

```
if config.services.openbao.settings.listener.<name>.type == "unix"  \
then "/run/openbao/openbao.sock" else "127.0.0.1:8200"
```

Declared by:
<nixpkgs/nixos/modules/services/security/openbao.nix>

services.openbao.settings.listener.<name>.type
The listener type to enable.

Type: one of “tcp”, “unix”

Declared by:
<nixpkgs/nixos/modules/services/security/openbao.nix>

services.openbao.settings.ui
Whether to enable the OpenBao web UI.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/openbao.nix>

services.opencloud.enable
Whether to enable OpenCloud.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/opencloud.nix>

services.opencloud.package
The opencloud package to use.

Type: package

Default:

```
pkgs.opencloud
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/opencloud.nix>

services.opencloud.address
Web server bind address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/opencloud.nix>

services.opencloud.environment

Extra environment variables to set for the service.

Use this to set configuration that may affect multiple microservices.

Set ‘OC_INSECURE = "false"’ if you want OpenCloud to terminate TLS.

Configuration provided here will override ‘settings’.

Type: attribute set of string

Default:

```
{
  OC_INSECURE = "true";
}
```

Example:

```
{
  OC_INSECURE = "false";
  OC_LOG_LEVEL = "error";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/opencloud.nix>

services.opencloud.environmentFile

An environment file as defined in **systemd.exec**(5).

Use this to inject secrets, e.g. database or auth credentials out of band.

Configuration provided here will override ‘settings’ and ‘environment’.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/opencloud.env"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/opencloud.nix>

services.opencloud.group

The group to run OpenCloud under. By default, a group named ‘opencloud’ will be created.

Type: string

Default:

```
"opencloud"
```

Example:

```
"mycloud"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/opencloud.nix>

services.opencloud.idpWebPackage

The idp−web package to use.

Type: package

Default:

```
pkgs.opencloud.idp-web
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/opencloud.nix>

services.opencloud.port
Web server port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9200
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/opencloud.nix>

services.opencloud.settings
Additional YAML configuration for OpenCloud services.

Every item in this attrset will be mapped to a .yaml file in /etc/opencloud.

The possible config options are currently not well documented, see source code: https://github.com/opencloud-eu/opencloud/blob/main/pkg/config/config.go

Type: attribute set of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
{
  proxy = {
    auto_provision_accounts = true;
    oidc = {
      rewrite_well_known = true;
    };
    role_assignment = {
      driver = "oidc";
      oidc_role_mapper = {
        role_claim = "opencloud_roles";
      };
    };
  };
  web = {
    web = {
      config = {
        oidc = {
          scope = "openid profile email opencloud_roles";
        };
      };
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/opencloud.nix>

services.opencloud.stateDir
OpenCloud data directory.

Type: string

Default:

```
"/var/lib/opencloud"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/opencloud.nix>

services.opencloud.url
Web interface root public URL, including scheme and port (if non−default).

Type: string

Default:

```
"https://localhost:9200"
```

Example:

```
"https://cloud.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/opencloud.nix>

services.opencloud.user
The user to run OpenCloud as. By default, a user named ‘opencloud’ will be created whose home directory is **services.opencloud.stateDir**.

Type: string

Default:

```
"opencloud"
```

Example:

```
"mycloud"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/opencloud.nix>

services.opencloud.webPackage
The web package to use.

Type: package

Default:

```
pkgs.opencloud.web
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/opencloud.nix>

services.opendkim.enable
Whether to enable OpenDKIM sender authentication system.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/opendkim.nix>

services.opendkim.configFile
Additional opendkim configuration as a file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/opendkim.nix>

services.opendkim.domains
Local domains set (see **opendkim**(8) for more information on datasets). Messages from them are signed, not verified.

Type: string

Default:

```
"csl:${config.networking.hostName}"
```

Example:

```
"csl:example.com,mydomain.net"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/opendkim.nix>

services.opendkim.group
Group for the daemon.

Type: string

Default:

```
"opendkim"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/opendkim.nix>

services.opendkim.keyPath
The path that opendkim should put its generated private keys into. The DNS settings will be found in this directory with the name selector.txt.

Type: absolute path

Default:

```
"/var/lib/opendkim/keys"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/opendkim.nix>

services.opendkim.selector
Selector to use when signing.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/mail/opendkim.nix>

services.opendkim.settings

Additional opendkim configuration

Type: open submodule of attribute set of string

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/mail/opendkim.nix>

services.opendkim.socket

Socket which is used for communication with OpenDKIM.

Type: string

Default:

```
"local:/run/opendkim/opendkim.sock"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/opendkim.nix>

services.opendkim.user

User for the daemon.

Type: string

Default:

```
"opendkim"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/opendkim.nix>

services.openiscsi.enable

Whether to enable the openiscsi iscsi daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/iscsi/initiator.nix>

services.openiscsi.enableAutoLoginOut

Whether to enable automatic login and logout of all automatic targets. You probably do not want this .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/iscsi/initiator.nix>

services.openiscsi.package
The openiscsi package to use.

Type: package

Default:

```
pkgs.openiscsi
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iscsi/initiator.nix>

services.openiscsi.discoverPortal
Portal to discover targets on

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iscsi/initiator.nix>

services.openiscsi.extraConfig
Lines to append to default iscsid.conf

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iscsi/initiator.nix>

services.openiscsi.extraConfigFile
Append an additional file's contents to /etc/iscsid.conf. Use a non−store path and store passwords in this file.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iscsi/initiator.nix>

services.openiscsi.name
Name of this iscsi initiator

Type: string

Example:

```
"iqn.2020−08.org.linux−iscsi.initiatorhost:example"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iscsi/initiator.nix>

services.openldap.enable
Whether to enable the ldap server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/openldap.nix>

services.openldap.package
The openldap package to use. This can be used to, for example, set an OpenLDAP package with custom overrides to enable modules or other functionality.

Type: package

Default:

```
pkgs.openldap
```

Declared by:
<nixpkgs/nixos/modules/services/databases/openldap.nix>

services.openldap.configDir
Use this config directory instead of generating one from the ‘settings’ option. Overrides all NixOS settings.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/openldap/slapd.d"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/openldap.nix>

services.openldap.declarativeContents
Declarative contents for the LDAP database, in LDIF format by suffix.

All data will be erased when starting the LDAP server. Modifications to the database are not prevented, they are just dropped on the next reboot of the server. Performance−wise the database and indexes are rebuilt on each server startup, so this will slow down server startup, especially with large databases.

Note that the root of the DB must be defined in ‘services.openldap.settings’ and the ‘olcDbDirectory’ must begin with ‘"/var/lib/openldap"’.

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Example:

```
{
  "dc=example,dc=org" = ''
    dn= dn: dc=example,dc=org
    objectClass: domain
    dc: example
    dn: ou=users,dc=example,dc=org
    objectClass = organizationalUnit
    ou: users
    # ...
  '';
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/openldap.nix>

services.openldap.group
Group account under which slapd runs.

Type: string

Default:

```
"openldap"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/openldap.nix>

services.openldap.mutableConfig
Whether to allow writable on−line configuration. If ‘true’, the NixOS settings will only be used to initialize the OpenLDAP configuration if it does not exist, and are subsequently ignored.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/openldap.nix>

services.openldap.settings
Configuration for OpenLDAP, in OLC format

Type: submodule

Example:

```
{
  attrs.olcLogLevel = [ "stats" ];
  children = {
    "cn=schema".includes = [
       "${pkgs.openldap}/etc/schema/core.ldif"
       "${pkgs.openldap}/etc/schema/cosine.ldif"
       "${pkgs.openldap}/etc/schema/inetorgperson.ldif"
    ];
    "olcDatabase={−1}frontend" = {
      attrs = {
        objectClass = "olcDatabaseConfig";
        olcDatabase = "{−1}frontend";
        olcAccess = [ "{0}to * by dn.exact=uidNumber=0+gidNumber=0, \
cn=peercred,cn=external,cn=auth manage stop by * none stop" ];
      };
    };
    "olcDatabase={0}config" = {
      attrs = {
        objectClass = "olcDatabaseConfig";
        olcDatabase = "{0}config";
        olcAccess = [ "{0}to * by * none break" ];
      };
    };
    "olcDatabase={1}mdb" = {
      attrs = {
        objectClass = [ "olcDatabaseConfig" "olcMdbConfig" ];
```

```
            olcDatabase = "{1}mdb";
            olcDbDirectory = "/var/lib/openldap/ldap";
            olcDbIndex = [
              "objectClass eq"
              "cn pres,eq"
              "uid pres,eq"
              "sn pres,eq,subany"
            ];
            olcSuffix = "dc=example,dc=com";
            olcAccess = [ "{0}to * by * read break" ];
          };
        };
      };
    };
```

Declared by:

<nixpkgs/nixos/modules/services/databases/openldap.nix>

services.openldap.settings.attrs

Attributes of the parent entry.

Type: attribute set of ((LDAP value − either a string, or an attrset containing `path` or `base64` for included values or base−64 encoded values respectively.) or list of (LDAP value − either a string, or an attrset containing `path` or `base64` for included values or base−64 encoded values respectively.))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/databases/openldap.nix>

services.openldap.settings.children

Child entries of the current entry, with recursively the same structure.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
    "cn=schema" = {
    # The attribute used in the DN must be defined
    attrs = { cn = "schema"; };
    children = {
        # This entry's DN is expanded to "cn=foo,cn=schema"
        "cn=foo" = { ... };
    };
    # These includes are inserted after "cn=schema", but before "cn \
=foo,cn=schema"
    includes = [ ... ];
    };
}
```

Declared by:

<nixpkgs/nixos/modules/services/databases/openldap.nix>

services.openldap.settings.includes

LDIF files to include after the parent's attributes but before its children.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/openldap.nix>

services.openldap.urlList

URL list slapd should listen on.

Type: list of string

Default:

```
[
  "ldap:///"
]
```

Example:

```
[
  "ldaps:///"
]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/openldap.nix>

services.openldap.user

User account under which slapd runs.

Type: string

Default:

```
"openldap"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/openldap.nix>

services.openntpd.enable

Whether to enable OpenNTP time synchronization server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ntp/openntpd.nix>

services.openntpd.extraConfig

Additional text appended to *openntpd.conf*.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
listen on 127.0.0.1
listen on ::1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/openntpd.nix>

services.openntpd.extraOptions
Extra options used when launching openntpd.

Type: strings concatenated with " "

Default:

```
""
```

Example:

```
"-s"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/openntpd.nix>

services.openntpd.servers
The set of NTP servers from which to synchronise.

Type: list of string

Default:

```
config.services.ntp.servers
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/openntpd.nix>

services.opensearch.enable
Whether to enable OpenSearch.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensearch.package
The OpenSearch package to use.

Type: package

Default:

```
pkgs.opensearch
```

Declared by:
<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensearch.dataDir
Data directory for OpenSearch. If you change this, you need to manually create the directory. You also need to create the ‘opensearch’ user and group, or change **services.opensearch.user** and **services.opensearch.group** to existing ones with access to the directory.

Type: absolute path

Default:

```
"/var/lib/opensearch"
```

Declared by:

<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensearch.extraCmdLineOptions

Extra command line options for the OpenSearch launcher.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensearch.extraJavaOptions

Extra command line options for Java.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-Djava.net.preferIPv4Stack=true"
]
```

Declared by:

<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensearch.group

The group OpenSearch runs as. Should be left at default unless you have very specific needs.

Type: string

Default:

```
"opensearch"
```

Declared by:

<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensearch.logging

opensearch logging configuration.

Type: string

Default:

```
    logger.action.name = org.opensearch.action
    logger.action.level = info

    appender.console.type = Console
    appender.console.name = console
    appender.console.layout.type = PatternLayout
    appender.console.layout.pattern = [%d{ISO8601}][%-5p][%-25c{1.} \
] %marker%m%n

    rootLogger.level = info
    rootLogger.appenderRef.console.ref = console
```

Declared by:
<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensearch.restartIfChanged
Automatically restart the service on config change. This can be set to false to defer restarts on a server or cluster. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensearch.settings
OpenSearch configuration.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensearch.settings."cluster.name"
The name of the cluster.

Type: string

Default:

```
"opensearch"
```

Declared by:
<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensearch.settings."discovery.type"
The type of discovery to use.

Type: string

Default:

```
"single-node"
```

Declared by:
<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensearch.settings."http.port"
The port to listen on for HTTP traffic.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9200
```

Declared by:
<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensearch.settings."network.host"
Which port this service should listen on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensearch.settings."plugins.security.disabled"
Whether to enable the security plugin, 'plugins.security.ssl.transport.keystore_filepath' or 'plugins.security.ssl.transport.server.pemcert_filepath' and 'plugins.security.ssl.transport.client.pemcert_filepath' must be set for this plugin to be enabled.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensearch.settings."transport.port"
The port to listen on for transport traffic.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9300
```

Declared by:
<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensearch.user
The user OpenSearch runs as. Should be left at default unless you have very specific needs.

Type: string

Default:

```
"opensearch"
```

Declared by:
<nixpkgs/nixos/modules/services/search/opensearch.nix>

services.opensmtpd.enable
Whether to enable the OpenSMTPD server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/opensmtpd.nix>

services.opensmtpd.package
The opensmtpd package to use.

Type: package

Default:

```
pkgs.opensmtpd
```

Declared by:
<nixpkgs/nixos/modules/services/mail/opensmtpd.nix>

services.opensmtpd.extraServerArgs
Extra command line arguments provided when the smtpd process is started.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-v"
  "-P mta"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/opensmtpd.nix>

services.opensmtpd.procPackages
Packages to search for filters, tables, queues, and schedulers.

Add packages here if you want to use them as as such, for example from the opensmtpd−table−* packages.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/opensmtpd.nix>

services.opensmtpd.serverConfiguration
The contents of the smtpd.conf configuration file. See the OpenSMTPD documentation for syntax information.

Type: strings concatenated with “\n”

Example:

```
listen on lo
accept for any deliver to lmtp localhost:24
```

Declared by:
<nixpkgs/nixos/modules/services/mail/opensmtpd.nix>

services.opensmtpd.setSendmail
Whether to set the system sendmail to OpenSMTPD’s.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/opensmtpd.nix>

services.opensnitch.enable

Whether to enable Opensnitch application firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.opensnitch.package

The opensnitch package to use.

Type: package

Default:

```
pkgs.opensnitch
```

Declared by:

<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.opensnitch.rules

Declarative configuration of firewall rules. All rules will be stored in '/var/lib/opensnitch/rules' by default. Rules path can be configured with 'settings.Rules.Path'. See **upstream documentation** for available options.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Example:

```
{
  "tor" = {
    "name" = "tor";
    "enabled" = true;
    "action" = "allow";
    "duration" = "always";
    "operator" = {
      "type" ="simple";
      "sensitive" = false;
      "operand" = "process.path";
      "data" = "${lib.getBin pkgs.tor}/bin/tor";
    };
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.opensnitch.settings
opensnitchd configuration. Refer to **upstream documentation** for details on supported values.

Type: open submodule of (JSON value)

Declared by:
<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.opensnitch.settings.Audit.AudispSocketPath
Configure audit socket path. Used when ‘settings.ProcMonitorMethod’ is set to ‘audit’.

Type: absolute path

Default:

```
"/run/audit/audispd_events"
```

Declared by:
<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.opensnitch.settings.DefaultAction
Default action whether to block or allow application internet access.

Type: one of “allow”, “deny”

Declared by:
<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.opensnitch.settings.Ebpf.ModulesPath
Configure eBPF modules path. Used when ‘settings.ProcMonitorMethod’ is set to ‘ebpf’.

Type: null or absolute path

Default:

```
if cfg.settings.ProcMonitorMethod == "ebpf" then
  "\\$\\{config.boot.kernelPackages.opensnitch-ebpf\\}/etc/o \
pensnitchd"
else null;
```

Declared by:
<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.opensnitch.settings.Firewall
Which firewall backend to use.

Type: one of “iptables”, “nftables”

Declared by:
<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.opensnitch.settings.InterceptUnknown
Whether to intercept spare connections.

Type: boolean

Declared by:
<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.opensnitch.settings.LogLevel
Default log level from 0 to 4 (debug, info, important, warning, error).

Type: integer between 0 and 4 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.opensnitch.settings.ProcMonitorMethod
Which process monitoring method to use.

Type: one of “ebpf”, “proc”, “ftrace”, “audit”

Declared by:
<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.opensnitch.settings.Rules.Path
Path to the directory where firewall rules can be found and will get stored by the NixOS module.

Type: absolute path

Default:

```
"/var/lib/opensnitch/rules"
```

Declared by:
<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.opensnitch.settings.Server.Address
Unix socket path (unix:///tmp/osui.sock, the “unix:///” part is mandatory) or TCP socket (192.168.1.100:50051).

Type: string

Declared by:
<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.opensnitch.settings.Server.LogFile
File to write logs to (use /dev/stdout to write logs to standard output).

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.opensnitch.settings.Stats.MaxEvents
Max events to send to the GUI.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.opensnitch.settings.Stats.MaxStats
Max stats per item to keep in backlog.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/services/security/opensnitch.nix>

services.openssh.enable
Whether to enable the OpenSSH secure shell daemon, which allows secure remote logins.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.enableRecommendedAlgorithms
Use algorithms curated and recommended by NixOS.

Set to false to use upstream's default algorithms.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.package
OpenSSH package to use for sshd.

Type: package

Default:

```
programs.ssh.package
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.allowSFTP
Whether to enable the SFTP subsystem in the SSH daemon. This enables the use of commands such as **sftp** and **sshfs**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.authorizedKeysCommand
Specifies a program to be used to look up the user's public keys. The program must be owned by root, not writable by group or others and specified by an absolute path.

Type: string

Default:

```
"none"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.authorizedKeysCommandUser
Specifies the user under whose account the AuthorizedKeysCommand is run. It is recommended to use a dedicated user that has no other role on the host than running authorized keys commands.

Type: string

Default:

```
"nobody"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.authorizedKeysFiles

Specify the rules for which files to read on the host.

This is an advanced option. If you're looking to configure user keys, you can generally use **users.users.<name>.openssh.authorizedKeys.keys** or **users.users.<name>.openssh.authorizedKeys.keyFiles**.

These are paths relative to the host root file system or home directories and they are subject to certain token expansion rules. See AuthorizedKeysFile in man sshd_config for details.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.authorizedKeysInHomedir

Enables the use of the '~/.ssh/authorized_keys' file.

Otherwise, the only files trusted by default are those in '/etc/ssh/authorized_keys.d', *i.e.* SSH keys from **users.users.<name>.openssh.authorizedKeys.keys**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.extraConfig

Verbatim contents of *sshd_config*.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.generateHostKeys

Whether to generate SSH host keys.

This can be enabled explicitly if you want to generate host keys but don't want to enable the SSH daemon.

Type: boolean

Default:

```
services.openssh.enable
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.hostKeys

NixOS can automatically generate SSH host keys. This option specifies the path, type and size of each key. See **ssh-keygen**(1) for supported types and sizes.

Type: list of (attribute set)

Default:

```
[
  {
    bits = 4096;
    path = "/etc/ssh/ssh_host_rsa_key";
    type = "rsa";
  }
  {
    path = "/etc/ssh/ssh_host_ed25519_key";
    type = "ed25519";
  }
]
```

Example:

```
[
  {
    bits = 4096;
    openSSHFormat = true;
    path = "/etc/ssh/ssh_host_rsa_key";
    type = "rsa";
  }
  {
    comment = "key comment";
    path = "/etc/ssh/ssh_host_ed25519_key";
    type = "ed25519";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.knownHosts

Alias of **programs.ssh.knownHosts**.

Type: attribute set of (submodule)

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.knownHosts.<name>.certAuthority

This public key is an SSH certificate authority, rather than an individual host's key.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

services.openssh.knownHosts.<name>.extraHostNames

A list of additional host names and/or IP numbers used for accessing the host's ssh service. This list is ignored if 'hostNames' is set explicitly.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

services.openssh.knownHosts.<name>.hostNames

A list of host names and/or IP numbers used for accessing the host's ssh service. This list includes the name of the containing 'knownHosts' attribute by default for convenience. If you wish to configure multiple host keys for the same host use multiple 'knownHosts' entries with different attribute names and the same 'hostNames' list.

Type: list of string

Default:

```
[ ‹name› ] ++ config.services.openssh.knownHosts.<name>.extraHostNa \
mes
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

services.openssh.knownHosts.<name>.publicKey

The public key data for the host. You can fetch a public key from a running SSH server with the **ssh-keyscan** command. The public key should not include any host names, only the key type and the key itself.

Type: null or string

Default:

```
null
```

Example:

```
"ecdsa-sha2-nistp521 AAAAE2VjZHN...UEPg=="
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

services.openssh.knownHosts.<name>.publicKeyFile

The path to the public key file for the host. The public key file is read at build time and saved in the Nix store. You can fetch a public key file from a running SSH server with the **ssh-keyscan** command. The content of the file should follow the same format as described for the 'publicKey' option. Only a single key is supported. If a host has multiple keys, use **programs.ssh.knownHostsFiles** instead.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

services.openssh.listenAddresses

List of addresses and ports to listen on (ListenAddress directive in config). If port is not specified for address sshd will listen on all ports specified by ‘ports’ option. NOTE: this will override default listening on all local addresses and port 22. NOTE: setting this option won’t automatically enable given ports in firewall configuration. NOTE: If the IP address is not available at boot time, the following has to be added to make sure sshd will wait for dhcp configuration:

```
systemd.services.sshd = {
  wants = [ "network-online.target" ];
  after = [ "network-online.target" ];
};
```

See the following issue for details: **https://github.com/NixOS/nixpkgs/issues/105570**

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "192.168.3.1";
    port = 22;
  }
  {
    addr = "0.0.0.0";
    port = 64022;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.listenAddresses.*.addr

Host, IPv4 or IPv6 address to listen to.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.listenAddresses.*.port

Port to listen to.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.moduliFile

Path to ‘moduli’ file to install in ‘/etc/ssh/moduli’. If this option is unset, then the ‘moduli’ file shipped with OpenSSH will be used.

Type: absolute path

Example:

```
"/etc/my-local-ssh-moduli;"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.openFirewall

Whether to automatically open the specified ports in the firewall.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.ports

Specifies on which ports the SSH daemon listens.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[
  22
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings

Configuration for ‘sshd_config(5)’.

Type: open submodule of attribute set of (atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  UseDns = true;
  PasswordAuthentication = false;
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.AcceptEnv

Specifies what environment variables sent by the client will be copied into the session’s environment. The TERM environment variable is always accepted whenever the client requests a pseudo-terminal as it is required by the protocol.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.AllowGroups
If specified, login is allowed only for users part of the listed groups. See **sshd_config**(5) for details.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.AllowUsers
If specified, login is allowed only for the listed users. See **sshd_config**(5) for details.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.AuthorizedPrincipalsFile
Specifies a file that lists principal names that are accepted for certificate authentication. The default is ‘"none"’, i.e. not to use a principals file.

Type: null or string

Default:

```
"none"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.Banner
The file whose contents are sent to the remote user before authentication.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/ssh/banner"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.Ciphers
Allowed ciphers

Defaults to a curated set of algorithms. Set enableRecommendedAlgorithms to false to use upstream’s defaults.

Type: null or (list of string)

Default:

```
if config.services.openssh.enableRecommendedAlgorithms then
  [
    "chacha20-poly1305@openssh.com"
```

```
        "aes256-gcm@openssh.com"
        "aes128-gcm@openssh.com"
        "aes256-ctr"
        "aes192-ctr"
        "aes128-ctr"
      ]
    else
      null;
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.DenyGroups
If specified, login is denied for all users part of the listed groups. Takes precedence over **services.openssh.settings.AllowGroups**. See **sshd_config**(5) for details.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.DenyUsers
If specified, login is denied for all listed users. Takes precedence over **services.openssh.settings.AllowUsers**. See **sshd_config**(5) for details.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.GatewayPorts
Specifies whether remote hosts are allowed to connect to ports forwarded for the client. See **sshd_config**(5).

Type: null or string

Default:

```
"no"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.KbdInteractiveAuthentication
Specifies whether keyboard-interactive authentication is allowed.

Type: null or boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.KexAlgorithms

Allowed key exchange algorithms

Defaults to a curated set of algorithms. Set enableRecommendedAlgorithms to false to use upstream's defaults.

Type: null or (list of string)

Default:

```
if config.services.openssh.enableRecommendedAlgorithms then
  [
    "mlkem768x25519-sha256"
    "sntrup761x25519-sha512"
    "sntrup761x25519-sha512@openssh.com"
    "curve25519-sha256"
    "curve25519-sha256@libssh.org"
    "diffie-hellman-group-exchange-sha256"
  ]
else
  null;
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.LogLevel

Gives the verbosity level that is used when logging messages from **sshd**(8). Logging with a DEBUG level violates the privacy of users and is not recommended.

Type: null or one of "QUIET", "FATAL", "ERROR", "INFO", "VERBOSE", "DEBUG", "DEBUG1", "DEBUG2", "DEBUG3"

Default:

```
"INFO"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.Macs

Allowed MACs

Defaults to a curated set of algorithms. Set enableRecommendedAlgorithms to false to use upstream's defaults.

Type: null or (list of string)

Default:

```
if config.services.openssh.enableRecommendedAlgorithms then
  [
    "hmac-sha2-512-etm@openssh.com"
    "hmac-sha2-256-etm@openssh.com"
    "umac-128-etm@openssh.com"
  ]
else
  null;
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.PasswordAuthentication

Specifies whether password authentication is allowed.

Type: null or boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.PermitRootLogin

Whether the root user can login using ssh.

Type: null or one of “yes”, “without−password”, “prohibit−password”, “forced−commands−only”, “no”

Default:

```
"prohibit-password"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.PrintMotd

Whether to enable printing /etc/motd when a user logs in interactively.

Type: null or boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.StrictModes

Whether sshd should check file modes and ownership of directories

Type: null or boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.UseDns

Specifies whether **sshd**(8) should look up the remote host name, and to check that the resolved host name for the remote IP address maps back to the very same IP address. If this option is set to no (the default) then only addresses and not host names may be used in ~/.ssh/authorized_keys from and sshd_config Match Host directives.

Type: null or boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.UsePAM
Whether to enable PAM authentication.

Type: null or boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.settings.X11Forwarding
Whether to allow X11 connections to be forwarded.

Type: null or boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.sftpFlags
Commandline flags to add to sftp−server.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−f AUTHPRIV"
  "−l INFO"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.sftpServerExecutable
The sftp server executable. Can be a path or “internal−sftp” to use the sftp server built into the sshd binary.

Type: string

Example:

```
"internal−sftp"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.openssh.startWhenNeeded
If set, **sshd** is socket−activated; that is, instead of having it permanently running as a daemon, systemd will start an instance for each incoming connection.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.opentelemetry-collector.enable
Whether to enable Opentelemetry Collector.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/opentelemetry-collector.nix>

services.opentelemetry-collector.package
The opentelemetry-collector package to use.

Type: package

Default:

```
pkgs.opentelemetry-collector
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/opentelemetry-collector.nix>

services.opentelemetry-collector.configFile
Specify a path to a configuration file that Opentelemetry Collector should use.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/opentelemetry-collector.nix>

services.opentelemetry-collector.settings
Specify the configuration for Opentelemetry Collector in Nix.

See **https://opentelemetry.io/docs/collector/configuration/** for available options.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/opentelemetry-collector.nix>

services.opentelemetry-collector.validateConfigFile
Whether to enable Validate configuration file.

Type: boolean

Default: true if configFile is a store path

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/opentelemetry−collector.nix>

services.openthread−border−router.enable
Whether to enable the OpenThread Border Router.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/openthread−border−router.nix>

services.openthread−border−router.package
The openthread−border−router package to use.

Type: package

Default:

```
pkgs.openthread−border−router
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/openthread−border−router.nix>

services.openthread−border−router.backboneInterfaces
The network interfaces on which to advertise the thread ipv6 mesh prefix. Can be specified multiple times.

Type: list of string

Default:

```
[
  "eth0"
]
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/openthread−border−router.nix>

services.openthread−border−router.extraArgs
Extra arguments to pass to the otbr−agent daemon.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−radio−version"
]
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/openthread−border−router.nix>

services.openthread−border−router.interfaceName
The network interface to create for thread packets.

Type: string

Default:

```
"wpan0"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/openthread−border−router.nix>

services.openthread−border−router.logLevel
The level to use when logging messages.

Type: one of “alert”, “crit”, “debug”, “emerg”, “err”, “info”, “notice”, “warning”

Default:

```
"err"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/openthread−border−router.nix>

services.openthread−border−router.openFirewall
Whether to open the firewall for the REST API and web interface ports.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/openthread−border−router.nix>

services.openthread−border−router.radio.baudRate
The baud rate of the radio device. Ignored if **services.openthread−border−router.radio.url** is set.

Type: positive integer, meaning >0

Default:

```
115200
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/openthread−border−router.nix>

services.openthread−border−router.radio.device
The device name of the serial port of the radio device. Ignored if **services.openthread−border−router.radio.url** is set.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/openthread−border−router.nix>

services.openthread−border−router.radio.extraDevices
Extra devices to add to the radio device.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "trel://eth0"
]
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/openthread-border-router.nix>

services.openthread-border-router.radio.flowControl
Enable hardware flow control. Ignored if **services.openthread-border-router.radio.url** is set.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/openthread-border-router.nix>

services.openthread-border-router.radio.url
The URL of the radio device to use.

Type: null or string

Default:

```
null
```

Example:

```
"spinel+hdlc+uart:///dev/ttyUSB0?uart-baudrate=460800&uart-flow- \
control"
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/openthread-border-router.nix>

services.openthread-border-router.radio.urlQueryString
Extra URL query string parameters. Ignored if **services.openthread-border-router.radio.url** is set.

Type: string

Default:

```
""
```

Example:

```
"bus-latency=100&region=ca"
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/openthread-border-router.nix>

services.openthread-border-router.rest.listenAddress
The address on which to listen for REST API requests.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"::"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/openthread−border−router.nix>

services.openthread−border−router.rest.listenPort
The port on which to listen for REST API requests. Warning: the web interface relies on this value being set to 8081.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8081
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/openthread−border−router.nix>

services.openthread−border−router.web.enable
Whether to enable the web interface.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/openthread−border−router.nix>

services.openthread−border−router.web.listenAddress
The address on which the web interface should listen.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"::"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/openthread−border−router.nix>

services.openthread−border−router.web.listenPort
The port on which the web interface should listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8082
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/openthread−border−router.nix>

services.opentracker.enable
Whether to enable opentracker.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/opentracker.nix>

services.opentracker.package
The opentracker package to use.

Type: package

Default:

```
pkgs.opentracker
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/opentracker.nix>

services.opentracker.extraOptions
Configuration Arguments for opentracker See **https://erdgeist.org/arts/software/opentracker/** for all params

Type: strings concatenated with " "

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/opentracker.nix>

services.opentsdb.enable
Whether to enable OpenTSDB.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/opentsdb.nix>

services.opentsdb.package
The opentsdb package to use.

Type: package

Default:

```
pkgs.opentsdb
```

Declared by:
<nixpkgs/nixos/modules/services/databases/opentsdb.nix>

services.opentsdb.config
The contents of OpenTSDB's configuration file

Type: strings concatenated with "\n"

Default:

```
tsd.core.auto_create_metrics = true
tsd.http.request.enable_chunked  = true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/opentsdb.nix>

services.opentsdb.group
Group account under which OpenTSDB runs.

Type: string

Default:

```
"opentsdb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/opentsdb.nix>

services.opentsdb.port
Which port OpenTSDB listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4242
```

Declared by:
<nixpkgs/nixos/modules/services/databases/opentsdb.nix>

services.opentsdb.user
User account under which OpenTSDB runs.

Type: string

Default:

```
"opentsdb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/opentsdb.nix>

services.openvpn.package
The openvpn package to use.

Type: package

Default:

```
pkgs.openvpn
```

Declared by:
<nixpkgs/nixos/modules/services/networking/openvpn.nix>

services.openvpn.restartAfterSleep
Whether OpenVPN client should be restarted after sleep.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/openvpn.nix>

services.openvpn.servers
Each attribute of this option defines a systemd service that runs an OpenVPN instance. These can be OpenVPN servers or clients. The name of each systemd service is ‘openvpn−«name».service’, where «name» is the corresponding attribute name.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  server = {
    config = ''
      # Simplest server configuration: https://community.openvpn.ne \
t/openvpn/wiki/StaticKeyMiniHowto
      # server :
      dev tun
      ifconfig 10.8.0.1 10.8.0.2
      secret /root/static.key
    '';
    up = "ip route add ...";
    down = "ip route del ...";
  };
  client = {
    config = ''
      client
      remote vpn.example.org
      dev tun
      proto tcp-client
      port 8080
      ca /root/.vpn/ca.crt
      cert /root/.vpn/alice.crt
      key /root/.vpn/alice.key
    '';
    up = "echo nameserver $nameserver | ${pkgs.openresolv}/sbin/res \
olvconf -m 0 -a $dev";
    down = "${pkgs.openresolv}/sbin/resolvconf -d $dev";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/openvpn.nix>

services.openvpn.servers.<name>.authUserPass

This option can be used to store the username / password credentials with the “auth-user-pass” authentication method.

You can either provide an attribute set of ‘username’ and ‘password’, or the path to a file containing the credentials on two lines.

WARNING: If you use an attribute set, this option will put the credentials WORLD-READABLE into the Nix store!

Type: null or (optionally newline-terminated) single-line string or (submodule)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/openvpn.nix>

services.openvpn.servers.<name>.autoStart

Whether this OpenVPN instance should be started automatically.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/openvpn.nix>

services.openvpn.servers.<name>.config

Configuration of this OpenVPN instance. See **openvpn**(8) for details.

To import an external config file, use the following definition: ‘config = "config /path/to/config.ovpn"’

Type: strings concatenated with “\n”

Declared by:

<nixpkgs/nixos/modules/services/networking/openvpn.nix>

services.openvpn.servers.<name>.down

Shell commands executed when the instance is shutting down.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/openvpn.nix>

services.openvpn.servers.<name>.up

Shell commands executed when the instance is starting.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/openvpn.nix>

services.openvpn.servers.<name>.updateResolvConf

Use the script from the update−resolv−conf package to automatically update resolv.conf with the DNS information provided by openvpn. The script will be run after the “up” commands and before the “down” commands.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/openvpn.nix>

services.openvscode−server.enable

Whether to enable openvscode−server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.package
The openvscode−server package to use.

Type: package

Default:

```
pkgs.openvscode−server
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.connectionToken
A secret that must be included with all requests.

Type: null or string

Default:

```
null
```

Example:

```
"secret−token"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.connectionTokenFile
Path to a file that contains the connection token.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.extensionsDir
Set the root path for extensions.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.extraArguments
Additional arguments to pass to openvscode−server.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "−−log=info" ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.extraEnvironment
Additional environment variables to pass to openvscode−server.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  PKG_CONFIG_PATH = "/run/current−system/sw/lib/pkgconfig";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.extraGroups
An array of additional groups for the ‘openvscode−server’ user.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "docker"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.extraPackages
Additional packages to add to the openvscode−server **PATH**.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.go ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.group
The group to run openvscode−server under. By default, a group named ‘openvscode−server’ will be created.

Type: string

Default:

```
"openvscode−server"
```

Example:

```
"yourGroup"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.host
The host name or IP address the server should listen to.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.port
The port the server should listen to. If 0 is passed a random free port is picked. If a range in the format num−num is passed, a free port from the range (end inclusive) is selected.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.serverDataDir
Specifies the directory that server data is kept in.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.socketPath
The path to a socket file for the server to listen to.

Type: null or string

Default:

```
null
```

Example:

```
"/run/openvscode/socket"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.telemetryLevel
Sets the initial telemetry level. Valid levels are: ‘off’, ‘crash’, ‘error’ and ‘all’.

Type: null or one of “off”, “crash”, “error”, “all”

Default:

```
null
```

Example:

```
"crash"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.user
The user to run openvscode−server as. By default, a user named ‘openvscode−server’ will be created.

Type: string

Default:

```
"openvscode−server"
```

Example:

```
"yourUser"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.userDataDir
Specifies the directory that user data is kept in. Can be used to open multiple distinct instances of Code.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openvscode−server.withoutConnectionToken
Run without a connection token. Only use this if the connection is secured by other means.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openvscode−server.nix>

services.openwebrx.enable
Whether to enable OpenWebRX Web interface for Software−Defined Radios on http://localhost:8073.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openwebrx.nix>

services.openwebrx.package
The openwebrx package to use.

Type: package

Default:

```
pkgs.openwebrx
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/openwebrx.nix>

services.opkssh.enable
Whether to enable OpenID Connect SSH authentication.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/opkssh/opkssh.nix>

services.opkssh.package
The opkssh package to use.

Type: package

Default:

```
pkgs.opkssh
```

Declared by:
<nixpkgs/nixos/modules/services/networking/opkssh/opkssh.nix>

services.opkssh.authorizations
User authorization mappings

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
# This example refers to values in the providers example
# adjust your expressions as necessary
[
  {
    user = "alice";
    principal = "alice@gmail.com";
    inherit (config.services.opkssh.providers.google) issuer;
  }
  {
    user = "bob";
    principal = "repo:NixOs/nixpkgs:environment:production";
    inherit (config.services.opkssh.providers.github) issuer;
  }
];
```

Declared by:
<nixpkgs/nixos/modules/services/networking/opkssh/opkssh.nix>

services.opkssh.authorizations.*.issuer
Issuer URI

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/opkssh/opkssh.nix>

services.opkssh.authorizations.*.principal
Principal identifier (email, repo, etc.)

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/opkssh/opkssh.nix>

services.opkssh.authorizations.*.user
Linux user to authorize

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/opkssh/opkssh.nix>

services.opkssh.group
System group for opkssh

Type: string

Default:

```
"opksshuser"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/opkssh/opkssh.nix>

services.opkssh.providers
OpenID Connect providers configuration

Type: attribute set of (submodule)

Default:

```
{
  github = {
    clientId = "github";
    issuer = "https://token.actions.githubusercontent.com";
    lifetime = "oidc";
  };
  google = {
    clientId = "206584157355-7cbe4s640tvm7naoludob4ut1emii7sf.apps \
.googleusercontent.com";
    issuer = "https://accounts.google.com";
    lifetime = "24h";
  };
  microsoft = {
    clientId = "096ce0a3-5e72-4da8-9c86-12924b294a01";
    issuer = "https://login.microsoftonline.com/9188040d-6c67-4c5 \
b-b112-36a304b66dad/v2.0";
    lifetime = "24h";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/opkssh/opkssh.nix>

services.opkssh.providers.<name>.clientId
OAuth client ID

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/opkssh/opkssh.nix>

services.opkssh.providers.<name>.issuer
Issuer URI

Type: string

Example:

```
"https://accounts.google.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/opkssh/opkssh.nix>

services.opkssh.providers.<name>.lifetime
Token lifetime

Type: one of “12h”, “24h”, “48h”, “1week”, “oidc”, “oidc−refreshed”

Default:

```
"24h"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/opkssh/opkssh.nix>

services.opkssh.user
System user for running opkssh

Type: string

Default:

```
"opksshuser"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/opkssh/opkssh.nix>

services.orangefs.client.enable
Whether to enable OrangeFS client daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/orangefs/client.nix>

services.orangefs.client.extraOptions
Extra command line options for pvfs2−client.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/orangefs/client.nix>

services.orangefs.client.fileSystems

The orangefs file systems to be mounted. This option is preferred over using **fileSystems** directly since the pvfs client service needs to be running for it to be mounted.

Type: list of (submodule)

Example:

```
[
  {
    mountPoint = "/orangefs";
    target = "tcp://server:3334/orangefs";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/orangefs/client.nix>

services.orangefs.client.fileSystems.*.mountPoint

Mount point.

Type: string

Default:

```
"/orangefs"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/orangefs/client.nix>

services.orangefs.client.fileSystems.*.options

Mount options

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/orangefs/client.nix>

services.orangefs.client.fileSystems.*.target

Target URL

Type: string

Example:

```
"tcp://server:3334/orangefs"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/orangefs/client.nix>

services.orangefs.server.enable

Whether to enable OrangeFS server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/orangefs/server.nix>

services.orangefs.server.BMIModules
List of BMI modules to load.

Type: list of string

Default:

```
[
  "bmi_tcp"
]
```

Example:

```
[
  "bmi_tcp"
  "bmi_ib"
]
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/orangefs/server.nix>

services.orangefs.server.dataStorageSpace
Directory for data storage.

Type: null or string

Default:

```
null
```

Example:

```
"/data/storage"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/orangefs/server.nix>

services.orangefs.server.extraConfig
Extra config for the global section.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/orangefs/server.nix>

services.orangefs.server.extraDefaults
Extra config for ‘<Defaults>’ section.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/orangefs/server.nix>

services.orangefs.server.fileSystems

These options will create the '<FileSystem>' sections of config file.

Type: attribute set of (submodule)

Default:

```
{
  orangefs = { };
}
```

Example:

```
{
  fs1 = {
    id = 101;
  };
  fs2 = {
    id = 102;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/orangefs/server.nix>

services.orangefs.server.fileSystems.<name>.extraConfig

Extra config for '<FileSystem>' section.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/orangefs/server.nix>

services.orangefs.server.fileSystems.<name>.extraStorageHints

Extra config for '<StorageHints>' section.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/orangefs/server.nix>

services.orangefs.server.fileSystems.<name>.id

File system ID (must be unique within configuration).

Type: signed integer

Default:

```
1
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/orangefs/server.nix>

services.orangefs.server.fileSystems.<name>.rootHandle

File system root ID.

Type: signed integer

Default:

```
3
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/orangefs/server.nix>

services.orangefs.server.fileSystems.<name>.troveSyncData

Sync data.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/orangefs/server.nix>

services.orangefs.server.fileSystems.<name>.troveSyncMeta

Sync meta data.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/orangefs/server.nix>

services.orangefs.server.logType

Destination for log messages.

Type: one of “file”, “syslog”

Default:

```
"syslog"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/orangefs/server.nix>

services.orangefs.server.metadataStorageSpace

Directory for meta data storage.

Type: null or string

Default:

```
null
```

Example:

```
"/data/meta"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/orangefs/server.nix>

services.orangefs.server.servers

URLs for storage server including port. The attribute names define the server alias.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  node1 = "tcp://node1:3334";
  node2 = "tcp://node2:3334";
}
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/orangefs/server.nix>

services.orca.enable

Whether to enable Orca screen reader.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/accessibility/orca.nix>

services.orca.package

The orca package to use.

Type: package

Default:

```
pkgs.orca
```

Declared by:

<nixpkgs/nixos/modules/services/accessibility/orca.nix>

services.orthanc.enable

Whether to enable Orthanc server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/orthanc.nix>

services.orthanc.package

The orthanc package to use.

Type: package

Default:

```
pkgs.orthanc
```

Declared by:
<nixpkgs/nixos/modules/services/misc/orthanc.nix>

services.orthanc.environment
Extra environment variables For more details see **https://orthanc.uclouvain.be/book/users/configuration.html**

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  ORTHANC_NAME = "Orthanc server";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/orthanc.nix>

services.orthanc.environmentFile
Environment file to be passed to the systemd service. Useful for passing secrets to the service to prevent them from being world−readable in the Nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/secrets/orthancSecrets"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/orthanc.nix>

services.orthanc.openFirewall
Whether to open the firewall for Orthanc. This adds ‘services.orthanc.settings.HttpPort’ to ‘networking.firewall.allowedTCPPorts’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/orthanc.nix>

services.orthanc.settings
Configuration written to a json file that is read by orthanc. See **https://orthanc.uclouvain.be/book/index.html** for more.

Type: open submodule of (JSON value)

Default:

```
{
  HttpPort = {
    _type = "override";
    content = 8042;
    priority = 1000;
```

```
    };
    IndexDirectory = {
      _type = "override";
      content = "/var/lib/orthanc/";
      priority = 1000;
    };
    StorageDirectory = {
      _type = "override";
      content = "/var/lib/orthanc/";
      priority = 1000;
    };
  }
```

Example:

```
{
  HttpPort = 12345;
  Name = "My Orthanc Server";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/orthanc.nix>

services.orthanc.stateDir
State directory of Orthanc.

Type: absolute path

Default:

```
"/var/lib/orthanc"
```

Example:

```
"/home/foo"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/orthanc.nix>

services.osquery.enable
Whether to enable osqueryd daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/osquery.nix>

services.osquery.package
The osquery package to use.

Type: package

Default:

```
pkgs.osquery
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/osquery.nix>

services.osquery.flags
Attribute set of flag names and values to be written to the osqueryd flagfile. For more information, refer to **https://osquery.readthedocs.io/en/stable/installation/cli-flags**.

Type: open submodule of attribute set of string

Default:

```
{ }
```

Example:

```
{
  config_refresh = "10";
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/osquery.nix>

services.osquery.flags.database_path
Path used for the database file.

> **Note**
> If left as the default value, this directory will be automatically created before the service starts, otherwise you are responsible for ensuring the directory exists with the appropriate ownership and permissions.

Type: absolute path *(read only)*

Default:

```
"/var/lib/osquery/osquery.db"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/osquery.nix>

services.osquery.flags.logger_path
Base directory used for logging.

> **Note**
> If left as the default value, this directory will be automatically created before the service starts, otherwise you are responsible for ensuring the directory exists with the appropriate ownership and permissions.

Type: absolute path *(read only)*

Default:

```
"/var/log/osquery"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/osquery.nix>

services.osquery.flags.pidfile
Path used for pid file.

Type: absolute path *(read only)*

Default:

```
"/run/osquery/osqueryd.pid"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/osquery.nix>

services.osquery.settings
Configuration to be written to the osqueryd JSON configuration file. To understand the configuration format, refer to **https://osquery.readthedocs.io/en/stable/deployment/configuration/#configuration-components**.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  options = {
    utc = false;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/osquery.nix>

services.osrm.enable
Enable the OSRM service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/osrm.nix>

services.osrm.address
IP address on which the web server will listen.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/osrm.nix>

services.osrm.algorithm
Algorithm to use for the data. Must be one of CH, CoreCH, MLD

Type: one of “CH”, “CoreCH”, “MLD”

Default:

```
"MLD"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/osrm.nix>

services.osrm.dataFile
Data file location

Type: absolute path

Example:

```
"/var/lib/osrm/berlin-latest.osrm"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/osrm.nix>

services.osrm.extraFlags
Extra command line arguments passed to osrm−routed

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--max-table-size 1000"
  "--max-matching-size 1000"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/osrm.nix>

services.osrm.port
Port on which the web server will run.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/osrm.nix>

services.osrm.threads
Number of threads to use.

Type: signed integer

Default:

```
4
```

Declared by:
<nixpkgs/nixos/modules/services/misc/osrm.nix>

services.ostinato.enable
Whether to enable Ostinato agent−controller (Drone).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ostinato.nix>

services.ostinato.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7878
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ostinato.nix>

services.ostinato.portList.exclude
A list of ports does not appear on the port list managed by drone.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "usbmon*"
  "eth0"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ostinato.nix>

services.ostinato.portList.include
For a port to pass the filter and appear on the port list managed by drone, it be allowed by this include list.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "eth*"
  "lo*"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ostinato.nix>

services.ostinato.rateAccuracy
To ensure that the actual transmit rate is as close as possible to the configured transmit rate, Drone runs a busy−wait loop. While this provides the maximum accuracy possible, the CPU utilization is 100% while the transmit is on. You can however, sacrifice the accuracy to reduce the CPU load.

Type: one of “High”, “Low”

Default:

```
"High"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ostinato.nix>

services.ostinato.rpcServer.address
By default, the Drone RPC server will listen on all interfaces and local IPv4 addresses for incoming connections from clients. Specify a single IPv4 or IPv6 address if you want to restrict that. To listen on any IPv6 address, use ::

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ostinato.nix>

services.outline.enable
Whether to enable outline.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.enableUpdateCheck
Have the installation check for updates by sending anonymized statistics to the maintainers.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.package
Outline package to use.

Type: package

Default:

```
pkgs.outline
```

Example:

```
pkgs.outline.overrideAttrs (super: {
  # Ignore the domain part in emails that come from OIDC. This is m \
ight
  # be helpful if you want multiple users with different email prov \
iders
  # to still land in the same team. Note that this effectively make \
s
  # Outline a single−team instance.
  patchPhase = ''
    sed −i 's/const domain = parts\.length && parts\[1\];/const \
 domain = "example.com";/g' plugins/oidc/server/auth/oidc.ts
  '';
})
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.azureAuthentication
To configure Microsoft/Azure auth, you'll need to create an OAuth Client. See **the guide** for details on setting up your Azure App.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.azureAuthentication.clientId
Authentication client identifier.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.azureAuthentication.clientSecretFile
File path containing the authentication secret.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.azureAuthentication.resourceAppId
Authentication application resource ID.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.cdnUrl
If using a Cloudfront/Cloudflare distribution or similar it can be set using this option. This will cause paths to JavaScript files, stylesheets and images to be updated to the hostname defined here. In your CDN configuration the origin server should be set to public URL.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.concurrency
How many processes should be spawned. For a rough estimate, divide your server's available memory by 512.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.databaseUrl
URI to use for the main PostgreSQL database. If this needs to include credentials that shouldn't be world−readable in the Nix store, set an environment file on the systemd service and override the 'DATABASE_URL' entry. Pass the string 'local' to setup a database on the local server.

Type: string

Default:

```
"local"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.debugOutput
Set this to ‘http’ log HTTP requests.

Type: null or value “http” (singular enum)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.defaultLanguage
The default interface language. See **translate.getoutline.com** for a list of available language codes and their rough percentage translated.

Type: one of “da_DK”, “de_DE”, “en_US”, “es_ES”, “fa_IR”, “fr_FR”, “it_IT”, “ja_JP”, “ko_KR”, “nl_NL”, “pl_PL”, “pt_BR”, “pt_PT”, “ru_RU”, “sv_SE”, “th_TH”, “vi_VN”, “zh_CN”, “zh_TW”

Default:

```
"en_US"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.discordAuthentication
To configure Discord auth, you’ll need to create an application at **https://discord.com/developers/applications/**

See **https://docs.getoutline.com/s/hosting/doc/discord−g4JdWFFub6** for details on setting up your Discord app.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.discordAuthentication.clientId
Authentication client identifier.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.discordAuthentication.clientSecretFile
File path containing the authentication secret.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.discordAuthentication.serverId
Restrict logins to a specific server (optional, but recommended). You can find a Discord server’s ID by right−clicking the server icon, and select “Copy Server ID”.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.discordAuthentication.serverRoles
Optionally restrict logins to a comma−separated list of role IDs

Type: strings concatenated with ","

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.forceHttps
Auto−redirect to HTTPS in production. The default is 'true' but you may set this to 'false' if you can be sure that SSL is terminated at an external loadbalancer.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.googleAnalyticsId
Optionally enable Google Analytics to track page views in the knowledge base.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.googleAuthentication
To configure Google auth, you'll need to create an OAuth Client ID at **https://console.cloud.google.com/apis/credentials**

When configuring the Client ID, add an Authorized redirect URI to 'https://[publicUrl]/auth/google.callback'.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.googleAuthentication.clientId
Authentication client identifier.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.googleAuthentication.clientSecretFile
File path containing the authentication secret.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.group
Group under which the service should run. If this is the default value, the group will be created.

Type: string

Default:

```
"outline"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.logo
Custom logo displayed on the authentication screen. This will be scaled to a height of 60px.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.maximumImportSize
The maximum size of document imports. Overriding this could be required if you have especially large Word documents with embedded imagery.

Type: signed integer

Default:

```
5120000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.oidcAuthentication
To configure generic OIDC auth, you'll need some kind of identity provider. See the documentation for whichever IdP you use to fill out all the fields. The redirect URL is 'https://[publicUrl]/auth/oidc.callback'.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.oidcAuthentication.authUrl
OIDC authentication URL endpoint.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.oidcAuthentication.clientId
Authentication client identifier.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.oidcAuthentication.clientSecretFile
File path containing the authentication secret.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.oidcAuthentication.displayName
Display name for OIDC authentication.

Type: string

Default:

```
"OpenID"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.oidcAuthentication.scopes
OpenID authentication scopes.

Type: list of string

Default:

```
[
  "openid"
  "profile"
  "email"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.oidcAuthentication.tokenUrl
OIDC token URL endpoint.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.oidcAuthentication.userinfoUrl
OIDC userinfo URL endpoint.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.oidcAuthentication.usernameClaim
Specify which claims to derive user information from. Supports any valid JSON path with the JWT payload

Type: string

Default:

```
"preferred_username"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.port
Listening port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.publicUrl
The fully qualified, publicly accessible URL

Type: string

Default:

```
"http://localhost:3000"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.rateLimiter.enable
Whether to enable rate limiter for the application web server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.rateLimiter.durationWindow
Length of a throttling window.

Type: signed integer

Default:

```
60
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.rateLimiter.requests
Maximum number of requests in a throttling window.

Type: signed integer

Default:

```
5000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.redisUrl

Connection to a redis server. If this needs to include credentials that shouldn't be world−readable in the Nix store, set an environment file on the systemd service and override the 'REDIS_URL' entry. Pass the string 'local' to setup a local Redis database.

Type: string

Default:

```
"local"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.secretKeyFile

File path that contains the application secret key. It must be 32 bytes long and hex−encoded. If the file does not exist, a new key will be generated and saved here.

Type: string

Default:

```
"/var/lib/outline/secret_key"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.sentryDsn

Optionally enable **Sentry** to track errors and performance.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.sentryTunnel

Optionally add a **Sentry proxy tunnel** for bypassing ad blockers in the UI.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.slackAuthentication

To configure Slack auth, you'll need to create an Application at **https://api.slack.com/apps**

When configuring the Client ID, add a redirect URL under "OAuth & Permissions" to 'https://[publicUrl]/auth/slack.callback'.

Type: null or (submodule)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.slackAuthentication.clientId
Authentication key.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.slackAuthentication.secretFile
File path containing the authentication secret.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.slackIntegration
For a complete Slack integration with search and posting to channels this configuration is also needed. See here for details: **https://wiki.generaloutline.com/share/be25efd1−b3ef−4450−b8e5−c4a4fc11e02a**

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.slackIntegration.appId
Application ID.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.slackIntegration.messageActions
Whether to enable message actions.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.slackIntegration.verificationTokenFile
File path containing the verification token.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.smtp
To support sending outgoing transactional emails such as “document updated” or “you’ve been invited” you’ll need to provide authentication for an SMTP server.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.smtp.fromEmail
Sender email in outgoing mail.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.smtp.host
Host name or IP address of the SMTP server.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.smtp.passwordFile
File path containing the password to authenticate with.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.smtp.port
TCP port of the SMTP server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.smtp.replyEmail
Reply address in outgoing mail.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.smtp.secure
Use a secure SMTP connection.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.smtp.tlsCiphers
Override SMTP cipher configuration.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.smtp.username

Username to authenticate with.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.sslCertFile

File path that contains the Base64−encoded certificate for HTTPS termination. This is only required if you do not use an external reverse proxy. See **the documentation**.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.sslKeyFile

File path that contains the Base64−encoded private key for HTTPS termination. This is only required if you do not use an external reverse proxy. See **the documentation**.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.storage

To support uploading of images for avatars and document attachments an s3−compatible storage can be provided. AWS S3 is recommended for redundancy however if you want to keep all file storage local an alternative such as **garage** can be used. Local filesystem storage can also be used.

A more detailed guide on setting up storage is available **here**.

Type: submodule

Example:

```
{
  accessKey = "...";
  secretKeyFile = "/somewhere";
  uploadBucketUrl = "https://garage.example.com";
  uploadBucketName = "outline";
  region = "us−east−1";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.storage.accelerateUrl

URL for AWS S3 **transfer acceleration**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.storage.accessKey
S3 access key.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.storage.acl
ACL setting.

Type: string

Default:

```
"private"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.storage.forcePathStyle
Force S3 path style.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.storage.localRootDir
If ‘storageType’ is ‘local’, this sets the parent directory under which all attachments/images go.

Type: string

Default:

```
"/var/lib/outline/data"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.storage.region
AWS S3 region name.

Type: string

Default:

```
"xx−xxxx−x"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.storage.secretKeyFile
File path that contains the S3 secret key.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.storage.storageType
File storage type, it can be local or s3.

Type: one of “local”, “s3”

Default:

```
"s3"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.storage.uploadBucketName
Name of the bucket where uploads should be stored.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.storage.uploadBucketUrl
URL endpoint of an S3−compatible API where uploads should be stored.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.storage.uploadMaxSize
Maxmium file size for uploads.

Type: signed integer

Default:

```
26214400
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.user
User under which the service should run. If this is the default value, the user will be created, with the specified group as the primary group.

Type: string

Default:

```
"outline"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.outline.utilsSecretFile
File path that contains the utility secret key. If the file does not exist, a new key will be generated and saved here.

Type: string

Default:

```
"/var/lib/outline/utils_secret"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/outline.nix>

services.overseerr.enable

Whether to enable Overseerr, a request management and media discovery tool for the Plex ecosystem.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/overseerr.nix>

services.overseerr.package

The overseerr package to use.

Type: package

Default:

```
pkgs.overseerr
```

Declared by:

<nixpkgs/nixos/modules/services/misc/overseerr.nix>

services.overseerr.openFirewall

Open a port in the firewall for the Overseerr web interface.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/overseerr.nix>

services.overseerr.port

The port which the Overseerr web UI should listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5055
```

Declared by:

<nixpkgs/nixos/modules/services/misc/overseerr.nix>

services.owamp.enable

Whether to enable OWAMP server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/owamp.nix>

services.owncast.enable

Whether to enable owncast, a video live streaming solution.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/owncast.nix>

services.owncast.dataDir

The directory where owncast stores its data files. If left as the default value this directory will automatically be created before the owncast server starts, otherwise the sysadmin is responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: string

Default:

```
"/var/lib/owncast"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/owncast.nix>

services.owncast.group

Group under which owncast runs.

Type: string

Default:

```
"owncast"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/owncast.nix>

services.owncast.listen

The IP address to bind the owncast web server to.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/owncast.nix>

services.owncast.openFirewall

Open the appropriate ports in the firewall for owncast.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/owncast.nix>

services.owncast.port
TCP port where owncast web−gui listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/misc/owncast.nix>

services.owncast.rtmp−port
TCP port where owncast rtmp service listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1935
```

Declared by:
<nixpkgs/nixos/modules/services/misc/owncast.nix>

services.owncast.user
User account under which owncast runs.

Type: string

Default:

```
"owncast"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/owncast.nix>

services.oxidized.enable
Whether to enable the oxidized configuration backup service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/admin/oxidized.nix>

services.oxidized.package
The oxidized package to use.

Type: package

Default:

```
pkgs.oxidized
```

Declared by:
<nixpkgs/nixos/modules/services/admin/oxidized.nix>

services.oxidized.configFile

Path to the oxidized configuration file.

Type: null or absolute path

Default:

```
null
```

Example:

```
pkgs.writeText "oxidized-config.yml" ''
  ---
  debug: true
  use_syslog: true
  input:
    default: ssh
    ssh:
      secure: true
  interval: 3600
  model_map:
    dell: powerconnect
    hp: procurve
  source:
    default: csv
    csv:
      delimiter: !ruby/regexp /:/
      file: "/var/lib/oxidized/.config/oxidized/router.db"
      map:
        name: 0
        model: 1
        username: 2
        password: 3
  pid: "/var/lib/oxidized/.config/oxidized/pid"
  rest: 127.0.0.1:8888
  retries: 3
  # ... additional config
```

Declared by:

<nixpkgs/nixos/modules/services/admin/oxidized.nix>

services.oxidized.dataDir

State directory for the oxidized service.

Type: absolute path

Default:

```
"/var/lib/oxidized"
```

Declared by:

<nixpkgs/nixos/modules/services/admin/oxidized.nix>

services.oxidized.group

Group under which the oxidized service runs.

Type: string

Default:

```
"oxidized"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/oxidized.nix>

services.oxidized.routerDB
Path to the file/database which contains the targets for oxidized.

Type: null or absolute path

Default:

```
null
```

Example:

```
pkgs.writeText "oxidized-router.db" ''
  hostname-sw1:powerconnect:username1:password2
  hostname-sw2:procurve:username2:password2
  # ... additional hosts
```

Declared by:
<nixpkgs/nixos/modules/services/admin/oxidized.nix>

services.oxidized.user
User under which the oxidized service runs.

Type: string

Default:

```
"oxidized"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/oxidized.nix>

services.pacemaker.enable
Whether to enable pacemaker.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/pacemaker/default.nix>

services.pacemaker.package
The pacemaker package to use.

Type: package

Default:

```
pkgs.pacemaker
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/pacemaker/default.nix>

services.pairdrop.enable
Whether to enable pairdrop.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pairdrop.nix>

services.pairdrop.package
The pairdrop package to use.

Type: package

Default:

```
pkgs.pairdrop
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pairdrop.nix>

services.pairdrop.environment
Additional configuration (environment variables) for PairDrop, see **https://github.com/schlagmichdoch/PairDrop/blob/master/docs/host−your−own.md#environment−variables** for supported values.

Type: open submodule of attribute set of (boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  BLUESKY_BUTTON_ACTIVE = false;
  CUSTOM_BUTTON_ACTIVE = false;
  DEBUG_MODE = true;
  DONATION_BUTTON_ACTIVE = false;
  IPV6_LOCALIZE = 4;
  MASTODON_BUTTON_ACTIVE = false;
  PRIVACYPOLICY_BUTTON_ACTIVE = false;
  RATE_LIMIT = 1;
  RTC_CONFIG = "/etc/pairdrop/rtc−config.json";
  SIGNALING_SERVER = "pairdrop.net";
  TWITTER_BUTTON_ACTIVE = false;
  WS_FALLBACK = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pairdrop.nix>

services.pairdrop.port
The port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Example:

```
3010
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pairdrop.nix>

services.pairdrop.rtcConfig

Configuration for STUN/TURN servers. This is converted to JSON and written into a file automatically. If you want to provide a file path instead, set 'RTC_CONFIG' in **services.pairdrop.environment**.

Type: JSON value

Default:

```
null
```

Example:

```
{
  iceServers = [
    {
      urls = "stun:stun.example.com:19302";
    }
  ];
  sdpSemantics = "unified-plan";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/pairdrop.nix>

services.paisa.enable

Whether to enable Paisa personal finance manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paisa.nix>

services.paisa.package

The paisa package to use.

Type: package

Default:

```
pkgs.paisa
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paisa.nix>

services.paisa.host

Host bind IP address.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paisa.nix>

services.paisa.mutableSettings

Allow changes made on the web interface to persist between service restarts.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paisa.nix>

services.paisa.openFirewall

Open ports in the firewall for the Paisa web server.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paisa.nix>

services.paisa.port

Port to serve Paisa on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7500
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paisa.nix>

services.paisa.settings

Paisa configuration. Please refer to **https://paisa.fyi/reference/config/** for details.

On start and if ‘mutableSettings’ is ‘true’, these options are merged into the configuration file on start, taking precedence over configuration changes made on the web interface.

Type: null or (open submodule of (YAML 1.1 value))

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paisa.nix>

services.paisa.settings.dataDir

Path to paisa data directory.

Type: string

Default:

```
"/var/lib/paisa/"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paisa.nix>

services.paisa.settings.dbFile

Filename of the Paisa database.

Type: string

Default:

```
"paisa.sqlite3"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/paisa.nix>

services.paisa.settings.journalFile
Filename of the main journal / ledger file.

Type: string

Default:

```
"main.ledger"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/paisa.nix>

services.pangolin.enable
Whether to enable Pangolin reverse proxy server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pangolin.nix>

services.pangolin.package
The fosrl−pangolin package to use.

Type: package

Default:

```
pkgs.fosrl-pangolin
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pangolin.nix>

services.pangolin.baseDomain
Your base fully qualified domain name (without any subdomains).

Type: null or string

Default:

```
null
```

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pangolin.nix>

services.pangolin.dashboardDomain
The domain where the application will be hosted. This is used for many things, including generating links. You can run Pangolin on a subdomain or root domain. Do not prefix with ‘http’ or ‘https’.

Type: string

Default:

```
"pangolin.\${config.services.pangolin.baseDomain}"
```

Example:

```
"auth.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pangolin.nix>

services.pangolin.dataDir
Path to variable state data directory for Pangolin.

Type: string

Default:

```
"/var/lib/pangolin"
```

Example:

```
"/srv/pangolin"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pangolin.nix>

services.pangolin.dnsProvider
The DNS provider Traefik will request wildcard certificates from. See the **Traefik Documentation** for more information.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pangolin.nix>

services.pangolin.environmentFile
Path to a file containing sensitive environment variables for Pangolin. See the **Pangolin Documentation** for more information. These will overwrite anything defined in the config. The file should contain environment−variable assignments like:

```
SERVER_SECRET=1234567890abc
```

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/nixos/secrets/pangolin.env"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pangolin.nix>

services.pangolin.letsEncryptEmail
An email address for SSL certificate registration with Let’s Encrypt. This should be an email you have access to.

Type: null or string

Default:

```
config.security.acme.defaults.email
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pangolin.nix>

services.pangolin.openFirewall
Whether to enable opening TCP ports 80 and 443, and UDP port 51820 in the firewall for the Pangolin service(s).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pangolin.nix>

services.pangolin.settings
Additional attributes to be merged with the configuration options and written to Pangolin's *config.yml* file.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  app = {
    save_logs = true;
  };
  domains = {
    domain1 = {
      prefer_wildcard_cert = true;
    };
  };
  server = {
    external_port = 3007;
    internal_port = 3008;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pangolin.nix>

services.pantalaimon−headless.instances
Declarative instance config.

Note: to use pantalaimon interactively, e.g. for a Matrix client which does not support End−to−end encryption (like 'fractal'), refer to the home−manager module.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/pantalaimon.nix>

services.pantalaimon-headless.instances.<name>.dataPath
The directory where ‘pantalaimon’ should store its state such as the database file.

Type: absolute path

Default:

```
"/var/lib/pantalaimon-‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/pantalaimon.nix>

services.pantalaimon-headless.instances.<name>.extraSettings
Extra configuration options. See **pantalaimon(5)** for available options.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/pantalaimon.nix>

services.pantalaimon-headless.instances.<name>.homeserver
The URI of the homeserver that the ‘pantalaimon’ proxy should forward requests to, without the matrix API path but including the http(s) schema.

Type: string

Example:

```
"https://matrix.org"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/pantalaimon.nix>

services.pantalaimon-headless.instances.<name>.listenAddress
The address where the daemon will listen to client connections for this homeserver.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/pantalaimon.nix>

services.pantalaimon-headless.instances.<name>.listenPort
The port where the daemon will listen to client connections for this homeserver. Note that the listen address/port combination needs to be lib.unique between different homeservers.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8009
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/pantalaimon.nix>

services.pantalaimon−headless.instances.<name>.logLevel
Set the log level of the daemon.

Type: one of “info”, “warning”, “error”, “debug”

Default:

```
"warning"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/pantalaimon.nix>

services.pantalaimon−headless.instances.<name>.ssl
Whether or not SSL verification should be enabled for outgoing connections to the homeserver.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/pantalaimon.nix>

services.pantheon.apps.enable
Whether to enable Pantheon default applications.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/pantheon.nix>

services.pantheon.contractor.enable
Whether to enable contractor, a desktop−wide extension service used by Pantheon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/pantheon.nix>

services.pantheon.parental−controls.enable
Whether to enable Pantheon parental controls daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/pantheon.nix>

services.paperless.enable
Whether to enable Paperless−ngx.

When started, the Paperless database is automatically created if it doesn't exist and updated if the Paperless package has changed. Both tasks are achieved by running a Django migration.

A script to manage the Paperless−ngx instance (by wrapping Django's manage.py) is available as 'paperless−manage'.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.package
The paperless−ngx package to use.

Type: package

Default:

```
pkgs.paperless-ngx
```

Declared by:
<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.address
Web interface address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.configureNginx
Whether to configure nginx as a reverse proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.configureTika
Whether to configure Tika and Gotenberg to process Office and e−mail files with OCR.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.consumptionDir
Directory from which new documents are imported.

Type: string

Default:

```
"${dataDir}/consume"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.consumptionDirIsPublic
Whether all users can write to the consumption dir.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.dataDir
Directory to store the Paperless data.

Type: string

Default:

```
"/var/lib/paperless"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.database.createLocally
Configure local PostgreSQL database server for Paperless.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.domain
Domain under which paperless will be available.

Type: null or string

Default:

```
null
```

Example:

```
"paperless.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.environmentFile

Path to a file containing extra paperless config options in the systemd ‘EnvironmentFile’ format. Refer to the **documentation** for config options.

This can be used to pass secrets to paperless without putting them in the Nix store.

To set a database password, point ‘environmentFile’ at a file containing:

```
PAPERLESS_DBPASS=<pass>
```

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/paperless"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.exporter.enable

Whether to enable regular automatic document exports.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.exporter.directory

Directory to store export.

Type: string

Default:

```
${config.services.paperless.dataDir}/export
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.exporter.onCalendar

When to run the exporter. See **systemd.time**(7).

‘null’ disables the timer; allowing you to run the ‘paperless−exporter’ service through other means.

Type: null or string

Default:

```
"01:30:00"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.exporter.settings

Settings to pass to the document exporter as CLI arguments.

Type: attribute set of anything

Default:

```
{
  compare-checksums = true;
  delete = true;
  no-color = true;
  no-progress-bar = true;
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.manage

The package derivation for the ‘paperless-manage’ wrapper script. Useful for other modules that need to add this specific script to a service’s PATH.

Type: package *(read only)*

Declared by:

<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.mediaDir

Directory to store the Paperless documents.

Type: string

Default:

```
"${dataDir}/media"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.openMPThreadingWorkaround

Whether to enable a workaround for document classifier timeouts.

Paperless uses OpenBLAS via scikit-learn for document classification.

The default is to use threading for OpenMP but this would cause the document classifier to spin on one core seemingly indefinitely if there are large amounts of classes per classification; causing it to effectively never complete due to running into timeouts.

This sets ‘OMP_NUM_THREADS’ to ‘1’ in order to mitigate the issue. See https://github.com/NixOS/nixpkgs/issues/240591 for more information .

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.passwordFile

A file containing the superuser password.

A superuser is required to access the web interface. If unset, you can create a superuser manually by running ‘paperless−manage createsuperuser’.

The default superuser name is ‘admin’. To change it, set option **settings.PAPERLESS_ADMIN_USER**. WARNING: When changing the superuser name after the initial setup, the old superuser will continue to exist.

To disable login for the web interface, set the following: ‘settings.PAPERLESS_AUTO_LOGIN_USERNAME = "admin";’. WARNING: Only use this on a trusted system without internet access to Paperless.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/paperless−password"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.port

Web interface port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
28981
```

Declared by:

<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.settings

Extra paperless config options.

See **the documentation** for available options.

Note that some settings such as ‘PAPERLESS_CONSUMER_IGNORE_PATTERN’ expect JSON values. Settings declared as lists or attrsets will automatically be serialised into JSON strings for your convenience.

Type: open submodule of attribute set of (boolean or floating point number or signed integer or string or absolute path or package or list of (boolean or floating point number or signed integer or string or absolute path or package) or attribute set of (boolean or floating point number or signed integer or string or absolute path or package))

Default:

```
{ }
```

Example:

```
{
  PAPERLESS_CONSUMER_IGNORE_PATTERN = [
    ".DS_STORE/*"
    "desktop.ini"
  ];
  PAPERLESS_OCR_LANGUAGE = "deu+eng";
  PAPERLESS_OCR_USER_ARGS = {
    optimize = 1;
```

```
    pdfa_image_compression = "lossless";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.paperless.user
User under which Paperless runs.

Type: string

Default:

```
"paperless"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/paperless.nix>

services.papra.enable
Whether to enable Papra.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/papra.nix>

services.papra.package
The papra package to use.

Type: package

Default:

```
pkgs.papra
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/papra.nix>

services.papra.environment
Environment variables to set for the service.

Type: attribute set of (string or signed integer or floating point number or boolean or absolute path or package)

Default:

```
{
  DATABASE_URL = "file:/var/lib/papra/db.sqlite";
  DOCUMENT_STORAGE_FILESYSTEM_ROOT = "/var/lib/papra/local-documen \
ts";
  PORT = 1221;
  SERVER_SERVE_PUBLIC_DIR = true;
}
```

Example:

```
{
  PORT = 1221;
```

```
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/papra.nix>

services.papra.environmentFile
Environment file, usefult to provide secrets to the service

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/papra.nix>

services.papra.group
If the default user “papra” is configured then this is the primary group of that user.

Type: string

Default:

```
"papra"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/papra.nix>

services.papra.user
User under which Papra runs.

Type: string

Default:

```
"papra"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/papra.nix>

services.paretosecurity.enable
Whether to enable **ParetoSecurity**

agent and its root helper.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/paretosecurity.nix>

services.paretosecurity.package
The paretosecurity package to use.

Type: package

Default:

```
pkgs.paretosecurity
```

Declared by:
<nixpkgs/nixos/modules/services/security/paretosecurity.nix>

services.paretosecurity.trayIcon
Set to false to disable the tray icon and run as a CLI tool only.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/paretosecurity.nix>

services.paretosecurity.users
Per−user Pareto Security configuration.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/paretosecurity.nix>

services.paretosecurity.users.<name>.inviteId
A unique ID that links the agent to Pareto Cloud. Get it from the Join Team page on ‘https://cloud.paretosecurity.com/team/join/xxxxxxxx−xxxx−xxxx−xxxx−xxxxxxxxxxxx’. In Step 2, under Linux tab, enter your email then copy it from the generated command.

Type: string

Example:

```
"xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx"
```

Declared by:
<nixpkgs/nixos/modules/services/security/paretosecurity.nix>

services.parsedmarc.enable
Whether to enable parsedmarc, a DMARC report monitoring service .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.provision.elasticsearch
Whether to set up and use a local instance of Elasticsearch.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.provision.geoIp
Whether to enable and configure the **geoipupdate** service to automatically fetch GeoIP databases. Not crucial, but recommended for full functionality.

To finish the setup, you need to manually set the **services.geoipupdate.settings.AccountID** and **services.geoipupdate.settings.LicenseKey** options.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.provision.grafana.dashboard
Whether the official parsedmarc grafana dashboard should be provisioned to the local grafana instance.

Type: boolean

Default:

```
config.services.grafana.enable
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.provision.grafana.datasource
Whether the automatically provisioned Elasticsearch instance should be added as a grafana datasource. Has no effect unless **services.parsedmarc.provision.elasticsearch** is also enabled.

Type: boolean

Default:

```
config.services.parsedmarc.provision.elasticsearch && config.servic \
es.grafana.enable
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.provision.localMail.enable
Whether Postfix and Dovecot should be set up to receive mail locally. parsedmarc will be configured to watch the local inbox as the automatically created user specified in **services.parsedmarc.provision.localMail.recipientName**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.provision.localMail.hostname
The hostname to use when configuring Postfix.

Should correspond to the host's fully qualified domain name and the domain part of the email address which receives DMARC reports. You also have to set up an MX record pointing to this domain name.

Type: string

Default:

```
config.networking.fqdn
```

Example:

```
"monitoring.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.provision.localMail.recipientName

The DMARC mail recipient name, i.e. the name part of the email address which receives DMARC reports.

A local user with this name will be set up and assigned a randomized password on service start.

Type: string

Default:

```
"dmarc"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings

Configuration parameters to set in *parsedmarc.ini*. For a full list of available parameters, see **https://domainaware.github.io/parsedmarc/#configuration−file**.

Settings containing secret data should be set to an attribute set containing the attribute '_secret' − a string pointing to a file containing the value the option should be set to. See the example to get a better picture of this: in the resulting *parsedmarc.ini* file, the 'splunk_hec.token' key will be set to the contents of the */run/keys/splunk_token* file.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Example:

```
{
  imap = {
    host = "imap.example.com";
    user = "alice@example.com";
    password = { _secret = "/run/keys/imap_password" };
  };
  mailbox = {
    watch = true;
    batch_size = 30;
  };
  splunk_hec = {
    url = "https://splunkhec.example.com";
    token = { _secret = "/run/keys/splunk_token" };
    index = "email";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.elasticsearch.cert_path
The path to a TLS certificate bundle used to verify the server's certificate.

Type: absolute path

Default:

```
config.security.pki.caBundle
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.elasticsearch.hosts
A list of Elasticsearch hosts to push parsed reports to.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.elasticsearch.password
The password to use when connecting to Elasticsearch, if required.

Always handled as a secret whether the value is wrapped in a '{ _secret = ...; }' attrset or not (refer to **services.parsedmarc.settings** for details).

Type: null or absolute path or attribute set of absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.elasticsearch.ssl
Whether to use an encrypted SSL/TLS connection.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.elasticsearch.user
Username to use when connecting to Elasticsearch, if required.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.general.save_aggregate
Save aggregate report data to Elasticsearch and/or Splunk.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.general.save_forensic
Save forensic report data to Elasticsearch and/or Splunk.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.imap.host
The IMAP server hostname or IP address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.imap.password
The IMAP server password.

Always handled as a secret whether the value is wrapped in a '{ _secret = ...; }' attrset or not (refer to **services.parsedmarc.settings** for details).

Type: null or absolute path or attribute set of absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.imap.port
The IMAP server port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
993
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.imap.ssl
Use an encrypted SSL/TLS connection.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.imap.user

The IMAP server username.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.mailbox.delete

Delete messages after processing them, instead of archiving them.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.mailbox.watch

Use the IMAP IDLE command to process messages as they arrive.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.smtp.from

The ‘From’ address to use for the outgoing mail.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.smtp.host

The SMTP server hostname or IP address.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.smtp.password

The SMTP server password.

Always handled as a secret whether the value is wrapped in a ‘{ _secret = ...; }’ attrset or not (refer to **services.parsedmarc.settings** for details).

Type: null or absolute path or attribute set of absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.smtp.port
The SMTP server port.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.smtp.ssl
Use an encrypted SSL/TLS connection.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.smtp.to
The addresses to send outgoing mail to.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.parsedmarc.settings.smtp.user
The SMTP server username.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/parsedmarc.nix>

services.part−db.enable
Whether to enable PartDB.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/part−db.nix>

services.part−db.enableNginx

Whether to enable nginx or not. If enabled, an nginx virtual host will be created for access to part−db. If not enabled, then you may use '${config.services.part−db.package}/public' as your document root in whichever webserver you wish to setup.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/part−db.nix>

services.part−db.enablePostgresql

Whether to configure the postgresql database for part−db. If enabled, a database and user will be created for part−db.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/part−db.nix>

services.part−db.package

The part−db package to use.

Type: package

Default:

```
pkgs.part−db
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/part−db.nix>

services.part−db.phpPackage

The php package to use.

Type: package

Default:

```
pkgs.php
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/part−db.nix>

services.part−db.poolConfig

Options for the PartDB PHP pool. See the documentation on <literal>php−fpm.conf</literal> for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  "pm" = "dynamic";
  "pm.max_children" = 32;
  "pm.start_servers" = 2;
  "pm.min_spare_servers" = 2;
  "pm.max_spare_servers" = 4;
  "pm.max_requests" = 500;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/part−db.nix>

services.part−db.settings
Options for part−db configuration. Refer to **https://github.com/Part−DB/Part−DB−server/blob/master/.env** for details on supported values. All <option>_FILE values supported by upstream are supported here.

Type: open submodule of attribute set of (string or signed integer or boolean)

Default:

```
{ }
```

Example:

```
{
  DATABASE_URL = "postgresql://db_user@localhost/db_name?serverVers \
ion=16.6&charset=utf8&host=/var/run/postgresql";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/part−db.nix>

services.part−db.settings.DATABASE_URL
The postgresql database server to connect to. Defauls to local postgresql unix socket

Type: string

Default:

```
"postgresql://part−db@localhost/part−db?serverVersion=\${config. \
services.postgresql.package.version}&host=/run/postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/part−db.nix>

services.part−db.virtualHost
The virtualHost at which you wish part−db to be served.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/part−db.nix>

services.passSecretService.enable
Whether to enable pass secret service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/pass−secret−service.nix>

services.passSecretService.package

The pass−secret−service package to use.

Type: package

Default:

```
pkgs.pass-secret-service
```

Example:

```
pass-secret-service.override { python3 = pkgs.python315 }
```

Declared by:

<nixpkgs/nixos/modules/services/security/pass−secret−service.nix>

services.patroni.enable

Whether to enable Patroni.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.patroni.dataDir

Folder where Patroni data will be written, this is where the pgpass password file will be written.

Type: absolute path

Default:

```
"/var/lib/patroni"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.patroni.environmentFiles

Environment variables made available to Patroni as files content, useful for providing secrets from files.

Type: attribute set of (null or string or absolute path or package)

Default:

```
{ }
```

Example:

```
{
  PATRONI_REPLICATION_PASSWORD = "/secret/file";
  PATRONI_SUPERUSER_PASSWORD = "/secret/file";
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.patroni.group

The group for the service. If left as the default value this group will automatically be created, otherwise the sysadmin is responsible for ensuring the group exists.

Type: string

Default:

```
"patroni"
```

Example:

```
"postgres"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.patroni.name
The name of the host. Must be unique for the cluster.

Type: string

Example:

```
"node1"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.patroni.namespace
Path within the configuration store where Patroni will keep information about the cluster.

Type: string

Default:

```
"/service"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.patroni.nodeIp
IP address of this node.

Type: string

Example:

```
"192.168.1.1"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.patroni.otherNodesIps
IP addresses of the other nodes.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "192.168.1.2"
  "192.168.1.3"
]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.patroni.postgresqlDataDir

The data directory for PostgreSQL. If left as the default value this directory will automatically be created before the PostgreSQL server starts, otherwise the sysadmin is responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: absolute path

Default:

```
"/var/lib/postgresql/${config.services.patroni.postgresqlPackage.ps \
qlSchema}"
```

Example:

```
"/var/lib/postgresql/14"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.patroni.postgresqlPackage

PostgreSQL package to use. Plugins can be enabled like this ‘pkgs.postgresql_14.withPackages (p: [p.pg_safeupdate p.postgis])’.

Type: package

Example:

```
pkgs.postgresql_14
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.patroni.postgresqlPort

The port on which PostgreSQL listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5432
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.patroni.restApiPort

The port on Patroni’s REST api listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8008
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.patroni.scope

Cluster name.

Type: string

Example:

```
"cluster1"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.patroni.settings

The primary patroni configuration. See the **documentation** for possible values. Secrets should be passed in by using the 'environmentFiles' option.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  bootstrap = {
    initdb = [
      "encoding=UTF-8"
      "data-checksums"
    ];
  };
  postgresql = {
    parameters = {
      unix_socket_directories = "/tmp";
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.patroni.softwareWatchdog

This will configure Patroni to use the software watchdog built into the Linux kernel as described in the **documentation**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.patroni.user

The user for the service. If left as the default value this user will automatically be created, otherwise the sysadmin is responsible for ensuring the user exists.

Type: string

Default:

```
"patroni"
```

Example:

```
"postgres"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/patroni/default.nix>

services.pcscd.enable

Whether to enable PCSC−Lite daemon, to access smart cards using SCard API (PC/SC).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/pcscd.nix>

services.pcscd.extendReaderNames

String to append to every reader name. The special variable '$HOSTNAME' will be expanded to the current host name.

Type: null or string

Default:

```
null
```

Example:

```
" $HOSTNAME"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/pcscd.nix>

services.pcscd.extraArgs

Extra command line arguments to be passed to the PCSC daemon.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/pcscd.nix>

services.pcscd.ignoreReaderNames

List of reader name patterns for the PCSC daemon to ignore.

For more precise control, readers can be ignored through udev rules (cf. **services.udev.extraRules**) by setting the 'PCSCLITE_IGNORE' property, for example:

```
ACTION!="remove|unbind", SUBSYSTEM=="usb", ATTR{idVendor}=="20a0",  \
ENV{PCSCLITE_IGNORE}="1"
```

Type: list of string matching the pattern [^:]+

Default:

```
[ ]
```

Example:

```
[
  "Nitrokey"
  "YubiKey"
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/pcscd.nix>

services.pcscd.plugins
Plugin packages to be used for PCSC−Lite.

Type: list of package

Default:

```
[ pkgs.ccid ]
```

Example:

```
[ pkgs.pcsc−cyberjack ]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/pcscd.nix>

services.pcscd.readerConfigs
Configuration for devices that aren't hotpluggable.

See **reader.conf**(5) for valid options.

Type: list of strings concatenated with "\n"

Default:

```
[ ]
```

Example:

```
[
  ''
    FRIENDLYNAME      "Some serial reader"
    DEVICENAME        /dev/ttyS0
    LIBPATH           /path/to/serial_reader.so
    CHANNELID         1
  ''
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/pcscd.nix>

services.pdfding.enable
Whether to enable PdfDing service.

To use the pdfding−manage CLI, add your user to the pdfding group: users.users.<youruser>.extraGroups = ["pdfding"];

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.package
The pdfding package to use.

Type: package

Default:

```
pkgs.pdfding
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.allowedHosts
Domains where PdfDing is allowed to run

Type: list of string

Default:

```
[
  "127.0.0.1"
  "localhost"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.backup.enable
Automatic backup of important data to a AWS S3 (or compatible) instance.

When enabled and properly configured via environment variables, important data is periodically uploaded to the specified s3 instance via cronjob.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.backup.endpoint
The s3 endpoint for backups

Type: null or string

Default:

```
null
```

Example:

```
"127.0.0.1:9000"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.backup.schedule
The cron schedule for the consume task to trigger. The format is “minute hour day month day_of_week” Read

- https://github.com/mrmn2/PdfDing/blob/d0f21ec2f9fbee4b1a2f6b7e0e6c7ea7784ab1bc/pdfding/base/task_helpers.py#L5
- https://huey.readthedocs.io/en/latest/api.html#crontab

Type: string

Default:

```
"0 2 * * *"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.consume.enable
Bulk PDF import from consume directory.

When enabled, administrators can create per−user directories like /var/lib/pdfding/consume/<user_id> with permissions allowing the pdfding user to read and write. PDFs placed in these directories are automatically imported into user accounts.

PDFs are imported periodically via cronjob and successfully imported files are automatically deleted from the consume directory.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.consume.schedule
The cron schedule for the consume task to trigger. The format is “minute hour day month day_of_week” Read

- https://github.com/mrmn2/PdfDing/blob/d0f21ec2f9fbee4b1a2f6b7e0e6c7ea7784ab1bc/pdfding/base/task_helpers.py#L5
- https://huey.readthedocs.io/en/latest/api.html#crontab

Type: string

Default:

```
"*/5 * * * *"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.database.createLocally
Whether to create a local PostgreSQL database automatically

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.database.host
PostgreSQL host

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.database.name
PostgreSQL database name

Type: string

Default:

```
"pdfding"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.database.passwordFile
File containing POSTGRES_PASSWORD. Consider using a secret managing scheme such as ‘agenix’ or ‘sops−nix’ to generate this file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/pdfding−db−password"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.database.port
PostgreSQL port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5432
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.database.type
Database type to use

Type: one of “sqlite”, “postgres”

Default:

```
"sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.database.user
PostgreSQL user

Type: string

Default:

```
"pdfding"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.envFiles
Environment variable files

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.extraEnvironment
Additional environment variables

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.group
Group under which PdfDing runs

Type: string

Default:

```
"pdfding"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.gunicorn.extraArgs
Command line arguments passed to Gunicorn server.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.hostName
Listen address for PdfDing

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"pdfding.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.openFirewall
Open ports in the firewall for the PdfDing web interface.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.port
Port on which PdfDing listens

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.secretKeyFile
File containing the Django SECRET_KEY. Consider using a secret managing scheme such as ‘agenix’ or ‘sops−nix’ to generate this file.

Type: absolute path

Default:

```
null
```

Example:

```
"/run/secrets/pdfding−secret−key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdfding.user
User account under which PdfDing runs

Type: string

Default:

```
"pdfding"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pdfding.nix>

services.pdns−recursor.enable
Whether to enable PowerDNS Recursor, a recursive DNS server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pdns−recursor.nix>

services.pdns−recursor.api.address

IP address Recursor REST API server will bind to.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/pdns−recursor.nix>

services.pdns−recursor.api.allowFrom

IP address ranges of clients allowed to make API requests.

Type: list of string

Default:

```
[
  "127.0.0.1"
  "::1"
]
```

Example:

```
[
  "0.0.0.0/0"
  "::/0"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/pdns−recursor.nix>

services.pdns−recursor.api.port

Port number Recursor REST API server will bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8082
```

Declared by:

<nixpkgs/nixos/modules/services/networking/pdns−recursor.nix>

services.pdns−recursor.dns.address

IP addresses Recursor DNS server will bind to.

Type: string or list of string

Default:

```
[
  "::"
  "0.0.0.0"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/pdns−recursor.nix>

services.pdns−recursor.dns.allowFrom

IP address ranges of clients allowed to make DNS queries.

Type: list of string

Default:

```
[
  "127.0.0.0/8"
  "10.0.0.0/8"
  "100.64.0.0/10"
  "169.254.0.0/16"
  "192.168.0.0/16"
  "172.16.0.0/12"
  "::1/128"
  "fc00::/7"
  "fe80::/10"
]
```

Example:

```
[
  "0.0.0.0/0"
  "::/0"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/pdns−recursor.nix>

services.pdns−recursor.dns.port

Port number Recursor DNS server will bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
53
```

Declared by:

<nixpkgs/nixos/modules/services/networking/pdns−recursor.nix>

services.pdns−recursor.dnssecValidation

Controls the level of DNSSEC processing done by the PowerDNS Recursor. See **https://doc.powerdns.com/md/recursor/dnssec/** for a detailed explanation.

Type: one of “off”, “process−no−validate”, “process”, “log−fail”, “validate”

Default:

```
"validate"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/pdns−recursor.nix>

services.pdns−recursor.exportHosts

Whether to export names and IP addresses defined in /etc/hosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pdns−recursor.nix>

services.pdns−recursor.forwardZones
DNS zones to be forwarded to other authoritative servers.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pdns−recursor.nix>

services.pdns−recursor.forwardZonesRecurse
DNS zones to be forwarded to other recursive servers.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  eth = "[::1]:5353";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pdns−recursor.nix>

services.pdns−recursor.luaConfig
The content Lua configuration file for PowerDNS Recursor. See **https://doc.powerdns.com/recursor/lua−config/index.html**.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pdns−recursor.nix>

services.pdns−recursor.resolveNamecoin
Resolve ‘.bit’ top−level domains using ncdns and namecoin.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncdns.nix>

services.pdns−recursor.serveRFC1918
Whether to directly resolve the RFC1918 reverse−mapping domains: ‘10.in−addr.arpa’, ‘168.192.in−addr.arpa’, ‘16−31.172.in−addr.arpa’ This saves load on the AS112 servers.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pdns-recursor.nix>

services.pdns-recursor.settings
PowerDNS Recursor settings. Use this option to configure Recursor settings not exposed in a NixOS option or to bypass one. See the full documentation at **https://doc.powerdns.com/recursor/yamlsettings.html** for the available options.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  loglevel = 8;
  log-common-errors = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pdns-recursor.nix>

services.pdnsd.enable
Whether to enable pdnsd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pdnsd.nix>

services.pdnsd.cacheDir
Directory holding the pdnsd cache

Type: string

Default:

```
"/var/cache/pdnsd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pdnsd.nix>

services.pdnsd.extraConfig
Extra configuration directives that should be added to *pdnsd.conf*.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pdnsd.nix>

services.pdnsd.globalConfig

Global configuration that should be added to the global directory of *pdnsd.conf*.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/pdnsd.nix>

services.pdnsd.serverConfig

Server configuration that should be added to the server directory of *pdnsd.conf*.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/pdnsd.nix>

services.pdudaemon.enable

Whether to enable PDUDaemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/pdudaemon.nix>

services.pdudaemon.package

The pdudaemon package to use.

Type: package

Default:

```
pkgs.pdudaemon
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/pdudaemon.nix>

services.pdudaemon.bindAddress

Bind address for the PDUDaemon.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/pdudaemon.nix>

services.pdudaemon.listener

Which kind of listener to provide.

Type: one of “http”, “tcp”

Default:

```
"http"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/pdudaemon.nix>

services.pdudaemon.logLevel

PDUDaemon log level.

Type: one of “debug”, “info”, “warning”, “error”

Default:

```
"error"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/pdudaemon.nix>

services.pdudaemon.openFirewall

Whether to automatically open the PDUDaemon listen port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/pdudaemon.nix>

services.pdudaemon.pdus

Structural pdus section of PDUDaemon’s pdudaemon.conf. Refer to **https://github.com/pdudaemon/pdudaemon/blob/main/share/pdudaemon.conf** for more examples.

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  cbs350-poe-switch = {
    driver = "snmpv1";
    community = "private";
    oid = ".1.3.6.1.2.1.105.1.1.1.3.1.*;
    onsetting = 1;
    offsetting = 2;
  };
  energenie = {
    driver = "EG-PMS";
    device = "aa:bb:cc:xx:yy";
  };
  local = {
    driver = "localcmdline";
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/pdudaemon.nix>

services.pdudaemon.port
Port to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
16421
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/pdudaemon.nix>

services.peerflix.enable
Whether to enable peerflix service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/peerflix.nix>

services.peerflix.downloadDir
Peerflix temporary download directory.

Type: absolute path

Default:

```
"${config.services.peerflix.stateDir}/torrents"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/peerflix.nix>

services.peerflix.stateDir
Peerflix state directory.

Type: absolute path

Default:

```
"/var/lib/peerflix"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/peerflix.nix>

services.peering−manager.enable
Enable Peering Manager.

This module requires a reverse proxy that serves ‘/static’ separately. See this **example** on how to configure this.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peering−manager.nix>

services.peering−manager.enableLdap

Enable LDAP−Authentication for Peering Manager.

This requires a configuration file being pass through ‘ldapConfigPath’.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peering−manager.nix>

services.peering−manager.enableScheduledTasks

Set up **scheduled tasks**

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peering−manager.nix>

services.peering−manager.environmentFile

Environment file as defined in **systemd.exec**(5).

Secrets may be passed to the service without adding them to the world−readable Nix store, by specifying placeholder variables as the option value in Nix and setting these variables accordingly in the environment file.

```
  # snippet of peering−manager−related config
  services.peering−manager.settings.SOCIAL_AUTH_OIDC_SECRET = "$PM \
_OIDC_SECRET";

  # content of the environment file
  PM_OIDC_SECRET=topsecret
```

Note that this file needs to be available on the host on which ‘peering−manager’ is running.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/peering−manager.env"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peering−manager.nix>

services.peering−manager.extraConfig

Additional lines of configuration appended to the ‘configuration.py’. See the **documentation** for more possible options.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peering−manager.nix>

services.peering−manager.ldapConfigPath
Path to the Configuration−File for LDAP−Authentication, will be loaded as ‘ldap_config.py’. See the **documentation** for possible options.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peering−manager.nix>

services.peering−manager.listenAddress
Address the server will listen on.

Type: string

Default:

```
"[::1]"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peering−manager.nix>

services.peering−manager.peeringdbApiKeyFile
Path to a file containing the PeeringDB API key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peering−manager.nix>

services.peering−manager.plugins
List of plugin packages to install.

Type: function that evaluates to a(n) list of package

Default:

```
python3Packages: with python3Packages; [];
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peering−manager.nix>

services.peering−manager.port
Port the server will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8001
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peering−manager.nix>

services.peering−manager.secretKeyFile
Path to a file containing the secret key.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peering−manager.nix>

services.peering−manager.settings

Configuration options to set in ‘configuration.py’. See the **documentation** for more possible options.

Type: open submodule of attribute set of (Python value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peering−manager.nix>

services.peering−manager.settings.ALLOWED_HOSTS

A list of valid fully−qualified domain names (FQDNs) and/or IP addresses that can be used to reach the peering manager service.

Type: list of string

Default:

```
[
  "*"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peering−manager.nix>

services.peertube.enable

Whether to enable Peertube.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.enableWebHttps

Whether clients will access your PeerTube instance with HTTPS. Does NOT configure the PeerTube webserver itself to listen for incoming HTTPS connections.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.package

The peertube package to use.

Type: package

Default:

```
pkgs.peertube
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.configureNginx

Configure nginx as a reverse proxy for peertube.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.dataDirs

Allow access to custom data locations.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/opt/peertube/storage"
  "/var/cache/peertube"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.database.createLocally

Configure local PostgreSQL database server for PeerTube.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.database.host

Database host address or unix socket.

Type: string

Default:

```
if config.services.peertube.database.createLocally
then "/run/postgresql"
else null
```

Example:

```
"192.168.15.47"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.database.name

Database name.

Type: string

Default:

```
"peertube"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/peertube.nix>

services.peertube.database.passwordFile
Password for PostgreSQL database.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/peertube/password-postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/peertube.nix>

services.peertube.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5432
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/peertube.nix>

services.peertube.database.user
Database user.

Type: string

Default:

```
"peertube"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/peertube.nix>

services.peertube.group
Group under which Peertube runs.

Type: string

Default:

```
"peertube"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/peertube.nix>

services.peertube.listenHttp
The port that the local PeerTube web server will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9000
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/peertube.nix>

services.peertube.listenWeb

The public−facing port that PeerTube will be accessible at (likely 80 or 443 if running behind a reverse proxy). Clients will try to access PeerTube at this port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.localDomain

The domain serving your PeerTube instance.

Type: string

Example:

```
"peertube.example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.redis.enableUnixSocket

Use Unix socket.

Type: boolean

Default:

```
config.services.peertube.redis.createLocally
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.redis.createLocally

Configure local Redis server for PeerTube.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.redis.host

Redis host.

Type: null or string

Default:

```
if config.services.peertube.redis.createLocally && !config.services \
.peertube.redis.enableUnixSocket
then "127.0.0.1"
else null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.redis.passwordFile

Password for redis database.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/peertube/password-redis-db"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/peertube.nix>

services.peertube.redis.port

Redis port.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
if config.services.peertube.redis.createLocally && config.services. \
peertube.redis.enableUnixSocket
then null
else 6379
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/peertube.nix>

services.peertube.secrets.secretsFile

Secrets to run PeerTube. Generate one using ‘openssl rand -hex 32’

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/peertube"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/peertube.nix>

services.peertube.serviceEnvironmentFile

Set environment variables for the service. Mainly useful for setting the initial root password. For example write to file: PT_INITIAL_ROOT_PASSWORD=changeme

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/peertube/password-init-root"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/peertube.nix>

services.peertube.settings

Configuration for peertube.

Type: open submodule of (JSON value)

Example:

```
{
  listen = {
    hostname = "0.0.0.0";
  };
  log = {
    level = "debug";
  };
  storage = {
    tmp = "/opt/data/peertube/storage/tmp/";
    logs = "/opt/data/peertube/storage/logs/";
    cache = "/opt/data/peertube/storage/cache/";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.settings.video_transcription.enabled

Enable automatic transcription of videos.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.settings.video_transcription.engine_path

Custom engine path for local transcription.

Type: absolute path or string

Default:

```
if config.services.peertube.settings.video_transcription.enabled th \
en
  lib.getExe pkgs.whisper−ctranslate2
else
  "Set ‘services.peertube.settings.video_transcription.enabled = tr \
ue‘."
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.smtp.createLocally

Configure local Postfix SMTP server for PeerTube.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.smtp.passwordFile
Password for smtp server.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/peertube/password−smtp"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube.user
User account under which Peertube runs.

Type: string

Default:

```
"peertube"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peertube.nix>

services.peertube−runner.enable
Whether to enable peertube−runner.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peertube−runner.nix>

services.peertube−runner.enabledJobTypes
Job types that this runner will execute.

Type: non−empty (list of string)

Default:

```
[
  "vod−web−video−transcoding"
  "vod−hls−transcoding"
  "vod−audio−merge−transcoding"
  "live−rtmp−hls−transcoding"
  "video−studio−transcoding"
  "video−transcription"
]
```

Example:

```
[
  "video−transcription"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peertube−runner.nix>

services.peertube−runner.package
The runner package to use.

Type: package

Default:

```
pkgs.peertube.runner
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peertube−runner.nix>

services.peertube−runner.group
Group under which peertube−runner runs.

Type: string

Default:

```
"prunner"
```

Example:

```
"peertube−runner"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peertube−runner.nix>

services.peertube−runner.instancesToRegister
PeerTube instances to register this runner with.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  personal = {
    registrationTokenFile = "/run/secrets/my−peertube−instance−r \
egistration−token";
    runnerDescription = "Runner for video transcription";
    runnerName = "Transcription";
    url = "https://mypeertubeinstance.com";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peertube−runner.nix>

services.peertube−runner.instancesToRegister.<name>.registrationTokenFile
Path to a file containing a registration token for the PeerTube instance.

See how to generate registration tokens at **https://docs.joinpeertube.org/admin/remote−runners#manage−remote−runners**.

Type: absolute path

Example:

```
"/run/secrets/my−peertube−instance−registration−token"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peertube−runner.nix>

services.peertube−runner.instancesToRegister.<name>.runnerDescription
Runner description declared to the PeerTube instance.

Type: null or string

Default:

```
null
```

Example:

```
"Runner for video transcription"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peertube−runner.nix>

services.peertube−runner.instancesToRegister.<name>.runnerName
Runner name declared to the PeerTube instance.

Type: string

Example:

```
"Transcription"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peertube−runner.nix>

services.peertube−runner.instancesToRegister.<name>.url
URL of the PeerTube instance.

Type: string

Example:

```
"https://mypeertubeinstance.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peertube−runner.nix>

services.peertube−runner.settings
Configuration for peertube−runner.

See available configuration options at **https://docs.joinpeertube.org/maintain/tools#configuration**.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  jobs.concurrency = 4;
  ffmpeg = {
    threads = 0; # Let ffmpeg automatically choose.
    nice = 5;
  };
  transcription.model = "large−v3";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peertube−runner.nix>

services.peertube−runner.user
User account under which peertube−runner runs.

Type: string

Default:

```
"prunner"
```

Example:

```
"peertube−runner"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/peertube−runner.nix>

services.perses.enable
Whether to enable perses.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/perses.nix>

services.perses.package
The perses package to use.

Type: package

Default:

```
pkgs.perses
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/perses.nix>

services.perses.extraOptions
Additional options passed to perses daemon.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−web.telemetry−path=/metrics"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/perses.nix>

services.perses.listenAddress

Address to listen on. Empty string will listen on all interfaces.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/perses.nix>

services.perses.port

Perses Web interface port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/perses.nix>

services.perses.settings

Perses settings. See **https://perses.dev/perses/docs/configuration/configuration/** for available options. You can specify secret values in this configuration by setting ‘somevalue._secret = "/path/to/file"’ instead of setting ‘somevalue’ directly.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/perses.nix>

services.persistent−evdev.enable

Whether to enable virtual input devices that persist even if the backing device is hotplugged.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/persistent−evdev.nix>

services.persistent−evdev.devices

A set of virtual proxy device labels with backing physical device ids.

Physical devices should already exist in */dev/input/by−id/*. Proxy devices will be automatically given a ‘uinput−’ prefix.

See the **project page** for example configuration of virtual devices with libvirt and remember to add ‘uinput−*’ devices to the qemu ‘cgroup_device_acl’ list (see **virtualisation.libvirtd.qemu.verbatimConfig**).

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  persist-mouse0 = "usb-Logitech_G403_Prodigy_Gaming_Mouse_078738 \
533531-event-if01";
  persist-mouse1 = "usb-Logitech_G403_Prodigy_Gaming_Mouse_078738 \
533531-event-mouse";
  persist-mouse2 = "usb-Logitech_G403_Prodigy_Gaming_Mouse_078738 \
533531-if01-event-kbd";
  persist-keyboard0 = "usb-Microsoft_Natural®_Ergonomic_Keyboard_ \
4000-event-kbd";
  persist-keyboard1 = "usb-Microsoft_Natural®_Ergonomic_Keyboard_ \
4000-if01-event-kbd";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/persistent-evdev.nix>

services.pfix-srsd.enable
Whether to run the postfix sender rewriting scheme daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/pfix-srsd.nix>

services.pfix-srsd.configurePostfix
Whether to configure the required settings to use pfix-srsd in the local Postfix instance.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/pfix-srsd.nix>

services.pfix-srsd.domain
The domain for which to enable srs

Type: string

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/pfix-srsd.nix>

services.pfix-srsd.secretsFile
The secret data used to encode the SRS address. to generate, use a command like: ‘for n in $(seq 5); do dd if=/dev/urandom count=1 bs=1024 status=none | sha256sum | sed 's/ -$//' | sed 's/^/ /'; done’

Type: absolute path

Default:

```
"/var/lib/pfix-srsd/secrets"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/pfix−srsd.nix>

services.pgadmin.enable
Whether to enable PostgreSQL Admin 4.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgadmin.package
The pgadmin4 package to use.

Type: package

Default:

```
pkgs.pgadmin4
```

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgadmin.emailServer.enable
Whether to enable SMTP email server. This is necessary, if you want to use password recovery or change your own password.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgadmin.emailServer.address
SMTP server for email delivery

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgadmin.emailServer.passwordFile
Password for SMTP email account. NOTE: Should be string not a store path, to prevent the password from being world readable

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgadmin.emailServer.port
SMTP server port for email delivery

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
25
```

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgadmin.emailServer.sender
SMTP server sender email for email delivery. Some servers require this to be a valid email address from that server

Type: string

Example:

```
"noreply@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgadmin.emailServer.useSSL
Whether to enable SSL for connecting to the SMTP server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgadmin.emailServer.useTLS
Whether to enable TLS for connecting to the SMTP server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgadmin.emailServer.username
SMTP server username for email delivery

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgadmin.initialEmail
Initial email for the pgAdmin account

Type: string

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgadmin.initialPasswordFile
Initial password file for the pgAdmin account. Minimum length by default is 6. Please see 'services.pgadmin.minimumPasswordLength'. NOTE: Should be string not a store path, to prevent the password from being world readable

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgadmin.minimumPasswordLength
Minimum length of the password

Type: signed integer

Default:

```
6
```

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgadmin.openFirewall
Whether to enable firewall passthrough for pgadmin4.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgadmin.port
Port for pgadmin4 to run on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5050
```

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgadmin.settings
Settings for pgadmin4. **Documentation**

Type: attribute set of ((attribute set of ((list of (signed integer or boolean or string)) or attribute set of (signed integer or boolean or string) or signed integer or boolean or string)) or list of ((list of (signed integer or boolean or string)) or attribute set of (signed integer or boolean or string) or signed integer or boolean or string) or (list of (signed integer or boolean or string)) or attribute set of (signed integer or

boolean or string) or signed integer or boolean or string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/admin/pgadmin.nix>

services.pgbackrest.enable
Whether to enable pgBackRest.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.annotate
Options for the ‘annotate’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.archive−get
Options for the ‘archive−get’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.archive−push
Options for the ‘archive−push’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or

attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.backup
Options for the ‘backup’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.check
Options for the ‘check’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.expire
Options for the ‘expire’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.help
Options for the ‘help’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.info
Options for the ‘info’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.repo−get
Options for the ‘repo−get’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.repo−ls
Options for the ‘repo−ls’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.restore
Options for the ‘restore’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.server
Options for the ‘server’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.server−ping
Options for the ‘server−ping’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.stanza−create
Options for the ‘stanza−create’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.stanza−delete
Options for the ‘stanza−delete’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.stanza−upgrade
Options for the ‘stanza−upgrade’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.start
Options for the ‘start’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.stop
Options for the ‘stop’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.verify

Options for the ‘verify’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.commands.version

Options for the ‘version’ command.

An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.repos

An attribute set of repositories as described in: **https://pgbackrest.org/configuration.html#section−repository**

Each repository defaults to set ‘repo−host’ to the attribute’s name. The special value “localhost” will unset ‘repo−host’.

Note

The prefix ‘repoNNN−’ is added automatically. Example: Use ‘path’ instead of ‘repo1−path’.

Type: attribute set of (open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string))

Default:

```
{ }
```

Example:

```
{
  localhost.path = "/var/lib/backup";
  "backup.example.com".host-type = "tls";
}
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.repos.<name>.host
Repository host when operating remotely

Type: null or string

Default:

```
name
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.repos.<name>.sftp−host
SFTP repository host

Type: null or string

Default:

```
name
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.repos.<name>.sftp−private−key−file
SFTP private key file.

The file must be accessible by both the pgbackrest and the postgres users.

Type: null or absolute path not in the Nix store

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.settings
An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All globally available options, i.e. all except stanza options, can be used. Repository options should be set via ‘repos’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Example:

```
{
  process−max = 2;
}
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.stanzas

An attribute set of stanzas as described in: **https://pgbackrest.org/user−guide.html#quickstart/configure−stanza**

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.stanzas.<name>.instances

An attribute set of database instances as described in: **https://pgbackrest.org/configuration.html#section−stanza**

Each instance defaults to set ‘pg−host’ to the attribute’s name. The special value “localhost” will unset ‘pg−host’.

Note

The prefix ‘pgNNN−’ is added automatically. Example: Use ‘user’ instead of ‘pg1−user’.

Type: attribute set of (open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string))

Default:

```
{ }
```

Example:

```
{
  localhost.database = "app";
  "postgres.example.com".port = "5433";
}
```

Declared by:

<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.stanzas.<name>.instances.<name>.host

PostgreSQL host for operating remotely.

Type: null or string

Default:

```
if name == "localhost" then null else name
```

Declared by:

<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.stanzas.<name>.jobs

Backups jobs to schedule for this stanza as described in: **https://pgbackrest.org/user−guide.html#quickstart/schedule−backup**

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  weekly = { schedule = "Sun, 6:30"; type = "full"; };
  daily = { schedule = "Mon..Sat, 6:30"; type = "diff"; };
```

```
}
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.stanzas.<name>.jobs.<name>.schedule
When or how often the backup should run. Must be in the format described in **systemd.time**(7).

Type: string

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.stanzas.<name>.jobs.<name>.type
Backup type as described in: **https://pgbackrest.org/command.html#command-backup/category-command/option-type**

Type: string

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbackrest.stanzas.<name>.settings
An attribute set of options as described in: **https://pgbackrest.org/configuration.html**

All options can be used. Repository options should be set via ‘repos’ instead. Stanza options should be set via ‘instances’ instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string or attribute set of string or list of string)

Default:

```
{ }
```

Example:

```
{
  process-max = 2;
}
```

Declared by:
<nixpkgs/nixos/modules/services/backup/pgbackrest.nix>

services.pgbouncer.enable
Whether to enable PostgreSQL connection pooler.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.package
The pgbouncer package to use.

Type: package

Default:

```
pkgs.pgbouncer
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.group
The group pgbouncer is run as.

Type: string

Default:

```
"pgbouncer"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.homeDir
Specifies the home directory.

Type: absolute path

Default:

```
"/var/lib/pgbouncer"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.openFilesLimit
Maximum number of open files.

Type: signed integer

Default:

```
65536
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.openFirewall
Whether to automatically open the specified TCP port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.settings
Configuration for PgBouncer, see **https://www.pgbouncer.org/config.html** for supported values.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.settings.databases

Detailed information about PostgreSQL database definitions: **https://www.pgbouncer.org/config.html#section−databases**

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  bardb = "host=localhost dbname=bazdb";
  exampledb = "host=/run/postgresql/ port=5432 auth_user=exampleuse \
r dbname=exampledb sslmode=require";
  foodb = "host=host1.example.com port=5432";
}
```

Declared by:

<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.settings.peers

Optional.

Detailed information about PostgreSQL database definitions: **https://www.pgbouncer.org/config.html#section−peers**

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "1" = "host=host1.example.com";
  "2" = "host=/tmp/pgbouncer−2 port=5555";
}
```

Declared by:

<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.settings.pgbouncer.default_pool_size

How many server connections to allow per user/database pair. Can be overridden in the per−database configuration.

Type: signed integer

Default:

```
20
```

Declared by:

<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.settings.pgbouncer.ignore_startup_parameters

By default, PgBouncer allows only parameters it can keep track of in startup packets: client_encoding, datestyle, timezone and standard_conforming_strings.

All others parameters will raise an error. To allow others parameters, they can be specified here, so that PgBouncer knows that they are handled by the admin and it can ignore them.

If you need to specify multiple values, use a comma−separated list.

IMPORTANT: When using prometheus−pgbouncer−exporter, you need: extra_float_digits

https://github.com/prometheus-community/pgbouncer_exporter#pgbouncer-configuration

Type: null or strings concatenated with ","

Default:

```
null
```

Example:

```
"extra_float_digits"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.settings.pgbouncer.listen_addr
Specifies a list (comma-separated) of addresses where to listen for TCP connections. You may also use * meaning "listen on all addresses". When not set, only Unix socket connections are accepted.

Addresses can be specified numerically (IPv4/IPv6) or by name.

Type: null or strings concatenated with ","

Default:

```
null
```

Example:

```
"*"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.settings.pgbouncer.listen_port
Which port to listen on. Applies to both TCP and Unix sockets.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6432
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.settings.pgbouncer.max_client_conn
Maximum number of client connections allowed.

When this setting is increased, then the file descriptor limits in the operating system might also have to be increased. Note that the number of file descriptors potentially used is more than maxClientConn. If each user connects under its own user name to the server, the theoretical maximum used is: maxClient-Conn + (max pool_size * total databases * total users)

If a database user is specified in the connection string (all users connect under the same user name), the theoretical maximum is: maxClientConn + (max pool_size * total databases)

The theoretical maximum should never be reached, unless somebody deliberately crafts a special load for it. Still, it means you should set the number of file descriptors to a safely high number.

Type: signed integer

Default:

```
100
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.settings.pgbouncer.max_db_connections
Do not allow more than this many server connections per database (regardless of user). This considers the PgBouncer database that the client has connected to, not the PostgreSQL database of the outgoing connection.

This can also be set per database in the [databases] section.

Note that when you hit the limit, closing a client connection to one pool will not immediately allow a server connection to be established for another pool, because the server connection for the first pool is still open. Once the server connection closes (due to idle timeout), a new server connection will immediately be opened for the waiting pool.

0 = unlimited

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.settings.pgbouncer.max_user_connections
Do not allow more than this many server connections per user (regardless of database). This considers the PgBouncer user that is associated with a pool, which is either the user specified for the server connection or in absence of that the user the client has connected as.

This can also be set per user in the [users] section.

Note that when you hit the limit, closing a client connection to one pool will not immediately allow a server connection to be established for another pool, because the server connection for the first pool is still open. Once the server connection closes (due to idle timeout), a new server connection will immediately be opened for the waiting pool.

0 = unlimited

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.settings.pgbouncer.pool_mode
Specifies when a server connection can be reused by other clients.

session Server is released back to pool after client disconnects. Default. transaction Server is released back to pool after transaction finishes. statement Server is released back to pool after query finishes. Transactions spanning multiple statements are disallowed in this mode.

Type: one of “session”, “transaction”, “statement”

Default:

```
"session"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.settings.users

Optional.

Detailed information about PostgreSQL user definitions: **https://www.pgbouncer.org/config.html#section−users**

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user1 = "pool_mode=session";
}
```

Declared by:

<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pgbouncer.user

The user pgbouncer is run as.

Type: string

Default:

```
"pgbouncer"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/pgbouncer.nix>

services.pghero.enable

Whether to enable PgHero service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/pghero.nix>

services.pghero.package

The pghero package to use.

Type: package

Default:

```
pkgs.pghero
```

Declared by:

<nixpkgs/nixos/modules/services/misc/pghero.nix>

services.pghero.environment

Environment variables to set for the service. Secrets should be specified using **environmentFile**.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pghero.nix>

services.pghero.environmentFiles
File to load environment variables from. Loaded variables override values set in **environment**.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pghero.nix>

services.pghero.extraArgs
Additional command−line arguments for the systemd service.

Refer to the **Puma web server documentation** for available arguments.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pghero.nix>

services.pghero.extraGroups
Additional groups for the systemd service.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "tlskeys"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pghero.nix>

services.pghero.listenAddress
‘hostname:port’ to listen for HTTP traffic.

This is bound using the systemd socket activation.

Type: string

Example:

```
"[::1]:3000"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pghero.nix>

services.pghero.settings
PgHero configuration. Refer to the **PgHero documentation** for more details.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  databases = {
    primary = {
      url = "<%= ENV['PRIMARY_DATABASE_URL'] %>";
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pghero.nix>

services.pgmanage.enable
Whether to enable PostgreSQL Administration for the web.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgmanage.nix>

services.pgmanage.package
The pgmanage package to use.

Type: package

Default:

```
pkgs.pgmanage
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgmanage.nix>

services.pgmanage.allowCustomConnections
This tells pgmanage whether or not to allow anyone to use a custom connection from the login screen.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgmanage.nix>

services.pgmanage.connections
pgmanage requires at least one PostgreSQL server be defined.

Detailed information about PostgreSQL connection strings is available at: **https://www.postgresql.org/docs/current/libpq-connect.html**

Note that you should not specify your user name or password. That information will be entered on the login screen. If you specify a username or password, it will be removed by pgmanage before attempting to connect to a database.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  mini-server = "hostaddr=127.0.0.1 port=5432 dbname=postgres sslm \
ode=require";
  nuc-server = "hostaddr=192.168.0.100 port=5432 dbname=postgres";
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgmanage.nix>

services.pgmanage.localOnly
This tells pgmanage whether or not to set the listening socket to local addresses only.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgmanage.nix>

services.pgmanage.logLevel
Verbosity of logs

Type: one of “error”, “warn”, “notice”, “info”

Default:

```
"error"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgmanage.nix>

services.pgmanage.loginGroup
This tells pgmanage to only allow users in a certain PostgreSQL group to login to pgmanage. Note that a connection will be made to PostgreSQL in order to test if the user is a member of the login group.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgmanage.nix>

services.pgmanage.loginTimeout
Number of seconds of inactivity before user is automatically logged out.

Type: signed integer

Default:

```
3600
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgmanage.nix>

services.pgmanage.port
This tells pgmanage what port to listen on for browser requests.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgmanage.nix>

services.pgmanage.sqlRoot
This tells pgmanage where to put the SQL file history. All tabs are saved to this location so that if you get disconnected from pgmanage you don't lose your work.

Type: string

Default:

```
"/var/lib/pgmanage"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgmanage.nix>

services.pgmanage.superOnly
This tells pgmanage whether or not to only allow super users to login. The recommended value is true and will restrict users who are not super users from logging in to any PostgreSQL instance through pgmanage. Note that a connection will be made to PostgreSQL in order to test if the user is a superuser.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgmanage.nix>

services.pgmanage.tls
These options tell pgmanage where the TLS Certificate and Key files reside. If you use these options then you'll only be able to access pgmanage through a secure TLS connection. These options are only necessary if you wish to connect directly to pgmanage using a secure TLS connection. As an alternative, you can set up pgmanage in a reverse proxy configuration. This allows your web server to terminate the secure connection and pass on the request to pgmanage. You can find help to set up this configuration in: **https://github.com/pgManage/pgManage/blob/master/INSTALL_NGINX.md**

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/pgmanage.nix>

services.pgmanage.tls.cert
TLS certificate

Type: string

Declared by:
<nixpkgs/nixos/modules/services/databases/pgmanage.nix>

services.pgmanage.tls.key
TLS key

Type: string

Declared by:
<nixpkgs/nixos/modules/services/databases/pgmanage.nix>

services.pgpkeyserver−lite.enable
Whether to enable pgpkeyserver−lite on a nginx vHost proxying to a gpg keyserver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pgpkeyserver−lite.nix>

services.pgpkeyserver−lite.package
The pgpkeyserver−lite package to use.

Type: package

Default:

```
pkgs.pgpkeyserver−lite
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pgpkeyserver−lite.nix>

services.pgpkeyserver−lite.hkpAddress
Which IP address the sks−keyserver is listening on.

Type: string

Default:

```
head config.services.sks.hkpAddress
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pgpkeyserver−lite.nix>

services.pgpkeyserver−lite.hkpPort
Which port the sks−keyserver is listening on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
config.services.sks.hkpPort
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pgpkeyserver−lite.nix>

services.pgpkeyserver−lite.hostname
Which hostname to set the vHost to that is proxying to sks.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pgpkeyserver−lite.nix>

services.pgscv.enable
Whether to enable pgSCV, a PostgreSQL ecosystem metrics collector.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/pgscv.nix>

services.pgscv.package
The pgscv package to use.

Type: package

Default:

```
pkgs.pgscv
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/pgscv.nix>

services.pgscv.logLevel
Log level for pgSCV.

Type: one of “debug”, “info”, “warn”, “error”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/pgscv.nix>

services.pgscv.settings
Configuration for pgSCV, in YAML format.

See **configuration reference**.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/pgscv.nix>

services.photonvision.enable
Whether to enable PhotonVision.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/video/photonvision.nix>

services.photonvision.package
The photonvision package to use.

Type: package

Default:

```
pkgs.photonvision
```

Declared by:
<nixpkgs/nixos/modules/services/video/photonvision.nix>

services.photonvision.openFirewall
Whether to open the required ports in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/video/photonvision.nix>

services.photoprism.enable
Whether to enable Photoprism web server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoprism.nix>

services.photoprism.package
The photoprism package to use.

Type: package

Default:

```
pkgs.photoprism
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoprism.nix>

services.photoprism.address
Web interface address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoprism.nix>

services.photoprism.databasePasswordFile
Database password file.

Type: null or absolute path not in the Nix store

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoprism.nix>

services.photoprism.group
Group under which photoprism runs.

Type: string

Default:

```
"photoprism"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoprism.nix>

services.photoprism.importPath
Relative or absolute to the ‘originalsPath’ from where the files should be imported.

Type: string

Default:

```
"import"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoprism.nix>

services.photoprism.originalsPath
Storage path of your original media files (photos and videos).

Type: absolute path

Default:

```
null
```

Example:

```
"/data/photos"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoprism.nix>

services.photoprism.passwordFile
Admin password file.

Type: null or absolute path not in the Nix store

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoprism.nix>

services.photoprism.port
Web interface port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2342
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoprism.nix>

services.photoprism.settings

See **the getting−started guide** for available options.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  PHOTOPRISM_ADMIN_USER = "root";
  PHOTOPRISM_DEFAULT_LOCALE = "de";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/photoprism.nix>

services.photoprism.storagePath

Location for sidecar, cache, and database files.

Type: absolute path

Default:

```
"/var/lib/photoprism"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/photoprism.nix>

services.photoprism.user

User under which photoprism runs.

Type: string

Default:

```
"photoprism"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/photoprism.nix>

services.photoview.enable

Whether to enable Photoview, a photo gallery for self−hosted personal servers.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.package

The photoview package to use.

Type: package

Default:

```
pkgs.photoview
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.dataDir
Directory for photoview state, cache, and database.

Type: absolute path

Default:

```
"/var/lib/photoview"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.database.host
Database host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.database.name
Database name.

Type: string

Default:

```
"photoview"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.database.passwordFile
Path to a file containing the database password. Required when using MySQL or PostgreSQL.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.database.port
Database port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5432
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.database.type
Database engine to use.

Type: one of “sqlite”, “mysql”, “postgres”

Default:

```
"sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.database.user
Database user.

Type: string

Default:

```
"photoview"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.group
Group under which photoview runs.

Type: string

Default:

```
"photoview"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.host
Address to listen on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.mediaPath
Path to the directory containing photos to be served. This directory must be readable by the photoview user.

Type: absolute path

Example:

```
"/mnt/photos"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4001
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.secretsFile

Path to an environment file containing secrets. Can be used for MAPBOX_TOKEN or other sensitive settings.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.settings.disableFaceRecognition

Disable face recognition feature.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.settings.disableRawProcessing

Disable RAW photo processing.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.settings.disableVideoEncoding

Disable video encoding with FFmpeg.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.settings.mapboxToken

Mapbox API token for map features.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.settings.videoEncoder

Hardware video encoder to use.

Type: null or one of “h264_qsv”, “h264_vaapi”, “h264_nvenc”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.photoview.user
User account under which photoview runs.

Type: string

Default:

```
"photoview"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/photoview.nix>

services.phpfpm.extraConfig
Extra configuration that should be put in the global section of the PHP−FPM configuration file. Do not specify the options ‘error_log’ or ‘daemonize’ here, since they are generated by NixOS.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/phpfpm/default.nix>

services.phpfpm.phpOptions
Options appended to the PHP configuration file *php.ini*.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  date.timezone = "CET"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/phpfpm/default.nix>

services.phpfpm.phpPackage
The php package to use.

Type: package

Default:

```
pkgs.php
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/phpfpm/default.nix>

services.phpfpm.pools
PHP−FPM pools. If no pools are defined, the PHP−FPM service is disabled.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  mypool = {
    user = "php";
```

```
      group = "php";
      phpPackage = pkgs.php;
      settings = {
        "pm" = "dynamic";
        "pm.max_children" = 75;
        "pm.start_servers" = 10;
        "pm.min_spare_servers" = 5;
        "pm.max_spare_servers" = 20;
        "pm.max_requests" = 500;
      };
    }
  }
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/phpfpm/default.nix>

services.phpfpm.pools.<name>.extraConfig
Extra lines that go into the pool configuration. See the documentation on ‘php−fpm.conf’ for details on configuration directives.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/phpfpm/default.nix>

services.phpfpm.pools.<name>.group
Group account under which this pool runs.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−servers/phpfpm/default.nix>

services.phpfpm.pools.<name>.listen
The address on which to accept FastCGI requests.

Type: string

Default:

```
""
```

Example:

```
"/path/to/unix/socket"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/phpfpm/default.nix>

services.phpfpm.pools.<name>.phpEnv
Environment variables used for this PHP−FPM pool.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  HOSTNAME = "$HOSTNAME";
```

```
  TMP = "/tmp";
  TMPDIR = "/tmp";
  TEMP = "/tmp";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/phpfpm/default.nix>

services.phpfpm.pools.<name>.phpOptions
"Options appended to the PHP configuration file *php.ini* used for this PHP−FPM pool."

Type: strings concatenated with "\n"

Declared by:
<nixpkgs/nixos/modules/services/web−servers/phpfpm/default.nix>

services.phpfpm.pools.<name>.phpPackage
The PHP package to use for running this PHP−FPM pool.

Type: package

Default:

```
config.services.phpfpm.phpPackage
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/phpfpm/default.nix>

services.phpfpm.pools.<name>.settings
PHP−FPM pool directives. Refer to the "List of pool directives" section of **https://www.php.net/manual/en/install.fpm.configuration.php** for details. Note that settings names must be enclosed in quotes (e.g. '"pm.max_children"' instead of 'pm.max_children').

Type: attribute set of (string or signed integer or boolean)

Default:

```
{ }
```

Example:

```
{
  "pm" = "dynamic";
  "pm.max_children" = 75;
  "pm.start_servers" = 10;
  "pm.min_spare_servers" = 5;
  "pm.max_spare_servers" = 20;
  "pm.max_requests" = 500;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/phpfpm/default.nix>

services.phpfpm.pools.<name>.socket
Path to the unix socket file on which to accept FastCGI requests.

Note
This option is read−only and managed by NixOS.

Type: string *(read only)*

Example:

```
"/run/phpfpm/<name>.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/phpfpm/default.nix>

services.phpfpm.pools.<name>.user
User account under which this pool runs.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−servers/phpfpm/default.nix>

services.phpfpm.settings
PHP−FPM global directives. Refer to the “List of global php−fpm.conf directives” section of **https://www.php.net/manual/en/install.fpm.configuration.php** for details. Note that settings names must be enclosed in quotes (e.g. ‘"pm.max_children"’ instead of ‘pm.max_children’). You need not specify the options ‘error_log’ or ‘daemonize’ here, since they are generated by NixOS.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/phpfpm/default.nix>

services.phylactery.enable
Whether to enable Phylactery server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/phylactery.nix>

services.phylactery.package
The phylactery package to use.

Type: package

Default:

```
pkgs.phylactery
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/phylactery.nix>

services.phylactery.host
Listen host for Phylactery

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/phylactery.nix>

services.phylactery.library
Path to CBZ library

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/phylactery.nix>

services.phylactery.port
Listen port for Phylactery

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/phylactery.nix>

services.physlock.enable
Whether to enable the **physlock** screen locking mechanism.

Enable this and then run **systemctl start physlock** to securely lock the screen.

This will switch to a new virtual terminal, turn off console switching and disable SysRq mechanism (when **services.physlock.disableSysRq** is set) until the root or user password is given.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/physlock.nix>

services.physlock.allowAnyUser
Whether to allow any user to lock the screen. This will install a setuid wrapper to allow any user to start physlock as root, which is a minor security risk. Call the physlock binary to use this instead of using the systemd service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/physlock.nix>

services.physlock.disableSysRq
Whether to disable SysRq when locked with physlock.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/physlock.nix>

services.physlock.lockMessage
Message to show on physlock login terminal.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/security/physlock.nix>

services.physlock.lockOn.extraTargets
Other targets to lock the screen just before.

Useful if you want to e.g. both autologin to X11 so that your *~/.xsession* gets executed and still to have the screen locked so that the system can be booted relatively unattended.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "display-manager.service"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/physlock.nix>

services.physlock.lockOn.hibernate
Whether to lock screen with physlock just before hibernate.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/physlock.nix>

services.physlock.lockOn.suspend
Whether to lock screen with physlock just before suspend.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/physlock.nix>

services.physlock.muteKernelMessages
Disable kernel messages on console while physlock is running.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/physlock.nix>

services.picom.enable
Whether or not to enable Picom as the X.org composite manager.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.package
The picom package to use.

Type: package

Default:

```
pkgs.picom
```

Declared by:
<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.activeOpacity
Opacity of active windows.

Type: integer or floating point number between 0 and 1 (both inclusive)

Default:

```
1.0
```

Example:

```
0.8
```

Declared by:
<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.backend
Backend to use: ‘egl’, ‘glx’, ‘xrender’ or ‘xr_glx_hybrid’.

Type: one of “egl”, “glx”, “xrender”, “xr_glx_hybrid”

Default:

```
"xrender"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.fade
Fade windows in and out.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.fadeDelta
Time between fade animation step (in ms).

Type: positive integer, meaning >0

Default:

```
10
```

Example:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.fadeExclude
List of conditions of windows that should not be faded. See **picom**(1) man page for more examples.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "window_type *= 'menu'"
  "name ~= 'Firefox$'"
  "focused = 1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.fadeSteps
Opacity change between fade steps (in and out).

Type: pair of integer or floating point number between 0.01 and 1 (both inclusive)

Default:

```
[
  0.028
  0.03
]
```

Example:

```
[
  0.04
  0.04
]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.inactiveOpacity
Opacity of inactive windows.

Type: integer or floating point number between 0.1 and 1 (both inclusive)

Default:

```
1.0
```

Example:

```
0.8
```

Declared by:
<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.menuOpacity

Opacity of dropdown and popup menu.

Type: integer or floating point number between 0 and 1 (both inclusive)

Default:

```
1.0
```

Example:

```
0.8
```

Declared by:

<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.opacityRules

Rules that control the opacity of windows, in format PERCENT:PATTERN.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "95:class_g = 'URxvt' && !_NET_WM_STATE@:32a"
  "0:_NET_WM_STATE@:32a *= '_NET_WM_STATE_HIDDEN'"
]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.settings

Picom settings. Use this option to configure Picom settings not exposed in a NixOS option or to bypass one. For the available options see the CONFIGURATION FILES section at **picom**(1).

Type: libconfig configuration. The format consists of an attributes set (called a group) of settings. Each setting can be a scalar type (boolean, integer, floating point number or string), a list of scalars or a group itself

Default:

```
{ }
```

Example:

```
blur =
  { method = "gaussian";
    size = 10;
    deviation = 5.0;
  };
```

Declared by:

<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.shadow

Draw window shadows.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.shadowExclude
List of conditions of windows that should have no shadow. See **picom**(1) man page for more examples.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "window_type *= 'menu'"
  "name ~= 'Firefox$'"
  "focused = 1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.shadowOffsets
Left and right offset for shadows (in pixels).

Type: pair of signed integer

Default:

```
[
  -15
  -15
]
```

Example:

```
[
  -10
  -15
]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.shadowOpacity
Window shadows opacity.

Type: integer or floating point number between 0 and 1 (both inclusive)

Default:

```
0.75
```

Example:

```
0.8
```

Declared by:
<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.vSync

Enable vertical synchronization. Chooses the best method (drm, opengl, opengl−oml, opengl−swc, opengl−mswc) automatically. The bool value should be used, the others are just for backwards compatibility.

Type: boolean or one of “none”, “drm”, “opengl”, “opengl−oml”, “opengl−swc”, “opengl−mswc”

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picom.wintypes

Rules for specific window types.

Type: attribute set

Default:

```
{
  popup_menu = { opacity = config.services.picom.menuOpacity; };
  dropdown_menu = { opacity = config.services.picom.menuOpacity; };
}
```

Example:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/x11/picom.nix>

services.picosnitch.enable

Whether to enable picosnitch daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/picosnitch.nix>

services.pict−rs.enable

Whether to enable pict−rs server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pict−rs.nix>

services.pict−rs.package
The pict−rs package to use.

Type: package

Default:

```
pkgs.pict−rs
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pict−rs.nix>

services.pict−rs.address
The IPv4 address to deploy the service to.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pict−rs.nix>

services.pict−rs.dataDir
The directory where to store the uploaded images & database.

Type: absolute path

Default:

```
"/var/lib/pict−rs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pict−rs.nix>

services.pict−rs.port
The port which to bind the service to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pict−rs.nix>

services.pict−rs.repoPath
The directory where to store the database. This option takes precedence over dataDir.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pict−rs.nix>

services.pict−rs.storePath
The directory where to store the uploaded images. This option takes precedence over dataDir.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pict−rs.nix>

services.pid−fan−controller.enable
Whether to enable the PID fan controller, which controls the configured fans by running a closed−loop PID control loop.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/pid−fan−controller.nix>

services.pid−fan−controller.package
The pid−fan−controller package to use.

Type: package

Default:

```
pkgs.pid−fan−controller
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/pid−fan−controller.nix>

services.pid−fan−controller.settings
Configuration for pid−fan−controller, see **https://github.com/zimward/pid−fan−controller** for supported values.

Type: open submodule of (JSON value or list of (JSON value))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/pid−fan−controller.nix>

services.pihole−ftl.enable
Whether to enable Pi−hole FTL.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole−ftl.nix>

services.pihole−ftl.package
The pihole−ftl package to use.

Type: package

Default:

```
pkgs.pihole−ftl
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole-ftl.nix>

services.pihole-ftl.group
Group to run the service as.

Type: string

Default:

```
"pihole"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole-ftl.nix>

services.pihole-ftl.lists
Deny (or allow) domain lists to use

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    url = "https://raw.githubusercontent.com/StevenBlack/hosts/mast \
er/hosts";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole-ftl.nix>

services.pihole-ftl.lists.*.enabled
Whether this list is enabled

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole-ftl.nix>

services.pihole-ftl.lists.*.description
Description of the list

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole-ftl.nix>

services.pihole-ftl.lists.*.type
Whether domains on this list should be explicitly allowed, or blocked

Type: one of “allow”, “block”

Default:

```
"block"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole-ftl.nix>

services.pihole-ftl.lists.*.url
URL of the domain list

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole-ftl.nix>

services.pihole-ftl.logDirectory
Path for Pi-hole log files

Type: absolute path

Default:

```
"/var/log/pihole"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole-ftl.nix>

services.pihole-ftl.macvendorURL
URL from which to download the macvendor.db file.

Type: string

Default:

```
"https://ftl.pi-hole.net/macvendor.db"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole-ftl.nix>

services.pihole-ftl.openFirewallDHCP
Open ports in the firewall for pihole-FTL's DHCP server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole-ftl.nix>

services.pihole-ftl.openFirewallDNS
Open ports in the firewall for pihole-FTL's DNS server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole-ftl.nix>

services.pihole-ftl.openFirewallWebserver
Open ports in the firewall for pihole-FTL's webserver, as configured in 'settings.webserver.port'.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole−ftl.nix>

services.pihole−ftl.piholePackage
The pihole package to use.

Type: package

Default:

```
pkgs.pihole
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole−ftl.nix>

services.pihole−ftl.privacyLevel
Level of detail in generated statistics. 0 enables full statistics, 3 shows only anonymous statistics.

See **the documentation**.

Also see services.dnsmasq.settings.log−queries to completely disable query logging.

Type: integer or floating point number between 0 and 3 (both inclusive)

Default:

Example:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole−ftl.nix>

services.pihole−ftl.queryLogDeleter.enable
Whether to enable Pi−hole FTL DNS query log deleter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole−ftl.nix>

services.pihole−ftl.queryLogDeleter.age
Delete DNS query logs older than this many days, if **services.pihole-ftl.queryLogDeleter.enable** is on.

Type: signed integer

Default:

```
90
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole−ftl.nix>

services.pihole−ftl.queryLogDeleter.interval
How often the query log deleter is run. See systemd.time(7) for more information about the format.

Type: string

Default:

```
"weekly"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole−ftl.nix>

services.pihole−ftl.settings
Configuration options for pihole.toml. See the upstream **documentation**.

Type: TOML value

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole−ftl.nix>

services.pihole−ftl.stateDirectory
Path for pihole state files.

Type: absolute path

Default:

```
"/var/lib/pihole"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole−ftl.nix>

services.pihole−ftl.useDnsmasqConfig
Import options defined in **services.dnsmasq.settings** via misc.dnsmasq_lines in Pi−hole's config.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole−ftl.nix>

services.pihole−ftl.user
User to run the service as.

Type: string

Default:

```
"pihole"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pihole−ftl.nix>

services.pihole−web.enable
Whether to enable Pi−hole dashboard.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pihole−web.nix>

services.pihole−web.package
The pihole−web package to use.

Type: package

Default:

```
pkgs.pihole-web
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/pihole-web.nix>

services.pihole-web.hostName
Domain name for the website.

Type: string

Default:

```
"pi.hole"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/pihole-web.nix>

services.pihole-web.ports
Port(s) for the webserver to serve on.

If provided as a string, optionally append suffixes to control behaviour:

- 'o': to make the port is optional − failure to bind will not be an error.
- 's': for the port to be used for SSL.
- 'r': for a non-SSL port to redirect to the first available SSL port.

Type: list of (16 bit unsigned integer; between 0 and 65535 (both inclusive) or string or (submodule))

Default:

```
[ ]
```

Example:

```
[
  "80r"
  "443s"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/pihole-web.nix>

services.pinchflat.enable
Whether to enable pinchflat.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pinchflat.nix>

services.pinchflat.package
The pinchflat package to use.

Type: package

Default:

```
pkgs.pinchflat
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pinchflat.nix>

services.pinchflat.extraConfig
The configuration of Pinchflat is handled through environment variables. The available configuration options can be found in **the Pinchflat README**.

Type: attribute set of (null or boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  YT_DLP_WORKER_CONCURRENCY = 1;
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pinchflat.nix>

services.pinchflat.group
Group under which Pinchflat runs.

Type: string

Default:

```
"pinchflat"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pinchflat.nix>

services.pinchflat.logLevel
Log level for Pinchflat.

Type: one of “debug”, “info”, “warning”, “error”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pinchflat.nix>

services.pinchflat.mediaDir
The directory into which Pinchflat downloads videos.

Type: absolute path

Default:

```
"/var/lib/pinchflat/media"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pinchflat.nix>

services.pinchflat.openFirewall
Open ports in the firewall for the Pinchflat web interface

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pinchflat.nix>

services.pinchflat.port
Port on which the Pinchflat web interface is available.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8945
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pinchflat.nix>

services.pinchflat.secretsFile
Secrets like **SECRET_KEY_BASE** and **BASIC_AUTH_PASSWORD** should be passed to the service without adding them to the world−readable Nix store.

Note that either this file needs to be available on the host on which 'pinchflat' is running, or the option 'selfhosted' must be 'true'. Further, **SECRET_KEY_BASE** has a minimum length requirement of 64 bytes. One way to generate such a secret is to use 'openssl rand −hex 64'.

As an example, the contents of the file might look like this:

```
SECRET_KEY_BASE=...copy−paste a secret token here...
BASIC_AUTH_USERNAME=...basic auth username...
BASIC_AUTH_PASSWORD=...basic auth password...
```

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/pinchflat"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pinchflat.nix>

services.pinchflat.selfhosted
Use a weak secret. If true, you are not required to provide a **SECRET_KEY_BASE** through the 'secretsFile' option. Do not use this option in production!

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pinchflat.nix>

services.pinchflat.user
User account under which Pinchflat runs.

Type: string

Default:

```
"pinchflat"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pinchflat.nix>

services.pinnwand.enable

Whether to enable Pinnwand, a pastebin.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/pinnwand.nix>

services.pinnwand.port

The port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8000
```

Declared by:

<nixpkgs/nixos/modules/services/misc/pinnwand.nix>

services.pinnwand.settings

Your *pinnwand.toml* as a Nix attribute set. Look up possible options in the **documentation**.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/misc/pinnwand.nix>

services.pinnwand.settings.database_uri

Database URI compatible with **SQLAlchemy**.

Additional packages may need to be introduced into the environment for certain databases.

Type: string

Default:

```
"sqlite:////var/lib/pinnwand/pinnwand.db"
```

Example:

```
"sqlite:///:memory"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/pinnwand.nix>

services.pinnwand.settings.footer

The footer in raw HTML.

Type: string

Default:

```
  View <a href="//github.com/supakeen/pinnwand" target="_BLANK">sou \
rce code</a>, the <a href="/removal">removal</a> or <a href="/expir \
y">expiry</a> stories, or read the <a href="/about">about</a> page.
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pinnwand.nix>

services.pinnwand.settings.paste_help
Raw HTML help text shown in the header area.

Type: string

Default:

```
  <p>Welcome to pinnwand, this site is a pastebin. It allows you to \
 share code with others. If you write code in the text area below a \
nd press the paste button you will be given a link you can share wi \
th others so they can view your code as well.</p><p>People with the \
 link can view your pasted code, only you can remove your paste and \
 it expires automatically. Note that anyone could guess the URI to  \
your paste so don't rely on it being private.</p>
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pinnwand.nix>

services.pinnwand.settings.paste_size
Maximum size of a paste in bytes.

Type: positive integer, meaning >0

Default:

```
262144
```

Example:

```
524288
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pinnwand.nix>

services.pipewire.enable
Whether to enable PipeWire service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.package
The pipewire package to use.

Type: package

Default:

```
pkgs.pipewire
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.alsa.enable

Whether to enable ALSA support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.alsa.support32Bit

Whether to enable 32−bit ALSA support on 64−bit systems.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.audio.enable

Whether to use PipeWire as the primary sound server

Type: boolean

Default:

```
config.services.pipewire.alsa.enable || config.services.pipewire.ja \
ck.enable || config.services.pipewire.pulse.enable
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.configPackages

List of packages that provide PipeWire configuration, in the form of ‘share/pipewire/*/*.conf’ files.

LV2/LADSPA dependencies will be picked up from config packages automatically via ‘passthru.requiredLv2Packages’/‘passthru.requiredLadspaPackages’.

Type: list of package

Default:

```
[ ]
```

Example:

```
[
          (pkgs.writeTextDir "share/pipewire/pipewire.conf.d/10−lo \
opback.conf" ''
            context.modules = [
            {   name = libpipewire−module−loopback
                args = {
                  node.description = "Scarlett Focusrite Line 1"
                  capture.props = {
                      audio.position = [ FL ]
```

```
                        stream.dont-remix = true
                        node.target = "alsa_input.usb-Focusrite_Scar \
    lett_Solo_USB_Y7ZD17C24495BC-00.analog-stereo"
                        node.passive = true
                    }
                    playback.props = {
                        node.name = "SF_mono_in_1"
                        media.class = "Audio/Source"
                        audio.position = [ MONO ]
                    }
                }
            }
            ]
          ''')
        ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.extraConfig.client

Additional configuration for the PipeWire client library, used by most applications.

Every item in this attrset becomes a separate drop-in file in '/etc/pipewire/client.conf.d'.

See the **PipeWire wiki** for examples.

Type: attribute set of (JSON value)

Default:

```
{ }
```

Example:

```
{
  "10-no-resample" = {
    "stream.properties" = {
      "resample.disable" = true;
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.extraConfig.jack

Additional configuration for the PipeWire JACK server and client library.

Every item in this attrset becomes a separate drop-in file in '/etc/pipewire/jack.conf.d'.

See the **PipeWire wiki** for examples.

Type: attribute set of (JSON value)

Default:

```
{ }
```

Example:

```
{
  "20-hide-midi" = {
    "jack.properties" = {
      "jack.show-midi" = false;
```

```
      };
    };
}
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.extraConfig.pipewire

Additional configuration for the PipeWire server.

Every item in this attrset becomes a separate drop−in file in '/etc/pipewire/pipewire.conf.d'.

See 'man pipewire.conf' for details, and **the PipeWire wiki** for examples.

See also:

- **PipeWire wiki − virtual devices** for creating virtual devices or remapping channels
- **PipeWire wiki − filter−chain** for creating more complex processing pipelines
- **PipeWire wiki − network** for streaming audio over a network

Type: attribute set of (JSON value)

Default:

```
{ }
```

Example:

```
{
  "10-clock-rate" = {
    "context.properties" = {
      "default.clock.rate" = 44100;
    };
  };
  "11-no-upmixing" = {
    "stream.properties" = {
      "channelmix.upmix" = false;
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.extraConfig.pipewire−pulse

Additional configuration for the PipeWire PulseAudio server.

Every item in this attrset becomes a separate drop−in file in '/etc/pipewire/pipewire−pulse.conf.d'.

See 'man pipewire−pulse.conf' for details, and **the PipeWire wiki** for examples.

See also:

- **PipeWire wiki − PulseAudio tricks guide** for more examples.

Type: attribute set of (JSON value)

Default:

```
{ }
```

Example:

```
{
  "15-force-s16-info" = {
    "pulse.rules" = [
```

```
          {
            actions = {
              quirks = [
                "force-s16-info"
              ];
            };
            matches = [
              {
                "application.process.binary" = "my-broken-app";
              }
            ];
          }
        ];
      };
    }
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.extraLadspaPackages
List of packages that provide LADSPA plugins in 'lib/ladspa' that should be made available to PipeWire for **filter chains**.

Config packages have their required LADSPA plugins added automatically, so they don't need to be specified here. Config packages need to set 'passthru.requiredLadspaPackages' for this to work.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.noisetorch-ladspa ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.extraLv2Packages
List of packages that provide LV2 plugins in 'lib/lv2' that should be made available to PipeWire for **filter chains**.

Config packages have their required LV2 plugins added automatically, so they don't need to be specified here. Config packages need to set 'passthru.requiredLv2Packages' for this to work.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.lsp-plugins ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.jack.enable

Whether to enable JACK audio emulation.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.pulse.enable

Whether to enable PulseAudio server emulation.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.raopOpenFirewall

Opens UDP/6001−6002, required by RAOP/Airplay for timing and control data.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.socketActivation

Automatically run PipeWire when connections are made to the PipeWire socket.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.systemWide

If true, a system−wide PipeWire service and socket is enabled allowing all users in the “pipewire” group to use it simultaneously. If false, then user units are used instead, restricting access to only one user.

Enabling system−wide PipeWire is however not recommended and disabled by default according to https://github.com/PipeWire/pipewire/blob/0.3.11/NEWS#L14−L16

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/pipewire/pipewire.nix>

services.pipewire.wireplumber.enable
Whether to enable WirePlumber, a modular session / policy manager for PipeWire

Type: boolean

Default:

```
config.services.pipewire.enable
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/pipewire/wireplumber.nix>

services.pipewire.wireplumber.package
The WirePlumber derivation to use.

Type: package

Default:

```
pkgs.wireplumber
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/pipewire/wireplumber.nix>

services.pipewire.wireplumber.configPackages
List of packages that provide WirePlumber configuration, in the form of ‘share/wireplumber/*/*.conf’ files.

LV2/LADSPA dependencies will be picked up from config packages automatically via ‘passthru.requiredLv2Packages’/‘passthru.requiredLadspaPackages’.

Type: list of package

Default:

```
[ ]
```

Example:

```
[
  (pkgs.writeTextDir "share/wireplumber/wireplumber.conf.d/10-blue \
z.conf" ''
    monitor.bluez.properties = {
      bluez5.roles = [ a2dp_sink a2dp_source bap_sink bap_source hs \
p_hs hsp_ag hfp_hf hfp_ag ]
      bluez5.codecs = [ sbc sbc_xq aac ]
      bluez5.enable-sbc-xq = true
      bluez5.hfphsp-backend = "native"
    }
  '')
]
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/pipewire/wireplumber.nix>

services.pipewire.wireplumber.extraConfig
Additional configuration for the WirePlumber daemon when run in single-instance mode (the default in nixpkgs and currently the only supported way to run WirePlumber configured via ‘extraConfig’).

See also:

- **The configuration file**
- **Modifying configuration**

- **Locations of files**
- and the **configuration section** of the docs in general

Note that WirePlumber (and PipeWire) use dotted attribute names like ‘device.product.id’. These are not nested, but flat objects for WirePlumber/PipeWire, so to write these in nix expressions, remember to quote them like ‘"device.product.id"’. Have a look at the example for this.

Type: attribute set of attribute set of (JSON value)

Default:

```
{ }
```

Example:

```
{
  "log-level-debug" = {
    "context.properties" = {
      # Output Debug log messages as opposed to only the default le \
vel (Notice)
      "log.level" = "D";
    };
  };
  "wh-1000xm3-ldac-hq" = {
    "monitor.bluez.rules" = [
      {
        matches = [
          {
            # Match any bluetooth device with ids equal to that of  \
a WH-1000XM3
            "device.name" = "~bluez_card.*";
            "device.product.id" = "0x0cd3";
            "device.vendor.id" = "usb:054c";
          }
        ];
        actions = {
          update-props = {
            # Set quality to high quality instead of the default of \
 auto
            "bluez5.a2dp.ldac.quality" = "hq";
          };
        };
      }
    ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/pipewire/wireplumber.nix>

services.pipewire.wireplumber.extraLadspaPackages

List of packages that provide LADSPA plugins in ‘lib/ladspa’ that should be made available to WirePlumber for **filter chains**.

Config packages have their required LADSPA plugins added automatically, so they don’t need to be specified here. Config packages need to set ‘passthru.requiredLadspaPackages’ for this to work.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.noisetorch-ladspa ]
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/pipewire/wireplumber.nix>

services.pipewire.wireplumber.extraLv2Packages

List of packages that provide LV2 plugins in 'lib/lv2' that should be made available to WirePlumber for **filter chains**.

Config packages have their required LV2 plugins added automatically, so they don't need to be specified here. Config packages need to set 'passthru.requiredLv2Packages' for this to work.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.lsp-plugins ]
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/pipewire/wireplumber.nix>

services.pipewire.wireplumber.extraScripts

Additional scripts for WirePlumber to be used by configuration files.

Every item in this attrset becomes a separate lua file with the path relative to the 'scripts' directory specified in the name of the item. The scripts get passed to the WirePlumber service via the 'XDG_DATA_DIRS' variable. Scripts specified here are preferred over those shipped with WirePlumber if they occupy the same relative path.

For a script to be loaded, it needs to be specified as part of a component, and that component needs to be required by an active profile (e.g. 'main'). Components can be defined in config files either via 'extraConfig' or 'configPackages'.

For the hello-world example, you'd have to add the following 'extraConfig':

```
services.pipewire.wireplumber.extraConfig."99-hello-world" = {
  "wireplumber.components" = [
    {
      name = "test/hello-world.lua";
      type = "script/lua";
      provides = "custom.hello-world";
    }
  ];
  "wireplumber.profiles" = {
    main = {
      "custom.hello-world" = "required";
    };
  };
};
```

See also:

- **Location of scripts**
- **Components & Profiles**
- **Migration − Loading custom scripts**

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Example:

```
{
  "test/hello-world.lua" = ''
    print("Hello, world!")
  '';
}
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/pipewire/wireplumber.nix>

services.pixelfed.enable
Whether to enable a Pixelfed instance.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/pixelfed.nix>

services.pixelfed.package
The pixelfed package to use.

Type: package

Default:

```
pkgs.pixelfed
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/pixelfed.nix>

services.pixelfed.dataDir
State directory of the ‘pixelfed’ user which holds the application’s state and data.

Type: string

Default:

```
"/var/lib/pixelfed"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/pixelfed.nix>

services.pixelfed.database.automaticMigrations
Whether to enable automatic migrations for database schema and data.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.database.createLocally
Whether to enable a local database using UNIX socket authentication.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.database.name
Database name.

Type: string

Default:

```
"pixelfed"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.database.type
Database engine to use. Note that PGSQL is not well supported: **https://github.com/pixelfed/pixelfed/issues/2727**

Type: one of “mysql”, “pgsql”

Default:

```
"mysql"
```

Example:

```
"pgsql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.domain
FQDN for the Pixelfed instance.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.group
Group account under which pixelfed runs.

Note
If left as the default value this group will automatically be created on system activation, otherwise you are responsible for ensuring the group exists before the pixelfed application starts.

Type: string

Default:

```
"pixelfed"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.maxUploadSize
Max upload size with units.

Type: string

Default:

```
"8M"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx
With this option, you can customize an nginx virtual host which already has sensible defaults for Pixelfed. Set to {} if you do not need any customization to the virtual host. If enabled, then by default, the **serverName** is '${domain}', If this is set to null (the default), no nginx virtualHost will be configured.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  serverAliases = [
    "pics.${config.networking.domain}"
  ];
  enableACME = true;
  forceSSL = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don’t put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with ‘redirectCode’) to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.http2
Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx’s implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.http3
Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.http3_hq
Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.kTLS
Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.listen
Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides 'addSSL' and 'onlySSL'.

If you only want to set the addresses manually and not the ports, take a look at 'listenAddresses'.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
```

```
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.listen.*.ssl

Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations.<name>.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with 'lib.mkOrder'. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.rejectSSL
Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.root

The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.serverName

Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.sslCertificate

Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

2. see the **security.acme.certs** option

services.pixelfed.phpPackage
The php83 package to use.

Type: package

Default:

```
pkgs.php83
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.poolConfig
Options for Pixelfed's PHP−FPM pool.

Type: attribute set of (signed integer or string or boolean)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.redis.createLocally
Whether to enable a local Redis database using UNIX socket authentication.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.runtimeDir
Ruutime directory of the ‘pixelfed’ user which holds the application’s caches and temporary files.

Type: string

Default:

```
"/run/pixelfed"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.schedulerInterval
How often the Pixelfed cron task should run

Type: string

Default:

```
"1d"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.secretFile
A secret file to be sourced for the .env settings. Place ‘APP_KEY’ and other settings that should not end up in the Nix store here.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.settings
.env settings for Pixelfed. Secrets should use ‘secretFile’ option instead.

Type: attribute set of (boolean or signed integer or string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixelfed.user

User account under which pixelfed runs.

> **Note**
> If left as the default value this user will automatically be created on system activation, otherwise you are responsible for ensuring the user exists before the pixelfed application starts.

Type: string

Default:

```
"pixelfed"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pixelfed.nix>

services.pixiecore.enable

Whether to enable Pixiecore.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pixiecore.nix>

services.pixiecore.apiServer

URI to connect to the API. Ignored unless mode is set to ‘api’

Type: string

Example:

```
"http://localhost:8080"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pixiecore.nix>

services.pixiecore.cmdLine

Kernel commandline arguments. Ignored unless mode is set to ‘boot’

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pixiecore.nix>

services.pixiecore.debug

Log more things that aren’t directly related to booting a recognized client

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pixiecore.nix>

services.pixiecore.dhcpNoBind

Handle DHCP traffic without binding to the DHCP server port

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/pixiecore.nix>

services.pixiecore.extraArguments

Additional command line arguments to pass to Pixiecore

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/pixiecore.nix>

services.pixiecore.initrd

Initrd path. Ignored unless mode is set to ‘boot’

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/pixiecore.nix>

services.pixiecore.kernel

Kernel path. Ignored unless mode is set to ‘boot’

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/pixiecore.nix>

services.pixiecore.listen

IPv4 address to listen on

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/pixiecore.nix>

services.pixiecore.mode

Which mode to use

Type: one of “api”, “boot”, “quick”

Default:

```
"boot"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pixiecore.nix>

services.pixiecore.openFirewall
Open ports (67, 69, 4011 UDP and ‘port’, ‘statusPort’ TCP) in the firewall for Pixiecore.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pixiecore.nix>

services.pixiecore.port
Port to listen on for HTTP

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
80
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pixiecore.nix>

services.pixiecore.quick
Which quick option to use

Type: one of “arch”, “centos”, “coreos”, “debian”, “fedora”, “ubuntu”, “xyz”

Default:

```
"xyz"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pixiecore.nix>

services.pixiecore.statusPort
HTTP port for status information (can be the same as −−port)

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
80
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pixiecore.nix>

services.plantuml−server.enable
Whether to enable PlantUML server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plantuml−server.nix>

services.plantuml−server.package
The plantuml−server package to use.

Type: package

Default:

```
pkgs.plantuml−server
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plantuml−server.nix>

services.plantuml−server.packages.jdk
The jdk package to use.

Type: package

Default:

```
pkgs.jdk
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plantuml−server.nix>

services.plantuml−server.packages.jetty
The jetty package to use. At the time of writing (v1.2023.12), PlantUML Server does not support Jetty versions higher than 12.x.

Jetty 12.x has introduced major breaking changes, see **https://github.com/jetty/jetty.project/releases/tag/jetty−12.0.0** and **https://eclipse.dev/jetty/documentation/jetty−12/programming−guide/index.html#pg−migration−11−to−12**

Type: package

Default:

```
pkgs.jetty_11
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plantuml−server.nix>

services.plantuml−server.graphvizPackage
The graphviz package to use.

Type: package

Default:

```
pkgs.graphviz
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plantuml−server.nix>

services.plantuml−server.group
Group which runs PlantUML server.

Type: string

Default:

```
"plantuml"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plantuml−server.nix>

services.plantuml−server.home
Home directory of the PlantUML server instance.

Type: absolute path

Default:

```
"/var/lib/plantuml"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plantuml−server.nix>

services.plantuml−server.httpAuthorization
When calling the proxy endpoint, the value of HTTP_AUTHORIZATION will be used to set the HTTP Authorization header.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plantuml−server.nix>

services.plantuml−server.listenHost
Host to listen on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plantuml−server.nix>

services.plantuml−server.listenPort
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plantuml−server.nix>

services.plantuml−server.plantumlLimitSize
Limits image width and height.

Type: signed integer

Default:

```
4096
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plantuml−server.nix>

services.plantuml−server.plantumlStats
Set it to on to enable statistics report (https://plantuml.com/statistics−report).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plantuml−server.nix>

services.plantuml−server.user
User which runs PlantUML server.

Type: string

Default:

```
"plantuml"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plantuml−server.nix>

services.plausible.enable
Whether to enable plausible.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.package
The plausible package to use.

Type: package

Default:

```
pkgs.plausible
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.database.clickhouse.setup
Whether to enable creating a clickhouse instance.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.database.clickhouse.url
The URL to be used to connect to ‘clickhouse’.

Type: string

Default:

```
"http://localhost:8123/default"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.database.postgres.dbname
Name of the database to use.

Type: string

Default:

```
"plausible"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.database.postgres.setup
Whether to enable creating a postgresql instance.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.database.postgres.socket
Path to the UNIX domain−socket to communicate with ‘postgres’.

Type: string

Default:

```
"/run/postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.mail.email
The email id to use for as *from* address of all communications from Plausible.

Type: string

Default:

```
"hello@plausible.local"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.mail.smtp.enableSSL
Whether to enable SSL when connecting to the SMTP server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.mail.smtp.hostAddr
The host address of your smtp server.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.mail.smtp.hostPort
The port of your smtp server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
25
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.mail.smtp.passwordFile
The path to the file with the password in case SMTP auth is enabled.

Type: null or string or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.mail.smtp.retries
Number of retries to make until mailer gives up.

Type: unsigned integer, meaning >=0

Default:

```
2
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.mail.smtp.user
The username/email in case SMTP auth is enabled.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.server.baseUrl
Public URL where plausible is available.

Note that '/path' components are currently ignored: **https://github.com/plausible/analytics/issues/1182**.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.server.disableRegistration
Whether to prohibit creating an account in plausible's UI or allow on 'invite_only'.

Type: one of true, false, "invite_only"

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.server.listenAddress
The IP address on which the server is listening.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.server.port
Port where the service should be available.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.plausible.server.secretKeybaseFile
Path to the secret used by the 'phoenix'−framework. Instructions how to generate one are documented in the **framework docs**.

Type: absolute path or string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/plausible.nix>

services.playerctld.enable
Whether to enable the playerctld daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/playerctld.nix>

services.playerctld.package
The playerctl package to use.

Type: package

Default:

```
pkgs.playerctl
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/playerctld.nix>

services.pleroma.enable
Whether to enable pleroma.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pleroma.nix>

services.pleroma.package
The pleroma package to use.

Type: package

Default:

```
pkgs.pleroma
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pleroma.nix>

services.pleroma.configs
Pleroma public configuration.

This list gets appended from left to right into /etc/pleroma/config.exs. Elixir evaluates its configuration imperatively, meaning you can override a setting by appending a new str to this NixOS option list.

DO NOT STORE ANY PLEROMA SECRET HERE, use **services.pleroma.secretConfigFile** instead.

This setting is going to be stored in a file part of the Nix store. The Nix store being world−readable, it's not the right place to store any secret

Have a look to Pleroma section in the NixOS manual for more information.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pleroma.nix>

services.pleroma.group
Group account under which pleroma runs.

Type: string

Default:

```
"pleroma"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pleroma.nix>

services.pleroma.secretConfigFile
Path to the file containing your secret pleroma configuration.

DO NOT POINT THIS OPTION TO THE NIX STORE, the store being world−readable, it'll compromise all your secrets.

Type: string

Default:

```
"/var/lib/pleroma/secrets.exs"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pleroma.nix>

services.pleroma.stateDir
Directory where the pleroma service will save the uploads and static files.

Type: string *(read only)*

Default:

```
"/var/lib/pleroma"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pleroma.nix>

services.pleroma.user
User account under which pleroma runs.

Type: string

Default:

```
"pleroma"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pleroma.nix>

services.plex.enable
Whether to enable Plex Media Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/plex.nix>

services.plex.package
The plex package to use. Plex subscribers may wish to use their own package here, pointing to subscriber−only server versions.

Type: package

Default:

```
pkgs.plex
```

Declared by:
<nixpkgs/nixos/modules/services/misc/plex.nix>

services.plex.accelerationDevices
A list of device paths to hardware acceleration devices that Plex should have access to. This is useful when transcoding media files. The special value ‘"*"’ will allow all devices.

Type: list of string

Default:

```
[
  "*"
]
```

Example:

```
[
  "/dev/dri/renderD128"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/plex.nix>

services.plex.dataDir
The directory where Plex stores its data files.

Type: string

Default:

```
"/var/lib/plex"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/plex.nix>

services.plex.extraPlugins
A list of paths to extra plugin bundles to install in Plex’s plugin directory. Every time the systemd unit for Plex starts up, all of the symlinks in Plex’s plugin directory will be cleared and this module will symlink all of the paths specified here to that directory.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  (builtins.path {
    name = "Audnexus.bundle";
    path = pkgs.fetchFromGitHub {
      owner = "djdembeck";
      repo = "Audnexus.bundle";
      rev = "v0.2.8";
      sha256 = "sha256-IWOSz3vYL7zhdHan468xNc6C/eQ2C2BukQlaJNLXh7E \
="";
    };
  })
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/plex.nix>

services.plex.extraScanners
A list of paths to extra scanners to install in Plex's scanners directory.

Every time the systemd unit for Plex starts up, all of the symlinks in Plex's scanners directory will be cleared and this module will symlink all of the paths specified here to that directory.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  (fetchFromGitHub {
    owner = "ZeroQI";
    repo = "Absolute-Series-Scanner";
    rev = "773a39f502a1204b0b0255903cee4ed02c46fde0";
    sha256 = "4l+vpiDdC8L/EeJowUgYyB3JPNTZ1sauN8liFAcK+PY=";
  })
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/plex.nix>

services.plex.group
Group under which Plex runs.

Type: string

Default:

```
"plex"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/plex.nix>

services.plex.openFirewall
Open ports in the firewall for the media server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/plex.nix>

services.plex.user
User account under which Plex runs.

Type: string

Default:

```
"plex"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/plex.nix>

services.plikd.enable

Whether to enable plikd, a temporary file upload system.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/plikd.nix>

services.plikd.openFirewall

Open ports in the firewall for the plikd.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/plikd.nix>

services.plikd.settings

Configuration for plikd, see **https://github.com/root-gg/plik/blob/master/server/plikd.cfg** for supported values.

Type: TOML value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/misc/plikd.nix>

services.pocket-id.enable

Whether to enable Pocket ID server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/pocket-id.nix>

services.pocket-id.package

The pocket-id package to use.

Type: package

Default:

```
pkgs.pocket-id
```

Declared by:

<nixpkgs/nixos/modules/services/security/pocket-id.nix>

services.pocket−id.credentials

Environment variables which are loaded from the contents of the specified file paths. This can be used to securely store tokens and secrets outside of the world−readable Nix store.

See **PocketID environment variables**.

Alternatively you can use ‘services.pocket−id.environmentFile’ to define all the variables in a single file.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  ENCRYPTION_KEY = "/run/secrets/pocket−id/encryption−key";
}
```

Declared by:

<nixpkgs/nixos/modules/services/security/pocket−id.nix>

services.pocket−id.dataDir

The directory where Pocket ID will store its data, such as the database when using SQLite.

Type: absolute path

Default:

```
"/var/lib/pocket−id"
```

Declared by:

<nixpkgs/nixos/modules/services/security/pocket−id.nix>

services.pocket−id.environmentFile

Path to an environment file to be loaded. This can be used to securely store tokens and secrets outside of the world−readable Nix store.

See **PocketID environment variables**.

Example contents of the file: MAXMIND_LICENSE_KEY=your−license−key

Alternatively you can use ‘services.pocket−id.credentials’ to define each variable in separate files.

Type: absolute path

Default:

```
"/dev/null"
```

Example:

```
"/var/lib/secrets/pocket−id"
```

Declared by:

<nixpkgs/nixos/modules/services/security/pocket−id.nix>

services.pocket−id.group

Group account under which Pocket ID runs.

Type: string

Default:

```
"pocket−id"
```

Declared by:
<nixpkgs/nixos/modules/services/security/pocket-id.nix>

services.pocket-id.settings
Environment variables to be passed.

See **PocketID environment variables**.

Type: open submodule of attribute set of (atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/pocket-id.nix>

services.pocket-id.settings.ANALYTICS_DISABLED
Whether to disable analytics.

See the **analytics documentation**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/pocket-id.nix>

services.pocket-id.settings.APP_URL
The URL where you will access the app.

Type: string

Default:

```
"http://localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/security/pocket-id.nix>

services.pocket-id.settings.TRUST_PROXY
Whether the app is behind a reverse proxy.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/pocket-id.nix>

services.pocket-id.user
User account under which Pocket ID runs.

Type: string

Default:

```
"pocket-id"
```

Declared by:
<nixpkgs/nixos/modules/services/security/pocket-id.nix>

services.podgrab.enable

Whether to enable Podgrab, a self−hosted podcast manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/podgrab.nix>

services.podgrab.dataDirectory

Directory to store downloads.

Type: absolute path

Default:

```
"/var/lib/podgrab/data"
```

Example:

```
"/mnt/podcasts"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/podgrab.nix>

services.podgrab.group

Group under which Podgrab runs, and which owns the download directory.

Type: string

Default:

```
"podgrab"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/podgrab.nix>

services.podgrab.passwordFile

The path to a file containing the PASSWORD environment variable definition for Podgrab's authentication.

Type: null or string

Default:

```
null
```

Example:

```
"/run/secrets/password.env"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/podgrab.nix>

services.podgrab.port

The port on which Podgrab will listen for incoming HTTP traffic.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Example:

```
4242
```

Declared by:
<nixpkgs/nixos/modules/services/misc/podgrab.nix>

services.podgrab.user
User under which Podgrab runs, and which owns the download directory.

Type: string

Default:

```
"podgrab"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/podgrab.nix>

services.polaris.enable
Whether to enable Polaris Music Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/polaris.nix>

services.polaris.package
The polaris package to use.

Type: package

Default:

```
pkgs.polaris
```

Declared by:
<nixpkgs/nixos/modules/services/misc/polaris.nix>

services.polaris.extraGroups
Polaris' auxiliary groups.

Type: list of string

Default:

```
[ ]
```

Example:

```
["media" "music"]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/polaris.nix>

services.polaris.group
Group under which Polaris is run.

Type: string

Default:

```
"polaris"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/polaris.nix>

services.polaris.openFirewall
Open the configured port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/polaris.nix>

services.polaris.port
The port which the Polaris REST api and web UI should listen to. Note: polaris is hardcoded to listen to the hostname “0.0.0.0”.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5050
```

Declared by:
<nixpkgs/nixos/modules/services/misc/polaris.nix>

services.polaris.settings
Contents for the TOML Polaris config, applied each start. Although poorly documented, an example may be found here: **test−config.toml**

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  settings.reindex_every_n_seconds = 7*24*60*60; # weekly, default  \
is 1800
  settings.album_art_pattern =
    "(cover|front|folder)\.(jpeg|jpg|png|bmp|gif)";
  mount_dirs = [
    {
      name = "NAS";
      source = "/mnt/nas/music";
    }
    {
      name = "Local";
      source = "/home/my_user/Music";
    }
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/polaris.nix>

services.polaris.user

User account under which Polaris runs.

Type: string

Default:

```
"polaris"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/polaris.nix>

services.pomerium.enable

Whether to enable the Pomerium authenticating reverse proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/pomerium.nix>

services.pomerium.configFile

Path to Pomerium config YAML. If set, overrides services.pomerium.settings.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/pomerium.nix>

services.pomerium.secretsFile

Path to file containing secrets for Pomerium, in systemd EnvironmentFile format. See the **systemd.exec**(5) man page.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/pomerium.nix>

services.pomerium.settings

The contents of Pomerium's config.yaml, in Nix expressions.

Specifying configFile will override this in its entirety.

See **the Pomerium configuration reference** for more information about what to put here.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/pomerium.nix>

services.pomerium.useACMEHost

If set, use a NixOS−generated ACME certificate with the specified name.

Note that this will require you to use a non−HTTP−based challenge, or disable Pomerium's in−built HTTP redirect server by setting http_redirect_addr to null and use a different HTTP server for serving the challenge response.

If you're using an HTTP−based challenge, you should use the Pomerium−native autocert option instead.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/pomerium.nix>

services.porn−vault.enable

Whether to enable Porn−Vault.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/porn−vault/default.nix>

services.porn−vault.package

The porn−vault package to use.

Type: package

Default:

```
pkgs.porn-vault
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/porn−vault/default.nix>

services.porn−vault.autoStart

Whether to start porn−vault automatically.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/porn−vault/default.nix>

services.porn−vault.openFirewall

Whether to open the Porn−Vault port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/porn−vault/default.nix>

services.porn−vault.port
Which port Porn−Vault will use.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/porn−vault/default.nix>

services.porn−vault.settings
Configuration for Porn−Vault. The attributes are serialized to JSON in config.json.

See **https://gitlab.com/porn−vault/porn−vault/−/blob/dev/config.example.json**

Type: JSON value

Default:

```
{
  auth = {
    password = null;
  };
  binaries = {
    ffmpeg = "ffmpeg";
    ffprobe = "ffprobe";
    imagemagick = {
      convertPath = "convert";
      identifyPath = "identify";
      montagePath = "montage";
    };
    izzyPort = 8000;
  };
  import = {
    images = [
      {
        enable = true;
        exclude = [ ];
        extensions = [
          ".jpg"
          ".jpeg"
          ".png"
          ".gif"
        ];
        include = [ ];
        path = "/media/porn-vault/images";
      }
    ];
    scanInterval = 10800000;
    videos = [
      {
        enable = true;
        exclude = [ ];
        extensions = [
```

```
        ".mp4"
        ".mov"
        ".webm"
      ];
      include = [ ];
      path = "/media/porn-vault/videos";
    }
  ];
};

        cpuUsed = 3;
        crf = 31;
        deadline = "realtime";
      };
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/porn−vault/default.nix>

services.portunus.enable
Whether to enable Portunus, a self−contained user/group management and authentication service for LDAP.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.package
The portunus package to use.

Type: package

Default:

```
pkgs.portunus
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.dex.enable
Whether to enable Dex ldap connector.

To activate dex, first a search user must be created in the Portunus web ui and then the password must to be set as the 'DEX_SEARCH_USER_PASSWORD' environment variable in the **services.dex.environmentFile** setting .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.dex.oidcClients
List of OIDC clients.

The OIDC secret must be set as the 'DEX_CLIENT_${id}' environment variable in the **services.dex.environmentFile** setting.

Note
Make sure the id only contains characters that are allowed in an environment variable name, e.g. no –.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    callbackURL = "https://example.com/client/oidc/callback";
    id = "service";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.dex.oidcClients.*.callbackURL
URL where the OIDC client should redirect

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.dex.oidcClients.*.id
ID of the OIDC client

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.dex.port
Port where dex should listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5556
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.domain
Subdomain which gets reverse proxied to Portunus webserver.

Type: string

Example:

```
"sso.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.group
Group account under which Portunus runs its webserver.

Type: string

Default:

```
"portunus"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.ldap.package
The openldap package to use.

Type: package

Default:

```
pkgs.openldap
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.ldap.group
Group account under which Portunus runs its LDAP server.

Type: string

Default:

```
"openldap"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.ldap.searchUserName
The login name of the search user. This user account must be configured in Portunus either manually or via seeding.

Type: string

Default:

```
""
```

Example:

```
"admin"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.ldap.suffix
The DN of the topmost entry in your LDAP directory. Please refer to the Portunus documentation for more information on how this impacts the structure of the LDAP directory.

Type: string

Example:

```
"dc=example,dc=org"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.ldap.tls
Whether to enable LDAPS protocol. This also adds two entries to the '/etc/hosts' file to point **services.portunus.domain** to localhost, so that CLIs and programs can use ldaps protocol and verify the certificate without opening the firewall port for the protocol.

This requires a TLS certificate for **services.portunus.domain** to be configured via **security.acme.certs**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.ldap.user
User account under which Portunus runs its LDAP server.

Type: string

Default:

```
"openldap"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.port
Port where the Portunus webserver should listen on.

This must be put behind a TLS−capable reverse proxy because Portunus only listens on localhost.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.seedPath
Path to a portunus seed file in json format. See **https://github.com/majewsky/portunus#seeding−users−and−groups−from−static−configuration** for available options.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.seedSettings
Seed settings for users and groups. See upstream for format **https://github.com/majewsky/portunus#seeding−users−and−groups−from−static−configuration**

Type: null or (attribute set of list of attribute set of anything)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.stateDir
Path where Portunus stores its state.

Type: absolute path

Default:

```
"/var/lib/portunus"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.portunus.user
User account under which Portunus runs its webserver.

Type: string

Default:

```
"portunus"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/portunus.nix>

services.porxie.enable
Whether to enable Porxie, an ATProto blob proxy for secure content delivery.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.package
The porxie package to use.

Type: package

Default:

```
pkgs.porxie
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.environmentFiles
Files to load environment variables from. Use for secrets such as **PORXIE_SERVER_ADMIN_PASSWORD** and **PORXIE_POLICY_REQUEST_HEADERS**.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings

Configuration for Porxie as environment variables. See the **README** for detailed information about application configuration.

Secrets such as **settings.PORXIE_SERVER_ADMIN_PASSWORD** should be set via **environmentFiles** rather than here, as values set here will be readable in the Nix store.

Type: open submodule of attribute set of (null or string or boolean or signed integer)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_BLOB_ALLOWED_MIMETYPES

Blob MIME types that can be served.

Validation is done loosely via content inference. Further validation can be done by a layer above this proxy, such as an image transformation service. When inference fails, the blob's type falls back to 'application/octet−stream'. When that type is allowed, blobs failing inference can still be served.

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_BLOB_CACHE_HEADER

The 'Cache−Control' header value to send alongside blob responses.

This does not affect internal cache lifetimes, only how downstream clients such as CDNs and browsers are instructed to cache responses. Intermediary caches may need to be cleared manually for changes to take effect quickly.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_BLOB_HTTP_CONNECT_TIMEOUT

Maximum duration before an attempted connection to a blob upstream is aborted.

This value should be lower than **settings.PORXIE_BLOB_HTTP_TIMEOUT**.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_BLOB_HTTP_TIMEOUT
Maximum duration before blob fetch requests are timed out.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_BLOB_MAX_SIZE
Maximum blob size that can be fetched and served.

Blobs that exceed this limit will return HTTP 413. The minimum value is 512kb and the maximum is the system's total memory.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_BLOB_PROCESSING_TIMEOUT
Maximum duration a blob can be processed by this server before aborting.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_CACHE_ALLOCATION
Total memory allocation for the internal cache.

Blobs are cached using an LFU policy. The most frequently requested blobs are kept longest when the cache approaches its limit.

For production deployments, a CDN or caching layer in front of this server is recommended for lower latency and better global availability.

The minimum value is 8mb and the maximum is the system's total memory.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_CACHE_BLOB_TTI
How long blobs can be idle in the cache before expiring.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_CACHE_IDENTITY_TTL
How long identity lookups (DID resolution, etc.) can be cached before expiring.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_CACHE_OWNERSHIP_TTL
How long blob ownership can be cached before expiring.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_CACHE_POLICY_TTL
How long policy decisions can be cached before expiring.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_IDENTITY_HTTP_CONNECT_TIMEOUT
Maximum duration before a connection attempt to an identity upstream is aborted.

This value should be lower than **settings.PORXIE_IDENTITY_HTTP_TIMEOUT**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_IDENTITY_HTTP_TIMEOUT
Maximum duration before identity resolution requests are timed out.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_IDENTITY_PLC_URL
URL of the PLC instance used for 'did:plc' lookups.

Can typically be left as default unless using a custom or local development setup.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_POLICY_FAIL_OPEN
Allow requests to proceed if the policy service is unavailable.

Warning: enabling this means restricted blobs may be served when the policy service is unreachable.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_POLICY_HTTP_CONNECT_TIMEOUT
Maximum duration before an attempted connection to the policy service is aborted.

This value should be lower than **settings.PORXIE_POLICY_HTTP_TIMEOUT**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_POLICY_HTTP_TIMEOUT
Maximum duration before policy service requests are timed out.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_POLICY_REQUEST_HEADERS
Headers sent alongside all requests to the policy service. Each header must be in the format 'Name: value'.

As pipes are used as a delimiter, they cannot be contained in header values.

Should be set via **environmentFiles** for sensitive values such as API keys.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_POLICY_URL
Policy service URL that DID+CID pairs will be checked against.

Requests are sent via XRPC to '<url>/xrpc/dev.blooym.porxie.getBlobPolicy?did=<did>&cid=<cid>'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_SERVER_ADDRESS
Address to bind the server to.

Use the 'ip:' prefix for an IP address (e.g. 'ip:127.0.0.1:6314'), or on UNIX systems, the 'unix:' prefix for a UNIX socket path (e.g. 'unix:/run/porxie/porxie.sock').

Type: string

Default:

```
"ip:127.0.0.1:6314"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.porxie.settings.PORXIE_SERVER_ADMIN_PASSWORD
Admin password for authenticating privileged requests.

When unset, all authenticated endpoints will reject requests with HTTP 401.

Authenticated requests always expect the username 'admin' as per specification.

Should be set via **environmentFiles** rather than directly.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/porxie.nix>

services.postfix.enable
Whether to run the Postfix mail server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.enableHeaderChecks
Whether to enable postfix header checks

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.enableSmtp

Whether to enable the ‘smtp’ service configured in the master.cf.

This service listens for plain text SMTP connections on port 25 and supports explicit TLS via StartTLS.

It is the primary port used by SMTP servers to exchange mail.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.enableSubmission

```
      Whether to enable the ‘submission‘ service configured in mast \
er.cf.
      This service listens for plain text SMTP connections on port  \
587
      and supports explicit TLS via StartTLS.
      It is a way for clients to login and submit mails after an in \
band
      connection upgrade using StartTLS.
      ::: {.warning}
      [RFC 8314](https://www.rfc-editor.org/rfc/rfc8314) discourag \
es the use
      of explicit TLS for mail submissionn.
      :::
```

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.enableSubmissions

Whether to enable the ‘submissions’ service configured in master.cf.

This service listen for implicit TLS connections on port 465.

::: {.info} Per **RFC 8314** implicit TLS is recommended for mail submission. :::

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.package

The postfix package to use.

Type: package

Default:

```
pkgs.postfix
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.aliasFiles

Aliases' tables to be compiled and placed into /var/lib/postfix/conf.

Type: attribute set of absolute path

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.aliasMapType

The format the alias map should have. Use regexp if you want to use regular expressions.

Type: one of "hash", "regexp", "pcre"

Default:

```
"hash"
```

Example:

```
"regexp"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.canonical

Entries for the **canonical**(5) table.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.dnsBlacklistOverrides

contents of check_client_access for overriding dnsBlacklists

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.dnsBlacklists
dns blacklist servers to use with smtpd_client_restrictions

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.extraAliases
Additional entries to put verbatim into aliases file, cf. man−page **aliases**(8).

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.extraHeaderChecks
Extra lines to /etc/postfix/header_checks file.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"/^X−Spam−Flag:/ REDIRECT spam@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.extraMasterConf
Extra lines to append to the generated master.cf file.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"submission inet n − n − − smtpd"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.group
What to call the Postfix group (must be used only for postfix).

Type: string

Default:

```
"postfix"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.headerChecks

Postfix header checks.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    action = "REDIRECT spam@example.com";
    pattern = "/^X-Spam-Flag:/";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.headerChecks.*.action

The action to be executed when the pattern is matched

Type: string

Default:

```
"DUNNO"
```

Example:

```
"BCC mail@example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.headerChecks.*.pattern

A regexp pattern matching the header

Type: string

Default:

```
"/^.*/"
```

Example:

```
"/^X-Mailer:/"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.localRecipients

List of accepted local users. Specify a bare username, an ‘"@domain.tld"’ wild-card, or a complete ‘"user@domain.tld"’ address. If set, these names end up in the local recipient map – see the **local**(8) man-page – and effectively replace the system user database lookup that’s otherwise used by default.

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.mapFiles

Maps to be compiled and placed into /var/lib/postfix/conf.

Type: attribute set of absolute path

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.postmasterAlias

Who should receive postmaster e−mail. Multiple values can be added by separating values with comma.

Type: string

Default:

```
"root"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.rootAlias

Who should receive root e−mail. Blank for no redirection. Multiple values can be added by separating values with comma.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.setSendmail

Whether to set the system sendmail to postfix's.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.setgidGroup

How to call postfix setgid group (for postdrop). Should be uniquely used group.

Type: string

Default:

```
"postdrop"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.main

The main.cf configuration file as key value set.

Null values will not be rendered.

Tip

Check 'postconf −d' for the default values of all settings.

Type: open submodule of attribute set of (null or boolean or signed integer or absolute path or string or

list of string)

Example:

```
{
  mail_owner = "postfix";
  smtp_tls_security_level = "may";
}
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.main.message_size_limit
Maximum size of an email message in bytes.

https://www.postfix.org/postconf.5.html#message_size_limit

Type: null or signed integer

Default:

```
10240000
```

Example:

```
52428800
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.main.mydestination
List of domain names intended for local delivery using /etc/passwd and /etc/aliases.

Warning
Do not include **virtual** domains in this list.

https://www.postfix.org/postconf.5.html#mydestination

Type: null or string or list of string

Default:

```
[
  "$myhostname"
  "localhost.$mydomain"
  "localhost"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.main.myhostname
The internet hostname of this mail system.

Leave unset to default to the system hostname with the **mydomain** suffix.

https://www.postfix.org/postconf.5.html#myhostname

Type: null or string

Default:

```
null
```

Example:

```
"mail.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.main.mynetworks
List of trusted remote SMTP clients, that are allowed to relay mail.

Leave unset to let Postfix populate this list based on the **mynetworks_style** setting.

https://www.postfix.org/postconf.5.html#mynetworks

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "127.0.0.0/8"
  "::1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.main.mynetworks_style
The method used for generating the default value for **mynetworks**, if that option is unset.

https://www.postfix.org/postconf.5.html#mynetworks_style

Type: null or one of “host”, “subnet”, “class”

Default:

```
"host"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.main.recipient_delimiter
Set of characters used as the delimiters for address extensions.

This allows creating different forwarding rules per extension.

https://www.postfix.org/postconf.5.html#recipient_delimiter

Type: null or string

Default:

```
""
```

Example:

```
"+"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.main.relay_domains
List of domains delivered via the relay transport.

https://www.postfix.org/postconf.5.html#relay_domains

Type: null or (list of string)

Default:

```
[ ]
```

Example:

```
[
  "lists.example.com"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.main.relayhost
List of hosts to use for relaying outbound mail.

Note
Putting the hostname in angled brackets, e.g. '[relay.example.com]', turns off MX and SRV lookups for the hostname.

https://www.postfix.org/postconf.5.html#relayhost

Type: null or (list of string)

Default:

```
[ ]
```

Example:

```
[
  "[relay.example.com]:587"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.main.smtp_tls_CAfile
File containing CA certificates of root CAs trusted to sign either remote SMTP server certificates or intermediate CA certificates.

Defaults to the system CA bundle that is managed through the 'security.pki' options.

https://www.postfix.org/postconf.5.html#smtp_tls_CAfile

Type: absolute path

Default:

```
config.security.pki.caBundle
```

Example:

```
${pkgs.cacert}/etc/ssl/certs/ca-bundle.crt
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.main.smtp_tls_security_level
The client TLS security level.

Tip
Use 'dane' with a local DNSSEC validating DNS resolver enabled.

https://www.postfix.org/postconf.5.html#smtp_tls_security_level

Type: one of "none", "may", "encrypt", "dane", "dane-only", "fingerprint", "verify", "secure"

Default:

```
"may"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.main.smtpd_tls_chain_files
List of paths to the server private keys and certificates.

Caution
The order of items matters and a private key must always be followed by the corresponding certificate.

https://www.postfix.org/postconf.5.html#smtpd_tls_chain_files

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/var/lib/acme/mail.example.com/privkey.pem"
  "/var/lib/acme/mail.example.com/fullchain.pem"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.main.smtpd_tls_security_level
The server TLS security level. Enable TLS by configuring at least 'may'.

https://www.postfix.org/postconf.5.html#smtpd_tls_security_level

Type: one of "none", "may", "encrypt"

Default:

```
if config.services.postfix.settings.main.smtpd_tls_chain_files != [ \
 ] then "may" else "none"
```

Example:

```
"may"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.master
The *master.cf* configuration file as an attribute set of service defitions

Tip
Check **https://www.postfix.org/master.5.html** for possible settings.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  submission = {
    args = [
      "-o"
      "smtpd_tls_security_level=encrypt"
    ];
```

```
    type = "inet";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.master.<name>.args
Arguments to pass to the **command**. There is no shell processing involved and shell syntax is passed verbatim to the process.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-o"
  "smtp_helo_timeout=5"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.master.<name>.chroot
Whether the service is chrooted to have only access to the **services.postfix.queueDir** and the closure of store paths specified by the **program** option.

Type: boolean

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.master.<name>.command
A program name specifying a Postfix service/daemon process. By default it's the attribute **name**.

Type: string

Default:

```
"‹name›"
```

Example:

```
"smtpd"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.master.<name>.maxproc
The maximum number of processes to spawn for this service. If the value is '0' it doesn't have any limit. If 'null' is given it uses the postfix default of '100'.

Type: signed integer

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.master.<name>.name
The name of the service to run. Defaults to the attribute set key.

Type: string

Default:

```
"‹name›"
```

Example:

```
"smtp"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.master.<name>.private
Whether the service's sockets and storage directory is restricted to be only available via the mail system. If 'null' is given it uses the postfix default 'true'.

Type: boolean

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.master.<name>.privileged
Type: boolean

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.master.<name>.type
The type of the service

Type: one of "inet", "unix", "unix−dgram", "fifo", "pass"

Default:

```
"unix"
```

Example:

```
"inet"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.master.<name>.wakeup
Automatically wake up the service after the specified number of seconds. If '0' is given, never wake the service up.

Type: signed integer

Example:

```
60
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.settings.master.<name>.wakeupUnusedComponent
If set to ‘false’ the component will only be woken up if it is used. This is equivalent to postfix’ notion of adding a question mark behind the wakeup time in *master.cf*

Type: boolean

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.submissionOptions
Options for the submission config in master.cf

Type: attribute set of string

Default:

```
{
  milter_macro_daemon_name = "ORIGINATING";
  smtpd_client_restrictions = "permit_sasl_authenticated,reject";
  smtpd_sasl_auth_enable = "yes";
  smtpd_tls_security_level = "encrypt";
}
```

Example:

```
{
  milter_macro_daemon_name = "ORIGINATING";
  smtpd_client_restrictions = "permit_sasl_authenticated,reject";
  smtpd_sasl_auth_enable = "yes";
  smtpd_sasl_type = "dovecot";
  smtpd_tls_security_level = "encrypt";
}
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.submissionsOptions
Options for the submission config via smtps in master.cf.

smtpd_tls_security_level will be set to encrypt, if it is missing or has one of the values “may” or “none”.

smtpd_tls_wrappermode with value “yes” will be added automatically.

Type: attribute set of string

Default:

```
{
  milter_macro_daemon_name = "ORIGINATING";
  smtpd_client_restrictions = "permit_sasl_authenticated,reject";
  smtpd_sasl_auth_enable = "yes";
}
```

Example:

```
{
  milter_macro_daemon_name = "ORIGINATING";
  smtpd_client_restrictions = "permit_sasl_authenticated,reject";
```

```
    smtpd_sasl_auth_enable = "yes";
    smtpd_sasl_type = "dovecot";
  }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.transport
Entries for the transport map, cf. man−page **transport**(5).

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.user
What to call the Postfix user (must be used only for postfix).

Type: string

Default:

```
"postfix"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.virtual
Entries for the virtual alias map, cf. man−page **virtual**(5).

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix.virtualMapType
What type of virtual alias map file to use. Use ‘"regexp"’ for regular expressions.

Type: one of “hash”, “regexp”, “pcre”

Default:

```
"hash"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix.nix>

services.postfix−tlspol.enable
Whether to enable postfix−tlspol.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix−tlspol.nix>

services.postfix−tlspol.package
The postfix−tlspol package to use.

Type: package

Default:

```
pkgs.postfix-tlspol
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix−tlspol.nix>

services.postfix−tlspol.configurePostfix
Whether to configure the required settings to use postfix−tlspol in the local Postfix instance.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix−tlspol.nix>

services.postfix−tlspol.settings
The postfix−tlspol configuration file as a Nix attribute set.

See the reference documentation for possible options. **https://github.com/Zuplu/postfix−tlspol/blob/main/configs/config.default.yaml**

Type: open submodule of (YAML 1.2 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix−tlspol.nix>

services.postfix−tlspol.settings.dns.address
IP and port to your DNS resolver.

Uses resolvers from /etc/resolv.conf if unset.

Note
The configured DNS resolver must validate DNSSEC signatures.

Type: null or string

Default:

```
null
```

Example:

```
"127.0.0.1:53"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix−tlspol.nix>

services.postfix−tlspol.settings.server.address
Path or address/port where postfix−tlspol binds its socket to.

Type: string

Default:

```
"unix:/run/postfix-tlspol/tlspol.sock"
```

Example:

```
"127.0.0.1:8642"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix-tlspol.nix>

services.postfix-tlspol.settings.server.cache-file
Path to the cache file.

Type: absolute path *(read only)*

Default:

```
"/var/cache/postfix-tlspol/cache.db"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix-tlspol.nix>

services.postfix-tlspol.settings.server.log-level
Log level

Type: one of “debug”, “info”, “warn”, “error”

Default:

```
"info"
```

Example:

```
"warn"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix-tlspol.nix>

services.postfix-tlspol.settings.server.prefetch
Whether to prefetch DNS records when the TTL of a cached record is about to expire.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix-tlspol.nix>

services.postfix-tlspol.settings.server.socket-permissions
Permissions to the UNIX socket, if configured.

Note
Due to hardening on the systemd unit the socket can never be created world readable/writable.

Type: string *(read only)*

Default:

```
"0660"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postfix-tlspol.nix>

services.postgres−websockets.enable

Whether to enable postgres−websockets.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgres−websockets.nix>

services.postgres−websockets.environment

postgres−websockets configuration as defined in: **https://github.com/diogob/postgres−websockets/blob/master/src/PostgresWebsockets/Config.hs#L71−L87**

'PGWS_DB_URI' is represented as an attribute set, see 'environment.PGWS_DB_URI'

Note

The 'environment.PGWS_JWT_SECRET' option is blocked. Use 'jwtSecretFile' instead.

Type: open submodule of attribute set of string

Default:

```
{ }
```

Example:

```
{
  PGWS_LISTEN_CHANNEL = "my_channel";
  PGWS_DB_URI.dbname = "postgres";
}
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgres−websockets.nix>

services.postgres−websockets.environment.PGWS_DB_URI

libpq connection parameters as documented in:

https://www.postgresql.org/docs/current/libpq−connect.html#LIBPQ−PARAMKEYWORDS

Note

The 'environment.PGWS_DB_URI.password' and 'environment.PGWS_DB_URI.passfile' options are blocked. Use 'pgpassFile' instead.

Type: open submodule of attribute set of string

Default:

```
{ }
```

Example:

```
{
  host = "localhost";
  dbname = "postgres";
}
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgres−websockets.nix>

services.postgres−websockets.environment.PGWS_HOST
Address the server will listen for websocket connections.

Type: null or string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgres−websockets.nix>

services.postgres−websockets.jwtSecretFile
Secret used to sign JWT tokens used to open communications channels.

Type: null or absolute path not in the Nix store

Default:

```
null
```

Example:

```
"/run/keys/jwt_secret"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgres−websockets.nix>

services.postgres−websockets.pgpassFile
The password to authenticate to PostgreSQL with. Not needed for peer or trust based authentication.

The file must be a valid '.pgpass' file as described in: **https://www.postgresql.org/docs/current/libpq−pgpass.html**

In most cases, the following will be enough:

```
*:*:*:*:<password>
```

Type: null or absolute path not in the Nix store

Default:

```
null
```

Example:

```
"/run/keys/db_password"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgres−websockets.nix>

services.postgresql.enable
Whether to enable PostgreSQL Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.enableJIT

Whether to enable JIT support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.enableTCPIP

Whether PostgreSQL should listen on all network interfaces. If disabled, the database can only be accessed via its Unix domain socket or via TCP connections to localhost.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.package

The package being used by postgresql.

Type: package

Default:

```
if versionAtLeast config.system.stateVersion "25.11" then
  pkgs.postgresql_17
else if versionAtLeast config.system.stateVersion "24.11" then
  pkgs.postgresql_16
else if versionAtLeast config.system.stateVersion "23.11" then
  pkgs.postgresql_15
else
  pkgs.postgresql_14
```

Example:

```
pkgs.postgresql_15
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.authentication

Defines how users authenticate themselves to the server. See the **PostgreSQL documentation for pg_hba.conf** for details on the expected format of this option. By default, peer based authentication will be used for users connecting via the Unix socket, and md5 password authentication will be used for users connecting via TCP. Any added rules will be inserted above the default rules. If you'd like to replace the default rules entirely, you can use 'lib.mkForce' in your module.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.checkConfig
Check the syntax of the configuration file at compile time

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.dataDir
The data directory for PostgreSQL. If left as the default value this directory will automatically be created before the PostgreSQL server starts, otherwise the sysadmin is responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: absolute path

Default:

```
"/var/lib/postgresql/${config.services.postgresql.package.psqlSchem \
a}"
```

Example:

```
"/var/lib/postgresql/15"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.ensureDatabases
Ensures that the specified databases exist. This option will never delete existing databases, especially not when the value of this option is changed. This means that databases created once through this option or otherwise have to be removed manually.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "gitea"
  "nextcloud"
]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.ensureUsers
Ensures that the specified users exist. The PostgreSQL users will be identified using peer authentication. This authenticates the Unix user with the same name only, and that without the need for a password. This option will never delete existing users or remove DB ownership of databases once granted with ‘ensureDBOwnership = true;’. This means that this must be cleaned up manually when changing after changing the config in here.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    name = "nextcloud";
  }
  {
    name = "superuser";
    ensureDBOwnership = true;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.ensureUsers.*.ensureClauses

An attrset of clauses to grant to the user. Under the hood this uses the **ALTER USER syntax** for each attrName where the attrValue is true in the attrSet: 'ALTER USER user.name WITH attrName'

Type: open submodule of attribute set of (string or signed integer or boolean)

Default:

```
{ }
```

Example:

```
{
  superuser = true;
  createrole = true;
  createdb = true;
  connection_limit = 5;
  # SCRAM-SHA-256 hashed password for "password"
  # Generate hashes using PostgreSQL or a dedicated script rather t \
han storing passwords in plain text.
  password = "SCRAM-SHA-256$4096:SZEJF5Si4QZ6l4fedrZZWQ==$6u3PWVc \
z+dts+NdpByPIjKa4CaSnoXGG3M2vpo76bVU=:WSZ0iGUCmVtKYVvNX0pFOp/60Igsd \
J+90Y67Eun+QE0=";
}
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.ensureUsers.*.ensureDBOwnership

Grants the user ownership to a database with the same name. This database must be defined manually in **services.postgresql.ensureDatabases**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.ensureUsers.*.name

Name of the user to ensure.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.extensions
List of PostgreSQL extensions to install.

Type: (function that evaluates to a(n) list of absolute path) or (list of absolute path) convertible to it

Default:

```
<function>
```

Example:

```
ps: with ps; [ postgis pg_repack ]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.finalPackage
The postgresql package that will effectively be used in the system. It consists of the base package with plugins applied to it.

Type: package *(read only)*

Default:

```
"with config.services.postgresql; package.withPackages extensions"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.identMap
Defines the mapping from system users to database users.

See the **auth doc**.

There is a default map “postgres” which is used for local peer authentication as the postgres superuser role. For example, to allow the root user to login as the postgres superuser, add:

```
postgres root postgres
```

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
map-name-0 system-username-0 database-username-0
map-name-1 system-username-1 database-username-1
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.initdbArgs
Additional arguments passed to ‘initdb’ during data dir initialisation.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--data-checksums"
  "--allow-group-access"
```

```
]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.initialScript

A file containing SQL statements to execute on first startup.

Type: null or absolute path

Default:

```
null
```

Example:

```
pkgs.writeText "init-sql-script" ''
  alter user postgres with password 'myPassword';
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.settings

PostgreSQL configuration. Refer to **https://www.postgresql.org/docs/current/config-setting.html#CONFIG-SETTING-CONFIGURATION-FILE** for an overview of *postgresql.conf*.

Note

String values will automatically be enclosed in single quotes. Single quotes will be escaped with two single quotes as described by the upstream documentation linked above.

Type: open submodule of attribute set of (boolean or floating point number or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  log_connections = true;
  log_statement = "all";
  logging_collector = true;
  log_disconnections = true;
  log_destination = lib.mkForce "syslog";
}
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.settings.log_line_prefix

A printf-style string that is output at the beginning of each log line. Upstream default is ''%m [%p] '', i.e. it includes the timestamp. We do not include the timestamp, because journal has it anyway.

Type: string

Default:

```
"[%p] "
```

Example:

```
"%m [%p] "
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.settings.port

The port on which PostgreSQL listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5432
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.settings.shared_preload_libraries

List of libraries to be preloaded.

Type: null or (strings concatenated with “,” or (list of string) convertible to it)

Default:

```
null
```

Example:

```
[ "auto_explain" "anon" ]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.systemCallFilter

Configures the syscall filter for ‘postgresql.service’. The keys are declarations for ‘SystemCallFilter’ as described in **systemd.exec**(5).

The value is a boolean: ‘true’ adds the attribute name to the syscall filter−set, ‘false’ doesn’t. This is done to allow downstream configurations to turn off restrictions made here. E.g. with

```
{
  services.postgresql.systemCallFilter."~@resources" = false;
}
```

it’s possible to remove the restriction on ‘@resources’ (keep in mind that ‘@system−service’ implies ‘@resources’).

As described in the section for **services.postgresql.systemCallFilter.<name>.priority**, the ordering matters. Hence, it’s also possible to specify customizations with

```
{
  services.postgresql.systemCallFilter = {
    "foobar" = { enable = true; priority = 23; };
  };
}
```

services.postgresql.systemCallFilter.<name>.enable is the flag whether or not it will be added to the ‘SystemCallFilter’ of ‘postgresql.service’.

Settings with a higher priority are added after filter settings with a lower priority. Hence, syscall groups with a higher priority can discard declarations with a lower priority.

By default, syscall groups (i.e. attribute names starting with ‘@’) are added *before* negated groups (i.e. ‘~@’ as prefix) *before* syscall names and negations.

Type: attribute set of ((submodule) or boolean convertible to it)

Default:

```
{
  "@system-service" = true;
  "~@privileged" = true;
```

```
  "~@resources" = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.systemCallFilter.<name>.enable
Whether to enable ‹name› in postgresql's syscall filter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresql.systemCallFilter.<name>.priority
Set the priority of the system call filter setting. Later declarations override earlier ones, e.g.

```
[Service]
SystemCallFilter=~read write
SystemCallFilter=write
```

results in a service where *only* 'read' is not allowed.

The ordering in the unit file is controlled by this option: the higher the number, the later it will be added to the filterset.

By default, depending on the prefix a priority is assigned: usually, call−groups (starting with '@') are used to allow/deny a larger set of syscalls and later on single syscalls are configured for exceptions. Hence, syscall groups and negative groups are placed before individual syscalls by default.

Type: signed integer

Default:

```
if hasPrefix "@" name then 500 else if hasPrefix "~@" name then  \
1000 else 1500
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgresql.nix>

services.postgresqlBackup.enable
Whether to enable PostgreSQL dumps.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/postgresql−backup.nix>

services.postgresqlBackup.backupAll

Backup all databases using pg_dumpall. This option is mutual exclusive to ‘services.postgresqlBackup.databases’. The resulting backup dump will have the name all.sql.gz. This option is the default if no databases are specified.

Type: boolean

Default:

```
services.postgresqlBackup.databases == []
```

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql−backup.nix>

services.postgresqlBackup.compression

The type of compression to use on the generated database dump.

Type: one of “none”, “gzip”, “zstd”

Default:

```
"gzip"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql−backup.nix>

services.postgresqlBackup.compressionLevel

The compression level used when compression is enabled. gzip accepts levels 1 to 9. zstd accepts levels 1 to 19.

Type: integer between 1 and 19 (both inclusive)

Default:

```
6
```

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql−backup.nix>

services.postgresqlBackup.databases

List of database names to dump.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql−backup.nix>

services.postgresqlBackup.location

Path of directory where the PostgreSQL database dumps will be placed.

Type: absolute path

Default:

```
"/var/backup/postgresql"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql−backup.nix>

services.postgresqlBackup.pgdumpAllOptions

Command line options for pg_dumpall. This options is not used if ‘config.services.postgresqlBackup.backupAll’ is disabled.

Type: strings concatenated with " "

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql−backup.nix>

services.postgresqlBackup.pgdumpOptions

Command line options for pg_dump. This options is not used if ‘config.services.postgresqlBackup.backupAll’ is enabled. Note that config.services.postgresqlBackup.backupAll is also active, when no databases where specified.

Type: strings concatenated with " "

Default:

```
"−C"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql−backup.nix>

services.postgresqlBackup.startAt

This option defines (see ‘systemd.time’ for format) when the databases should be dumped. The default is to update at 01:15 (at night) every day.

Type: (list of string) or string

Default:

```
"*−*−* 01:15:00"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql−backup.nix>

services.postgresqlWalReceiver.receivers

PostgreSQL WAL receivers. Stream write−ahead logs from a PostgreSQL server using **pg_receivewal** (formerly **pg_receivexlog**). See **the man page** for more information.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  main = {
    postgresqlPackage = pkgs.postgresql_15;
    directory = /mnt/pg_wal/main/;
    slot = "main_wal_receiver";
    connection = "postgresql://user@somehost";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql−wal−receiver.nix>

services.postgresqlWalReceiver.receivers.<name>.compress

Enables gzip compression of write−ahead logs, and specifies the compression level (‘0’ through ‘9’, ‘0’ being no compression and ‘9’ being best compression). The suffix ‘.gz’ will automatically be added to all filenames.

This option requires PostgreSQL >= 10.

Type: integer between 0 and 9 (both inclusive)

Default:

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql−wal−receiver.nix>

services.postgresqlWalReceiver.receivers.<name>.connection

Specifies parameters used to connect to the server, as a connection string. See **Section 34.1.1 of the PostgreSQL manual** for more information.

Because **pg_receivewal** doesn’t connect to any particular database in the cluster, database name in the connection string will be ignored.

Type: string

Example:

```
"postgresql://user@somehost"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql−wal−receiver.nix>

services.postgresqlWalReceiver.receivers.<name>.directory

Directory to write the output to.

Type: absolute path

Example:

```
/mnt/pg_wal/main/
```

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql−wal−receiver.nix>

services.postgresqlWalReceiver.receivers.<name>.environment

Environment variables passed to the service. Usable parameters are listed in **Section 34.14 of the PostgreSQL manual**.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  PGPASSFILE = "/private/passfile";
  PGSSLMODE = "require";
}
```

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql−wal−receiver.nix>

services.postgresqlWalReceiver.receivers.<name>.extraArgs

A list of extra arguments to pass to the **pg_receivewal** command.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--no-sync"
]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql-wal-receiver.nix>

services.postgresqlWalReceiver.receivers.<name>.postgresqlPackage

The postgresql package to use.

Type: package

Default:

```
pkgs.postgresql
```

Example:

```
postgresql_15
```

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql-wal-receiver.nix>

services.postgresqlWalReceiver.receivers.<name>.slot

Require **pg_receivewal** to use an existing replication slot (see **Section 26.2.6 of the PostgreSQL manual**). When this option is used, **pg_receivewal** will report a flush position to the server, indicating when each segment has been synchronized to disk so that the server can remove that segment if it is not otherwise needed.

When the replication client of **pg_receivewal** is configured on the server as a synchronous standby, then using a replication slot will report the flush position to the server, but only when a WAL file is closed. Therefore, that configuration will cause transactions on the primary to wait for a long time and effectively not work satisfactorily. The option **synchronous** must be specified in addition to make this work correctly.

Type: string

Default:

```
""
```

Example:

```
"some_slot_name"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/postgresql-wal-receiver.nix>

services.postgresqlWalReceiver.receivers.<name>.statusInterval

Specifies the number of seconds between status packets sent back to the server. This allows for easier monitoring of the progress from server. A value of zero disables the periodic status updates completely, although an update will still be sent when requested by the server, to avoid timeout disconnect.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/backup/postgresql−wal−receiver.nix>

services.postgresqlWalReceiver.receivers.<name>.synchronous
Flush the WAL data to disk immediately after it has been received. Also send a status packet back to the server immediately after flushing, regardless of **statusInterval**.

This option should be specified if the replication client of **pg_receivewal** is configured on the server as a synchronous standby, to ensure that timely feedback is sent to the server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/postgresql−wal−receiver.nix>

services.postgrest.enable
Whether to enable PostgREST.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgrest.nix>

services.postgrest.jwtSecretFile
The secret or JSON Web Key (JWK) (or set) used to decode JWT tokens clients provide for authentication. For security the key must be at least 32 characters long. If this parameter is not specified then PostgREST refuses authentication requests.

https://docs.postgrest.org/en/stable/references/configuration.html#jwt−secret

Type: null or absolute path not in the Nix store

Default:

```
null
```

Example:

```
"/run/keys/jwt_secret"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgrest.nix>

services.postgrest.pgpassFile
The password to authenticate to PostgreSQL with. Not needed for peer or trust based authentication.

The file must be a valid '.pgpass' file as described in: **https://www.postgresql.org/docs/current/libpq−pgpass.html**

In most cases, the following will be enough:

```
*:*:*:*:<password>
```

Type: null or absolute path not in the Nix store

Default:

```
null
```

Example:

```
"/run/keys/db_password"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgrest.nix>

services.postgrest.settings
PostgREST configuration as documented in: **https://docs.postgrest.org/en/stable/references/configuration.html#list-of-parameters**

'db-uri' is represented as an attribute set, see 'settings.db-uri'

Note
The 'settings.jwt-secret' option is blocked. Use 'jwtSecretFile' instead.

Type: open submodule of attribute set of (boolean or (unsigned integer, meaning >=0) or string)

Default:

```
{ }
```

Example:

```
{
  db-anon-role = "anon";
  db-uri.dbname = "postgres";
  "app.settings.custom" = "value";
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgrest.nix>

services.postgrest.settings.admin-server-port
Specifies the port for the admin server, which can be used for healthchecks.

https://docs.postgrest.org/en/stable/references/admin_server.html#admin-server

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgrest.nix>

services.postgrest.settings.db-config
Enables the in-database configuration.

https://docs.postgrest.org/en/stable/references/configuration.html#in-database-configuration

Note
This is enabled by default upstream, but disabled by default in this module.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgrest.nix>

services.postgrest.settings.db−uri
libpq connection parameters as documented in:

https://www.postgresql.org/docs/current/libpq−connect.html#LIBPQ−PARAMKEYWORDS

Note
The ‘settings.db−uri.password’ and ‘settings.db−uri.passfile’ options are blocked. Use ‘pgpassFile’ instead.

Type: open submodule of attribute set of string

Default:

```
{ }
```

Example:

```
{
  host = "localhost";
  dbname = "postgres";
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgrest.nix>

services.postgrest.settings.server−host
Where to bind the PostgREST web server.

Note
The admin server will also bind here, but potentially exposes sensitive information. Make sure you turn off the admin server, when opening this to the public.

https://github.com/PostgREST/postgrest/issues/3956

Type: null or string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgrest.nix>

services.postgrest.settings.server−port
The TCP port to bind the web server.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Example:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/databases/postgrest.nix>

services.postgrest.settings.server−unix−socket

Unix domain socket where to bind the PostgREST web server.

Type: null or absolute path

Default:

```
"/run/postgrest/postgrest.sock"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/postgrest.nix>

services.postgrey.enable

Whether to run the Postgrey daemon

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postgrey.nix>

services.postgrey.IPv4CIDR

Strip N bits from IPv4 addresses if lookupBySubnet is true

Type: unsigned integer, meaning >=0

Default:

```
24
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postgrey.nix>

services.postgrey.IPv6CIDR

Strip N bits from IPv6 addresses if lookupBySubnet is true

Type: unsigned integer, meaning >=0

Default:

```
64
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postgrey.nix>

services.postgrey.autoWhitelist

Whitelist clients after successful delivery of N messages

Type: null or (positive integer, meaning >0)

Default:

```
5
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postgrey.nix>

services.postgrey.delay

Greylist for N seconds

Type: unsigned integer, meaning >=0

Default:

```
300
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postgrey.nix>

services.postgrey.greylistAction
Response status for greylisted messages (see **access**(5))

Type: string

Default:

```
"DEFER_IF_PERMIT"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postgrey.nix>

services.postgrey.greylistHeader
Prepend header to greylisted mails; use %%t for seconds delayed due to greylisting, %%v for the version of postgrey, %%d for the date, and %%h for the host

Type: string

Default:

```
"X-Greylist: delayed %%t seconds by postgrey-%%v at %%h; %%d"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postgrey.nix>

services.postgrey.greylistText
Response status text for greylisted messages; use %%s for seconds left until greylisting is over and %%r for mail domain of recipient

Type: string

Default:

```
"Greylisted for %%s seconds"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postgrey.nix>

services.postgrey.lookupBySubnet
Strip the last N bits from IP addresses, determined by IPv4CIDR and IPv6CIDR

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postgrey.nix>

services.postgrey.maxAge
Delete entries from whitelist if they haven’t been seen for N days

Type: unsigned integer, meaning >=0

Default:

```
35
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postgrey.nix>

services.postgrey.privacy

Store data using one−way hash functions (SHA1)

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postgrey.nix>

services.postgrey.retryWindow

Allow N days for the first retry. Use string with appended ‘h’ to specify time in hours

Type: string or (unsigned integer, meaning >=0)

Default:

```
2
```

Example:

```
"12h"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postgrey.nix>

services.postgrey.socket

Socket to bind to

Type: (submodule) or (submodule)

Default:

```
{
  mode = "0777";
  path = "/run/postgrey.sock";
}
```

Example:

```
{
  addr = "127.0.0.1";
  port = 10030;
}
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postgrey.nix>

services.postgrey.whitelistClients

Client address whitelist files (see **postgrey**(8))

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postgrey.nix>

services.postgrey.whitelistRecipients

Recipient address whitelist files (see **postgrey**(8))

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postgrey.nix>

services.postsrsd.enable

Whether to enable the postsrsd SRS server for Postfix…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postsrsd.nix>

services.postsrsd.package

The postsrsd package to use.

Type: package

Default:

```
pkgs.postsrsd
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postsrsd.nix>

services.postsrsd.configurePostfix

Whether to configure the required settings to use postsrsd in the local Postfix instance.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postsrsd.nix>

services.postsrsd.group

Group for the daemon

Type: string

Default:

```
"postsrsd"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postsrsd.nix>

services.postsrsd.secretsFile

Secret keys used for signing and verification.

> **Note**
> The secret will be generated, if it does not exist at the given path.

Type: absolute path

Default:

```
"/var/lib/postsrsd/postsrsd.secret"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postsrsd.nix>

services.postsrsd.settings

Configuration options for the postsrsd.conf file.

See the **example configuration** for possible values.

Type: open submodule of attribute set of (boolean or floating point number or signed integer or absolute path or string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postsrsd.nix>

services.postsrsd.settings.chroot−dir

Path to chroot into at runtime as an additional layer of protection.

> **Note**
> We confine the runtime environment through systemd hardening instead, so this option is read−only.

Type: string *(read only)*

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postsrsd.nix>

services.postsrsd.settings.domains

List of local domains, that do not require rewriting.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "example.com"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postsrsd.nix>

services.postsrsd.settings.secrets−file

Path to the file containing the secret keys.

Note

Secrets are passed using ‘LoadCredential=’ on the systemd unit, so this options is read−only.

Configure **services.postsrsd.secretsFile** instead.

Type: string *(read only)*

Default:

```
"\${CREDENTIALS_DIRECTORY}/secrets-file"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postsrsd.nix>

services.postsrsd.settings.separator

SRS tag separator used in generated sender addresses.

Unless you have a very good reason, you should leave this setting at its default.

Type: one of “−”, “=”, “+”

Default:

```
"="
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postsrsd.nix>

services.postsrsd.settings.socketmap

Listener configuration in socket map format native to Postfix configuration.

Type: string matching the pattern ^(unix|inet):.+

Default:

```
"unix:/run/postsrsd/socket"
```

Example:

```
"inet:localhost:10003"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postsrsd.nix>

services.postsrsd.settings.srs−domain

Dedicated mail domain used for ephemeral SRS envelope addresses.

Recommended to configure, when hosting multiple unrelated mail domains (e.g. for different customers), to prevent privacy issues.

Set to ‘null’ to not configure any ‘srs−domain’.

Type: null or string

Default:

```
null
```

Example:

```
"srs.example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/postsrsd.nix>

services.postsrsd.settings.unprivileged−user

Unprivileged user to drop privileges to.

Note
Our systemd unit never runs postsrsd as a privileged process, so this option is read−only.

Type: string *(read only)*

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postsrsd.nix>

services.postsrsd.user

User for the daemon

Type: string

Default:

```
"postsrsd"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/postsrsd.nix>

services.power−profiles−daemon.enable

Whether to enable power−profiles−daemon, a DBus daemon that allows changing system behavior based upon user−selected power profiles.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/power−profiles−daemon.nix>

services.power−profiles−daemon.package

The power−profiles−daemon package to use.

Type: package

Default:

```
pkgs.power-profiles-daemon
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/power−profiles−daemon.nix>

services.powerdns.enable

Whether to enable PowerDNS domain name server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/powerdns.nix>

services.powerdns.extraConfig

PowerDNS configuration. Refer to **https://doc.powerdns.com/authoritative/settings.html** for details on supported values.

Type: strings concatenated with "\n"

Default:

```
"launch=bind"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/powerdns.nix>

services.powerdns.secretFile

Environment variables from this file will be interpolated into the final config file using envsubst with this syntax: '$ENVIRONMENT' or '${VARIABLE}'. The file should contain lines formatted as 'SECRET_VAR=SECRET_VALUE'. This is useful to avoid putting secrets into the nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/powerdns.env"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/powerdns.nix>

services.powerdns−admin.enable

Whether to enable the PowerDNS web interface.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/powerdns−admin.nix>

services.powerdns−admin.config

Configuration python file. See **the example configuration** for options. Also see **Flask Session configuration** as the version shipped with NixOS is more recent than the one PowerDNS−Admin expects and it requires explicit configuration.

Type: string

Default:

```
""
```

Example:

```
  import cachelib

  BIND_ADDRESS = '127.0.0.1'
  PORT = 8000
  SQLALCHEMY_DATABASE_URI = 'postgresql://powerdnsadmin@/powerdnsad \
min?host=/run/postgresql'
  SESSION_TYPE = 'cachelib'
```

```
SESSION_CACHELIB = cachelib.simple.SimpleCache()
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/powerdns−admin.nix>

services.powerdns−admin.extraArgs
Extra arguments passed to powerdns−admin.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "−b" "127.0.0.1:8000" ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/powerdns−admin.nix>

services.powerdns−admin.saltFile
The salt used for serialization. This should be set, otherwise the default is used. Set this to null to ignore this setting and configure it through another way.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/powerdns−admin/salt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/powerdns−admin.nix>

services.powerdns−admin.secretKeyFile
The secret used to create cookies. This needs to be set, otherwise the default is used and everyone can forge valid login cookies. Set this to null to ignore this setting and configure it through another way.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/powerdns−admin/secret"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/powerdns−admin.nix>

services.powerstation.enable
Whether to enable PowerStation.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/powerstation.nix>

services.powerstation.package
The powerstation package to use.

Type: package

Default:

```
pkgs.powerstation
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/powerstation.nix>

services.pppd.enable
Whether to enable pppd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pppd.nix>

services.pppd.package
The ppp package to use.

Type: package

Default:

```
pkgs.ppp
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pppd.nix>

services.pppd.peers
pppd peers.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pppd.nix>

services.pppd.peers.<name>.enable
Whether to enable this PPP peer.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pppd.nix>

services.pppd.peers.<name>.autostart
Whether the PPP session is automatically started at boot time.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pppd.nix>

services.pppd.peers.<name>.config
pppd configuration for this peer, see the **pppd**(8) man page.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pppd.nix>

services.pppd.peers.<name>.name
Name of the PPP peer.

Type: string

Default:

```
"‹name›"
```

Example:

```
"dialup"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pppd.nix>

services.pptpd.enable
Whether to enable pptpd, the Point−to−Point Tunneling Protocol daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pptpd.nix>

services.pptpd.clientIpRange
The range from which client IPs are drawn.

Type: string

Default:

```
"10.124.124.2−11"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pptpd.nix>

services.pptpd.extraPppdOptions
Adds extra lines to the pppd options file.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
ms-dns 8.8.8.8
ms-dns 8.8.4.4
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pptpd.nix>

services.pptpd.extraPptpdOptions
Adds extra lines to the pptpd configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pptpd.nix>

services.pptpd.maxClients
The maximum number of simultaneous connections.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pptpd.nix>

services.pptpd.serverIp
The server-side IP address.

Type: string

Default:

```
"10.124.124.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pptpd.nix>

services.prefect.enable
enable prefect server and worker services

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/prefect.nix>

services.prefect.package
The prefect package to use.

Type: package

Default:

```
pkgs.prefect
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/prefect.nix>

services.prefect.baseUrl
external url when served by a reverse proxy, e.g. ‘https://example.com/prefect’

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/prefect.nix>

services.prefect.dataDir
Specify the directory for Prefect.

Type: absolute path

Default:

```
"/var/lib/prefect-server"
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/prefect.nix>

services.prefect.database
which database to use for prefect server: sqlite or postgres

Type: one of “sqlite”, “postgres”

Default:

```
"sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/prefect.nix>

services.prefect.databaseHost
database host for postgres only

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/prefect.nix>

services.prefect.databaseName
database name for postgres only

Type: string

Default:

```
"prefect"
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/prefect.nix>

services.prefect.databasePasswordFile
path to a file containing e.g.: DBPASSWORD=supersecret

stored outside the nix store, read by systemd as EnvironmentFile.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/prefect.nix>

services.prefect.databasePort
database port for postgres only

Type: string

Default:

```
"5432"
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/prefect.nix>

services.prefect.databaseUser
database user for postgres only

Type: string

Default:

```
"postgres"
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/prefect.nix>

services.prefect.host
Prefect server host

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/prefect.nix>

services.prefect.port
Prefect server port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4200
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/prefect.nix>

services.prefect.workerPools

define a set of worker pools with submodule config. example: workerPools.my−pool = { installPolicy = “never”; };

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/scheduling/prefect.nix>

services.prefect.workerPools.<name>.installPolicy

install policy for the worker (always, if−not−present, never, prompt)

Type: one of “always”, “if−not−present”, “never”, “prompt”

Default:

```
"always"
```

Declared by:

<nixpkgs/nixos/modules/services/scheduling/prefect.nix>

services.pretalx.enable

Whether to enable pretalx.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.package

The pretalx package to use.

Type: package

Default:

```
pkgs.pretalx
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.celery.enable

Whether to set up celery as an asynchronous task runner.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.celery.extraArgs

Extra arguments to pass to celery.

See **https://docs.celeryq.dev/en/stable/reference/cli.html#celery-worker** for more info.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/pretalx.nix>

services.pretalx.database.createLocally

Whether to automatically set up the database on the local DBMS instance.

Currently only supported for PostgreSQL. Not required for sqlite.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/pretalx.nix>

services.pretalx.environmentFiles

Environment files that allow passing secret configuration values.

Each line must follow the 'PRETALX_SECTION_KEY=value' pattern.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/run/secrets/pretalx/env"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/pretalx.nix>

services.pretalx.finalPackage

The effective pretalx package used. This is the base package with the selected plugins applied.

Type: package *(read only)*

Default:

```
config.services.package.override {
  inherit (config.services.pretalx) plugins;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/pretalx.nix>

services.pretalx.group

Group under which pretalx should run.

Type: string

Default:

```
"pretalx"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.gunicorn.extraArgs

Extra arguments to pass to gunicorn. See **https://docs.pretalx.org/administrator/installation.html#step−6−starting−pretalx−as−a−service** for details.

Type: list of string

Default:

```
[
  "−−name=pretalx"
]
```

Example:

```
[
  "−−name=pretalx"
  "−−workers=4"
  "−−max−requests=1200"
  "−−max−requests−jitter=50"
  "−−log−level=info"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.nginx.enable

Whether to set up an nginx virtual host.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.nginx.domain

The domain name under which to set up the virtual host.

Type: string

Example:

```
"talks.example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.plugins

Pretalx plugins to install into the Python environment.

Type: list of package

Default:

```
[ ]
```

Example:

```
with config.services.pretalx.package.plugins; [
  pages
  youtube
];
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/pretalx.nix>

services.pretalx.settings

pretalx configuration as a Nix attribute set. All settings can also be passed from the environment.

See **https://docs.pretalx.org/administrator/configure.html** for possible options.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/pretalx.nix>

services.pretalx.settings.celery.backend

URI to the celery backend used for the asynchronous job queue.

Type: null or string

Default:

```
optionalString config.services.pretalx.celery.enable "redis+socket: \
//${config.services.redis.servers.pretalx.unixSocket}?virtual_host= \
1"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/pretalx.nix>

services.pretalx.settings.celery.broker

URI to the celery broker used for the asynchronous job queue.

Type: null or string

Default:

```
optionalString config.services.pretalx.celery.enable "redis+socket: \
//${config.services.redis.servers.pretalx.unixSocket}?virtual_host= \
2"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/pretalx.nix>

services.pretalx.settings.database.backend

Database backend to use.

Currently only PostgreSQL gets tested, and as such we don't support any other DBMS.

Type: value "postgresql" (singular enum) *(read only)*

Default:

```
"postgresql"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.settings.database.host

Database host or socket path.

Type: null or absolute path

Default:

```
if config.services.pretalx.settings..database.backend == "postgresq \
l" then "/run/postgresql"
else if config.services.pretalx.settings.database.backend == "mysql \
" then "/run/mysqld/mysqld.sock"
else null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.settings.database.name

Database name.

Type: string

Default:

```
"pretalx"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.settings.database.user

Database username.

Type: string

Default:

```
"pretalx"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.settings.files.upload_limit

Maximum file upload size in MiB.

Type: positive integer, meaning >0

Default:

```
10
```

Example:

```
50
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.settings.filesystem.data
Base path for all other storage paths.

Type: absolute path

Default:

```
"/var/lib/pretalx"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.settings.filesystem.logs
Path to the log directory, that pretalx logs message to.

Type: absolute path

Default:

```
"/var/log/pretalx"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.settings.filesystem.static
Path to the directory that contains static files.

Type: absolute path *(read only)*

Default:

```
"\${config.services.pretalx.finalPackage.static}/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.settings.redis.location
URI to the redis server, used to speed up locking, caching and session storage.

Type: null or string

Default:

```
"unix://${config.services.redis.servers.pretalx.unixSocket}?db=0"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.settings.redis.session
Whether to use redis as the session storage.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretalx.nix>

services.pretalx.settings.site.url

The base URI below which your pretalx instance will be reachable.

Type: string

Default:

```
https://${config.services.pretalx.nginx.domain}
```

Example:

```
"https://talks.example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/pretalx.nix>

services.pretalx.user

User under which pretalx should run.

Type: string

Default:

```
"pretalx"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/pretalx.nix>

services.pretix.enable

Whether to enable Pretix, a ticket shop application for conferences, festivals, concerts, etc.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/pretix.nix>

services.pretix.package

The pretix package to use.

Type: package

Default:

```
pkgs.pretix
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/pretix.nix>

services.pretix.celery.extraArgs

Extra arguments to pass to celery.

See **https://docs.celeryq.dev/en/stable/reference/cli.html#celery-worker** for more info.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.database.createLocally
Whether to automatically set up the database on the local DBMS instance.

Only supported for PostgreSQL. Not required for sqlite.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.environmentFile
Environment file to pass secret configuration values.

Each line must follow the 'PRETIX_SECTION_KEY=value' pattern.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/pretix−secrets.env"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.group
Group under which pretix should run.

Type: string

Default:

```
"pretix"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.gunicorn.extraArgs
Extra arguments to pass to gunicorn. See **https://docs.pretix.eu/en/latest/admin/installation/manual_smallscale.html#start−pretix−as−a−service** for details.

Type: list of string

Default:

```
[
  "−−name=pretix"
]
```

Example:

```
[
  "−−name=pretix"
  "−−workers=4"
  "−−max−requests=1200"
```

```
    "--max-requests-jitter=50"
    "--log-level=info"
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/pretix.nix>

services.pretix.nginx.enable
Whether to set up an nginx virtual host.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/pretix.nix>

services.pretix.nginx.domain
The domain name under which to set up the virtual host.

Type: string

Example:

```
"talks.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/pretix.nix>

services.pretix.plugins
Pretix plugins to install into the Python environment.

Type: list of package

Default:

```
[ ]
```

Example:

```
with config.services.pretix.package.plugins; [
  passbook
  pages
];
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/pretix.nix>

services.pretix.settings
pretix configuration as a Nix attribute set. All settings can also be passed from the environment.

See **https://docs.pretix.eu/en/latest/admin/config.html** for possible options.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.celery.backend
URI to the celery backend used for the asynchronous job queue.

Type: string

Default:

```
redis+socket://${config.services.redis.servers.pretix.unixSocket}?v \
irtual_host=1
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.celery.broker
URI to the celery broker used for the asynchronous job queue.

Type: string

Default:

```
redis+socket://${config.services.redis.servers.pretix.unixSocket}?v \
irtual_host=2
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.database.backend
Database backend to use.

Only postgresql is recommended for production setups.

Type: one of “sqlite3”, “postgresql”

Default:

```
"postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.database.host
Database host or socket path.

Type: null or string

Default:

```
if config.services.pretix.settings..database.backend == "postgresql \
" then "/run/postgresql"
else null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.database.name
Database name.

Type: string

Default:

```
"pretix"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.database.user
Database username.

Type: string

Default:

```
"pretix"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.mail.from
E−Mail address used in the 'FROM' header of outgoing mails.

Type: string

Example:

```
"tickets@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.mail.host
Hostname of the SMTP server use for mail delivery.

Type: string

Default:

```
"localhost"
```

Example:

```
"mail.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.mail.port
Port of the SMTP server to use for mail delivery.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
25
```

Example:

```
587
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.memcached.location
The 'host:port' combination or the path to the UNIX socket of a memcached instance.

Can be used instead of Redis for caching.

Type: null or string

Default:

```
null
```

Example:

```
"127.0.0.1:11211"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.pretix.cachedir
Directory for storing temporary files.

Type: absolute path

Default:

```
"/var/cache/pretix"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.pretix.currency
Default currency for events in its ISO 4217 three−letter code.

Type: string

Default:

```
"EUR"
```

Example:

```
"USD"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.pretix.datadir
Directory for storing user uploads and similar data.

Type: absolute path

Default:

```
"/var/lib/pretix"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.pretix.instance_name
The name of this installation.

Type: string

Example:

```
"tickets.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.pretix.logdir
Directory for storing log files.

Type: absolute path

Default:

```
"/var/log/pretix"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.pretix.registration
Whether to allow registration of new admin users.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.pretix.url
The installation's full URL, without a trailing slash.

Type: string

Example:

```
"https://tickets.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.redis.location
URI to the redis server, used to speed up locking, caching and session storage.

Type: null or string

Default:

```
"unix://${config.services.redis.servers.pretix.unixSocket}?db=0"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.redis.sessions
Whether to use redis as the session storage.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.settings.tools.pdftk
Path to the pdftk executable.

Type: absolute path

Default:

```
lib.getExe pkgs.pdftk
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.pretix.user

User under which pretix should run.

Type: string

Default:

```
"pretix"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/pretix.nix>

services.printing.enable

Whether to enable printing support through the CUPS daemon.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.package

The cups package to use.

Type: package

Default:

```
pkgs.cups
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.allowFrom

From which hosts to allow unconditional access.

Type: list of string

Default:

```
[
  "localhost"
]
```

Example:

```
[
  "all"
]
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.browsed.enable

Whether to enable the CUPS Remote Printer Discovery (browsed) daemon.

Type: boolean

Default:

```
config.services.avahi.enable
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.browsed.package

The cups−browsed package to use.

Type: package

Default:

```
pkgs.cups-browsed
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.browsedConf

The contents of the configuration. file of the CUPS Browsed daemon (*cups−browsed.conf*)

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  BrowsePoll cups.example.com
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.browsing

Specifies whether shared printers are advertised.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.clientConf

The contents of the client configuration. (*client.conf*)

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  ServerName server.example.com
  Encryption Never
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.cups−pdf.enable

Whether to enable the cups−pdf virtual pdf printer backend. By default, this will install a single printer ‘pdf’. but this can be changed/extended with **services.printing.cups−pdf.instances** .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/printing/cups−pdf.nix>

services.printing.cups−pdf.instances
Permits to raise one or more cups−pdf instances. Each instance is named by an attribute name, and the attribute's values control the instance' configuration.

Type: attribute set of (submodule)

Default:

```
{
  pdf = { };
}
```

Example:

```
{
  pdf = {
    settings = {
      Out = "\${HOME}/cups−pdf";
      UserUMask = "0033";
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/printing/cups−pdf.nix>

services.printing.cups−pdf.instances.<name>.enable
Whether to enable this cups−pdf instance.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/printing/cups−pdf.nix>

services.printing.cups−pdf.instances.<name>.confFileText
This will contain the contents of *cups−pdf.conf* for this instance, derived from **settings**. You can use this option to append text to the file.

Type: strings concatenated with "\n"

Declared by:
<nixpkgs/nixos/modules/services/printing/cups−pdf.nix>

services.printing.cups−pdf.instances.<name>.installPrinter
Whether to enable a CUPS printer queue for this instance. The queue will be named after the instance and will use the *CUPS−PDF_opt.ppd* ppd file. If this is disabled, you need to add the queue yourself to use the instance .

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cups-pdf.nix>

services.printing.cups-pdf.instances.<name>.settings

Settings for a cups-pdf instance, see the descriptions in the template config file in the cups-pdf package. The key value pairs declared here will be translated into proper key value pairs for *cups-pdf.conf*. Setting a value to 'null' disables the option and removes it from the file.

Type: open submodule of attribute set of (null or signed integer or string or absolute path or package)

Default:

```
{ }
```

Example:

```
{
  Out = "\${HOME}/cups-pdf";
  UserUMask = "0033";
}
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cups-pdf.nix>

services.printing.cups-pdf.instances.<name>.settings.AnonDirName

path for anonymously created PDF files

Type: null or (optionally newline-terminated) single-line string

Default:

```
"/var/spool/cups-pdf-{instance-name}/anonymous"
```

Example:

```
"/var/lib/cups-pdf"
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cups-pdf.nix>

services.printing.cups-pdf.instances.<name>.settings.Anonuser

User for anonymous PDF creation. An empty string disables this feature.

Type: (optionally newline-terminated) single-line string

Default:

```
"root"
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cups-pdf.nix>

services.printing.cups-pdf.instances.<name>.settings.GhostScript

location of GhostScript binary

Type: null or absolute path

Default:

```
lib.getExe pkgs.ghostscript
```

Example:

```
${pkgs.ghostscript}/bin/ps2pdf
```

Declared by:
<nixpkgs/nixos/modules/services/printing/cups−pdf.nix>

services.printing.cups−pdf.instances.<name>.settings.Out
output directory; '${HOME}' will be expanded to the user's home directory, '${USER}' will be expanded to the user name.

Type: null or (optionally newline−terminated) single−line string

Default:

```
"/var/spool/cups−pdf−{instance−name}/users/\${USER}"
```

Example:

```
"\${HOME}/cups−pdf"
```

Declared by:
<nixpkgs/nixos/modules/services/printing/cups−pdf.nix>

services.printing.cups−pdf.instances.<name>.settings.Spool
spool directory

Type: null or (optionally newline−terminated) single−line string

Default:

```
"/var/spool/cups−pdf−{instance−name}/spool"
```

Example:

```
"/var/lib/cups−pdf"
```

Declared by:
<nixpkgs/nixos/modules/services/printing/cups−pdf.nix>

services.printing.defaultShared
Specifies whether local printers are shared by default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.drivers
CUPS drivers to use. Drivers provided by CUPS, cups−filters, Ghostscript and Samba are added unconditionally. If this list contains Gutenprint (i.e. a derivation with 'meta.isGutenprint = true') the PPD files in */var/lib/cups/ppd* will be updated automatically to avoid errors due to incompatible versions.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
with pkgs; [ gutenprint hplip splix ]
```

Declared by:
<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.extraConf

Extra contents of the configuration file of the CUPS daemon (*cupsd.conf*).

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
BrowsePoll cups.example.com
MaxCopies 42
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.extraFilesConf

Extra contents of the configuration file of the CUPS daemon (*cups−files.conf*).

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.listenAddresses

A list of addresses and ports on which to listen.

Type: list of string

Default:

```
[
  "localhost:631"
]
```

Example:

```
[
  "*:631"
]
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.logLevel

Specifies the cupsd logging verbosity.

Type: string

Default:

```
"info"
```

Example:

```
"debug"
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.openFirewall

Whether to open the firewall for TCP ports specified in listenAddresses option.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.snmpConf

The contents of */etc/cups/snmp.conf*. See “man cups−snmp.conf” for a complete description.

Type: strings concatenated with “\n”

Default:

```
  Address @LOCAL
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.startWhenNeeded

If set, CUPS is socket−activated; that is, instead of having it permanently running as a daemon, systemd will start it on the first incoming connection.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.stateless

If set, all state directories relating to CUPS will be removed on startup of the service.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.tempDir

CUPSd temporary directory.

Type: absolute path

Default:

```
"/tmp"
```

Example:

```
"/tmp/cups"
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.printing.webInterface

Specifies whether the web interface is enabled.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/printing/cupsd.nix>

services.privatebin.enable

Whether to enable Privatebin: A minimalist, open source online pastebin where the server has zero knowledge of pasted data…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/privatebin.nix>

services.privatebin.enableNginx

Whether to enable nginx or not. If enabled, an nginx virtual host will be created for access to privatebin. If not enabled, then you may use '${config.services.privatebin.package}' as your document root in whichever webserver you wish to setup.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/privatebin.nix>

services.privatebin.package

The privatebin package to use.

Type: package

Default:

```
pkgs.privatebin
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/privatebin.nix>

services.privatebin.dataDir

The place where privatebin stores its state.

Type: absolute path

Default:

```
"/var/lib/privatebin"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/privatebin.nix>

services.privatebin.group

Group under which privatebin runs. It is best to set this to the group of whatever webserver is being used as the frontend.

Type: string

Default:

```
if config.services.privatebin.enableNginx then "nginx" else "privat \
ebin"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/privatebin.nix>

services.privatebin.poolConfig

Options for the PrivateBin PHP pool. See the documentation on <literal>php−fpm.conf</literal> for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  "pm" = "dynamic";
  "pm.max_children" = 32;
  "pm.start_servers" = 2;
  "pm.min_spare_servers" = 2;
  "pm.max_spare_servers" = 4;
  "pm.max_requests" = 500;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/privatebin.nix>

services.privatebin.settings

Options for privatebin configuration. Refer to **https://github.com/PrivateBin/PrivateBin/wiki/Configuration** for details on supported values.

Type: open submodule of attribute set of anything

Default:

```
{ }
```

Example:

```
{
  main = {
    name = "NixOS Based Privatebin";
    discussion = false;
    defaultformatter = "plalib.types.intext";
    qrcode = true
  };
  model.class = "Filesystem";
  model_options.dir = "/var/lib/privatebin/data";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/privatebin.nix>

services.privatebin.user

User account under which privatebin runs.

Type: string

Default:

```
"privatebin"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/privatebin.nix>

services.privatebin.virtualHost

The hostname at which you wish privatebin to be served. If you have enabled nginx using ‘services.privatebin.enableNginx’ then this will be used.

Type: string

Default:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/privatebin.nix>

services.privoxy.enable

Whether to enable Privoxy, non−caching filtering proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/privoxy.nix>

services.privoxy.enableTor

Whether to configure Privoxy to use Tor’s faster SOCKS port, suitable for HTTP.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/privoxy.nix>

services.privoxy.certsLifetime

If ‘inspectHttps’ is enabled, the time generated HTTPS certificates will be stored in a temporary directory for reuse. Once the lifetime has expired the directory will cleared and the certificate will have to be generated again, on−demand.

Depending on the traffic, you may want to reduce the lifetime to limit the disk usage, since Privoxy itself never deletes the certificates.

Note
The format is that of the **tmpfiles.d**(5) Age parameter.

Type: tmpfiles.d(5) age format

Default:

```
"10d"
```

Example:

```
"12h"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/privoxy.nix>

services.privoxy.inspectHttps

Whether to configure Privoxy to inspect HTTPS requests, meaning all encrypted traffic will be filtered as well. This works by decrypting and re−encrypting the requests using a per−domain generated certificate.

To issue per−domain certificates, Privoxy must be provided with a CA certificate, using the 'ca−cert−file', 'ca−key−file' settings.

Warning
The CA certificate must also be added to the system trust roots, otherwise browsers will reject all Privoxy certificates as invalid. You can do so by using the option **security.pki.certificateFiles**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/privoxy.nix>

services.privoxy.settings

This option is mapped to the main Privoxy configuration file. Check out the Privoxy user manual at **https://www.privoxy.org/user−manual/config.html** for available settings and documentation.

Note
Repeated settings can be represented by using a list.

Type: open submodule of privoxy configuration type. The format consists of an attribute set of settings. Each setting can be either a value (integer, string, boolean or path) or a list of such values.

Default:

```
{ }
```

Example:

```
{ # Listen on IPv6 only
  listen−address = "[::]:8118";
  # Forward .onion requests to Tor
  forward−socks5 = ".onion localhost:9050 .";
  # Log redirects and filters
  debug = [ 128 64 ];
  # This is equivalent to writing these lines
  # in the Privoxy configuration file:
  # debug 128
  # debug 64
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/privoxy.nix>

services.privoxy.settings.enable−edit−actions

Whether the web−based actions file editor may be used.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/privoxy.nix>

services.privoxy.settings.actionsfile
List of paths to Privoxy action files. These paths may either be absolute or relative to the privoxy configuration directory.

Type: list of string

Default:

```
[
  "match-all.action"
  "default.action"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/privoxy.nix>

services.privoxy.settings.filterfile
List of paths to Privoxy filter files. These paths may either be absolute or relative to the privoxy configuration directory.

Type: list of string

Default:

```
[
  "default.filter"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/privoxy.nix>

services.privoxy.settings.listen-address
Pair of address:port the proxy server is listening to.

Type: string or list of string

Default:

```
"127.0.0.1:8118"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/privoxy.nix>

services.privoxy.userActions
Actions to be included in a ‘user.action’ file. This will have a higher priority and can be used to override all other actions.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/privoxy.nix>

services.privoxy.userFilters
Filters to be included in a ‘user.filter’ file. This will have a higher priority and can be used to override all other filters definitions.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/privoxy.nix>

services.prometheus.enable
Whether to enable Prometheus monitoring daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.enableAgentMode
Whether to enable agent mode.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.enableReload
Reload prometheus when configuration file changes (instead of restart).

The following property holds: switching to a configuration (‘switch−to−configuration’) that changes the prometheus configuration only finishes successfully when prometheus has finished loading the new configuration.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.package
The prometheus package to use.

Type: package

Default:

```
pkgs.prometheus
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.alertmanager.enable

Whether to enable Prometheus Alertmanager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager.nix>

services.prometheus.alertmanager.package

The prometheus−alertmanager package to use.

Type: package

Default:

```
pkgs.prometheus−alertmanager
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager.nix>

services.prometheus.alertmanager.checkConfig

Check configuration with ‘amtool check−config’. The call to ‘amtool’ is subject to sandboxing by Nix.

If you use credentials stored in external files (‘environmentFile’, etc), they will not be visible to ‘amtool’ and it will report errors, despite a correct configuration.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager.nix>

services.prometheus.alertmanager.clusterPeers

Initial peers for HA cluster.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager.nix>

services.prometheus.alertmanager.configText

Alertmanager configuration as YAML text. If non−null, this option defines the text that is written to alertmanager.yml. If null, the contents of alertmanager.yml is generated from the structured config options.

The contents of the resulting config file are processed using envsubst. ‘$’ needs to be escaped as ‘$$’ to be preserved.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager.nix>

services.prometheus.alertmanager.configuration
Alertmanager configuration as nix attribute set.

The contents of the resulting config file are processed using envsubst. '$' needs to be escaped as '$$' to be preserved.

Type: null or (attribute set)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager.nix>

services.prometheus.alertmanager.environmentFile
File to load as environment file. Environment variables from this file will be interpolated into the config file using envsubst with this syntax: '$ENVIRONMENT ${VARIABLE}'

Type: null or absolute path

Default:

```
null
```

Example:

```
"/root/alertmanager.env"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager.nix>

services.prometheus.alertmanager.extraFlags
Extra commandline options when launching the Alertmanager.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager.nix>

services.prometheus.alertmanager.listenAddress
Address to listen on for the web interface and API. Empty string will listen on all interfaces. "localhost" will listen on 127.0.0.1 (but not ::1).

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager.nix>

services.prometheus.alertmanager.logFormat
If set use a syslog logger or JSON logging.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager.nix>

services.prometheus.alertmanager.logLevel
Only log messages with the given severity or above.

Type: one of “debug”, “info”, “warn”, “error”, “fatal”

Default:

```
"warn"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager.nix>

services.prometheus.alertmanager.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager.nix>

services.prometheus.alertmanager.port
Port to listen on for the web interface and API.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9093
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager.nix>

services.prometheus.alertmanager.webExternalUrl
The URL under which Alertmanager is externally reachable (for example, if Alertmanager is served via a reverse proxy). Used for generating relative and absolute links back to Alertmanager itself. If the URL has a path portion, it will be used to prefix all HTTP endoints served by Alertmanager. If omitted, relevant URL components will be derived automatically.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager.nix>

services.prometheus.alertmanager−ntfy.enable
Whether to enable alertmanager−ntfy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−ntfy.nix>

services.prometheus.alertmanager−ntfy.package
The alertmanager−ntfy package to use.

Type: package

Default:

```
pkgs.alertmanager−ntfy
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−ntfy.nix>

services.prometheus.alertmanager−ntfy.extraConfigFiles
Config files to merge into the settings defined in **services.prometheus.alertmanager-ntfy.settings**. This is useful to avoid putting secrets into the Nix store. See **https://github.com/alexbakker/alertmanager−ntfy** for more information.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/run/secrets/alertmanager−ntfy.yml"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−ntfy.nix>

services.prometheus.alertmanager−ntfy.settings
Configuration of alertmanager−ntfy. See **https://github.com/alexbakker/alertmanager−ntfy** for more information.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−ntfy.nix>

services.prometheus.alertmanager−ntfy.settings.http.addr
The address to listen on.

Type: string

Default:

```
"127.0.0.1:8000"
```

Example:

```
":8000"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−ntfy.nix>

services.prometheus.alertmanager−ntfy.settings.ntfy.baseurl
The base URL of the ntfy.sh instance.

Type: string

Example:

```
"https://ntfy.sh"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−ntfy.nix>

services.prometheus.alertmanager−ntfy.settings.ntfy.notification.priority
The ntfy.sh message priority (see **https://docs.ntfy.sh/publish/#message−priority** for more information). Can either be a hardcoded string or a gval expression that evaluates to a string.

Type: string

Default:

```
"status == \"firing\" ? \"high\" : \"default\""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−ntfy.nix>

services.prometheus.alertmanager−ntfy.settings.ntfy.notification.tags
Tags to add to ntfy.sh messages. See **https://docs.ntfy.sh/publish/#tags−emojis** for more information.

Type: list of (submodule)

Default:

```
[
  {
    condition = "status == \"resolved\"";
    tag = "green_circle";
  }
  {
    condition = "status == \"firing\"";
    tag = "red_circle";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−ntfy.nix>

services.prometheus.alertmanager−ntfy.settings.ntfy.notification.tags.*.condition
The condition under which this tag should be added. Tags with no condition are always included.

Type: null or string

Default:

```
null
```

Example:

```
"status == \"firing\""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−ntfy.nix>

services.prometheus.alertmanager−ntfy.settings.ntfy.notification.tags.*.tag
The tag to add. See **https://docs.ntfy.sh/emojis** for a list of all supported emojis.

Type: string

Example:

```
"rotating_light"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−ntfy.nix>

services.prometheus.alertmanager−ntfy.settings.ntfy.notification.templates.description
The ntfy.sh message description template.

Type: string

Default:

```
  {{ index .Annotations "description" }}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−ntfy.nix>

services.prometheus.alertmanager−ntfy.settings.ntfy.notification.templates.title
The ntfy.sh message title template.

Type: string

Default:

```
  {{ if eq .Status "resolved" }}Resolved: {{ end }}{{ index .Annota \
tions "summary" }}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−ntfy.nix>

services.prometheus.alertmanager−ntfy.settings.ntfy.notification.topic

Note: when using ntfy.sh and other public instances it is recommended to set this option to an empty string and set the actual topic via **services.prometheus.alertmanager-ntfy.extraConfigFiles** since the 'topic' in 'ntfy.sh' is essentially a password.

The topic to which alerts should be published. Can either be a hardcoded string or a gval expression that evaluates to a string.

Type: string

Example:

```
"alertmanager"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−ntfy.nix>

services.prometheus.alertmanagerGotify.enable
Whether to enable alertmagager−gotify.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.package
The alertmanager−gotify−bridge package to use.

Type: package

Default:

```
pkgs.alertmanager-gotify-bridge
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.bindAddress
The address the server will listen on (bind address).

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.debug
Enables extended logs for debugging purposes. Should be disabled in productive mode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.defaultPriority
The default priority for messages sent to gotify.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.dispatchErrors
When enabled, alerts will be tried to dispatch with an error message regarding faulty templating or missing fields to help debugging.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.environmentFile

File containing additional config environment variables for alertmanager−gotify−bridge. This is especially for secrets like GOTIFY_TOKEN and AUTH_PASSWORD.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.extendedDetails

When enabled, alerts are presented in HTML format and include colorized status (FIR|RES), alert start time, and a link to the generator of the alert.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.gotifyEndpoint.host

The hostname or ip your gotify endpoint is running.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.gotifyEndpoint.port

The port your gotify endpoint is running.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
443
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.gotifyEndpoint.tls

If your gotify endpoint uses https, leave this option set to default

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.messageAnnotation

Annotation holding the alert message.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.metrics.namespace
The namescape of the metrics.

Type: string

Default:

```
"alertmanager−gotify−bridge"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.metrics.path
The path under which the metrics will be exposed.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.metrics.username
The username used to access your metrics.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.openFirewall
Opens the bridge port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.port
The local port the bridge is listening on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.priorityAnnotation
Annotation holding the priority of the alert.

Type: string

Default:

```
"priority"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.timeout
The time between sending a message and the timeout.

Type: positive integer, meaning >0

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.titleAnnotation
Annotation holding the title of the alert

Type: string

Default:

```
"summary"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerGotify.webhookPath
The URL path to handle requests on.

Type: string

Default:

```
"/gotify_webhook"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−gotify−bridge.nix>

services.prometheus.alertmanagerIrcRelay.enable
Whether to enable Alertmanager IRC Relay.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−irc−relay.nix>

services.prometheus.alertmanagerIrcRelay.package
The alertmanager−irc−relay package to use.

Type: package

Default:

```
pkgs.alertmanager−irc−relay
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−irc−relay.nix>

services.prometheus.alertmanagerIrcRelay.extraFlags

Extra command line options to pass to alertmanager−irc−relay.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−irc−relay.nix>

services.prometheus.alertmanagerIrcRelay.settings

Configuration for Alertmanager IRC Relay as a Nix attribute set. For a reference, check out the **example configuration** and the **source code**.

Note: The webhook's URL MUST point to the IRC channel where the message should be posted. For '#mychannel' from the example, this would be 'http://localhost:8080/mychannel'.

Type: YAML 1.1 value

Default:

```
null
```

Example:

```
{
  http_host = "localhost";
  http_port = 8000;
  irc_host = "irc.example.com";
  irc_port = 7000;
  irc_nickname = "myalertbot";
  irc_channels = [
    { name = "#mychannel"; }
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−irc−relay.nix>

services.prometheus.alertmanagerNotificationQueueCapacity

The capacity of the queue for pending alert manager notifications.

Type: signed integer

Default:

```
10000
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.alertmanagerWebhookLogger.enable

Whether to enable Alertmanager Webhook Logger.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−webhook−logger.nix>

services.prometheus.alertmanagerWebhookLogger.package
The alertmanager−webhook−logger package to use.

Type: package

Default:

```
pkgs.alertmanager−webhook−logger
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−webhook−logger.nix>

services.prometheus.alertmanagerWebhookLogger.extraFlags
Extra command line options to pass to alertmanager−webhook−logger.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/alertmanager−webhook−logger.nix>

services.prometheus.alertmanagers
A list of alertmanagers to send alerts to. See **the official documentation** for more information.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[ {
  scheme = "https";
  path_prefix = "/alertmanager";
  static_configs = [ {
    targets = [
      "prometheus.domain.tld"
    ];
  } ];
} ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.checkConfig
Check configuration with ‘promtool check’. The call to ‘promtool’ is subject to sandboxing by Nix.

If you use credentials stored in external files (‘password_file’, ‘bearer_token_file’, etc), they will not be visible to ‘promtool’ and it will report errors, despite a correct configuration. To resolve this, you may set this option to ‘"syntax−only"’ in order to only syntax check the Prometheus configuration.

Type: boolean or value “syntax−only” (singular enum)

Default:

```
true
```

Example:

```
"syntax−only"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.configText
If non−null, this option defines the text that is written to prometheus.yml. If null, the contents of prometheus.yml is generated from the structured config options.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.exporters
Prometheus exporter configuration

Type: submodule

Default:

```
{ }
```

Example:

```
{
  node = {
    enable = true;
    enabledCollectors = [ "systemd" ];
  };
  varnish.enable = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.apcupsd.enable
Whether to enable the prometheus apcupsd exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.apcupsd.apcupsdAddress
Address of the apcupsd Network Information Server (NIS).

Type: string

Default:

```
":3551"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.apcupsd.apcupsdNetwork

Network of the apcupsd Network Information Server (NIS): one of “tcp”, “tcp4”, or “tcp6”.

Type: one of “tcp”, “tcp4”, “tcp6”

Default:

```
"tcp"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.apcupsd.extraFlags

Extra commandline options to pass to the apcupsd exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.apcupsd.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.apcupsd.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9162"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.apcupsd.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.apcupsd.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9162 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.apcupsd.group

Group under which the apcupsd exporter shall be run.

Type: string

Default:

```
"apcupsd−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.apcupsd.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.apcupsd.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.apcupsd.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9162
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.apcupsd.user
User name under which the apcupsd exporter shall be run.

Type: string

Default:

```
"apcupsd-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.artifactory.enable
Whether to enable the prometheus artifactory exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.artifactory.artiAccessToken

Access token for authentication against JFrog Artifactory API. One of the password or access token needs to be set.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.artifactory.artiPassword

Password for authentication against JFrog Artifactory API. One of the password or access token needs to be set.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.artifactory.artiUsername

Username for authentication against JFrog Artifactory API.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.artifactory.extraFlags

Extra commandline options to pass to the artifactory exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.artifactory.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.artifactory.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9531"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.artifactory.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.artifactory.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9531 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.artifactory.group

Group under which the artifactory exporter shall be run.

Type: string

Default:

```
"artifactory-exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.artifactory.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.artifactory.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.artifactory.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9531
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.artifactory.scrapeUri
URI on which to scrape JFrog Artifactory.

Type: string

Default:

```
"http://localhost:8081/artifactory"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.artifactory.user
User name under which the artifactory exporter shall be run.

Type: string

Default:

```
"artifactory-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bind.enable
Whether to enable the prometheus bind exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bind.bindGroups
List of statistics to collect. Available: [server, view, tasks]

Type: list of (one of “server”, “view”, “tasks”)

Default:

```
[
  "server"
  "view"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bind.bindTimeout
Timeout for trying to get stats from Bind.

Type: string

Default:

```
"10s"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bind.bindURI
HTTP XML API address of an Bind server.

Type: string

Default:

```
"http://localhost:8053/"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bind.bindVersion
BIND statistics version. Can be detected automatically.

Type: one of “xml.v2”, “xml.v3”, “auto”

Default:

```
"auto"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bind.extraFlags
Extra commandline options to pass to the bind exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bind.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.bind.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9119"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bind.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.bind.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9119 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bind.group
Group under which the bind exporter shall be run.

Type: string

Default:

```
"bind-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bind.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bind.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bind.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9119
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bind.user
User name under which the bind exporter shall be run.

Type: string

Default:

```
"bind-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bird.enable
Whether to enable the prometheus bird exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bird.birdSocket
Path to BIRD2 (or BIRD1 v4) socket.

Type: absolute path

Default:

```
"/run/bird/bird.ctl"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bird.birdVersion
Specifies whether BIRD1 or BIRD2 is in use.

Type: one of 1, 2

Default:

```
2
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bird.extraFlags
Extra commandline options to pass to the bird exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bird.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.bird.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9324"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bird.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.bird.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9324 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bird.group
Group under which the bird exporter shall be run.

Type: string

Default:

```
"bird-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bird.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bird.newMetricFormat
Enable the new more-generic metric format.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bird.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bird.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9324
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bird.user
User name under which the bird exporter shall be run.

Type: string

Default:

```
"bird-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.enable
Whether to enable the prometheus bitcoin exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.package
The prometheus-bitcoin-exporter package to use.

Type: package

Default:

```
pkgs.prometheus-bitcoin-exporter
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.extraEnv
Extra environment variables for the exporter.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.extraFlags
Extra commandline options to pass to the bitcoin exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.bitcoin.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9332"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.bitcoin.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9332 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.group

Group under which the bitcoin exporter shall be run.

Type: string

Default:

```
"bitcoin−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9332
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.refreshSeconds
How often to ask bitcoind for metrics.

Type: unsigned integer, meaning >=0

Default:

```
300
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.rpcHost
RPC host.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.rpcPasswordFile
File containing RPC password.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.rpcPort
RPC port number.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8332
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.rpcScheme
Whether to connect to bitcoind over http or https.

Type: one of “http”, “https”

Default:

```
"http"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.rpcUser
RPC user name.

Type: string

Default:

```
"bitcoinrpc"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.bitcoin.user
User name under which the bitcoin exporter shall be run.

Type: string

Default:

```
"bitcoin-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.blackbox.enable
Whether to enable the prometheus blackbox exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.blackbox.enableConfigCheck
Whether to run a correctness check for the configuration file. This depends on the configuration file residing in the nix-store. Paths passed as string will be copied to the store.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.blackbox.configFile
Path to configuration file.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.blackbox.extraFlags

Extra commandline options to pass to the blackbox exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.blackbox.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.blackbox.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9115"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.blackbox.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.blackbox.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9115 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.blackbox.group

Group under which the blackbox exporter shall be run.

Type: string

Default:

```
"blackbox−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.blackbox.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.blackbox.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.blackbox.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9115
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.blackbox.user
User name under which the blackbox exporter shall be run.

Type: string

Default:

```
"blackbox-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.borgmatic.enable
Whether to enable the prometheus borgmatic exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.borgmatic.configFile
The path to the borgmatic config file

Type: absolute path

Default:

```
"/etc/borgmatic/config.yaml"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.borgmatic.extraFlags

Extra commandline options to pass to the borgmatic exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.borgmatic.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.borgmatic.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9996"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.borgmatic.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.borgmatic.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9996 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.borgmatic.group

Group under which the borgmatic exporter shall be run.

Type: string

Default:

```
"borgmatic−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.borgmatic.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.borgmatic.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.borgmatic.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9996
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.borgmatic.user
User name under which the borgmatic exporter shall be run.

Type: string

Default:

```
"borgmatic-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.buildkite-agent.enable
Whether to enable the prometheus buildkite-agent exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.buildkite-agent.endpoint
The Buildkite Agent API endpoint.

Type: string

Default:

```
"https://agent.buildkite.com/v3"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.buildkite−agent.extraFlags
Extra commandline options to pass to the buildkite−agent exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.buildkite−agent.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.buildkite−agent.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9876"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.buildkite−agent.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.buildkite−agent.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9876 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.buildkite−agent.group
Group under which the buildkite−agent exporter shall be run.

Type: string

Default:

```
"buildkite−agent−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.buildkite−agent.interval
How often to update metrics.

Type: string

Default:

```
"30s"
```

Example:

```
"1min"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.buildkite−agent.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.buildkite−agent.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.buildkite−agent.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9876
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.buildkite−agent.queues
Which specific queues to process.

Type: null or (list of string)

Default:

```
null
```

Example:

```
[ "my−queue1" "my−queue2" ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.buildkite−agent.tokenPath
The token from your Buildkite “Agents” page.

A run−time path to the token file, which is supposed to be provisioned outside of Nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.buildkite−agent.user
User name under which the buildkite−agent exporter shall be run.

Type: string

Default:

```
"buildkite−agent−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.chrony.enable
Whether to enable the prometheus chrony exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.chrony.enabledCollectors
Collectors to enable. Currently all collectors are enabled by default.

Type: list of string

Default:

```
[
  "tracking"
  "sources"
  "sources.with−ntpdata"
  "serverstats"
  "dns−lookups"
]
```

Example:

```
[
  "dns−lookups"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.chrony.chronyServerAddress
ChronyServerAddress of the chrony server side command port. (Not enabled by default.) Defaults to the local unix socket.

Type: string

Default:

```
"unix:///run/chrony/chronyd.sock"
```

Example:

```
[
  "192.82.0.1:323"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.chrony.disabledCollectors
Collectors to disable which are enabled by default. Disable sources.with−ntpdata for network scraper. Option requires unix socket.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "sources.with−ntpdata"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.chrony.extraFlags
Extra commandline options to pass to the chrony exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.chrony.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.chrony.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9123"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.chrony.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.chrony.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9123 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.chrony.group

Group under which the chrony exporter shall be run. This allows the exporter to talk to chrony using a unix socket, which is owned by chrony group. The service startup with the default group chrony will fail without local chrony instance.

Type: string

Default:

```
"chrony"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.chrony.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.chrony.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.chrony.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9123
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.chrony.user

User name under which the chrony exporter shall be run. This allows the exporter to talk to chrony using a unix socket, which is owned by chrony. The exporter startup with the default user chrony will fail without local chrony instance.

Type: string

Default:

```
"chrony"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.enable
Whether to enable the prometheus collectd exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.collectdBinary.enable
Whether to enable collectd binary protocol receiver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.collectdBinary.authFile
File mapping user names to pre−shared keys (passwords).

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.collectdBinary.listenAddress
Address to listen on for binary network packets.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.collectdBinary.port
Network address on which to accept collectd binary network packets.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
25826
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.collectdBinary.securityLevel
Minimum required security level for accepted packets.

Type: one of “None”, “Sign”, “Encrypt”

Default:

```
"None"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.extraFlags
Extra commandline options to pass to the collectd exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.collectd.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9103"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.collectd.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9103 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.group
Group under which the collectd exporter shall be run.

Type: string

Default:

```
"collectd−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.logFormat
Set the log format.

Type: one of “logfmt”, “json”

Default:

```
"logfmt"
```

Example:

```
"json"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.logLevel
Only log messages with the given severity or above.

Type: one of “debug”, “info”, “warn”, “error”, “fatal”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9103
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.collectd.user
User name under which the collectd exporter shall be run.

Type: string

Default:

```
"collectd-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.deluge.enable
Whether to enable the prometheus deluge exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.deluge.delugeHost
Hostname where deluge server is running.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.deluge.delugePassword
Password to connect to deluge server.

This stores the password unencrypted in the nix store and is thus considered unsafe. Prefer using the delugePasswordFile option.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.deluge.delugePasswordFile
File containing the password to connect to deluge server.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.deluge.delugePort
Port where deluge server is listening.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
58846
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.deluge.delugeUser
User to connect to deluge server.

Type: string

Default:

```
"localclient"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.deluge.exportPerTorrentMetrics
Enable per−torrent metrics.

This may significantly increase the number of time series depending on the number of torrents in your Deluge instance.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.deluge.extraFlags
Extra commandline options to pass to the deluge exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.deluge.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.deluge.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9354"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.deluge.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.deluge.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9354 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.deluge.group

Group under which the deluge exporter shall be run.

Type: string

Default:

```
"deluge-exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.deluge.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.deluge.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.deluge.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9354
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.deluge.user
User name under which the deluge exporter shall be run.

Type: string

Default:

```
"deluge-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.enable
Whether to enable the prometheus dmarc exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.debug
Whether to declare enable '--debug'.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.deduplicationMaxSeconds
How long individual report IDs will be remembered to avoid counting double delivered reports twice.

Type: unsigned integer, meaning >=0

Default:

```
"7 days (in seconds)"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.extraFlags
Extra commandline options to pass to the dmarc exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.dmarc.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9797"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.dmarc.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9797 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.folders.done

IMAP mailbox that successfully processed reports are moved to.

Type: string

Default:

```
"Archive"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.folders.error

IMAP mailbox that emails are moved to that could not be processed.

Type: string

Default:

```
"Invalid"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.folders.inbox

IMAP mailbox that is checked for incoming DMARC aggregate reports

Type: string

Default:

```
"INBOX"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.group
Group under which the dmarc exporter shall be run.

Type: string

Default:

```
"dmarc-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.imap.host
Hostname of IMAP server to connect to.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.imap.passwordFile
File containing the login password for the IMAP connection.

Type: string

Example:

```
"/run/secrets/dovecot_pw"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.imap.port
Port of the IMAP server to connect to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
993
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.imap.username
Login username for the IMAP connection.

Type: string

Example:

```
"postmaster@example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.pollIntervalSeconds
How often to poll the IMAP server in seconds.

Type: unsigned integer, meaning >=0

Default:

```
60
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9797
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dmarc.user
User name under which the dmarc exporter shall be run.

Type: string

Default:

```
"dmarc-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnsmasq.enable
Whether to enable the prometheus dnsmasq exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnsmasq.dnsmasqListenAddress
Address on which dnsmasq listens.

Type: string

Default:

```
"localhost:53"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnsmasq.extraFlags
Extra commandline options to pass to the dnsmasq exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnsmasq.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.dnsmasq.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9153"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnsmasq.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.dnsmasq.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9153 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnsmasq.group
Group under which the dnsmasq exporter shall be run.

Type: string

Default:

```
"dnsmasq−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnsmasq.leasesPath
Path to the ‘dnsmasq.leases’ file.

Type: absolute path

Default:

```
"/var/lib/dnsmasq/dnsmasq.leases"
```

Example:

```
"/var/lib/misc/dnsmasq.leases"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnsmasq.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnsmasq.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnsmasq.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9153
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnsmasq.user
User name under which the dnsmasq exporter shall be run.

Type: string

Default:

```
"dnsmasq-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnssec.enable

Whether to enable the prometheus dnssec exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnssec.configuration

dnssec exporter configuration as nix attribute set.

See **https://github.com/chrj/prometheus-dnssec-exporter/blob/master/README.md** for the description of the configuration file format.

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  records = [
    {
      zone = "ietf.org";
      record = "@";
      type = "SOA";
    }
    {
      zone = "verisigninc.com";
      record = "@";
      type = "SOA";
    }
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnssec.extraFlags

Extra commandline options when launching Prometheus.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnssec.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.dnssec.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9204"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnssec.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.dnssec.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9204 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnssec.group

Group under which the dnssec exporter shall be run.

Type: string

Default:

```
"dnssec−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnssec.listenAddress

Listen address as host IP and port definition.

Type: null or string

Default:

```
null
```

Example:

```
":9204"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnssec.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnssec.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9204
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnssec.resolvers
DNSSEC capable resolver to be used for the check.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "0.0.0.0:53"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnssec.timeout
DNS request timeout duration.

Type: null or string

Default:

```
null
```

Example:

```
"10s"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dnssec.user
User name under which the dnssec exporter shall be run.

Type: string

Default:

```
"dnssec-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.domain.enable
Whether to enable the prometheus domain exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.domain.extraFlags
Extra commandline options to pass to the domain exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.domain.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.domain.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9222"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.domain.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.domain.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9222 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.domain.group
Group under which the domain exporter shall be run.

Type: string

Default:

```
"domain−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.domain.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.domain.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.domain.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9222
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.domain.user
User name under which the domain exporter shall be run.

Type: string

Default:

```
"domain-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dovecot.enable
Whether to enable the prometheus dovecot exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dovecot.extraFlags

Extra commandline options to pass to the dovecot exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dovecot.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.dovecot.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9166"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dovecot.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.dovecot.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9166 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dovecot.group

Group under which the dovecot exporter shall be run.

Type: string

Default:

```
"dovecot−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dovecot.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dovecot.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dovecot.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9166
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dovecot.scopes
Stats scopes to query.

Type: list of string

Default:

```
[
  "user"
]
```

Example:

```
[
  "user"
  "global"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dovecot.socketPath
Path under which the stats socket is placed. The user/group under which the exporter runs, should be able to access the socket in order to scrape the metrics successfully.

Please keep in mind that the stats module has changed in **Dovecot 2.3+** which is not **compatible with this exporter**.

The following extra config has to be passed to Dovecot to ensure that recent versions work with this exporter:

```
{
  services.prometheus.exporters.dovecot.enable = true;
  services.prometheus.exporters.dovecot.socketPath = "/var/run/dove \
cot2/old-stats";
  services.dovecot2.mailPlugins.globally.enable = [ "old_stats" ];
  services.dovecot2.extraConfig = ''
    service old-stats {
      unix_listener old-stats {
```

```
            user = dovecot-exporter
            group = dovecot-exporter
            mode = 0660
          }
          fifo_listener old-stats-mail {
            mode = 0660
            user = dovecot
            group = dovecot
          }
          fifo_listener old-stats-user {
            mode = 0660
            user = dovecot
            group = dovecot
          }
        }
        plugin {
          old_stats_refresh = 30 secs
          old_stats_track_cmds = yes
        }
      '';
    }
```

Type: absolute path

Default:

```
"/var/run/dovecot/stats"
```

Example:

```
"/var/run/dovecot2/old-stats"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dovecot.telemetryPath
Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.dovecot.user
User name under which the dovecot exporter shall be run.

Type: string

Default:

```
"dovecot-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ebpf.enable

Whether to enable the prometheus ebpf exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ebpf.extraFlags

Extra commandline options to pass to the ebpf exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ebpf.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.ebpf.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9435"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ebpf.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.ebpf.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9435 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ebpf.group

Group under which the ebpf exporter shall be run.

Type: string

Default:

```
"ebpf−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ebpf.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ebpf.names
List of eBPF programs to load

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "timers"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ebpf.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ebpf.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9435
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ebpf.user
User name under which the ebpf exporter shall be run.

Type: string

Default:

```
"ebpf-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.enable
Whether to enable the prometheus ecoflow exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.debug
Enable debug log messages. Disabled by default. Set to “1” to enable.

Type: string

Default:

```
"0"
```

Example:

```
"1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.ecoflowAccessKeyFile
Path to the file with your personal api access string from the Ecoflow development website **https://developer-eu.ecoflow.com**. Do to share or commit your plaintext scecrets to a public repo use: agenix or soaps.

Type: absolute path

Default:

```
"/etc/ecoflow-access-key"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.ecoflowDevicesFile
File must contain one line, example: R3300000,R3400000,NC430000,… The list of devices serial numbers separated by comma. For instance: SN1,SN2,SN3. Instead of “devicesFile” you can specify “devicesPrettynamesFile” which will also work. You can specify both. Do to share or commit your plaintext serial numbers to a public repo use: agenix or soaps.

Type: absolute path

Default:

```
"/etc/ecoflow-devices"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.ecoflowDevicesPrettyNamesFile

File must contain one line, example: {“R3300000”:“Delta 2”,“R3400000”:“Delta Pro”,…} The key/value map of custom names for your devices. Key is a serial number, value is a device name you want to see in Grafana Dashboard. It’s helpful to see a meaningful name in Grafana dashboard instead of a serial-number. Do to share or commit your plaintext serial numbers to a public repo use: agenix or soaps.

Type: absolute path

Default:

```
"/etc/ecoflow-devices-pretty-names"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.ecoflowEmailFile

Path to the file with your personal ecoflow app login email address. Do to share or commit your plaintext scecrets to a public repo use: agenix or soaps.

Type: absolute path

Default:

```
"/etc/ecoflow-email"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.ecoflowPasswordFile

Path to the file with your personal ecoflow app login email password. Do to share or commit your plaintext passwords to a public repo use: agenix or soaps here!

Type: absolute path

Default:

```
"/etc/ecoflow-password"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.ecoflowSecretKeyFile

Path to the file with your personal api secret string from the Ecoflow development website **https://developer-eu.ecoflow.com**. Do to share or commit your plaintext scecrets to a public repo use: agenix or soaps.

Type: absolute path

Default:

```
"/etc/ecoflow-secret-key"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.exporterType

The type of exporter you’d like to use. Possible values: “rest” and “mqtt”. Default value is “rest”. Choose “rest” for the ecoflow online cloud api use “rest” and define: accessKey, secretKey. Choose “mqtt” for the lan realtime integration use “mqtt” and define: email, password, devices.

Type: one of “rest”, “mqtt”

Default:

```
"rest"
```

Example:

```
"mqtt"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.extraFlags
Extra commandline options to pass to the ecoflow exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.ecoflow.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 2112"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.ecoflow.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 2112 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.group
Group under which the ecoflow exporter shall be run.

Type: string

Default:

```
"ecoflow−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.mqttDeviceOfflineThreshold
The threshold in seconds which indicates how long we should wait for a metric message from MQTT broker. Default value: 60 seconds. If we don't receive message within 60 seconds we consider that device is offline. If we don't receive messages within the threshold for all devices, we'll try to reconnect to the MQTT broker. There is a strange behavior that MQTT stop sends messages if you open Ecoflow mobile app and then close it).

Type: positive integer, meaning >0

Default:

```
60
```

Example:

```
120
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2112
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.prefix
The prefix that will be added to all metrics. Default value is ecoflow. For instance metric bms_bmsStatus.minCellTemp will be exported to prometheus as ecoflow.bms_bmsStatus.minCellTemp. With default value "ecoflow" you can use Grafana Dashboard with ID 17812 without any changes.

Type: string

Default:

```
"ecoflow"
```

Example:

```
"ecoflow_privateSite"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.scrapingInterval

Scrapping interval in seconds. How often should the exporter execute requests to Ecoflow Rest API in order to get the data. Default value is 30 seconds. Align this value with your prometheus scraper interval settings.

Type: positive integer, meaning >0

Default:

```
30
```

Example:

```
120
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ecoflow.user

User name under which the ecoflow exporter shall be run.

Type: string

Default:

```
"ecoflow-exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr-bazarr.enable

Whether to enable the prometheus exportarr-bazarr exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr-bazarr.package

The exportarr package to use.

Type: package

Default:

```
pkgs.exportarr
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr-bazarr.apiKeyFile

File containing the api-key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−bazarr.environment
See **the configuration guide** for available options.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  PROWLARR__BACKFILL = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−bazarr.extraFlags
Extra commandline options to pass to the exportarr−bazarr exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−bazarr.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.exportarr−bazarr.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9708"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−bazarr.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.exportarr−bazarr.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9708 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−bazarr.group
Group under which the exportarr−bazarr exporter shall be run.

Type: string

Default:

```
"exportarr−bazarr−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−bazarr.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−bazarr.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−bazarr.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9708
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−bazarr.url
The full URL to Sonarr, Radarr, or Lidarr.

Type: string

Default:

```
"http://127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−bazarr.user
User name under which the exportarr−bazarr exporter shall be run.

Type: string

Default:

```
"exportarr−bazarr−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−lidarr.enable
Whether to enable the prometheus exportarr−lidarr exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−lidarr.package
The exportarr package to use.

Type: package

Default:

```
pkgs.exportarr
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−lidarr.apiKeyFile
File containing the api−key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−lidarr.environment
See **the configuration guide** for available options.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  PROWLARR__BACKFILL = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−lidarr.extraFlags
Extra commandline options to pass to the exportarr−lidarr exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−lidarr.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.exportarr−lidarr.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9708"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−lidarr.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.exportarr−lidarr.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9708 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−lidarr.group
Group under which the exportarr−lidarr exporter shall be run.

Type: string

Default:

```
"exportarr−lidarr−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−lidarr.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−lidarr.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−lidarr.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9708
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−lidarr.url
The full URL to Sonarr, Radarr, or Lidarr.

Type: string

Default:

```
"http://127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−lidarr.user
User name under which the exportarr−lidarr exporter shall be run.

Type: string

Default:

```
"exportarr-lidarr-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−prowlarr.enable
Whether to enable the prometheus exportarr−prowlarr exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−prowlarr.package
The exportarr package to use.

Type: package

Default:

```
pkgs.exportarr
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−prowlarr.apiKeyFile
File containing the api−key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−prowlarr.environment
See **the configuration guide** for available options.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  PROWLARR__BACKFILL = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−prowlarr.extraFlags
Extra commandline options to pass to the exportarr−prowlarr exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−prowlarr.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.exportarr−prowlarr.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9708"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−prowlarr.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.exportarr−prowlarr.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9708 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−prowlarr.group
Group under which the exportarr−prowlarr exporter shall be run.

Type: string

Default:

```
"exportarr−prowlarr−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−prowlarr.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−prowlarr.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−prowlarr.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9708
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−prowlarr.url
The full URL to Sonarr, Radarr, or Lidarr.

Type: string

Default:

```
"http://127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−prowlarr.user
User name under which the exportarr−prowlarr exporter shall be run.

Type: string

Default:

```
"exportarr-prowlarr-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−radarr.enable
Whether to enable the prometheus exportarr−radarr exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−radarr.package
The exportarr package to use.

Type: package

Default:

```
pkgs.exportarr
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−radarr.apiKeyFile
File containing the api−key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−radarr.environment
See **the configuration guide** for available options.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  PROWLARR__BACKFILL = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−radarr.extraFlags
Extra commandline options to pass to the exportarr−radarr exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−radarr.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.exportarr−radarr.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9708"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−radarr.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.exportarr−radarr.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9708 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−radarr.group
Group under which the exportarr−radarr exporter shall be run.

Type: string

Default:

```
"exportarr−radarr−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−radarr.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−radarr.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−radarr.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9708
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−radarr.url
The full URL to Sonarr, Radarr, or Lidarr.

Type: string

Default:

```
"http://127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−radarr.user
User name under which the exportarr−radarr exporter shall be run.

Type: string

Default:

```
"exportarr−radarr−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−readarr.enable
Whether to enable the prometheus exportarr−readarr exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−readarr.package
The exportarr package to use.

Type: package

Default:

```
pkgs.exportarr
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−readarr.apiKeyFile
File containing the api−key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−readarr.environment
See **the configuration guide** for available options.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  PROWLARR__BACKFILL = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−readarr.extraFlags
Extra commandline options to pass to the exportarr−readarr exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−readarr.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.exportarr−readarr.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9708"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−readarr.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.exportarr−readarr.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9708 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−readarr.group
Group under which the exportarr−readarr exporter shall be run.

Type: string

Default:

```
"exportarr-readarr-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−readarr.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−readarr.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−readarr.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9708
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−readarr.url
The full URL to Sonarr, Radarr, or Lidarr.

Type: string

Default:

```
"http://127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−readarr.user
User name under which the exportarr−readarr exporter shall be run.

Type: string

Default:

```
"exportarr−readarr−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−sonarr.enable
Whether to enable the prometheus exportarr−sonarr exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−sonarr.package
The exportarr package to use.

Type: package

Default:

```
pkgs.exportarr
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−sonarr.apiKeyFile
File containing the api−key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−sonarr.environment

See **the configuration guide** for available options.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  PROWLARR__BACKFILL = true;
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−sonarr.extraFlags

Extra commandline options to pass to the exportarr−sonarr exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−sonarr.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.exportarr−sonarr.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9708"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−sonarr.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.exportarr−sonarr.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9708 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−sonarr.group
Group under which the exportarr−sonarr exporter shall be run.

Type: string

Default:

```
"exportarr−sonarr−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−sonarr.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−sonarr.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−sonarr.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9708
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−sonarr.url
The full URL to Sonarr, Radarr, or Lidarr.

Type: string

Default:

```
"http://127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.exportarr−sonarr.user
User name under which the exportarr−sonarr exporter shall be run.

Type: string

Default:

```
"exportarr−sonarr−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fail2ban.enable
Whether to enable the prometheus fail2ban exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fail2ban.exitOnError
When set to true the exporter will immediately exit on a fail2ban socket connection error

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fail2ban.extraFlags
Extra commandline options to pass to the fail2ban exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fail2ban.fail2banSocket
Path to the fail2ban server socket. Permissions will be set automatically if fail2ban runs on this system.

Type: string

Default:

```
"config.services.fail2ban.daemonSettings.Definition.socket"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fail2ban.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.fail2ban.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9191"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fail2ban.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.fail2ban.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9191 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fail2ban.group
Group under which the fail2ban exporter shall be run.

Type: string

Default:

```
"fail2ban-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fail2ban.host
The host that the fail2ban exporter should listen on

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fail2ban.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fail2ban.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fail2ban.passwordFile
File that contains the password to protect endpoints with HTTP basic authentication

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/prometheus-fail2ban-exporter-password.txt"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fail2ban.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9191
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fail2ban.user
User name under which the fail2ban exporter shall be run.

Type: string

Default:

```
"fail2ban-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fail2ban.username
Username to protect endpoints with HTTP basic authentication

Type: null or string

Default:

```
null
```

Example:

```
"admin"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fastly.enable
Whether to enable the prometheus fastly exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fastly.configFile
Path to a fastly−exporter configuration file. Example one can be generated with ‘fastly−exporter −−config−file−example’.

Type: null or absolute path

Default:

```
null
```

Example:

```
"./fastly-exporter-config.txt"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fastly.environmentFile
An environment file containg at least the FASTLY_API_TOKEN= environment variable.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fastly.extraFlags
Extra commandline options to pass to the fastly exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fastly.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.fastly.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9118"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fastly.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.fastly.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9118 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fastly.group
Group under which the fastly exporter shall be run.

Type: string

Default:

```
"fastly-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fastly.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fastly.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fastly.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9118
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fastly.user
User name under which the fastly exporter shall be run.

Type: string

Default:

```
"fastly-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.flow.enable
Whether to enable the prometheus flow exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.flow.asn
The ASN being monitored.

Type: positive integer, meaning >0

Example:

```
65542
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.flow.brokers
List of Kafka brokers to connect to.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "kafka.example.org:19092" ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.flow.extraFlags
Extra commandline options to pass to the flow exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.flow.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.flow.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9590"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.flow.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.flow.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9590 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.flow.group

Group under which the flow exporter shall be run.

Type: string

Default:

```
"flow-exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.flow.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.flow.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.flow.partitions

The number of the partitions to consume, none means all.

Type: list of signed integer

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.flow.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9590
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.flow.topic
The Kafka topic to consume from.

Type: string

Example:

```
"pmacct.acct"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.flow.user
User name under which the flow exporter shall be run.

Type: string

Default:

```
"flow-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.enable
Whether to enable the prometheus fritz exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.extraFlags
Extra commandline options to pass to the fritz exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.fritz.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9787"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.fritz.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9787 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.group

Group under which the fritz exporter shall be run.

Type: string

Default:

```
"fritz−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9787
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.settings
Configuration settings for fritz−exporter.

Type: open submodule of (YAML 1.1 value)

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.settings.devices
Fritz!−devices to monitor using the exporter.

Type: list of (open submodule of (YAML 1.1 value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.settings.devices.*.host_info
Enable extended host info for this device. *Warning*: This will heavily increase scrape time.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.settings.devices.*.hostname
Hostname under which the target device is reachable.

Type: string

Default:

```
"fritz.box"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.settings.devices.*.name
Name to use for the device.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.settings.devices.*.password_file
Path to a file which contains the password to authenticate with the target device. Needs to be readable by the user the exporter runs under.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.settings.devices.*.username
Username to authenticate with the target device.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.settings.log_level
Log level to use for the exporter.

Type: one of “DEBUG”, “INFO”, “WARNING”, “ERROR”, “CRITICAL”

Default:

```
"INFO"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritz.user
User name under which the fritz exporter shall be run.

Type: string

Default:

```
"fritz-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritzbox.enable
Whether to enable the prometheus fritzbox exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritzbox.extraFlags
Extra commandline options to pass to the fritzbox exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritzbox.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.fritzbox.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9133"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritzbox.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.fritzbox.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9133 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritzbox.gatewayAddress
The hostname or IP of the FRITZ!Box.

Type: string

Default:

```
"fritz.box"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritzbox.gatewayPort
The port of the FRITZ!Box UPnP service.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
49000
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritzbox.group
Group under which the fritzbox exporter shall be run.

Type: string

Default:

```
"fritzbox−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritzbox.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritzbox.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritzbox.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9133
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.fritzbox.user
User name under which the fritzbox exporter shall be run.

Type: string

Default:

```
"fritzbox-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.frr.enable
Whether to enable the prometheus frr exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.frr.enabledCollectors

Collectors to enable. The collectors listed here are enabled in addition to the default ones.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "vrrp"
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.frr.disabledCollectors

Collectors to disable which are enabled by default.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "bfd"
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.frr.extraFlags

Extra commandline options to pass to the frr exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.frr.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.frr.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9342"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.frr.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.frr.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9342 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.frr.group

Group under which the frr exporter shall be run. The exporter talks to frr using a unix socket, which is owned by frrvty group.

Type: string

Default:

```
"frrvty"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.frr.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.frr.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.frr.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9342
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.frr.user

User name under which the frr exporter shall be run. The exporter talks to frr using a unix socket, which is owned by frr.

Type: string

Default:

```
"frr"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.graphite.enable

Whether to enable the prometheus graphite exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.graphite.extraFlags

Extra commandline options to pass to the graphite exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.graphite.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.graphite.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9108"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.graphite.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.graphite.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9108 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.graphite.graphitePort
Port to use for the graphite server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9109
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.graphite.group
Group under which the graphite exporter shall be run.

Type: string

Default:

```
"graphite-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.graphite.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.graphite.mappingSettings
Mapping configuration for the exporter, see **https://github.com/prometheus/graphite_exporter#yaml-config** for available options.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.graphite.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.graphite.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9108
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.graphite.user

User name under which the graphite exporter shall be run.

Type: string

Default:

```
"graphite-exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.idrac.enable

Whether to enable the prometheus idrac exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.idrac.configuration

Configuration for iDRAC exporter, as a nix attribute set.

Configuration reference: **https://github.com/mrlhansen/idrac_exporter/#configuration**

Mutually exclusive with ‘configurationPath’ option.

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  hosts = {
    default = {
      password = "password";
      username = "username";
    };
  };
  metrics = {
    memory = true;
    power = true;
    sel = true;
    sensors = true;
```

```
    storage = true;
    system = true;
  };
  retries = 1;
  timeout = 10;
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.idrac.configurationPath
Path to the service's config file. This path can either be a computed path in /nix/store or a path in the local filesystem.

The config file should NOT be stored in /nix/store as it will contain passwords and/or keys in plain text.

Mutually exclusive with 'configuration' option.

Configuration reference: **https://github.com/mrlhansen/idrac_exporter/#configuration**

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/prometheus-idrac-exporter/idrac.yml"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.idrac.extraFlags
Extra commandline options to pass to the idrac exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.idrac.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.idrac.openFirewall** is true. It is used as 'ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept'.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9348"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.idrac.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.idrac.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9348 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.idrac.group

Group under which the idrac exporter shall be run.

Type: string

Default:

```
"idrac-exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.idrac.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.idrac.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.idrac.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9348
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.idrac.user
User name under which the idrac exporter shall be run.

Type: string

Default:

```
"idrac-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap-mailstat.enable
Whether to enable the prometheus imap-mailstat exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap-mailstat.accounts
Accounts to monitor

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap-mailstat.accounts.<name>.mailaddress
Your email address (at the moment used as login name)

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap-mailstat.accounts.<name>.password
Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap-mailstat.accounts.<name>.serveraddress
mailserver name or address

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap−mailstat.accounts.<name>.serverport
imap port number (at the moment only tls connection is supported)

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap−mailstat.accounts.<name>.starttls
set to true for using STARTTLS to start a TLS connection

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap−mailstat.accounts.<name>.username
If empty string mailaddress value is used

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap−mailstat.configurationFile
File containing the configuration

Type: absolute path

Example:

```
"/path/to/config−file"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap−mailstat.extraFlags
Extra commandline options to pass to the imap−mailstat exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap−mailstat.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.imap−mailstat.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 8081"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap−mailstat.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.imap−mailstat.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 8081 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap−mailstat.group
Group under which the imap−mailstat exporter shall be run.

Type: string

Default:

```
"imap−mailstat−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap−mailstat.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap−mailstat.oldestUnseenDate
Enable metric with timestamp of oldest unseen mail

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap−mailstat.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap−mailstat.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8081
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.imap−mailstat.user
User name under which the imap−mailstat exporter shall be run.

Type: string

Default:

```
"imap−mailstat−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.influxdb.enable
Whether to enable the prometheus influxdb exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.influxdb.extraFlags
Extra commandline options to pass to the influxdb exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.influxdb.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.influxdb.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9122"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.influxdb.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.influxdb.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9122 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.influxdb.group
Group under which the influxdb exporter shall be run.

Type: string

Default:

```
"influxdb-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.influxdb.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.influxdb.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.influxdb.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9122
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.influxdb.sampleExpiry
How long a sample is valid for

Type: string

Default:

```
"5m"
```

Example:

```
"10m"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.influxdb.udpBindAddress
Address on which to listen for udp packets

Type: string

Default:

```
":9122"
```

Example:

```
"192.0.2.1:9122"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.influxdb.user
User name under which the influxdb exporter shall be run.

Type: string

Default:

```
"influxdb-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ipmi.enable
Whether to enable the prometheus ipmi exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ipmi.configFile
Path to configuration file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ipmi.extraFlags
Extra commandline options to pass to the ipmi exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ipmi.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.ipmi.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9290"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ipmi.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.ipmi.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9290 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ipmi.group
Group under which the ipmi exporter shall be run.

Type: string

Default:

```
"ipmi−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ipmi.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ipmi.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ipmi.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9290
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ipmi.user
User name under which the ipmi exporter shall be run.

Type: string

Default:

```
"ipmi-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ipmi.webConfigFile
Path to configuration file that can enable TLS or authentication.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.jitsi.enable
Whether to enable the prometheus jitsi exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.jitsi.extraFlags

Extra commandline options to pass to the jitsi exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.jitsi.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.jitsi.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9700"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.jitsi.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.jitsi.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9700 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.jitsi.group

Group under which the jitsi exporter shall be run.

Type: string

Default:

```
"jitsi−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.jitsi.interval

How often to scrape new data

Type: string

Default:

```
"30s"
```

Example:

```
"1min"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.jitsi.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.jitsi.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.jitsi.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9700
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.jitsi.url
Jitsi Videobridge metrics URL to monitor. This is usually /colibri/stats on port 8080 of the jitsi videobridge host.

Type: string

Default:

```
"http://localhost:8080/colibri/stats"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.jitsi.user
User name under which the jitsi exporter shall be run.

Type: string

Default:

```
"jitsi-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.json.enable

Whether to enable the prometheus json exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.json.configFile

Path to configuration file.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.json.extraFlags

Extra commandline options to pass to the json exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.json.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.json.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 7979"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.json.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.json.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 7979 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.json.group
Group under which the json exporter shall be run.

Type: string

Default:

```
"json-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.json.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.json.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.json.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7979
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.json.user
User name under which the json exporter shall be run.

Type: string

Default:

```
"json-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.junos-czerwonk.enable
Whether to enable the prometheus junos-czerwonk exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.junos−czerwonk.configuration
JunOS exporter configuration as nix attribute set. Mutually exclusive with the ‘configurationFile’ option.

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  devices = [
    {
      host = "router1";
      key_file = "/path/to/key";
    }
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.junos−czerwonk.configurationFile
Specify the JunOS exporter configuration file to use.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.junos−czerwonk.environmentFile
File containing env−vars to be substituted into the exporter’s config.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.junos−czerwonk.extraFlags
Extra commandline options to pass to the junos−czerwonk exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.junos−czerwonk.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.junos−czerwonk.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9326"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.junos−czerwonk.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.junos−czerwonk.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9326 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.junos−czerwonk.group
Group under which the junos−czerwonk exporter shall be run.

Type: string

Default:

```
"junos−czerwonk−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.junos−czerwonk.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.junos−czerwonk.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.junos−czerwonk.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9326
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.junos−czerwonk.telemetryPath
Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.junos−czerwonk.user
User name under which the junos−czerwonk exporter shall be run.

Type: string

Default:

```
"junos−czerwonk−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kafka.enable
Whether to enable the prometheus kafka exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kafka.package
The kminion package to use.

Type: package

Default:

```
pkgs.kminion
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kafka.environmentFile

File containing the credentials to access the repository, in the format of an EnvironmentFile as described by systemd.exec(5)

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kafka.extraFlags

Extra commandline options to pass to the kafka exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kafka.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.kafka.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 8080"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kafka.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.kafka.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 8080 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kafka.group

Group under which the kafka exporter shall be run.

Type: string

Default:

```
"kafka−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kafka.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kafka.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kafka.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kafka.user
User name under which the kafka exporter shall be run.

Type: string

Default:

```
"kafka-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kea.enable
Whether to enable the prometheus kea exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kea.extraFlags

Extra commandline options to pass to the kea exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kea.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.kea.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9547"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kea.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.kea.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9547 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kea.group

Group under which the kea exporter shall be run.

Type: string

Default:

```
"kea−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kea.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kea.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kea.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9547
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kea.targets
Paths or URLs to the Kea control socket.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/run/kea/kea-dhcp4.socket"
  "/run/kea/kea-dhcp6.socket"
  "http://127.0.0.1:8547"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.kea.user
User name under which the kea exporter shall be run.

Type: string

Default:

```
"kea-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.keylight.enable
Whether to enable the prometheus keylight exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.keylight.extraFlags
Extra commandline options to pass to the keylight exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.keylight.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.keylight.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9288"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.keylight.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.keylight.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9288 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.keylight.group
Group under which the keylight exporter shall be run.

Type: string

Default:

```
"keylight−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.keylight.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.keylight.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.keylight.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9288
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.keylight.user
User name under which the keylight exporter shall be run.

Type: string

Default:

```
"keylight-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.klipper.enable
Whether to enable the prometheus klipper exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.klipper.package
The prometheus-klipper-exporter package to use.

Type: package

Default:

```
pkgs.prometheus-klipper-exporter
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.klipper.extraFlags
Extra commandline options to pass to the klipper exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.klipper.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.klipper.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9101"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.klipper.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.klipper.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9101 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.klipper.group
Group under which the klipper exporter shall be run.

Type: string

Default:

```
"klipper−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.klipper.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.klipper.moonrakerApiKey
API Key to authenticate with the Moonraker APIs. Only needed if the host running the exporter is not a trusted client to Moonraker.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.klipper.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.klipper.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9101
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.klipper.user
User name under which the klipper exporter shall be run.

Type: string

Default:

```
"klipper-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.knot.enable
Whether to enable the prometheus knot exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.knot.extraFlags
Extra commandline options to pass to the knot exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.knot.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.knot.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9433"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.knot.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.knot.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9433 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.knot.group
Group under which the knot exporter shall be run.

Type: string

Default:

```
"knot−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.knot.knotLibraryPath
Path to the library of ‘knot−dns’.

Type: null or string

Default:

```
null
```

Example:

```
"${pkgs.knot−dns.out}/lib/libknot.so"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.knot.knotSocketPath
Socket path of **knotd**(8).

Type: string

Default:

```
"/run/knot/knot.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.knot.knotSocketTimeout
Timeout in seconds.

Type: positive integer, meaning >0

Default:

```
2000
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.knot.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.knot.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.knot.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9433
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.knot.user
User name under which the knot exporter shall be run.

Type: string

Default:

```
"knot-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.libvirt.enable
Whether to enable the prometheus libvirt exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.libvirt.extraFlags
Extra commandline options to pass to the libvirt exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.libvirt.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.libvirt.openFirewall** is true. It is used as ‘ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept’.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9177"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.libvirt.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.libvirt.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9177 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.libvirt.group
Group under which the libvirt exporter shall be run.

Type: string

Default:

```
"libvirt-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.libvirt.libvirtUri
Libvirt URI from which to extract metrics

Type: string

Default:

```
"qemu:///system"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.libvirt.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.libvirt.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.libvirt.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9177
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.libvirt.user
User name under which the libvirt exporter shall be run.

Type: string

Default:

```
"libvirt-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.lnd.enable
Whether to enable the prometheus lnd exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.lnd.extraFlags
Extra commandline options to pass to the lnd exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.lnd.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.lnd.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9092"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.lnd.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.lnd.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9092 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.lnd.group
Group under which the lnd exporter shall be run.

Type: string

Default:

```
"lnd-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.lnd.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.lnd.lndHost
lnd instance gRPC address:port.

Type: string

Default:

```
"localhost:10009"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.lnd.lndMacaroonDir
Path to lnd macaroons.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.lnd.lndTlsPath
Path to lnd TLS certificate.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.lnd.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.lnd.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9092
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.lnd.user

User name under which the lnd exporter shall be run.

Type: string

Default:

```
"lnd-exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.enable

Whether to enable the prometheus mail exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.configFile

Specify the mailexporter configuration file to use.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.configuration

Specify the mailexporter configuration file to use.

Type: null or (submodule)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.configuration.disableFileDeletion
Disables the exporter's function to delete probing mails.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.configuration.mailCheckTimeout
Timeout until mails are considered "didn't make it".

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.configuration.monitoringInterval
Time interval between two probe attempts.

Type: string

Example:

```
"10s"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.configuration.servers
List of servers that should be probed.

Note: if your mailserver has **rspamd**(8) configured, it can happen that emails from this exporter are marked as spam.

It's possible to work around the issue with a config like this:

```
{
  services.rspamd.locals."multimap.conf".text = ''
    ALLOWLIST_PROMETHEUS {
      filter = "email:domain:tld";
      type = "from";
      map = "${pkgs.writeText "allowmap" "domain.tld"}";
      score = -100.0;
    }
  '';
}
```

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[ {
  name = "testserver";
  server = "smtp.domain.tld";
  port = 587;
  from = "exporteruser@domain.tld";
  to = "exporteruser@domain.tld";
  detectionDir = "/path/to/Maildir/new";
```

```
} ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.configuration.servers.*.detectionDir
Directory in which new mails for the exporter user are placed. Note that this needs to exist when the exporter starts.

Type: absolute path

Example:

```
"/var/spool/mail/exporteruser/new"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.configuration.servers.*.from
Content of 'From' Header for probing mails.

Type: string

Example:

```
"exporteruser@domain.tld"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.configuration.servers.*.login
Username to use for SMTP authentication.

Type: null or string

Default:

```
null
```

Example:

```
"exporteruser@domain.tld"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.configuration.servers.*.name
Value for label 'configname' which will be added to all metrics.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.configuration.servers.*.passphrase
Password to use for SMTP authentication.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.configuration.servers.*.port
Port to use for SMTP.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Example:

```
587
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.configuration.servers.*.server
Hostname of the server that should be probed.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.configuration.servers.*.to
Content of 'To' Header for probing mails.

Type: string

Example:

```
"exporteruser@domain.tld"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.environmentFile
File containing env−vars to be substituted into the exporter's config.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.extraFlags
Extra commandline options to pass to the mail exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.mail.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9225"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.mail.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9225 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.group
Group under which the mail exporter shall be run.

Type: string

Default:

```
"mail-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9225
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.telemetryPath
Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mail.user
User name under which the mail exporter shall be run.

Type: string

Default:

```
"mail-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mailman3.enable
Whether to enable the prometheus mailman3 exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mailman3.extraFlags
Extra commandline options to pass to the mailman3 exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mailman3.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.mailman3.openFirewall** is true. It is used as ‘ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept’.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9934"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mailman3.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.mailman3.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9934 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mailman3.group

Group under which the mailman3 exporter shall be run.

Type: string

Default:

```
"mailman3-exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mailman3.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mailman3.logLevel

Detail level to log.

Type: one of "debug", "info", "warning", "error", "critical"

Default:

```
"info"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mailman3.mailman.addr

Mailman3 Core REST API address.

Type: string

Default:

```
"http://127.0.0.1:8001"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mailman3.mailman.passFile
Mailman3 Core REST API password.

Type: string

Default:

```
config.services.mailman.restApiPassFile
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mailman3.mailman.user
Mailman3 Core REST API username.

Type: string

Default:

```
"restadmin"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mailman3.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mailman3.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9934
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mailman3.user
User name under which the mailman3 exporter shall be run.

Type: string

Default:

```
"mailman3-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mikrotik.enable
Whether to enable the prometheus mikrotik exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mikrotik.configFile

Path to a mikrotik exporter configuration file. Mutually exclusive with **configuration** option.

Type: null or absolute path

Default:

```
null
```

Example:

```
./mikrotik.yml
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mikrotik.configuration

Mikrotik exporter configuration as nix attribute set. Mutually exclusive with **configFile** option.

See **https://github.com/nshttpd/mikrotik-exporter/blob/master/README.md** for the description of the configuration file format.

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  devices = [
    {
      name = "my_router";
      address = "10.10.0.1";
      user = "prometheus";
      password = "changeme";
    }
  ];
  features = {
    bgp = true;
    dhcp = true;
    routes = true;
    optics = true;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mikrotik.extraFlags

Extra commandline options to pass to the mikrotik exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mikrotik.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.mikrotik.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9436"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mikrotik.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.mikrotik.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9436 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mikrotik.group
Group under which the mikrotik exporter shall be run.

Type: string

Default:

```
"mikrotik−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mikrotik.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mikrotik.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mikrotik.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9436
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mikrotik.user
User name under which the mikrotik exporter shall be run.

Type: string

Default:

```
"mikrotik-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.modemmanager.enable
Whether to enable the prometheus modemmanager exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.modemmanager.extraFlags
Extra commandline options to pass to the modemmanager exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.modemmanager.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.modemmanager.openFirewall** is true. It is used as ‘ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept’.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9539"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.modemmanager.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.modemmanager.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9539 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.modemmanager.group
Group under which the modemmanager exporter shall be run.

Type: string

Default:

```
"modemmanager-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.modemmanager.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.modemmanager.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.modemmanager.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9539
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.modemmanager.refreshRate

How frequently ModemManager will refresh the extended signal quality information for each modem. The duration should be specified in seconds (“5s”), minutes (“1m”), or hours (“1h”).

Type: string

Default:

```
"5s"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.modemmanager.user

User name under which the modemmanager exporter shall be run.

Type: string

Default:

```
"modemmanager-exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mongodb.enable

Whether to enable the prometheus mongodb exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mongodb.collStats

List of comma separared databases.collections to get $collStats

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "db1.coll1"
  "db2"
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mongodb.collectAll

Enable all collectors. Same as specifying all −−collector.<name>

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mongodb.collector
Enabled collectors

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "diagnosticdata"
  "replicasetstatus"
  "dbstats"
  "topmetrics"
  "currentopmetrics"
  "indexstats"
  "dbstats"
  "profile"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mongodb.extraFlags
Extra commandline options to pass to the mongodb exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mongodb.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.mongodb.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9216"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mongodb.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.mongodb.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9216 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mongodb.group
Group under which the mongodb exporter shall be run.

Type: string

Default:

```
"mongodb-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mongodb.indexStats
List of comma separared databases.collections to get $indexStats

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "db1.coll1"
  "db2"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mongodb.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mongodb.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mongodb.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9216
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mongodb.telemetryPath
Metrics expose path

Type: string

Default:

```
"/metrics"
```

Example:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mongodb.uri
MongoDB URI to connect to.

Type: string

Default:

```
"mongodb://localhost:27017/test"
```

Example:

```
"mongodb://localhost:27017/test"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mongodb.user
User name under which the mongodb exporter shall be run.

Type: string

Default:

```
"mongodb-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.enable
Whether to enable the prometheus mqtt exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.environmentFile
File to load as environment file. Useful for e.g. setting ‘MQTT_PASSWORD’ without putting any secrets into the Nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
[
  "/run/secrets/mqtt-exporter"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.esphomeTopicPrefixes
MQTT topic used for ESPHome messages.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.extraFlags
Extra commandline options to pass to the mqtt exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.mqtt.openFirewall** is true. It is used as 'ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept'.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9000"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.mqtt.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9000 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.group
Group under which the mqtt exporter shall be run.

Type: string

Default:

```
"mqtt-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.hubitatTopicPrefixes
MQTT topic used for Hubitat messages.

Type: list of string

Default:

```
[
  "hubitat/"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.keepFullTopic
Whether to enable Keep entire topic instead of the first two elements only. Usecase: Shelly 3EM.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.logLevel
Logging level

Type: one of “CRITICAL”, “ERROR”, “WARNING”, “INFO”, “DEBUG”

Default:

```
"INFO"
```

Example:

```
"DEBUG"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.logMqttMessage
Whether to enable Log MQTT original message, only if 'LOG_LEVEL' is set to DEBUG…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.mqttAddress
IP or hostname of MQTT broker.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.mqttClientId
Set client ID manually for MQTT connection

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.mqttExposeClientId
Whether to enable Expose the client ID as a label in Prometheus metrics…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.mqttIgnoredTopics
Lists of topics to ignore. Accepts wildcards.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.mqttKeepAlive
Keep alive interval to maintain connection with MQTT broker.

Type: signed integer

Default:

```
60
```

Example:

```
30
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.mqttPort
TCP port of MQTT broker.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1883
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.mqttTopic
Topic path to subscribe to.

Type: string

Default:

```
"#"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.mqttUsername
Username which should be used to authenticate against the MQTT broker.

Type: null or string

Default:

```
null
```

Example:

```
"mqttexporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.mqttV5Protocol
Whether to enable Force to use MQTT protocol v5 instead of 3.1.1…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9000
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.prometheusPrefix
Prefix added to the metric name.

Type: string

Default:

```
"mqtt_"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.topicLabel
Define the Prometheus label for the topic.

Type: string

Default:

```
"topic"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.user
User name under which the mqtt exporter shall be run.

Type: string

Default:

```
"mqtt-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.zigbee2MqttAvailability
Whether to enable Normalize sensor name for device availability metric added by Zigbee2MQTT…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mqtt.zwaveTopicPrefix
MQTT topic used for Zwavejs2Mqtt messages.

Type: string

Default:

```
"zwave/"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mysqld.enable
Whether to enable the prometheus mysqld exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mysqld.configFile
Path to the services config file.

See **https://github.com/prometheus/mysqld_exporter#running** for more information about the available options.

::: {.warn} Please do not store this file in the nix store if you choose to include any credentials here, as it would be world−readable. :::

Type: absolute path

Example:

```
"/var/lib/prometheus-mysqld-exporter.cnf"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mysqld.extraFlags
Extra commandline options to pass to the mysqld exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mysqld.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.mysqld.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9104"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mysqld.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.mysqld.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9104 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mysqld.group

Group under which the mysqld exporter shall be run.

Type: string

Default:

```
"mysqld−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mysqld.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mysqld.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mysqld.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9104
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mysqld.runAsLocalSuperUser
Whether to run the exporter as **services.mysql.user**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mysqld.telemetryPath
Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.mysqld.user
User name under which the mysqld exporter shall be run.

Type: string

Default:

```
"mysqld-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nats.enable
Whether to enable the prometheus nats exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nats.extraFlags

Extra commandline options to pass to the nats exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nats.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.nats.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 7777"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nats.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.nats.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 7777 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nats.group

Group under which the nats exporter shall be run.

Type: string

Default:

```
"nats−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nats.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nats.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nats.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7777
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nats.url
NATS monitor endpoint to query.

Type: string

Default:

```
"http://127.0.0.1:8222"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nats.user
User name under which the nats exporter shall be run.

Type: string

Default:

```
"nats-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nextcloud.enable
Whether to enable the prometheus nextcloud exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nextcloud.extraFlags

Extra commandline options to pass to the nextcloud exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nextcloud.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.nextcloud.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9205"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nextcloud.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.nextcloud.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9205 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nextcloud.group

Group under which the nextcloud exporter shall be run.

Type: string

Default:

```
"nextcloud−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nextcloud.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nextcloud.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nextcloud.passwordFile
File containing the password for connecting to Nextcloud. Make sure that this file is readable by the exporter user.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/password-file"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nextcloud.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9205
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nextcloud.timeout
Timeout for getting server info document.

Type: string

Default:

```
"5s"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nextcloud.tokenFile
File containing the token for connecting to Nextcloud. Make sure that this file is readable by the exporter user.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/token-file"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nextcloud.url
URL to the Nextcloud serverinfo page. Adding the path to the serverinfo API is optional, it defaults to '/ocs/v2.php/apps/serverinfo/api/v1/info'.

Type: string

Example:

```
"https://domain.tld"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nextcloud.user
User name under which the nextcloud exporter shall be run.

Type: string

Default:

```
"nextcloud-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nextcloud.username
Username for connecting to Nextcloud. Note that this account needs to have admin privileges in Nextcloud. Unused when using token authentication.

Type: string

Default:

```
"nextcloud-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginx.enable
Whether to enable the prometheus nginx exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginx.constLabels
A list of constant labels that will be used in every metric.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "label1=value1"
```

```
  "label2=value2"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginx.extraFlags
Extra commandline options to pass to the nginx exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginx.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.nginx.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9113"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginx.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.nginx.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9113 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginx.group
Group under which the nginx exporter shall be run.

Type: string

Default:

```
"nginx−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginx.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginx.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginx.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9113
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginx.scrapeUri
Address to access the nginx status page. Can be enabled with services.nginx.statusPage = true.

Type: string

Default:

```
"http://localhost/nginx_status"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginx.sslVerify
Whether to perform certificate verification for https.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginx.telemetryPath
Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginx.user
User name under which the nginx exporter shall be run.

Type: string

Default:

```
"nginx-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginxlog.enable
Whether to enable the prometheus nginxlog exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginxlog.extraFlags
Extra commandline options to pass to the nginxlog exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginxlog.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.nginxlog.openFirewall** is true. It is used as 'ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept'.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9117"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginxlog.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.nginxlog.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9117 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginxlog.group
Group under which the nginxlog exporter shall be run.

Type: string

Default:

```
"nginxlog-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginxlog.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginxlog.metricsEndpoint
Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginxlog.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginxlog.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9117
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginxlog.settings

All settings of nginxlog expressed as an Nix attrset.

Check the official documentation for the corresponding YAML settings that can all be used here: **https://github.com/martin−helmich/prometheus−nginxlog−exporter**

The ‘listen’ object is already generated by ‘port’, ‘listenAddress’ and ‘metricsEndpoint’ and will be merged with the value of ‘settings’ before writing it as JSON.

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginxlog.settings.consul

Consul integration options. For more information see the **example config**.

This is disabled by default.

Type: null or (attribute set of anything)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginxlog.settings.namespaces

Namespaces to collect the metrics for. For more information see the **example config**.

Type: list of attribute set of anything

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nginxlog.user

User name under which the nginxlog exporter shall be run.

Type: string

Default:

```
"nginxlog−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node.enable

Whether to enable the prometheus node exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node.enabledCollectors
Collectors to enable. The collectors listed here are enabled in addition to the default ones.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "systemd"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node.disabledCollectors
Collectors to disable which are enabled by default.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "timex"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node.extraFlags
Extra commandline options to pass to the node exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.node.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9100"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.node.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9100 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node.group

Group under which the node exporter shall be run.

Type: string

Default:

```
"node-exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9100
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node.user
User name under which the node exporter shall be run.

Type: string

Default:

```
"node-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node-cert.enable
Whether to enable the prometheus node-cert exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node-cert.excludeGlobs
List files matching a pattern to include. Uses Go blob pattern.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node-cert.excludePaths
List of paths to exclute from searching for SSL certificates.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node-cert.extraFlags
Extra commandline options to pass to the node-cert exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node−cert.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.node−cert.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9141"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node−cert.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.node−cert.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9141 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node−cert.group

Group under which the node−cert exporter shall be run.

Type: string

Default:

```
"node−cert−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node−cert.includeGlobs

List files matching a pattern to include. Uses Go blob pattern.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node−cert.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node−cert.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node−cert.paths
List of paths to search for SSL certificates.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node−cert.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9141
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.node−cert.user
User owning the certs.

Type: string

Default:

```
"acme"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nut.enable
Whether to enable the prometheus nut exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nut.extraFlags

Extra commandline options to pass to the nut exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nut.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.nut.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9199"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nut.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.nut.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9199 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nut.group

Group under which the nut exporter shall be run.

Type: string

Default:

```
"nut−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nut.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nut.nutServer
Hostname or address of the NUT server

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nut.nutUser
The user to log in into NUT server. If set, passwordPath should also be set.

Default NUT configs usually permit reading variables without authentication.

Type: string

Default:

```
""
```

Example:

```
"nut"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nut.nutVariables
List of NUT variable names to monitor.

If no variables are set, all numeric variables will be exported automatically. See the **upstream docs** for more information.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nut.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nut.passwordPath
A run−time path to the nutUser password file, which should be provisioned outside of Nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nut.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9199
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nut.user
User name under which the nut exporter shall be run.

Type: string

Default:

```
"nut-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nvidia-gpu.enable
Whether to enable the prometheus nvidia-gpu exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nvidia-gpu.extraFlags
Extra commandline options to pass to the nvidia-gpu exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nvidia-gpu.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.nvidia-gpu.openFirewall** is true. It is used as 'ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept'.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9835"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nvidia−gpu.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.nvidia−gpu.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9835 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nvidia−gpu.group
Group under which the nvidia−gpu exporter shall be run.

Type: string

Default:

```
"nvidia−gpu−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nvidia−gpu.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nvidia−gpu.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nvidia−gpu.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9835
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.nvidia−gpu.user
User name under which the nvidia−gpu exporter shall be run.

Type: string

Default:

```
"nvidia−gpu−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.opnsense.enable
Whether to enable the prometheus opnsense exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.opnsense.enabledExporter
Collectors to enable or disable. All collectors are enabled by default.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "disable−openvpn"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.opnsense.apiKeyFile
File containing the api key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.opnsense.apiSecretFile
File containing the api secret.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.opnsense.disabledExporter
Collectors to enable or disable. All collectors are enabled by default.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "disable-openvpn"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.opnsense.extraFlags
Extra commandline options to pass to the opnsense exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.opnsense.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.opnsense.openFirewall** is true. It is used as 'ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept'.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9144"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.opnsense.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.opnsense.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9144 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.opnsense.group
Group under which the opnsense exporter shall be run.

Type: string

Default:

```
"opnsense"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.opnsense.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.opnsense.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.opnsense.opnsenseServerAddress
Opnsense IP address of the opnsense appliance. Defaults to 192.168.1.1

Type: string

Default:

```
"192.168.1.1"
```

Example:

```
"192.168.100.254"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.opnsense.opnsenseServerProtocol
Opnsense metrics scraper protocol to use. Defaults to https.

Type: one of “http”, “https”

Default:

```
"https"
```

Example:

```
"http"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.opnsense.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9144
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.opnsense.user
User name under which the opensense exporter shall be run.

Type: string

Default:

```
"opnsense"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.enable
Whether to enable the prometheus pgbouncer exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.package
The prometheus-pgbouncer-exporter package to use.

Type: package

Default:

```
pkgs.prometheus-pgbouncer-exporter
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.connectionEnvFile
File that must contain the environment variable 'PGBOUNCER_EXPORTER_CONNECTION_STRING' which is set to the connection string used by pgbouncer. I.e. the format is supposed to look like this:

```
PGBOUNCER_EXPORTER_CONNECTION_STRING="postgres://admin@localhost:64 \
32/pgbouncer?sslmode=require"
```

NOTE: You MUST keep pgbouncer as database name (special internal db)! NOTE: 'services.pgbouncer.settings.pgbouncer.ignore_startup_parameters' MUST contain "extra_float_digits".

Mutually exclusive with **services.prometheus.exporters.pgbouncer.connectionString**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.connectionString
Connection string for accessing pgBouncer.

NOTE: You MUST keep pgbouncer as database name (special internal db)!!!

NOTE: ignore_startup_parameters MUST contain “extra_float_digits”.

NOTE: Admin user (with password or passwordless) MUST exist in the auth_file if auth_type other than “any” is used.

WARNING: this secret is stored in the world−readable Nix store! Use **services.prometheus.exporters.pgbouncer.connectionEnvFile** if the URL contains a secret.

Type: null or string

Default:

```
null
```

Example:

```
"postgres://admin:@localhost:6432/pgbouncer?sslmode=require"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.extraFlags
Extra commandline options when launching Prometheus.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.pgbouncer.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9127"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.pgbouncer.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9127 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.group
Group under which the pgbouncer exporter shall be run.

Type: string

Default:

```
"pgbouncer-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.logFormat
Output format of log messages. One of: [logfmt, json]

Type: one of “logfmt”, “json”

Default:

```
"logfmt"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.logLevel
Only log messages with the given severity or above.

Type: one of “debug”, “info”, “warn”, “error”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.pidFile

Path to PgBouncer pid file.

If provided, the standard process metrics get exported for the PgBouncer process, prefixed with 'pgbouncer_process_…'. The pgbouncer_process exporter needs to have read access to files owned by the PgBouncer process. Depends on the availability of /proc.

https://prometheus.io/docs/instrumenting/writing_clientlibs/#process−metrics.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9127
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.telemetryPath

Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.user

User name under which the pgbouncer exporter shall be run.

Type: string

Default:

```
"pgbouncer−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.webConfigFile

Path to configuration file that can enable TLS or authentication.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pgbouncer.webSystemdSocket

Use systemd socket activation listeners instead of port listeners (Linux only).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.php−fpm.enable

Whether to enable the prometheus php−fpm exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.php−fpm.package

The prometheus−php−fpm−exporter package to use.

Type: package

Default:

```
pkgs.prometheus-php-fpm-exporter
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.php−fpm.environmentFile

Environment file as defined in **systemd.exec**(5).

Secrets may be passed to the service without adding them to the world−readable Nix store, by specifying placeholder variables as the option value in Nix and setting these variables accordingly in the environment file.

Environment variables from this file will be interpolated into the config file using envsubst with this syntax: '$ENVIRONMENT ${VARIABLE}'

For variables to use see **options and defaults**.

The main use is to set the PHP_FPM_SCRAPE_URI that indicate how to connect to PHP−FPM process.

```
# Content of the environment file
PHP_FPM_SCRAPE_URI="unix:///tmp/php.sock;/status"
```

Note that this file needs to be available on the host on which this exporter is running.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/root/prometheus-php-fpm-exporter.env"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.php−fpm.extraFlags
Extra commandline options to pass to the php−fpm exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.php−fpm.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.php−fpm.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9253"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.php−fpm.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.php−fpm.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9253 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.php−fpm.group
Group under which the php−fpm exporter shall be run.

Type: string

Default:

```
"php−fpm−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.php−fpm.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.php−fpm.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.php−fpm.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9253
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.php−fpm.telemetryPath
Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.php−fpm.user
User name under which the php−fpm exporter shall be run.

Type: string

Default:

```
"php-fpm-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pihole.enable
Whether to enable the prometheus pihole exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pihole.apiToken

Pi−Hole API token which can be used instead of a password

Type: string

Default:

```
""
```

Example:

```
"580a770cb40511eb85290242ac130003580a770cb40511eb85290242ac130003"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pihole.extraFlags

Extra commandline options to pass to the pihole exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pihole.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.pihole.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9617"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pihole.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.pihole.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9617 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pihole.group

Group under which the pihole exporter shall be run.

Type: string

Default:

```
"pihole−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pihole.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pihole.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pihole.password
The password to login into Pi−Hole. An api token can be used instead.

Type: string

Default:

```
""
```

Example:

```
"password"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pihole.piholeHostname
Hostname or address where to find the Pi−Hole webinterface

Type: string

Default:

```
"pihole"
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pihole.piholePort
The port Pi−Hole webinterface is reachable on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
80
```

Example:

```
443
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pihole.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9617
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pihole.protocol
The protocol which is used to connect to Pi−Hole

Type: one of “http”, “https”

Default:

```
"http"
```

Example:

```
"https"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pihole.timeout
Controls the timeout to connect to a Pi−Hole instance

Type: string

Default:

```
"5s"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pihole.user
User name under which the pihole exporter shall be run.

Type: string

Default:

```
"pihole-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ping.enable
Whether to enable the prometheus ping exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ping.extraFlags
Extra commandline options to pass to the ping exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ping.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.ping.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9427"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ping.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.ping.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9427 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ping.group
Group under which the ping exporter shall be run.

Type: string

Default:

```
"ping−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ping.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ping.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ping.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9427
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ping.settings
Configuration for ping_exporter, see **https://github.com/czerwonk/ping_exporter** for supported values.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ping.telemetryPath
Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.ping.user
User name under which the ping exporter shall be run.

Type: string

Default:

```
"ping-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.enable
Whether to enable the prometheus postfix exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.package
The prometheus−postfix−exporter package to use.

Type: package

Default:

```
pkgs.prometheus−postfix−exporter
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.extraFlags
Extra commandline options to pass to the postfix exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.postfix.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9154"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.postfix.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9154 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.group
Group under which the postfix exporter shall be run. It should match the group that is allowed to access the 'showq' socket in the 'queue/public/' directory. Defaults to 'services.postfix.setgidGroup' when postfix is enabled.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.logfilePath
Path where Postfix writes log entries. This file will be truncated by this exporter!

Type: absolute path

Default:

```
"/var/log/postfix_exporter_input.log"
```

Example:

```
"/var/log/mail.log"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9154
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.showqPath
Path where Postfix places its showq socket.

Type: absolute path

Default:

```
"/var/lib/postfix/queue/public/showq"
```

Example:

```
"/var/spool/postfix/public/showq"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.systemd.enable
Whether to enable reading metrics from the systemd journal instead of from a logfile

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.systemd.journalPath
Path to the systemd journal.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.systemd.slice
Name of the postfix systemd slice. This overrides the **systemd.unit**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.systemd.unit
Name of the postfix systemd unit.

Type: string

Default:

```
"postfix.service"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.telemetryPath
Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postfix.user
User name under which the postfix exporter shall be run.

Type: string

Default:

```
"postfix-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postgres.enable
Whether to enable the prometheus postgres exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postgres.dataSourceName
Accepts PostgreSQL URI form and key=value form arguments.

Type: string

Default:

```
"user=postgres database=postgres host=/run/postgresql sslmode=disab \
le"
```

Example:

```
"postgresql://username:password@localhost:5432/postgres?sslmode=dis \
able"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postgres.environmentFile
Environment file as defined in **systemd.exec**(5).

Secrets may be passed to the service without adding them to the world−readable Nix store, by specifying placeholder variables as the option value in Nix and setting these variables accordingly in the environment file.

Environment variables from this file will be interpolated into the config file using envsubst with this syntax: '$ENVIRONMENT ${VARIABLE}'

The main use is to set the DATA_SOURCE_NAME that contains the postgres password

note that contents from this file will override dataSourceName if you have set it from nix.

```
  # Content of the environment file
  DATA_SOURCE_NAME=postgresql://username:password@localhost:5432/po \
stgres?sslmode=disable
```

Note that this file needs to be available on the host on which this exporter is running.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/root/prometheus-postgres-exporter.env"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postgres.extraFlags
Extra commandline options to pass to the postgres exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postgres.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.postgres.openFirewall** is true. It is used as 'ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept'.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9187"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postgres.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.postgres.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9187 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postgres.group
Group under which the postgres exporter shall be run.

Type: string

Default:

```
"postgres-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postgres.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postgres.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postgres.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9187
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postgres.runAsLocalSuperUser
Whether to run the exporter as the local ‘postgres’ super user.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postgres.telemetryPath
Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.postgres.user
User name under which the postgres exporter shall be run.

Type: string

Default:

```
"postgres-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.process.enable
Whether to enable the prometheus process exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.process.extraFlags
Extra commandline options to pass to the process exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.process.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.process.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9256"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.process.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.process.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9256 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.process.group

Group under which the process exporter shall be run.

Type: string

Default:

```
"process-exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.process.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.process.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.process.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9256
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.process.settings.process_names

All settings expressed as an Nix attrset.

Check the official documentation for the corresponding YAML settings that can all be used here: **https://github.com/ncabatoff/process-exporter**

Type: list of anything

Default:

```
[ ]
```

Example:

```
[
  # Remove nix store path from process name
  { name = "{{.Matches.Wrapped}} {{ .Matches.Args }}"; cmdline = [  \
"^/nix/store[^ ]*/(?P<Wrapped>[^ /]*) (?P<Args>.*)" ]; }
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.process.user
User name under which the process exporter shall be run.

Type: string

Default:

```
"process-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.enable
Whether to enable the prometheus pve exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.package
The prometheus-pve-exporter package to use.

Type: package

Default:

```
pkgs.prometheus-pve-exporter
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.collectors.cluster
Collect PVE cluster info

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.collectors.config
Collect PVE onboot status

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.collectors.node
Collect PVE node info

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.collectors.replication
Collect PVE replication info

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.collectors.resources
Collect PVE resources info

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.collectors.status
Collect Node/VM/CT status

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.collectors.version
Collect PVE version info

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.configFile
Path to the service's config file. This path can either be a computed path in /nix/store or a path in the local filesystem.

The config file should NOT be stored in /nix/store as it will contain passwords and/or keys in plain text.

If both configFile and environmentFile are provided, the configFile option will be ignored.

Configuration reference: **https://github.com/prometheus-pve/prometheus-pve-exporter/#authentication**

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/prometheus-pve-exporter/pve.yml"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.environmentFile
Path to the service's environment file. This path can either be a computed path in /nix/store or a path in the local filesystem.

The environment file should NOT be stored in /nix/store as it contains passwords and/or keys in plain text.

Environment reference: **https://github.com/prometheus-pve/prometheus-pve-exporter#authentication**

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/prometheus-pve-exporter/pve.env"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.extraFlags
Extra commandline options to pass to the pve exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.pve.openFirewall** is true. It is used as 'ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept'.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9221"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.pve.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9221 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.group

Group under which the pve exporter shall be run.

Type: string

Default:

```
"pve-exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9221
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.server.certFile
Path to a SSL certificate file for the server

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/prometheus-pve-exporter/full-chain.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.server.keyFile
Path to a SSL private key file for the server

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/prometheus-pve-exporter/privkey.key"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.pve.user
User name under which the pve exporter shall be run.

Type: string

Default:

```
"pve-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.py-air-control.enable
Whether to enable the prometheus py-air-control exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.py-air-control.deviceHostname
The hostname of the air purification device from which to scrape the metrics.

Type: string

Example:

```
"192.168.1.123"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.py−air−control.extraFlags
Extra commandline options to pass to the py−air−control exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.py−air−control.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.py−air−control.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9896"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.py−air−control.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.py−air−control.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9896 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.py−air−control.group
Group under which the py−air−control exporter shall be run.

Type: string

Default:

```
"py−air−control−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.py−air−control.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.py−air−control.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.py−air−control.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9896
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.py−air−control.protocol
The protocol to use when communicating with the air purification device. Available: [http, coap, plain_coap]

Type: string

Default:

```
"http"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.py−air−control.stateDir
Directory below ‘/var/lib’ to store runtime data. This directory will be created automatically using systemd’s StateDirectory mechanism.

Type: string

Default:

```
"prometheus-py-air-control-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.py−air−control.user
User name under which the py−air−control exporter shall be run.

Type: string

Default:

```
"py-air-control-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rasdaemon.enable

Whether to enable the prometheus rasdaemon exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rasdaemon.enabledCollectors

List of error types to collect from the event database.

Type: list of (one of “aer”, “mce”, “mc”, “extlog”, “devlink”, “disk”)

Default:

```
[
  "aer"
  "mce"
  "mc"
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rasdaemon.databasePath

Path to the RAS daemon machine check event database.

Type: absolute path

Default:

```
"/var/lib/rasdaemon/ras-mc_event.db"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rasdaemon.extraFlags

Extra commandline options to pass to the rasdaemon exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rasdaemon.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.rasdaemon.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 10029"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rasdaemon.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.rasdaemon.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 10029 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rasdaemon.group
Group under which the rasdaemon exporter shall be run.

Type: string

Default:

```
"rasdaemon-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rasdaemon.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rasdaemon.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rasdaemon.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
10029
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rasdaemon.user
User name under which the rasdaemon exporter shall be run.

Type: string

Default:

```
"rasdaemon-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.redis.enable
Whether to enable the prometheus redis exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.redis.extraFlags
Extra commandline options to pass to the redis exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.redis.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.redis.openFirewall** is true. It is used as ‘ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept’.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9121"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.redis.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.redis.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9121 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.redis.group
Group under which the redis exporter shall be run.

Type: string

Default:

```
"redis-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.redis.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.redis.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.redis.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9121
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.redis.user
User name under which the redis exporter shall be run.

Type: string

Default:

```
"redis-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.enable
Whether to enable the prometheus restic exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.environmentFile
File containing the credentials to access the repository, in the format of an EnvironmentFile as described by **systemd.exec**(5)

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.extraFlags
Extra commandline options to pass to the restic exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.restic.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9753"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.restic.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9753 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.group
Group under which the restic exporter shall be run.

Type: string

Default:

```
"restic-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.passwordFile
File containing the password to the repository.

Type: absolute path

Example:

```
"/etc/nixos/restic-password"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9753
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.rcloneConfig
Configuration for the rclone remote being used for backup. See the remote's specific options under rclone's docs at **https://rclone.org/docs/**. When specifying option names, use the "config" name specified in the docs. For example, to set '−−b2−hard−delete' for a B2 remote, use 'hard_delete = true' in the attribute set.

Warning
Secrets set in here will be world−readable in the Nix store! Consider using the **rcloneConfigFile** option instead to specify secret values separately. Note that options set here will override those set in

the config file.

Type: attribute set of (string or boolean)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.rcloneConfigFile
Path to the file containing rclone configuration. This file must contain configuration for the remote specified in this backup set and also must be readable by root.

Caution
Options set in 'rcloneConfig' will override those set in this file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.rcloneOptions
Options to pass to rclone to control its behavior. See **https://rclone.org/docs/#options** for available options. When specifying option names, strip the leading '−−'. To set a flag such as '−−drive−use−trash', which does not take a value, set the value to the Boolean 'true'.

Type: attribute set of (string or boolean)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.refreshInterval
Refresh interval for the metrics in seconds. Computing the metrics is an expensive task, keep this value as high as possible.

Type: unsigned integer, meaning >=0

Default:

```
60
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.repository
URI pointing to the repository to monitor.

Type: null or string

Default:

```
null
```

Example:

```
"sftp:backup@192.168.1.100:/backups/example"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.repositoryFile
Path to the file containing the URI for the repository to monitor.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.restic.user
User name under which the restic exporter shall be run.

Type: string

Default:

```
"restic-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.enable
Whether to enable the prometheus rtl_433 exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.channels
List of channel matchers to export.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    channel = 6543;
    location = "Kitchen";
    name = "Acurite";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.channels.*.channel
Channel to match.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.channels.*.location
Location to match.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.channels.*.name
Name to match.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.extraFlags
Extra commandline options to pass to the rtl_433 exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.rtl_433.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9550"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.rtl_433.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9550 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.group
Group under which the rtl_433 exporter shall be run.

Type: string

Default:

```
"rtl_433-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.ids
List of ID matchers to export.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    id = 1;
    location = "Bedroom";
    name = "Nexus";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.ids.*.id
ID to match.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.ids.*.location
Location to match.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.ids.*.name
Name to match.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9550
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.rtl433Flags
Flags passed verbatim to rtl_433 binary. Having ‘−C si’ (the default) is recommended since only Celsius temperatures are parsed.

Type: string

Default:

```
"−C si"
```

Example:

```
"−C si −R 19"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.rtl_433.user
User name under which the rtl_433 exporter shall be run.

Type: string

Default:

```
"rtl_433−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sabnzbd.enable

Whether to enable the prometheus sabnzbd exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sabnzbd.extraFlags

Extra commandline options to pass to the sabnzbd exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sabnzbd.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.sabnzbd.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9387"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sabnzbd.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.sabnzbd.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9387 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sabnzbd.group

Group under which the sabnzbd exporter shall be run.

Type: string

Default:

```
"sabnzbd−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sabnzbd.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sabnzbd.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sabnzbd.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9387
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sabnzbd.servers
List of sabnzbd servers to connect to.

Type: list of (submodule)

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sabnzbd.servers.*.apiKeyFile
The path to a file containing the API key. The file is securely passed to the service by leveraging systemd credentials. No special permissions need to be set on this file.

Type: string

Example:

```
"/run/secrets/sabnzbd_apikey"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sabnzbd.servers.*.baseUrl
Base URL of the sabnzbd server.

Type: string

Example:

```
"http://localhost:8080/sabnzbd"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sabnzbd.user
User name under which the sabnzbd exporter shall be run.

Type: string

Default:

```
"sabnzbd-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.scaphandre.enable
Whether to enable the prometheus scaphandre exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.scaphandre.extraFlags
Extra commandline options to pass to the scaphandre exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.scaphandre.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.scaphandre.openFirewall** is true. It is used as 'ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept'.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 8080"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.scaphandre.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.scaphandre.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 8080 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.scaphandre.group
Group under which the scaphandre exporter shall be run.

Type: string

Default:

```
"scaphandre-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.scaphandre.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.scaphandre.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.scaphandre.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.scaphandre.telemetryPath
Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.scaphandre.user

User name under which the scaphandre exporter shall be run.

Type: string

Default:

```
"scaphandre-exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.script.enable

Whether to enable the prometheus script exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.script.extraFlags

Extra commandline options to pass to the script exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.script.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.script.openFirewall** is true. It is used as ‘ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept’.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9172"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.script.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.script.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9172 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.script.group
Group under which the script exporter shall be run.

Type: string

Default:

```
"script-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.script.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.script.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.script.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9172
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.script.settings
Free-form configuration for script_exporter, expressed as a Nix attrset and rendered to YAML.

Migration note: The previous format using ‘script = "sleep 5"’ is no longer supported. You must use ‘command’ (list) and ‘args’ (list), e.g. ‘{ command = ["sleep"]; args = ["5"]; }’.

See the official documentation for all available options: **https://github.com/ricoberger/script_exporter#configuration-file**

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  scripts = [
```

```
      { name = "sleep"; command = [ "sleep" ]; args = [ "5" ]; }
    ];
  }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.script.user
User name under which the script exporter shall be run.

Type: string

Default:

```
"script-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.shelly.enable
Whether to enable the prometheus shelly exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.shelly.extraFlags
Extra commandline options to pass to the shelly exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.shelly.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.shelly.openFirewall** is true. It is used as ‘ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept’.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9784"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.shelly.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.shelly.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9784 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.shelly.group

Group under which the shelly exporter shall be run.

Type: string

Default:

```
"shelly-exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.shelly.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.shelly.metrics-file

Path to the JSON file with the metric definitions

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.shelly.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.shelly.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9784
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.shelly.user
User name under which the shelly exporter shall be run.

Type: string

Default:

```
"shelly-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smartctl.enable
Whether to enable the prometheus smartctl exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smartctl.devices
Paths to the disks that will be monitored. Will autodiscover all disks if none given.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "/dev/sda", "/dev/nvme0n1" ];
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smartctl.extraFlags
Extra commandline options to pass to the smartctl exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smartctl.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.smartctl.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9633"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smartctl.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.smartctl.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9633 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smartctl.group
Group under which the smartctl exporter shall be run.

Type: string

Default:

```
"smartctl-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smartctl.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smartctl.maxInterval
Interval that limits how often a disk can be queried.

Type: string

Default:

```
"60s"
```

Example:

```
"2m"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smartctl.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smartctl.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9633
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smartctl.user
User name under which the smartctl exporter shall be run.

Type: string

Default:

```
"smartctl-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smokeping.enable
Whether to enable the prometheus smokeping exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smokeping.buckets
List of buckets to use for the response duration histogram.

Type: strings concatenated with ","

Default:

```
"5e-05,0.0001,0.0002,0.0004,0.0008,0.0016,0.0032,0.0064,0.0128,0.0 \
256,0.0512,0.1024,0.2048,0.4096,0.8192,1.6384,3.2768,6.5536,13.1072 \
,26.2144"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smokeping.extraFlags
Extra commandline options to pass to the smokeping exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smokeping.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.smokeping.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9374"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smokeping.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.smokeping.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9374 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smokeping.group
Group under which the smokeping exporter shall be run.

Type: string

Default:

```
"smokeping−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smokeping.hosts
List of endpoints to probe.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smokeping.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smokeping.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smokeping.pingInterval
Interval between pings.

Type: Go duration (https://golang.org/pkg/time/#ParseDuration)

Default:

```
"1s"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smokeping.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9374
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smokeping.telemetryPath
Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.smokeping.user
User name under which the smokeping exporter shall be run.

Type: string

Default:

```
"smokeping-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.snmp.enable
Whether to enable the prometheus snmp exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.snmp.enableConfigCheck
Whether to run a correctness check for the configuration file. This depends on the configuration file residing in the nix−store. Paths passed as string will be copied to the store.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.snmp.configuration
Snmp exporter configuration as nix attribute set. Mutually exclusive with ‘configurationPath’ option.

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  auths = {
    public_v2 = {
      community = "public";
      version = 2;
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.snmp.configurationPath
Path to a snmp exporter configuration file. Mutually exclusive with ‘configuration’ option.

Type: null or absolute path

Default:

```
null
```

Example:

```
./snmp.yml
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.snmp.environmentFile
EnvironmentFile as defined in **systemd.exec**(5).

Secrets may be passed to the service without adding them to the world−readable Nix store, by specifying placeholder variables as the option value in Nix and setting these variables accordingly in the environment file.

Environment variables from this file will be interpolated into the config file using envsubst with this syntax: '$ENVIRONMENT ${VARIABLE}'

For variables to use see **Prometheus Configuration**.

If the file path is set to this option, the parameter '−−config.expand−environment−variables' is implicitly added to 'ExecStart'.

Note that this file needs to be available on the host on which this exporter is running.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/root/prometheus-snmp-exporter.env"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.snmp.extraFlags
Extra commandline options to pass to the snmp exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.snmp.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.snmp.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9116"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.snmp.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.snmp.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9116 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.snmp.group
Group under which the snmp exporter shall be run.

Type: string

Default:

```
"snmp-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.snmp.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.snmp.logFormat
Output format of log messages.

Type: one of “logfmt”, “json”

Default:

```
"logfmt"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.snmp.logLevel
Only log messages with the given severity or above.

Type: one of “debug”, “info”, “warn”, “error”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.snmp.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.snmp.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9116
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.snmp.user
User name under which the snmp exporter shall be run.

Type: string

Default:

```
"snmp-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.enable
Whether to enable the prometheus sql exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.configFile
Path to configuration file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.configuration
Exporter configuration as nix attribute set. Mutually exclusive with ‘configFile’ option.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.configuration.jobs
An attrset of metrics scraping jobs to run.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.configuration.jobs.<name>.connections
A list of connection strings of the SQL servers to scrape metrics from

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.configuration.jobs.<name>.interval
How often to run this job, specified in **Go duration** format.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.configuration.jobs.<name>.queries
SQL queries to run.

Type: attribute set of (submodule)

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.configuration.jobs.<name>.queries.<name>.help
A human−readable description of this metric.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.configuration.jobs.<name>.queries.<name>.labels
A set of columns that will be used as Prometheus labels.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.configuration.jobs.<name>.queries.<name>.query
The SQL query to run.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.configuration.jobs.<name>.queries.<name>.values
A set of columns that will be used as values of this metric.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.configuration.jobs.<name>.startupSql
A list of SQL statements to execute once after making a connection.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.extraFlags
Extra commandline options to pass to the sql exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.sql.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9237"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.sql.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9237 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.group
Group under which the sql exporter shall be run.

Type: string

Default:

```
"sql−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9237
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.sql.user
User name under which the sql exporter shall be run.

Type: string

Default:

```
"sql-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.statsd.enable
Whether to enable the prometheus statsd exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.statsd.extraFlags

Extra commandline options to pass to the statsd exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.statsd.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.statsd.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9102"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.statsd.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.statsd.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9102 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.statsd.group

Group under which the statsd exporter shall be run.

Type: string

Default:

```
"statsd−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.statsd.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.statsd.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.statsd.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9102
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.statsd.user
User name under which the statsd exporter shall be run.

Type: string

Default:

```
"statsd-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.storagebox.enable
Whether to enable the prometheus storagebox exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.storagebox.package
The prometheus-storagebox-exporter package to use.

Type: package

Default:

```
pkgs.prometheus-storagebox-exporter
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.storagebox.extraFlags

Extra commandline options to pass to the storagebox exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.storagebox.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.storagebox.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9509"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.storagebox.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.storagebox.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9509 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.storagebox.group

Group under which the storagebox exporter shall be run.

Type: string

Default:

```
"storagebox−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.storagebox.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.storagebox.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.storagebox.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9509
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.storagebox.tokenFile
File that contains the Hetzner API token to use.

Type: absolute path not in the Nix store

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.storagebox.user
User name under which the storagebox exporter shall be run.

Type: string

Default:

```
"storagebox-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.surfboard.enable
Whether to enable the prometheus surfboard exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.surfboard.extraFlags
Extra commandline options to pass to the surfboard exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.surfboard.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.surfboard.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9239"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.surfboard.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.surfboard.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9239 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.surfboard.group

Group under which the surfboard exporter shall be run.

Type: string

Default:

```
"surfboard−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.surfboard.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.surfboard.modemAddress

The hostname or IP of the cable modem.

Type: string

Default:

```
"192.168.100.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.surfboard.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.surfboard.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9239
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.surfboard.user
User name under which the surfboard exporter shall be run.

Type: string

Default:

```
"surfboard-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.systemd.enable
Whether to enable the prometheus systemd exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.systemd.extraFlags
Extra commandline options to pass to the systemd exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.systemd.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.systemd.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9558"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.systemd.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.systemd.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9558 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.systemd.group

Group under which the systemd exporter shall be run.

Type: string

Default:

```
"systemd−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.systemd.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.systemd.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.systemd.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9558
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.systemd.user
User name under which the systemd exporter shall be run.

Type: string

Default:

```
"systemd-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tailscale.enable
Whether to enable the prometheus tailscale exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tailscale.package
The prometheus-tailscale-exporter package to use.

Type: package

Default:

```
pkgs.prometheus-tailscale-exporter
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tailscale.environmentFile
Environment file containg at least the TAILSCALE_TAILNET, TAILSCALE_OAUTH_CLIENT_ID, and TAILSCALE_OAUTH_CLIENT_SECRET environment variables.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tailscale.extraFlags

Extra commandline options to pass to the tailscale exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tailscale.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.tailscale.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9250"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tailscale.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.tailscale.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9250 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tailscale.group

Group under which the tailscale exporter shall be run.

Type: string

Default:

```
"tailscale−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tailscale.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tailscale.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tailscale.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9250
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tailscale.user
User name under which the tailscale exporter shall be run.

Type: string

Default:

```
"tailscale-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tibber.enable
Whether to enable the prometheus tibber exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tibber.apiTokenPath
Add here the path to your personal Tibber API Token (‘Bearer Token’) File. Get your personal Tibber API Token here: **https://developer.tibber.com** Do not share your personal plaintext Tibber API Token via github. (see: ryantm/agenix, mic92/sops)

Type: absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tibber.extraFlags
Extra commandline options to pass to the tibber exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tibber.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.tibber.openFirewall** is true. It is used as ‘ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept’.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9489"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tibber.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.tibber.openFirewall** is true.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9489 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tibber.group
Group under which the tibber exporter shall be run.

Type: string

Default:

```
"tibber−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tibber.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tibber.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tibber.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9489
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.tibber.user
User name under which the tibber exporter shall be run.

Type: string

Default:

```
"tibber-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unbound.enable
Whether to enable the prometheus unbound exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unbound.extraFlags
Extra commandline options to pass to the unbound exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unbound.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.unbound.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9167"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unbound.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.unbound.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9167 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unbound.group

Group under which the unbound exporter shall be run.

Type: string

Default:

```
"unbound−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unbound.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unbound.openFirewall

Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unbound.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9167
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unbound.telemetryPath
Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unbound.unbound.ca
Path to the Unbound server certificate authority

Type: null or absolute path

Default:

```
"/var/lib/unbound/unbound_server.pem"
```

Example:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unbound.unbound.certificate
Path to the Unbound control socket certificate

Type: null or absolute path

Default:

```
"/var/lib/unbound/unbound_control.pem"
```

Example:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unbound.unbound.host
Path to the unbound control socket. Supports unix domain sockets, as well as the TCP interface.

Type: string

Default:

```
"tcp://127.0.0.1:8953"
```

Example:

```
"unix:///run/unbound/unbound.socket"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unbound.unbound.key
Path to the Unbound control socket key.

Type: null or absolute path

Default:

```
"/var/lib/unbound/unbound_control.key"
```

Example:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unbound.user
User name under which the unbound exporter shall be run.

Type: string

Default:

```
"unbound-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.enable
Whether to enable the prometheus unpoller exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.controllers
List of Unifi controllers to poll. Use defaults if empty.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.controllers.*.hash_pii
Hash, with md5, client names and MAC addresses. This attempts to protect personally identifiable information.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.prometheus.exporters.unpoller.controllers.*.pass
Path of a file containing the password for the unifi service user. This file needs to be readable by the unifi−poller user.

Type: absolute path

Default:

```
unpoller−unifi−default.password
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.prometheus.exporters.unpoller.controllers.*.save_alarms
Collect and save data from UniFi alarms to influxdb and Loki.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.prometheus.exporters.unpoller.controllers.*.save_anomalies
Collect and save data from UniFi anomalies to influxdb and Loki.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.prometheus.exporters.unpoller.controllers.*.save_dpi
Collect and save data from deep packet inspection. Adds around 150 data points and impacts performance.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.prometheus.exporters.unpoller.controllers.*.save_events
Collect and save data from UniFi events to influxdb and Loki.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.prometheus.exporters.unpoller.controllers.*.save_ids
Collect and save data from the intrusion detection system to influxdb and Loki.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.prometheus.exporters.unpoller.controllers.*.save_sites
Collect and save site data.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.prometheus.exporters.unpoller.controllers.*.sites
List of site names for which statistics should be exported. Or the string “default” for the default site or the string “all” for all sites.

Type: one of “default”, “all” or list of string

Default:

```
"all"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.prometheus.exporters.unpoller.controllers.*.url
URL of the Unifi controller.

Type: string

Default:

```
"https://unifi:8443"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.prometheus.exporters.unpoller.controllers.*.user
Unifi service user name.

Type: string

Default:

```
"unifi"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.prometheus.exporters.unpoller.controllers.*.verify_ssl
Verify the Unifi controller’s certificate.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/unpoller.nix>

services.prometheus.exporters.unpoller.extraFlags
Extra commandline options to pass to the unpoller exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.unpoller.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9130"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.unpoller.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9130 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.group
Group under which the unpoller exporter shall be run.

Type: string

Default:

```
"unpoller−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.log.debug
Whether to enable debug logging including line numbers, high resolution timestamps, per−device logs.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.log.prometheusErrors
Whether to enable emitting errors to prometheus.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.log.quiet
Whether to enable startup and error logs only.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.loki.interval
How often the events are polled and pushed to Loki.

Type: string

Default:

```
"2m"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.loki.pass
Path of a file containing the password for Loki. This file needs to be readable by the unifi−poller user.

Type: absolute path

Default:

```
"unpoller-influxdb-default.password"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.loki.tenant_id
Tenant ID to use in Loki.

Type: string

Default:
`""`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.loki.timeout
Should be increased in case of timeout errors.

Type: string

Default:
`"10s"`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.loki.url
URL of the Loki host.

Type: string

Default:
`""`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.loki.user
Username for Loki.

Type: string

Default:
`""`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.loki.verify_ssl
Verify Loki's certificate.

Type: boolean

Default:
`false`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9130
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.unpoller.user
User name under which the unpoller exporter shall be run.

Type: string

Default:

```
"unpoller-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.v2ray.enable
Whether to enable the prometheus v2ray exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.v2ray.extraFlags
Extra commandline options to pass to the v2ray exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.v2ray.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.v2ray.openFirewall** is true. It is used as ‘ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept’.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9299"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.v2ray.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.v2ray.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9299 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.v2ray.group
Group under which the v2ray exporter shall be run.

Type: string

Default:

```
"v2ray-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.v2ray.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.v2ray.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.v2ray.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9299
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.v2ray.user
User name under which the v2ray exporter shall be run.

Type: string

Default:

```
"v2ray-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.v2ray.v2rayEndpoint
v2ray grpc api endpoint

Type: string

Default:

```
"127.0.0.1:54321"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.enable
Whether to enable the prometheus varnish exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.extraFlags
Extra commandline options to pass to the varnish exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.varnish.openFirewall** is true. It is used as ‘ip46tables -I nixos-fw firewallFilter -j nixos-fw-accept’.

Type: null or string

Default:

```
null
```

Example:

```
"-i eth0 -p tcp -m tcp --dport 9131"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.varnish.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9131 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.group

Group under which the varnish exporter shall be run.

Type: string

Default:

```
"varnish-exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.healthPath

Path under which to expose healthcheck. Disabled unless configured.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.instance

varnishstat -n value.

Type: null or string

Default:

```
config.services.varnish.stateDir
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.listenAddress

Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.noExit
Do not exit server on Varnish scrape errors.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9131
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.raw
Enable raw stdout logging without timestamps.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.telemetryPath
Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.user
User name under which the varnish exporter shall be run.

Type: string

Default:

```
"varnish-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.varnishStatPath
Path to varnishstat.

Type: string

Default:

```
"varnishstat"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.verbose
Enable verbose logging.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.varnish.withGoMetrics
Export go runtime and http handler metrics.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.enable
Whether to enable the prometheus wireguard exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.extraFlags
Extra commandline options to pass to the wireguard exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.firewallFilter

Specify a filter for iptables to use when **services.prometheus.exporters.wireguard.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9586"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.firewallRules

Specify rules for nftables to add to the input chain when **services.prometheus.exporters.wireguard.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9586 counter accept
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.group

Group under which the wireguard exporter shall be run.

Type: string

Default:

```
"wireguard−exporter"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.interfaces

Specifies the interface(s) passed to the wg show <interface> dump parameter. By default all interfaces are used.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.latestHandshakeDelay

Adds the 'wireguard_latest_handshake_delay_seconds' metric that automatically calculates the seconds passed since the last handshake.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9586
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.prependSudo
Whether or no to prepend sudo to wg commands.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.singleSubnetPerField
By default, all allowed IPs and subnets are comma−separated in the ‘allowed_ips’ field. With this option enabled, a single IP and subnet will be listed in fields like ‘allowed_ip_0’, ‘allowed_ip_1’ and so on.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.user
User name under which the wireguard exporter shall be run.

Type: string

Default:

```
"wireguard-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.verbose
Whether to enable verbose logging mode for prometheus-wireguard-exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.wireguardConfig
Path to the Wireguard Config to **add the peer's name to the stats of a peer**.

Please note that 'networking.wg-quick' is required for this feature as 'networking.wireguard' uses **wg**(8) to set the peers up.

Type: null or absolute path or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.wireguard.withRemoteIp
Whether or not the remote IP of a WireGuard peer should be exposed via prometheus.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.zfs.enable
Whether to enable the prometheus zfs exporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.zfs.extraFlags
Extra commandline options to pass to the zfs exporter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.zfs.firewallFilter
Specify a filter for iptables to use when **services.prometheus.exporters.zfs.openFirewall** is true. It is used as 'ip46tables −I nixos−fw firewallFilter −j nixos−fw−accept'.

Type: null or string

Default:

```
null
```

Example:

```
"−i eth0 −p tcp −m tcp −−dport 9134"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.zfs.firewallRules
Specify rules for nftables to add to the input chain when **services.prometheus.exporters.zfs.openFirewall** is true.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
iifname "eth0" tcp dport 9134 counter accept
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.zfs.group
Group under which the zfs exporter shall be run.

Type: string

Default:

```
"zfs−exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.zfs.listenAddress
Address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.zfs.openFirewall
Open port in firewall for incoming connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.zfs.pools
Name of the pool(s) to collect, repeat for multiple pools (default: all pools).

Type: null or (list of string)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.zfs.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9134
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.zfs.telemetryPath
Path under which to expose metrics.

Type: string

Default:

```
"/metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.exporters.zfs.user
User name under which the zfs exporter shall be run.

Type: string

Default:

```
"zfs-exporter"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/exporters.nix>

services.prometheus.extraFlags
Extra commandline options when launching Prometheus.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.globalConfig

Parameters that are valid in all configuration contexts. They also serve as defaults for other configuration sections

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.globalConfig.evaluation_interval

How frequently to evaluate rules by default.

Defaults to ‘1m’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.globalConfig.external_labels

The labels to add to any time series or alerts when communicating with external systems (federation, remote storage, Alertmanager).

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.globalConfig.query_log_file

Path to the file prometheus should write its query log to.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.globalConfig.scrape_interval

How frequently to scrape targets by default.

Defaults to ‘1m’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.globalConfig.scrape_timeout
How long until a scrape request times out.

Defaults to '10s' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.listenAddress
Address to listen on for the web interface, API, and telemetry.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9090
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.pushgateway.enable
Whether to enable Prometheus Pushgateway.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/pushgateway.nix>

services.prometheus.pushgateway.package
The prometheus-pushgateway package to use.

Type: package

Default:

```
pkgs.prometheus-pushgateway
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/pushgateway.nix>

services.prometheus.pushgateway.extraFlags

Extra commandline options when launching the Pushgateway.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/pushgateway.nix>

services.prometheus.pushgateway.log.format

Set the log target and format.

'null' will default to 'logger:stderr'.

Type: null or string

Default:

```
null
```

Example:

```
"logger:syslog?appname=bob&local=7"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/pushgateway.nix>

services.prometheus.pushgateway.log.level

Only log messages with the given severity or above.

'null' will default to 'info'.

Type: null or one of "debug", "info", "warn", "error", "fatal"

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/pushgateway.nix>

services.prometheus.pushgateway.persistMetrics

Whether to persist metrics to a file.

When enabled metrics will be saved to a file called 'metrics' in the directory '/var/lib/pushgateway'. The directory below '/var/lib' can be set using **services.prometheus.pushgateway.stateDir**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/pushgateway.nix>

services.prometheus.pushgateway.persistence.interval

The minimum interval at which to write out the persistence file.

'null' will default to '5m'.

Type: null or string

Default:

```
null
```

Example:

```
"10m"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/pushgateway.nix>

services.prometheus.pushgateway.stateDir
Directory below ‘/var/lib’ to store metrics.

This directory will be created automatically using systemd’s StateDirectory mechanism when **services.prometheus.pushgateway.persistMetrics** is enabled.

Type: string

Default:

```
"pushgateway"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/pushgateway.nix>

services.prometheus.pushgateway.web.external−url
The URL under which Pushgateway is externally reachable.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/pushgateway.nix>

services.prometheus.pushgateway.web.listen−address
Address to listen on for the web interface, API and telemetry.

‘null’ will default to ‘:9091’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/pushgateway.nix>

services.prometheus.pushgateway.web.route−prefix
Prefix for the internal routes of web endpoints.

Defaults to the path of **services.prometheus.pushgateway.web.external−url**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/pushgateway.nix>

services.prometheus.pushgateway.web.telemetry−path
Path under which to expose metrics.

‘null’ will default to ‘/metrics’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/pushgateway.nix>

services.prometheus.remoteRead
Parameters of the endpoints to query from. See **the official documentation** for more information.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.basic_auth
Sets the 'Authorization' header on every remote read request with the configured username and password. password and password_file are mutually exclusive.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.basic_auth.password
HTTP password

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.bearer_token
Sets the 'Authorization' header on every remote read request with the configured bearer token. It is mutually exclusive with 'bearer_token_file'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.bearer_token_file
Sets the 'Authorization' header on every remote read request with the bearer token read from the configured file. It is mutually exclusive with 'bearer_token'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.headers
Custom HTTP headers to be sent along with each remote read request. Be aware that headers that are set by Prometheus itself can't be overwritten.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.name
Name of the remote read config, which if specified must be unique among remote read configs. The name will be used in metrics and logging in place of a generated value to help users distinguish between remote read configs.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.proxy_url
Optional Proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.read_recent
Whether reads should be made for queries for time ranges that the local storage should have complete data for.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.remote_timeout
Timeout for requests to the remote read endpoint.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.required_matchers
An optional list of equality matchers which have to be present in a selector to query the remote read endpoint.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.tls_config
Configures the remote read request's TLS settings.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteRead.*.url
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite
Parameters of the endpoints to send samples to. See **the official documentation** for more information.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.basic_auth
Sets the ‘Authorization’ header on every remote write request with the configured username and password. password and password_file are mutually exclusive.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.basic_auth.password
HTTP password

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.bearer_token
Sets the ‘Authorization’ header on every remote write request with the configured bearer token. It is mutually exclusive with ‘bearer_token_file’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.bearer_token_file
Sets the ‘Authorization’ header on every remote write request with the bearer token read from the configured file. It is mutually exclusive with ‘bearer_token’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.headers
Custom HTTP headers to be sent along with each remote write request. Be aware that headers that are set by Prometheus itself can’t be overwritten.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.metadata_config
Configures the sending of series metadata to remote storage. Metadata configuration is subject to change at any point or be removed in future releases.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.metadata_config.send
Whether metric metadata is sent to remote storage or not.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.metadata_config.send_interval
How frequently metric metadata is sent to remote storage.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.name
Name of the remote write config, which if specified must be unique among remote write configs. The name will be used in metrics and logging in place of a generated value to help users distinguish between remote write configs.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.proxy_url
Optional Proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.queue_config
Configures the queue used to write to remote storage.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.queue_config.batch_send_deadline
Maximum time a sample will wait in buffer.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.queue_config.capacity
Number of samples to buffer per shard before we block reading of more samples from the WAL. It is recommended to have enough capacity in each shard to buffer several requests to keep throughput up while processing occasional slow remote requests.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.queue_config.max_backoff
Maximum retry delay.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.queue_config.max_samples_per_send
Maximum number of samples per send.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.queue_config.max_shards
Maximum number of shards, i.e. amount of concurrency.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.queue_config.min_backoff
Initial retry delay. Gets doubled for every retry.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.queue_config.min_shards
Minimum number of shards, i.e. amount of concurrency.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.remote_timeout
Timeout for requests to the remote write endpoint.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.sigv4
Configures AWS Signature Version 4 settings.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.sigv4.access_key
The Access Key ID.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.sigv4.profile
The named AWS profile used to authenticate.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.sigv4.region
The AWS region.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.sigv4.role_arn
The AWS role ARN.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.sigv4.secret_key
The Secret Access Key.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.tls_config
Configures the remote write request's TLS settings.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.url
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.write_relabel_configs
List of remote write relabel configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.write_relabel_configs.*.action
Action to perform based on regex matching.

Defaults to ‘replace’ in prometheus when set to ‘null’.

Type: null or one of “replace”, “lowercase”, “uppercase”, “keep”, “drop”, “hashmod”, “labelmap”, “labeldrop”, “labelkeep”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.write_relabel_configs.*.modulus
Modulus to take of the hash of the source label values.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.write_relabel_configs.*.regex
Regular expression against which the extracted value is matched.

Defaults to ‘(.*)’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.write_relabel_configs.*.replacement
Replacement value against which a regex replace is performed if the regular expression matches.

Defaults to ‘$1’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.write_relabel_configs.*.separator
Separator placed between concatenated source label values.

Defaults to ‘;’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.write_relabel_configs.*.source_labels

The source labels select values from existing labels. Their content is concatenated using the configured separator and matched against the configured regular expression.

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.remoteWrite.*.write_relabel_configs.*.target_label

Label to which the resulting value is written in a replace action. It is mandatory for replace actions.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.retentionTime

How long to retain samples in storage.

Type: null or string

Default:

```
null
```

Example:

```
"15d"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.ruleFiles

Any additional rules files to include in this configuration.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.rules

Alerting and/or Recording rules to evaluate at runtime.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.sachet.enable

Whether to enable Sachet, an SMS alerting tool for the Prometheus Alertmanager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/sachet.nix>

services.prometheus.sachet.address

The address Sachet will listen to.

Type: string

Default:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/sachet.nix>

services.prometheus.sachet.configuration

Sachet's configuration as a nix attribute set.

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  providers = {
    twilio = {
      # environment variables gets expanded at runtime
      account_sid = "$TWILIO_ACCOUNT";
      auth_token = "$TWILIO_TOKEN";
    };
  };
  templates = [ ./some-template.tmpl ];
  receivers = [{
    name = "pager";
    provider = "twilio";
    to = [ "+33123456789" ];
    text = "{{ template \"message\" . }}";
  }];
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/sachet.nix>

services.prometheus.sachet.port
The port Sachet will listen to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9876
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/sachet.nix>

services.prometheus.scrapeConfigs
A list of scrape configurations.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.authorization
Sets the 'Authorization' header on every scrape request with the configured credentials.

Type: null or (attribute set)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs
List of Azure service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.authentication_method
The authentication method, either OAuth or ManagedIdentity. See **https://docs.microsoft.com/en-us/azure/active-directory/managed-identities-azure-resources/overview**

Defaults to 'OAuth' in prometheus when set to 'null'.

Type: null or one of "OAuth", "ManagedIdentity"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.client_id
Optional client ID. Only required with authentication_method OAuth.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.client_secret
Optional client secret. Only required with authentication_method OAuth.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.environment
The Azure environment.

Defaults to 'AzurePublicCloud' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.follow_redirects
Configure whether HTTP requests follow HTTP 3xx redirects.

Defaults to 'true' in prometheus when set to 'null'.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.port
The port to scrape metrics from. If using the public IP address, this must instead be specified in the relabeling rule.

Defaults to '80' in prometheus when set to 'null'.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.refresh_interval
Refresh interval to re−read the instance list.

Defaults to '300s' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.subscription_id
The subscription ID.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.tenant_id
Optional tenant ID. Only required with authentication_method OAuth.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.tls_config
TLS configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.azure_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.basic_auth
Sets the ‘Authorization’ header on every scrape request with the configured username and password. password and password_file are mutually exclusive.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.basic_auth.password
HTTP password

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.bearer_token
Sets the ‘Authorization’ header on every scrape request with the configured bearer token. It is mutually exclusive with **bearer_token_file**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.bearer_token_file
Sets the ‘Authorization’ header on every scrape request with the bearer token read from the configured file. It is mutually exclusive with **bearer_token**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.body_size_limit
An uncompressed response body larger than this many bytes will cause the scrape to fail. 0 means no limit. Example: 100MB. This is an experimental feature, this behaviour could change or be removed in the future.

Defaults to ‘0’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs
List of Consul service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.allow_stale
Allow stale Consul results (see **https://www.consul.io/api/index.html#consistency−modes**).

Will reduce load on Consul.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.authorization
Optional ‘Authorization’ header configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.authorization.credentials
Sets the credentials. It is mutually exclusive with ‘credentials_file’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.authorization.credentials_file
Sets the credentials to the credentials read from the configured file. It is mutually exclusive with ‘credentials’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.authorization.type
Sets the authentication type.

Defaults to ‘Bearer’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.basic_auth
Optional HTTP basic authentication information.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.basic_auth.password
HTTP password

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.datacenter
Consul datacenter

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.follow_redirects
Configure whether HTTP requests follow HTTP 3xx redirects.

Defaults to ‘true’ in prometheus when set to ‘null’.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.node_meta
Node metadata used to filter nodes for a given service.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.oauth2
Optional OAuth 2.0 configuration. Cannot be used at the same time as basic_auth or authorization.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.oauth2.client_id
OAuth client ID.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.oauth2.client_secret
OAuth client secret.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.oauth2.client_secret_file
Read the client secret from a file. It is mutually exclusive with ‘client_secret’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.oauth2.endpoint_params
Optional parameters to append to the token URL.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.oauth2.scopes
Scopes for the token request.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.oauth2.token_url
The URL to fetch the token from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.password
Consul password

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.refresh_interval
The time after which the provided names are refreshed.

On large setup it might be a good idea to increase this value because the catalog will change all the time.

Defaults to ‘30s’ in prometheus when set to ‘null’.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.scheme
Consul scheme Defaults to 'http' in prometheus when set to 'null'.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.server
Consul server to query.

Defaults to 'localhost:8500' in prometheus when set to 'null'.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.services
A list of services for which targets are retrieved.

Type: null or (list of string)

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.tag_separator
The string by which Consul tags are joined into the tag label.

Defaults to ',' in prometheus when set to 'null'.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.tags
An optional list of tags used to filter nodes for a given service. Services must contain all tags in the list.

Type: null or (list of string)

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.tls_config
Configures the Consul request's TLS settings.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.token
Consul token

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.consul_sd_configs.*.username
Consul username

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs
List of DigitalOcean service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.authorization
Optional ‘Authorization’ header configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.authorization.credentials
Sets the credentials. It is mutually exclusive with ‘credentials_file’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.authorization.credentials_file
Sets the credentials to the credentials read from the configured file. It is mutually exclusive with ‘credentials’.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.authorization.type
Sets the authentication type.

Defaults to 'Bearer' in prometheus when set to 'null'.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.basic_auth
Optional HTTP basic authentication information.

Type: null or (submodule)

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.basic_auth.password
HTTP password

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.follow_redirects
Configure whether HTTP requests follow HTTP 3xx redirects.

Defaults to 'true' in prometheus when set to 'null'.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.oauth2
Optional OAuth 2.0 configuration. Cannot be used at the same time as basic_auth or authorization.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.oauth2.client_id
OAuth client ID.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.oauth2.client_secret
OAuth client secret.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.oauth2.client_secret_file
Read the client secret from a file. It is mutually exclusive with ‘client_secret’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.oauth2.endpoint_params
Optional parameters to append to the token URL.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.oauth2.scopes
Scopes for the token request.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.oauth2.token_url
The URL to fetch the token from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.port
The port to scrape metrics from.

Defaults to ‘80’ in prometheus when set to ‘null’.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.refresh_interval
The time after which the droplets are refreshed.

Defaults to ‘60s’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.tls_config
TLS configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.digitalocean_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dns_sd_configs
List of DNS service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dns_sd_configs.*.names
A list of DNS SRV record names to be queried.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dns_sd_configs.*.port
The port number used if the query type is not SRV.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dns_sd_configs.*.refresh_interval
The time after which the provided names are refreshed.

Defaults to ‘30s’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dns_sd_configs.*.type
The type of DNS query to perform.

Defaults to ‘SRV’ in prometheus when set to ‘null’.

Type: null or one of “SRV”, “A”, “AAAA”, “MX”, “NS”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs
List of Docker service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.authorization
Optional 'Authorization' header configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.authorization.credentials
Sets the credentials. It is mutually exclusive with 'credentials_file'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.authorization.credentials_file
Sets the credentials to the credentials read from the configured file. It is mutually exclusive with 'credentials'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.authorization.type
Sets the authentication type.

Defaults to 'Bearer' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.basic_auth
Optional HTTP basic authentication information.

Type: null or (submodule)

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.basic_auth.password
HTTP password

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.filters
Optional filters to limit the discovery process to a subset of available resources.

Type: null or (list of (submodule))

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.filters.*.name
Name of the filter. The available filters are listed in the upstream documentation: Services: **https://docs.docker.com/engine/api/v1.40/#operation/ServiceList** Tasks: **https://docs.docker.com/engine/api/v1.40/#operation/TaskList** Nodes: **https://docs.docker.com/engine/api/v1.40/#operation/NodeList**

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.filters.*.values
Value for the filter.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.follow_redirects
Configure whether HTTP requests follow HTTP 3xx redirects.

Defaults to 'true' in prometheus when set to 'null'.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.host
Address of the Docker daemon.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.host_networking_host
The host to use if the container is in host networking mode.

Defaults to 'localhost' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.oauth2
Optional OAuth 2.0 configuration. Cannot be used at the same time as basic_auth or authorization.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.oauth2.client_id
OAuth client ID.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.oauth2.client_secret
OAuth client secret.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.oauth2.client_secret_file
Read the client secret from a file. It is mutually exclusive with ‘client_secret’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.oauth2.endpoint_params
Optional parameters to append to the token URL.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.oauth2.scopes
Scopes for the token request.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.oauth2.token_url
The URL to fetch the token from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.port
The port to scrape metrics from, when ‘role’ is nodes, and for discovered tasks and services that don’t have published ports.

Defaults to ‘80’ in prometheus when set to ‘null’.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.refresh_interval
The time after which the containers are refreshed.

Defaults to ‘60s’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.tls_config
TLS configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.docker_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs
List of Docker Swarm service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.authorization
Optional ‘Authorization’ header configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.authorization.credentials
Sets the credentials. It is mutually exclusive with ‘credentials_file’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.authorization.credentials_file
Sets the credentials to the credentials read from the configured file. It is mutually exclusive with ‘credentials’.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.authorization.type
Sets the authentication type.

Defaults to 'Bearer' in prometheus when set to 'null'.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.basic_auth
Optional HTTP basic authentication information.

Type: null or (submodule)

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.basic_auth.password
HTTP password

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.filters
Optional filters to limit the discovery process to a subset of available resources.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.filters.*.name
Name of the filter. The available filters are listed in the upstream documentation: Services: **https://docs.docker.com/engine/api/v1.40/#operation/ServiceList** Tasks: **https://docs.docker.com/engine/api/v1.40/#operation/TaskList** Nodes: **https://docs.docker.com/engine/api/v1.40/#operation/NodeList**

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.filters.*.values
Value for the filter.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.follow_redirects
Configure whether HTTP requests follow HTTP 3xx redirects.

Defaults to ‘true’ in prometheus when set to ‘null’.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.host
Address of the Docker daemon.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.oauth2
Optional OAuth 2.0 configuration. Cannot be used at the same time as basic_auth or authorization.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.oauth2.client_id
OAuth client ID.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.oauth2.client_secret
OAuth client secret.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.oauth2.client_secret_file
Read the client secret from a file. It is mutually exclusive with ‘client_secret’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.oauth2.endpoint_params
Optional parameters to append to the token URL.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.oauth2.scopes
Scopes for the token request.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.oauth2.token_url
The URL to fetch the token from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.port
The port to scrape metrics from, when ‘role’ is nodes, and for discovered tasks and services that don’t have published ports.

Defaults to ‘80’ in prometheus when set to ‘null’.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.refresh_interval
The time after which the containers are refreshed.

Defaults to ‘60s’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.role
Role of the targets to retrieve. Must be ‘services’, ‘tasks’, or ‘nodes’.

Type: one of “services”, “tasks”, “nodes”

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.tls_config
TLS configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.dockerswarm_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.ec2_sd_configs
List of EC2 service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.ec2_sd_configs.*.access_key
The AWS API key id. If blank, the environment variable ‘AWS_ACCESS_KEY_ID’ is used.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.ec2_sd_configs.*.endpoint
Custom endpoint to be used.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.ec2_sd_configs.*.filters
Filters can be used optionally to filter the instance list by other criteria.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.ec2_sd_configs.*.filters.*.name
See **this list** for the available filters.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.ec2_sd_configs.*.filters.*.values
Value of the filter.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.ec2_sd_configs.*.port
The port to scrape metrics from. If using the public IP address, this must instead be specified in the relabeling rule.

Defaults to ‘80’ in prometheus when set to ‘null’.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.ec2_sd_configs.*.profile
Named AWS profile used to connect to the API.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.ec2_sd_configs.*.refresh_interval
Refresh interval to re−read the instance list.

Defaults to ‘60s’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.ec2_sd_configs.*.region
The AWS Region. If blank, the region from the instance metadata is used.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.ec2_sd_configs.*.role_arn
AWS Role ARN, an alternative to using AWS API keys.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.ec2_sd_configs.*.secret_key
The AWS API key secret. If blank, the environment variable ‘AWS_SECRET_ACCESS_KEY’ is used.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs
List of Eureka service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.authorization
Optional ‘Authorization’ header configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.authorization.credentials
Sets the credentials. It is mutually exclusive with ‘credentials_file’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.authorization.credentials_file
Sets the credentials to the credentials read from the configured file. It is mutually exclusive with ‘credentials’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.authorization.type
Sets the authentication type.

Defaults to ‘Bearer’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.basic_auth
Optional HTTP basic authentication information.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.basic_auth.password
HTTP password

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.follow_redirects
Configure whether HTTP requests follow HTTP 3xx redirects.

Defaults to ‘true’ in prometheus when set to ‘null’.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.oauth2
Optional OAuth 2.0 configuration. Cannot be used at the same time as basic_auth or authorization.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.oauth2.client_id
OAuth client ID.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.oauth2.client_secret
OAuth client secret.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.oauth2.client_secret_file
Read the client secret from a file. It is mutually exclusive with ‘client_secret’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.oauth2.endpoint_params
Optional parameters to append to the token URL.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.oauth2.scopes
Scopes for the token request.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.oauth2.token_url
The URL to fetch the token from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.server
The URL to connect to the Eureka server.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.tls_config
TLS configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.eureka_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.fallback_scrape_protocol
Fallback protocol to use if a scrape returns blank, unparseable, or otherwise invalid Content−Type.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.file_sd_configs
List of file service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.file_sd_configs.*.files
Patterns for files from which target groups are extracted. Refer to the Prometheus documentation for permitted filename patterns and formats.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.file_sd_configs.*.refresh_interval
Refresh interval to re−read the files.

Defaults to ‘5m’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.gce_sd_configs
List of Google Compute Engine service discovery configurations.

See **the relevant Prometheus configuration docs** for more detail.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.gce_sd_configs.*.filter
Filter can be used optionally to filter the instance list by other criteria Syntax of this filter string is described here in the filter query parameter section: **https://cloud.google.com/compute/docs/reference/latest/instances/list**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.gce_sd_configs.*.port
The port to scrape metrics from. If using the public IP address, this must instead be specified in the relabeling rule.

Defaults to ‘80’ in prometheus when set to ‘null’.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.gce_sd_configs.*.project
The GCP Project.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.gce_sd_configs.*.refresh_interval
Refresh interval to re−read the cloud instance list.

Defaults to ‘60s’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.gce_sd_configs.*.tag_separator
The tag separator used to separate concatenated GCE instance network tags.

See the GCP documentation on network tags for more information: **https://cloud.google.com/vpc/docs/add−remove−network−tags**

Defaults to ‘,’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.gce_sd_configs.*.zone
The zone of the scrape targets. If you need multiple zones use multiple gce_sd_configs.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs
List of Hetzner service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.authorization
Optional ‘Authorization’ header configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.authorization.credentials
Sets the credentials. It is mutually exclusive with ‘credentials_file’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.authorization.credentials_file
Sets the credentials to the credentials read from the configured file. It is mutually exclusive with ‘credentials’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.authorization.type
Sets the authentication type.

Defaults to ‘Bearer’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.basic_auth
Optional HTTP basic authentication information.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.basic_auth.password
HTTP password

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.follow_redirects
Configure whether HTTP requests follow HTTP 3xx redirects.

Defaults to ‘true’ in prometheus when set to ‘null’.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.oauth2
Optional OAuth 2.0 configuration. Cannot be used at the same time as basic_auth or authorization.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.oauth2.client_id
OAuth client ID.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.oauth2.client_secret
OAuth client secret.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.oauth2.client_secret_file
Read the client secret from a file. It is mutually exclusive with ‘client_secret’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.oauth2.endpoint_params
Optional parameters to append to the token URL.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.oauth2.scopes
Scopes for the token request.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.oauth2.token_url
The URL to fetch the token from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.port
The port to scrape metrics from.

Defaults to '80' in prometheus when set to 'null'.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.refresh_interval
The time after which the servers are refreshed.

Defaults to '60s' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.role
The Hetzner role of entities that should be discovered. One of 'robot' or 'hcloud'.

Type: one of "robot", "hcloud"

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.tls_config
TLS configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.hetzner_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.honor_labels
Controls how Prometheus handles conflicts between labels that are already present in scraped data and labels that Prometheus would attach server−side (“job” and “instance” labels, manually configured target labels, and labels generated by service discovery implementations).

If honor_labels is set to “true”, label conflicts are resolved by keeping label values from the scraped data and ignoring the conflicting server−side labels.

If honor_labels is set to “false”, label conflicts are resolved by renaming conflicting labels in the scraped

data to “exported_<original−label>” (for example “exported_instance”, “exported_job”) and then attaching server−side labels. This is useful for use cases such as federation, where all labels specified in the target should be preserved.

Defaults to ‘false’ in prometheus when set to ‘null’.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.honor_timestamps
honor_timestamps controls whether Prometheus respects the timestamps present in scraped data.

If honor_timestamps is set to ‘true’, the timestamps of the metrics exposed by the target will be used.

If honor_timestamps is set to ‘false’, the timestamps of the metrics exposed by the target will be ignored.

Defaults to ‘true’ in prometheus when set to ‘null’.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.http_sd_configs
List of HTTP service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.http_sd_configs.*.basic_auth
Authentication information used to authenticate to the API server. password and password_file are mutually exclusive.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.http_sd_configs.*.basic_auth.password
HTTP password

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.http_sd_configs.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.http_sd_configs.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.http_sd_configs.*.follow_redirects
Configure whether HTTP requests follow HTTP 3xx redirects.

Defaults to ‘true’ in prometheus when set to ‘null’.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.http_sd_configs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.http_sd_configs.*.refresh_interval
Refresh interval to re−query the endpoint.

Defaults to ‘60s’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.http_sd_configs.*.tls_config
Configures the scrape request’s TLS settings.

Type: null or (submodule)

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.http_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.http_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.http_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.http_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.http_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.http_sd_configs.*.url
URL from which the targets are fetched.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.job_name
The job name assigned to scraped metrics by default.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs
List of Kubernetes service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.api_server
The API server addresses. If left empty, Prometheus is assumed to run inside of the cluster and will discover API servers automatically and use the pod's CA certificate and bearer token file at /var/run/secrets/kubernetes.io/serviceaccount/.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.authorization
Optional 'Authorization' header configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.authorization.credentials
Sets the credentials. It is mutually exclusive with 'credentials_file'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.authorization.credentials_file
Sets the credentials to the credentials read from the configured file. It is mutually exclusive with 'credentials'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.authorization.type
Sets the authentication type.

Defaults to 'Bearer' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.basic_auth
Optional HTTP basic authentication information.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.basic_auth.password
HTTP password

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.follow_redirects
Configure whether HTTP requests follow HTTP 3xx redirects.

Defaults to 'true' in prometheus when set to 'null'.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.kubeconfig_file
Optional path to a kubeconfig file. Note that api_server and kube_config are mutually exclusive.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.namespaces
Optional namespace discovery. If omitted, all namespaces are used.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.namespaces.names
Namespace name.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.oauth2
Optional OAuth 2.0 configuration. Cannot be used at the same time as basic_auth or authorization.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.oauth2.client_id
OAuth client ID.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.oauth2.client_secret
OAuth client secret.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.oauth2.client_secret_file
Read the client secret from a file. It is mutually exclusive with ‘client_secret’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.oauth2.endpoint_params
Optional parameters to append to the token URL.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.oauth2.scopes
Scopes for the token request.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.oauth2.token_url
The URL to fetch the token from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.role
The Kubernetes role of entities that should be discovered. One of endpoints, service, pod, node, or ingress.

Type: one of “endpoints”, “service”, “pod”, “node”, “ingress”

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.selectors
Optional label and field selectors to limit the discovery process to a subset of available resources. See **https://kubernetes.io/docs/concepts/overview/working−with−objects/field−selectors/** and **https://kubernetes.io/docs/concepts/overview/working−with−objects/labels/** to learn more about the possible filters that can be used. Endpoints role supports pod, service and endpoints selectors, other roles only support selectors matching the role itself (e.g. node role can only contain node selectors).

Note: When making decision about using field/label selector make sure that this is the best approach − it will prevent Prometheus from reusing single list/watch for all scrape configs. This might result in a bigger load on the Kubernetes API, because per each selector combination there will be additional LIST/WATCH. On the other hand, if you just want to monitor small subset of pods in large cluster it’s recommended to use selectors. Decision, if selectors should be used or not depends on the particular situation.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.selectors.*.field
Selector field

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.selectors.*.label
Selector label

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.selectors.*.role
Selector role

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.tls_config
TLS configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kubernetes_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs
List of Kuma service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.authorization
Optional ‘Authorization’ header configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.authorization.credentials
Sets the credentials. It is mutually exclusive with ‘credentials_file’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.authorization.credentials_file
Sets the credentials to the credentials read from the configured file. It is mutually exclusive with ‘credentials’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.authorization.type
Sets the authentication type.

Defaults to 'Bearer' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.basic_auth
Optional HTTP basic authentication information.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.basic_auth.password
HTTP password

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.fetch_timeout
The time after which the monitoring assignments are refreshed.

Defaults to '2m' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.follow_redirects
Configure whether HTTP requests follow HTTP 3xx redirects.

Defaults to 'true' in prometheus when set to 'null'.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.oauth2
Optional OAuth 2.0 configuration. Cannot be used at the same time as basic_auth or authorization.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.oauth2.client_id
OAuth client ID.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.oauth2.client_secret
OAuth client secret.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.oauth2.client_secret_file
Read the client secret from a file. It is mutually exclusive with 'client_secret'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.oauth2.endpoint_params
Optional parameters to append to the token URL.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.oauth2.scopes
Scopes for the token request.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.oauth2.token_url
The URL to fetch the token from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.refresh_interval
The time to wait between polling update requests.

Defaults to ‘30s’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.server
Address of the Kuma Control Plane’s MADS xDS server.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.tls_config
TLS configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.kuma_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.label_limit
Per−scrape limit on number of labels that will be accepted for a sample. If more than this number of labels are present post metric−relabeling, the entire scrape will be treated as failed. 0 means no limit.

Defaults to ‘0’ in prometheus when set to ‘null’.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.label_name_length_limit
Per−scrape limit on length of labels name that will be accepted for a sample. If a label name is longer than this number post metric−relabeling, the entire scrape will be treated as failed. 0 means no limit.

Defaults to ‘0’ in prometheus when set to ‘null’.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.label_value_length_limit
Per−scrape limit on length of labels value that will be accepted for a sample. If a label value is longer than this number post metric−relabeling, the entire scrape will be treated as failed. 0 means no limit.

Defaults to ‘0’ in prometheus when set to ‘null’.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.lightsail_sd_configs
List of Lightsail service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.lightsail_sd_configs.*.access_key
The AWS API keys. If blank, the environment variable ‘AWS_ACCESS_KEY_ID’ is used.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.lightsail_sd_configs.*.endpoint
Custom endpoint to be used.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.lightsail_sd_configs.*.port
The port to scrape metrics from. If using the public IP address, this must instead be specified in the relabeling rule.

Defaults to ‘80’ in prometheus when set to ‘null’.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.lightsail_sd_configs.*.profile
Named AWS profile used to connect to the API.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.lightsail_sd_configs.*.refresh_interval
Refresh interval to re−read the instance list.

Defaults to ‘60s’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.lightsail_sd_configs.*.region
The AWS region. If blank, the region from the instance metadata is used.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.lightsail_sd_configs.*.role_arn
AWS Role ARN, an alternative to using AWS API keys.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.lightsail_sd_configs.*.secret_key
The AWS API keys. If blank, the environment variable 'AWS_SECRET_ACCESS_KEY' is used.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs
List of Linode service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.authorization
Optional 'Authorization' header configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.authorization.credentials
Sets the credentials. It is mutually exclusive with 'credentials_file'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.authorization.credentials_file
Sets the credentials to the credentials read from the configured file. It is mutually exclusive with 'credentials'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.authorization.type
Sets the authentication type.

Defaults to 'Bearer' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.basic_auth
Optional HTTP basic authentication information.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.basic_auth.password
HTTP password

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.follow_redirects
Configure whether HTTP requests follow HTTP 3xx redirects.

Defaults to 'true' in prometheus when set to 'null'.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.oauth2
Optional OAuth 2.0 configuration. Cannot be used at the same time as basic_auth or authorization.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.oauth2.client_id
OAuth client ID.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.oauth2.client_secret
OAuth client secret.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.oauth2.client_secret_file
Read the client secret from a file. It is mutually exclusive with ‘client_secret’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.oauth2.endpoint_params
Optional parameters to append to the token URL.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.oauth2.scopes
Scopes for the token request.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.oauth2.token_url
The URL to fetch the token from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.port
The port to scrape metrics from.

Defaults to ‘80’ in prometheus when set to ‘null’.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.refresh_interval
The time after which the linode instances are refreshed.

Defaults to ‘60s’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.tag_separator
The string by which Linode Instance tags are joined into the tag label.

Defaults to ‘,’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.tls_config
TLS configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.linode_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs
List of Marathon service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.auth_token
Optional authentication information for token−based authentication: **https://docs.mesosphere.com/1.11/security/ent/iam−api/#passing−an−authentication−token** It is mutually exclusive with ‘auth_token_file’ and other authentication mechanisms.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.auth_token_file
Optional authentication information for token−based authentication: **https://docs.mesosphere.com/1.11/security/ent/iam−api/#passing−an−authentication−token** It is mutually exclusive with ‘auth_token’ and other authentication mechanisms.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.authorization
Optional ‘Authorization’ header configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.authorization.credentials
Sets the credentials. It is mutually exclusive with ‘credentials_file’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.authorization.credentials_file
Sets the credentials to the credentials read from the configured file. It is mutually exclusive with ‘credentials’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.authorization.type
Sets the authentication type.

Defaults to ‘Bearer’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.basic_auth
Optional HTTP basic authentication information.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.basic_auth.password
HTTP password

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.follow_redirects
Configure whether HTTP requests follow HTTP 3xx redirects.

Defaults to ‘true’ in prometheus when set to ‘null’.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.oauth2
Optional OAuth 2.0 configuration. Cannot be used at the same time as basic_auth or authorization.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.oauth2.client_id
OAuth client ID.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.oauth2.client_secret
OAuth client secret.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.oauth2.client_secret_file
Read the client secret from a file. It is mutually exclusive with ‘client_secret’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.oauth2.endpoint_params
Optional parameters to append to the token URL.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.oauth2.scopes
Scopes for the token request.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.oauth2.token_url
The URL to fetch the token from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.refresh_interval
Polling interval.

Defaults to ‘30s’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.servers
List of URLs to be used to contact Marathon servers. You need to provide at least one server URL.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.tls_config
TLS configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.marathon_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.metric_relabel_configs
List of metric relabel configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.metric_relabel_configs.*.action
Action to perform based on regex matching.

Defaults to ‘replace’ in prometheus when set to ‘null’.

Type: null or one of “replace”, “lowercase”, “uppercase”, “keep”, “drop”, “hashmod”, “labelmap”, “labeldrop”, “labelkeep”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.metric_relabel_configs.*.modulus
Modulus to take of the hash of the source label values.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.metric_relabel_configs.*.regex
Regular expression against which the extracted value is matched.

Defaults to ‘(.*)’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.metric_relabel_configs.*.replacement

Replacement value against which a regex replace is performed if the regular expression matches.

Defaults to '$1' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.metric_relabel_configs.*.separator

Separator placed between concatenated source label values.

Defaults to ';' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.metric_relabel_configs.*.source_labels

The source labels select values from existing labels. Their content is concatenated using the configured separator and matched against the configured regular expression.

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.metric_relabel_configs.*.target_label

Label to which the resulting value is written in a replace action. It is mandatory for replace actions.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.metrics_path

The HTTP resource path on which to fetch metrics from targets.

Defaults to '/metrics' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.nerve_sd_configs
List of AirBnB's Nerve service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.nerve_sd_configs.*.paths
Paths can point to a single service, or the root of a tree of services.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.nerve_sd_configs.*.servers
The Zookeeper servers.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.nerve_sd_configs.*.timeout
Timeout value.

Defaults to '10s' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs
List of OpenStack service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.all_tenants
Whether the service discovery should list all instances for all projects. It is only relevant for the 'instance' role and usually requires admin permissions.

Defaults to 'false' in prometheus when set to 'null'.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.application_credential_id
The application_credential_id or application_credential_name fields are required if using an application credential to authenticate. Some providers allow you to create an application credential to authenticate rather than a password.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.application_credential_name
The application_credential_id or application_credential_name fields are required if using an application credential to authenticate. Some providers allow you to create an application credential to authenticate rather than a password.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.application_credential_secret
The application_credential_secret field is required if using an application credential to authenticate.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.availability
The availability of the endpoint to connect to. Must be one of public, admin or internal.

Defaults to ‘public’ in prometheus when set to ‘null’.

Type: null or one of “public”, “admin”, “internal”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.domain_id
At most one of domain_id and domain_name must be provided if using username with Identity V3. Otherwise, either are optional.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.domain_name
At most one of domain_id and domain_name must be provided if using username with Identity V3. Otherwise, either are optional.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.identity_endpoint
identity_endpoint specifies the HTTP endpoint that is required to work with the Identity API of the appropriate version. While it's ultimately needed by all of the identity services, it will often be populated by a provider−level function.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.password
password for the Identity V2 and V3 APIs. Consult with your provider's control panel to discover your account's preferred method of authentication.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.port
The port to scrape metrics from. If using the public IP address, this must instead be specified in the relabeling rule.

Defaults to '80' in prometheus when set to 'null'.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.project_id
The project_id and project_name fields are optional for the Identity V2 API. Some providers allow you to specify a project_name instead of the project_id. Some require both. Your provider's authentication policies will determine how these fields influence authentication.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.project_name
The project_id and project_name fields are optional for the Identity V2 API. Some providers allow you to specify a project_name instead of the project_id. Some require both. Your provider's authentication policies will determine how these fields influence authentication.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.refresh_interval
Refresh interval to re−read the instance list.

Defaults to '60s' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.region
The OpenStack Region.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.role
The OpenStack role of entities that should be discovered.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.tls_config
TLS configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.userid
username is required if using Identity V2 API. Consult with your provider's control panel to discover your account's username. In Identity V3, either userid or a combination of username and domain_id or domain_name are needed.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.openstack_sd_configs.*.username
username is required if using Identity V2 API. Consult with your provider's control panel to discover your account's username. In Identity V3, either userid or a combination of username and domain_id or domain_name are needed.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.params
Optional HTTP URL parameters.

Type: null or (attribute set of list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs
List of PuppetDB service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.authorization
Optional 'Authorization' header configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.authorization.credentials
Sets the credentials. It is mutually exclusive with 'credentials_file'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.authorization.credentials_file
Sets the credentials to the credentials read from the configured file. It is mutually exclusive with 'credentials'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.authorization.type
Sets the authentication type.

Defaults to 'Bearer' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.basic_auth
Optional HTTP basic authentication information.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.basic_auth.password
HTTP password

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.follow_redirects
Configure whether HTTP requests follow HTTP 3xx redirects.

Defaults to ‘true’ in prometheus when set to ‘null’.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.include_parameters
Whether to include the parameters as meta labels. Due to the differences between parameter types and Prometheus labels, some parameters might not be rendered. The format of the parameters might also change in future releases.

Note: Enabling this exposes parameters in the Prometheus UI and API. Make sure that you don’t have secrets exposed as parameters if you enable this.

Defaults to ‘false’ in prometheus when set to ‘null’.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.oauth2
Optional OAuth 2.0 configuration. Cannot be used at the same time as basic_auth or authorization.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.oauth2.client_id
OAuth client ID.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.oauth2.client_secret
OAuth client secret.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.oauth2.client_secret_file
Read the client secret from a file. It is mutually exclusive with ‘client_secret’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.oauth2.endpoint_params
Optional parameters to append to the token URL.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.oauth2.scopes
Scopes for the token request.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.oauth2.token_url
The URL to fetch the token from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.port
The port to scrape metrics from.

Defaults to ‘80’ in prometheus when set to ‘null’.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.query
Puppet Query Language (PQL) query. Only resources are supported. **https://puppet.com/docs/puppetdb/latest/api/query/v4/pql.html**

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.refresh_interval
Refresh interval to re−read the resources list.

Defaults to ‘60s’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.tls_config
TLS configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.puppetdb_sd_configs.*.url
The URL of the PuppetDB root query endpoint.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.relabel_configs
List of relabel configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.relabel_configs.*.action
Action to perform based on regex matching.

Defaults to ‘replace’ in prometheus when set to ‘null’.

Type: null or one of “replace”, “lowercase”, “uppercase”, “keep”, “drop”, “hashmod”, “labelmap”, “labeldrop”, “labelkeep”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.relabel_configs.*.modulus
Modulus to take of the hash of the source label values.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.relabel_configs.*.regex
Regular expression against which the extracted value is matched.

Defaults to '(.*)' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.relabel_configs.*.replacement
Replacement value against which a regex replace is performed if the regular expression matches.

Defaults to '$1' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.relabel_configs.*.separator
Separator placed between concatenated source label values.

Defaults to ';' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.relabel_configs.*.source_labels
The source labels select values from existing labels. Their content is concatenated using the configured separator and matched against the configured regular expression.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.relabel_configs.*.target_label
Label to which the resulting value is written in a replace action. It is mandatory for replace actions.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.sample_limit
Per−scrape limit on number of scraped samples that will be accepted. If more than this number of samples are present after metric relabelling the entire scrape will be treated as failed. 0 means no limit.

Defaults to ‘0’ in prometheus when set to ‘null’.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs
List of Scaleway service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.access_key
Access key to use. **https://console.scaleway.com/project/credentials**

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.api_url
API URL to use when doing the server listing requests.

Defaults to ‘https://api.scaleway.com’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.follow_redirects
Configure whether HTTP requests follow HTTP 3xx redirects.

Defaults to ‘true’ in prometheus when set to ‘null’.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.name_filter
Specify a name filter (works as a LIKE) to apply on the server listing request.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.port
The port to scrape metrics from.

Defaults to ‘80’ in prometheus when set to ‘null’.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.project_id
Project ID of the targets.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.refresh_interval
Refresh interval to re−read the managed targets list.

Defaults to ‘60s’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.role
Role of the targets to retrieve. Must be ‘instance’ or ‘baremetal’.

Type: one of “instance”, “baremetal”

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.secret_key
Secret key to use when listing targets. **https://console.scaleway.com/project/credentials** It is mutually exclusive with ‘secret_key_file’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.secret_key_file
Sets the secret key with the credentials read from the configured file. It is mutually exclusive with ‘secret_key’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.tags_filter
Specify a tag filter (a server needs to have all defined tags to be listed) to apply on the server listing request.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.tls_config
TLS configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scaleway_sd_configs.*.zone
Zone is the availability zone of your targets (e.g. fr−par−1).

Defaults to ‘fr−par−1’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scheme
The URL scheme with which to fetch metrics from targets.

Defaults to ‘http’ in prometheus when set to ‘null’.

Type: null or one of “http”, “https”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scrape_interval
How frequently to scrape targets from this job. Defaults to the globally configured default.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scrape_protocols
The protocols to negotiate during a scrape with the client.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.scrape_timeout
Per−target timeout when scraping this job. Defaults to the globally configured default.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.serverset_sd_configs
List of Zookeeper Serverset service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.serverset_sd_configs.*.paths
Paths can point to a single service, or the root of a tree of services.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.serverset_sd_configs.*.servers
The Zookeeper servers.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.serverset_sd_configs.*.timeout
Timeout value.

Defaults to ‘10s’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.static_configs
List of labeled target groups for this job.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.static_configs.*.labels
Labels assigned to all metrics scraped from the targets.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.static_configs.*.targets
The targets specified by the target group.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.target_limit
Per−scrape config limit on number of unique targets that will be accepted. If more than this number of targets are present after target relabeling, Prometheus will mark the targets as failed without scraping them. 0 means no limit. This is an experimental feature, this behaviour could change in the future.

Defaults to ‘0’ in prometheus when set to ‘null’.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.tls_config
Configures the scrape request’s TLS settings.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.triton_sd_configs
List of Triton Serverset service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.triton_sd_configs.*.account
The account to use for discovering new targets.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.triton_sd_configs.*.dns_suffix
The DNS suffix which should be applied to target.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.triton_sd_configs.*.endpoint
The Triton discovery endpoint (e.g. ‘cmon.us−east−3b.triton.zone’). This is often the same value as dns_suffix.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.triton_sd_configs.*.groups
A list of groups for which targets are retrieved, only supported when targeting the ‘container’ role. If omitted all containers owned by the requesting account are scraped.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.triton_sd_configs.*.port
The port to use for discovery and metric scraping.

Defaults to '9163' in prometheus when set to 'null'.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.triton_sd_configs.*.refresh_interval
The interval which should be used for refreshing targets.

Defaults to '60s' in prometheus when set to 'null'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.triton_sd_configs.*.role
The type of targets to discover, can be set to:

- "container" to discover virtual machines (SmartOS zones, lx/KVM/bhyve branded zones) running on Triton
- "cn" to discover compute nodes (servers/global zones) making up the Triton infrastructure

Defaults to 'container' in prometheus when set to 'null'.

Type: null or one of "container", "cn"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.triton_sd_configs.*.tls_config
TLS configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.triton_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.triton_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.triton_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.triton_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.triton_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.triton_sd_configs.*.version
The Triton discovery API version.

Defaults to ‘1’ in prometheus when set to ‘null’.

Type: null or signed integer

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs
List of Uyuni Serverset service discovery configurations.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.authorization
Optional ‘Authorization’ header configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.authorization.credentials
Sets the credentials. It is mutually exclusive with ‘credentials_file’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.authorization.credentials_file
Sets the credentials to the credentials read from the configured file. It is mutually exclusive with ‘credentials’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.authorization.type
Sets the authentication type.

Defaults to ‘Bearer’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.basic_auth
Optional HTTP basic authentication information.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.basic_auth.password
HTTP password

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.basic_auth.password_file
HTTP password file

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.basic_auth.username
HTTP username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.entitlement
The entitlement string to filter eligible systems.

Defaults to ‘monitoring_entitled’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.follow_redirects
Configure whether HTTP requests follow HTTP 3xx redirects.

Defaults to ‘true’ in prometheus when set to ‘null’.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.oauth2
Optional OAuth 2.0 configuration. Cannot be used at the same time as basic_auth or authorization.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.oauth2.client_id
OAuth client ID.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.oauth2.client_secret
OAuth client secret.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.oauth2.client_secret_file
Read the client secret from a file. It is mutually exclusive with ‘client_secret’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.oauth2.endpoint_params
Optional parameters to append to the token URL.

Type: null or (attribute set of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.oauth2.scopes
Scopes for the token request.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.oauth2.token_url
The URL to fetch the token from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.password
Credentials are used to authenticate the requests to Uyuni API.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.proxy_url
Optional proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.refresh_interval
Refresh interval to re−read the managed targets list.

Defaults to ‘60s’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.separator
The string by which Uyuni group names are joined into the groups label

Defaults to ‘,’ in prometheus when set to ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.server
The URL to connect to the Uyuni server.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.tls_config
TLS configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.tls_config.ca_file
CA certificate to validate API server certificate with.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.tls_config.cert_file
Certificate file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.tls_config.insecure_skip_verify
Disable validation of the server certificate.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.tls_config.key_file
Key file for client cert authentication to the server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.tls_config.server_name
ServerName extension to indicate the name of the server. http://tools.ietf.org/html/rfc4366#section−3.1

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.scrapeConfigs.*.uyuni_sd_configs.*.username
Credentials are used to authenticate the requests to Uyuni API.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.stateDir
Directory below '/var/lib' to store Prometheus metrics data. This directory will be created automatically using systemd's StateDirectory mechanism.

Type: string

Default:

```
"prometheus2"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.webConfigFile
Specifies which file should be used as web.config.file and be passed on startup. See **https://prometheus.io/docs/prometheus/latest/configuration/https/** for valid options.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.webExternalUrl
The URL under which Prometheus is externally reachable (for example, if Prometheus is served via a reverse proxy).

Type: null or string

Default:

```
null
```

Example:

```
"https://example.com/"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/default.nix>

services.prometheus.xmpp−alerts.enable
Whether to enable XMPP Web hook service for Alertmanager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/xmpp−alerts.nix>

services.prometheus.xmpp−alerts.settings
Configuration for prometheus xmpp−alerts, see **https://github.com/jelmer/prometheus−xmpp−alerts/blob/master/xmpp−alerts.yml.example** for supported values.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/prometheus/xmpp−alerts.nix>

services.prosody.enable
Whether to enable the prosody server

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.package
The prosody package to use.

Type: package

Default:

```
pkgs.prosody
```

Example:

```
pkgs.prosody.override {
  withExtraLibs = [ pkgs.luaPackages.lpty ];
  withCommunityModules = [ "auth_external" ];
};
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.admins
List of administrators of the current host

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "admin1@example.com"
  "admin2@example.com"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.allowRegistration

Allow account creation

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.authentication

Authentication mechanism used for logins.

Type: one of “internal_plain”, “internal_hashed”, “cyrus”, “anonymous”, “ldap”

Default:

```
"internal_hashed"
```

Example:

```
"internal_plain"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.c2sRequireEncryption

Force clients to use encrypted connections? This option will prevent clients from authenticating unless they are using encryption.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.checkConfig

Check the configuration file with ‘prosodyctl check config’

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.dataDir

The prosody home directory used to store all data. If left as the default value this directory will automatically be created before the prosody server starts, otherwise you are responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: absolute path

Default:

```
"/var/lib/prosody"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.disco_items
List of discoverable items you want to advertise.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.disco_items.*.description
A short description of the endpoint you want to advertise

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.disco_items.*.url
URL of the endpoint you want to make discoverable

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.extraConfig
Additional prosody configuration

The generated file is processed by ‘envsubst’ to allow secrets to be passed securely via environment variables.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.extraModules
Enable custom modules

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.extraPluginPaths
Additional path in which to look find plugins/modules

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.group
Group account under which prosody runs.

Note
If left as the default value this group will automatically be created on system activation, otherwise you are responsible for ensuring the group exists before the prosody service starts.

Type: string

Default:

```
"prosody"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.httpFileShare
Configures the http_file_share module to handle user uploads.

See **https://prosody.im/doc/modules/mod_http_file_share** for a full list of options.

Type: null or (open submodule of int, bool, string or list of them)

Default:

```
null
```

Example:

```
{
  domain = "uploads.my-xmpp-example-host.org";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.httpFileShare.daily_quota
Maximum size of daily uploaded files per user, in bytes.

Type: null or signed integer

Default:

```
10 * services.prosody.httpFileShare.size_limit
```

Example:

```
"100*1024*1024"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.httpFileShare.domain
Domain name for a http_file_share service.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.httpFileShare.expires_after
Max age of a file before it gets deleted.

Type: string

Default:

```
"1 week"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.httpFileShare.http_external_url
External URL in case Prosody sits behind a reverse proxy.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.httpFileShare.http_host
To avoid an additional DNS record and certificate, you may set this option to your primary domain (e.g. “example.com”) or use a reverse proxy to handle the HTTP for that domain.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.httpFileShare.size_limit
Maximum file size, in bytes.

Type: signed integer

Default:

```
"10 * 1024 * 1024"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.httpInterfaces
Interfaces on which the HTTP server will listen on.

Type: list of string

Default:

```
[
  "*"
  "::"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.httpPorts

Listening HTTP ports list for this service.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[
  5280
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.httpsInterfaces

Interfaces on which the HTTPS server will listen on.

Type: list of string

Default:

```
[
  "*"
  "::"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.httpsPorts

Listening HTTPS ports list for this service.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[
  5281
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.log

Logging configuration. See [1] for more details

Type: strings concatenated with “\n”

Default:

```
"\"*syslog\""
```

Example:

```
{
  { min = "warn"; to = "*syslog"; };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

1. https://prosody.im/doc/logging

services.prosody.modules.admin_adhoc
Allows administration via an XMPP client that supports ad−hoc commands

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.admin_telnet
Opens telnet console interface on localhost port 5582

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.announce
Send announcement to all online users

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.blocklist
Allow users to block communications with other users

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.bookmarks
Allows interop between older clients that use XEP−0048: Bookmarks in its 1.0 version and recent clients which use it in PEP

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.bosh
Enable BOSH clients, aka ‘Jabber over HTTP’

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.carbons
Keep multiple clients in sync

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.cloud_notify
Push notifications to inform users of new messages or other pertinent information even when they have no XMPP clients online

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.csi
Implements the CSI protocol that allows clients to report their active/inactive state to the server

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.dialback
s2s dialback support

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.disco
Service discovery

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.groups
Shared roster support

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.http_files
Serve static files from a directory over HTTP

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.legacyauth
Legacy authentication. Only used by some old clients and bots

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.limits
Enable bandwidth limiting for XMPP connections

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.mam
Store messages in an archive and allow users to access it

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.motd
Send a message to users when they log in

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.pep
Enables users to publish their mood, activity, playing music and more

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.ping
Replies to XMPP pings with pongs

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.private
Private XML storage (for room bookmarks, etc.)

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.proxy65
Enables a file transfer proxy service which clients behind NAT can use

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.register
Allow users to register on this server using a client and change passwords

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.roster
Allow users to have a roster

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.saslauth
Authentication for clients and servers. Recommended if you want to log in.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.server_contact_info
Publish contact information for this service

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.smacks
Allow a client to resume a disconnected session, and prevent message loss

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.time
Let others know the time here on this server

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.tls
Add support for secure TLS on c2s/s2s connections

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.uptime
Report how long server has been running

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.vcard
Allow users to set vCards

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.vcard_legacy
Converts users profiles and Avatars between old and new formats

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.version
Replies to server version requests

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.watchregistrations
Alert admins of registrations

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.websocket
Enable WebSocket support

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.modules.welcome
Welcome users who register accounts

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc
Multi User Chat (MUC) configuration

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    domain = "conference.my-xmpp-example-host.org";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.allowners_muc
Add module allowners, any user in chat is able to kick other. Useful in jitsi-meet to kick ghosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.domain
Domain name of the MUC

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.extraConfig
Additional MUC specific configuration

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.maxHistoryMessages

Specifies a limit on what each room can be configured to keep

Type: signed integer

Default:

```
20
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.moderation

Allow rooms to be moderated

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.name

The name to return in service discovery responses for the MUC service itself

Type: string

Default:

```
"Prosody Chatrooms"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.restrictRoomCreation

Restrict room creation to server admins

Type: one of true, false, “admin”, “local”

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.roomDefaultChangeSubject

If set, the rooms will display the public JIDs by default.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.roomDefaultHistoryLength

Number of history message sent to participants by default.

Type: signed integer

Default:

```
20
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.roomDefaultLanguage
Default room language.

Type: string

Default:

```
"en"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.roomDefaultMembersOnly
If set, the MUC rooms will only be accessible to the members by default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.roomDefaultModerated
If set, the MUC rooms will be moderated by default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.roomDefaultPublic
If set, the MUC rooms will be public by default.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.roomDefaultPublicJids
If set, the MUC rooms will display the public JIDs by default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.roomLockTimeout
Timeout after which the room is destroyed or unlocked if not configured, in seconds

Type: signed integer

Default:

```
300
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.roomLocking
Enables room locking, which means that a room must be configured before it can be used. Locked rooms are invisible and cannot be entered by anyone but the creator

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.tombstoneExpiry
This settings controls how long a tombstone is considered valid. It defaults to 31 days. After this time, the room in question can be created again.

Type: signed integer

Default:

```
2678400
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.muc.*.tombstones
When a room is destroyed, it leaves behind a tombstone which prevents the room being entered or recreated. It also allows anyone who was not in the room at the time it was destroyed to learn about it, and to update their bookmarks. Tombstones prevents the case where someone could recreate a previously semi−anonymous room in order to learn the real JIDs of those who often join there.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.s2sInsecureDomains
Some servers have invalid or self−signed certificates. You can list remote domains here that will not be required to authenticate using certificates. They will be authenticated using DNS instead, even when s2s_secure_auth is enabled.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "insecure.example.com"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.s2sRequireEncryption

Force servers to use encrypted connections? This option will prevent servers from authenticating unless they are using encryption. Note that this is different from authentication.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.s2sSecureAuth

Force certificate authentication for server−to−server connections? This provides ideal security, but requires servers you communicate with to support encryption AND present valid, trusted certificates. For more information see **https://prosody.im/doc/s2s#security**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.s2sSecureDomains

Even if you leave s2s_secure_auth disabled, you can still require valid certificates for some domains by specifying a list here.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "jabber.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.ssl

Paths to SSL files

Type: null or (submodule)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.ssl.cert

Path to the certificate file.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.ssl.extraOptions

Extra SSL configuration options.

Type: attribute set

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.ssl.key

Path to the key file.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.user

User account under which prosody runs.

Note

If left as the default value this user will automatically be created on system activation, otherwise you are responsible for ensuring the user exists before the prosody service starts.

Type: string

Default:

```
"prosody"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.virtualHosts

Define the virtual hosts

Type: attribute set of (submodule)

Default:

```
{
  localhost = {
    domain = "localhost";
    enabled = true;
  };
}
```

Example:

```
{
  myhost = {
    domain = "my-xmpp-example-host.org";
    enabled = true;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.virtualHosts.<name>.enabled
Whether to enable the virtual host

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.virtualHosts.<name>.domain
Domain name

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.virtualHosts.<name>.extraConfig
Additional virtual host specific configuration

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.virtualHosts.<name>.ssl
Paths to SSL files

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.virtualHosts.<name>.ssl.cert
Path to the certificate file.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.virtualHosts.<name>.ssl.extraOptions
Extra SSL configuration options.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.virtualHosts.<name>.ssl.key

Path to the key file.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody.xmppComplianceSuite

The XEP−0423 defines a set of recommended XEPs to implement for a server. It's generally a good idea to implement this set of extensions if you want to provide your users with a good XMPP experience.

This NixOS module aims to provide a "advanced server" experience as per defined in the XEP−0423[1] specification.

Setting this option to true will prevent you from building a NixOS configuration which won't comply with this standard. You can explicitly decide to ignore this standard if you know what you are doing by setting this option to false.

[1] https://xmpp.org/extensions/xep−0423.html

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/prosody.nix>

services.prosody−filer.enable

Whether to enable Prosody Filer XMPP upload file server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/prosody−filer.nix>

services.prosody−filer.settings

Configuration for Prosody Filer. Refer to **https://github.com/ThomasLeister/prosody−filer#configure−prosody−filer** for details on supported values.

Type: TOML value

Default:

```
{
  listenport = mkDefault "127.0.0.1:5050";
  uploadSubDir = mkDefault "upload/";
}
```

Example:

```
{
  secret = "mysecret";
  storeDir = "/srv/http/nginx/prosody−upload";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/prosody−filer.nix>

services.protonmail−bridge.enable
Whether to enable protonmail bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/protonmail−bridge.nix>

services.protonmail−bridge.package
The protonmail−bridge package to use.

Type: package

Default:

```
pkgs.protonmail−bridge
```

Declared by:
<nixpkgs/nixos/modules/services/mail/protonmail−bridge.nix>

services.protonmail−bridge.logLevel
Log level of the Proton Mail Bridge service. If set to null then the service uses it’s default log level.

Type: null or one of “panic”, “fatal”, “error”, “warn”, “info”, “debug”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/protonmail−bridge.nix>

services.protonmail−bridge.path
List of derivations to put in protonmail−bridge’s path.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
with pkgs; [ pass gnome−keyring ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/protonmail−bridge.nix>

services.prowlarr.enable
Whether to enable Prowlarr, an indexer manager/proxy for Torrent trackers and Usenet indexers.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/prowlarr.nix>

services.prowlarr.package
The prowlarr package to use.

Type: package

Default:

```
pkgs.prowlarr
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/prowlarr.nix>

services.prowlarr.dataDir
The directory where Prowlarr stores its data files.

Note: A bind mount will be used to mount the directory at the expected location if a different value than '/var/lib/prowlarr' is used.

Type: string

Default:

```
"/var/lib/prowlarr"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/prowlarr.nix>

services.prowlarr.environmentFiles
Environment file to pass secret configuration values. Each line must follow the 'PROWLARR__SECTION__KEY=value' pattern. Please consult the documentation at the **wiki**.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/prowlarr.nix>

services.prowlarr.openFirewall
Open ports in the firewall for the Prowlarr web interface.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/prowlarr.nix>

services.prowlarr.settings
Attribute set of arbitrary config options. Please consult the documentation at the **wiki**.

WARNING: this configuration is stored in the world−readable Nix store! For secrets use **services.prowlarr.environmentFiles**.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  update.mechanism = "internal";
  server = {
    urlbase = "localhost";
    port = 9696;
    bindaddress = "*";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/prowlarr.nix>

services.prowlarr.settings.log.analyticsEnabled
Send Anonymous Usage Data

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/prowlarr.nix>

services.prowlarr.settings.server.port
Port Number

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9696
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/prowlarr.nix>

services.prowlarr.settings.update.automatically
Automatically download and install updates.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/prowlarr.nix>

services.prowlarr.settings.update.mechanism
which update mechanism to use

Type: null or one of “external”, “builtIn”, “script”

Default:

```
"external"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/prowlarr.nix>

services.psd.enable
Whether to enable the Profile Sync daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/profile−sync−daemon.nix>

services.psd.resyncTimer
The amount of time to wait before syncing browser profiles back to the disk.

Takes a systemd.unit time span. The time unit defaults to seconds if omitted.

Type: string

Default:

```
"1h"
```

Example:

```
"1h 30min"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/profile−sync−daemon.nix>

services.public−inbox.enable
Whether to enable the public−inbox mail archiver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.package
The public−inbox package to use.

Type: package

Default:

```
pkgs.public−inbox
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.http.enable
Whether to enable the public−inbox HTTP server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.http.args

Command−line arguments to pass to **public−inbox−httpd**(1).

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.http.mounts

Root paths or URLs that public−inbox will be served on. If domain parts are present, only requests to those domains will be accepted.

Type: list of string

Default:

```
[
  "/"
]
```

Example:

```
[
  "/lists/archives"
]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.http.port

Listening port or systemd's ListenStream= entry to be used as a reverse proxy, eg. in nginx: 'locations."/inbox".proxyPass = "http://unix:${config.services.public−inbox.http.port}:/inbox";' Set to null and use 'systemd.sockets.public−inbox−httpd.listenStreams' if you need a more advanced listening.

Type: null or string or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
80
```

Example:

```
"/run/public−inbox−httpd.sock"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.imap.enable

Whether to enable the public−inbox IMAP server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.imap.args

Command−line arguments to pass to **public−inbox−imapd**(1).

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.imap.cert

Path to TLS certificate to use for connections to **public−inbox−imapd**(1).

Type: null or string

Default:

```
null
```

Example:

```
"/path/to/fullchain.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.imap.key

Path to TLS key to use for connections to **public−inbox−imapd**(1).

Type: null or string

Default:

```
null
```

Example:

```
"/path/to/key.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.imap.port

Listening port. Beware that public−inbox uses well−known ports number to decide whether to enable TLS or not. Set to null and use ‘systemd.sockets.public−inbox−imapd.listenStreams’ if you need a more advanced listening.

Type: null or string or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
993
```

Declared by:

<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.inboxes

Inboxes to configure, where attribute names are inbox names.

Type: attribute set of (open submodule of attribute set of (INI atom (null, bool, int, float or string) or a list of them for duplicate keys))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.inboxes.<name>.address
The email addresses of the public−inbox.

Type: list of string

Default:

```
[ ]
```

Example:

```
"example−discuss@example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.inboxes.<name>.coderepo
Nicknames of a ‘coderepo’ section associated with the inbox.

Type: list of coderepo names

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.inboxes.<name>.description
User−visible description for the repository.

Type: string

Example:

```
"user/dev discussion of public−inbox itself"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.inboxes.<name>.inboxdir
The absolute path to the directory which hosts the public−inbox.

Type: string

Default:

```
"/var/lib/public−inbox/inboxes/‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.inboxes.<name>.newsgroup
NNTP group name for the inbox.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.inboxes.<name>.url

URL where this inbox can be accessed over HTTP.

Type: non−empty string

Example:

```
"https://example.org/lists/example-discuss"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.inboxes.<name>.watch

Paths for **public−inbox−watch**(1) to monitor for new mail.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "maildir:/path/to/test.example.com.git"
]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.inboxes.<name>.watchheader

If specified, **public−inbox−watch**(1) will only process mail containing a matching header.

Type: null or string

Default:

```
null
```

Example:

```
"List-Id:<test@example.com>"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.mda.enable

Whether to enable the public−inbox Mail Delivery Agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.mda.args

Command−line arguments to pass to **public−inbox−mda**(1).

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.nntp.enable
Whether to enable the public−inbox NNTP server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.nntp.args
Command−line arguments to pass to **public−inbox−nntpd**(1).

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.nntp.cert
Path to TLS certificate to use for connections to **public−inbox−nntpd**(1).

Type: null or string

Default:

```
null
```

Example:

```
"/path/to/fullchain.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.nntp.key
Path to TLS key to use for connections to **public−inbox−nntpd**(1).

Type: null or string

Default:

```
null
```

Example:

```
"/path/to/key.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.nntp.port
Listening port. Beware that public−inbox uses well−known ports number to decide whether to enable TLS or not. Set to null and use ‘systemd.sockets.public−inbox−nntpd.listenStreams’ if you need a more advanced listening.

Type: null or string or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
563
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.openFirewall
Whether to enable opening the firewall when using a port option.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.path
Additional packages to place in the path of public−inbox−mda, public−inbox−watch, etc.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [ spamassassin ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.postfix.enable
Whether to enable the integration into Postfix.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.settings
Settings for the **public−inbox config file**.

Type: open submodule of attribute set of attribute set of (INI atom (null, bool, int, float or string) or a list of them for duplicate keys or attribute set of (INI atom (null, bool, int, float or string) or a list of them for duplicate keys))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.settings.coderepo
code repositories

Type: attribute set of (open submodule of attribute set of (INI atom (null, bool, int, float or string) or a list of them for duplicate keys))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.settings.coderepo.<name>.cgitUrl
URL of a cgit instance

Type: string

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.settings.coderepo.<name>.dir
Path to a git repository

Type: string

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.settings.publicinbox
public inboxes

Type: open submodule of attribute set of (INI atom (null, bool, int, float or string) or a list of them for duplicate keys or attribute set of (INI atom (null, bool, int, float or string) or a list of them for duplicate keys))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.settings.publicinbox.css
The local path name of a CSS file for the PSGI web interface.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.settings.publicinbox.imapserver
IMAP URLs to this public−inbox instance

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "imap.public-inbox.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.settings.publicinbox.nntpserver
NNTP URLs to this public−inbox instance

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "nntp://news.public−inbox.org"
  "nntps://news.public−inbox.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.settings.publicinbox.pop3server
POP3 URLs to this public−inbox instance

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "pop.public−inbox.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.settings.publicinbox.wwwlisting
Controls which lists (if any) are listed for when the root public−inbox URL is accessed over HTTP.

Type: one of “all”, “404”, “match=domain”

Default:

```
"404"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.settings.publicinboxmda.spamcheck
If set to spamc, **public−inbox−watch**(1) will filter spam using SpamAssassin.

Type: one of “spamc”, “none”

Default:

```
"none"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.settings.publicinboxwatch.spamcheck

If set to spamc, **public−inbox−watch**(1) will filter spam using SpamAssassin.

Type: one of “spamc”, “none”

Default:

```
"none"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.settings.publicinboxwatch.watchspam

If set, mail in this maildir will be trained as spam and deleted from all watched inboxes

Type: null or string

Default:

```
null
```

Example:

```
"maildir:/path/to/spam"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.public−inbox.spamAssassinRules

SpamAssassin configuration specific to public−inbox.

Type: null or absolute path

Default:

```
${cfg.package.sa_config}/user/.spamassassin/user_prefs
```

Declared by:

<nixpkgs/nixos/modules/services/mail/public−inbox.nix>

services.pufferpanel.enable

Whether to enable PufferPanel game management server.

Note that **PufferPanel templates** and binaries downloaded by PufferPanel expect **FHS environment**. It is possible to set **package** option to use PufferPanel wrapper with FHS environment. For example, to use ‘Download Game from Steam’ and ‘Download Java’ template operations:

```
{ lib, pkgs, ... }: {
  services.pufferpanel = {
    enable = true;
    extraPackages = with pkgs; [ bash curl gawk gnutar gzip ];
    package = pkgs.buildFHSEnv {
      name = "pufferpanel−fhs";
      runScript = lib.getExe pkgs.pufferpanel;
      targetPkgs = pkgs': with pkgs'; [ icu openssl zlib ];
    };
  };
}
```

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pufferpanel.nix>

services.pufferpanel.package
The pufferpanel package to use.

Type: package

Default:

```
pkgs.pufferpanel
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pufferpanel.nix>

services.pufferpanel.environment
Environment variables to set for the service. Secrets should be specified using **environmentFile**.

Refer to the **PufferPanel source code** for the list of available configuration options. Variable name is an upper−cased configuration entry name with underscores instead of dots, prefixed with 'PUFFER_'. For example, 'panel.settings.companyName' entry can be set using **PUFFER_PANEL_SETTINGS_COMPANYNAME**.

When running with panel enabled (configured with 'PUFFER_PANEL_ENABLE' environment variable), it is recommended disable registration using 'PUFFER_PANEL_REGISTRATIONENABLED' environment variable (registration is enabled by default). To create the initial administrator user, run **pufferpanel −−workDir /var/lib/pufferpanel user add −−admin**.

Some options override corresponding settings set via web interface (e.g. 'PUFFER_PANEL_REGISTRATIONENABLED'). Those options can be temporarily toggled or set in settings but do not persist between restarts.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  PUFFER_WEB_HOST = ":8080";
  PUFFER_DAEMON_SFTP_HOST = ":5657";
  PUFFER_DAEMON_CONSOLE_BUFFER = "1000";
  PUFFER_DAEMON_CONSOLE_FORWARD = "true";
  PUFFER_PANEL_REGISTRATIONENABLED = "false";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pufferpanel.nix>

services.pufferpanel.environmentFile
File to load environment variables from. Loaded variables override values set in **environment**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pufferpanel.nix>

services.pufferpanel.extraGroups

Additional groups for the systemd service.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "podman"
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/pufferpanel.nix>

services.pufferpanel.extraPackages

Packages to add to the PATH environment variable. Both the *bin* and *sbin* subdirectories of each package are added.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.jre ]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/pufferpanel.nix>

services.pulseaudio.enable

Whether to enable the PulseAudio sound server.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.package

The PulseAudio derivation to use. This can be used to enable features (such as JACK support, Bluetooth) via the ‘pulseaudioFull’ package.

Type: package

Default:

```
pkgs.pulseaudio
```

Example:

```
pkgs.pulseaudioFull
```

Declared by:

<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.configFile

The path to the default configuration options the PulseAudio server should use. By default, the "default.pa" configuration from the PulseAudio distribution is used.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.daemon.config

Config of the pulse daemon. See 'man pulse−daemon.conf'.

Type: attribute set of unspecified value

Default:

```
{ }
```

Example:

```
{ realtime−scheduling = "yes"; }
```

Declared by:

<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.daemon.logLevel

The log level that the system−wide pulseaudio daemon should use, if activated.

Type: string

Default:

```
"notice"
```

Declared by:

<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.extraClientConf

Extra configuration appended to pulse/client.conf file.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.extraConfig

Literal string to append to 'configFile' and the config file generated by the pulseaudio module.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.extraModules

Extra pulseaudio modules to use. This is intended for out−of−tree pulseaudio modules like extra bluetooth codecs.

Extra modules take precedence over built−in pulseaudio modules.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.pulseaudio-modules-bt ]
```

Declared by:

<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.support32Bit

Whether to include the 32−bit pulseaudio libraries in the system or not. This is only useful on 64−bit systems and currently limited to x86_64−linux.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.systemWide

If false, a PulseAudio server is launched automatically for each user that tries to use the sound system. The server runs with user privileges. If true, one system−wide PulseAudio server is launched on boot, running as the user “pulse”, and only users in the “pulse−access” group will have access to the server. Please read the PulseAudio documentation for more details.

Don’t enable this option unless you know what you are doing.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.tcp.enable

Whether to enable tcp streaming support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.tcp.anonymousClients.allowAll

Whether to enable all anonymous clients to stream to the server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.tcp.anonymousClients.allowedIpRanges

A list of IP subnets that are allowed to stream to the server.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "127.0.0.1" "192.168.1.0/24" ]
```

Declared by:

<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.tcp.openFirewall

Whether to enable Open firewall for the specified port.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.tcp.port

TCP connection port. The default ‘null’ value, means pulseaudio will try to use the default 4713 port, but if it is occupied, it will fallback to a random port.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Example:

```
4713
```

Declared by:

<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.zeroconf.discovery.enable
Whether to enable discovery of pulseaudio sinks in the local network.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pulseaudio.zeroconf.publish.enable
Whether to enable publishing the pulseaudio sink in the local network.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/pulseaudio.nix>

services.pykms.enable
Whether to enable the PyKMS service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pykms.nix>

services.pykms.package
The pykms package to use.

Type: package

Default:

```
pkgs.pykms
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pykms.nix>

services.pykms.extraArgs
Additional arguments

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/pykms.nix>

services.pykms.listenAddress

The IP address on which to listen.

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"::"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/pykms.nix>

services.pykms.logLevel

How much to log

Type: one of “CRITICAL”, “ERROR”, “WARNING”, “INFO”, “DEBUG”, “MININFO”

Default:

```
"INFO"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/pykms.nix>

services.pykms.memoryLimit

How much memory to use at most.

Type: string

Default:

```
"64M"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/pykms.nix>

services.pykms.openFirewallPort

Whether the listening port should be opened automatically.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/pykms.nix>

services.pykms.port

The port on which to listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1688
```

Declared by:

<nixpkgs/nixos/modules/services/misc/pykms.nix>

services.pyroscope.enable

Whether to enable Pyroscope.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/pyroscope.nix>

services.pyroscope.package

The pyroscope package to use.

Type: package

Default:

```
pkgs.pyroscope
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/pyroscope.nix>

services.pyroscope.configFile

Specify a path to a configuration file that Pyroscope should use.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/pyroscope.nix>

services.pyroscope.extraFlags

Additional arguments to pass to pyroscope

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/pyroscope.nix>

services.pyroscope.openFirewall

Whether or not to open the firewall for this service

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/pyroscope.nix>

services.pyroscope.settings

Specify the configuration for Pyroscope in Nix.

See **https://grafana.com/docs/pyroscope/latest/configure-server/reference-configuration-parameters/** for available options.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/pyroscope.nix>

services.pyroscope.settings.server.http_listen_address

The server listen address

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/pyroscope.nix>

services.pyroscope.settings.server.http_listen_port

The port that Pyroscope should run on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4040
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/pyroscope.nix>

services.qbittorrent.enable

Whether to enable qbittorrent, BitTorrent client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/qbittorrent.nix>

services.qbittorrent.package

The qbittorrent-nox package to use.

Type: package

Default:

```
pkgs.qbittorrent-nox
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/qbittorrent.nix>

services.qbittorrent.extraArgs

Extra arguments passed to qbittorrent. See ‘qbittorrent −h’, or the **source code**, for the available arguments.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--confirm-legal-notice"
]
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/qbittorrent.nix>

services.qbittorrent.group

Group under which qbittorrent runs.

Type: string

Default:

```
"qbittorrent"
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/qbittorrent.nix>

services.qbittorrent.openFirewall

Whether to enable opening both the webuiPort and torrentPort over TCP in the firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/qbittorrent.nix>

services.qbittorrent.profileDir

the path passed to qbittorrent via −−profile.

Type: absolute path

Default:

```
"/var/lib/qBittorrent/"
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/qbittorrent.nix>

services.qbittorrent.serverConfig

Free−form settings mapped to the *qBittorrent.conf* file in the profile. Refer to **Explanation−of−Options−in−qBittorrent**. The Password_PBKDF2 format is oddly unique, you will likely want to use **this tool** to generate the format. Alternatively you can run qBittorrent independently first and use its webUI to generate the format.

Optionally an alternative webUI can be easily set. VueTorrent for example:

```
{
  Preferences = {
```

```
      WebUI = {
        AlternativeUIEnabled = true;
        RootFolder = "${pkgs.vuetorrent}/share/vuetorrent";
      };
    };
  }
  ];
```

Type: open submodule of attribute set of attribute set of anything

Default:

```
{ }
```

Example:

```
{
  LegalNotice.Accepted = true;
  Preferences = {
    WebUI = {
      Username = "user";
      Password_PBKDF2 = "generated ByteArray.";
    };
    General.Locale = "en";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/qbittorrent.nix>

services.qbittorrent.torrentingPort
the port passed to qbittorrent via '−−torrenting−port'

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/qbittorrent.nix>

services.qbittorrent.user
User account under which qbittorrent runs.

Type: string

Default:

```
"qbittorrent"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/qbittorrent.nix>

services.qbittorrent.webuiPort
the port passed to qbittorrent via '−−webui−port'

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/qbittorrent.nix>

services.qdrant.enable
Whether to enable Vector Search Engine for the next generation of AI applications.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/search/qdrant.nix>

services.qdrant.package
The qdrant package to use.

Type: package

Default:

```
pkgs.qdrant
```

Declared by:
<nixpkgs/nixos/modules/services/search/qdrant.nix>

services.qdrant.settings
Configuration for Qdrant Refer to **https://github.com/qdrant/qdrant/blob/master/config/config.yaml** for details on supported values.

Type: YAML 1.1 value

Default:

```
{
  storage = {
    storage_path = "/var/lib/qdrant/storage";
    snapshots_path = "/var/lib/qdrant/snapshots";
  };
  hsnw_index = {
    on_disk = true;
  };
  service = {
    host = "127.0.0.1";
    http_port = 6333;
    grpc_port = 6334;
  };
  telemetry_disabled = true;
}
```

Example:

```
{
  hsnw_index = {
    on_disk = true;
  };
  service = {
    grpc_port = 6334;
    host = "127.0.0.1";
```

```
    http_port = 6333;
  };
  storage = {
    snapshots_path = "/var/lib/qdrant/snapshots";
    storage_path = "/var/lib/qdrant/storage";
  };
  telemetry_disabled = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/search/qdrant.nix>

services.qdrant.webUIPackage
The qdrant−web−ui package to use.

Type: package

Default:

```
pkgs.qdrant-web-ui
```

Declared by:
<nixpkgs/nixos/modules/services/search/qdrant.nix>

services.qemuGuest.enable
Whether to enable the qemu guest agent.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-guest-agent.nix>

services.qemuGuest.package
The ga package to use.

Type: package

Default:

```
pkgs.qemu_kvm.ga
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/qemu-guest-agent.nix>

services.quake3−server.enable
Whether to enable Quake 3 dedicated server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/quake3-server.nix>

services.quake3−server.package
The ioquake3 package to use.

Type: package

Default:

```
pkgs.ioquake3
```

Declared by:
<nixpkgs/nixos/modules/services/games/quake3−server.nix>

services.quake3−server.baseq3
Path to the baseq3 files (pak*.pk3). If this is on the nix store (type = package) all .pk3 files should be saved in the top−level directory. If this is on another filesystem (e.g /var/lib/baseq3) the .pk3 files are searched in $baseq3/.q3a/baseq3/

Type: package or absolute path

Default: Manually downloaded Quake 3 installation directory.

Example:

```
"/var/lib/q3ds"
```

Declared by:
<nixpkgs/nixos/modules/services/games/quake3−server.nix>

services.quake3−server.extraConfig
Extra configuration options. Note that options changed via RCON will not be persisted. To list all possible options, use “cvarlist 1” via RCON.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  seta rconPassword "superSecret"      // sets RCON password for re \
mote console
  seta sv_hostname "My Quake 3 server"      // name that appears in \
 server list
```

Declared by:
<nixpkgs/nixos/modules/services/games/quake3−server.nix>

services.quake3−server.openFirewall
Open the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/quake3−server.nix>

services.quake3−server.port
UDP Port the server should listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
27960
```

Declared by:
<nixpkgs/nixos/modules/services/games/quake3-server.nix>

services.quassel.enable
Whether to enable the Quassel IRC client daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/quassel.nix>

services.quassel.package
The quasselDaemon package to use.

Type: package

Default:

```
pkgs.quasselDaemon
```

Declared by:
<nixpkgs/nixos/modules/services/networking/quassel.nix>

services.quassel.certificateFile
Path to the certificate used for SSL connections with clients.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/quassel.nix>

services.quassel.dataDir
The directory holding configuration files, the SQlite database and the SSL Cert.

Type: string

Default:

```
"/home/${config.services.quassel.user}/.config/quassel-irc.org"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/quassel.nix>

services.quassel.interfaces
The interfaces the Quassel daemon will be listening to. If ‘[127.0.0.1]’, only clients on the local host can connect to it; if ‘[0.0.0.0]’, clients can access it from any network interface.

Type: list of string

Default:

```
[
  "127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/quassel.nix>

services.quassel.portNumber
The port number the Quassel daemon will be listening to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4242
```

Declared by:
<nixpkgs/nixos/modules/services/networking/quassel.nix>

services.quassel.requireSSL
Require SSL for connections from clients.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/quassel.nix>

services.quassel.user
The existing user the Quassel daemon should run as. If left empty, a default “quassel” user will be created.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/quassel.nix>

services.qui.enable
Whether to enable qui.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/qui.nix>

services.qui.package
The qui package to use.

Type: package

Default:

```
pkgs.qui
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/qui.nix>

services.qui.group

Group to run qui as.

Type: string

Default:

```
"qui"
```

Example:

```
"torrents"
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/qui.nix>

services.qui.openFirewall

Whether or not to open ports in the firewall for qui.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/qui.nix>

services.qui.secretFile

Path to a file that contains the session secret. The session secret can be generated with ‘openssl rand −hex 32’.

Type: absolute path

Example:

```
"/run/secrets/qui-session.txt"
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/qui.nix>

services.qui.settings

qui configuration options.

Refer to the **template config** in the source code for the available options. The documentation contains the available **environment variables**, this can be used to get an overview.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Example:

```
{
  logLevel = "DEBUG";
  metricsEnabled = true;
  port = 7777;
}
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/qui.nix>

services.qui.settings.host

The host address qui listens on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/qui.nix>

services.qui.settings.port

The port qui listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7476
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/qui.nix>

services.qui.user

User to run qui as.

Type: string

Default:

```
"qui"
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/qui.nix>

services.quicktun

QuickTun tunnels.

See **http://wiki.ucis.nl/QuickTun** for more information about available options.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/quicktun.nix>

services.quicktun.<name>.localAddress

IP address or hostname of the local end.

Type: null or string

Default:

```
null
```

Example:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/quicktun.nix>

services.quicktun.<name>.localPort

Local UDP port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2998
```

Declared by:

<nixpkgs/nixos/modules/services/networking/quicktun.nix>

services.quicktun.<name>.privateKey

Local secret key in hexadecimal form.

Warning
This option is deprecated. Please use *services.quicktun.<name>.privateKeyFile* instead.

Note
Not needed when *services.quicktun.<name>.protocol* is set to ‘raw’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/quicktun.nix>

services.quicktun.<name>.privateKeyFile

Path to file containing local secret key in binary or hexadecimal form.

Note
Not needed when *services.quicktun.<name>.protocol* is set to ‘raw’.

Type: null or absolute path

Default:

```
"null"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/quicktun.nix>

services.quicktun.<name>.protocol

Which protocol to use.

Type: one of “raw”, “nacl0”, “nacltai”, “salty”

Default:

```
"nacltai"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/quicktun.nix>

services.quicktun.<name>.publicKey

Remote public key in hexadecimal form.

Note
Not needed when *services.quicktun.<name>.protocol* is set to ‘raw’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/quicktun.nix>

services.quicktun.<name>.remoteAddress
IP address or hostname of the remote end (use ‘0.0.0.0’ for a floating/dynamic remote endpoint).

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"tunnel.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/quicktun.nix>

services.quicktun.<name>.remoteFloat
Whether to allow the remote address and port to change when properly encrypted packets are received.

Type: integer between 0 and 1 (both inclusive) or boolean convertible to it

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/quicktun.nix>

services.quicktun.<name>.remotePort
Remote UDP port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
config.services.quicktun.<name>.localPort
```

Declared by:
<nixpkgs/nixos/modules/services/networking/quicktun.nix>

services.quicktun.<name>.timeWindow
Allowed time window for first received packet in seconds (positive number allows packets from history)

Type: unsigned integer, meaning >=0

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/quicktun.nix>

services.quicktun.<name>.tunMode
Whether to operate in tun (IP) or tap (Ethernet) mode.

Type: integer between 0 and 1 (both inclusive) or boolean convertible to it

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/quicktun.nix>

services.quicktun.<name>.upScript
Run specified command or script after the tunnel device has been opened.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/quicktun.nix>

services.quickwit.enable
Whether to enable Quickwit.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/search/quickwit.nix>

services.quickwit.package
The Quickwit package to use.

Type: package

Default:

```
pkgs.quickwit
```

Declared by:
<nixpkgs/nixos/modules/services/search/quickwit.nix>

services.quickwit.dataDir
Data directory for Quickwit. If you change this, you need to manually create the directory. You also need to create the 'quickwit' user and group, or change **services.quickwit.user** and **services.quickwit.group** to existing ones with access to the directory.

Type: absolute path

Default:

```
"/var/lib/quickwit"
```

Declared by:
<nixpkgs/nixos/modules/services/search/quickwit.nix>

services.quickwit.extraFlags
Extra command line options to pass to Quickwit.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/search/quickwit.nix>

services.quickwit.group
The group quickwit runs as. Should be left at default unless you have very specific needs.

Type: string

Default:

```
"quickwit"
```

Declared by:
<nixpkgs/nixos/modules/services/search/quickwit.nix>

services.quickwit.restartIfChanged
Automatically restart the service on config change. This can be set to false to defer restarts on a server or cluster. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/search/quickwit.nix>

services.quickwit.settings
Quickwit configuration.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/search/quickwit.nix>

services.quickwit.settings.grpc_listen_port
The port to listen on for gRPC traffic.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7281
```

Declared by:
<nixpkgs/nixos/modules/services/search/quickwit.nix>

services.quickwit.settings.listen_address
Listen address of Quickwit.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/search/quickwit.nix>

services.quickwit.settings.rest

Rest server configuration for Quickwit

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/search/quickwit.nix>

services.quickwit.settings.rest.listen_port

The port to listen on for HTTP REST traffic.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7280
```

Declared by:

<nixpkgs/nixos/modules/services/search/quickwit.nix>

services.quickwit.settings.version

Configuration file version.

Type: floating point number

Default:

```
0.7
```

Declared by:

<nixpkgs/nixos/modules/services/search/quickwit.nix>

services.quickwit.user

The user Quickwit runs as. Should be left at default unless you have very specific needs.

Type: string

Default:

```
"quickwit"
```

Declared by:

<nixpkgs/nixos/modules/services/search/quickwit.nix>

services.r53−ddns.enable

Whether to enable r53−ddyns.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/r53−ddns.nix>

services.r53−ddns.domain
The name of your domain in Route53

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/r53−ddns.nix>

services.r53−ddns.environmentFile
File containing the AWS_ACCESS_KEY_ID and AWS_SECRET_ACCESS_KEY in the format of an EnvironmentFile as described by **systemd.exec**(5)

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/r53−ddns.nix>

services.r53−ddns.hostname
Manually specify the hostname. Otherwise the tool will try to use the name returned by the OS (Call to gethostname)

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/r53−ddns.nix>

services.r53−ddns.interval
How often to update the entry

Type: string

Default:

```
"15min"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/r53−ddns.nix>

services.r53−ddns.ttl
The TTL for the generated record

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/services/networking/r53−ddns.nix>

services.r53−ddns.zoneID
The ID of your zone in Route53

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/r53−ddns.nix>

services.rabbitmq.enable
Whether to enable the RabbitMQ server, an Advanced Message Queuing Protocol (AMQP) broker.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/amqp/rabbitmq.nix>

services.rabbitmq.package

The rabbitmq−server package to use.

Type: package

Default:

```
pkgs.rabbitmq−server
```

Declared by:

<nixpkgs/nixos/modules/services/amqp/rabbitmq.nix>

services.rabbitmq.config

Verbatim advanced configuration file contents using the Erlang syntax. This is also known as the *advanced.config* file or the old config format.

'configItems' is preferred whenever possible. However, nested data structures can only be expressed properly using the 'config' option.

The contents of this option will be merged into the 'configItems' by RabbitMQ at runtime to form the final configuration.

See the second table on **https://www.rabbitmq.com/configure.html#config−items** For the distinct formats, see **https://www.rabbitmq.com/configure.html#config−file−formats**

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/amqp/rabbitmq.nix>

services.rabbitmq.configItems

Configuration options in RabbitMQ's new config file format, which is a simple key−value format that can not express nested data structures. This is known as the *rabbitmq.conf* file, although outside NixOS that filename may have Erlang syntax, particularly prior to RabbitMQ 3.7.0.

If you do need to express nested data structures, you can use 'config' option. Configuration from 'config' will be merged into these options by RabbitMQ at runtime to form the final configuration.

See **https://www.rabbitmq.com/configure.html#config−items** For the distinct formats, see **https://www.rabbitmq.com/configure.html#config−file−formats**

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "auth_backends.1.authn" = "rabbit_auth_backend_ldap";
  "auth_backends.1.authz" = "rabbit_auth_backend_internal";
}
```

Declared by:

<nixpkgs/nixos/modules/services/amqp/rabbitmq.nix>

services.rabbitmq.dataDir

Data directory for rabbitmq.

Type: absolute path

Default:

```
"/var/lib/rabbitmq"
```

Declared by:

<nixpkgs/nixos/modules/services/amqp/rabbitmq.nix>

services.rabbitmq.listenAddress

IP address on which RabbitMQ will listen for AMQP connections. Set to the empty string to listen on all interfaces. Note that RabbitMQ creates a user named ‘guest’ with password ‘guest’ by default, so you should delete this user if you intend to allow external access.

Together with ‘port’ setting it’s mostly an alias for configItems.“listeners.tcp.1” and it’s left for backwards compatibility with previous version of this module.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/amqp/rabbitmq.nix>

services.rabbitmq.managementPlugin.enable

Whether to enable the management plugin.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/amqp/rabbitmq.nix>

services.rabbitmq.managementPlugin.port

On which port to run the management plugin

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
15672
```

Declared by:

<nixpkgs/nixos/modules/services/amqp/rabbitmq.nix>

services.rabbitmq.pluginDirs

The list of directories containing external plugins

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/amqp/rabbitmq.nix>

services.rabbitmq.plugins
The names of plugins to enable

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/amqp/rabbitmq.nix>

services.rabbitmq.port
Port on which RabbitMQ will listen for AMQP connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5672
```

Declared by:
<nixpkgs/nixos/modules/services/amqp/rabbitmq.nix>

services.rabbitmq.unsafeCookie
Erlang cookie is a string of arbitrary length which must be the same for several nodes to be allowed to communicate. Leave empty to generate automatically.

Setting the cookie via this option exposes the cookie to the store, which is not recommended for security reasons. Only use this option in an isolated non−production environment such as NixOS VM tests.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/amqp/rabbitmq.nix>

services.radarr.enable
Whether to enable Radarr, a UsetNet/BitTorrent movie downloader.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/radarr.nix>

services.radarr.package
The radarr package to use.

Type: package

Default:

```
pkgs.radarr
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/radarr.nix>

services.radarr.dataDir
The directory where Radarr stores its data files.

Type: string

Default:

```
"/var/lib/radarr/.config/Radarr"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/radarr.nix>

services.radarr.environmentFiles
Environment file to pass secret configuration values. Each line must follow the 'RADARR__SECTION__KEY=value' pattern. Please consult the documentation at the **wiki**.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/radarr.nix>

services.radarr.group
Group under which Radarr runs.

Type: string

Default:

```
"radarr"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/radarr.nix>

services.radarr.openFirewall
Open ports in the firewall for the Radarr web interface.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/radarr.nix>

services.radarr.settings
Attribute set of arbitrary config options. Please consult the documentation at the **wiki**.

WARNING: this configuration is stored in the world−readable Nix store! For secrets use **services.radarr.environmentFiles**.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  update.mechanism = "internal";
```

```
  server = {
    urlbase = "localhost";
    port = 7878;
    bindaddress = "*";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/radarr.nix>

services.radarr.settings.log.analyticsEnabled
Send Anonymous Usage Data

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/radarr.nix>

services.radarr.settings.server.port
Port Number

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7878
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/radarr.nix>

services.radarr.settings.update.automatically
Automatically download and install updates.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/radarr.nix>

services.radarr.settings.update.mechanism
which update mechanism to use

Type: null or one of “external”, “builtIn”, “script”

Default:

```
"external"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/radarr.nix>

services.radarr.user
User account under which Radarr runs.

Type: string

Default:

```
"radarr"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/radarr.nix>

services.radicale.enable
Whether to enable Radicale CalDAV and CardDAV server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/radicale.nix>

services.radicale.package
Radicale package to use.

Type: package

Default:

```
pkgs.radicale
```

Declared by:
<nixpkgs/nixos/modules/services/networking/radicale.nix>

services.radicale.config
Radicale configuration, this will set the service configuration file. This option is mutually exclusive with **settings**. This option is deprecated. Use **settings** instead.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/radicale.nix>

services.radicale.extraArgs
Extra arguments passed to the Radicale daemon.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/radicale.nix>

services.radicale.rights
Configuration for Radicale's rights file. See **https://radicale.org/v3.html#authentication−and−rights**. This option only works in conjunction with **settings**. Setting this will also set **settings.rights.type** and **settings.rights.file** to appropriate values.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a non−empty list of them)

Default:

```
{ }
```

Example:

```
root = {
  user = ".+";
  collection = "";
  permissions = "R";
};
principal = {
  user = ".+";
  collection = "{user}";
  permissions = "RW";
};
calendars = {
  user = ".+";
  collection = "{user}/[^/]+";
  permissions = "rw";
};
```

Declared by:

<nixpkgs/nixos/modules/services/networking/radicale.nix>

services.radicale.settings

Configuration for Radicale. See **https://radicale.org/v3.html#configuration**. This option is mutually exclusive with **config**.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a non−empty list of them)

Default:

```
{ }
```

Example:

```
server = {
  hosts = [ "0.0.0.0:5232" "[::]:5232" ];
};
auth = {
  type = "htpasswd";
  htpasswd_filename = "/etc/radicale/users";
  htpasswd_encryption = "bcrypt";
};
storage = {
  filesystem_folder = "/var/lib/radicale/collections";
};
```

Declared by:

<nixpkgs/nixos/modules/services/networking/radicale.nix>

services.radicle.enable

Whether to enable Radicle Seed Node.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.package
The radicle−node package to use.

Type: package

Default:

```
pkgs.radicle-node
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.checkConfig
Whether to enable checking the *config.json* file resulting from **services.radicle.settings**.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.ci.adapters.native.instances
radicle−native−ci adapter instances.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/radicle/adapters/native.nix>

services.radicle.ci.adapters.native.instances.<name>.enable
Whether to enable this radicle−native−ci instance.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/radicle/adapters/native.nix>

services.radicle.ci.adapters.native.instances.<name>.package
The radicle−native−ci package to use.

Type: package

Default:

```
pkgs.radicle-native-ci
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/radicle/adapters/native.nix>

services.radicle.ci.adapters.native.instances.<name>.name
Adapter name that is used in the radicle−ci−broker configuration. Defaults to the attribute name.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/radicle/adapters/native.nix>

services.radicle.ci.adapters.native.instances.<name>.runtimePackages
Packages added to the adapter's **PATH**.

Type: list of package

Default:

```
with pkgs; [
  bash
  coreutils
  curl
  gawk
  gitMinimal
  gnused
  wget
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/radicle/adapters/native.nix>

services.radicle.ci.adapters.native.instances.<name>.settings
Configuration of radicle−native−ci. See **https://radicle.network/nodes/seed.radicle.dev/rad:z3qg5TKmN83afz2fj9z3fQjU8vaYE#configuration** for more information.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/radicle/adapters/native.nix>

services.radicle.ci.adapters.native.instances.<name>.settings.base_url
Base URL for build logs (mandatory for access from CI broker page).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/radicle/adapters/native.nix>

services.radicle.ci.adapters.native.instances.<name>.settings.log
File where radicle−native−ci should write the run log.

Type: absolute path

Default:

```
"${config.services.radicle.ci.broker.logDir}/adapters/native/‹name› \
.log"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/radicle/adapters/native.nix>

services.radicle.ci.adapters.native.instances.<name>.settings.state
Directory where per−run directories are stored.

Type: absolute path

Default:

```
"${config.services.radicle.ci.broker.stateDir}/adapters/native/‹nam \
e›"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/radicle/adapters/native.nix>

services.radicle.ci.broker.enable
Whether to enable radicle−ci−broker.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/radicle/ci−broker.nix>

services.radicle.ci.broker.enableHardening
Whether to enable systemd hardening.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/radicle/ci−broker.nix>

services.radicle.ci.broker.package
The radicle−ci−broker package to use.

Type: package

Default:

```
pkgs.radicle−ci−broker
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/radicle/ci−broker.nix>

services.radicle.ci.broker.checkConfig
Whether to enable checking the *ci−broker.yaml* file resulting from **services.radicle.ci.broker.settings**.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/radicle/ci−broker.nix>

services.radicle.ci.broker.logDir

Log directory of radicle−ci−broker.

Type: absolute path

Default:

```
"/var/log/radicle−ci"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/radicle/ci−broker.nix>

services.radicle.ci.broker.settings

Configuration of radicle−ci−broker. See **https://radicle.network/nodes/seed.radicle.dev/rad:zwTxyg-wuz5LDGBq255RA2CbNGrz8/tree/doc/userguide.md#configuration** for more information.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Example:

```
{
  adapters.native = {
    command = lib.getExe pkgs.radicle−native−ci;
    config = { };
    config_env = "RADICLE_NATIVE_CI";
    env.PATH = lib.makeBinPath (with pkgs; [ bash coreutils ]);
  };
  triggers = [
    {
      adapter = "native";
      filters = [
        {
          And = [
            { HasFile = ".radicle/native.yaml"; }
            { Node = "z6MkgEMYod7Hxfy9qCvDv5hYHkZ4ciWmLFgfvm3Wn1b2w \
2FV"; }
            {
              Or = [
                "DefaultBranch"
                "PatchCreated"
                "PatchUpdated"
              ];
            }
          ];
        }
      ];
    }
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/radicle/ci-broker.nix>

services.radicle.ci.broker.settings.adapters
CI adapters. See also the options under **services.radicle.ci.adapters**.

Type: attribute set of (open submodule of (JSON value))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/radicle/ci-broker.nix>

services.radicle.ci.broker.settings.adapters.<name>.command
Adapter command to run.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/radicle/ci-broker.nix>

services.radicle.ci.broker.settings.adapters.<name>.env
Environment variables to add when running the adapter.

Type: attribute set of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/radicle/ci-broker.nix>

services.radicle.ci.broker.settings.db
Database file path.

Type: absolute path

Default:

```
"${config.services.radicle.ci.broker.stateDir}/ci-broker.db"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/radicle/ci-broker.nix>

services.radicle.ci.broker.settings.report_dir
Directory where HTML and JSON report pages are written.

Type: null or absolute path

Default:

```
"${config.services.radicle.ci.broker.stateDir}/reports"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/radicle/ci-broker.nix>

services.radicle.ci.broker.settings.triggers
CI triggers.

Type: list of (open submodule of (JSON value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/radicle/ci−broker.nix>

services.radicle.ci.broker.settings.triggers.*.adapter
Adapter name.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/radicle/ci−broker.nix>

services.radicle.ci.broker.settings.triggers.*.filters
Trigger filter.

Type: list of (JSON value)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/radicle/ci−broker.nix>

services.radicle.ci.broker.stateDir
State directory of radicle−ci−broker.

Type: absolute path

Default:

```
"/var/lib/radicle−ci"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/radicle/ci−broker.nix>

services.radicle.httpd.enable
Whether to enable Radicle HTTP gateway to radicle−node.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.package
The radicle−httpd package to use.

Type: package

Default:

```
pkgs.radicle−httpd
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.aliases
Alias and RID pairs to shorten git clone commands for repositories.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  heartwood = "rad:z3gqcJUoA1n9HaHKufZs5FCSGazv5";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.extraArgs
Extra arguments for ‘radicle−httpd’

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.listenAddress
The IP address on which ‘radicle−httpd’ listens.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.listenPort
The port on which ‘radicle−httpd’ listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx
With this option, you can customize an nginx virtual host which already has sensible defaults for ‘radicle−httpd’. Set to ‘{}’ if you do not need any customization to the virtual host. If enabled, then by default, the **serverName** is ‘radicle−${config.networking.hostName}.${config.networking.domain}’, TLS is active, and certificates are acquired via ACME. If this is set to null (the default), no nginx virtual host will be configured.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  serverAliases = [
    "seed.${config.networking.domain}"
  ];
  enableACME = false;
```

```
  useACMEHost = config.networking.domain;
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme-challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.globalRedirect

If set, all requests for this host are redirected (defaults to 301, configurable with 'redirectCode') to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.http2

Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.http3

Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.http3_hq

Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides ‘addSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.listen.*.addr

Listen address.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.listen.*.extraParameters

Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
```

```
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.listen.*.ssl
Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations.<name>.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:

<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations.<name>.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix-shell --packages apacheHttpd --run 'htpasswd -B -c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won't unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with 'lib.mkOrder'. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en-US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.rejectSSL
Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.reuseport
Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.root
The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.serverName
Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
"radicle-\${config.networking.hostName}.\${config.networking.dom \
ain}"
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca-bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.httpd.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

2. see the **security.acme.certs** option

services.radicle.node.extraArgs
Extra arguments for ‘radicle−node’

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.node.listenAddress
The IP address on which ‘radicle−node’ listens.

Type: string

Default:

```
"[::]"
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.node.listenPort
The port on which ‘radicle−node’ listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8776
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.node.openFirewall
Whether to enable opening the firewall for ‘radicle−node’.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.privateKey
An SSH private key (as an absolute file path or Systemd credential name), usually generated by ‘rad auth’.

If set to the default value of ‘null’, radicle will import the private key from a credential named ‘xyz.radicle.node.secret’.

If configured as a credential name it will be imported via 'ImportCredential=' in the service configuration. Refer to the systemd−creds documentation for more details **https://systemd.io/CREDENTIALS/**

Type: null or absolute path or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.privateKeyPassphrase
A passphrase for an SSH private key (as a Systemd credential name), usually provided on generation of the key with 'rad auth'.

If set to the default value of 'null', radicle will optionally import the passphrase from a credential named 'xyz.radicle.node.passphrase'.

If the passphrase is not set, radicle will prompt for it.

If configured as a credential name it will be imported via 'ImportCredential=' in the service configuration. Refer to the systemd−creds documentation for more details **https://systemd.io/CREDENTIALS/**

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.publicKey
An SSH public key (as an absolute file path or directly as a string), usually generated by 'rad auth'.

Make sure to not include a comment if your key comes with a comment.

Type: absolute path or string

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radicle.settings
See **https://radicle.network/nodes/iris.radicle.network/rad:z3gqcJUoA1n9HaHKufZs5FCSGazv5/tree/radicle/src/node/config.rs#L275**

Type: open submodule of (JSON value)

Default:

```
{ }
```

Example:

```
{
  web.pinned.repositories = [
    "rad:z3gqcJUoA1n9HaHKufZs5FCSGazv5" # heartwood
    "rad:z3trNYnLWS11cJWC6BbxDs5niGo82" # rips
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/radicle.nix>

services.radvd.enable

Whether to enable the Router Advertisement Daemon (**radvd**), which provides link−local advertisements of IPv6 router addresses and prefixes using the Neighbor Discovery Protocol (NDP). This enables stateless address autoconfiguration in IPv6 clients on the network.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/radvd.nix>

services.radvd.package

The radvd package to use.

Type: package

Default:

```
pkgs.radvd
```

Declared by:

<nixpkgs/nixos/modules/services/networking/radvd.nix>

services.radvd.config

The contents of the radvd configuration file.

Type: strings concatenated with “\n”

Example:

```
interface eth0 {
  AdvSendAdvert on;
  prefix 2001:db8:1234:5678::/64 { };
};
```

Declared by:

<nixpkgs/nixos/modules/services/networking/radvd.nix>

services.radvd.debugLevel

The debugging level is an integer in the range from 1 to 5, from quiet to very verbose. A debugging level of 0 completely turns off debugging.

Type: integer between 0 and 5 (both inclusive)

Default:

Example:

```
5
```

Declared by:

<nixpkgs/nixos/modules/services/networking/radvd.nix>

services.ratbagd.enable

Whether to enable ratbagd for configuring gaming mice.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/ratbagd.nix>

services.ratbagd.package
The libratbag package to use.

Type: package

Default:

```
pkgs.libratbag
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/ratbagd.nix>

services.rathole.enable
Whether to enable Rathole.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/rathole.nix>

services.rathole.package
The rathole package to use.

Type: package

Default:

```
pkgs.rathole
```

Declared by:
<nixpkgs/nixos/modules/services/networking/rathole.nix>

services.rathole.credentialsFile
Path to a TOML file to be merged with the settings. Useful to set secret config parameters like tokens, which should not appear in the Nix Store.

Type: absolute path

Default:

```
"/dev/null"
```

Example:

```
"/var/lib/secrets/rathole/config.toml"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/rathole.nix>

services.rathole.role
Select whether rathole needs to be run as a ‘client’ or a ‘server’. Server is a machine with a public IP and client is a device behind NAT, but running some services that need to be exposed to the Internet.

Type: one of “server”, “client”

Declared by:
<nixpkgs/nixos/modules/services/networking/rathole.nix>

services.rathole.settings
Rathole configuration, for options reference see the **example** on GitHub. Both server and client configurations can be specified at the same time, regardless of the selected role.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  server = {
    bind_addr = "0.0.0.0:2333";
    services = {
      my_nas_ssh = {
        bind_addr = "0.0.0.0:5202";
        token = "use_a_secret_that_only_you_know";
      };
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/rathole.nix>

services.rauc.enable
Whether to enable RAUC A/B update service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/rauc.nix>

services.rauc.package
The rauc package to use.

Type: package

Default:

```
pkgs.rauc
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/rauc.nix>

services.rauc.bootloader
The bootloader backend for RAUC.

Type: one of “barebox”, “grub”, “uboot”, “efi”, “custom”, “noop”

Example:

```
"grub"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/rauc.nix>

services.rauc.bundleFormats
Allowable formats for the RAUC bundle.

Type: list of string

Default:

```
[
  "-plain"
  "+verity"
]
```

Example:

```
[
  "-plain"
  "+verity"
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/rauc.nix>

services.rauc.client.enable
Whether to enable RAUC client in the system environment.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/rauc.nix>

services.rauc.compatible
The compatibility string for this system. Can be any format so long as you are consistent.

Type: string

Example:

```
"nix/appliance/foo"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/rauc.nix>

services.rauc.dataDir
The state directory for RAUC.

Type: absolute path

Default:

```
"/var/lib/rauc"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/rauc.nix>

services.rauc.mark−good.enable

Whether to enable RAUC Good−marking service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/rauc.nix>

services.rauc.settings

Rauc configuration that will be converted to INI. Refer to: **https://rauc.readthedocs.io/en/latest/reference.html#sec−ref−slot−config** for details on supported values.

All module−specific options override these.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/rauc.nix>

services.rauc.slots

RAUC slot definitions. Every key is a slot class and every value is a list of slot indexes.

Type: attribute set of list of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/rauc.nix>

services.rauc.slots.<name>.*.enable

Whether to enable this RAUC slot.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/rauc.nix>

services.rauc.slots.<name>.*.device

The device to update.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/hardware/rauc.nix>

services.rauc.slots.<name>.*.settings

Settings for this slot.

Type: attribute set

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/rauc.nix>

services.rauc.slots.<name>.*.type

The type of the device.

Type: one of “raw”, “nand”, “nor”, “ubivol”, “ubifs”, “ext4”, “vfat”

Default:

```
"raw"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/rauc.nix>

services.rdnssd.enable

Whether to enable the RDNSS daemon (**rdnssd**), which configures DNS servers in */etc/resolv.conf* from RDNSS advertisements sent by IPv6 routers.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/rdnssd.nix>

services.reaction.enable

Whether to enable enable reaction.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/reaction.nix>

services.reaction.package

The reaction package to use.

Type: package

Default:

```
pkgs.reaction
```

Declared by:

<nixpkgs/nixos/modules/services/security/reaction.nix>

services.reaction.checkConfig

Check the syntax of the configuration files at build time

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/reaction.nix>

services.reaction.loglevel

reaction's loglevel. One of DEBUG, INFO, WARN, ERROR.

Type: null or one of "DEBUG", "INFO", "WARN", "ERROR"

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/reaction.nix>

services.reaction.runAsRoot

Whether to run reaction as root. Defaults to false, where an unprivileged reaction user is created.

Be sure to give it sufficient permissions. Example config permitting 'iptables' and 'journalctl' use

```
{
  # allows reading journal logs of processess
  users.users.reaction.extraGroups = [ "systemd-journal" ];
  # allows modifying ip firewall rules
  systemd.services.reaction.unitConfig.ConditionCapability = "CAP_N \
ET_ADMIN";
  systemd.services.reaction.serviceConfig = {
    CapabilityBoundingSet = [ "CAP_NET_ADMIN" ];
    AmbientCapabilities = [ "CAP_NET_ADMIN" ];
  };
  # optional, if more control over ssh logs is needed
  services.openssh.settings.LogLevel = lib.mkDefault "VERBOSE";
}
```

```
# core ipset plugin requires these if running as non-root
systemd.services.reaction.serviceConfig = {
  CapabilityBoundingSet = [
    "CAP_NET_ADMIN"
    "CAP_NET_RAW"
    "CAP_DAC_READ_SEARCH" # for journalctl
  ];
  AmbientCapabilities = [
    "CAP_NET_ADMIN"
    "CAP_NET_RAW"
    "CAP_DAC_READ_SEARCH"
  ];
};
```

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/reaction.nix>

services.reaction.settings
Configuration for reaction. See the **wiki**.

The settings are written as a YAML file.

Can be used in combination with ‘settingsFiles’ option, both will be present in the configuration directory.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/reaction.nix>

services.reaction.settings.plugins
Nixpkgs provides a ‘reaction−plugins’ package set which includes both offical and community plugins for reaction.

To use the plugins in your module configuration, in ‘settings.plugins’ you can use for e.g. ‘${lib.getExe reaction−plugins.reaction−plugin−ipset}’ See https://reaction.ppom.me/plugins/ to configure plugins.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/reaction.nix>

services.reaction.settings.plugins.<name>.enable
enable reaction−plugin−‹name›

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/reaction.nix>

services.reaction.settings.plugins.<name>.check_root
Whether reaction must check that the executable is owned by root

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/reaction.nix>

services.reaction.settings.plugins.<name>.path
path to the plugin binary

Type: string

Default:

```
${cfg.package.plugins."reaction−plugin−‹name›"}/bin/reaction−plu \
gin−‹name›
```

Declared by:
<nixpkgs/nixos/modules/services/security/reaction.nix>

services.reaction.settings.plugins.<name>.systemd
Whether reaction must isolate the plugin using systemd's run0

Type: boolean

Default:

```
"config.services.reaction.runAsRoot"
```

Declared by:
<nixpkgs/nixos/modules/services/security/reaction.nix>

services.reaction.settings.plugins.<name>.systemd_options
A key−value map of systemd options. Keys must be strings and values must be string arrays.

See 'man systemd.directives' for all supported options, and particularly options in 'man systemd.exec'

Type: attribute set of list of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/reaction.nix>

services.reaction.settingsFiles
Configuration for reaction, see the **wiki**.

reaction supports JSON, YAML and JSONnet. For those who prefer to take advantage of JSONnet rather than Nix.

Can be used in combination with 'settings' option, both will be present in the configuration directory.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/reaction.nix>

services.reaction.stopForFirewall
Whether to stop reaction when reloading the firewall.

The presence of a reaction chain in the INPUT table may cause the firewall reload to fail. One can alternatively cherry−pick the right iptables commands to execute before and after the firewall

```
{
  systemd.services.firewall.serviceConfig = {
    ExecStopPre = [ "${pkgs.iptables}/bin/iptables −w −D INPUT − \
p all −j reaction" ];
    ExecStartPost = [ "${pkgs.iptables}/bin/iptables −w −I INPUT  \
−p all −j reaction" ];
  };
}
```

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/reaction.nix>

services.readarr.enable
Whether to enable Readarr, a Usenet/BitTorrent ebook downloader.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/readarr.nix>

services.readarr.package
The readarr package to use.

Type: package

Default:

```
pkgs.readarr
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/readarr.nix>

services.readarr.dataDir
The directory where Readarr stores its data files.

Type: string

Default:

```
"/var/lib/readarr/"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/readarr.nix>

services.readarr.environmentFiles
Environment file to pass secret configuration values. Each line must follow the 'READARR__SECTION__KEY=value' pattern. Please consult the documentation at the **wiki**.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/readarr.nix>

services.readarr.group
Group under which Readarr runs.

Type: string

Default:

```
"readarr"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/readarr.nix>

services.readarr.openFirewall

Open ports in the firewall for Readarr

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/readarr.nix>

services.readarr.settings

Attribute set of arbitrary config options. Please consult the documentation at the **wiki**.

WARNING: this configuration is stored in the world−readable Nix store! For secrets use **services.readarr.environmentFiles**.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  update.mechanism = "internal";
  server = {
    urlbase = "localhost";
    port = 8787;
    bindaddress = "*";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/readarr.nix>

services.readarr.settings.log.analyticsEnabled

Send Anonymous Usage Data

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/readarr.nix>

services.readarr.settings.server.port

Port Number

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8787
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/readarr.nix>

services.readarr.settings.update.automatically
Automatically download and install updates.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/readarr.nix>

services.readarr.settings.update.mechanism
which update mechanism to use

Type: null or one of “external”, “builtIn”, “script”

Default:

```
"external"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/readarr.nix>

services.readarr.user
User account under which Readarr runs.

Type: string

Default:

```
"readarr"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/readarr.nix>

services.readeck.enable
Whether to enable Readeck.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/readeck.nix>

services.readeck.package
The readeck package to use.

Type: package

Default:

```
pkgs.readeck
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/readeck.nix>

services.readeck.environmentFile

File containing environment variables to be passed to Readeck. May be used to provide the Readeck secret key by setting the READECK_SECRET_KEY variable.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/readeck.nix>

services.readeck.settings

Additional configuration for Readeck, see **https://readeck.org/en/docs/configuration** for supported values.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  main = {
    log_level = "debug";
  };
  server = {
    port = 9000;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/readeck.nix>

services.realm.enable

Whether to enable A simple, high performance relay server written in rust.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/realm.nix>

services.realm.package

The realm package to use.

Type: package

Default:

```
pkgs.realm
```

Declared by:

<nixpkgs/nixos/modules/services/networking/realm.nix>

services.realm.config

The realm configuration, see **https://github.com/zhboner/realm#overview** for documentation.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/realm.nix>

services.realmd.enable

Whether to enable realmd service for managing system enrollment in Active Directory domains.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/realmd.nix>

services.realmd.package

The realmd package to use.

Type: package

Default:

```
pkgs.realmd
```

Declared by:

<nixpkgs/nixos/modules/services/misc/realmd.nix>

services.rebuilderd.enable

Whether to enable rebuilderd service for independent verification of binary packages.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/rebuilderd.nix>

services.rebuilderd.package

The rebuilderd package to use.

Type: package

Default:

```
pkgs.rebuilderd
```

Declared by:

<nixpkgs/nixos/modules/services/misc/rebuilderd.nix>

services.rebuilderd.settings

Configuration for rebuilderd (rebuilderd.conf)

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/misc/rebuilderd.nix>

services.recyclarr.enable

Whether to enable recyclarr service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/recyclarr.nix>

services.recyclarr.package

The recyclarr package to use.

Type: package

Default:

```
pkgs.recyclarr
```

Declared by:

<nixpkgs/nixos/modules/services/misc/recyclarr.nix>

services.recyclarr.command

The recyclarr command to run (e.g., sync).

Type: string

Default:

```
"sync"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/recyclarr.nix>

services.recyclarr.configuration

Recyclarr YAML configuration as a Nix attribute set.

For detailed configuration options and examples, see the **official configuration reference**.

The configuration is processed using **utils.genJqSecretsReplacement** to handle secret substitution.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  radarr = {
    radarr-main = {
```

```
            api_key = {
              _secret = "/run/credentials/recyclarr.service/radarr-api_k \
        ey";
            };
            base_url = "http://localhost:7878";
            instance_name = "main";
          };
        };
        sonarr = {
          sonarr-main = {
            api_key = {
              _secret = "/run/credentials/recyclarr.service/sonarr-api_k \
        ey";
            };
            base_url = "http://localhost:8989";
            instance_name = "main";
          };
        };
        }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/recyclarr.nix>

services.recyclarr.group
Group under which recyclarr runs.

Type: string

Default:

```
"recyclarr"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/recyclarr.nix>

services.recyclarr.schedule
When to run recyclarr in systemd calendar format.

Type: string

Default:

```
"daily"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/recyclarr.nix>

services.recyclarr.user
User account under which recyclarr runs.

Type: string

Default:

```
"recyclarr"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/recyclarr.nix>

services.redis.package

The redis package to use.

Type: package

Default:

```
pkgs.redis
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers

Configuration of multiple ‘redis−server’ instances.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.enable

Whether to enable Redis server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.appendFsync

How often to fsync the append−only log, options: no, always, everysec.

Type: string

Default:

```
"everysec"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.appendOnly

By default data is only periodically persisted to disk, enable this option to use an append−only file for improved persistence.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.bind

The IP interface to bind to. ‘null’ means “all interfaces”.

Type: null or string

Default:

```
"127.0.0.1"
```

Example:

```
"192.0.2.1"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.databases

Set the number of databases.

Type: signed integer

Default:

```
16
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.extraParams

Extra parameters to append to redis−server invocation

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--sentinel"
]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.group

Group account under which this instance of redis−server runs.

Note

If left as the default value this group will automatically be created on system activation, otherwise you are responsible for ensuring the group exists before the redis service starts.

Type: string

Default:

```
config.user
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.logLevel

Specify the server verbosity level, options: debug, verbose, notice, warning.

Type: string

Default:

```
"notice"
```

Example:

```
"debug"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.logfile
Specify the log file name. Also ‘stdout’ can be used to force Redis to log on the standard output.

Type: string

Default:

```
"/dev/null"
```

Example:

```
"/var/log/redis.log"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.masterAuth
If the master is password protected (using the requirePass configuration) it is possible to tell the slave to authenticate before starting the replication synchronization process, otherwise the master will refuse the slave request. (STORED PLAIN TEXT, WORLD−READABLE IN NIX STORE)

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.masterAuthFile
File with password for the master user.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/redis−master−password"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.masterUser
If the master is password protected via ACLs this option can be used to specify the Redis user that is used by replicas.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.maxclients

Set the max number of connected clients at the same time.

Type: signed integer

Default:

```
10000
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.openFirewall

Whether to open ports in the firewall for the server.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.port

The TCP port to accept connections. If port 0 is specified Redis will not listen on a TCP socket.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
if name == "" then 6379 else 0
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.requirePass

Password for database (STORED PLAIN TEXT, WORLD−READABLE IN NIX STORE). Use requirePassFile to store it outside of the nix store in a dedicated file.

Type: null or string

Default:

```
null
```

Example:

```
"letmein!"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.requirePassFile

File with password for the database.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/redis−password"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.save

The schedule in which data is persisted to disk, represented as a list of lists where the first element represent the amount of seconds and the second the number of changes.

If set to the empty list (‘[]’) then RDB persistence will be disabled (useful if you are using AOF or don’t want any persistence).

Type: list of list of signed integer

Default:

```
[
  [
    900
    1
  ]
  [
    300
    10
  ]
  [
    60
    10000
  ]
]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.sentinelAuthPassFile

File with password for connecting to other Sentinel instances.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/sentinel-password"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.sentinelAuthUser

The username to use to monitor a master from Sentinel.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.sentinelMasterHost

The IP address (recommended) or hostname of the Redis master that Sentinel will monitor.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.sentinelMasterName
The master name of the Redis master that Sentinel will monitor.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.sentinelMasterPort
The TCP port of the Redis master that Sentinel will monitor.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.sentinelMasterQuorum
The Sentinel quorum (minimum number of Sentinel nodes online for failover)

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.settings
Redis configuration. Refer to **https://redis.io/topics/config** for details on supported values.

Type: attribute set of (boolean or signed integer or string or list of string)

Default:

```
{ }
```

Example:

```
{
  loadmodule = [ "/path/to/my_module.so" "/path/to/other_module.so" \
 ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.slaveOf
IP and port to which this redis instance acts as a slave.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
```

```
  ip = "192.168.1.100";
  port = 6379;
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.slaveOf.ip
IP of the Redis master

Type: string

Example:

```
"192.168.1.100"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.slaveOf.port
port of the Redis master

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6379
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.slowLogLogSlowerThan
Log queries whose execution take longer than X in milliseconds.

Type: signed integer

Default:

```
10000
```

Example:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.slowLogMaxLen
Maximum number of items to keep in slow log.

Type: signed integer

Default:

```
128
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.syslog
Enable logging to the system logger.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.unixSocket
The path to the socket to bind to.

Type: null or absolute path

Default:

```
if name == "" then "/run/redis/redis.sock" else "/run/redis-${name \
}/redis.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.unixSocketPerm
Change permissions for the socket

Type: signed integer

Default:

```
660
```

Example:

```
600
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.servers.<name>.user
User account under which this instance of redis-server runs.

Note
If left as the default value this user will automatically be created on system activation, otherwise you are responsible for ensuring the user exists before the redis service starts.

Type: string

Default:

```
if name == "" then "redis" else "redis-${name}"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redis.vmOverCommit
Whether to enable set 'vm.overcommit_memory' sysctl to 1 (Suggested for Background Saving: **https://redis.io/docs/get-started/faq/**) .

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/redis.nix>

services.redlib.enable

Whether to enable Private front−end for Reddit.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/redlib.nix>

services.redlib.package

The redlib package to use.

Type: package

Default:

```
pkgs.redlib
```

Declared by:

<nixpkgs/nixos/modules/services/misc/redlib.nix>

services.redlib.address

The address to listen on

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/redlib.nix>

services.redlib.openFirewall

Open ports in the firewall for the redlib web interface

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/redlib.nix>

services.redlib.port

The port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Example:

```
8000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redlib.nix>

services.redlib.settings
See **GitHub** for available settings.

Type: open submodule of attribute set of (null or boolean or signed integer or string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redlib.nix>

services.redmine.enable
Whether to enable Redmine, a project management web application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.package
The redmine package to use.

Type: package

Default:

```
pkgs.redmine
```

Example:

```
redmine.override { ruby = pkgs.ruby_3_3; }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.address
IP address Redmine should bind to.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.components.breezy
Whether to enable bazaar integration…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.components.cvs
Whether to enable cvs integration…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.components.ghostscript
Whether to enable exporting Gant diagrams as PDF…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.components.git
Whether to enable git integration…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.components.imagemagick
Whether to enable exporting Gant diagrams as PNG…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.components.mercurial
Whether to enable Mercurial integration…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.components.minimagick_font_path
MiniMagick font path

Type: string

Default:

```
""
```

Example:

```
"/run/current-system/sw/share/X11/fonts/LiberationSans-Regular.tt \
f"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.components.subversion
Whether to enable Subversion integration…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.database.host
Database host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.database.name
Database name.

Type: string

Default:

```
"redmine"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.database.passwordFile
A file containing the password corresponding to **database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/redmine-dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.database.socket
Path to the unix socket file to use for authentication.

Type: null or absolute path

Default:

```
/run/mysqld/mysqld.sock
```

Example:

```
"/run/mysqld/mysqld.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.database.type
Database engine to use.

Type: one of “mysql2”, “postgresql”, “sqlite3”

Default:

```
"mysql2"
```

Example:

```
"postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.database.user
Database user.

Type: string

Default:

```
"redmine"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.extraEnv
Extra configuration in additional_environment.rb.

See **https://svn.redmine.org/redmine/trunk/config/additional_environment.rb.example** for details.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  config.logger.level = Logger::DEBUG
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.group
Group under which Redmine is ran.

Type: string

Default:

```
"redmine"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.plugins
Set of plugins.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  redmine_env_auth = builtins.fetchurl {
    url = "https://github.com/Intera/redmine_env_auth/archive/0.6.z \
ip";
    sha256 = "0yyr1yjd8gvvh832wdc8m3xfnhhxzk2pk3gm2psg5w9jdvd6skak" \
;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.port
Port on which Redmine is ran.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.settings
Redmine configuration (*configuration.yml*). Refer to **https://guides.rubyonrails.org/action_mailer_basics.html#action-mailer-configuration** for details.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  email_delivery = {
    delivery_method = "smtp";
    smtp_settings = {
      address = "mail.example.com";
      port = 25;
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.stateDir
The state directory, logs and plugins are stored here.

Type: absolute path

Default:

```
"/var/lib/redmine"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.themes
Set of themes.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  dkuk-redmine_alex_skin = builtins.fetchurl {
    url = "https://bitbucket.org/dkuk/redmine_alex_skin/get/1842ef6 \
75ef3.zip";
```

```
    sha256 = "0hrin9lzyi50k4w2bd2b30vrf1i4fi1c0gyas5801wn8i7kpm9yl" \
;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redmine.user
User under which Redmine is ran.

Type: string

Default:

```
"redmine"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/redmine.nix>

services.redshift.enable
Enable Redshift to change your screen’s colour temperature depending on the time of day.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/x11/redshift.nix>

services.redshift.package
The redshift package to use.

Type: package

Default:

```
pkgs.redshift
```

Declared by:
<nixpkgs/nixos/modules/services/x11/redshift.nix>

services.redshift.brightness.day
Screen brightness to apply during the day, between ‘0.1’ and ‘1.0’.

Type: string

Default:

```
"1"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/redshift.nix>

services.redshift.brightness.night
Screen brightness to apply during the night, between ‘0.1’ and ‘1.0’.

Type: string

Default:

```
"1"
```

Declared by:
<nixpkgs/nixos/modules/services/x11/redshift.nix>

services.redshift.executable

Redshift executable to use within the package.

Type: string

Default:

```
"/bin/redshift"
```

Example:

```
"/bin/redshift-gtk"
```

Declared by:

<nixpkgs/nixos/modules/services/x11/redshift.nix>

services.redshift.extraOptions

Additional command−line arguments to pass to **redshift**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-v"
  "-m randr"
]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/redshift.nix>

services.redshift.temperature.day

Colour temperature to use during the day, between ‘1000’ and ‘25000’ K.

Type: integer between 1000 and 25000 (both inclusive)

Default:

```
5500
```

Declared by:

<nixpkgs/nixos/modules/services/x11/redshift.nix>

services.redshift.temperature.night

Colour temperature to use at night, between ‘1000’ and ‘25000’ K.

Type: integer between 1000 and 25000 (both inclusive)

Default:

```
3700
```

Declared by:

<nixpkgs/nixos/modules/services/x11/redshift.nix>

services.redsocks.enable

Whether to enable redsocks.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.redsocks.chroot
Chroot under which to run redsocks. Log file is opened before chroot, but if logging to syslog /etc/localtime may be required.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.redsocks.log
Where to send logs.

Possible values are:

- stderr
- file:/path/to/file
- syslog:FACILITY where FACILITY is any of “daemon”, “local0”, etc.

Type: string

Default:

```
"stderr"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.redsocks.log_debug
Log connection progress.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.redsocks.log_info
Log start and end of client sessions.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.redsocks.redsocks
Local port to proxy associations to be performed.

The example shows how to configure a proxy to handle port 80 as HTTP relay, and all other ports as HTTP connect.

Type: list of (submodule)

Example:

```
[
```

```
{
  doNotRedirect = [
    "-d 1.2.0.0/16"
  ];
  port = 23456;
  proxy = "1.2.3.4:8080";
  redirectCondition = "--dport 80";
  type = "http-relay";
}
{
  doNotRedirect = [
    "-d 1.2.0.0/16"
  ];
  port = 23457;
  proxy = "1.2.3.4:8080";
  redirectCondition = true;
  type = "http-connect";
}
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.redsocks.redsocks.*.disclose_src

Way to disclose client IP to the proxy.

- "false": do not disclose

http-connect supports the following ways:

- "X-Forwarded-For": add header "X-Forwarded-For: IP"
- "Forwarded_ip": add header "Forwarded: for=IP" (see RFC7239)
- "Forwarded_ipport": add header 'Forwarded: for="IP:port"'

Type: one of "false", "X-Forwarded-For", "Forwarded_ip", "Forwarded_ipport"

Default:

```
"false"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.redsocks.redsocks.*.doNotRedirect

Iptables filters that if matched will get the packet off of redsocks.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-d 1.2.3.4"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.redsocks.redsocks.*.ip

IP on which redsocks should listen. Defaults to 127.0.0.1 for security reasons.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.redsocks.redsocks.*.login

Login to send to proxy.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.redsocks.redsocks.*.password

Password to send to proxy. WARNING, this will end up world−readable in the store! Awaiting https://github.com/NixOS/nix/issues/8 to be able to fix.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.redsocks.redsocks.*.port

Port on which redsocks should listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
12345
```

Declared by:

<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.redsocks.redsocks.*.proxy

Proxy through which redsocks should forward incoming traffic. Example: “example.org:8080”

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.redsocks.redsocks.*.redirectCondition

Conditions to make outbound packets go through this redsocks instance.

If set to false, no packet will be forwarded. If set to true, all packets will be forwarded (except packets excluded by redirectInternetOnly).

If set to a string, this is an iptables filter that will be matched against packets before getting them into redsocks. For example, setting it to “–dport 80” will only send packets to port 80 to redsocks. Note “−p tcp” is always implicitly added, as udp can only be proxied through redudp or the like.

Type: boolean or string

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.redsocks.redsocks.*.redirectInternetOnly
Exclude all non−globally−routable IPs from redsocks

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.redsocks.redsocks.*.type
Type of proxy.

Type: one of “socks4”, “socks5”, “http−connect”, “http−relay”

Declared by:
<nixpkgs/nixos/modules/services/networking/redsocks.nix>

services.remark42.enable
Whether to enable Remark42 commenting server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/remark42.nix>

services.remark42.package
The remark42 package to use.

Type: package

Default:

```
pkgs.remark42
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/remark42.nix>

services.remark42.dataDir
Working directory for Remark42. Data files are stored here and automatic backups will be created in this directory by default.

Type: absolute path

Default:

```
"/var/lib/remark42"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/remark42.nix>

services.remark42.environmentFile

Optional environment file in systemd ‘EnvironmentFile=’ format. Use this for secrets to avoid storing them in the Nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/remark42.env"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/remark42.nix>

services.remark42.listenAddress

Bind address (‘REMARK_ADDRESS’).

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/remark42.nix>

services.remark42.openFirewall

Whether to open the firewall for ‘port’.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/remark42.nix>

services.remark42.port

Listen port (‘REMARK_PORT’).

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/remark42.nix>

services.remark42.remarkUrl

Public URL of this Remark42 instance. This is passed to the backend as ‘REMARK_URL’ and should match the frontend embed config ‘host’.

Type: string

Example:

```
"https://comments.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/remark42.nix>

services.remark42.settings
Extra environment variables passed to Remark42.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  AUTH_ANON = "true";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/remark42.nix>

services.remark42.sites
Site IDs served by this instance (passed as ‘SITE’, comma−separated). The frontend embed config ‘site_id’ must match one of these values.

Type: list of string

Default:

```
[
  "remark"
]
```

Example:

```
[
  "blog"
  "docs"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/remark42.nix>

services.renovate.enable
Whether to enable renovate.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/renovate.nix>

services.renovate.package
The renovate package to use.

Type: package

Default:

```
pkgs.renovate
```

Declared by:
<nixpkgs/nixos/modules/services/misc/renovate.nix>

services.renovate.credentials
Allows configuring environment variable credentials for renovate, read from files. This should always be used for passing confidential data to renovate.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  RENOVATE_TOKEN = "/etc/renovate/token";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/renovate.nix>

services.renovate.environment
Extra environment variables to export to the Renovate process from the systemd unit configuration.

See **https://docs.renovatebot.com/config-overview** for available environment variables.

Type: attribute set of (null or string or absolute path or package)

Default:

```
{ }
```

Example:

```
{
  LOG_LEVEL = "debug";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/renovate.nix>

services.renovate.runtimePackages
Packages available to renovate.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/renovate.nix>

services.renovate.schedule
How often to run renovate. See **systemd.time**(7) for the format.

Type: null or string

Default:

```
null
```

Example:

```
"*:0/10"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/renovate.nix>

services.renovate.settings
Renovate's global configuration. If you want to pass secrets to renovate, please use **services.renovate.credentials** for that.

See **https://docs.renovatebot.com/config-overview** for available settings.

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  endpoint = "https://git.example.com";
  gitAuthor = "Renovate <renovate@example.com>";
  platform = "gitea";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/renovate.nix>

services.renovate.validateSettings
Whether to run renovate's config validator on the built configuration.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/renovate.nix>

services.reposilite.enable
Whether to enable Reposilite.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/reposilite.nix>

services.reposilite.package
The reposilite package to use.

Type: package

Default:

```
pkgs.reposilite
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/reposilite.nix>

services.reposilite.database
Database options.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.database.dbname
Database name.

Type: string

Default:

```
"reposilite"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.database.host
Database host address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.database.passwordFile
Path to the file containing the password for the database connection. This file must be readable by **services.reposilite.user**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.database.path
Path to the embedded database file. Set to '−−temporary' to use an in−memory database.

Type: string

Default:

```
"reposilite.db"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.database.port
Database TCP port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
if type == "postgresql" then 5432 else 3306
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.database.type
Database engine to use.

Type: one of “h2”, “mariadb”, “mysql”, “postgresql”, “sqlite”

Default:

```
"sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.database.user
Database user.

Type: string

Default:

```
"reposilite"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.extraArgs
Extra arguments/parameters passed to the Reposilite. Can be used for first token generation.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "−−token" "name:tempsecrettoken" ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.group
The group to run Reposilite under.

Type: string

Default:

```
"reposilite"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.keyPasswordFile
Path the the file containing the password used to unlock the Java KeyStore file specified in **services.reposilite.settings.keyPath**. This file must be readable my **services.reposilite.user**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.openFirewall

Whether to open the firewall ports for Reposilite. If SSL is enabled, its port will be opened too.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.plugins

List of plugins to add to Reposilite.

Type: list of package

Default:

```
[ ]
```

Example:

```
"with reposilitePlugins; [ checksum groovy ]"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings

Configuration written to the reposilite.cdn file

Type: open submodule of (CDN value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.basePath

Custom base path for this Reposilite instance. It is not recommended changing this, you should instead prioritize using a different subdomain.

Type: string

Default:

```
"/"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.bypassExternalCache

Add cache bypass headers to responses from /api/* to avoid issues with proxies such as Cloudflare.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.cachedLogSize

Amount of messages stored in the cache logger.

Type: unsigned integer, meaning >=0

Default:

```
50
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.compressionStrategy

Compression algorithm used by this instance of Reposilite. ‘none’ reduces usage of CPU & memory, but requires transfering more data.

Type: one of “none”, “gzip”

Default:

```
"none"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.database

Database connection string. Please use **services.reposilite.database** instead. See **https://reposilite.com/guide/general#local−configuration** for valid values.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.databaseThreadPool

Maximum amount of concurrent connections to the database. (one per thread) Embedded databases (sqlite, h2) do not support truly concurrent connections, so the value will always be ‘1’ if they are used.

Type: positive integer, meaning >0

Default:

```
1
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.debugEnabled

Whether to enable debug mode.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.defaultFrontend
Whether to enable the default included frontend with a dashboard.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.enforceSsl
Whether to redirect all traffic to SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.hostname
The hostname to bind to. Set to ‘0.0.0.0’ to accept connections from everywhere, or ‘127.0.0.1’ to restrict to localhost."

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.idleTimeout
Default idle timeout used by Jetty.

Type: unsigned integer, meaning >=0

Default:

```
30000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.ioThreadPool
The IO thread pool handles all tasks that may benefit from non−blocking IO. (min: 2) Because most tasks are redirected to IO thread pool, it might be a good idea to keep it at least equal to web thread pool.

Type: integer between 2 and 65535 (both inclusive)

Default:

```
8
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.keyPassword

Plaintext password used to unlock the Java KeyStore set in **services.reposilite.settings.keyPath**. WARNING: this option is insecure and should not be used to store the password. Consider using **services.reposilite.keyPasswordFile** instead.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.keyPath

Path to the .jsk KeyStore or paths to the PKCS#8 certificate and private key, separated by a space (see example). You can use '${WORKING_DIRECTORY}' to refer to paths relative to Reposilite's working directory. If you are using a Java KeyStore, don't forget to specify the password via the *REPOSILITE_LOCAL_KEYPASSWORD* environment variable. See **https://reposilite.com/guide/ssl** for more information on how to set SSL up.

Type: null or string

Default:

```
null
```

Example:

```
"\${WORKING_DIRECTORY}/cert.pem \${WORKING_DIRECTORY}/key.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.port

The TCP port to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.sslEnabled

Whether to listen for encrypted connections on **settings.sslPort**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.sslPort

SSL port to bind to. SSL needs to be enabled explicitly via **settings.enableSsl**.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
443
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.settings.webThreadPool
Maximum amount of threads used by the core thread pool. (min: 5) The web thread pool handles the first few steps of incoming HTTP connections, tasks are redirected as soon as possible to the IO thread pool.

Type: integer between 5 and 65535 (both inclusive)

Default:

```
16
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.useACMEHost
Host of an existing Let's Encrypt certificate to use for SSL. Make sure that the certificate directory is readable by the 'reposilite' user or group, for example via **security.acme.certs.<cert>.group**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.user
The user to run Reposilite under.

Type: string

Default:

```
"reposilite"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.reposilite.workingDirectory
Working directory for Reposilite.

Type: absolute path

Default:

```
"/var/lib/reposilite"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/reposilite.nix>

services.resilio.enable
If enabled, start the Resilio Sync daemon. Once enabled, you can interact with the service through the Web UI, or configure it in your NixOS configuration.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.enableWebUI
Enable Web UI for administration. Bound to the specified ‘httpListenAddress’ and ‘httpListenPort’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.package
The resilio−sync package to use.

Type: package

Default:

```
pkgs.resilio-sync
```

Declared by:
<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.apiKey
API key, which enables the developer API.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.checkForUpdates
Determines whether to check for updates and alert the user about them in the UI.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.deviceName
Name of the Resilio Sync device.

Type: string

Default:

```
config.networking.hostName
```

Example:

```
"Voltron"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.directoryRoot

Default directory to add folders in the web UI.

Type: string

Default:

```
""
```

Example:

```
"/media"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.downloadLimit

Download speed limit. 0 is unlimited (default).

Type: unsigned integer, meaning >=0

Default:

Example:

```
1024
```

Declared by:

<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.encryptLAN

Encrypt LAN data.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.httpListenAddr

HTTP address to bind to.

Type: string

Default:

```
"[::1]"
```

Example:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.httpListenPort

HTTP port to bind on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.httpLogin
HTTP web login username.

Type: string

Default:

```
""
```

Example:

```
"allyourbase"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.httpPass
HTTP web login password.

Type: string

Default:

```
""
```

Example:

```
"arebelongtous"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.listeningPort
Listening port. Defaults to 0 which randomizes the port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

Example:

```
44444
```

Declared by:
<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.sharedFolders
Shared folder list. If enabled, web UI must be disabled. Secrets can be generated using ‘rslsync −−generate−secret’.

If you would like to be able to modify the contents of this directories, it is recommended that you make your user a member of the ‘rslsync’ group.

Directories in this list should be in the ‘rslsync’ group, and that group must have write access to the directory. It is also recommended that ‘chmod g+s’ is applied to the directory so that any sub directories created will also belong to the ‘rslsync’ group. Also, ‘setfacl −d −m group:rslsync:rwx’ and ‘setfacl −m group:rslsync:rwx’ should also be applied so that the sub directories are writable by the group.

Type: list of attribute set of anything

Default:

```
[ ]
```

Example:

```
[
```

```
  {
    directory = "/home/user/sync_test";
    knownHosts = [
      "192.168.1.2:4444"
      "192.168.1.3:4444"
    ];
    searchLAN = true;
    secretFile = "/run/resilio-secret";
    useDHT = false;
    useRelayServer = true;
    useSyncTrash = true;
    useTracker = true;
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.storagePath
Where BitTorrent Sync will store it's database files (containing things like username info and licenses). Generally, you should not need to ever change this.

Type: absolute path

Default:

```
"/var/lib/resilio-sync/"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.uploadLimit
Upload speed limit. 0 is unlimited (default).

Type: unsigned integer, meaning >=0

Default:

Example:

```
1024
```

Declared by:
<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resilio.useUpnp
Use Universal Plug-n-Play (UPnP)

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/resilio.nix>

services.resolved.enable
Whether to enable the Systemd DNS resolver daemon (systemd-resolved).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/resolved.nix>

services.resolved.dnsDelegates
dns−delegate files to be created. See **systemd.dns−delegate**(5) for more info.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/resolved.nix>

services.resolved.dnsDelegates.<name>.Delegate
Settings option for systemd dns−delegate files. See **systemd.dns−delegate**(5) for all available options.

Type: open submodule of attribute set of (systemd option)

Declared by:
<nixpkgs/nixos/modules/system/boot/resolved.nix>

services.resolved.settings.Resolve
Settings option for systemd−resolved. See **resolved.conf**(5) for all available options.

Type: open submodule of attribute set of (systemd option)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/resolved.nix>

services.resolved.settings.Resolve.DNS
List of IP addresses to query as recursive DNS resolvers.

Type: systemd option

Default:

```
config.networking.nameservers
```

Declared by:
<nixpkgs/nixos/modules/system/boot/resolved.nix>

services.resolved.settings.Resolve.DNSOverTLS
Whether to use TLS encryption for DNS queries. Requires nameservers that support DNS−over−TLS.

Type: systemd option

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/resolved.nix>

services.resolved.settings.Resolve.DNSSEC
Whether to validate DNSSEC for DNS lookups.

Type: systemd option

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/resolved.nix>

services.resolved.settings.Resolve.Domains
List of search domains used to complete unqualified name lookups.

Type: systemd option

Default:

```
config.networking.search
```

Example:

```
[
  "scope.example.com"
  "example.com"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/resolved.nix>

services.restic.backups
Periodic backups to create with Restic.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  commandbackup = {
    command = [
      "\${lib.getExe pkgs.sudo}"
      "-u postgres"
      "\${pkgs.postgresql}/bin/pg_dumpall"
    ];
    environmentFile = "/etc/nixos/secrets/restic-environment";
    extraBackupArgs = [
      "--tag database"
    ];
    passwordFile = "/etc/nixos/secrets/restic-password";
    pruneOpts = [
      "--keep-daily 14"
      "--keep-weekly 4"
      "--keep-monthly 2"
      "--group-by tags"
    ];
    repository = "s3:example.com/mybucket";
  };
  localbackup = {
    exclude = [
      "/home/*/.cache"
    ];
    initialize = true;
    passwordFile = "/etc/nixos/secrets/restic-password";
```

```
      paths = [
        "/home"
      ];
      repository = "/mnt/backup-hdd";
    };
    remotebackup = {
      extraOptions = [
        "sftp.command='ssh backup@host -i /etc/nixos/secrets/backup \
-private-key -s sftp'"
      ];
      passwordFile = "/etc/nixos/secrets/restic-password";
      paths = [
        "/home"
      ];
      repository = "sftp:backup@host:/backups/home";
      timerConfig = {
        OnCalendar = "00:05";
        RandomizedDelaySec = "5h";
      };
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.package
The restic package to use.

Type: package

Default:

```
pkgs.restic
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.backupCleanupCommand
A script that must run after finishing the backup process.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.backupPrepareCommand
A script that must run before starting the backup process.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.checkOpts

A list of options for ‘restic check’.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--with-cache"
]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.command

Command to pass to --stdin-from-command. If null or an empty array, and ‘paths’/‘dynamicFilesFrom’ are also null, no backup command will be run.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "sudo"
  "-u"
  "postgres"
  "pg_dumpall"
]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.createWrapper

Whether to generate and add a script to the system path, that has the same environment variables set as the systemd service. This can be used to e.g. mount snapshots or perform other opterations, without having to manually specify most options.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.dynamicFilesFrom

A script that produces a list of files to back up. The results of this command are given to the ‘–files-from’ option. The result is merged with paths specified via ‘paths’.

Type: null or string

Default:

```
null
```

Example:

```
"find /home/matt/git -type d -name .git"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.environmentFile
file containing the credentials to access the repository, in the format of an EnvironmentFile as described by **systemd.exec**(5)

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.exclude
Patterns to exclude when backing up. See https://restic.readthedocs.io/en/latest/040_backup.html#excluding−files for details on syntax.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/var/cache"
  "/home/*/.cache"
  ".git"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.extraBackupArgs
Extra arguments passed to restic backup.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−cleanup−cache"
  "−−exclude−file=/etc/nixos/restic−ignore"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.extraOptions
Extra extended options to be passed to the restic −−option flag.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
```

```
    "sftp.command='ssh backup@192.168.1.100 -i /home/user/.ssh/id_rs \
  a -s sftp'"
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.inhibitsSleep
Prevents the system from sleeping while backing up.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.initialize
Create the repository if it doesn't exist.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.passwordFile
Read the repository password from a file.

Type: null or string

Default:

```
null
```

Example:

```
"/etc/nixos/restic-password"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.paths
Which paths to backup, in addition to ones specified via 'dynamicFilesFrom'. If null or an empty array and 'dynamicFilesFrom' is also null, no backup command will be run. This can be used to create a prune-only job.

Type: null or (list of string)

Default:

```
[ ]
```

Example:

```
[
  "/var/lib/postgresql"
  "/home/user/backup"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.progressFps
Controls the frequency of progress reporting.

Type: null or (nonnegative integer or floating point number, meaning >=0)

Default:

```
null
```

Example:

```
0.1
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.pruneOpts
A list of options (–keep−* et al.) for ‘restic forget –prune’, to automatically prune old snapshots. The ‘forget’ command is run *after* the ‘backup’ command, so keep that in mind when constructing the −−keep−* options.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--keep-daily 7"
  "--keep-weekly 5"
  "--keep-monthly 12"
  "--keep-yearly 75"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.rcloneConfig
Configuration for the rclone remote being used for backup. See the remote’s specific options under rclone’s docs at **https://rclone.org/docs/**. When specifying option names, use the “config” name specified in the docs. For example, to set ‘−−b2−hard−delete’ for a B2 remote, use ‘hard_delete = true’ in the attribute set. Warning: Secrets set in here will be world−readable in the Nix store! Consider using the ‘rcloneConfigFile’ option instead to specify secret values separately. Note that options set here will override those set in the config file.

Type: null or (attribute set of (string or boolean))

Default:

```
null
```

Example:

```
{
  account = "xxx";
  hard_delete = true;
  key = "xxx";
  type = "b2";
}
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.rcloneConfigFile
Path to the file containing rclone configuration. This file must contain configuration for the remote specified in this backup set and also must be readable by root. Options set in 'rcloneConfig' will override those set in this file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.rcloneOptions
Options to pass to rclone to control its behavior. See **https://rclone.org/docs/#options** for available options. When specifying option names, strip the leading '--'. To set a flag such as '--drive-use-trash', which does not take a value, set the value to the Boolean 'true'.

Type: null or (attribute set of (string or boolean))

Default:

```
null
```

Example:

```
{
  bwlimit = "10M";
  drive-use-trash = "true";
}
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.repository
repository to backup to.

Type: null or string

Default:

```
null
```

Example:

```
"sftp:backup@192.168.1.100:/backups/‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.repositoryFile
Path to the file containing the repository location to backup to.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.runCheck

Whether to run the ‘check’ command with the provided ‘checkOpts’ options.

Type: boolean

Default:

```
builtins.length config.services.backups.‹name›.checkOpts > 0
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.timerConfig

When to run the backup. See **systemd.timer**(5) for details. If null no timer is created and the backup will only run when explicitly started.

Type: null or (attribute set of (systemd option))

Default:

```
{
  OnCalendar = "daily";
  Persistent = true;
}
```

Example:

```
{
  OnCalendar = "00:05";
  Persistent = true;
  RandomizedDelaySec = "5h";
}
```

Declared by:

<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.backups.<name>.user

As which user the backup should run.

Type: string

Default:

```
"root"
```

Example:

```
"postgresql"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/restic.nix>

services.restic.server.enable

Whether to enable Restic REST Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic−rest−server.nix>

services.restic.server.package
The restic−rest−server package to use.

Type: package

Default:

```
pkgs.restic-rest-server
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic−rest−server.nix>

services.restic.server.appendOnly
Enable append only mode. This mode allows creation of new backups but prevents deletion and modification of existing backups. This can be useful when backing up systems that have a potential of being hacked.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic−rest−server.nix>

services.restic.server.dataDir
The directory for storing the restic repository.

Type: absolute path

Default:

```
"/var/lib/restic"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic−rest−server.nix>

services.restic.server.extraFlags
Extra commandline options to pass to Restic REST server.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic−rest−server.nix>

services.restic.server.htpasswd−file
The path to the servers .htpasswd file. Defaults to ‘${dataDir}/.htpasswd’.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/restic−rest−server.nix>

services.restic.server.listenAddress

Listen on a specific IP address and port or unix socket.

Type: string

Default:

```
"8000"
```

Example:

```
"127.0.0.1:8080"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/restic−rest−server.nix>

services.restic.server.privateRepos

Enable private repos. Grants access only when a subdirectory with the same name as the user is specified in the repository URL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/backup/restic−rest−server.nix>

services.restic.server.prometheus

Enable Prometheus metrics at /metrics.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/backup/restic−rest−server.nix>

services.rethinkdb.enable

Whether to enable RethinkDB server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/databases/rethinkdb.nix>

services.rethinkdb.dbpath

Location where RethinkDB stores its data, 1 data directory per instance.

Type: unspecified value

Default:

```
"/var/db/rethinkdb"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/rethinkdb.nix>

services.rethinkdb.group
Group which rethinkdb user belongs to.

Type: unspecified value

Default:

```
"rethinkdb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/rethinkdb.nix>

services.rethinkdb.pidpath
Location where each instance's pid file is located.

Type: unspecified value

Default:

```
"/run/rethinkdb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/rethinkdb.nix>

services.rethinkdb.user
User account under which RethinkDB runs.

Type: unspecified value

Default:

```
"rethinkdb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/rethinkdb.nix>

services.riemann.enable
Whether to enable Riemann network monitoring daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/riemann.nix>

services.riemann.config
Contents of the Riemann configuration file. For more complicated config you should use configFile.

Type: strings concatenated with "\n"

Declared by:
<nixpkgs/nixos/modules/services/monitoring/riemann.nix>

services.riemann.configFile
A Riemann config file. Any files in the same directory as this file will be added to the classpath by Riemann.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/riemann.nix>

services.riemann.configFiles
Extra files containing Riemann configuration. These files will be loaded at runtime by Riemann (with Clojure's 'load−file' function) at the end of the configuration if you use the config option, this is ignored if you use configFile.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/riemann.nix>

services.riemann.extraClasspathEntries
Extra entries added to the Java classpath when running Riemann.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/riemann.nix>

services.riemann.extraJavaOpts
Extra Java options used when launching Riemann.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/riemann.nix>

services.riemann−dash.enable
Enable the riemann−dash dashboard daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/riemann−dash.nix>

services.riemann−dash.config
Contents added to the end of the riemann−dash configuration file.

Type: strings concatenated with "\n"

Declared by:
<nixpkgs/nixos/modules/services/monitoring/riemann−dash.nix>

services.riemann−dash.dataDir
Location of the riemann−base dir. The dashboard configuration file is is stored to this directory. The directory is created automatically on service start, and owner is set to the riemanndash user.

Type: string

Default:

```
"/var/riemann-dash"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/riemann-dash.nix>

services.riemann-tools.enableHealth
Enable the riemann-health daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/riemann-tools.nix>

services.riemann-tools.extraArgs
A list of commandline-switches forwarded to a riemann-tool. See for example 'riemann-health --help' for available options.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-p 5555"
  "--timeout=30"
  "--attribute=myattribute=42"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/riemann-tools.nix>

services.riemann-tools.riemannHost
Address of the host riemann node. Defaults to localhost.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/riemann-tools.nix>

services.rimgo.enable
Whether to enable rimgo.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/rimgo.nix>

services.rimgo.package

The rimgo package to use.

Type: package

Default:

```
pkgs.rimgo
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/rimgo.nix>

services.rimgo.settings

Settings for rimgo, see **the official documentation** for supported options.

Type: open submodule of attribute set of string

Example:

```
{
  PORT = 69420;
  FORCE_WEBP = "1";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/rimgo.nix>

services.rimgo.settings.ADDRESS

The address to listen on.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"1.1.1.1"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/rimgo.nix>

services.rimgo.settings.PORT

The port to use.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Example:

```
69420
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/rimgo.nix>

services.ringboard.wayland.enable

Whether to enable Wayland support for Ringboard.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ringboard.nix>

services.ringboard.wayland.package
The ringboard-wayland package to use.

Type: package

Default:

```
pkgs.ringboard-wayland
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ringboard.nix>

services.ringboard.x11.enable
Whether to enable X11 support for Ringboard.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ringboard.nix>

services.ringboard.x11.package
The ringboard package to use.

Type: package

Default:

```
pkgs.ringboard
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ringboard.nix>

services.rke2.enable
Whether to enable rke2.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.package
The rke2 package to use.

Type: package

Default:

```
pkgs.rke2
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.agentToken
The rke2 token agents can use to connect to the server. This option only makes sense on server nodes (‘role = server’).

WARNING: This option will expose your token unencrypted in the world−readable nix store. If this is undesired use the tokenFile option instead.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.agentTokenFile
File path containing the rke2 token agents can use to connect to the server. This option only makes sense on server nodes (‘role = server’).

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.autoDeployCharts
Auto deploying Helm charts that are installed by the rke2 Helm controller. Avoid using attribute names that are also used in the **services.rke2.manifests** and **services.rke2.charts** options. Manifests with the same name will override auto deploying charts with the same name. This option only makes sense on server nodes (‘role = server’). See the **rke2 Helm documentation** for further information.

WARNING: If you have multiple server nodes, and set this option on more than one server, it is your responsibility to ensure that files stay in sync across those nodes. AddOn content is not synced between nodes, and rke2 cannot guarantee correct behavior if different servers attempt to deploy conflicting manifests.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  harbor = {
    name = "harbor";
    repo = "https://helm.goharbor.io";
    version = "1.14.0";
    hash = "sha256−fMP7q1MIbvzPGS9My91vbQ1d3OJMjwc+o8YE/BXZaYU=";
    values = {
      existingSecretAdminPassword = "harbor−admin";
      expose = {
        tls = {
          enabled = true;
          certSource = "secret";
          secret.secretName = "my−tls−secret";
```

```
            };
            ingress = {
              hosts.core = "example.com";
              className = "nginx";
            };
          };
        };
      };
      nginx = {
        repo = "oci://registry-1.docker.io/bitnamicharts/nginx";
        version = "20.0.0";
        hash = "sha256-sy+tzB+i9jIl/tqOMzzuhVhTU4EZVsoSBtPznxF/36c=";
      };
      custom-chart = {
        package = ../charts/my-chart.tgz;
        values = ../values/my-values.yaml;
        extraFieldDefinitions = {
          spec.timeout = "60s";
        };
      };
    }
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.autoDeployCharts.<name>.enable

Whether to enable the installation of this Helm chart. Note that setting this option to ‘false’ will not uninstall the chart from the cluster, if it was previously installed. Please use the the ‘--disable’ flag or ‘.skip’ files to delete/disable Helm charts, as mentioned in the **docs**.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.autoDeployCharts.<name>.package

The packaged Helm chart. Overwrites the options ‘repo’, ‘name’, ‘version’ and ‘hash’ in case of conflicts.

Type: absolute path or package

Example:

```
../my-helm-chart.tgz
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.autoDeployCharts.<name>.createNamespace

Whether to create the target namespace if not present.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.autoDeployCharts.<name>.extraDeploy

List of extra Kubernetes manifests to deploy with this Helm chart.

Type: list of (absolute path or (attribute set))

Default:

```
[ ]
```

Example:

```
[
  ../manifests/my-extra-deployment.yaml
  {
    apiVersion = "v1";
    kind = "Service";
    metadata = {
      name = "app-service";
    };
    spec = {
      selector = {
        "app.kubernetes.io/name" = "MyApp";
      };
      ports = [
        {
          name = "name-of-service-port";
          protocol = "TCP";
          port = 80;
          targetPort = "http-web-svc";
        }
      ];
    };
  }
];
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.autoDeployCharts.<name>.extraFieldDefinitions

Extra HelmChart field definitions that are merged with the rest of the HelmChart custom resource. This can be used to set advanced fields or to overwrite generated fields. See **https://docs.rke2.io/helm#helm-chart-field-definitions** for possible fields.

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  spec = {
    backOffLimit = 3;
    bootstrap = true;
    helmVersion = "v2";
    jobImage = "custom-helm-controller:v0.0.1";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.autoDeployCharts.<name>.hash
The hash of the packaged Helm chart. Only has an effect if 'package' is not set. The Helm chart is fetched during build time and placed as a '.tgz' archive on the filesystem.

Type: string

Default:

```
""
```

Example:

```
"sha256-ej+vpPNdiOoXsaj1jyRpWLisJgWo8EqX+Z5VbpSjsPA="
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.autoDeployCharts.<name>.name
The name of the Helm chart. Only has an effect if 'package' is not set. The Helm chart is fetched during build time and placed as a '.tgz' archive on the filesystem.

Type: non-empty string

Example:

```
"ingress-nginx"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.autoDeployCharts.<name>.repo
The repo of the Helm chart. Only has an effect if 'package' is not set. The Helm chart is fetched during build time and placed as a '.tgz' archive on the filesystem.

Type: non-empty string

Example:

```
"https://kubernetes.github.io/ingress-nginx"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.autoDeployCharts.<name>.targetNamespace
The namespace in which the Helm chart gets installed.

Type: non-empty string

Default:

```
"default"
```

Example:

```
"kube-system"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.autoDeployCharts.<name>.values

Override default chart values via Nix expressions. This is equivalent to setting values in a 'values.yaml' file.

WARNING: The values (including secrets!) specified here are exposed unencrypted in the world-readable nix store.

Type: absolute path or (attribute set)

Default:

```
{ }
```

Example:

```
{
  hostName = "my-host";
  replicaCount = 3;
  server = {
    name = "nginx";
    port = 80;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.autoDeployCharts.<name>.version

The version of the Helm chart. Only has an effect if 'package' is not set. The Helm chart is fetched during build time and placed as a '.tgz' archive on the filesystem.

Type: non-empty string

Example:

```
"4.7.0"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.charts

Packaged Helm charts that are linked to */var/lib/rancher/rke2/server/static/charts* before rke2 starts. The attribute name will be used as the link target (relative to */var/lib/rancher/rke2/server/static/charts*). The specified charts will only be placed on the file system and made available via port 9345 on server nodes. See the **services.rke2.autoDeployCharts** option and the **rke2 Helm controller docs** to deploy Helm charts. This option only makes sense on server nodes ('role = server').

Type: attribute set of (absolute path or package)

Default:

```
{ }
```

Example:

```
nginx = ../charts/my-nginx-chart.tgz;
redis = ../charts/my-redis-chart.tgz;
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.cisHardening
Enable CIS Hardening for RKE2.

The OS−level configuration options required to pass the CIS benchmark are enabled by default. This option only creates the ‘etcd’ user and group, and passes the ‘−−profile=cis’ flag to RKE2.

Learn more about **CIS Hardening for RKE2**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.cni
CNI plugins to deploy, one of ‘none’, ‘calico’, ‘canal’, ‘cilium’ or ‘flannel’.

All CNI plugins get installed via a helm chart after the main components are up and running and can be **customized by modifying the helm chart options**.

Learn more about RKE2 and CNI plugins

“” **WARNING**: Flannel support in RKE2 is currently experimental.

Type: null or one of “none”, “canal”, “cilium”, “calico”, “flannel”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.configPath
File path containing the rke2 YAML config. This is useful when the config is generated (for example on boot).

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.containerdConfigTemplate
Config template for containerd, to be placed at ‘/var/lib/rancher/rke2/agent/etc/containerd/config.toml.tmpl’. See the docs on **configuring containerd**.

Type: null or string

Default:

```
null
```

Example:

```
# Base config
{{ template "base" . }}
# Add a custom runtime
[plugins."io.containerd.grpc.v1.cri".containerd.runtimes."custom"]
  runtime_type = "io.containerd.runc.v2"
```

```
[plugins."io.containerd.grpc.v1.cri".containerd.runtimes."custom".o \
ptions]
  BinaryName = "/path/to/custom-container-runtime"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.disable
Disable default components, see the **RKE2 documentation**.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.environmentFile
File path containing environment variables for configuring the rke2 service in the format of an EnvironmentFile. See **systemd.exec**(5).

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.extraFlags
Extra flags to pass to the rke2 command.

Type: string or list of string

Default:

```
[ ]
```

Example:

```
[
  "--etcd-expose-metrics"
  "--cluster-cidr 10.24.0.0/16"
]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.extraKubeProxyConfig
Extra configuration to add to the kube-proxy's configuration file. The subset of the kube-proxy's configuration that can be configured via a file is defined by the **KubeProxyConfiguration** struct. Note that the kubeconfig param will be overriden by 'clientConnection.kubeconfig', so you must set the 'clientConnection.kubeconfig' option if you want to use 'extraKubeProxyConfig'.

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  clientConnection = {
```

```
      kubeconfig = "/var/lib/rancher/rke2/agent/kubeproxy.kubeconfig" \
  ;
    };
    mode = "nftables";
  }
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.extraKubeletConfig

Extra configuration to add to the kubelet's configuration file. The subset of the kubelet's configuration that can be configured via a file is defined by the **KubeletConfiguration** struct. See the **documentation** for further information.

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  containerLogMaxSize = "5Mi";
  memoryThrottlingFactor = 0.69;
  podsPerCore = 3;
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.gracefulNodeShutdown.enable

Whether to enable graceful node shutdowns where the kubelet attempts to detect node system shutdown and terminates pods running on the node. See the **documentation** for further information. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.gracefulNodeShutdown.shutdownGracePeriod

Specifies the total duration that the node should delay the shutdown by. This is the total grace period for pod termination for both regular and critical pods.

Type: non−empty string

Default:

```
"30s"
```

Example:

```
"1m30s"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.gracefulNodeShutdown.shutdownGracePeriodCriticalPods

Specifies the duration used to terminate critical pods during a node shutdown. This should be less than 'shutdownGracePeriod'.

Type: non−empty string

Default:

```
"10s"
```

Example:

```
"15s"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.images

List of derivations that provide container images. All images are linked to */var/lib/rancher/rke2/agent/images* before rke2 starts and are consequently imported by the rke2 agent. Consider importing the rke2 core and CNI image archives of the rke2 package in use, if you want to pre−provision this node with all rke2 container images. For a full list of available airgap images, check the **source**. of the rke2 package in use.

Type: list of package

Default:

```
[ ]
```

Example:

```
[
  (pkgs.dockerTools.pullImage {
    imageName = "docker.io/bitnami/keycloak";
    imageDigest = "sha256:714dfadc66a8e3adea6609bda350345bd3711657b \
7ef3cf2e8015b526bac2d6b";
    hash = "sha256−IM2BLZ0EdKIZcRWOtuFY9TogZJXCpKtPZnMnPsGlq0Y=";
    finalImageTag = "21.1.2−debian−11−r0";
  })
  config.services.rke2.package.images−core−linux−amd64−tar−zst
  config.services.rke2.package.images−canal−linux−amd64−tar−zs \
t
]
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.manifests

Auto−deploying manifests that are linked to */var/lib/rancher/rke2/server/manifests* before rke2 starts. Note that deleting manifest files will not remove or otherwise modify the resources it created. Please use the the '−−disable' flag or '.skip' files to delete/disable AddOns, as mentioned in the **docs**. This option only makes sense on server nodes ('role = server'). Read the **auto−deploying manifests docs** for further information.

WARNING: If you have multiple server nodes, and set this option on more than one server, it is your responsibility to ensure that files stay in sync across those nodes. AddOn content is not synced between nodes, and rke2 cannot guarantee correct behavior if different servers attempt to deploy conflicting manifests.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  deployment.source = ../manifests/deployment.yaml;
  my-service = {
    enable = false;
    target = "app-service.yaml";
    content = {
      apiVersion = "v1";
      kind = "Service";
      metadata = {
        name = "app-service";
      };
      spec = {
        selector = {
          "app.kubernetes.io/name" = "MyApp";
        };
        ports = [
          {
            name = "name-of-service-port";
            protocol = "TCP";
            port = 80;
            targetPort = "http-web-svc";
          }
        ];
      };
    };
  };
  nginx.content = [
    {
      apiVersion = "v1";
      kind = "Pod";
      metadata = {
        name = "nginx";
        labels = {
          "app.kubernetes.io/name" = "MyApp";
        };
      };
      spec = {
        containers = [
          {
            name = "nginx";
            image = "nginx:1.14.2";
            ports = [
              {
                containerPort = 80;
                name = "http-web-svc";
              }
            ];
          }
        ];
      };
```

```
        }
        {
          apiVersion = "v1";
          kind = "Service";
          metadata = {
            name = "nginx-service";
          };
          spec = {
            selector = {
              "app.kubernetes.io/name" = "MyApp";
            };
            ports = [
              {
                name = "name-of-service-port";
                protocol = "TCP";
                port = 80;
                targetPort = "http-web-svc";
              }
            ];
          };
        }
      ];
    };
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.manifests.<name>.enable
Whether this manifest file should be generated.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.manifests.<name>.content
Content of the manifest file. A single attribute set will generate a single document YAML file. A list of attribute sets will generate multiple documents separated by '---' in a single YAML file.

Type: null or (attribute set) or list of (attribute set)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.manifests.<name>.source
Path of the source '.yaml' file.

Type: absolute path

Example:

```
./manifests/app.yaml
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.manifests.<name>.target
Name of the symlink (relative to */var/lib/rancher/rke2/server/manifests*). Defaults to the attribute name.

Type: non−empty string

Example:

```
"manifest.yaml"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.nodeExternalIP
IPv4/IPv6 external addresses to advertise for node.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.nodeIP
IPv4/IPv6 addresses to advertise for node.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.nodeLabel
Registering and starting kubelet with set of labels.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.nodeName
Node name.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.nodeTaint
Registering kubelet with set of taints.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.role
Whether rke2 should run as a server or agent.

If it's a server:

- By default it also runs workloads as an agent.
- All options can be set.

If it's an agent:

- 'serverAddr' is required.
- 'token' or 'tokenFile' is required.
- 'agentToken', 'agentTokenFile', 'disable' and 'cni' should not be set.

Type: one of "server", "agent"

Default:

```
"server"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.selinux
Enable SELinux in containerd.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.serverAddr
The rke2 server to connect to, used to join a cluster.

Type: string

Default:

```
""
```

Example:

```
"https://10.0.0.10:6443"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.token
The rke2 token to use when connecting to a server.

WARNING: This option will expose your token unencrypted in the world−readable nix store. If this is undesired use the tokenFile option instead.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rke2.tokenFile
File path containing the rke2 token to use when connecting to a server.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.rkvm.enable
Whether to enable rkvm, a Virtual KVM switch for Linux machines.

Type: boolean

Default:

```
config.services.rkvm.server.enable || config.services.rkvm.client.e \
nable
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rkvm.nix>

services.rkvm.package
The rkvm package to use.

Type: package

Default:

```
pkgs.rkvm
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rkvm.nix>

services.rkvm.client.enable
Whether to enable the rkvm client daemon (input receiver).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rkvm.nix>

services.rkvm.client.settings
Structured client daemon configuration

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rkvm.nix>

services.rkvm.client.settings.certificate
TLS ceritficate path.

Note
This should be generated with **rkvm−certificate−gen**.

Type: absolute path

Default:

```
"/etc/rkvm/certificate.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rkvm.nix>

services.rkvm.client.settings.password
Shared secret token to authenticate the client. Make sure this matches your server's config.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/rkvm.nix>

services.rkvm.client.settings.server
An RKVM server's internet socket address, either IPv4 or IPv6.

Type: string

Example:

```
"192.168.0.123:5258"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rkvm.nix>

services.rkvm.server.enable
Whether to enable the rkvm server daemon (input transmitter).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rkvm.nix>

services.rkvm.server.settings
Structured server daemon configuration

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rkvm.nix>

services.rkvm.server.settings.certificate
TLS certificate path.

Note
This should be generated with **rkvm−certificate−gen**.

Type: absolute path

Default:

```
"/etc/rkvm/certificate.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rkvm.nix>

services.rkvm.server.settings.key
TLS key path.

Note
This should be generated with **rkvm−certificate−gen**.

Type: absolute path

Default:

```
"/etc/rkvm/key.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rkvm.nix>

services.rkvm.server.settings.listen
An internet socket address to listen on, either IPv4 or IPv6.

Type: string

Default:

```
"0.0.0.0:5258"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rkvm.nix>

services.rkvm.server.settings.password
Shared secret token to authenticate the client. Make sure this matches your client's config.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/rkvm.nix>

services.rkvm.server.settings.switch−keys
A key list specifying a host switch combination.

A list of key names is available in **https://github.com/htrefil/rkvm/blob/master/switch−keys.md**[1].

Type: list of string

Default:

```
[
  "left-alt"
  "left-ctrl"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rkvm.nix>

1. https://github.com/htrefil/rkvm/blob/master/switch−keys.md

services.rmfakecloud.enable
Whether to enable rmfakecloud remarkable self−hosted cloud.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rmfakecloud.nix>

services.rmfakecloud.package
The rmfakecloud package to use.

Type: package

Default:

```
pkgs.rmfakecloud
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rmfakecloud.nix>

services.rmfakecloud.environmentFile
Path to an environment file loaded for the rmfakecloud service.

This can be used to securely store tokens and secrets outside of the world−readable Nix store. Since this file is read by systemd, it may have permission 0400 and be owned by root.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/secrets/rmfakecloud.env"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rmfakecloud.nix>

services.rmfakecloud.extraSettings
Extra settings in the form of a set of key−value pairs. For tokens and secrets, use ‘environmentFile’ instead.

Available settings are listed on https://ddvk.github.io/rmfakecloud/install/configuration/.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  DATADIR = "/custom/path/for/rmfakecloud/data";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rmfakecloud.nix>

services.rmfakecloud.logLevel
Logging level.

Type: one of “info”, “debug”, “warn”, “error”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rmfakecloud.nix>

services.rmfakecloud.port
Listening port number.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rmfakecloud.nix>

services.rmfakecloud.storageUrl
URL used by the tablet to access the rmfakecloud service.

Type: string

Example:

```
"https://local.appspot.com"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rmfakecloud.nix>

services.robustirc−bridge.enable
Whether to enable RobustIRC bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/robustirc−bridge.nix>

services.robustirc−bridge.extraFlags
Extra flags passed to the **robustirc−bridge** command. See **RobustIRC Documentation** or **robustirc−bridge**(1) for details.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−network robustirc.net"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/robustirc−bridge.nix>

services.roon−bridge.enable
Whether to enable Roon Bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/roon-bridge.nix>

services.roon-bridge.group
Group to run the Roon Bridge as.

Type: string

Default:

```
"roon-bridge"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/roon-bridge.nix>

services.roon-bridge.openFirewall
Open ports in the firewall for the bridge.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/audio/roon-bridge.nix>

services.roon-bridge.user
User to run the Roon bridge as.

Type: string

Default:

```
"roon-bridge"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/roon-bridge.nix>

services.roon-server.enable
Whether to enable Roon Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/roon-server.nix>

services.roon-server.package
The roon-server package to use.

Type: package

Default:

```
pkgs.roon-server
```

Declared by:
<nixpkgs/nixos/modules/services/audio/roon-server.nix>

services.roon-server.group
Group to run the Roon Server as.

Type: string

Default:

```
"roon-server"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/roon-server.nix>

services.roon-server.openFirewall
Open ports in the firewall for the server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/audio/roon-server.nix>

services.roon-server.user
User to run the Roon Server as.

Type: string

Default:

```
"roon-server"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/roon-server.nix>

services.rosenpass.enable
Whether to enable Rosenpass.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/rosenpass.nix>

services.rosenpass.package
The rosenpass package to use.

Type: package

Default:

```
pkgs.rosenpass
```

Declared by:
<nixpkgs/nixos/modules/services/networking/rosenpass.nix>

services.rosenpass.defaultDevice

Name of the network interface to use for all peers by default.

Type: null or string

Default:

```
null
```

Example:

```
"wg0"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/rosenpass.nix>

services.rosenpass.settings

Configuration for Rosenpass, see **https://rosenpass.eu/** for further information.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/rosenpass.nix>

services.rosenpass.settings.listen

List of local endpoints to listen for connections.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "0.0.0.0:10000" ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/rosenpass.nix>

services.rosenpass.settings.peers

List of peers to exchange keys with.

Type: list of (open submodule of (TOML value))

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/rosenpass.nix>

services.rosenpass.settings.peers.*.device

Name of the local WireGuard interface to use for this peer.

Type: string

Default:

```
config.services.rosenpass.defaultDevice
```

Declared by:

<nixpkgs/nixos/modules/services/networking/rosenpass.nix>

services.rosenpass.settings.peers.*.endpoint
Endpoint of the remote Rosenpass peer.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/rosenpass.nix>

services.rosenpass.settings.peers.*.peer
WireGuard public key corresponding to the remote Rosenpass peer.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/rosenpass.nix>

services.rosenpass.settings.peers.*.public_key
Path to a file containing the public key of the remote Rosenpass peer.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/networking/rosenpass.nix>

services.rosenpass.settings.public_key
Path to a file containing the public key of the local Rosenpass peer. Generate this by running **rosenpass gen-keys**.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/networking/rosenpass.nix>

services.rosenpass.settings.secret_key
Path to a file containing the secret key of the local Rosenpass peer. Generate this by running **rosenpass gen-keys**.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/networking/rosenpass.nix>

services.rosenpass.settings.verbosity
Verbosity of output produced by the service.

Type: one of “Verbose”, “Quiet”

Default:

```
"Quiet"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/rosenpass.nix>

services.roundcube.enable
Whether to enable roundcube.

Also enables nginx virtual host management. Further nginx configuration can be done by adapting ‘services.nginx.virtualHosts.<name>’. See **services.nginx.virtualHosts** for further information.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/roundcube.nix>

services.roundcube.package
The roundcube package to use.

Type: package

Default:

```
pkgs.roundcube
```

Example:

```
roundcube.withPlugins (plugins: [ plugins.persistent_login ])
```

Declared by:
<nixpkgs/nixos/modules/services/mail/roundcube.nix>

services.roundcube.configureNginx
Configure nginx as a reverse proxy for roundcube.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/roundcube.nix>

services.roundcube.database.dbname
Name of the postgresql database

Type: string

Default:

```
"roundcube"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/roundcube.nix>

services.roundcube.database.host
Host of the postgresql server. If this is not set to ‘localhost’, you have to create the postgresql user and database yourself, with appropriate permissions.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/roundcube.nix>

services.roundcube.database.password
Password for the postgresql connection. Do not use: the password will be stored world readable in the store; use ‘passwordFile’ instead.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/mail/roundcube.nix>

services.roundcube.database.passwordFile
Password file for the postgresql connection. Must be formatted according to PostgreSQL .pgpass standard (see **https://www.postgresql.org/docs/current/libpq-pgpass.html**) but only one line, no comments and readable by user 'nginx'. Ignored if 'database.host' is set to 'localhost', as peer authentication will be used.

Type: absolute path

Example:

```
pkgs.writeText "roundcube-postgres-passwd.txt" ''
  hostname:port:database:username:password
```

Declared by:
<nixpkgs/nixos/modules/services/mail/roundcube.nix>

services.roundcube.database.username
Username for the postgresql connection. If 'database.host' is set to 'localhost', a unix user and group of the same name will be created as well.

Type: string

Default:

```
"roundcube"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/roundcube.nix>

services.roundcube.dicts
List of aspell dictionaries for spell checking. If empty, spell checking is disabled.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs.aspellDicts; [ en fr de ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/roundcube.nix>

services.roundcube.extraConfig
Extra configuration for roundcube webmail instance

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/mail/roundcube.nix>

services.roundcube.hostName
Hostname to use for the nginx vhost

Type: string

Example:

```
"webmail.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/roundcube.nix>

services.roundcube.maxAttachmentSize
The maximum attachment size in MB. [upstream issue comment]: https://github.com/roundcube/roundcubemail/issues/7979#issuecomment−808879209

Note
Since there is some overhead in base64 encoding applied to attachments, + 37% will be added to the value set in this option in order to offset the overhead. For example, setting ‘maxAttachmentSize’ to ‘100’ would result in ‘137M’ being the real value in the configuration. See [upstream issue comment] for more details on the motivations behind this.

Type: signed integer

Default:

```
18
```

Declared by:
<nixpkgs/nixos/modules/services/mail/roundcube.nix>

services.roundcube.plugins
List of roundcube plugins to enable. Currently, only those directly shipped with Roundcube are supported.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/roundcube.nix>

services.routedns.enable
Whether to enable RouteDNS − DNS stub resolver, proxy and router.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/routedns.nix>

services.routedns.package
The routedns package to use.

Type: package

Default:

```
pkgs.routedns
```

Declared by:
<nixpkgs/nixos/modules/services/networking/routedns.nix>

services.routedns.configFile

Path to RouteDNS TOML configuration file.

Type: absolute path

Default:

```
"A RouteDNS configuration file automatically generated by values fr \
om services.routedns.*"
```

Example:

```
"${pkgs.routedns}/cmd/routedns/example-config/use-case-1.toml"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/routedns.nix>

services.routedns.settings

Configuration for RouteDNS, see **https://github.com/folbricht/routedns/blob/master/doc/configuration.md** for more information.

Type: TOML value

Example:

```
{
  resolvers.cloudflare-dot = {
    address = "1.1.1.1:853";
    protocol = "dot";
  };
  groups.cloudflare-cached = {
    type = "cache";
    resolvers = ["cloudflare-dot"];
  };
  listeners.local-udp = {
    address = "127.0.0.1:53";
    protocol = "udp";
    resolver = "cloudflare-cached";
  };
  listeners.local-tcp = {
    address = "127.0.0.1:53";
    protocol = "tcp";
    resolver = "cloudflare-cached";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/routedns.nix>

services.routinator.enable

Whether to enable Routinator 3000.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/routinator.nix>

services.routinator.package
The routinator package to use.

Type: package

Default:

```
pkgs.routinator
```

Declared by:
<nixpkgs/nixos/modules/services/networking/routinator.nix>

services.routinator.extraArgs
Extra arguments passed to routinator, see **https://routinator.docs.nlnetlabs.nl/en/stable/manual-page.html#options** for options.";

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--no-rir-tals"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/routinator.nix>

services.routinator.extraServerArgs
Extra arguments passed to the server subcommand, see **https://routinator.docs.nlnetlabs.nl/en/stable/manual-page.html#subcmd-server** for options.";

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--rtr-client-metrics"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/routinator.nix>

services.routinator.settings
Configuration for Routinator 3000, see **https://routinator.docs.nlnetlabs.nl/en/stable/manual-page.html#configuration-file** for options.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/routinator.nix>

services.routinator.settings.expire

An integer value specifying the number of seconds an RTR client is requested to use a data set if it cannot get an update before throwing it away and continuing with no data at all.

Type: null or signed integer

Default:

```
7200
```

Declared by:

<nixpkgs/nixos/modules/services/networking/routinator.nix>

services.routinator.settings.http−listen

An array of string values each providing an address and port on which the HTTP server should listen. Address and port should be separated by a colon. IPv6 address should be enclosed in square brackets.

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/routinator.nix>

services.routinator.settings.log

A string specifying where to send log messages to. See, **https://routinator.docs.nlnetlabs.nl/en/stable/manual−page.html#term−log**

Type: null or one of “default”, “stderr”, “syslog”, “file”

Default:

```
"default"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/routinator.nix>

services.routinator.settings.log−file

A string value containing the path to a file to which log messages will be appended if the log configuration value is set to file. In this case, the value is mandatory.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/routinator.nix>

services.routinator.settings.log−level

A string value specifying the maximum log level for which log messages should be emitted. See, **https://routinator.docs.nlnetlabs.nl/en/stable/manual−page.html#logging**

Type: null or one of “error”, “warn”, “info”, “debug”

Default:

```
"warn"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/routinator.nix>

services.routinator.settings.refresh

An integer value specifying the number of seconds Routinator should wait between consecutive validation runs in server mode. The next validation run will happen earlier, if objects expire earlier.

Type: null or signed integer

Default:

```
600
```

Declared by:

<nixpkgs/nixos/modules/services/networking/routinator.nix>

services.routinator.settings.repository−dir

The path where the collected RPKI data is stored.

Type: absolute path

Default:

```
"/var/lib/routinator/rpki-cache"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/routinator.nix>

services.routinator.settings.retry

An integer value specifying the number of seconds an RTR client is requested to wait after it failed to receive a data set.

Type: null or signed integer

Default:

```
600
```

Declared by:

<nixpkgs/nixos/modules/services/networking/routinator.nix>

services.routinator.settings.rtr−listen

An array of string values each providing an address and port on which the RTR server should listen in TCP mode. Address and port should be separated by a colon. IPv6 address should be enclosed in square brackets.

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/routinator.nix>

services.rpcbind.enable

Whether to enable ‘rpcbind’, an ONC RPC directory service notably used by NFS and NIS, and which can be queried using the **rpcinfo**(1) command. ‘rpcbind’ is a replacement for ‘portmap’.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/rpcbind.nix>

services.rqbit.enable

Whether to enable rqbit BitTorrent daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/rqbit.nix>

services.rqbit.package

The rqbit package to use.

Type: package

Default:

```
pkgs.rqbit
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/rqbit.nix>

services.rqbit.downloadDir

Directory where to download torrents.

Type: absolute path

Default:

```
"/var/lib/rqbit/downloads"
```

Example:

```
"/mnt/storage/torrents"
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/rqbit.nix>

services.rqbit.group

Group account under which rqbit runs.

Type: string

Default:

```
"rqbit"
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/rqbit.nix>

services.rqbit.httpHost

The listen host for the HTTP API.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rqbit.nix>

services.rqbit.httpPort
The listen port for the HTTP API.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3030
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rqbit.nix>

services.rqbit.openFirewall
Whether to enable opening of the HTTP and Peer ports in the firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rqbit.nix>

services.rqbit.peerPort
The port to listen for incoming BitTorrent peer connections (TCP and uTP).

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4240
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rqbit.nix>

services.rqbit.user
User account under which rqbit runs.

Type: string

Default:

```
"rqbit"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rqbit.nix>

services.rshim.enable
Whether to enable user−space rshim driver for the BlueField SoC.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rshim.nix>

services.rshim.package
The rshim−user−space package to use.

Type: package

Default:

```
pkgs.rshim-user-space
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rshim.nix>

services.rshim.backend
Specify the backend to attach. If not specified, the driver will scan all rshim backends unless the ‘device’ option is given with a device name specified.

Type: null or one of “usb”, “pcie”, “pcie_lf”

Default:

```
null
```

Example:

```
"pcie"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rshim.nix>

services.rshim.config
Structural setting for the rshim configuration file (‘/etc/rshim.conf’). It can be used to specify the static mapping between rshim devices and rshim names. It can also be used to ignore some rshim devices.

Type: attribute set of (signed integer or string)

Default:

```
{ }
```

Example:

```
{
  DISPLAY_LEVEL = 0;
  none = "usb-1-1.4";
  rshim0 = "usb-2-1.7";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rshim.nix>

services.rshim.device
Specify the device name to attach. The backend driver can be deduced from the device name, thus the ‘backend’ option is not needed.

Type: null or string

Default:

```
null
```

Example:

```
"pcie-04:00.2"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rshim.nix>

services.rshim.index
Specify the index to create device path '/dev/rshim<index>'. It's also used to create network interface name 'tmfifo_net<index>'. This option is needed when multiple rshim instances are running.

Type: null or signed integer

Default:

```
null
```

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rshim.nix>

services.rshim.log−level
Specify the log level (0:none, 1:error, 2:warning, 3:notice, 4:debug).

Type: integer between 0 and 4 (both inclusive)

Default:

```
2
```

Example:

```
4
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rshim.nix>

services.rsnapshot.enable
Whether to enable rsnapshot backups.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/rsnapshot.nix>

services.rsnapshot.enableManualRsnapshot
Whether to enable manual usage of the rsnapshot command with this module.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/rsnapshot.nix>

services.rsnapshot.cronIntervals

Periodicity at which intervals should be run by cron. Note that the intervals also have to exist in configuration as retain options.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  daily = "50 21 * * *";
  hourly = "0 * * * *";
}
```

Declared by:

<nixpkgs/nixos/modules/services/backup/rsnapshot.nix>

services.rsnapshot.extraConfig

rsnapshot configuration option in addition to the defaults from rsnapshot and this module.

Note that tabs are required to separate option arguments, and directory names require trailing slashes.

The “extra” in the option name might be a little misleading right now, as it is required to get a functional configuration.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  retains     hourly      24
  retain      daily 365
  backup      /home/      localhost/
```

Declared by:

<nixpkgs/nixos/modules/services/backup/rsnapshot.nix>

services.rspamd.enable

Whether to enable rspamd, the Rapid spam filtering system.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.package

The rspamd package to use.

Type: package

Default:

```
pkgs.rspamd
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.debug
Whether to run the rspamd daemon in debug mode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.extraArgs
A list of extra command line arguments to pass to rspamd. Check ‘rspamd −−help’ for possible arguments.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--var=RBL_API_KEY=\${RBL_API_KEY}"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.extraConfig
Extra configuration to add at the end of the rspamd configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.group
Group to use when no root privileges are required.

Type: string

Default:

```
"rspamd"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.localLuaRules
Path of file to link to */etc/rspamd/rspamd.local.lua* for local rules written in Lua

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.locals
Local configuration files, written into */etc/rspamd/local.d/{name}*.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{ "redis.conf".source = "/nix/store/.../etc/dir/redis.conf";
  "arc.conf".text = "allow_envfrom_empty = true;";
}
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.locals.<name>.enable
Whether this file locals should be generated. This option allows specific locals files to be disabled.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.locals.<name>.source
Path of the source file.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.locals.<name>.text
Text of the file.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.overrides
Overridden configuration files, written into */etc/rspamd/override.d/{name}*.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{ "redis.conf".source = "/nix/store/.../etc/dir/redis.conf";
  "arc.conf".text = "allow_envfrom_empty = true;";
}
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.overrides.<name>.enable
Whether this file overrides should be generated. This option allows specific overrides files to be disabled.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.overrides.<name>.source
Path of the source file.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.overrides.<name>.text
Text of the file.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.postfix.enable
Add rspamd milter to postfix main.conf

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.postfix.config
Addon to postfix configuration

Type: attribute set of (boolean or string or list of string)

Default:

```
{
  non_smtpd_milters = [
    "unix:/run/rspamd/rspamd-milter.sock"
  ];
  smtpd_milters = [
    "unix:/run/rspamd/rspamd-milter.sock"
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.user

User to use when no root privileges are required.

Type: string

Default:

```
"rspamd"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.workers

Attribute set of workers to start.

Type: attribute set of (submodule)

Default:

```
{
  controller = { };
  normal = { };
}
```

Example:

```
{
  normal = {
    includes = [ "$CONFDIR/worker-normal.inc" ];
    bindSockets = [{
      socket = "/run/rspamd/rspamd.sock";
      mode = "0660";
      owner = "${config.services.rspamd.user}";
      group = "${config.services.rspamd.group}";
    }];
  };
  controller = {
    includes = [ "$CONFDIR/worker-controller.inc" ];
    bindSockets = [ "[::1]:11334" ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.workers.<name>.enable

Whether to run the rspamd worker.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.workers.<name>.bindSockets

List of sockets to listen, in format acceptable by rspamd

Type: list of (string or (submodule))

Default:

```
[ ]
```

Example:

```
[
  {
    mode = "0666";
    owner = "rspamd";
    socket = "/run/rspamd.sock";
  }
  "*:11333"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.workers.<name>.count
Number of worker instances to run

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.workers.<name>.extraConfig
Additional entries to put verbatim into worker section of rspamd config file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.workers.<name>.includes
List of files to include in configuration

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.workers.<name>.name
Name of the worker

Type: null or string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd.workers.<name>.type

The type of this worker. The type ‘proxy’ is deprecated and only kept for backwards compatibility and should be replaced with ‘rspamd_proxy’.

Type: null or one of “normal”, “controller”, “fuzzy”, “rspamd_proxy”, “lua”, “proxy”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/mail/rspamd.nix>

services.rspamd−trainer.enable

Whether to enable Spam/ham trainer for rspamd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/rspamd−trainer.nix>

services.rspamd−trainer.secrets

A list of files containing the various secrets. Should be in the format expected by systemd’s ‘EnvironmentFile’ directory. For the IMAP account password use ‘PASSWORD = mypassword’.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/rspamd−trainer.nix>

services.rspamd−trainer.settings

IMAP authentication configuration for rspamd−trainer. For supplying the IMAP password, use the ‘secrets’ option.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Example:

```
{
  HOST = "localhost";
  USERNAME = "spam@example.com";
  INBOXPREFIX = "INBOX/";
}
```

Declared by:

<nixpkgs/nixos/modules/services/mail/rspamd−trainer.nix>

services.rss−bridge.enable

Whether to enable rss−bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/rss−bridge.nix>

services.rss−bridge.package

The rss−bridge package to use.

Type: package

Default:

```
pkgs.rss−bridge
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/rss−bridge.nix>

services.rss−bridge.config

Attribute set of arbitrary config options. Please consult the documentation at the **wiki** and **sample config** to see a list of available options.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Example:

```
{
  system.enabled_bridges = [ "*" ];
  error = {
    output = "http";
    report_limit = 5;
  };
  FileCache = {
    enable_purge = true;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/rss−bridge.nix>

services.rss−bridge.config.FileCache.path

Directory where to store cache files (if cache.type = “file”).

Type: string

Default:

```
${config.services.rss−bridge.dataDir}/cache/
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/rss−bridge.nix>

services.rss−bridge.config.system.enabled_bridges
Only enabled bridges are available for feed production

Type: null or string or list of string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rss−bridge.nix>

services.rss−bridge.dataDir
Location in which cache directory will be created. You can put ‘config.ini.php’ in here.

Type: string

Default:

```
"/var/lib/rss−bridge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rss−bridge.nix>

services.rss−bridge.group
The group under which the web application runs.

Type: string

Default:

```
"{option}‘config.services.rss−bridge.webserver‘ or \"rss−bridge \
e""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rss−bridge.nix>

services.rss−bridge.pool
Name of phpfpm pool that is used to run web−application. If ‘null’ specified none will be created, otherwise automatically created with default values.

Type: null or string

Default:

```
"rss−bridge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rss−bridge.nix>

services.rss−bridge.user
The user account under which both the service and the web application run.

Type: string

Default:

```
"{option}‘config.services.rss−bridge.webserver‘ or \"rss−bridge \
e""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rss−bridge.nix>

services.rss−bridge.virtualHost

Name of the nginx or caddy virtualhost to use and setup. If null, do not setup any virtualhost.

Type: null or string

Default:

```
"rss−bridge"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/rss−bridge.nix>

services.rss−bridge.webserver

Type of virtualhost to use and setup. If null, do not setup any virtualhost.

Type: null or one of “nginx”, “caddy”

Default:

```
"nginx"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/rss−bridge.nix>

services.rss2email.enable

Whether to enable rss2email.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/mail/rss2email.nix>

services.rss2email.config

The configuration to give rss2email.

Default will use system−wide ‘sendmail’ to send the email. This is rss2email’s default when running ‘r2e new’.

This set contains key−value associations that will be set in the ‘[DEFAULT]’ block along with the ‘to’ parameter.

See ‘man r2e’ for more information on which parameters are accepted.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/mail/rss2email.nix>

services.rss2email.feeds

The feeds to watch.

Type: attribute set of (submodule)

Declared by:

<nixpkgs/nixos/modules/services/mail/rss2email.nix>

services.rss2email.feeds.<name>.to
Email address to which to send feed items.

If ‘null’, this will not be set in the configuration file, and rss2email will make it default to ‘rss2email.to’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rss2email.nix>

services.rss2email.feeds.<name>.url
The URL at which to fetch the feed.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/mail/rss2email.nix>

services.rss2email.interval
How often to check the feeds, in systemd interval format

Type: string

Default:

```
"12h"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/rss2email.nix>

services.rss2email.to
Mail address to which to send emails

Type: string

Declared by:
<nixpkgs/nixos/modules/services/mail/rss2email.nix>

services.rsshub.enable
Whether to enable RSSHub service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rsshub.nix>

services.rsshub.package
The rsshub package to use.

Type: package

Default:

```
pkgs.rsshub
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rsshub.nix>

services.rsshub.openFirewall
Whether to open the firewall for the specified port.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rsshub.nix>

services.rsshub.redis.enable
Whether to enable Redis for RSSHub.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rsshub.nix>

services.rsshub.redis.createLocally
Create and use a local Redis instance. Sets ‘services.redis.servers.rsshub’.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rsshub.nix>

services.rsshub.redis.host
The Redis host.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rsshub.nix>

services.rsshub.redis.port
The Redis port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6379
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rsshub.nix>

services.rsshub.secretFiles

Environment variables stored in files for secrets. See **https://docs.rsshub.app/deploy/config** for available options.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[ config.sops.secrets.rsshub.path ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/rsshub.nix>

services.rsshub.settings

Environment variables for RSSHub. See **https://docs.rsshub.app/deploy/config** for available options.

Type: open submodule of attribute set of string

Default:

```
{ }
```

Example:

```
{
  REQUEST_TIMEOUT = "3000";
  REQUEST_RETRY = "10";
  PUPPETEER_EXECUTABLE_PATH = lib.getExe pkgs.chromium";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/rsshub.nix>

services.rsshub.settings.LISTEN_INADDR_ANY

Listen to any address

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/rsshub.nix>

services.rsshub.settings.NO_LOGFILES

Print logs into stderr.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/rsshub.nix>

services.rsshub.settings.PORT

Listen on port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1200
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rsshub.nix>

services.rstudio−server.enable
Whether to enable RStudio server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/rstudio−server/default.nix>

services.rstudio−server.package
The rstudio−server package to use.

Type: package

Default:

```
pkgs.rstudio−server
```

Example:

```
rstudioServerWrapper.override { packages = [ pkgs.rPackages.ggplot2 \
 ]; }
```

Declared by:
<nixpkgs/nixos/modules/services/development/rstudio−server/default.nix>

services.rstudio−server.listenAddr
Address to listen on (www−address in rserver.conf).

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/development/rstudio−server/default.nix>

services.rstudio−server.rserverExtraConfig
Extra contents for rserver.conf.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/development/rstudio−server/default.nix>

services.rstudio−server.rsessionExtraConfig
Extra contents for resssion.conf.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/development/rstudio−server/default.nix>

services.rstudio−server.serverWorkingDir
Default working directory for server (server−working−dir in rserver.conf).

Type: string

Default:

```
"/var/lib/rstudio-server"
```

Declared by:
<nixpkgs/nixos/modules/services/development/rstudio−server/default.nix>

services.rsync.enable
Whether to enable periodic directory syncing via rsync.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rsync.nix>

services.rsync.package
The rsync package to use.

Type: package

Default:

```
pkgs.rsync
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rsync.nix>

services.rsync.jobs
Synchronization jobs to run.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rsync.nix>

services.rsync.jobs.<name>.destination
Destination directory.

Type: string

Example:

```
"/srv/dst"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rsync.nix>

services.rsync.jobs.<name>.group

The name of an existing user group under which the rsync process should run.

Type: string

Default:

```
"root"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/rsync.nix>

services.rsync.jobs.<name>.inhibit

Run the rsync process with an inhibition lock taken; see **systemd−inhibit**(1) for a list of possible operations.

Type: list of string matching the pattern ^[^:]+$

Default:

```
[ ]
```

Example:

```
[
  "sleep"
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/rsync.nix>

services.rsync.jobs.<name>.settings

Settings that should be passed to rsync via long options. See **rsync**(1) for available options.

Type: attribute set of (boolean or string or signed integer or floating point number or list of (boolean or string or signed integer or floating point number))

Default:

```
{ }
```

Example:

```
{
  archive = true;
  delete = true;
  mkpath = true;
  verbose = true;
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/rsync.nix>

services.rsync.jobs.<name>.sources

Source directories.

Type: non−empty (list of string)

Example:

```
[
  "/srv/src1/"
  "/srv/src2/"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rsync.nix>

services.rsync.jobs.<name>.timerConfig
When to run the job.

Type: null or (attribute set of (systemd option))

Default:

```
{
  OnCalendar = "daily";
  Persistent = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rsync.nix>

services.rsync.jobs.<name>.user
The name of an existing user account under which the rsync process should run.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rsync.nix>

services.rsyncd.enable
Whether to enable the rsync daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/rsyncd.nix>

services.rsyncd.port
TCP port the daemon will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
873
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/rsyncd.nix>

services.rsyncd.settings
Configuration for rsyncd. See **rsyncd.conf**(5).

Type: submodule

Default:

```
{ }
```

Example:

```
{
```

```
globalSection = {
  address = "0.0.0.0";
  gid = "nobody";
  "max connections" = 4;
  uid = "nobody";
  "use chroot" = true;
};
sections = {
  cvs = {
    "auth users" = [
      "tridge"
      "susan"
    ];
    comment = "CVS repository (requires authentication)";
    path = "/data/cvs";
    "secrets file" = "/etc/rsyncd.secrets";
  };
  ftp = {
    comment = "whole ftp area";
    path = "/var/ftp/./pub";
  };
};
}
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/rsyncd.nix>

services.rsyncd.settings.globalSection

global section of an INI file (attrs of INI atom (null, bool, int, float or string))

Type: section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/rsyncd.nix>

services.rsyncd.settings.sections

attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/rsyncd.nix>

services.rsyncd.socketActivated

If enabled Rsync will be socket−activated rather than run persistently.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/rsyncd.nix>

services.rsyslogd.enable
Whether to enable syslogd. Note that systemd also logs syslog messages, so you normally don't need to run syslogd.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/logging/rsyslogd.nix>

services.rsyslogd.defaultConfig
The default *syslog.conf* file configures a fairly standard setup of log files, which can be extended by means of *extraConfig*.

Type: strings concatenated with "\n"

Default:

```
# "local1" is used for dhcpd messages.
local1.*                        −/var/log/dhcpd

mail.*                          −/var/log/mail

*.=warning;*.=err               −/var/log/warn
*.crit                           /var/log/warn

*.*;mail.none;local1.none       −/var/log/messages
```

Declared by:
<nixpkgs/nixos/modules/services/logging/rsyslogd.nix>

services.rsyslogd.extraConfig
Additional text appended to *syslog.conf*, i.e. the contents of *defaultConfig*.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
"news.* −/var/log/news"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/rsyslogd.nix>

services.rsyslogd.extraParams
Additional parameters passed to **rsyslogd**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−m 0"
]
```

Declared by:
<nixpkgs/nixos/modules/services/logging/rsyslogd.nix>

services.rtorrent.enable
Whether to enable rtorrent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rtorrent.nix>

services.rtorrent.package
The rtorrent package to use.

Type: package

Default:

```
pkgs.rtorrent
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rtorrent.nix>

services.rtorrent.configText
The content of *rtorrent.rc*. The **modernized configuration template** with the values specified in this module will be prepended using mkBefore. You can use mkForce to overwrite the config completely.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rtorrent.nix>

services.rtorrent.dataDir
The directory where rtorrent stores its data files.

Type: string

Default:

```
"/var/lib/rtorrent"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rtorrent.nix>

services.rtorrent.dataPermissions
Unix Permissions in octal on the rtorrent directory.

Type: string

Default:

```
"0750"
```

Example:

```
"0755"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rtorrent.nix>

services.rtorrent.downloadDir
Where to put downloaded files.

Type: string

Default:

```
"${config.services.rtorrent.dataDir}/download"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rtorrent.nix>

services.rtorrent.group
Group under which rtorrent runs.

Type: string

Default:

```
"rtorrent"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rtorrent.nix>

services.rtorrent.openFirewall
Whether to open the firewall for the port in **services.rtorrent.port**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rtorrent.nix>

services.rtorrent.port
The rtorrent port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
50000
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rtorrent.nix>

services.rtorrent.rpcSocket
RPC socket path.

Type: string *(read only)*

Default:

```
"/run/rtorrent/rpc.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rtorrent.nix>

services.rtorrent.user
User account under which rtorrent runs.

Type: string

Default:

```
"rtorrent"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/rtorrent.nix>

services.rumno.enable
Whether to enable rumno visual pop−up notification manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rumno.nix>

services.rumno.package
The rumno package to use.

Type: package

Default:

```
pkgs.rumno
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rumno.nix>

services.rumno.extraArgs
Extra command−line arguments to pass to the rumno daemon.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--verbose"
  "--config"
  "/etc/rumno/config.toml"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/rumno.nix>

services.rustdesk−server.enable
Whether to enable RustDesk, a remote access and remote control software, allowing maintenance of computers and other devices.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/rustdesk-server.nix>

services.rustdesk-server.package
The rustdesk-server package to use.

Type: package

Default:

```
pkgs.rustdesk-server
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/rustdesk-server.nix>

services.rustdesk-server.openFirewall
Open the connection ports. TCP (21115, 21116, 21117, 21118, 21119) UDP (21116)

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/rustdesk-server.nix>

services.rustdesk-server.relay.enable
Whether to enable the RustDesk relay server.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/rustdesk-server.nix>

services.rustdesk-server.relay.extraArgs
A list of extra command line arguments to pass to the ‘hbbr’ process.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-k"
  "_"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/rustdesk-server.nix>

services.rustdesk-server.signal.enable
Whether to enable the RustDesk signal server.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/rustdesk-server.nix>

services.rustdesk-server.signal.extraArgs
A list of extra command line arguments to pass to the ‘hbbs’ process.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-k"
  "_"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/rustdesk-server.nix>

services.rustdesk-server.signal.relayHosts
The relay server IP addresses or DNS names of the RustDesk relay.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/rustdesk-server.nix>

services.rustus.enable
Whether to enable TUS protocol implementation in Rust.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/rustus.nix>

services.rustus.cors
list of origins allowed to upload

Type: list of string

Default:

```
[
  "*"
]
```

Example:

```
[
  "*.staging.domain"
  "*.prod.domain"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.disable_health_access_logs
disable access log for /health endpoint

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.host
The host that rustus will connect to.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.info_storage
Info storages are used to store information about file uploads. These storages must be persistent, because every time chunk is uploaded rustus updates information about upload. And when someone wants to download file, information about it requested from storage to get actual path of an upload.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.info_storage.dir
directory to store info about uploads

Type: string

Default:

```
"/var/lib/rustus"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.info_storage.type
Type of info storage to use

Type: value “file−info−storage” (singular enum)

Default:

```
"file-info-storage"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.log_level
Desired log level

Type: one of “DEBUG”, “INFO”, “ERROR”

Default:

```
"INFO"
```

Example:

```
"ERROR"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.max_body_size
Maximum body size in bytes

Type: string

Default:

```
"10000000"
```

Example:

```
"100000000"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.port
The port that rustus will connect to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1081
```

Example:

```
1081
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.remove_parts
remove parts files after successful concatenation

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.storage

Storages are used to actually store your files. You can configure where you want to store files.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  type = "hybrid-s3"
  s3_access_key_file = konfig.age.secrets.R2_ACCESS_KEY.path;
  s3_secret_key_file = konfig.age.secrets.R2_SECRET_KEY.path;
  s3_bucket = "my_bucket";
  s3_url = "https://s3.example.com";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/rustus.nix>

services.rustus.storage.data_dir

path to the local directory where all files are stored

Type: string

Default:

```
"/var/lib/rustus"
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/rustus.nix>

services.rustus.storage.dir_structure

pattern of a directory structure locally and on s3

Type: string

Default:

```
"{year}/{month}/{day}"
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/rustus.nix>

services.rustus.storage.force_sync

calls fsync system call after every write to disk in local storage

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/rustus.nix>

services.rustus.storage.s3_access_key_file

File path that contains the S3 access key.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web-servers/rustus.nix>

services.rustus.storage.s3_bucket
S3 bucket.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.storage.s3_region
S3 region name.

Type: string

Default:

```
"us−east−1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.storage.s3_secret_key_file
File path that contains the S3 secret key.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.storage.s3_url
S3 url.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.storage.type
Type of storage to use

Type: one of “file−storage”, “hybrid−s3”

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.tus_extensions
Since TUS protocol offers extensibility you can turn off some protocol extensions.

Type: list of (one of “getting”, “creation”, “termination”, “creation−with−upload”, “creation−defer−length”, “concatenation”, “checksum”)

Default:

```
[
  "getting"
  "creation"
  "termination"
  "creation−with−upload"
  "creation−defer−length"
  "concatenation"
  "checksum"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rustus.url
url path for uploads

Type: string

Default:

```
"/files"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/rustus.nix>

services.rutorrent.enable
Whether to enable ruTorrent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rutorrent.nix>

services.rutorrent.dataDir
Storage path of ruTorrent.

Type: string

Default:

```
"/var/lib/rutorrent"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rutorrent.nix>

services.rutorrent.group
Group which runs the ruTorrent service.

Type: string

Default:

```
"rutorrent"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rutorrent.nix>

services.rutorrent.hostName
FQDN for the ruTorrent instance.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rutorrent.nix>

services.rutorrent.nginx.enable
Whether to enable nginx virtual host management. Further nginx configuration can be done by adapting <literal>services.nginx.virtualHosts.<name></literal>. See <xref linkend="opt−services.nginx.virtualHosts"/> for further information.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rutorrent.nix>

services.rutorrent.nginx.exposeInsecureRPC2mount
If you do not enable one of the <literal>rpc</literal> or <literal>httprpc</literal> plugins you need to expose an RPC mount through scgi using this option. Warning: This allow to run arbitrary commands, as the rtorrent user, so make sure to use authentification. The simplest way would be to use the <literal>services.nginx.virtualHosts.<name>.basicAuth</literal> option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rutorrent.nix>

services.rutorrent.plugins
List of plugins to enable. See the list of <link xlink:href="https://github.com/Novik/ruTorrent/wiki/Plugins#currently−there−are−the−following−plugins">available plugins</link>. Note: the <literal>unpack</literal> plugin needs the nonfree <literal>unrar</literal> package. You need to either enable one of the <literal>rpc</literal> or <literal>httprpc</literal> plugin or enable the <xref linkend="opt−services.rutorrent.nginx.exposeInsecureRPC2mount"/> option.

Type: list of (string or package)

Default:

```
[
  "httprpc"
]
```

Example:

```
[ "httprpc" "data" "diskspace" "edit" "erasedata" "theme" "trafic"  \
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rutorrent.nix>

services.rutorrent.poolSettings
Options for ruTorrent's PHP pool. See the documentation on <literal>php−fpm.conf</literal> for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rutorrent.nix>

services.rutorrent.rpcSocket
Path to rtorrent rpc socket.

Type: string

Default:

```
"config.services.rtorrent.rpcSocket"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rutorrent.nix>

services.rutorrent.user
User which runs the ruTorrent service.

Type: string

Default:

```
"rutorrent"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/rutorrent.nix>

services.sabnzbd.enable
Whether to enable the sabnzbd server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.package
The sabnzbd package to use.

Type: package

Default:

```
pkgs.sabnzbd
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.allowConfigWrite
By default we create the sabnzbd configuration read−only, which keeps the nixos configuration as the single source of truth. If you want to enable configuration of sabnzbd via the web interface or use options that require a writeable configuration, such as quota tracking, enable this option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.configFile

Path to config file (deprecated, use ‘settings’ instead and set this value to null)

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.group

Group to run the service as

Type: string

Default:

```
"sabnzbd"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.openFirewall

Open ports in the firewall for the sabnzbd web interface

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.secretFiles

Path to a list of ini file containing confidential settings such as credentials. Settings here will be merged with the rest of the configuration (with the secret settings taking precedence in case of conflicts, and files that occur later in this list taking precedence over those that occur earlier). Recommended settings:

- misc.api_key, misc.nzb_key, misc.username, misc.password
- misc.email_account, misc.email_pwd if email alerts are enabled
- servers.<name>.username, servers.<name>.password

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings

The sabnzbd configuration (see also **sabnzbd’s wiki** for extra documentation)

Type: open submodule of attribute set of (ConfigObj type)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.enable_https

Whether to enable HTTPS for the web UI

Type: boolean

Default:

```
"cfg.settings.misc.https_cert != null"
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.bandwidth_max

Maximum bandwidth in bytes(!)/sec (supports prefixes). Use in conjunction with 'bandwidth_perc' to set a bandwidth limit. Empty string disables limit.

Type: string

Default:

```
""
```

Example:

```
"50MB/s"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.bandwidth_perc

Percentage of 'bandwidth_max' that sabnzbd is allowed to use. 0 means no limit.

Type: signed integer

Default:

Example:

```
50
```

Declared by:

<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.cache_limit

Size of the RAM cache, in bytes (prefixes supported). Sabnzbd recommends 25% of available RAM. Empty means no cache.

Type: string

Default:

```
""
```

Example:

```
"500M"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.email_endjob
Whether to send emails on job completion. Values are: 0, ‘never’ – Never 1, ‘always’ – Always 2, ‘on error’ – On error

Type: (one of 1, 0, 2) or (one of “always”, “never”, “on error”) convertible to it

Default:

```
"if cfg.settings.misc.email_server != \"\" then \"on error\" el \
se \"never\""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.email_from
‘From:’ field for emails (needs to be an address)

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.email_full
Whether to send alerts for full disks

Type: boolean

Default:

```
"cfg.settings.misc.email_server != \"\""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.email_rss
Whether to send alerts for jobs added by RSS feeds

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.email_server
SMTP server for email alerts (server:host)

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.email_to
Receiving address for email alerts

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.host
Address for the Web UI to listen on for incoming connections.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.html_login
Prompt for login with an html login mask if enabled, otherwise prompt for basic auth (useful for SSO)

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.https_cert
Path to the TLS certificate for the web UI. If not set and https is enabled, a self−signed certificate will be generated.

Type: null or absolute path

Default:

```
null
```

Example:

```
${config.acme.certs.${domain}.directory}/fullchain.pem
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.https_key
Path to the TLS key for the web UI. If not set and https is enabled, a self−signed certificate will be generated

Type: null or absolute path

Default:

```
null
```

Example:

```
${config.acme.certs.${domain}.directory}/key.pem
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.inet_exposure

Restrictions for access from non−local IP addresses. Values are: 0, ‘none’ – no access 1, ‘api (add nzbs)’ – api access only, only add nzb files 2, ‘api (no config)’ – api access only, config changes not allowed 3, ‘api (full)’ – api access only, full api access 4, ‘api+web (auth needed)’ – api and web ui, login required always 5, ‘api+web (locally no auth)’ – api and web ui, login required from non−local IPs only

Type: (one of 1, 3, 2, 4, 5, 0) or (one of “api (add nzbs)”, “api (full)”, “api (no config)”, “api+web (auth needed)”, “api+web (locally no auth)”, “none”) convertible to it

Default:

```
"none"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.misc.port

Port for the Web UI to listen on for incoming connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Example:

```
12345
```

Declared by:

<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.ntfosd

NotifyOSD settings

Type: open submodule of attribute set of (ConfigObj type)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.ntfosd.ntfosd_enable

Whether to enable NotifyOSD alerts. Does not really make sense in a server environment, hence we default to false despite upstream’s default true.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.servers

Usenet provider specification

Type: attribute set of (open submodule of attribute set of (ConfigObj type))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.servers.<name>.enable
Enable this server by default

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.servers.<name>.connections
Number of parallel connections permitted by the server.

Type: signed integer

Default:

```
8
```

Example:

```
50
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.servers.<name>.displayname
Human−friendly description of the server

Type: string

Example:

```
"Example News Provider"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.servers.<name>.expire_date
If Notifications are enabled and an expiry date is set, warn 5 days before expiry. This setting does not automatically disable the server. Expected format: yyyy−mm−dd

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.servers.<name>.host
Hostname of the server

Type: string

Example:

```
"news.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.servers.<name>.name
The name of the server

Type: string

Example:

```
"Example News Provider"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.servers.<name>.optional
In case of connection failures, temporarily disable this server. (See sabnzbd's documentation for usage guides).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.servers.<name>.port
Port of the server

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
563
```

Example:

```
443
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.servers.<name>.priority
Priority of this servers. Servers are queried in order of priority, from highest (0) to lowest (100).

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.servers.<name>.required
In case of connection failures, wait for the server to come back online instead of skipping it.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.servers.<name>.ssl
Whether the server supports TLS

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.servers.<name>.ssl_verify
Level of TLS verification. Supported values: 3, ‘strict’ – strict (normal) verification 2, ‘allow injection’ – allow locally injected certificates 0, ‘none’ – no verification

Type: (one of 2, 0, 3) or (one of “allow injection”, “none”, “strict”) convertible to it

Default:

```
"strict"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.settings.servers.<name>.timeout
Time, in seconds, to wait for a response before attempting error recovery.

Type: signed integer

Default:

```
60
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.stateDir
State directory of the service under /var/lib/

Type: string

Default:

```
"sabnzbd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.sabnzbd.user
User to run the service as

Type: string

Default:

```
"sabnzbd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sabnzbd>

services.safeeyes.enable

Whether to enable the safeeyes OSGi service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/safeeyes.nix>

services.salt.master.enable

Whether to enable Salt configuration management system master service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/admin/salt/master.nix>

services.salt.master.configuration

Salt master configuration as Nix attribute set.

Type: attribute set

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/admin/salt/master.nix>

services.salt.minion.enable

Whether to enable Salt configuration management system minion service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/admin/salt/minion.nix>

services.salt.minion.configuration

Salt minion configuration as Nix attribute set. See **https://docs.saltstack.com/en/latest/ref/configuration/minion.html** for details.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/admin/salt/minion.nix>

services.samba.enable
Whether to enable Samba, the SMB/CIFS protocol.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/samba.nix>

services.samba.package
The samba package to use.

Type: package

Default:

```
pkgs.samba
```

Example:

```
samba4Full
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/samba.nix>

services.samba.nmbd.enable
Whether to enable Samba's nmbd, which replies to NetBIOS over IP name service requests. It also participates in the browsing protocols which make up the Windows "Network Neighborhood" view.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/samba.nix>

services.samba.nmbd.extraArgs
Extra arguments to pass to the nmbd service.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/samba.nix>

services.samba.nsswins
Whether to enable WINS NSS (Name Service Switch) plug−in.

Enabling it allows applications to resolve WINS/NetBIOS names (a.k.a. Windows machine names) by transparently querying the winbindd daemon .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/samba.nix>

services.samba.openFirewall
Whether to enable opening the default ports in the firewall for Samba.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/samba.nix>

services.samba.settings
Configuration file for the Samba suite in ini format. This file is located in /etc/samba/smb.conf

Refer to **https://www.samba.org/samba/docs/current/man−html/smb.conf.5.html** for all available options.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a non−empty list of them)

Default:

```
{
  global = {
    "invalid users" = [
      "root"
    ];
    "passwd program" = "/run/wrappers/bin/passwd %u";
    security = "user";
  };
}
```

Example:

```
{
  global = {
    "invalid users" = [
      "root"
    ];
    "passwd program" = "/run/wrappers/bin/passwd %u";
    security = "user";
  };
  public = {
    browseable = "yes";
    comment = "Public samba share.";
    "guest ok" = "yes";
    path = "/srv/public";
    "read only" = "yes";
  };
```

```
}
```

Declared by:
<nixpkgs/nixos/modules/services/network-filesystems/samba.nix>

services.samba.settings.global."invalid users"
List of users who are denied to login via Samba.

Type: list of string

Default:

```
[
  "root"
]
```

Declared by:
<nixpkgs/nixos/modules/services/network-filesystems/samba.nix>

services.samba.settings.global."passwd program"
Path to a program that can be used to set UNIX user passwords.

Type: string

Default:

```
"/run/wrappers/bin/passwd %u"
```

Declared by:
<nixpkgs/nixos/modules/services/network-filesystems/samba.nix>

services.samba.settings.global.security
Samba security type.

Type: one of “auto”, “user”, “domain”, “ads”

Default:

```
"user"
```

Declared by:
<nixpkgs/nixos/modules/services/network-filesystems/samba.nix>

services.samba.smbd.enable
Whether to enable Samba’s smbd daemon.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network-filesystems/samba.nix>

services.samba.smbd.extraArgs
Extra arguments to pass to the smbd service.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/network-filesystems/samba.nix>

services.samba.usershares.enable

Whether to enable user−configurable Samba shares.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/samba.nix>

services.samba.usershares.group

Name of the group members of which will be allowed to create usershares.

The group will be created automatically.

Type: string

Default:

```
"samba"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/samba.nix>

services.samba.winbindd.enable

Whether to enable Samba's winbindd, which provides a number of services to the Name Service Switch capability found in most modern C libraries, to arbitrary applications via PAM and ntlm_auth and to Samba itself.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/samba.nix>

services.samba.winbindd.extraArgs

Extra arguments to pass to the winbindd service.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/samba.nix>

services.samba−wsdd.enable

Whether to enable Web Services Dynamic Discovery host daemon. This enables (Samba) hosts, like your local NAS device, to be found by Web Service Discovery Clients like Windows .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/samba−wsdd.nix>

services.samba−wsdd.discovery
Enable discovery operation mode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/samba−wsdd.nix>

services.samba−wsdd.domain
Set domain name (disables workgroup).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/samba−wsdd.nix>

services.samba−wsdd.extraOptions
Additional wsdd options.

Type: list of string

Default:

```
[
  "−−shortlog"
]
```

Example:

```
[
  "−−verbose"
  "−−no−http"
  "−−ipv4only"
  "−−no−host"
]
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/samba−wsdd.nix>

services.samba−wsdd.hoplimit
Hop limit for multicast packets (default = 1).

Type: null or signed integer

Default:

```
null
```

Example:

```
2
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/samba−wsdd.nix>

services.samba−wsdd.hostname

Override (NetBIOS) hostname to be used (default hostname).

Type: null or string

Default:

```
null
```

Example:

```
"FILESERVER"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/samba−wsdd.nix>

services.samba−wsdd.interface

Interface or address to use.

Type: null or string

Default:

```
null
```

Example:

```
"eth0"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/samba−wsdd.nix>

services.samba−wsdd.listen

Listen on path or localhost port in discovery mode.

Type: string

Default:

```
"/run/wsdd/wsdd.sock"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/samba−wsdd.nix>

services.samba−wsdd.openFirewall

Whether to open the required firewall ports in the firewall.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/samba−wsdd.nix>

services.samba−wsdd.workgroup

Set workgroup name (default WORKGROUP).

Type: null or string

Default:

```
null
```

Example:

```
"HOME"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/samba−wsdd.nix>

services.saned.enable
Enable saned network daemon for remote connection to scanners.

saned would be run from ‘scanner’ user; to allow access to hardware that doesn’t have ‘scanner’ group you should add needed groups to this user.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane.nix>

services.saned.extraConfig
Extra saned configuration lines.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"192.168.0.0/24"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane.nix>

services.sanoid.enable
Whether to enable Sanoid ZFS snapshotting service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.package
The sanoid package to use.

Type: package

Default:

```
pkgs.sanoid
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets
Datasets to snapshot.

Type: attribute set of (open submodule of dataset/template options)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.autoprune
Whether to automatically prune old snapshots.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.autosnap
Whether to automatically take snapshots.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.daily
Number of daily snapshots.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.force_post_snapshot_script
Whether to run the post script if the pre script fails

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.hourly
Number of hourly snapshots.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.monthly
Number of monthly snapshots.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.no_inconsistent_snapshot
Whether to take a snapshot if the pre script fails

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.post_snapshot_script
Script to run after taking snapshot.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.pre_snapshot_script
Script to run before taking snapshot.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.processChildrenOnly
Whether to only snapshot child datasets if recursing.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.process_children_only
Whether to only snapshot child datasets if recursing.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.pruning_script
Script to run after pruning snapshot.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.recursive
Whether to recursively snapshot dataset children. You can also set this to ‘"zfs"’ to handle datasets recursively in an atomic way without the possibility to override settings for child datasets.

Type: boolean or value “zfs” (singular enum)

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.script_timeout
Time limit for pre/post/pruning script execution time (<=0 for infinite).

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.useTemplate
Names of the templates to use for this dataset.

Type: list of configured template name

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.use_template
Names of the templates to use for this dataset.

Type: list of configured template name

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.datasets.<name>.yearly
Number of yearly snapshots.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.extraArgs
Extra arguments to pass to sanoid. See **https://github.com/jimsalterjrs/sanoid/#sanoid−command−line−options** for allowed options.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−verbose"
  "−−readonly"
  "−−debug"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.interval
Run sanoid at this interval. The default is to run hourly.

The format is described in **systemd.time**(7).

Type: string

Default:

```
"hourly"
```

Example:

```
"daily"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.settings
Free−form settings written directly to the config file. See **https://github.com/jimsalterjrs/sanoid/blob/master/sanoid.defaults.conf** for allowed values.

Type: attribute set of dataset/template options

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.templates
Templates for datasets.

Type: attribute set of (open submodule of dataset/template options)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.templates.<name>.autoprune
Whether to automatically prune old snapshots.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.templates.<name>.autosnap
Whether to automatically take snapshots.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.templates.<name>.daily
Number of daily snapshots.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.templates.<name>.force_post_snapshot_script
Whether to run the post script if the pre script fails

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.templates.<name>.hourly
Number of hourly snapshots.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.templates.<name>.monthly
Number of monthly snapshots.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.templates.<name>.no_inconsistent_snapshot
Whether to take a snapshot if the pre script fails

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.templates.<name>.post_snapshot_script
Script to run after taking snapshot.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.templates.<name>.pre_snapshot_script
Script to run before taking snapshot.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.templates.<name>.pruning_script
Script to run after pruning snapshot.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.templates.<name>.script_timeout
Time limit for pre/post/pruning script execution time (<=0 for infinite).

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.sanoid.templates.<name>.yearly
Number of yearly snapshots.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/sanoid.nix>

services.saslauthd.enable
Whether to enable saslauthd, the Cyrus SASL authentication daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/saslauthd.nix>

services.saslauthd.package
The bin package to use.

Type: package

Default:

```
pkgs.cyrus_sasl.bin
```

Declared by:
<nixpkgs/nixos/modules/services/system/saslauthd.nix>

services.saslauthd.config
Configuration to use for Cyrus SASL authentication daemon.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/system/saslauthd.nix>

services.saslauthd.mechanism
Auth mechanism to use

Type: string

Default:

```
"pam"
```

Declared by:
<nixpkgs/nixos/modules/services/system/saslauthd.nix>

services.saunafs.chunkserver.enable
Whether to enable Saunafs chunkserver daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.saunafs.chunkserver.hdds
Mount points to be used by chunkserver for storage (see **sfshdd.cfg**(5)).

Note, that these mount points must writeable by the user defined by the saunafs user.

Type: list of string

Default:

```
null
```

Example:

```
[ "/mnt/hdd1" ];
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.saunafs.chunkserver.openFirewall
Whether to automatically open the necessary ports in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.saunafs.chunkserver.settings
Contents of chunkserver config file (see **sfschunkserver.cfg**(5)).

Type: open submodule of attribute set of (Flat key−value file)

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.saunafs.chunkserver.settings.DATA_PATH
Directory for chunck meta data

Type: string

Default:

```
"/var/lib/saunafs/chunkserver"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.saunafs.client.enable
Whether to enable Saunafs client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.saunafs.master.enable
Enable Saunafs master daemon.

You need to run ‘sfsmaster−init’ on a freshly installed master server to initialize the ‘DATA_PATH’ directory.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.saunafs.master.exports
Paths to exports file (see **sfsexports.cfg**(5)).

Type: list of string

Default:

```
null
```

Example:

```
[ "* / rw,alldirs,admin,maproot=0:0" ];
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.saunafs.master.openFirewall
Whether to automatically open the necessary ports in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.saunafs.master.settings
Contents of config file (**sfsmaster.cfg**(5)).

Type: open submodule of attribute set of (Flat key−value file)

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.saunafs.master.settings.DATA_PATH
Data storage directory.

Type: string

Default:

```
"/var/lib/saunafs/master"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.saunafs.masterHost
IP or hostname name of master host.

Type: string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.saunafs.metalogger.enable
Whether to enable Saunafs metalogger daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.saunafs.metalogger.settings
Contents of metalogger config file (see **sfsmetalogger.cfg**(5)).

Type: open submodule of attribute set of (Flat key−value file)

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.saunafs.metalogger.settings.DATA_PATH
Data storage directory

Type: string

Default:

```
"/var/lib/saunafs/metalogger"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.saunafs.sfsUser
Run daemons as user.

Type: string

Default:

```
"saunafs"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/saunafs.nix>

services.scanservjs.enable
Whether to enable scanservjs.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/scanservjs.nix>

services.scanservjs.extraActions

Actions to add to config.local.js's 'actions'.

Type: list of strings concatenated with "\n"

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/scanservjs.nix>

services.scanservjs.extraConfig

Extra code to add to config.local.js's 'afterConfig'.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/scanservjs.nix>

services.scanservjs.extraDevicesConfig

Extra code to add to config.local.js's 'afterDevices'.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/scanservjs.nix>

services.scanservjs.runAfterScan

Extra code to add to config.local.js's 'afterScan'.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/scanservjs.nix>

services.scanservjs.settings

Config to set in config.local.js's 'afterConfig'.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/scanservjs.nix>

services.scanservjs.settings.host

The IP to listen on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/scanservjs.nix>

services.scanservjs.settings.port
The port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/scanservjs.nix>

services.scanservjs.stateDir
State directory for scanservjs.

Type: string

Default:

```
"/var/lib/scanservjs"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/scanservjs.nix>

services.schleuder.enable
Whether to enable Schleuder secure remailer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/schleuder.nix>

services.schleuder.enablePostfix
Whether to enable automatic postfix integration.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/schleuder.nix>

services.schleuder.extraSettingsFile
YAML file to merge into the schleuder config at runtime. This can be used for secrets such as API keys.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/schleuder.nix>

services.schleuder.listDefaults
Default settings for lists (list−defaults.yml).

Check the **example configuration** for possible values.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/schleuder.nix>

services.schleuder.lists
List of list addresses that should be handled by Schleuder.

Note that this is only handled by the postfix integration, and the setup of the lists, their members and their keys has to be performed separately via schleuder's API, using a tool such as schleuder−cli.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "widget-team@example.com"
  "security@example.com"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/schleuder.nix>

services.schleuder.settings
Settings for schleuder.yml.

Check the **example configuration** for possible values.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/schleuder.nix>

services.schleuder.settings.keyserver
Key server from which to fetch and update keys.

Note that NixOS uses a different default from upstream, since the upstream default sks−keyservers.net is deprecated.

Type: string

Default:

```
"keys.openpgp.org"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/schleuder.nix>

services.scion.enable

Whether to enable all of the scion components and services.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/scion/scion.nix>

services.scion.package

The scion package to use.

Type: package

Default:

```
pkgs.scion
```

Declared by:

<nixpkgs/nixos/modules/services/networking/scion/scion.nix>

services.scion.bypassBootstrapWarning

bypass Nix warning about SCION PKI bootstrapping

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/scion/scion.nix>

services.scion.scion−control.enable

Whether to enable the scion−control service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/scion/scion−control.nix>

services.scion.scion−control.settings

scion−control configuration. Refer to **https://docs.scion.org/en/latest/manuals/common.html** for details on supported values.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  path_db = {
```

```
    connection = "/run/scion-control/control.path.db";
  };
  log.console = {
    level = "info";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/scion/scion-control.nix>

services.scion.scion-daemon.enable
Whether to enable the scion-daemon service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/scion/scion-daemon.nix>

services.scion.scion-daemon.settings
scion-daemon configuration. Refer to **https://docs.scion.org/en/latest/manuals/common.html** for details on supported values.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  path_db = {
    connection = "/run/scion-daemon/sd.path.db";
  };
  log.console = {
    level = "info";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/scion/scion-daemon.nix>

services.scion.scion-dispatcher.enable
Whether to enable the scion-dispatcher service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/scion/scion−dispatcher.nix>

services.scion.scion−dispatcher.settings
scion−dispatcher configuration. Refer to **https://docs.scion.org/en/latest/manuals/common.html** for details on supported values.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  dispatcher = {
    id = "dispatcher";
    socket_file_mode = "0770";
    application_socket = "/dev/shm/dispatcher/default.sock";
  };
  log.console = {
    level = "info";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/scion/scion−dispatcher.nix>

services.scion.scion−ip−gateway.enable
Whether to enable the scion−ip−gateway service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/scion/scion−ip−gateway.nix>

services.scion.scion−ip−gateway.config
scion−ip−gateway daemon configuration

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  tunnel = {
    src_ipv4 = "172.16.100.1";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/scion/scion−ip−gateway.nix>

services.scion.scion−ip−gateway.trafficConfig

scion−ip−gateway traffic configuration

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  ASes = {
    "2−ffaa:0:b" = {
      Nets = [
          "172.16.1.0/24"
      ];
    };
  };
  ConfigVersion = 9001;
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/scion/scion−ip−gateway.nix>

services.scion.scion−router.enable

Whether to enable the scion−router service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/scion/scion−router.nix>

services.scion.scion−router.settings

scion−router configuration. Refer to **https://docs.scion.org/en/latest/manuals/common.html** for details on supported values.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  general.id = "br";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/scion/scion−router.nix>

services.scion.stateless

Setting this value to false (stateful) can lead to improved caching and performance.

This option decides whether to persist the SCION path sqlite databases on disk or not. Persisting this data can lead to database corruption in extreme cases such as power outage, meaning SCION fails to work on the next boot. This is being investigated.

If true, /run/scion−* is used for data If false, use /var/lib/scion−* is used for data

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/scion/scion.nix>

services.scollector.enable
Whether to run scollector.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/scollector.nix>

services.scollector.package
The scollector package to use.

Type: package

Default:

```
pkgs.scollector
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/scollector.nix>

services.scollector.bosunHost
Host and port of the bosun server that will store the collected data.

Type: string

Default:

```
"localhost:8070"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/scollector.nix>

services.scollector.collectors
An attribute set mapping the frequency of collection to a list of binaries that should be executed at that frequency. You can use “0” to run a binary forever.

Type: attribute set of list of absolute path

Default:

```
{ }
```

Example:

```
{ "0" = [ "${postgresStats}/bin/collect-stats" ]; }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/scollector.nix>

services.scollector.extraConfig

Extra scollector configuration added to the end of scollector.toml

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scollector.nix>

services.scollector.extraOpts

Extra scollector command line options

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-d"
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scollector.nix>

services.scollector.group

Group account under which scollector runs.

Type: string

Default:

```
"scollector"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scollector.nix>

services.scollector.user

User account under which scollector runs.

Type: string

Default:

```
"scollector"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scollector.nix>

services.screego.enable

Whether to enable screego screen−sharing server for developers.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/screego.nix>

services.screego.environmentFile
Environment file (see **systemd.exec**(5) “EnvironmentFile=” section for the syntax) passed to the service. This option can be used to safely include secrets in the configuration.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/screego-envfile"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/screego.nix>

services.screego.openFirewall
Open the firewall port(s).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/screego.nix>

services.screego.settings
Screego settings passed as Nix attribute set, they will be merged with the defaults. Settings will be passed as environment variables.

See **https://screego.net/#/config** for possible values

Type: attribute set of string

Default:

```
{
  SCREEGO_AUTH_MODE = "turn";
  SCREEGO_CLOSE_ROOM_WHEN_OWNER_LEAVES = "true";
  SCREEGO_LOG_LEVEL = "info";
  SCREEGO_SERVER_ADDRESS = "127.0.0.1:5050";
  SCREEGO_SESSION_TIMEOUT_SECONDS = "0";
  SCREEGO_TURN_ADDRESS = "0.0.0.0:3478";
  SCREEGO_TURN_PORT_RANGE = "50000:55000";
}
```

Example:

```
{
  SCREEGO_EXTERNAL_IP = "dns:example.com";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/screego.nix>

services.scrutiny.enable

Whether to enable Scrutiny, a web application for drive monitoring.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.package

The scrutiny package to use.

Type: package

Default:

```
pkgs.scrutiny
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.collector.enable

Whether to enable the Scrutiny metrics collector.

Type: boolean

Default:

```
config.services.scrutiny.enable
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.collector.package

The scrutiny−collector package to use.

Type: package

Default:

```
pkgs.scrutiny-collector
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.collector.schedule

How often to run the collector in systemd calendar format.

Type: string

Default:

```
"daily"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.collector.settings

Collector settings to be rendered into the collector configuration file.

See **https://github.com/AnalogJ/scrutiny/blob/master/example.collector.yaml**.

Options containing secret data should be set to an attribute set containing the attribute '_secret'. This attribute should be a string or structured JSON with 'quote = false;', pointing to a file that contains the value the option should be set to.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.collector.settings.api.endpoint

Scrutiny app API endpoint for sending metrics to.

Type: string

Default:

```
"http://${config.services.scrutiny.settings.web.listen.host}:${conf \
ig.services.scrutiny.settings.web.listen.port}${config.services.scr \
utiny.settings.web.listen.basepath}"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.collector.settings.host.id

Host ID for identifying/labelling groups of disks

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.collector.settings.log.level

Log level for Scrutiny collector.

Type: one of "INFO", "DEBUG"

Default:

```
"INFO"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.influxdb.enable

Enables InfluxDB on the host system using the 'services.influxdb2' NixOS module with default options.

If you already have InfluxDB configured, or wish to connect to an external InfluxDB instance, disable this option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.openFirewall
Whether to enable opening the default ports in the firewall for Scrutiny.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.settings
Scrutiny settings to be rendered into the configuration file.

See **https://github.com/AnalogJ/scrutiny/blob/master/example.scrutiny.yaml**.

Options containing secret data should be set to an attribute set containing the attribute '_secret'. This attribute should be a string or structured JSON with 'quote = false;', pointing to a file that contains the value the option should be set to.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.settings.log.level
Log level for Scrutiny.

Type: one of "INFO", "DEBUG"

Default:

```
"INFO"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.settings.web.influxdb.bucket
InfluxDB bucket in which to store data.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.settings.web.influxdb.host
IP or hostname of the InfluxDB instance.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.settings.web.influxdb.org
InfluxDB organisation under which to store data.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.settings.web.influxdb.port
The port of the InfluxDB instance.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8086
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.settings.web.influxdb.scheme
URL scheme to use when connecting to InfluxDB.

Type: string

Default:

```
"http"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.settings.web.influxdb.tls.insecure_skip_verify
Whether to enable skipping TLS verification when connecting to InfluxDB.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.settings.web.influxdb.token
Authentication token for connecting to InfluxDB.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.settings.web.listen.basepath

If Scrutiny will be behind a path prefixed reverse proxy, you can override this value to serve Scrutiny on a subpath.

Type: string

Default:

```
""
```

Example:

```
"/scrutiny"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.settings.web.listen.host

Interface address for web application to bind to.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scrutiny.settings.web.listen.port

Port for web application to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/scrutiny.nix>

services.scx.enable

Whether to enable SCX service, a daemon to run schedulers from userspace.

Note

This service requires a kernel with the Sched−ext feature. Generally, kernel version 6.12 and later are supported.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/scheduling/scx.nix>

services.scx.package

‘scx’ package to use. ‘scx.full’, which includes all schedulers, is the default. You may choose a minimal package, such as ‘pkgs.scx.rustscheds’.

Note

Overriding this does not change the default scheduler; you should set ‘services.scx.scheduler’ for it.

Type: package

Default:

```
pkgs.scx.full
```

Example:

```
pkgs.scx.rustscheds
```

Declared by:

<nixpkgs/nixos/modules/services/scheduling/scx.nix>

services.scx.extraArgs

Parameters passed to the chosen scheduler at runtime.

Note

Run ‘chosen−scx−scheduler −−help’ to see the available options. Generally, each scheduler has its own set of options, and they are incompatible with each other.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--verbose"
  "--slice-us 5000"
]
```

Declared by:

<nixpkgs/nixos/modules/services/scheduling/scx.nix>

services.scx.scheduler

Which scheduler to use. See **SCX documentation** for details on each scheduler and guidance on selecting the most suitable one.

Type: one of “scx_central”, “scx_flatcg”, “scx_nest”, “scx_pair”, “scx_prev”, “scx_qmap”, “scx_simple”, “scx_userland”, “scx_beerland”, “scx_bpfland”, “scx_cake”, “scx_chaos”, “scx_cosmos”, “scx_flash”, “scx_lavd”, “scx_layered”, “scx_mitosis”, “scx_p2dq”, “scx_pandemonium”, “scx_rlfifo”, “scx_rustland”, “scx_rusty”, “scx_tickless”, “scx_wd40”

Default:

```
"scx_rustland"
```

Example:

```
"scx_bpfland"
```

Declared by:

<nixpkgs/nixos/modules/services/scheduling/scx.nix>

services.sdrplayApi.enable

Whether to enable the SDRplay API service and udev rules.

Note

To enable integration with SoapySDR and GUI applications like gqrx create an overlay containing ‘soapysdr−with−plugins = super.soapysdr.override { extraPackages = [super.soapysdrplay]; };’

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/sdrplay.nix>

services.searx.enable
Whether to enable Searx, the meta search engine.

Type: boolean

Default:

```
false
```

Related packages:

- 'pkgs.searx'

Declared by:
<nixpkgs/nixos/modules/services/networking/searx.nix>

services.searx.package
The searxng package to use.

Type: package

Default:

```
pkgs.searxng
```

Declared by:
<nixpkgs/nixos/modules/services/networking/searx.nix>

services.searx.configureNginx
Whether to configure nginx as an frontend to uwsgi.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/searx.nix>

services.searx.configureUwsgi
Whether to run searx in uWSGI as a "vassal", instead of using its built−in HTTP server. This is the recommended mode for public or large instances, but is unnecessary for LAN or local−only use.

Warning
The built−in HTTP server logs all queries by default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/searx.nix>

services.searx.domain
The domain under which searxng will be served. Right now this is only used with the configureNginx option.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/searx.nix>

services.searx.environmentFile
Environment file (see **systemd.exec**(5) “EnvironmentFile=” section for the syntax) to define variables for Searx. This option can be used to safely include secret keys into the Searx configuration.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/searx.nix>

services.searx.faviconsSettings
Favicons settings for SearXNG.

Note
For available settings, see the SearXNG **schema file**.

Type: attribute set of (JSON value)

Default:

```
{ }
```

Example:

```
{
  favicons = {
    cfg_schema = 1;
    cache = {
      db_url = "/var/cache/searx/faviconcache.db";
      HOLD_TIME = 5184000;
      LIMIT_TOTAL_BYTES = 2147483648;
      BLOB_MAX_BYTES = 40960;
      MAINTENANCE_MODE = "auto";
      MAINTENANCE_PERIOD = 600;
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/searx.nix>

services.searx.limiterSettings
Limiter settings for SearXNG.

Note
For available settings, see the SearXNG **schema file**.

Type: attribute set of (JSON value)

Default:

```
{ }
```

Example:

```
{
  real_ip = {
    x_for = 1;
    ipv4_prefix = 32;
```

```
    ipv6_prefix = 56;
  }
  botdetection.ip_lists.block_ip = [
    # "93.184.216.34" # example.org
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/searx.nix>

services.searx.openFirewall
Whether to open the port in the firewall. Enabling this option adds the port specified in **services.settings.server.port** to **networking.firewall.allowedTCPPorts**.

Note
When this option is set to true, **services.settings.server.port** must be set as well or an error will be thrown.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/searx.nix>

services.searx.redisCreateLocally
Configure a local Redis server for SearXNG. This is required if you want to enable the rate limiter and bot protection of SearXNG.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/searx.nix>

services.searx.settings
Searx settings. These will be merged with (taking precedence over) the default configuration. It's also possible to refer to environment variables (defined in **services.searx.environmentFile**) using the syntax '$VARIABLE_NAME'.

Note
For available settings, see the Searx **docs**.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Example:

```
{
  server.port = 8080;
  server.bind_address = "0.0.0.0";
  server.secret_key = "$SEARX_SECRET_KEY";
  engines = [ {
    name = "wolframalpha";
    shortcut = "wa";
    api_key = "$WOLFRAM_API_KEY";
```

```
    engine = "wolframalpha_api";
  } ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/searx.nix>

services.searx.settingsFile

The path of the Searx server settings.yml file. If no file is specified, a default file is used (default config file has debug mode enabled).

Note

Setting this options overrides **services.searx.settings**.

Warning

This file, along with any secret key it contains, will be copied into the world−readable Nix store.

Type: absolute path

Default:

```
"/run/searx/settings.yml"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/searx.nix>

services.searx.uwsgiConfig

Additional configuration of the uWSGI vassal running searx. It should notably specify on which interfaces and ports the vassal should listen.

Type: Json value or lambda

Default:

```
{
  http = ":8080";
}
```

Example:

```
{
  disable-logging = true;
  http = ":8080";                    # serve via HTTP...
  socket = "/run/searx/searx.sock"; # ...or UNIX socket
  chmod-socket = "660";              # allow the searx group to rea \
d/write to the socket
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/searx.nix>

services.seatd.enable

Whether to enable seatd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/seatd.nix>

services.seatd.group
Group to own the seatd socket

Type: string

Default:

```
"seat"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/seatd.nix>

services.seatd.logLevel
Logging verbosity

Type: one of “debug”, “info”, “error”, “silent”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/seatd.nix>

services.seatd.user
User to own the seatd socket

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/seatd.nix>

services.seerr.enable
Whether to enable Seerr, a requests manager for Jellyfin.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/seerr.nix>

services.seerr.package
The seerr package to use.

Type: package

Default:

```
pkgs.seerr
```

Declared by:
<nixpkgs/nixos/modules/services/misc/seerr.nix>

services.seerr.configDir
Config data directory

Type: absolute path

Default:

```
"/var/lib/seerr/"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/seerr.nix>

services.seerr.openFirewall
Open port in the firewall for the Seerr web interface.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/seerr.nix>

services.seerr.port
The port which the Seerr web UI should listen to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5055
```

Declared by:
<nixpkgs/nixos/modules/services/misc/seerr.nix>

services.self−deploy.enable
Whether to enable self−deploy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/self−deploy.nix>

services.self−deploy.branch
Branch to track

Technically speaking any ref can be specified here, as this is passed directly to a ‘git fetch’, but for the use−case of continuous deployment you’re likely to want to specify a branch.

Type: string

Default:

```
"master"
```

Declared by:
<nixpkgs/nixos/modules/services/system/self−deploy.nix>

services.self−deploy.nixArgs

Arguments to ‘nix−build’ passed as ‘−−argstr’ or ‘−−arg’ depending on the type.

Type: attribute set

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/system/self−deploy.nix>

services.self−deploy.nixAttribute

Attribute of ‘nixFile’ that builds the current system.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/system/self−deploy.nix>

services.self−deploy.nixFile

Path to nix file in repository. Leading ‘/’ refers to root of git repository.

Type: absolute path

Default:

```
"/default.nix"
```

Declared by:

<nixpkgs/nixos/modules/services/system/self−deploy.nix>

services.self−deploy.repository

The repository to fetch from. Must be properly formatted for git.

If this value is set to a path (must begin with ‘/’) then it’s assumed that the repository is local and the resulting service won’t wait for the network to be up.

If the repository will be fetched over SSH, you must add an entry to ‘programs.ssh.knownHosts’ for the SSH host for the fetch to be successful.

Type: absolute path or string

Declared by:

<nixpkgs/nixos/modules/services/system/self−deploy.nix>

services.self−deploy.sshKeyFile

Path to SSH private key used to fetch private repositories over SSH.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/system/self−deploy.nix>

services.self−deploy.startAt

The schedule on which to run the ‘self−deploy’ service. Format specified by ‘systemd.time 7’.

This value can also be a list of ‘systemd.time 7’ formatted strings, in which case the service will be started on multiple schedules.

Type: string or list of string

Default:

```
"hourly"
```

Declared by:

<nixpkgs/nixos/modules/services/system/self−deploy.nix>

services.self−deploy.switchCommand

The ‘switch−to−configuration’ subcommand used.

Type: one of “boot”, “switch”, “dry−activate”, “test”

Default:

```
"switch"
```

Declared by:

<nixpkgs/nixos/modules/services/system/self−deploy.nix>

services.selfoss.enable

Whether to enable selfoss.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/selfoss.nix>

services.selfoss.database.host

Host of the database (has no effect if type is “sqlite”).

Type: string

Default:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/selfoss.nix>

services.selfoss.database.name

Name of the existing database (has no effect if type is “sqlite”).

Type: string

Default:

```
"tt_rss"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/selfoss.nix>

services.selfoss.database.password

The database user’s password (has no effect if type is “sqlite”).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/selfoss.nix>

services.selfoss.database.port
The database's port. If not set, the default ports will be provided (5432 and 3306 for pgsql and mysql respectively) (has no effect if type is "sqlite").

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/selfoss.nix>

services.selfoss.database.type
Database to store feeds. Supported are sqlite, pgsql and mysql.

Type: one of "pgsql", "mysql", "sqlite"

Default:

```
"sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/selfoss.nix>

services.selfoss.database.user
The database user. The user must exist and has access to the specified database (has no effect if type is "sqlite").

Type: string

Default:

```
"tt_rss"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/selfoss.nix>

services.selfoss.extraConfig
Extra configuration added to config.ini

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/selfoss.nix>

services.selfoss.pool
Name of existing phpfpm pool that is used to run web−application. If not specified a pool will be created automatically with default values.

Type: string

Default:

```
"selfoss_pool"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/selfoss.nix>

services.selfoss.user

User account under which both the service and the web−application run.

Type: string

Default:

```
config.services.nginx.user
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/selfoss.nix>

services.send.enable

Whether to enable Send, a file sharing web sevice for ffsend…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/send.nix>

services.send.package

The send package to use.

Type: package

Default:

```
pkgs.send
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/send.nix>

services.send.baseUrl

Base URL for the Send service. Leave it blank to automatically detect the base url.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/send.nix>

services.send.dataDir

Directory for uploaded files. Due to limitations in **systemd.services.send.serviceConfig.DynamicUser**, this item is read only.

Type: absolute path *(read only)*

Default:

```
"/var/lib/send"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/send.nix>

services.send.environment

All the available config options and their defaults can be found here: **https://github.com/timvisee/send/blob/master/server/config.js**, some descriptions can found here: **https://github.com/timvisee/send/blob/master/docs/docker.md#environment−variables**

Values under **services.send.environment** will override the predefined values in the Send service.

- Time/duration should be in seconds
- Filesize values should be in bytes

Type: attribute set of (null or boolean or signed integer or string or list of signed integer)

Default:

```
{ }
```

Example:

```
{
  DEFAULT_DOWNLOADS = 1;
  DETECT_BASE_URL = true;
  EXPIRE_TIMES_SECONDS = [
    300
    3600
    86400
    604800
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/send.nix>

services.send.environmentFile

Environment file (see **systemd.exec**(5) “EnvironmentFile=” section for the syntax) passed to the service. This option is the recommended way to pass secrets to Send.

This is especially important for users using a cloud storage backend.

A list of environment variables recognized by Send can be found here: **https://github.com/timvisee/send/blob/master/docs/docker.md**

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/send"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/send.nix>

services.send.host

The hostname or IP address for Send to bind to.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/send.nix>

services.send.openFirewall
Whether to open firewall ports for send

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/send.nix>

services.send.port
Port the Send service listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1443
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/send.nix>

services.send.redis.createLocally
Whether to create a local redis automatically.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/send.nix>

services.send.redis.host
Redis server address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/send.nix>

services.send.redis.name
Name of the redis server. Only used if **services.send.redis.createLocally** is set to true.

Type: string

Default:

```
"send"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/send.nix>

services.send.redis.passwordFile
The path to the file containing the Redis password.

If **services.send.redis.createLocally** is set to true, the content of this file will be used as the password for the locally created Redis instance.

Leave it blank if no password is required.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/agenix/send-redis-password"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/send.nix>

services.send.redis.port
Port of the redis server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6379
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/send.nix>

services.serviio.enable
Whether to enable the Serviio Media Server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/serviio.nix>

services.serviio.dataDir
The directory where serviio stores its state, data, etc.

Type: absolute path

Default:

```
"/var/lib/serviio"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/serviio.nix>

services.serviio.openFirewall
Open ports in the firewall for the Serviio Media Server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/serviio.nix>

services.sftpgo.enable
sftpgo

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.package
The sftpgo package to use.

Type: package

Default:

```
pkgs.sftpgo
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.dataDir
The directory where SFTPGo stores its data files.

Type: absolute path

Default:

```
"/var/lib/sftpgo"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.extraArgs
Additional command line arguments to pass to the sftpgo daemon.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--log-level"
  "info"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.extraReadWriteDirs
Extra directories where SFTPGo is allowed to write to.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.group
Group name under which SFTPGo runs.

Type: string

Default:

```
"sftpgo"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.loadDataFile
Path to a json file containing users and folders to load (or update) on startup. Check the **documentation** for the '−−loaddata−from' command line argument for more info.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings
The primary sftpgo configuration. See the **configuration reference** for possible values.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.ftpd.bindings
Configure listen addresses and ports for ftpd.

Type: list of (open submodule of (JSON value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.ftpd.bindings.*.address
Network listen address. Leave blank to listen on all available network interfaces. On *NIX you can specify an absolute path to listen on a Unix−domain socket.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.ftpd.bindings.*.port
The port for serving FTP requests.

Setting the port to '0' disables listening on this interface binding.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.httpd.bindings
Configure listen addresses and ports for httpd.

Type: list of (open submodule of (JSON value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.httpd.bindings.*.enable_web_admin
Enable the built−in web admin for this interface binding.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.httpd.bindings.*.enable_web_client
Enable the built−in web client for this interface binding.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.httpd.bindings.*.address
Network listen address. Leave blank to listen on all available network interfaces. On *NIX you can specify an absolute path to listen on a Unix−domain socket.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.httpd.bindings.*.port
The port for serving HTTP(S) requests.

Setting the port to ‘0’ disables listening on this interface binding.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.sftpd.bindings
Configure listen addresses and ports for sftpd.

Type: list of (open submodule of (JSON value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.sftpd.bindings.*.address
Network listen address. Leave blank to listen on all available network interfaces. On *NIX you can specify an absolute path to listen on a Unix−domain socket.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.sftpd.bindings.*.port
The port for serving SFTP requests.

Setting the port to ‘0’ disables listening on this interface binding.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.smtp
SMTP configuration section.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.smtp.auth_type
- ‘0’: Plain
- ‘1’: Login
- ‘2’: CRAM−MD5

Type: one of 0, 1, 2

Default:

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.smtp.encryption
Encryption scheme:

- ‘0’: No encryption
- ‘1’: TLS
- ‘2’: STARTTLS

Type: one of 0, 1, 2

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.smtp.from
From address.

Type: string

Default:

```
"SFTPGo <sftpgo@example.com>"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.smtp.host
Location of SMTP email server. Leave empty to disable email sending capabilities.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.smtp.port
Port of the SMTP Server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
465
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.smtp.user
SMTP username.

Type: string

Default:

```
"sftpgo"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.webdavd.bindings
Configure listen addresses and ports for webdavd.

Type: list of (open submodule of (JSON value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.webdavd.bindings.*.address
Network listen address. Leave blank to listen on all available network interfaces. On *NIX you can specify an absolute path to listen on a Unix−domain socket.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.settings.webdavd.bindings.*.port
The port for serving WebDAV requests.

Setting the port to ‘0’ disables listening on this interface binding.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.sftpgo.user
User account name under which SFTPGo runs.

Type: string

Default:

```
"sftpgo"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sftpgo.nix>

services.shadowsocks.enable
Whether to run shadowsocks−libev shadowsocks server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shadowsocks.nix>

services.shadowsocks.package
The Shadowsocks package to use.

Type: package

Default:

```
pkgs.shadowsocks−libev
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shadowsocks.nix>

services.shadowsocks.encryptionMethod
Encryption method. See **https://github.com/shadowsocks/shadowsocks−org/wiki/AEAD−Ciphers**.

Type: string

Default:

```
"chacha20−ietf−poly1305"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shadowsocks.nix>

services.shadowsocks.extraConfig

Additional configuration for shadowsocks that is not covered by the provided options. The provided attrset will be serialized to JSON and has to contain valid shadowsocks options. Unfortunately most additional options are undocumented but it's easy to find out what is available by looking into the source code of **https://github.com/shadowsocks/shadowsocks−libev/blob/master/src/jconf.c**

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  nameserver = "8.8.8.8";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/shadowsocks.nix>

services.shadowsocks.fastOpen

use TCP fast−open

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/shadowsocks.nix>

services.shadowsocks.localAddress

Local addresses to which the server binds. Note: shadowsocks−rust accepts only string parameter.

Type: string or list of string

Default:

```
[
  "[::0]"
  "0.0.0.0"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/shadowsocks.nix>

services.shadowsocks.mode

Relay protocols.

Type: one of "tcp_only", "tcp_and_udp", "udp_only"

Default:

```
"tcp_and_udp"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/shadowsocks.nix>

services.shadowsocks.password

Password for connecting clients.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shadowsocks.nix>

services.shadowsocks.passwordFile
Password file with a password for connecting clients.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shadowsocks.nix>

services.shadowsocks.plugin
SIP003 plugin for shadowsocks

Type: null or string

Default:

```
null
```

Example:

```
"${pkgs.shadowsocks-v2ray-plugin}/bin/v2ray-plugin"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shadowsocks.nix>

services.shadowsocks.pluginOpts
Options to pass to the plugin if one was specified

Type: string

Default:

```
""
```

Example:

```
"server;host=example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shadowsocks.nix>

services.shadowsocks.port
Port which the server uses.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8388
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shadowsocks.nix>

services.shairport-sync.enable
Enable the shairport-sync daemon.

Running with a local system-wide or remote pulseaudio server is recommended.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shairport−sync.nix>

services.shairport−sync.package
The shairport−sync package to use.

Type: package

Default:

```
pkgs.shairport−sync
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shairport−sync.nix>

services.shairport−sync.arguments
Arguments to pass to the daemon. Defaults to a local pulseaudio server.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shairport−sync.nix>

services.shairport−sync.group
Group account name under which to run shairport−sync. The account will be created.

Type: string

Default:

```
"shairport"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shairport−sync.nix>

services.shairport−sync.openFirewall
Whether to automatically open ports in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shairport−sync.nix>

services.shairport−sync.settings
Configuration options for Shairport−Sync.

See the example **shairport−sync.conf** for possible options.

Type: attribute set of (libconfig value)

Default:

```
{
  diagnostics = {
    log_verbosity = 1;
  };
  general = {
    output_backend = "pulseaudio";
  };
}
```

Example:

```
{
  general = {
    name = "NixOS Shairport";
    output_backend = "pipewire";
  };
  metadata = {
    cover_art_cache_directory = "/tmp/shairport-sync/.cache/covera \
rt";
    enabled = "yes";
    include_cover_art = "yes";
    pipe_name = "/tmp/shairport-sync-metadata";
    pipe_timeout = 5000;
  };
  mqtt = {
    enabled = "yes";
    hostname = "mqtt.server.domain.example";
    port = 1883;
    publish_cover = "yes";
    publish_parsed = "yes";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shairport-sync.nix>

services.shairport-sync.user
User account name under which to run shairport-sync. The account will be created.

Type: string

Default:

```
"shairport"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shairport-sync.nix>

services.sharkey.enable
Whether to enable Sharkey, a Sharkish microblogging platform.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/sharkey.nix>

services.sharkey.package
The sharkey package to use.

Type: package

Default:

```
pkgs.sharkey
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sharkey.nix>

services.sharkey.environmentFiles
List of paths to files containing environment variables for Sharkey to use at runtime.

This is useful for keeping secrets out of the Nix store. See **https://docs.joinsharkey.org/docs/install/configuration/** for how to configure Sharkey using environment variables.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/run/secrets/sharkey−env"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sharkey.nix>

services.sharkey.openFirewall
Whether to open ports in the NixOS firewall for Sharkey.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sharkey.nix>

services.sharkey.settings
Configuration options for Sharkey.

See **https://activitypub.software/TransFem−org/Sharkey/−/blob/develop/.config/example.yml** for a list of all available configuration options.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sharkey.nix>

services.sharkey.settings.address
The address that Sharkey binds to.

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sharkey.nix>

services.sharkey.settings.fulltextSearch.provider
Which provider to use for full text search.

All options other than 'sqlLike' require extra setup − see the comments in **https://activitypub.software/TransFem−org/Sharkey/−/blob/develop/.config/example.yml** for details.

If 'sqlPgroonga' is set, and 'services.sharkey.setupPostgres' is 'true', the pgroonga extension will automatically be setup. You still need to create an index manually.

If using Meilisearch, consider setting 'services.sharkey.setupMeilisearch' instead, which will configure Meilisearch for you.

Type: one of "sqlLike", "sqlPgroonga", "sqlTsvector", "meilisearch"

Default:

```
"sqlLike"
```

Example:

```
"sqlPgroonga"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sharkey.nix>

services.sharkey.settings.id
The ID generation method for Sharkey to use.

Do NOT change this after initial setup!

Type: one of "aid", "aidx", "meid", "ulid", "objectid"

Default:

```
"aidx"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sharkey.nix>

services.sharkey.settings.mediaDirectory
Path to the folder where Sharkey stores uploaded media such as images and attachments.

Type: absolute path

Default:

```
"/var/lib/sharkey"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sharkey.nix>

services.sharkey.settings.port
The port that Sharkey will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sharkey.nix>

services.sharkey.settings.socket

If specified, creates a UNIX socket at the given path that Sharkey listens on.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/sharkey/sharkey.sock"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/sharkey.nix>

services.sharkey.settings.url

The full URL that the Sharkey instance will be publically accessible on.

Do NOT change this after initial setup!

Type: string

Example:

```
"https://blahaj.social/"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/sharkey.nix>

services.sharkey.setupMeilisearch

Whether to automatically set up a local Meilisearch instance and configure Sharkey to use it.

You need to ensure ‘services.meilisearch.masterKeyFile’ is correctly configured for a working Meilisearch setup. You also need to configure Sharkey to use an API key obtained from Meilisearch with the ‘MK_CONFIG_MEILISEARCH_APIKEY’ environment variable, and set ‘services.sharkey.settings.meilisearch.index’ to the created index. See **https://docs.joinsharkey.org/docs/customisation/search/meilisearch/** for how to create an API key and index.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/sharkey.nix>

services.sharkey.setupPostgresql

Whether to automatically set up a local PostgreSQL database and configure Sharkey to use it.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/sharkey.nix>

services.sharkey.setupRedis

Whether to automatically set up a local Redis cache and configure Sharkey to use it.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/sharkey.nix>

services.shelfmark.enable

Whether to enable Shelfmark, a self−hosted book and audiobook search and download interface.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/shelfmark.nix>

services.shelfmark.package

The shelfmark package to use.

Type: package

Default:

```
pkgs.shelfmark
```

Declared by:

<nixpkgs/nixos/modules/services/misc/shelfmark.nix>

services.shelfmark.environment

Environment variables to pass to the Shelfmark service. See **https://github.com/calibrain/shelfmark/blob/main/docs/environment−variables.md** for available options.

Type: open submodule of attribute set of string

Default:

```
{ }
```

Example:

```
{
  LOG_LEVEL = "DEBUG";
  SEARCH_MODE = "universal";
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/shelfmark.nix>

services.shelfmark.environment.CONFIG_DIR
Directory for Shelfmark configuration, database, and artwork cache.

Type: absolute path

Default:

```
"/var/lib/shelfmark"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/shelfmark.nix>

services.shelfmark.environment.ENABLE_LOGGING
Whether to enable file logging. Disabled by default since systemd captures console output via journald.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/shelfmark.nix>

services.shelfmark.environment.FLASK_HOST
The IP address to bind the Shelfmark server to.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/shelfmark.nix>

services.shelfmark.environment.FLASK_PORT
TCP port for the Shelfmark web interface.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8084
```

Declared by:
<nixpkgs/nixos/modules/services/misc/shelfmark.nix>

services.shelfmark.openFirewall
Open the appropriate ports in the firewall for Shelfmark.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/shelfmark.nix>

services.shellhub−agent.enable
Whether to enable ShellHub Agent daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shellhub−agent.nix>

services.shellhub−agent.package
The shellhub−agent package to use.

Type: package

Default:

```
pkgs.shellhub−agent
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shellhub−agent.nix>

services.shellhub−agent.keepAliveInterval
Determine the interval to send the keep alive message to the server. This has a direct impact of the bandwidth used by the device.

Type: signed integer

Default:

```
30
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shellhub−agent.nix>

services.shellhub−agent.preferredHostname
Set the device preferred hostname. This provides a hint to the server to use this as hostname if it is available.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shellhub−agent.nix>

services.shellhub−agent.privateKey
Location where to store the ShellHub Agent private key.

Type: absolute path

Default:

```
"/var/lib/shellhub−agent/private.key"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shellhub−agent.nix>

services.shellhub−agent.server
Server address of ShellHub Gateway to connect.

Type: string

Default:

```
"https://cloud.shellhub.io"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shellhub−agent.nix>

services.shellhub−agent.tenantId
The tenant ID to use when connecting to the ShellHub Gateway.

Type: string

Example:

```
"ba0a880c−2ada−11eb−a35e−17266ef329d6"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/shellhub−agent.nix>

services.shibboleth−sp.enable
Whether to enable the shibboleth service

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/shibboleth−sp.nix>

services.shibboleth−sp.configFile
Path to shibboleth config file

Type: absolute path

Example:

```
"${pkgs.shibboleth−sp}/etc/shibboleth/shibboleth2.xml"
```

Declared by:
<nixpkgs/nixos/modules/services/security/shibboleth−sp.nix>

services.shibboleth−sp.fastcgi.enable
Whether to include the shibauthorizer and shibresponder FastCGI processes

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/shibboleth−sp.nix>

services.shibboleth−sp.fastcgi.shibAuthorizerPort
Port for shibauthorizer FastCGI process to bind to

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9100
```

Declared by:
<nixpkgs/nixos/modules/services/security/shibboleth−sp.nix>

services.shibboleth−sp.fastcgi.shibResponderPort
Port for shibauthorizer FastCGI process to bind to

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9101
```

Declared by:
<nixpkgs/nixos/modules/services/security/shibboleth−sp.nix>

services.shiori.enable
Whether to enable Shiori simple bookmarks manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/shiori.nix>

services.shiori.package
The shiori package to use.

Type: package

Default:

```
pkgs.shiori
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/shiori.nix>

services.shiori.address
The IP address on which Shiori will listen. If empty, listens on all interfaces.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/shiori.nix>

services.shiori.databaseUrl
The connection URL to connect to MySQL or PostgreSQL

Type: null or string

Default:

```
null
```

Example:

```
"postgres:///shiori?host=/run/postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/shiori.nix>

services.shiori.environmentFile
Path to file containing environment variables. Useful for passing down secrets. **https://github.com/go−shiori/shiori/blob/master/docs/Configuration.md#overall−configuration**

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/environmentFile"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/shiori.nix>

services.shiori.port
The port of the Shiori web application

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/shiori.nix>

services.shiori.webRoot
The root of the Shiori web application

Type: string

Default:

```
"/"
```

Example:

```
"/shiori"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/shiori.nix>

services.shoko.enable
Whether to enable Shoko.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/shoko.nix>

services.shoko.package

The shoko package to use.

Type: package

Default:

```
pkgs.shoko
```

Declared by:

<nixpkgs/nixos/modules/services/misc/shoko.nix>

services.shoko.openFirewall

Open ports in the firewall for the ShokoAnime api and web interface.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/shoko.nix>

services.shoko.plugins

The plugins to install.

Note that if there are plugins installed imperatively when this option is used, they will be deleted.

Type: list of package

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/shoko.nix>

services.shoko.webui

The shoko-webui package to use.

Type: null or package

Default:

```
pkgs.shoko-webui
```

Declared by:

<nixpkgs/nixos/modules/services/misc/shoko.nix>

services.shorewall.enable

Whether to enable Shorewall IPv4 Firewall.

Warning
Enabling this service WILL disable the existing NixOS firewall! Default firewall rules provided by packages are not considered at the moment.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/shorewall.nix>

services.shorewall.package

The shorewall package to use.

Type: package

Default:

```
pkgs.shorewall
```

Declared by:

<nixpkgs/nixos/modules/services/networking/shorewall.nix>

services.shorewall.configs

This option defines the Shorewall configs. The attribute name defines the name of the config, and the attribute value defines the content of the config.

Type: attribute set of strings concatenated with "\n"

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/shorewall.nix>

services.shorewall6.enable

Whether to enable Shorewall IPv6 Firewall.

Warning
Enabling this service WILL disable the existing NixOS firewall! Default firewall rules provided by packages are not considered at the moment.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/shorewall6.nix>

services.shorewall6.package

The shorewall package to use.

Type: package

Default:

```
pkgs.shorewall
```

Declared by:

<nixpkgs/nixos/modules/services/networking/shorewall6.nix>

services.shorewall6.configs

This option defines the Shorewall configs. The attribute name defines the name of the config, and the attribute value defines the content of the config.

Type: attribute set of strings concatenated with "\n"

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/shorewall6.nix>

services.sickbeard.enable

Whether to enable the sickbeard server.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/sickbeard.nix>

services.sickbeard.package

The sickbeard package to use. Enable ‘pkgs.sickrage’ or ‘pkgs.sickgear’ as an alternative to SickBeard

Type: package

Default:

```
pkgs.sickbeard
```

Example:

```
sickrage
```

Declared by:

<nixpkgs/nixos/modules/services/misc/sickbeard.nix>

services.sickbeard.configFile

Path to config file.

Type: absolute path

Default:

```
"${config.services.sickbeard.dataDir}/config.ini"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/sickbeard.nix>

services.sickbeard.dataDir

Path where to store data files.

Type: absolute path

Default:

```
"/var/lib/sickbeard"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/sickbeard.nix>

services.sickbeard.group

Group to run the service as

Type: string

Default:

```
"sickbeard"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/sickbeard.nix>

services.sickbeard.port
Port to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8081
```

Declared by:
<nixpkgs/nixos/modules/services/misc/sickbeard.nix>

services.sickbeard.user
User to run the service as

Type: string

Default:

```
"sickbeard"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/sickbeard.nix>

services.sillytavern.enable
Whether to enable sillytavern.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sillytavern.nix>

services.sillytavern.package
The sillytavern package to use.

Type: package

Default:

```
pkgs.sillytavern
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sillytavern.nix>

services.sillytavern.configFile
Path to the SillyTavern configuration file.

Type: absolute path

Default:

```
${cfg.package}/lib/node_modules/sillytavern/config.yaml
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sillytavern.nix>

services.sillytavern.group

Group account under which the web−application run.

Type: string

Default:

```
"sillytavern"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/sillytavern.nix>

services.sillytavern.listen

Whether to listen on all network interfaces.

Type: null or boolean

Default:

```
null
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/sillytavern.nix>

services.sillytavern.listenAddressIPv4

Specific IPv4 address to listen to.

Type: null or string

Default:

```
null
```

Example:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/sillytavern.nix>

services.sillytavern.listenAddressIPv6

Specific IPv6 address to listen to.

Type: null or string

Default:

```
null
```

Example:

```
"::1"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/sillytavern.nix>

services.sillytavern.port

Port on which SillyTavern will listen.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Example:

```
8045
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sillytavern.nix>

services.sillytavern.user
User account under which the web−application run.

Type: string

Default:

```
"sillytavern"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sillytavern.nix>

services.sillytavern.whitelist
Enables whitelist mode.

Type: null or boolean

Default:

```
null
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sillytavern.nix>

services.silverbullet.enable
Whether to enable Silverbullet, an open−source, self−hosted, offline−capable Personal Knowledge Management (PKM) web application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/silverbullet.nix>

services.silverbullet.package
The silverbullet package to use.

Type: package

Default:

```
pkgs.silverbullet
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/silverbullet.nix>

services.silverbullet.envFile
File containing extra environment variables. For example:

```
SB_USER=user:password
SB_AUTH_TOKEN=abcdefg12345
```

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/silverbullet.env"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/silverbullet.nix>

services.silverbullet.extraArgs
Extra arguments passed to silverbullet.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--db /path/to/silverbullet.db"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/silverbullet.nix>

services.silverbullet.group
The group to run Silverbullet under. By default, a group named ‘silverbullet’ will be created.

Type: string

Default:

```
"silverbullet"
```

Example:

```
"yourGroup"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/silverbullet.nix>

services.silverbullet.listenAddress
Address or hostname to listen on. Defaults to 127.0.0.1.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/silverbullet.nix>

services.silverbullet.listenPort
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/silverbullet.nix>

services.silverbullet.openFirewall
Open port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/silverbullet.nix>

services.silverbullet.spaceDir
Folder to store Silverbullet's space/workspace. By default it is located at '/var/lib/silverbullet'.

Type: absolute path

Default:

```
"/var/lib/silverbullet"
```

Example:

```
"/home/yourUser/silverbullet"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/silverbullet.nix>

services.silverbullet.user
The user to run Silverbullet as. By default, a user named 'silverbullet' will be created whose space directory is **spaceDir**.

Type: string

Default:

```
"silverbullet"
```

Example:

```
"yourUser"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/silverbullet.nix>

services.sing−box.enable
Whether to enable sing−box universal proxy platform.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sing−box.nix>

services.sing−box.package
The sing−box package to use.

Type: package

Default:

```
pkgs.sing−box
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sing−box.nix>

services.sing−box.settings
The sing−box configuration, see **https://sing−box.sagernet.org/configuration/** for documentation.

Options containing secret data should be set to an attribute set containing the attribute '_secret' − a string pointing to a file containing the value the option should be set to.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sing−box.nix>

services.sitespeed−io.enable
Whether to enable Sitespeed.io.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sitespeed−io.nix>

services.sitespeed−io.package
The sitespeed−io package to use.

Type: package

Default:

```
pkgs.sitespeed−io
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sitespeed−io.nix>

services.sitespeed−io.dataDir
The base sitespeed−io data directory.

Type: string

Default:

```
"/var/lib/sitespeed−io"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sitespeed−io.nix>

services.sitespeed−io.period
Systemd calendar expression when to run. See **systemd.time**(7).

Type: string

Default:

```
"hourly"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sitespeed−io.nix>

services.sitespeed−io.runs
A list of run configurations. The service will call sitespeed−io once for every run listed here. This lets you examine different websites with different sitespeed−io settings.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sitespeed−io.nix>

services.sitespeed−io.runs.*.extraArgs
Extra command line arguments to pass to the program.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sitespeed−io.nix>

services.sitespeed−io.runs.*.settings
Configuration for sitespeed−io, see **https://www.sitespeed.io/documentation/sitespeed.io/configuration/** for available options. The value here will be directly transformed to JSON and passed as '−−config' to the program.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sitespeed−io.nix>

services.sitespeed−io.runs.*.urls
URLs the service should monitor.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sitespeed−io.nix>

services.sitespeed−io.user
User account under which sitespeed−io runs.

Type: string

Default:

```
"sitespeed-io"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sitespeed−io.nix>

services.sks.enable

Whether to enable SKS (synchronizing key server for OpenPGP) and start the database server. You need to create "${dataDir}/dump/*.gpg" for the initial import.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/sks.nix>

services.sks.package

The sks package to use.

Type: package

Default:

```
pkgs.sks
```

Declared by:

<nixpkgs/nixos/modules/services/security/sks.nix>

services.sks.dataDir

Data directory (−basedir) for SKS, where the database and all configuration files are located (e.g. KDB, PTree, membership and sksconf).

Type: absolute path

Default:

```
"/var/db/sks"
```

Example:

```
"/var/lib/sks"
```

Declared by:

<nixpkgs/nixos/modules/services/security/sks.nix>

services.sks.extraDbConfig

Set contents of the files "KDB/DB_CONFIG" and "PTree/DB_CONFIG" within the ${dataDir} directory. This is used to configure options for the database for the sks key server.

Documentation of available options are available in the file named "sampleConfig/DB_CONFIG" in the following repository: https://bitbucket.org/skskeyserver/sks−keyserver/src

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/security/sks.nix>

services.sks.hkpAddress

Domain names, IPv4 and/or IPv6 addresses to listen on for HKP requests.

Type: list of string

Default:

```
[
```

```
  "127.0.0.1"
  "::1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/sks.nix>

services.sks.hkpPort
HKP port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
11371
```

Declared by:
<nixpkgs/nixos/modules/services/security/sks.nix>

services.sks.webroot
Source directory (will be symlinked, if not null) for the files the built−in webserver should serve. SKS (${pkgs.sks.webSamples}) provides the following examples: “HTML5”, “OpenPKG”, and “XHTML+ES”. The index file can be named index.html, index.htm, index.xhtm, or index.xhtml. Files with the extensions .css, .es, .js, .jpg, .jpeg, .png, or .gif are supported. Subdirectories and filenames with anything other than alphanumeric characters and the ‘.’ character will be ignored.

Type: null or absolute path

Default:

```
"${package.webSamples}/OpenPKG"
```

Declared by:
<nixpkgs/nixos/modules/services/security/sks.nix>

services.skydns.enable
Whether to enable skydns service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/skydns.nix>

services.skydns.package
The skydns package to use.

Type: package

Default:

```
pkgs.skydns
```

Declared by:
<nixpkgs/nixos/modules/services/networking/skydns.nix>

services.skydns.address
Skydns address to bind to.

Type: string

Default:

```
"0.0.0.0:53"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/skydns.nix>

services.skydns.domain
Skydns default domain if not specified by etcd config.

Type: string

Default:

```
"skydns.local."
```

Declared by:
<nixpkgs/nixos/modules/services/networking/skydns.nix>

services.skydns.etcd.caCert
Skydns path of TLS certificate authority public key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/skydns.nix>

services.skydns.etcd.machines
Skydns list of etcd endpoints to connect to.

Type: list of string

Default:

```
[
  "http://127.0.0.1:2379"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/skydns.nix>

services.skydns.etcd.tlsKey
Skydns path of TLS client certificate − private key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/skydns.nix>

services.skydns.etcd.tlsPem
Skydns path of TLS client certificate − public key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/skydns.nix>

services.skydns.extraConfig
Skydns attribute set of extra config options passed as environment variables.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/skydns.nix>

services.skydns.nameservers
Skydns list of nameservers to forward DNS requests to when not authoritative for a domain.

Type: list of string

Default:

```
map (n: n + ":53") config.networking.nameservers
```

Example:

```
[
  "8.8.8.8:53"
  "8.8.4.4:53"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/skydns.nix>

services.slimserver.enable
Whether to enable slimserver.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/audio/slimserver.nix>

services.slimserver.package
The slimserver package to use.

Type: package

Default:

```
pkgs.slimserver
```

Declared by:
<nixpkgs/nixos/modules/services/audio/slimserver.nix>

services.slimserver.dataDir
The directory where slimserver stores its state, tag cache, playlists etc.

Type: absolute path

Default:

```
"/var/lib/slimserver"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/slimserver.nix>

services.slskd.enable
Whether to enable slskd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.package
The slskd package to use.

Type: package

Default:

```
pkgs.slskd
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.domain
If non−null, enables an nginx reverse proxy virtual host at this FQDN, at the path configurated with ‘services.slskd.web.url_base’.

Type: null or string

Default:

```
null
```

Example:

```
"slskd.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.environmentFile
Path to the environment file sourced on startup. It must at least contain the variables ‘SLSKD_SLSK_USERNAME’ and ‘SLSKD_SLSK_PASSWORD’. Web interface credentials should also be set here in ‘SLSKD_USERNAME’ and ‘SLSKD_PASSWORD’. Other, optional credentials like SOCKS5 with ‘SLSKD_SLSK_PROXY_USERNAME’ and ‘SLSKD_SLSK_PROXY_PASSWORD’ should all reside here instead of in the world−readable nix store. Variables are documented at **https://github.com/slskd/slskd/blob/master/docs/config.md**

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.group
Group under which slskd runs.

Type: string

Default:

```
"slskd"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx
This option customizes the nginx virtual host set up for slskd.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  enableACME = true;
  forceSSL = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.enableACME
Whether to ask Let’s Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don’t put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.addSSL

Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.default

Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.extraConfig

These lines go to the end of the vhost verbatim.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with 'redirectCode') all plain HTTP traffic to HTTPS. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with 'redirectCode') to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.http2
Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.http3
Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.http3_hq

Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides 'addSSL' and 'onlySSL'.

If you only want to set the addresses manually and not the ports, take a look at 'listenAddresses'.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.listen.*.ssl
Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations.<name>.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations.<name>.priority

Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations.<name>.proxyPass

Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations.<name>.proxyWebsockets

Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations.<name>.recommendedProxySettings

Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations.<name>.recommendedUwsgiSettings

Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.onlySSL

Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for ‘listen’ to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.quic

Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.redirectCode

HTTP status used by ‘globalRedirect’ and ‘forceSSL’. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.rejectSSL

Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the ‘ssl_reject_handshake’ directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.root
The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.serverName
Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.sslCertificateKey

Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.sslTrustedCertificate

Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.nginx.useACMEHost

A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

2. see the **security.acme.certs** option

services.slskd.openFirewall

Whether to open the firewall for the soulseek network listen port (not the web interface port).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings

Application configuration for slskd. See **documentation**.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.directories.downloads
Directory where downloaded files are stored.

Type: null or absolute path

Default:

```
"/var/lib/slskd/downloads"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.directories.incomplete
Directory where incomplete downloading files are stored.

Type: null or absolute path

Default:

```
"/var/lib/slskd/incomplete"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.filters.search.request
Incoming search requests which match this filter are ignored.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "^.{1,2}$" ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.flags.force_share_scan
Force a rescan of shares on every startup.

Type: boolean

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.global.download.slots
Limit of the number of concurrent download slots.

Type: unsigned integer, meaning >=0

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.global.download.speed_limit
Total upload download limit

Type: unsigned integer, meaning >=0

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.global.upload.slots
Limit of the number of concurrent upload slots.

Type: unsigned integer, meaning >=0

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.global.upload.speed_limit
Total upload speed limit.

Type: unsigned integer, meaning >=0

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.remote_file_management
Whether to enable modification of share contents through the web ui.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.retention.files.complete
Lifespan of completely downloaded files in minutes.

Type: unsigned integer, meaning >=0

Default:

```
"(indefinite)"
```

Example:

```
20160
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.retention.files.incomplete
Lifespan of incomplete downloading files in minutes.

Type: unsigned integer, meaning >=0

Default:

```
"(indefinite)"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.retention.transfers.download.cancelled
Lifespan of cancelled download tasks.

Type: unsigned integer, meaning >=0

Default:

```
"(indefinite)"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.retention.transfers.download.errored
Lifespan of errored download tasks.

Type: unsigned integer, meaning >=0

Default:

```
"(indefinite)"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.retention.transfers.download.succeeded
Lifespan of succeeded download tasks.

Type: unsigned integer, meaning >=0

Default:

```
"(indefinite)"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.retention.transfers.upload.cancelled
Lifespan of cancelled upload tasks.

Type: unsigned integer, meaning >=0

Default:

```
"(indefinite)"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.retention.transfers.upload.errored
Lifespan of errored upload tasks.

Type: unsigned integer, meaning >=0

Default:

```
"(indefinite)"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.retention.transfers.upload.succeeded
Lifespan of succeeded upload tasks.

Type: unsigned integer, meaning >=0

Default:

```
"(indefinite)"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.rooms
Chat rooms to join on startup.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.shares.directories
Paths to shared directories. See **documentation** for advanced usage.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "/home/John/Music" "!/home/John/Music/Recordings" "[Music Drive]/ \
mnt" ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.shares.filters
Regular expressions of files to exclude from sharing.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "\.ini$" "Thumbs.db$" "\.DS_Store$" ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.soulseek.description
The user description for the Soulseek network.

Type: string

Default:

```
"A slskd user. https://github.com/slskd/slskd"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.soulseek.listen_port
The port on which to listen for incoming connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
50300
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.web.https.disabled
Disable the built−in HTTPS server

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.web.port
The HTTP listen port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5030
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.settings.web.url_base
The base path in the url for web requests.

Type: absolute path

Default:

```
"/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slskd.user
User account under which slskd runs.

Type: string

Default:

```
"slskd"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/slskd.nix>

services.slurm.enableSrunX11
If enabled srun will accept the option “–x11” to allow for X11 forwarding from within an interactive session or a batch job. This activates the slurm−spank−x11 module. Note that this option also enables **services.openssh.forwardX11** on the client.

This option requires slurm to be compiled without native X11 support. The default behavior is to re−compile the slurm package with native X11 support disabled if this option is set to true.

To use the native X11 support add ‘PrologFlags=X11’ in **extraConfig**. Note that this method will only work RSA SSH host keys.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.enableStools
Whether to provide a *slurm.conf* file. Enable this option if you do not run a slurm daemon on this host (i.e. ‘server.enable’ and ‘client.enable’ are ‘false’) but you still want to run slurm commands from this host.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.package
The slurm package to use.

Type: package

Default:

```
pkgs.slurm
```

Example:

```
slurm-full
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.client.enable
Whether to enable slurm client daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.clusterName
Necessary to distinguish accounting records in a multi−cluster environment.

Type: string

Default:

```
"default"
```

Example:

```
"myCluster"
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.controlAddr
Name that ControlMachine should be referred to in establishing a communications path.

Type: null or string

Default:

```
config.services.slurm.controlMachine
```

Example:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.controlMachine

The short hostname of the machine where SLURM control functions are executed (i.e. the name returned by the command “hostname −s”, use “tux001” rather than “tux001.my.com”).

Type: null or string

Default:

```
null
```

Example:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.dbdserver.enable

Whether to enable SlurmDBD service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.dbdserver.dbdHost

Hostname of the machine where ‘slurmdbd’ is running (i.e. name returned by ‘hostname −s’).

Type: string

Default:

```
config.networking.hostName
```

Declared by:

<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.dbdserver.extraConfig

Extra configuration for *slurmdbd.conf* See also: **slurmdbd.conf**(8).

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.dbdserver.storagePassFile

Path to file with database password. The content of this will be used to create the password for the ‘StoragePass’ option.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.dbdserver.storageUser
Database user name.

Type: string

Default:

```
config.services.slurm.user
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.extraCgroupConfig
Extra configuration for *cgroup.conf*. This file is used when 'procTrackType=proctrack/cgroup'.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.extraConfig
Extra configuration options that will be added verbatim at the end of the slurm configuration file.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.extraConfigPaths
Slurm expects config files for plugins in the same path as *slurm.conf*. Add extra nix store paths that should be merged into same directory as *slurm.conf*.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.extraPlugstackConfig
Extra configuration that will be added to the end of *plugstack.conf*.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.mpi.PmixCliTmpDirBase
Base path for PMIx temporary files.

Type: string

Default:

```
"/tmp/pmix"
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.mpi.extraMpiConfig
Extra configuration for that will be added to *mpi.conf*.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.nodeName
Name that SLURM uses to refer to a node (or base partition for BlueGene systems). Typically this would be the string that "/bin/hostname −s" returns. Note that now you have to write node's parameters after the name.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "linux[1−32] CPUs=1 State=UNKNOWN" ];
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.partitionName
Name by which the partition may be referenced. Note that now you have to write the partition's parameters after the name.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "debug Nodes=linux[1−32] Default=YES MaxTime=INFINITE State=UP"  \
];
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.procTrackType
Plugin to be used for process tracking on a job step basis. The slurmd daemon uses this mechanism to identify all processes which are children of processes it spawns for a user job step.

Type: string

Default:

```
"proctrack/linuxproc"
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.rest.enable
Whether to enable slurm REST daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.rest.environment
Environment variables to set for the slurmrestd daemon, see slurmrestd(8).

Type: open submodule of attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.rest.environment.SLURMRESTD_DEBUG
Set debug level explicitly. Valid values are 0−9, or the same string values as the debug options such as SlurmctldDebug in slurm.conf(5).

Type: string

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.rest.environment.SLURMRESTD_LISTEN
Comma−delimited list of host:port pairs or unix sockets to listen on.

Type: string

Default:

```
":6820"
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.rest.environment.SLURM_JWT
This variable must be set to use JWT token authentication.

Type: string

Default:

```
"daemon"
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.rest.options

Extra command−line options to pass to slurmrestd.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.server.enable

Whether to enable the slurm control daemon. Note that the standard authentication method is “munge”. The “munge” service needs to be provided with a password file in order for slurm to work properly (see ‘services.munge.password’).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.server.flags

Flags passed to ‘slurmctld’ daemon, see **slurmctld**(8). Special characters are properly escaped.

Type: attribute set of (string or boolean or floating point number or signed integer)

Default:

```
{ }
```

Example:

```
{
  L = "/var/log/file with space.log";
  i = true;
  n = 10;
  systemd = true;
}
```

Declared by:

<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.stateSaveLocation

Directory into which the Slurm controller, slurmctld, saves its state.

Type: string

Default:

```
"/var/spool/slurmctld"
```

Declared by:

<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.slurm.user

Set this option when you want to run the slurmctld daemon as something else than the default slurm user “slurm”. Note that the UID of this user needs to be the same on all nodes.

Type: string

Default:

```
"slurm"
```

Declared by:
<nixpkgs/nixos/modules/services/computing/slurm/slurm.nix>

services.smartd.enable
Whether to enable smartd daemon from ‘smartmontools’ package.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.autodetect
Whenever smartd should monitor all devices connected to the machine at the time it’s being started (the default).

Set to false to monitor the devices listed in **services.smartd.devices** only.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.defaults.autodetected
Like **services.smartd.defaults.monitored**, but for the autodetected devices.

Type: strings concatenated with " "

Default:

```
config.services.smartd.defaults.monitored
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.defaults.monitored
Common default options for explicitly monitored (listed in **services.smartd.devices**) devices.

The default value turns on monitoring of all the things (see ‘man 5 smartd.conf’).

The example also turns on SMART Automatic Offline Testing on startup, and schedules short self−tests daily, and long self−tests weekly.

Type: strings concatenated with " "

Default:

```
"−a"
```

Example:

```
"−a −o on −s (S/../../02|L/../../7/04)"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.devices

List of devices to monitor.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    device = "/dev/sda";
  }
  {
    device = "/dev/sdb";
    options = "-d sat";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.devices.*.device

Location of the device.

Type: string

Example:

```
"/dev/sda"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.devices.*.options

Options that determine how smartd monitors the device.

Type: strings concatenated with " "

Default:

```
""
```

Example:

```
"-d sat"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.extraOptions

Extra command-line options passed to the ‘smartd’ daemon on startup.

(See ‘man 8 smartd’.)

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-A /var/log/smartd/"
  "--interval=3600"
```

```
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.notifications.mail.enable
Whenever to send e−mail notifications.

Type: boolean

Default:

```
config.services.mail.sendmailSetuidWrapper != null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.notifications.mail.mailer
Sendmail−compatible binary to be used to send the messages.

You should probably enable **services.postfix** or some other MTA for this to work.

Type: absolute path

Default:

```
"/run/wrappers/bin/sendmail"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.notifications.mail.recipient
Recipient of the notification messages.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.notifications.mail.sender
Sender of the notification messages. Acts as the value of ‘email’ in the emails’ ‘From: ...’ field.

Type: string

Default:

```
"root"
```

Example:

```
"example@domain.tld"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.notifications.systembus−notify.enable
Whenever to send systembus−notify notifications.

WARNING: enabling this option (while convenient) should *not* be done on a machine where you do not trust the other users as it allows any other local user to DoS your session by spamming notifications.

To actually see the notifications in your GUI session, you need to have ‘systembus−notify’ running as your user, which this option handles by enabling **services.systembus−notify**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.notifications.test

Whenever to send a test notification on startup.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.notifications.wall.enable

Whenever to send wall notifications to all users.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.notifications.x11.enable

Whenever to send X11 xmessage notifications.

Type: boolean

Default:

```
config.services.xserver.enable
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartd.notifications.x11.display

DISPLAY to send X11 notifications to.

Type: string

Default:

```
":${toString config.services.xserver.display}"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/smartd.nix>

services.smartdns.enable

Whether to enable SmartDNS DNS server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smartdns.nix>

services.smartdns.bindPort
DNS listening port number.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
53
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smartdns.nix>

services.smartdns.settings
A set that will be generated into configuration file, see the **SmartDNS README** for details of configuration parameters. You could override the options here like **services.smartdns.bindPort** by writing 'settings.bind = ":5353 −no−rule −group example";'.

Type: attribute set of ((list of (string or signed integer or boolean)) or (string or signed integer or boolean) convertible to it)

Default:

```
{ }
```

Example:

```
{
  bind = ":5353 -no-rule -group example";
  cache-size = 4096;
  server-tls = [ "8.8.8.8:853" "1.1.1.1:853" ];
  server-https = "https://cloudflare-dns.com/dns-query -exclude \
-default-group";
  prefetch-domain = true;
  speed-check-mode = "ping,tcp:80";
};
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smartdns.nix>

services.smokeping.enable
Whether to enable smokeping service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.package
The smokeping package to use.

Type: package

Default:

```
pkgs.smokeping
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.alertConfig
Configuration for alerts.

Type: strings concatenated with “\n”

Default:

```
to = root@localhost
from = smokeping@localhost
```

Example:

```
to = alertee@address.somewhere
from = smokealert@company.xy

+someloss
type = loss
# in percent
pattern = >0%,*12*,>0%,*12*,>0%
comment = loss 3 times  in a row;
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.cgiUrl
URL to the smokeping cgi.

Type: string

Default:

```
"http://${hostName}/smokeping.cgi"
```

Example:

```
"https://somewhere.example.com/smokeping.cgi"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.config
Full smokeping config supplied by the user. Overrides and replaces any other configuration supplied.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.databaseConfig
Configure the ping frequency and retention of the rrd files. Once set, changing the interval will require deletion or migration of all the collected data.

Type: strings concatenated with “\n”

Default:

```
step     = 300
pings    = 20
# consfn mrhb steps total
AVERAGE  0.5   1  1008
```

```
AVERAGE  0.5  12  4320
    MIN  0.5  12  4320
    MAX  0.5  12  4320
AVERAGE  0.5 144   720
    MAX  0.5 144   720
    MIN  0.5 144   720
```

Example:

```
# near constant pings.
step     = 30
pings    = 20
# consfn mrhb steps total
AVERAGE  0.5   1  10080
AVERAGE  0.5  12  43200
    MIN  0.5  12  43200
    MAX  0.5  12  43200
AVERAGE  0.5 144   7200
    MAX  0.5 144   7200
    MIN  0.5 144   7200
```

Declared by:

<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.extraConfig

Any additional customization not already included.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.host

Host/IP to bind to for the web server.

Setting it to ‘null’ skips passing the −h option to thttpd, which makes it bind to all interfaces.

Type: null or string

Default:

```
"localhost"
```

Example:

```
"192.0.2.1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.hostName

DNS name for the urls generated in the cgi.

Type: string

Default:

```
config.networking.fqdn
```

Example:

```
"somewhere.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.imgUrl
Base url for images generated in the cgi.

The default is a relative URL to ensure it works also when e.g. forwarding the GUI port via SSH.

Type: string

Default:

```
"cache"
```

Example:

```
"https://somewhere.example.com/cache"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.linkStyle
DNS name for the urls generated in the cgi.

Type: one of “original”, “absolute”, “relative”

Default:

```
"relative"
```

Example:

```
"absolute"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.mailHost
Use this SMTP server to send alerts

Type: string

Default:

```
""
```

Example:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.owner
Real name of the owner of the instance

Type: string

Default:

```
"nobody"
```

Example:

```
"Bob Foobawr"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.ownerEmail
Email contact for owner

Type: string

Default:

```
"no-reply@${hostName}"
```

Example:

```
"no-reply@yourdomain.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.presentationConfig
presentation graph style

Type: strings concatenated with “\n”

Default:

```
+ charts
menu = Charts
title = The most interesting destinations
++ stddev
sorter = StdDev(entries=>4)
title = Top Standard Deviation
menu = Std Deviation
format = Standard Deviation %f
++ max
sorter = Max(entries=>5)
title = Top Max Roundtrip Time
menu = by Max
format = Max Roundtrip Time %f seconds
++ loss
sorter = Loss(entries=>5)
title = Top Packet Loss
menu = Loss
format = Packets Lost %f
++ median
sorter = Median(entries=>5)
title = Top Median Roundtrip Time
menu = by Median
format = Median RTT %f seconds
+ overview
width = 600
height = 50
range = 10h
+ detail
width = 600
height = 200
unison_tolerance = 2
"Last 3 Hours"    3h
"Last 30 Hours"   30h
"Last 10 Days"    10d
```

```
"Last 360 Days"   360d
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.presentationTemplate
Default page layout for the web UI.

Type: string

Default:

```
"${pkgs.smokeping}/etc/basepage.html.dist"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.probeConfig
Probe configuration

Type: strings concatenated with “\n”

Default:

```
+ FPing
binary = ${config.security.wrapperDir}/fping
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.sendmail
Use this sendmail compatible script to deliver alerts

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/wrappers/bin/sendmail"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.smokeMailTemplate
Specify the smokemail template for alerts.

Type: string

Default:

```
"${package}/etc/smokemail.dist"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.targetConfig
Target configuration

Type: strings concatenated with “\n”

Default:

```
probe = FPing
menu = Top
title = Network Latency Grapher
remark = Welcome to the SmokePing website of xxx Company. \
```

```
                Here you will learn all about the latency of our network \
    .
      + Local
      menu = Local
      title = Local Network
      ++ LocalMachine
      menu = Local Machine
      title = This host
      host = localhost
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.user
User that runs smokeping and (optionally) thttpd. A group of the same name will be created as well.

Type: string

Default:

```
"smokeping"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.smokeping.webService
Enable a smokeping web interface

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/smokeping.nix>

services.snapper.cleanupInterval
Cleanup interval.

The format is described in **systemd.time**(7).

Type: string

Default:

```
"1d"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.configs
Subvolume configuration. Any option mentioned in man:snapper−configs(5) is valid here, even if NixOS doesn’t document it.

Type: attribute set of (open submodule of attribute set of ((list of (string without line breaks or quotes)) or boolean or string without line breaks or quotes or signed integer or floating point number))

Default:

```
{ }
```

Example:

```
{
  home = {
    SUBVOLUME = "/home";
```

```
      ALLOW_USERS = [ "alice" ];
      TIMELINE_CREATE = true;
      TIMELINE_CLEANUP = true;
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.configs.<name>.ALLOW_GROUPS
List of groups allowed to operate with the config.

Also see the PERMISSIONS section in man:snapper(8).

Type: list of (string without line breaks or quotes)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.configs.<name>.ALLOW_USERS
List of users allowed to operate with the config. “root” is always implicitly included.

Also see the PERMISSIONS section in man:snapper(8).

Type: list of (string without line breaks or quotes)

Default:

```
[ ]
```

Example:

```
[
  "alice"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.configs.<name>.FSTYPE
Filesystem type. Only btrfs is stable and tested.

bcachefs support is experimental.

Type: one of “btrfs”, “bcachefs”

Default:

```
"btrfs"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.configs.<name>.SUBVOLUME
Path of the subvolume or mount point. This path is a subvolume and has to contain a subvolume named .snapshots. See also man:snapper(8) section PERMISSIONS.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.configs.<name>.TIMELINE_CLEANUP
Defines whether the timeline cleanup algorithm should be run for the config.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.configs.<name>.TIMELINE_CREATE
Defines whether hourly snapshots should be created.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.configs.<name>.TIMELINE_LIMIT_DAILY
Limits for timeline cleanup.

Type: unsigned integer, meaning >=0, or string containing either a number or a range

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.configs.<name>.TIMELINE_LIMIT_HOURLY
Limits for timeline cleanup.

Type: unsigned integer, meaning >=0, or string containing either a number or a range

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.configs.<name>.TIMELINE_LIMIT_MONTHLY
Limits for timeline cleanup.

Type: unsigned integer, meaning >=0, or string containing either a number or a range

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.configs.<name>.TIMELINE_LIMIT_QUARTERLY
Limits for timeline cleanup.

Type: unsigned integer, meaning >=0, or string containing either a number or a range

Default:

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.configs.<name>.TIMELINE_LIMIT_WEEKLY
Limits for timeline cleanup.

Type: unsigned integer, meaning >=0, or string containing either a number or a range

Default:

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.configs.<name>.TIMELINE_LIMIT_YEARLY
Limits for timeline cleanup.

Type: unsigned integer, meaning >=0, or string containing either a number or a range

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.filters
Global display difference filter. See man:snapper(8) for more details.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.persistentTimer
Set the ‘Persistent’ option for the **systemd.timer**(5) which triggers the snapshot immediately if the last trigger was missed (e.g. if the system was powered down).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.snapshotInterval
Snapshot interval.

The format is described in **systemd.time**(7).

Type: string

Default:

```
"hourly"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapper.snapshotRootOnBoot

Whether to snapshot root on boot

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/snapper.nix>

services.snapraid.enable

Whether to enable SnapRAID.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/snapraid.nix>

services.snapraid.contentFiles

SnapRAID content list files.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/var/snapraid.content"
  "/mnt/disk1/snapraid.content"
  "/mnt/disk2/snapraid.content"
]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/snapraid.nix>

services.snapraid.dataDisks

SnapRAID data disks.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  d1 = "/mnt/disk1/";
  d2 = "/mnt/disk2/";
  d3 = "/mnt/disk3/";
}
```

Declared by:
<nixpkgs/nixos/modules/services/backup/snapraid.nix>

services.snapraid.exclude
SnapRAID exclude directives.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "*.unrecoverable"
  "/tmp/"
  "/lost+found/"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/snapraid.nix>

services.snapraid.extraConfig
Extra config options for SnapRAID.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  nohidden
  blocksize 256
  hashsize 16
  autosave 500
  pool /pool
```

Declared by:
<nixpkgs/nixos/modules/services/backup/snapraid.nix>

services.snapraid.parityFiles
SnapRAID parity files.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/mnt/diskp/snapraid.parity"
  "/mnt/diskq/snapraid.2-parity"
  "/mnt/diskr/snapraid.3-parity"
  "/mnt/disks/snapraid.4-parity"
  "/mnt/diskt/snapraid.5-parity"
  "/mnt/disku/snapraid.6-parity"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/snapraid.nix>

services.snapraid.scrub.interval
How often to run **snapraid scrub**.

Type: string

Default:

```
"Mon *-*-* 02:00:00"
```

Example:

```
"weekly"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/snapraid.nix>

services.snapraid.scrub.olderThan
Number of days since data was last scrubbed before it can be scrubbed again.

Type: signed integer

Default:

```
10
```

Example:

```
20
```

Declared by:
<nixpkgs/nixos/modules/services/backup/snapraid.nix>

services.snapraid.scrub.plan
Percent of the array that should be checked by **snapraid scrub**.

Type: signed integer

Default:

```
8
```

Example:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/backup/snapraid.nix>

services.snapraid.sync.interval
How often to run **snapraid sync**.

Type: string

Default:

```
"01:00"
```

Example:

```
"daily"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/snapraid.nix>

services.snapraid.touchBeforeSync

Whether **snapraid touch** should be run before **snapraid sync**.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/backup/snapraid.nix>

services.snapserver.enable

Whether to enable snapserver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/audio/snapserver.nix>

services.snapserver.package

The snapcast package to use.

Type: package

Default:

```
pkgs.snapcast
```

Declared by:

<nixpkgs/nixos/modules/services/audio/snapserver.nix>

services.snapserver.openFirewall

Whether to automatically open the specified ports in the firewall.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/audio/snapserver.nix>

services.snapserver.settings

Snapserver configuration.

Refer to the **example configuration** for possible options.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/audio/snapserver.nix>

services.snapserver.settings.http.enabled
Whether to enable the HTTP JSON−RPC.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/snapserver.nix>

services.snapserver.settings.http.bind_to_address
Address to listen on for snapclient connections.

Type: unspecified value

Default:

```
"::"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/snapserver.nix>

services.snapserver.settings.http.doc_root
Path to serve from the HTTP servers root.

Type: null or absolute path

Default:

```
pkgs.snapweb
```

Declared by:
<nixpkgs/nixos/modules/services/audio/snapserver.nix>

services.snapserver.settings.http.port
Port to listen on for snapclient connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1780
```

Declared by:
<nixpkgs/nixos/modules/services/audio/snapserver.nix>

services.snapserver.settings.stream.source
One or multiple URIs to PCM input streams.

Type: string or list of string

Example:

```
"pipe:///tmp/snapfifo?name=default"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/snapserver.nix>

services.snapserver.settings.tcp−control.enabled
Whether to enable the TCP JSON−RPC.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/snapserver.nix>

services.snapserver.settings.tcp−control.bind_to_address
Address to listen on for snapclient connections.

Type: unspecified value

Default:

```
"::"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/snapserver.nix>

services.snapserver.settings.tcp−control.port
Port to listen on for snapclient connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1705
```

Declared by:
<nixpkgs/nixos/modules/services/audio/snapserver.nix>

services.snapserver.settings.tcp−streaming.enabled
Whether to enable streaming via TCP.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/snapserver.nix>

services.snapserver.settings.tcp−streaming.bind_to_address
Address to listen on for snapclient connections.

Type: unspecified value

Default:

```
"::"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/snapserver.nix>

services.snapserver.settings.tcp−streaming.port

Port to listen on for snapclient connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1704
```

Declared by:

<nixpkgs/nixos/modules/services/audio/snapserver.nix>

services.snipe−it.enable

Whether to enable snipe−it, a free open source IT asset/license management system.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.appKeyFile

A file containing the Laravel APP_KEY − a 32 character long, base64 encoded key used for encryption where needed. Can be generated with 'head −c 32 /dev/urandom | base64'.

Type: absolute path

Example:

```
"/run/keys/snipe−it/appkey"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.appURL

The root URL that you want to host Snipe−IT on. All URLs in Snipe−IT will be generated using this value. If you change this in the future you may need to run a command to update stored URLs in the database. Command example: 'snipe−it snipe−it:update−url https://old.example.com https://new.example.com'

Type: string

Default:

```
http''${lib.optionalString tlsEnabled "s"}://''${cfg.hostName}
```

Example:

```
"https://example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.config

Snipe−IT configuration options to set in the *.env* file. Refer to **https://snipe−it.readme.io/docs/configuration** for details on supported values.

Settings containing secret data should be set to an attribute set containing the attribute '_secret' − a string pointing to a file containing the value the option should be set to. See the example to get a better picture of this: in the resulting *.env* file, the 'OIDC_CLIENT_SECRET' key will be set to the contents of the */run/keys/oidc_secret* file.

Type: attribute set of (null or boolean or signed integer or 16 bit unsigned integer; between 0 and 65535 (both inclusive) or absolute path or string or (submodule))

Default:

```
{ }
```

Example:

```
{
  ALLOWED_IFRAME_HOSTS = "https://example.com";
  WKHTMLTOPDF = "${pkgs.wkhtmltopdf}/bin/wkhtmltopdf";
  AUTH_METHOD = "oidc";
  OIDC_NAME = "MyLogin";
  OIDC_DISPLAY_NAME_CLAIMS = "name";
  OIDC_CLIENT_ID = "snipe-it";
  OIDC_CLIENT_SECRET = {_secret = "/run/keys/oidc_secret"};
  OIDC_ISSUER = "https://keycloak.example.com/auth/realms/My%20Real \
m";
  OIDC_ISSUER_DISCOVER = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/snipe-it.nix>

services.snipe-it.dataDir
snipe-it data directory

Type: absolute path

Default:

```
"/var/lib/snipe-it"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/snipe-it.nix>

services.snipe-it.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/snipe-it.nix>

services.snipe-it.database.host
Database host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/snipe-it.nix>

services.snipe−it.database.name
Database name.

Type: string

Default:

```
"snipeit"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.database.passwordFile
A file containing the password corresponding to **database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/snipe−it/dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.database.user
Database username.

Type: string

Default:

```
user
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.group
Group snipe−it runs as.

Type: string

Default:

```
"snipeit"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.hostName
The hostname to serve Snipe−IT on.

Type: string

Default:

```
config.networking.fqdnOrHostName
```

Example:

```
"snipe-it.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.mail.backupNotificationAddress
Email Address to send Backup Notifications to.

Type: string

Default:

```
"backup@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.mail.driver
Mail driver to use.

Type: one of “smtp”, “sendmail”

Default:

```
"smtp"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.mail.encryption
SMTP encryption mechanism to use.

Type: null or one of “tls”, “ssl”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.mail.from.address
Mail “from” address.

Type: string

Default:

```
"mail@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.mail.from.name
Mail “from” name.

Type: string

Default:

```
"Snipe−IT Asset Management"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.mail.host
Mail host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.mail.passwordFile
A file containing the password corresponding to **mail.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/snipe−it/mailpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.mail.port
Mail host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1025
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.mail.replyTo.address
Mail “reply−to” address.

Type: string

Default:

```
"mail@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.mail.replyTo.name

Mail “reply−to” name.

Type: string

Default:

```
"Snipe−IT Asset Management"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.mail.user

Mail username.

Type: null or string

Default:

```
null
```

Example:

```
"snipeit"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.maxUploadSize

The maximum size for uploads (e.g. images).

Type: string

Default:

```
"18M"
```

Example:

```
"1G"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx

With this option, you can customize the nginx virtualHost settings.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  serverAliases = [
    "snipe−it.${config.networking.domain}"
  ];
  # To enable encryption and let let’s encrypt take care of certifi \
cate
  forceSSL = true;
  enableACME = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with ‘redirectCode’) to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.http2
Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.http3
Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.http3_hq
Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.kTLS
Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.listen
Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides ‘addSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.listen.*.port

Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.listen.*.proxyProtocol

Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.listen.*.ssl

Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
```

```
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations.<name>.alias
Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations.<name>.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won't unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with 'lib.mkOrder'. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.locations.<name>.uwsgiPass

Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.onlySSL

Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.quic

Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.redirectCode

HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.rejectSSL

Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.root

The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.serverName

Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

2. see the **security.acme.certs** option

services.snipe−it.poolConfig

Options for the snipe−it PHP pool. See the documentation on ‘php−fpm.conf’ for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.snipe−it.user

User snipe−it runs as.

Type: string

Default:

```
"snipeit"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snipe−it.nix>

services.sniproxy.enable

Whether to enable sniproxy server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/sniproxy.nix>

services.sniproxy.config

sniproxy.conf configuration excluding the daemon username and pid file.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
error_log {
  filename /var/log/sniproxy/error.log
}
access_log {
  filename /var/log/sniproxy/access.log
}
listen 443 {
```

```
    proto tls
  }
  table {
    example.com 192.0.2.10
    example.net 192.0.2.20
  }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sniproxy.nix>

services.sniproxy.group
Group under which sniproxy runs.

Type: string

Default:

```
"sniproxy"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sniproxy.nix>

services.sniproxy.user
User account under which sniproxy runs.

Type: string

Default:

```
"sniproxy"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sniproxy.nix>

services.snips−sh.enable
Whether to enable snips.sh.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snips−sh.nix>

services.snips−sh.package
The snips−sh package to use.

Type: package

Default:

```
pkgs.snips−sh
```

Example:

```
pkgs.snips−sh.override {withTensorflow = true;}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snips−sh.nix>

services.snips−sh.environmentFile

Additional environment file as defined in **systemd.exec**(5).

Sensitive secrets such as **SNIPS_SSH_HOSTKEYPATH** and **SNIPS_METRICS_STATSD** may be passed to the service while avoiding potentially making them world−readable in the nix store or to convert an existing non−nix installation with minimum hassle.

Note that this file needs to be available on the host on which ‘snips−sh’ is running.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/snips-sh.env"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snips−sh.nix>

services.snips−sh.settings

The configuration of snips−sh is done through environment variables, therefore you must use upper snake case (e.g. **SNIPS_HTTP_INTERNAL**).

Based on the attributes passed to this config option an environment file will be generated that is passed to snips−sh’s systemd service.

The available configuration options can be found in **self−hosting guide** to find about the environment variables you can use.

Type: open submodule of attribute set of (null or string or signed integer or boolean)

Default:

```
{ }
```

Example:

```
{
  SNIPS_HTTP_INTERNAL = "http://0.0.0.0:8080";
  SNIPS_SSH_INTERNAL = "ssh://0.0.0.0:2222";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snips−sh.nix>

services.snips−sh.settings.SNIPS_HTTP_INTERNAL

The internal HTTP address of the service

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snips−sh.nix>

services.snips−sh.settings.SNIPS_SSH_INTERNAL

The internal SSH address of the service

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web−apps/snips−sh.nix>

services.snips−sh.stateDir
The state directory of the service.

Type: absolute path

Default:

```
"/var/lib/snips−sh"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/snips−sh.nix>

services.snmpd.enable
Whether to enable snmpd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/snmpd.nix>

services.snmpd.package
The net−snmp package to use.

Type: package

Default:

```
pkgs.net−snmp
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/snmpd.nix>

services.snmpd.configFile
Path to the snmpd.conf file. By default, if **configText** is set, a config file will be automatically generated.

Type: absolute path

Default: The value of **configText**.

Declared by:
<nixpkgs/nixos/modules/services/monitoring/snmpd.nix>

services.snmpd.configText
The contents of the snmpd.conf. If the **configFile** option is set, this value will be ignored.

Note that the contents of this option will be added to the Nix store as world−readable plain text, **configFile** can be used in addition to a secret management tool to protect sensitive data.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/snmpd.nix>

services.snmpd.listenAddress

The address to listen on for SNMP and AgentX messages.

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/snmpd.nix>

services.snmpd.openFirewall

Open port in firewall for snmpd.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/snmpd.nix>

services.snmpd.port

The port to listen on for SNMP and AgentX messages.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
161
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/snmpd.nix>

services.snowflake−proxy.enable

Whether to enable snowflake−proxy, a system to defeat internet censorship.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/snowflake−proxy.nix>

services.snowflake−proxy.broker

Broker URL (default “https://snowflake−broker.torproject.net/”)

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/snowflake−proxy.nix>

services.snowflake−proxy.capacity
Limits the amount of maximum concurrent clients allowed.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/snowflake−proxy.nix>

services.snowflake−proxy.extraFlags
Extra flags to pass to snowflake−proxy

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−metrics"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/snowflake−proxy.nix>

services.snowflake−proxy.relay
websocket relay URL (default “wss://snowflake.bamsoftware.com/”)

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/snowflake−proxy.nix>

services.snowflake−proxy.stun
STUN broker URL (default “stun:stun.stunprotocol.org:3478”)

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/snowflake−proxy.nix>

services.soft−serve.enable
Whether to enable soft−serve.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/soft−serve.nix>

services.soft−serve.package
The soft−serve package to use.

Type: package

Default:

```
pkgs.soft-serve
```

Declared by:
<nixpkgs/nixos/modules/services/misc/soft−serve.nix>

services.soft−serve.settings
The contents of the configuration file for soft−serve.

See **https://charm.sh/blog/self−hosted−soft−serve/**.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  name = "user's repos";
  log_format = "text";
  ssh = {
    listen_addr = ":23231";
    public_url = "ssh://localhost:23231";
    max_timeout = 30;
    idle_timeout = 120;
  };
  stats.listen_addr = ":23233";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/soft−serve.nix>

services.softether.enable
Whether to enable SoftEther VPN services.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/softether.nix>

services.softether.package
The softether package to use.

Type: package

Default:

```
pkgs.softether
```

Declared by:
<nixpkgs/nixos/modules/services/networking/softether.nix>

services.softether.dataDir
Data directory for SoftEther VPN.

Type: absolute path

Default:

```
"/var/lib/softether"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/softether.nix>

services.softether.vpnbridge.enable
Whether to enable SoftEther VPN Bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/softether.nix>

services.softether.vpnclient.enable
Whether to enable SoftEther VPN Client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/softether.nix>

services.softether.vpnclient.down
Shell commands executed when the Virtual Network Adapter(s) is/are shutting down.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/softether.nix>

services.softether.vpnclient.up
Shell commands executed when the Virtual Network Adapter(s) is/are starting.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/softether.nix>

services.softether.vpnserver.enable
Whether to enable SoftEther VPN Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/softether.nix>

services.sogo.enable
Whether to enable SOGo groupware.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sogo.nix>

services.sogo.configReplaces
Replacement−filepath mapping for sogo.conf. Every key is replaced with the contents of the file specified as value.

In the example, every occurrence of LDAP_BINDPW will be replaced with the text of the specified file.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  LDAP_BINDPW = "/var/lib/secrets/sogo/ldappw";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sogo.nix>

services.sogo.ealarmsCredFile
Optional path to a credentials file for email alarms

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sogo.nix>

services.sogo.extraConfig
Extra sogo.conf configuration lines

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sogo.nix>

services.sogo.language
Language of SOGo

Type: string

Default:

```
"English"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sogo.nix>

services.sogo.timezone
Timezone of your SOGo instance

Type: string

Example:

```
"America/Montreal"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sogo.nix>

services.sogo.vhostName
Name of the nginx vhost

Type: string

Default:

```
"sogo"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sogo.nix>

services.soju.enable
Whether to enable soju.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/soju.nix>

services.soju.enableMessageLogging
Whether to enable message logging.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/soju.nix>

services.soju.package
The soju package to use.

Type: package

Default:

```
pkgs.soju
```

Declared by:
<nixpkgs/nixos/modules/services/networking/soju.nix>

services.soju.acceptProxyIP
Allow the specified IPs to act as a proxy. Proxys have the ability to overwrite the remote and local connection addresses (via the X−Forwarded−* HTTP header fields). The special name “localhost” accepts the loopback addresses 127.0.0.0/8 and ::1/128. By default, all IPs are rejected.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/soju.nix>

services.soju.adminSocket.enable
Listen for admin connections from sojuctl at /run/soju/admin.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/soju.nix>

services.soju.configFile
Path to config file. If this option is set, it will override any configuration done using other options, including **extraConfig**.

Type: absolute path

Default:

```
"Config file generated from other options."
```

Example:

```
./soju.conf
```

Declared by:
<nixpkgs/nixos/modules/services/networking/soju.nix>

services.soju.extraConfig

Lines added verbatim to the generated configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/soju.nix>

services.soju.hostName

Server hostname.

Type: string

Default:

```
config.networking.hostName
```

Declared by:

<nixpkgs/nixos/modules/services/networking/soju.nix>

services.soju.httpOrigins

List of allowed HTTP origins for WebSocket listeners. The parameters are interpreted as shell patterns, see **glob**(7).

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/soju.nix>

services.soju.listen

Where soju should listen for incoming connections. See the ‘listen’ directive in **soju**(1).

Type: list of string

Default:

```
[
  ":6697"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/soju.nix>

services.soju.tlsCertificate

Path to server TLS certificate.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/host.cert"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/soju.nix>

services.soju.tlsCertificateKey

Path to server TLS certificate key.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/host.key"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/soju.nix>

services.solanum.enable

Whether to enable Solanum IRC daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/solanum.nix>

services.solanum.config

Solanum IRC daemon configuration file. check **https://github.com/solanum-ircd/solanum/blob/main/doc/reference.conf** for all options.

Type: string

Default:

```
serverinfo {
  name = "irc.example.com";
  sid = "1ix";
  description = "irc!";

  vhost = "0.0.0.0";
  vhost6 = "::";
};

listen {
  host = "0.0.0.0";
  port = 6667;
};

class "users" {
  number_per_ip = 3;
};

auth {
  user = "*@*";
  class = "users";
  flags = exceed_limit;
};
```

```
channel {
  default_split_user_count = 0;
};
```

Declared by:
<nixpkgs/nixos/modules/services/networking/solanum.nix>

services.solanum.motd
Solanum MOTD text.

Solanum will read its MOTD from '/etc/solanum/ircd.motd'. If set, the value of this option will be written to this path.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/solanum.nix>

services.solanum.openFilesLimit
Maximum number of open files. Limits the clients and server connections.

Type: signed integer

Default:

```
1024
```

Declared by:
<nixpkgs/nixos/modules/services/networking/solanum.nix>

services.sonarr.enable
Whether to enable Sonarr.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/sonarr.nix>

services.sonarr.package
The sonarr package to use.

Type: package

Default:

```
pkgs.sonarr
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/sonarr.nix>

services.sonarr.dataDir
The Sonarr home directory used to store all data. If left as the default value this directory will automatically be created before the Sonarr server starts, otherwise you are responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: string

Default:

```
"/var/lib/sonarr/.config/NzbDrone"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/sonarr.nix>

services.sonarr.environmentFiles

Environment file to pass secret configuration values. Each line must follow the 'SONARR__SECTION__KEY=value' pattern. Please consult the documentation at the **wiki**.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/sonarr.nix>

services.sonarr.group

Group account under which Sonarr runs.

Note

If left as the default value this group will automatically be created on system activation, otherwise you are responsible for ensuring the group exists before the Sonarr service starts.

Type: string

Default:

```
"sonarr"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/sonarr.nix>

services.sonarr.openFirewall

Open ports in the firewall for the Sonarr web interface

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/sonarr.nix>

services.sonarr.settings

Attribute set of arbitrary config options. Please consult the documentation at the **wiki**.

WARNING: this configuration is stored in the world−readable Nix store! For secrets use **services.sonarr.environmentFiles**.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  update.mechanism = "internal";
  server = {
    urlbase = "localhost";
    port = 8989;
```

```
    bindaddress = "*";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/sonarr.nix>

services.sonarr.settings.log.analyticsEnabled
Send Anonymous Usage Data

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/sonarr.nix>

services.sonarr.settings.server.port
Port Number

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8989
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/sonarr.nix>

services.sonarr.settings.update.automatically
Automatically download and install updates.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/sonarr.nix>

services.sonarr.settings.update.mechanism
which update mechanism to use

Type: null or one of “external”, “builtIn”, “script”

Default:

```
"external"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/sonarr.nix>

services.sonarr.user
User account under which Sonarr runs.";

Note
If left as the default value this user will automatically be created on system activation, otherwise you are responsible for ensuring the user exists before the Sonarr service starts.

Type: string

Default:

```
"sonarr"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/sonarr.nix>

services.sonic−server.enable
Whether to enable Sonic Search Index.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/search/sonic−server.nix>

services.sonic−server.package
The sonic−server package to use.

Type: package

Default:

```
pkgs.sonic−server
```

Declared by:
<nixpkgs/nixos/modules/services/search/sonic−server.nix>

services.sonic−server.settings
Sonic Server configuration options.

Refer to **https://github.com/valeriansaliou/sonic/blob/master/CONFIGURATION.md** for a full list of available options.

Type: open submodule of (TOML value)

Default:

```
{
  store = {
    fst = {
      path = "/var/lib/sonic/fst";
    };
    kv = {
      path = "/var/lib/sonic/kv";
    };
  };
}
```

Example:

```
{
  channel = {
    inet = "[::1]:1491";
  };
  server = {
    log_level = "debug";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/search/sonic−server.nix>

services.spacecookie.enable
Whether to enable spacecookie.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/spacecookie.nix>

services.spacecookie.package
The spacecookie package to use.

Type: package

Default:

```
pkgs.spacecookie
```

Example:

```
haskellPackages.spacecookie
```

Declared by:
<nixpkgs/nixos/modules/services/networking/spacecookie.nix>

services.spacecookie.address
Address to listen on. Must be in the 'ListenStream=' syntax of **systemd.socket**(5).

Type: string

Default:

```
"[::]"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/spacecookie.nix>

services.spacecookie.openFirewall
Whether to open the necessary port in the firewall for spacecookie.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/spacecookie.nix>

services.spacecookie.port
Port the gopher service should be exposed on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
70
```

Declared by:
<nixpkgs/nixos/modules/services/networking/spacecookie.nix>

services.spacecookie.settings
Settings for spacecookie. The settings set here are directly translated to the spacecookie JSON config file. See **spacecookie.json(5)** for explanations of all options.

Type: open submodule of (JSON value)

Declared by:
<nixpkgs/nixos/modules/services/networking/spacecookie.nix>

services.spacecookie.settings.hostname
The hostname the service is reachable via. Clients will use this hostname for further requests after loading the initial gopher menu.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/spacecookie.nix>

services.spacecookie.settings.log.enable
Whether to enable logging for spacecookie.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/spacecookie.nix>

services.spacecookie.settings.log.hide−ips
If enabled, spacecookie will hide personal information of users like IP addresses from log output.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/spacecookie.nix>

services.spacecookie.settings.log.hide−time
If enabled, spacecookie will not print timestamps at the beginning of every log line.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/spacecookie.nix>

services.spacecookie.settings.log.level

Log level for the spacecookie service.

Type: one of “info”, “warn”, “error”

Default:

```
"info"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/spacecookie.nix>

services.spacecookie.settings.root

The directory spacecookie should serve via gopher. Files in there need to be world−readable since the spacecookie service file sets ‘DynamicUser=true’.

Type: absolute path

Default:

```
"/srv/gopher"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/spacecookie.nix>

services.spamassassin.enable

Whether to enable the SpamAssassin daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/spamassassin.nix>

services.spamassassin.config

The SpamAssassin local.cf config

If you are using this configuration:

```
add_header all Status _YESNO_, score=_SCORE_ required=_REQD_ tests= \
_TESTS_ autolearn=_AUTOLEARN_ version=_VERSION_
```

Then you can Use this sieve filter:

```
require ["fileinto", "reject", "envelope"];
if header :contains "X−Spam−Flag" "YES" {
  fileinto "spam";
}
```

Or this procmail filter:

```
:0:
* ^X−Spam−Flag: YES
/var/vpopmail/domains/lastlog.de/js/.maildir/.spam/new
```

To filter your messages based on the additional mail headers added by spamassassin.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
    #rewrite_header Subject [***** SPAM _SCORE_ *****]
    required_score          5.0
    use_bayes               1
    bayes_auto_learn        1
    add_header all Status _YESNO_, score=_SCORE_ required=_REQD_ test \
  s=_TESTS_ autolearn=_AUTOLEARN_ version=_VERSION_
```

Declared by:

<nixpkgs/nixos/modules/services/mail/spamassassin.nix>

services.spamassassin.debug

Whether to run the SpamAssassin daemon in debug mode

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/mail/spamassassin.nix>

services.spamassassin.initPreConf

The SpamAssassin init.pre config.

Type: string or absolute path

Default:

```
    #
    # to update this list, run this command in the rules directory:
    # grep 'loadplugin.*Mail::SpamAssassin::Plugin::.*' -o -h * | s \
  ort | uniq
    #

    #loadplugin Mail::SpamAssassin::Plugin::AccessDB
    #loadplugin Mail::SpamAssassin::Plugin::AntiVirus
    loadplugin Mail::SpamAssassin::Plugin::AskDNS
    # loadplugin Mail::SpamAssassin::Plugin::ASN
    loadplugin Mail::SpamAssassin::Plugin::AutoLearnThreshold
    #loadplugin Mail::SpamAssassin::Plugin::AWL
    loadplugin Mail::SpamAssassin::Plugin::Bayes
    loadplugin Mail::SpamAssassin::Plugin::BodyEval
    loadplugin Mail::SpamAssassin::Plugin::Check
    #loadplugin Mail::SpamAssassin::Plugin::DCC
    loadplugin Mail::SpamAssassin::Plugin::DKIM
    loadplugin Mail::SpamAssassin::Plugin::DMARC
    loadplugin Mail::SpamAssassin::Plugin::DNSEval
    loadplugin Mail::SpamAssassin::Plugin::FreeMail
    loadplugin Mail::SpamAssassin::Plugin::HeaderEval
    loadplugin Mail::SpamAssassin::Plugin::HTMLEval
    loadplugin Mail::SpamAssassin::Plugin::HTTPSMismatch
    loadplugin Mail::SpamAssassin::Plugin::ImageInfo
    loadplugin Mail::SpamAssassin::Plugin::MIMEEval
    loadplugin Mail::SpamAssassin::Plugin::MIMEHeader
    # loadplugin Mail::SpamAssassin::Plugin::PDFInfo
    #loadplugin Mail::SpamAssassin::Plugin::PhishTag
    loadplugin Mail::SpamAssassin::Plugin::Pyzor
```

```
loadplugin Mail::SpamAssassin::Plugin::Razor2
# loadplugin Mail::SpamAssassin::Plugin::RelayCountry
loadplugin Mail::SpamAssassin::Plugin::RelayEval
loadplugin Mail::SpamAssassin::Plugin::ReplaceTags
# loadplugin Mail::SpamAssassin::Plugin::Rule2XSBody
# loadplugin Mail::SpamAssassin::Plugin::Shortcircuit
loadplugin Mail::SpamAssassin::Plugin::SpamCop
loadplugin Mail::SpamAssassin::Plugin::SPF
loadplugin Mail::SpamAssassin::Plugin::TextCat
# loadplugin Mail::SpamAssassin::Plugin::TxRep
loadplugin Mail::SpamAssassin::Plugin::URIDetail
loadplugin Mail::SpamAssassin::Plugin::URIDNSBL
loadplugin Mail::SpamAssassin::Plugin::URIEval
# loadplugin Mail::SpamAssassin::Plugin::URILocalBL
loadplugin Mail::SpamAssassin::Plugin::VBounce
loadplugin Mail::SpamAssassin::Plugin::WhiteListSubject
loadplugin Mail::SpamAssassin::Plugin::WLBLEval
```

Declared by:

<nixpkgs/nixos/modules/services/mail/spamassassin.nix>

services.spark.package

The spark package to use.

Type: package

Default:

```
pkgs.spark
```

Example:

```
spark.overrideAttrs (super: rec {
  pname = "spark";
  version = "2.4.4";
  src = pkgs.fetchzip {
    url    = "mirror://apache/spark/"${pname}-${version}/${pname} \
-${version}-bin-without-hadoop.tgz";
    sha256 = "1a9w5k0207fysgpxx6db3a00fs5hdc2ncx99x4ccy2s0v5ndc66g" \
;
  };
})
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/spark/default.nix>

services.spark.confDir

Spark configuration directory. Spark will use the configuration files (spark-defaults.conf, spark-env.sh, log4j.properties, etc) from this directory.

Type: absolute path

Default:

```
"${package}/conf"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/spark/default.nix>

services.spark.logDir

Spark log directory.

Type: absolute path

Default:

```
"/var/log/spark"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/spark/default.nix>

services.spark.master.enable

Whether to enable Spark master service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/spark/default.nix>

services.spark.master.bind

Address the spark master binds to.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/spark/default.nix>

services.spark.master.extraEnvironment

Extra environment variables to pass to spark master. See spark−standalone documentation.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  SPARK_MASTER_OPTS = "-Dspark.deploy.defaultCores=5";
  SPARK_MASTER_WEBUI_PORT = 8181;
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/spark/default.nix>

services.spark.master.restartIfChanged

Automatically restart master service on config change. This can be set to false to defer restarts on clusters running critical applications. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/spark/default.nix>

services.spark.worker.enable
Whether to enable Spark worker service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/spark/default.nix>

services.spark.worker.extraEnvironment
Extra environment variables to pass to spark worker.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  SPARK_WORKER_CORES = 5;
  SPARK_WORKER_MEMORY = "2g";
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/spark/default.nix>

services.spark.worker.master
Address of the spark master.

Type: string

Default:

```
"127.0.0.1:7077"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/spark/default.nix>

services.spark.worker.restartIfChanged
Automatically restart worker service on config change. This can be set to false to defer restarts on clusters running critical applications. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/spark/default.nix>

services.spark.worker.workDir
Spark worker work dir.

Type: absolute path

Default:

```
"/var/lib/spark"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/spark/default.nix>

services.speechd.enable
Whether to enable speech−dispatcher speech synthesizer daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/accessibility/speechd.nix>

services.speechd.package
The speechd package to use.

Type: package

Default:

```
pkgs.speechd
```

Declared by:
<nixpkgs/nixos/modules/services/accessibility/speechd.nix>

services.speechd.clients
Client specific configuration.

Type: open submodule of attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Example:

```
{
  emacs = ''
    BeginClient "emacs:*"
    # Example:
    #   DefaultPunctuationMode "some"
    EndClient
  '';
}
```

Declared by:
<nixpkgs/nixos/modules/services/accessibility/speechd.nix>

services.speechd.config

System wide configuration file for Speech Dispatcher. This will be used if no user configuration file is found.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
AddModule "module_name" "module_binary" "module_config"
```

Declared by:

<nixpkgs/nixos/modules/services/accessibility/speechd.nix>

services.speechd.modules

Configuration files of output modules.

Type: open submodule of attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Example:

```
{
  generic-epos = ''
    AddVoice        "cs"  "male1"   "kadlec"
    AddVoice        "sk"  "male1"   "bob"
  '';
}
```

Declared by:

<nixpkgs/nixos/modules/services/accessibility/speechd.nix>

services.speedify.enable

This option enables Speedify daemon. This sets **networking.firewall.checkReversePath** to “loose”, which might be undesirable for security.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/speedify.nix>

services.speedify.package

The speedify package to use.

Type: package

Default:

```
pkgs.speedify
```

Declared by:

<nixpkgs/nixos/modules/services/networking/speedify.nix>

services.speedtest−tracker.enable

Whether to enable Speedtest Tracker: A self−hosted internet performance tracking application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/speedtest−tracker.nix>

services.speedtest−tracker.enableNginx

Whether to enable nginx or not. If enabled, an nginx virtual host will be created for access to Speedtest Tracker. If not enabled, then you may use '${config.services.speedtest−tracker.package}' as your document root in whichever webserver you wish to setup.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/speedtest−tracker.nix>

services.speedtest−tracker.package

The speedtest−tracker package to use.

Type: package

Default:

```
pkgs.speedtest−tracker
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/speedtest−tracker.nix>

services.speedtest−tracker.dataDir

The place where Speedtest Tracker stores its state.

Type: absolute path

Default:

```
"/var/lib/speedtest−tracker"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/speedtest−tracker.nix>

services.speedtest−tracker.group

Group under which Speedtest Tracker runs. It is best to set this to the group of whatever webserver is being used as the frontend.

Type: string

Default:

```
"If 'services.speedtest−tracker.enableNginx' is true then 'nginx'  \
else speedtest−tracker"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/speedtest−tracker.nix>

services.speedtest−tracker.poolConfig

Options for the Speedtest Tracker PHP pool. See the documentation on ‘php−fpm.conf’ for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  "pm" = "dynamic";
  "pm.max_children" = 32;
  "pm.start_servers" = 2;
  "pm.min_spare_servers" = 2;
  "pm.max_spare_servers" = 4;
  "pm.max_requests" = 500;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/speedtest−tracker.nix>

services.speedtest−tracker.settings

Options for Speedtest Tracker configuration. Refer to **https://github.com/alexjustesen/speedtest−tracker** for details on supported values. All ‘_FILE’ values are supported: append ‘_FILE’ to the setting name to provide a path to a file containing the secret value.

Type: open submodule of attribute set of (string or signed integer or boolean)

Default:

```
{ }
```

Example:

```
{
  APP_KEY_FILE = "/var/secrets/speedtest−tracker−app−key.txt";
  DB_CONNECTION = "mysql";
  DB_HOST = "db";
  DB_PORT = 3306;
  DB_DATABASE = "speedtest−tracker";
  DB_USERNAME = "speedtest−tracker";
  DB_PASSWORD_FILE = "/var/secrets/speedtest−tracker−mysql−passw \
ord.txt";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/speedtest−tracker.nix>

services.speedtest−tracker.settings.APP_KEY_FILE

The path to your appkey. The file should contain a 32 character random app key. This may be set using ‘echo "base64:$(head −c 32 /dev/urandom | base64)" > /path/to/key−file’.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/web−apps/speedtest−tracker.nix>

services.speedtest−tracker.settings.APP_URL

The APP_URL used by Speedtest Tracker internally. Please make sure this URL matches the external URL of your installation. It is used to validate specific requests and to generate URLs in notifications.

Type: string

Default:

```
http(s):///''${config.services.speedtest-tracker.virtualHost}
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/speedtest-tracker.nix>

services.speedtest-tracker.settings.DB_CONNECTION
The type of database you wish to use. Can be one of “sqlite”, “mysql”, “mariadb” or “pgsql”.

Type: one of “sqlite”, “mysql”, “mariadb”, “pgsql”

Default:

```
"sqlite"
```

Example:

```
"pgsql"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/speedtest-tracker.nix>

services.speedtest-tracker.settings.DB_DATABASE
The name of the database, or path to the sqlite file.

Type: string

Default:

```
  "''${config.services.speedtest-tracker.dataDir}/storage/database \
/database.sqlite" if DB_CONNECTION is "sqlite", "speedtest-tracker \
" otherwise
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/speedtest-tracker.nix>

services.speedtest-tracker.settings.DB_HOST
The IP or hostname which hosts your database.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/speedtest-tracker.nix>

services.speedtest-tracker.settings.DB_PORT
The port your database is listening at. sqlite does not require this value to be filled.

Type: null or signed integer

Default:

```
  ‘null‘ if DB_CONNECTION is "sqlite", ‘3306‘ if "mysql" or "mariad \
b", ‘5432‘ if "pgsql"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/speedtest-tracker.nix>

services.speedtest-tracker.user
User account under which Speedtest Tracker runs.

Type: string

Default:

```
"speedtest-tracker"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/speedtest−tracker.nix>

services.speedtest−tracker.virtualHost
The hostname at which you wish Speedtest Tracker to be served. If you have enabled nginx using 'services.speedtest−tracker.enableNginx' then this will be used.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/speedtest−tracker.nix>

services.spice−autorandr.enable
Whether to enable spice−autorandr service that will automatically resize display to match SPICE client window size.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/spice−autorandr.nix>

services.spice−autorandr.package
The spice−autorandr package to use.

Type: package

Default:

```
pkgs.spice−autorandr
```

Declared by:
<nixpkgs/nixos/modules/services/misc/spice−autorandr.nix>

services.spice−vdagentd.enable
Whether to enable Spice guest vdagent daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/spice−vdagentd.nix>

services.spice−webdavd.enable
Whether to enable the spice guest webdav proxy daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/spice-webdavd.nix>

services.spice-webdavd.package
The phodav package to use.

Type: package

Default:

```
pkgs.phodav
```

Declared by:
<nixpkgs/nixos/modules/services/misc/spice-webdavd.nix>

services.spiped.enable
Enable the spiped service module.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/spiped.nix>

services.spiped.config
Configuration for a secure pipe daemon. The daemon can be started, stopped, or examined using ‘systemctl’, under the name ‘spiped@foo’.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  pipe1 =
    { keyfile = "/var/lib/spiped/pipe1.key";
      encrypt = true;
      source  = "localhost:6000";
      target  = "endpoint.example.com:7000";
    };
  pipe2 =
    { keyfile = "/var/lib/spiped/pipe2.key";
      decrypt = true;
      source  = "0.0.0.0:7000";
      target  = "localhost:3000";
    };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/spiped.nix>

services.spiped.config.<name>.decrypt

Take encrypted connections from the ‘source’ socket and send unencrypted connections to the ‘target’ socket.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/spiped.nix>

services.spiped.config.<name>.disableKeepalives

Disable transport layer keep−alives.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/spiped.nix>

services.spiped.config.<name>.disableReresolution

Disable target address re−resolution.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/spiped.nix>

services.spiped.config.<name>.encrypt

Take unencrypted connections from the ‘source’ socket and send encrypted connections to the ‘target’ socket.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/spiped.nix>

services.spiped.config.<name>.keyfile

Name of a file containing the spiped key. As the daemon runs as the ‘spiped’ user, the key file must be readable by that user. To securely manage the file within your configuration consider a tool such as agenix or sops−nix.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/networking/spiped.nix>

services.spiped.config.<name>.maxConns

Limit on the number of simultaneous connections allowed.

Type: signed integer

Default:

```
100
```

Declared by:
<nixpkgs/nixos/modules/services/networking/spiped.nix>

services.spiped.config.<name>.resolveRefresh
Resolution refresh time for the target socket, in seconds.

Type: signed integer

Default:

```
60
```

Declared by:
<nixpkgs/nixos/modules/services/networking/spiped.nix>

services.spiped.config.<name>.source
Address on which spiped should listen for incoming connections. Must be in one of the following formats: '/absolute/path/to/unix/socket', 'host.name:port', '[ip.v4.ad.dr]:port' or '[ipv6::addr]:port' − note that hostnames are resolved when spiped is launched and are not re−resolved later; thus if DNS entries change spiped will continue to connect to the expired address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/spiped.nix>

services.spiped.config.<name>.target
Address to which spiped should connect.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/spiped.nix>

services.spiped.config.<name>.timeout
Timeout, in seconds, after which an attempt to connect to the target or a protocol handshake will be aborted (and the connection dropped) if not completed

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/spiped.nix>

services.spiped.config.<name>.waitForDNS
Wait for DNS. Normally when 'spiped' is launched it resolves addresses and binds to its source socket before the parent process returns; with this option it will daemonize first and retry failed DNS lookups until they succeed. This allows 'spiped' to launch even if DNS isn't set up yet, but at the expense of losing the guarantee that once 'spiped' has finished launching it will be ready to create pipes.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/spiped.nix>

services.spiped.config.<name>.weakHandshake

Use fast/weak handshaking: This reduces the CPU time spent in the initial connection setup, at the expense of losing perfect forward secrecy.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/spiped.nix>

services.spire.agent.enable

Whether to enable SPIRE agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.package

The spire package to use.

Type: package

Default:

```
pkgs.spire
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.configFile

Path to the SPIRE agent configuration file. See **the documentation** for more information.

Type: absolute path

Default:

```
"Config file generated from services.spire.agent.settings"
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.expandEnv

Expand environment $VARIABLES in the config file

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.settings

SPIRE Agent configuration file options. See **the documentation** for all available options.

Type: open submodule of (JSON value)

Declared by:

<nixpkgs/nixos/modules/services/security/spire/agent−tpm.nix>
<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.settings.agent.data_dir

A directory the agent can use for its runtime data

Type: string

Default:

```
"$STATE_DIRECTORY"
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.settings.agent.join_token

An optional token which has been generated by the SPIRE server

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.settings.agent.join_token_file

Path to a file containing an optional join token which has been generated by the SPIRE server

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.settings.agent.server_address

DNS name or IP address of the SPIRE server

Type: string

Example:

```
"server.example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.settings.agent.server_port

Port number of the SPIRE server

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8081
```

Declared by:
<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.settings.agent.socket_path
Location to bind the SPIRE Agent API socket (Unix only)

Type: absolute path

Default:

```
"/run/spire/agent/public/api.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.settings.agent.trust_domain
The trust domain that this agent belongs to (should be no more than 255 characters)

Type: string

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.settings.plugins
Built−in plugin types can be found at **the plugin types documentation**. See **plugin configuration** for options and how to configure external plugins.

Type: open submodule of (JSON value)

Example:

```
{
  KeyManager = {
    memory = {
      plugin_data = { };
    };
  };
  NodeAttestor = {
    join_token = {
      plugin_data = { };
    };
  };
  WorkloadAttestor = {
    systemd = {
      plugin_data = { };
    };
    unix = {
      plugin_data = { };
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/security/spire/agent−tpm.nix>
<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.settings.plugins.NodeAttestor

Gathers information used to attest the agent's identity to the server. Generally paired with a server plugin of the same type.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/agent−tpm.nix>
<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.settings.plugins.NodeAttestor.join_token

The 'join_token' is responsible for attesting the agent's identity using a one−time−use pre−shared key.

Must be used in conjunction with the server−side 'join_token' plugin.

Type: null or (open submodule of (JSON value))

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.settings.plugins.NodeAttestor.join_token.plugin_data

As a special case for node attestors, the join token itself is configured by a CLI flag ('−joinToken') or by configuring 'join_token' in the agent's main config body.

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/agent.nix>

services.spire.agent.settings.plugins.NodeAttestor.tpm

TPM 2.0 node attestation plugin. When set, automatically enables security.tpm2 and grants the spire−agent user access to the TPM device.

Type: null or (open submodule of (JSON value))

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/agent−tpm.nix>

services.spire.agent.settings.plugins.NodeAttestor.tpm.plugin_cmd

Path to the TPM attestor agent plugin binary.

Type: string

Default:

```
lib.getExe' pkgs.spire−tpm−plugin "tpm_attestor_agent"
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/agent−tpm.nix>

services.spire.server.enable

Whether to enable SPIRE Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/server.nix>

services.spire.server.package

The spire package to use.

Type: package

Default:

```
pkgs.spire
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/server.nix>

services.spire.server.configFile

Path to the SPIRE server configuration file. See **the documentation** for more information.

Type: absolute path

Default:

```
"Config file generated from services.spire.server.settings"
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/server.nix>

services.spire.server.expandEnv

Expand environment variables in services.spire.server.settings and services.spire.server.configFile

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/server.nix>

services.spire.server.openFirewall

Whether to open firewall

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/server.nix>

services.spire.server.settings

SPIRE Server configuration file options. See **the documentation** for all available options.

Type: open submodule of (JSON value)

Declared by:

<nixpkgs/nixos/modules/services/security/spire/server−tpm.nix>
<nixpkgs/nixos/modules/services/security/spire/server.nix>

services.spire.server.settings.plugins

Built−in plugin types can be found at **the plugin types documentation**. See **plugin configuration** for options and how to configure external plugins.

Type: open submodule of (JSON value)

Example:

```
{
  DataStore = {
    sql = {
      plugin_data = {
        connection_string = "$STATE_DIRECTORY/datastore.sqlite3";
        database_type = "sqlite3";
      };
    };
  };
  KeyManager = {
    memory = {
      plugin_data = { };
    };
  };
  NodeAttestor = {
    join_token = {
      plugin_data = { };
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/server−tpm.nix>
<nixpkgs/nixos/modules/services/security/spire/server.nix>

services.spire.server.settings.plugins.NodeAttestor

NodeAttestor plugins implement validation logic for nodes attempting to assert their identity. They are generally paired with an agent plugin of the same type. See **the documentation** for the list of built−in NodeAttestor plugins.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/server−tpm.nix>
<nixpkgs/nixos/modules/services/security/spire/server.nix>

services.spire.server.settings.plugins.NodeAttestor.join_token
Join token based node attestation.

Type: null or (open submodule of (JSON value))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/spire/server.nix>

services.spire.server.settings.plugins.NodeAttestor.join_token.plugin_data
Plugin data for the join_token NodeAttestor.

Type: JSON value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/spire/server.nix>

services.spire.server.settings.plugins.NodeAttestor.tpm
TPM 2.0 node attestation plugin from **spire-tpm-plugin**.

Type: null or (open submodule of (JSON value))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/spire/server-tpm.nix>

services.spire.server.settings.plugins.NodeAttestor.tpm.plugin_cmd
Path to the TPM attestor server plugin binary.

Type: string

Default:

```
lib.getExe' pkgs.spire-tpm-plugin "tpm_attestor_server"
```

Declared by:
<nixpkgs/nixos/modules/services/security/spire/server-tpm.nix>

services.spire.server.settings.plugins.NodeAttestor.tpm.plugin_data
Plugin data for the TPM NodeAttestor. Either 'ca_path', 'hash_path', or both must be configured.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/spire/server-tpm.nix>

services.spire.server.settings.plugins.NodeAttestor.tpm.plugin_data.ca_path
The path to the CA directory. Contains the manufacturer CA cert that signed the TPM's EK certificate in PEM or DER format.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/spire/server−tpm.nix>

services.spire.server.settings.plugins.NodeAttestor.tpm.plugin_data.hash_path
The path to the Hash directory. Contains empty files named after the EK public key hash.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/spire/server−tpm.nix>

services.spire.server.settings.server.bind_address
The address on which the SPIRE server is listening

Type: string

Default:

```
"[::]"
```

Declared by:
<nixpkgs/nixos/modules/services/security/spire/server.nix>

services.spire.server.settings.server.bind_port
The port on which the SPIRE server is listening

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8081
```

Declared by:
<nixpkgs/nixos/modules/services/security/spire/server.nix>

services.spire.server.settings.server.data_dir
The directory where SPIRE server stores its data

Type: string

Default:

```
"$STATE_DIRECTORY"
```

Declared by:
<nixpkgs/nixos/modules/services/security/spire/server.nix>

services.spire.server.settings.server.socket_path
Path to bind the SPIRE Server API Socket to

Type: string

Default:

```
"/run/spire/server/private/api.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/security/spire/server.nix>

services.spire.server.settings.server.trust_domain
The trust domain that this server belongs to

Type: string

Example:

```
"example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/security/spire/server.nix>

services.spoolman.enable

Whether to enable Spoolman, a filament spool inventory management system…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/spoolman.nix>

services.spoolman.environment

Environment variables to be passed to the spoolman service. Refer to https://github.com/Donkie/Spoolman/blob/master/.env.example for details on supported variables.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  SPOOLMAN_AUTOMATIC_BACKUP = "TRUE";
  SPOOLMAN_BASE_PATH = "/spoolman";
  SPOOLMAN_CORS_ORIGIN = "source1.domain.com:p1, source2.domain.com \
:p2";
  SPOOLMAN_DB_TYPE = "sqlite";
  SPOOLMAN_LOGGING_LEVEL = "DEBUG";
  SPOOLMAN_METRICS_ENABLED = "TRUE";
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/spoolman.nix>

services.spoolman.listen

The IP address to bind the spoolman server to.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/spoolman.nix>

services.spoolman.openFirewall

Open the appropriate ports in the firewall for spoolman.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/spoolman.nix>

services.spoolman.port

TCP port where spoolman web−gui listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7912
```

Declared by:

<nixpkgs/nixos/modules/services/misc/spoolman.nix>

services.spotifyd.enable

Whether to enable spotifyd, a Spotify playing daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/audio/spotifyd.nix>

services.spotifyd.package

The spotifyd package to use.

Type: package

Default:

```
pkgs.spotifyd
```

Declared by:

<nixpkgs/nixos/modules/services/audio/spotifyd.nix>

services.spotifyd.config

(Deprecated) Configuration for Spotifyd. For syntax and directives, see **https://docs.spotifyd.rs/configuration/index.html#config−file**.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/audio/spotifyd.nix>

services.spotifyd.settings

Configuration for Spotifyd. For syntax and directives, see **https://docs.spotifyd.rs/configuration/index.html#config−file**.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  global = {
    bitrate = 320;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/audio/spotifyd.nix>

services.squeezelite.enable

Whether to enable Squeezelite, a software Squeezebox emulator.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/audio/squeezelite.nix>

services.squeezelite.package

The squeezelite package to use.

Type: package

Default:

```
if config.services.squeezelite.pulseaudio.enable then pkgs.squeezel \
ite−pulse else pkgs.squeezelite
```

Declared by:

<nixpkgs/nixos/modules/services/audio/squeezelite.nix>

services.squeezelite.extraArgs

Additional command line arguments to pass to Squeezelite.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/audio/squeezelite.nix>

services.squeezelite.mutableName
store name in file, controllable by server

Type: boolean

Default:

```
config.services.squeezelite.name == null
```

Declared by:
<nixpkgs/nixos/modules/services/audio/squeezelite.nix>

services.squeezelite.name
name to report to server

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/audio/squeezelite.nix>

services.squeezelite.pulseaudio.enable
Whether to enable pulseaudio support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/squeezelite.nix>

services.squeezelite.pulseaudio.group
group for accessing to pulseaudio socket

Type: string

Default:

```
if config.services.pulseaudio.systemWide then "pulse-access" else  \
"pipewire"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/squeezelite.nix>

services.squid.enable
Whether to run squid web proxy.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/squid.nix>

services.squid.package
The squid package to use.

Type: package

Default:

```
pkgs.squid
```

Declared by:
<nixpkgs/nixos/modules/services/networking/squid.nix>

services.squid.configText
Verbatim contents of squid.conf. If null (default), use the autogenerated file from NixOS instead.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/squid.nix>

services.squid.extraConfig
Squid configuration. Contents will be added verbatim to the configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/squid.nix>

services.squid.proxyAddress
IP address on which squid will listen.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/squid.nix>

services.squid.proxyPort
TCP port on which squid will listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3128
```

Declared by:
<nixpkgs/nixos/modules/services/networking/squid.nix>

services.squid.validateConfig
Validate config syntax.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/squid.nix>

services.ssh−agent−switcher.enable
Whether to enable ssh−agent−switcher, a daemon that proxies SSH agent connections to forwarded agents. This allows tmux/screen sessions to access SSH agents across reconnections.

This is a per−user service that automatically starts when you log in via SSH and sets SSH_AUTH_SOCK to point to a stable socket location.

Note: This only activates for SSH sessions, not graphical or console logins.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/ssh−agent−switcher.nix>

services.ssh−agent−switcher.package
The ssh−agent−switcher package to use.

Type: package

Default:

```
pkgs.ssh−agent−switcher
```

Declared by:
<nixpkgs/nixos/modules/services/security/ssh−agent−switcher.nix>

services.sshd.enable
Alias of **services.openssh.enable**.

Type: boolean

Declared by:
<nixpkgs/nixos/modules/services/networking/ssh/sshd.nix>

services.sshguard.enable
Whether to enable the sshguard service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/sshguard.nix>

services.sshguard.attack_threshold
Block attackers when their cumulative attack score exceeds threshold. Most attacks have a score of 10.

Type: signed integer

Default:

```
30
```

Declared by:
<nixpkgs/nixos/modules/services/security/sshguard.nix>

services.sshguard.blacklist_file
Blacklist an attacker when its score exceeds threshold. Blacklisted addresses are loaded from and added to blacklist−file.

Type: absolute path

Default:

```
"/var/lib/sshguard/blacklist.db"
```

Declared by:
<nixpkgs/nixos/modules/services/security/sshguard.nix>

services.sshguard.blacklist_threshold
Blacklist an attacker when its score exceeds threshold. Blacklisted addresses are loaded from and added to blacklist−file.

Type: null or signed integer

Default:

```
null
```

Example:

```
120
```

Declared by:
<nixpkgs/nixos/modules/services/security/sshguard.nix>

services.sshguard.blocktime
Block attackers for initially blocktime seconds after exceeding threshold. Subsequent blocks increase by a factor of 1.5.

sshguard unblocks attacks at random intervals, so actual block times will be longer.

Type: signed integer

Default:

```
120
```

Declared by:
<nixpkgs/nixos/modules/services/security/sshguard.nix>

services.sshguard.detection_time
Remember potential attackers for up to detection_time seconds before resetting their score.

Type: signed integer

Default:

```
1800
```

Declared by:
<nixpkgs/nixos/modules/services/security/sshguard.nix>

services.sshguard.services
Systemd services sshguard should receive logs of.

Type: list of string

Default:

```
[
  "sshd"
```

```
]
```

Example:

```
[
  "sshd"
  "exim"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/sshguard.nix>

services.sshguard.whitelist
Whitelist a list of addresses, hostnames, or address blocks.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "198.51.100.56"
  "198.51.100.2"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/sshguard.nix>

services.sshwifty.enable
Whether to enable Sshwifty.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sshwifty.nix>

services.sshwifty.package
The sshwifty package to use.

Type: package

Default:

```
pkgs.sshwifty
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sshwifty.nix>

services.sshwifty.settings
Configuration for Sshwifty. See **the Sshwifty documentation** for possible options.

Type: JSON value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sshwifty.nix>

services.sshwifty.sharedKeyFile
Path to a file containing the shared key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sshwifty.nix>

services.sshwifty.socks5PasswordFile
Path to a file containing the SOCKS5 password.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/sshwifty.nix>

services.sslh.enable
Whether to enable sslh, protocol demultiplexer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sslh.nix>

services.sslh.listenAddresses
Listening addresses or hostnames.

Type: (list of string) or string convertible to it

Default:

```
[
  "0.0.0.0"
  "[::]"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sslh.nix>

services.sslh.method
The method to use for handling connections:

- ‘fork’ forks a new process for each incoming connection. It is well−tested and very reliable, but incurs the overhead of many processes.
- ‘select’ uses only one thread, which monitors all connections at once. It has lower overhead per connection, but if it stops, you’ll lose all connections.
- ‘ev’ is implemented using libev, it’s similar to ‘select’ but scales better to a large number of connections.

Type: one of “fork”, “select”, “ev”

Default:

```
"fork"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sslh.nix>

services.sslh.port
Listening port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
443
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sslh.nix>

services.sslh.settings
sslh configuration. See **sslh**(8) for available settings.

Type: open submodule of attribute set of (libconfig value)

Declared by:
<nixpkgs/nixos/modules/services/networking/sslh.nix>

services.sslh.settings.numeric
Whether to disable reverse DNS lookups, thus keeping IP address literals in the log.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sslh.nix>

services.sslh.settings.protocols
List of protocols sslh will probe for and redirect. Each protocol entry consists of:

- ‘name’: name of the probe.
- ‘service’: libwrap service name (see **hosts_access**(5)),
- ‘host’, ‘port’: where to connect when this probe succeeds,
- ‘log_level’: to log incoming connections,
- ‘transparent’: proxy this protocol transparently,
- etc.

See the documentation for all options, including probe−specific ones.

Type: list of attribute set of (libconfig value)

Default:

```
[
  {
    host = "localhost";
    name = "ssh";
    port = "22";
    service = "ssh";
  }
```

```
    {
      host = "localhost";
      name = "openvpn";
      port = "1194";
    }
    {
      host = "localhost";
      name = "xmpp";
      port = "5222";
    }
    {
      host = "localhost";
      name = "http";
      port = "80";
    }
    {
      host = "localhost";
      name = "tls";
      port = "443";
    }
    {
      host = "localhost";
      name = "anyprot";
      port = "443";
    }
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sslh.nix>

services.sslh.settings.timeout
Timeout in seconds.

Type: unsigned integer, meaning >=0

Default:

```
2
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sslh.nix>

services.sslh.settings.transparent
Whether the services behind sslh (Apache, sshd and so on) will see the external IP and ports as if the external world connected directly to them.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sslh.nix>

services.sslh.settings.verbose−connections

Where to log connections information. Possible values are:

0. don’t log anything
1. write log to stdout
2. write log to syslog
3. write log to both stdout and syslog
4. write to a log file (**sslh.settings.logfile**)

Type: integer between 0 and 4 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/sslh.nix>

services.sslmate−agent.enable

Whether to enable sslmate−agent, a daemon for managing SSL/TLS certificates on a server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/sslmate−agent.nix>

services.sssd.enable

Whether to enable the System Security Services Daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/sssd.nix>

services.sssd.config

Contents of *sssd.conf*.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
[sssd]
services = nss, pam
domains = shadowutils

[nss]

[pam]
```

```
[domain/shadowutils]
id_provider = proxy
proxy_lib_name = files
auth_provider = proxy
proxy_pam_target = sssd-shadowutils
proxy_fast_alias = True
```

Declared by:
<nixpkgs/nixos/modules/services/misc/sssd.nix>

services.sssd.environmentFile
Environment file as defined in **systemd.exec**(5).

Secrets may be passed to the service without adding them to the world-readable Nix store, by specifying placeholder variables as the option value in Nix and setting these variables accordingly in the environment file.

```
# snippet of sssd-related config
[domain/LDAP]
ldap_default_authtok = $SSSD_LDAP_DEFAULT_AUTHTOK

# contents of the environment file
SSSD_LDAP_DEFAULT_AUTHTOK=verysecretpassword
```

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/sssd.nix>

services.sssd.kcm
Whether to use SSS as a Kerberos Cache Manager (KCM). Kerberos will be configured to cache credentials in SSS.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/sssd.nix>

services.sssd.settings
Contents of *sssd.conf*.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  "domain/shadowutils" = {
    auth_provider = "proxy";
    id_provider = "proxy";
    proxy_fast_alias = true;
    proxy_lib_name = "files";
    proxy_pam_target = "sssd-shadowutils";
  };
```

```
  nss = { };
  pam = { };
  sssd = {
    domains = "shadowutils";
    services = "nss, pam";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/sssd.nix>

services.sssd.sshAuthorizedKeysIntegration
Whether to make sshd look up authorized keys from SSS. For this to work, the ‘ssh’ SSS service must be enabled in the sssd configuration.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/sssd.nix>

services.sssd.subIDsIntegration
Whether to use SSS as a source for subuid and subgid.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/sssd.nix>

services.stalwart.enable
Whether to enable the all−in−one collaboration and mail server, Stalwart.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/stalwart.nix>

services.stalwart.package
The stalwart package to use.

Type: package

Default:

```
pkgs.stalwart
```

Declared by:
<nixpkgs/nixos/modules/services/mail/stalwart.nix>

services.stalwart.credentials

Credentials envs used to configure Stalwart secrets. These secrets can be accessed in configuration values with the macros such as '%{file:/run/credentials/stalwart.service/VAR_NAME}%'.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user_admin_password = "/run/keys/stalwart_admin_password";
}
```

Declared by:

<nixpkgs/nixos/modules/services/mail/stalwart.nix>

services.stalwart.dataDir

Data directory for stalwart

Type: absolute path

Default:

```
/var/lib/${if lib.versionOlder config.services.stalwart.stateVersio \
n "26.05" then "stalwart-mail" else "stalwart"}
```

Declared by:

<nixpkgs/nixos/modules/services/mail/stalwart.nix>

services.stalwart.group

Group ownership of service

Type: string

Default:

```
if lib.versionOlder config.services.stalwart.stateVersion "26.05" t \
hen "stalwart-mail" else "stalwart"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/stalwart.nix>

services.stalwart.openFirewall

Whether to open TCP firewall ports, which are specified in **services.stalwart.settings.server.listener** on all interfaces.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/mail/stalwart.nix>

services.stalwart.settings

Configuration options for the Stalwart server. See **https://stalw.art/docs/category/configuration** for available options.

By default, the module is configured to store everything locally.

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/stalwart.nix>

services.stalwart.stateVersion
The version of this module (=version of NixOS) when this module was first enabled on this particular machine, used to maintain compatibility with application data created on older versions of this module.

See **system.stateVersion** for details on the NixOS−global equivalent to this option.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/mail/stalwart.nix>

services.stalwart.user
User ownership of service

Type: string

Default:

```
if lib.versionOlder config.services.stalwart.stateVersion "26.05" t \
hen "stalwart−mail" else "stalwart"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/stalwart.nix>

services.stargazer.enable
Whether to enable Stargazer Gemini server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.allowCgiUser
When enabled, the stargazer process will be given ‘CAP_SETGID’ and ‘CAP_SETUID’ so that it can run cgi processes as a different user. This is required if the ‘cgi−user’ option is used for a route. Note that these capabilities could allow privilege escalation so be careful. For that reason, this is disabled by default.

You will need to create the user mentioned ‘cgi−user’ if it does not already exist.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.certLifetime
How long certs generated by Stargazer should live for. Certs live forever by default.

Type: string

Default:

```
""
```

Example:

```
"1y"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.certOrg
The name of the organization responsible for the X.509 certificate's /O name.

Type: string

Default:

```
"stargazer"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.connectionLogging
Whether or not to log connections to stdout.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.debugMode
Run Stargazer in debug mode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.genCerts
Set to false to disable automatic certificate generation. Use if you want to provide your own certs.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.group
Group account under which stargazer runs.

Type: string

Default:

```
"stargazer"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.ipLog

Log client IP addresses in the connection log.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.ipLogPartial

Log partial client IP addresses in the connection log.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.listen

Address and port to listen on.

Type: list of string

Default:

```
[ "0.0.0.0" ] ++ lib.optional config.networking.enableIPv6 "[::0]"
```

Example:

```
[ "10.0.0.12" "[2002:a00:1::]" ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.regenCerts

Set to false to turn off automatic regeneration of expired certificates. Use if you want to provide your own certs.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.requestTimeout

Number of seconds to wait for the client to send a complete request. Set to 0 to disable.

Type: unsigned integer, meaning >=0

Default:

```
5
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.responseTimeout

Number of seconds to wait for the client to send a complete request and for stargazer to finish sending the response. Set to 0 to disable.

Type: unsigned integer, meaning >=0

Default:

Declared by:

<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.routes

Routes that Stargazer should server.

Expressed as a list of attribute sets. Each set must have a key ‘route’ that becomes the section name for that route in the stargazer ini cofig. The remaining keys and values become the parameters for that route.

Refer to upstream docs for other params

Type: list of (open submodule of attribute set of (INI atom (null, bool, int, float or string)))

Default:

```
[ ]
```

Example:

```
[
  {
    route = "example.com";
    root = "/srv/gemini/example.com"
  }
  {
    route = "example.com:/man";
    root = "/cgi−bin";
    cgi = true;
  }
  {
    route = "other.org~(.*)";
    redirect = "gemini://example.com";
    rewrite = "\1";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.routes.*.route

Route section name

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.store

Path to the certificate store on disk. This should be a persistent directory writable by Stargazer.

Type: absolute path

Default:

```
"/var/lib/gemini/certs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stargazer.user
User account under which stargazer runs.

Type: string

Default:

```
"stargazer"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/stargazer.nix>

services.stash.enable
Whether to enable stash.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.package
The stash package to use.

Type: package

Default:

```
pkgs.stash
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.dataDir
The directory where Stash stores its files.

Type: absolute path

Default:

```
"/var/lib/stash"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.group
Group under which Stash runs.

Type: string

Default:

```
"stash"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.jwtSecretKeyFile

Path to file containing a secret used to sign JWT tokens.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.mutablePlugins

Whether to enable Whether plugins/themes can be installed, updated, uninstalled manually…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.mutableScrapers

Whether to enable Whether scrapers can be installed, updated, uninstalled manually…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.mutableSettings

Whether the Stash config.yml is writeable by Stash.

If ‘false’, Any config changes done from within Stash UI will be temporary and reset to those defined in **services.stash.settings** upon ‘Stash.service’ restart. If ‘true’, the **services.stash.settings** will only be used to initialize the Stash configuration if it does not exist, and are subsequently ignored.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.openFirewall

Open ports in the firewall for the Stash web interface.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.passwordFile
Path to file containing password for login.

Warning
This option takes precedence over **services.stash.settings.password** ::

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/password/file"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.plugins
The plugins Stash should be started with.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.scrapers
The scrapers Stash should be started with.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.sessionStoreKeyFile
Path to file containing a secret for session store.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings
Stash configuration

Type: open submodule of (YAML 1.1 value)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.blobs_path
Path to blobs

Type: absolute path

Default:

```
"/var/lib/stash/blobs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.blobs_storage
Where to store blobs

Type: one of “FILESYSTEM”, “DATABASE”

Default:

```
"FILESYSTEM"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.cache
Path to cache

Type: absolute path

Default:

```
"/var/lib/stash/cache"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.calculate_md5
Whether to calculate MD5 checksums for scene video files

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.create_image_clip_from_videos
Create Image Clips from Video extensions when Videos are disabled in Library

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.dangerous_allow_public_without_auth
Learn more at **https://docs.stashapp.cc/networking/authentication−required−when−accessing−stash−from−the−internet/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.database
Path to the SQLite database

Type: absolute path

Default:

```
"/var/lib/stash/go.sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.gallery_cover_regex
Regex used to identify images as gallery covers

Type: string

Default:

```
"(poster|cover|folder|board)\\.[^.]+$"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.generated
Path to generated files

Type: absolute path

Default:

```
"/var/lib/stash/generated"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.host
The ip address that Stash should bind to.

Type: string

Default:

```
"localhost"
```

Example:

```
"::1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.no_proxy
A list of domains for which the proxy must not be used

Type: string

Default:

```
"localhost,127.0.0.1,192.168.0.0/16,10.0.0.0/8,172.16.0.0/12"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.nobrowser
If we should not auto−open a browser window on startup

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.notifications_enabled
If we should send notifications to the desktop

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.parallel_tasks
Number of parallel tasks to start during scan/generate

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.plugins_path
Path to scrapers

Type: absolute path

Default:

```
"/var/lib/stash/plugins"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.port
The port that Stash should listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9999
```

Example:

```
1234
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.preview_audio
Include audio stream in previews

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.preview_exclude_end
Duration of start of video to exclude when generating previews

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.preview_exclude_start
Duration of end of video to exclude when generating previews

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.preview_segment_duration
Preview segment duration, in seconds

Type: floating point number

Default:

```
0.75
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.preview_segments
Number of segments in a preview file

Type: signed integer

Default:

```
12
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.scrapers_path
Path to scrapers

Type: absolute path

Default:

```
"/var/lib/stash/scrapers"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.security_tripwire_accessed_from_public_internet

Learn more at **https://docs.stashapp.cc/networking/authentication-required-when-accessing-stash-from-the-internet/**

Type: null or string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/stash.nix>

services.stash.settings.sequential_scanning

Modifies behaviour of the scanning functionality to generate support files (previews/sprites/phash) at the same time as fingerprinting/screenshotting

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/stash.nix>

services.stash.settings.show_one_time_moved_notification

Whether a small notification to inform the user that Stash will no longer show a terminal window, and instead will be available in the tray

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/stash.nix>

services.stash.settings.sound_on_preview

Enable sound on mouseover previews

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/stash.nix>

services.stash.settings.stash

Add directories containing your adult videos and images. Stash will use these directories to find videos and/or images during scanning.

Type: list of (submodule)

Example:

```
{
  stash = [
    {
      Path = "/media/drive/videos";
      ExcludeImage = true;
    }
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.stash.*.excludeimage
Whether to exclude image files from being scanned into Stash

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.stash.*.excludevideo
Whether to exclude video files from being scanned into Stash

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.stash.*.path
location of your media files

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.stash_boxes
Stash−box facilitates automated tagging of scenes and performers based on fingerprints and filenames

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
{
  stash_boxes = [
    {
      name = "StashDB";
      endpoint = "https://stashdb.org/graphql";
      apikey = "aaaaaaaaaaaa.bbbbbbbbbbbbbbbbbbbbbbb.ccccccccccccc \
c";
    }
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.stash_boxes.*.apikey
Stash Box API key

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.stash_boxes.*.endpoint
URL to the Stash Box graphql api

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.stash_boxes.*.name
The name of the Stash Box

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.theme_color
Sets the ‘theme−color’ property in the UI

Type: string

Default:

```
"#202b33"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.ui.frontPageContent
Search filters to display on the front page.

Type: (list of (attribute set)) or function that evaluates to a(n) list of (attribute set)

Default:

```
<function>
```

Example:

```
presets: [
  # To get the savedFilterId, you can query ‘{ findSavedFilters(mod \
e: <FilterMode>) { id name } }‘ on localhost:9999/graphql
  {
    __typename = "SavedFilter";
    savedFilterId = 1;
  }
  # basic custom filter
  {
    __typename = "CustomFilter";
    title = "Random Scenes";
    mode = "SCENES";
    sortBy = "random";
    direction = "DESC";
  }
  presets.recentlyAddedImages
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.video_file_naming_algorithm
Hash algorithm to use for generated file naming

Type: one of “OSHASH”, “MD5”

Default:

```
"OSHASH"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.settings.write_image_thumbnails
Write image thumbnails to disk when generating on the fly

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.user
User under which Stash runs.

Type: string

Default:

```
"stash"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.stash.username
Username for login.

Warning
This option takes precedence over **services.stash.settings.username** ::

Type: null or non−empty string

Default:

```
null
```

Example:

```
"admin"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stash.nix>

services.static−web−server.enable
Whether to enable Static Web Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/static−web−server.nix>

services.static−web−server.configuration
Configuration for Static Web Server. See **https://static−web−server.net/configuration/config−file/**. NOTE: Don't set "host", "port", or "root" here. They will be ignored. Use the top−level "listen" and "root" options instead.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  general = {
    directory-listing = true;
    log-level = "error";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/static−web−server.nix>

services.static−web−server.listen
The **systemd.socket**(5) "ListenStream" used in static−web−server.socket. This is equivalent to SWS's "host" and "port" options. See here for specific syntax: **https://www.freedesktop.org/software/systemd/man/systemd.socket.html#ListenStream=**

Type: string

Default:

```
"[::]:8787"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/static−web−server.nix>

services.static−web−server.root
The location of files for SWS to serve. Equivalent to SWS's "root" config value. NOTE: This folder must exist before starting SWS.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−servers/static−web−server.nix>

services.step−ca.enable
Whether to enable the smallstep certificate authority server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/step−ca.nix>

services.step−ca.package

The step−ca package to use.

Type: package

Default:

```
pkgs.step-ca
```

Declared by:

<nixpkgs/nixos/modules/services/security/step−ca.nix>

services.step−ca.address

The address (without port) the certificate authority should listen at. This combined with **services.step−ca.port** overrides **services.step−ca.settings.address**.

Type: string

Example:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/security/step−ca.nix>

services.step−ca.intermediatePasswordFile

Path to the file containing the password for the intermediate certificate private key.

Warning
Make sure to use a quoted absolute path instead of a path literal to prevent it from being copied to the globally readable Nix store.

Type: null or absolute path not in the Nix store

Default:

```
null
```

Example:

```
"/run/keys/smallstep-password"
```

Declared by:

<nixpkgs/nixos/modules/services/security/step−ca.nix>

services.step−ca.openFirewall

Whether to enable opening the certificate authority server port.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/step−ca.nix>

services.step−ca.port

The port the certificate authority should listen on. This combined with **services.step−ca.address** overrides **services.step−ca.settings.address**.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Example:

```
8443
```

Declared by:
<nixpkgs/nixos/modules/services/security/step−ca.nix>

services.step−ca.settings
Settings that go into *ca.json*. See **the step−ca manual** for more information. The easiest way to configure this module would be to run 'step ca init' to generate *ca.json* and then import it using 'builtins.fromJSON'. **This article** may also be useful if you want to customize certain aspects of certificate generation for your CA. You need to change the database storage path to */var/lib/step−ca/db*.

Warning
The **services.step−ca.settings.address** option will be ignored and overwritten by **services.step−ca.address** and **services.step−ca.port**.

Type: attribute set of anything

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/step−ca.nix>

services.stirling−pdf.enable
Whether to enable the stirling−pdf service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stirling−pdf.nix>

services.stirling−pdf.package
The stirling−pdf package to use.

Type: package

Default:

```
pkgs.stirling−pdf
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stirling−pdf.nix>

services.stirling−pdf.environment
Environment variables for the stirling−pdf app. See **https://github.com/Stirling−Tools/Stirling−PDF#customisation** for available options.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{ }
```

Example:

```
{
  INSTALL_BOOK_AND_ADVANCED_HTML_OPS = true;
  SERVER_PORT = 8080;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stirling−pdf.nix>

services.stirling−pdf.environmentFiles
Files containing additional environment variables to pass to Stirling PDF. Secrets should be added in environmentFiles instead of environment.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/stirling−pdf.nix>

services.stratis.enable
Whether to enable Stratis Storage − Easy to use local storage management for Linux.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/stratis.nix>

services.strfry.enable
Whether to enable strfry.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strfry.nix>

services.strfry.package
The strfry package to use.

Type: package

Default:

```
pkgs.strfry
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strfry.nix>

services.strfry.settings
Configuration options to set for the Strfry service. See **https://github.com/hoytech/strfry** for documentation.

Type: JSON value

Default:

```
{
  db = "/var/lib/strfry";
```

```
dbParams = {
  mapsize = 10995116277760;
  maxreaders = 256;
  noReadAhead = false;
};
events = {
  ephemeralEventsLifetimeSeconds = 300;
  maxEventSize = 65536;
  maxNumTags = 2000;
  maxTagValSize = 1024;
  rejectEphemeralEventsOlderThanSeconds = 60;
  rejectEventsNewerThanSeconds = 900;
  rejectEventsOlderThanSeconds = 94608000;
};
relay = {
  autoPingSeconds = 55;
  bind = "127.0.0.1";
  compression = {
    enabled = true;
    slidingWindow = true;
  };
  enableTcpKeepalive = false;
  info = {
    contact = "";
    description = "This is a strfry instance.";
    icon = "";
    name = "strfry default";
    nips = "";
    pubkey = "";
  };
  logging = {
    dbScanPerf = false;
    dumpInAll = false;
    dumpInEvents = false;
    dumpInReqs = false;
    invalidEvents = true;
  };
  maxFilterLimit = 500;
  maxReqFilterSize = 200;
  maxSubsPerConnection = 20;
  maxWebsocketPayloadSize = 131072;
  negentropy = {
    enabled = true;
    maxSyncEvents = 1000000;
  };
  nofiles = 1000000;
  numThreads = {
    ingester = 3;
    negentropy = 2;
    reqMonitor = 3;
    reqWorker = 3;
  };
  port = 7777;
```

```
        queryTimesliceBudgetMicroseconds = 10000;
        realIpHeader = "";
        writePolicy = {
          plugin = "";
        };
      };
    }
```

Example:

```
dbParams = {
  maxreaders = 256;
  mapsize = 10995116277760;
  noReadAhead = false;
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strfry.nix>

services.strichliste.enable
Whether to enable strichliste, a web based tally sheet…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.packages.backend
The strichliste package to use.

Type: package

Default:

```
pkgs.strichliste
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.packages.frontend
The strichliste−frontend package to use.

Type: package

Default:

```
<derivation strichliste−frontend−2.0.0>
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.domain
Domain name used to configure the webserver virtual host.

Type: string

Example:

```
"strichliste.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.environment
Environment variables consumed by Symfony.

See **https://github.com/strichliste/strichliste−backend/blob/v2.0.1/.env.dist** for possible options.

Type: open submodule of (attribute set)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.environment.APP_CACHE_DIR
Directory used for caching.

Type: absolute path

Default:

```
"/var/cache/strichliste"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.environment.APP_ENV
The active environment.

Type: string

Default:

```
"prod"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.environment.APP_LOG_DIR
Directory to write logs.

Type: absolute path

Default:

```
"/var/log/strichliste"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.environment.CORS_ALLOW_ORIGIN
Regular expression defining the allowed CORS origins.

Type: string

Default:

```
^https?://${config.services.strichliste.domain}(:[0−9]+)?$
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.environment.DATABASE_URL

See **https://www.doctrine-project.org/projects/doctrine-dbal/en/3.9/reference/configuration.html#connecting-using-a-url** for more URL examples.

Type: string

Default:

```
"sqlite:////var/lib/strichliste/db.sqlite"
```

Example:

```
"postgresql://strichliste@localhost/strichliste?host=/run/postgresq \
l"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/strichliste.nix>

services.strichliste.environmentFiles

Environment files to configure Symfony.

See **https://github.com/strichliste/strichliste-backend/blob/v2.0.1/.env.dist** for possible options.

Important
You should configure 'APP_SECRET' here.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/run/keys/strichliste.env"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/strichliste.nix>

services.strichliste.nginx.enable

Whether to enable and configure an nginx vhost to serve strichliste.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/strichliste.nix>

services.strichliste.nginx.virtualHost

Nginx virtual settings to allow direct customization of its settings.

Type: submodule

Example:

```
{
  enableACME = true;
  forceSSL = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with ‘redirectCode’) to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.http2

Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.http3

Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.http3_hq

Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.listen
Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides ‘addSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.listen.*.port

Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.listen.*.proxyProtocol

Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.listen.*.ssl

Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
```

```
    "/" = {
      proxyPass = "http://localhost:3000";
    };
  };
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations.<name>.alias
Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations.<name>.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won't unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with 'lib.mkOrder'. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.locations.<name>.uwsgiPass

Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.onlySSL

Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.quic

Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.redirectCode

HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.rejectSSL

Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.root

The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.serverName

Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.nginx.virtualHost.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

2. see the **security.acme.certs** option

services.strichliste.settings

The *strichliste.yaml* configuration as a Nix attribute set.

See the **configuration reference** for possible options.

Type: open submodule of (YAML 1.1 value)

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.account.lower

The credit limit for user accounts.

Type: signed integer

Default:

```
−200000
```

Example:

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.account.upper

The maximum balance on a user account.

Type: positive integer, meaning >0

Default:

```
200000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.common.idleTimeout

Time until the app returns to the start page.

Type: signed integer

Default:

```
30000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.i18n.currency.alpha3

ISO 4217 alpha code representing the currency.

Type: string

Example:

```
"EUR"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.i18n.currency.name

Name of the currency.

Type: string

Example:

```
"Euro"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/strichliste.nix>

services.strichliste.settings.i18n.currency.symbol
Symbol for the currency.

Type: string

Example:

```
"€"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/strichliste.nix>

services.strichliste.settings.i18n.language
Language used throughout the app.

Type: string

Default:

```
"en"
```

Example:

```
"de"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/strichliste.nix>

services.strichliste.settings.i18n.timezone
Timezone used throughout the app, e.g. in the transaction log.

Type: string

Default:

```
config.time.timeZone
```

Example:

```
"Europe/Berlin"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/strichliste.nix>

services.strichliste.settings.payment.boundary.lower
The lowest amount that can be used for payments.

Type: signed integer

Default:

```
-2000
```

Example:

Declared by:
<nixpkgs/nixos/modules/services/web-apps/strichliste.nix>

services.strichliste.settings.payment.boundary.upper
The highest amount that can be used for payment.

Type: positive integer, meaning >0

Default:

```
15000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.payment.deposit.enabled
Whether to allow money deposits.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.payment.deposit.custom
Whether to allow custom amounts for deposits.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.payment.deposit.steps
List of selectable deposit amounts.

This should match your most common coins and banknotes.

Type: list of (signed integer or floating point number)

Default:

```
[ ]
```

Example:

```
[
  0.5
  1
  2
  5
  10
  20
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.payment.dispense.enabled
Whether to allow spending money.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.payment.dispense.custom

Whether to allow custom spending amounts.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.payment.dispense.steps

List of selectable spending amounts.

This should match your most common products.

Type: list of (signed integer or floating point number)

Default:

```
[ ]
```

Example:

```
[
  0.5
  1
  2
  5
  10
  20
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.payment.transaction.enabled

Whether to allow transactions between user accounts.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.payment.undo.enabled

Whether to allow undoing transactions withing the **services.strichliste.settings.payment.undo.timeout** period.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.payment.undo.delete

Whether to allow deleting within the **services.strichliste.settings.payment.undo.timeout** period.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.payment.undo.timeout

The time period after creating a transaction in which undoing/deleting remains possible.

The format used is documented in **https://www.php.net/manual/en/dateinterval.createfromdatestring.php**.

Type: string

Default:

```
"5 minute"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strichliste.settings.user.stalePeriod

Duration after which users are listed as inactive.

The format used is documented in **https://www.php.net/manual/en/dateinterval.createfromdatestring.php**.

Tip

This helps unclutter the user listing by prioritizing active users.

Type: string

Default:

```
"10 day"
```

Example:

```
"1 week"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/strichliste.nix>

services.strongswan.enable

Whether to enable strongSwan.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan.nix>

services.strongswan.enabledPlugins

A list of additional plugins to enable if **managePlugins** is true.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan.nix>

services.strongswan.ca

A set of CAs (certification authorities) and their options for the ‘ca xxx’ sections of the *ipsec.conf* file.

Type: attribute set of attribute set of string

Default:

```
{ }
```

Example:

```
{
  strongswan = {
    auto = "add";
    cacert = "/run/keys/strongswanCert.pem";
    crluri = "http://crl2.strongswan.org/strongswan.crl";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan.nix>

services.strongswan.connections

A set of connections and their options for the ‘conn xxx’ sections of the *ipsec.conf* file.

Type: attribute set of attribute set of string

Default:

```
{ }
```

Example:

```
{
  "%default" = {
    keyexchange = "ikev2";
    keyingtries = "1";
  };
  roadwarrior = {
    auto       = "add";
    leftcert   = "/run/keys/moonCert.pem";
    leftid     = "@moon.strongswan.org";
    leftsubnet = "10.1.0.0/16";
    right      = "%any";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan.nix>

services.strongswan.managePlugins

If set to true, this option will disable automatic plugin loading and then tell strongSwan to enable the plugins specified in the **enabledPlugins** option.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan.nix>

services.strongswan.secrets

A list of paths to IPSec secret files. These files will be included into the main ipsec.secrets file with the 'include' directive. It is safer if these paths are absolute.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/run/keys/ipsec-foo.secret"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan.nix>

services.strongswan.setup

A set of options for the 'config setup' section of the *ipsec.conf* file. Defines general configuration parameters.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  cachecrls = "yes";
  strictcrlpolicy = "yes";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan.nix>

services.strongswan-swanctl.enable

Whether to enable strongswan-swanctl service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.package
The strongswan package to use.

Type: package

Default:

```
pkgs.strongswan
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.includes
Extra configuration files to include in the swanctl configuration. This can be used to provide secret values from outside the nix store.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.strongswan.extraConfig
Contents of the *strongswan.conf* file.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.authorities
Section defining complementary attributes of certification authorities, each in its own subsection with an arbitrary yet unique name

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.authorities.<name>.cacert
The certificates may use a relative path from the swanctl ‘x509ca’ directory or an absolute path.

Configure one of **cacert**, **file**, or **handle** per section.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan−swanctl.swanctl.authorities.<name>.cert_uri_base
Defines the base URI for the Hash and URL feature supported by IKEv2. Instead of exchanging complete certificates, IKEv2 allows one to send an URI that resolves to the DER encoded certificate. The certificate URIs are built by appending the SHA1 hash of the DER encoded certificates to this base URI.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.authorities.<name>.crl_uris
List of CRL distribution points (ldap, http, or file URI).

StrongSwan default: '[]'

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.authorities.<name>.file
Absolute path to the certificate to load. Passed as−is to the daemon, so it must be readable by it.

Configure either this or **handle**, but not both, in one section.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.authorities.<name>.handle
Hex−encoded CKA_ID or handle of the certificate on a token or TPM, respectively.

Configure either this or **file**, but not both, in one section.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.authorities.<name>.module
Optional PKCS#11 module name.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.authorities.<name>.ocsp_uris
List of OCSP URIs.

StrongSwan default: '[]'

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.authorities.<name>.slot
Optional slot number of the token that stores the certificate.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections
Section defining IKE connection configurations, each in its own subsection with an arbitrary yet unique name

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.aggressive
Enables Aggressive Mode instead of Main Mode with Identity Protection. Aggressive Mode is considered less secure, because the ID and HASH payloads are exchanged unprotected. This allows a passive attacker to snoop peer identities, and even worse, start dictionary attacks on the Preshared Key.

StrongSwan default: 'false'

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.childless
Use childless IKE_SA initiation (*allow*, *prefer*, *force* or *never*).

Use childless IKE_SA initiation (RFC 6023) for IKEv2, with the first CHILD_SA created with a separate CREATE_CHILD_SA exchange (e.g. to use an independent key exchange for all CHILD_SAs). Acceptable values are *allow* (the default), *prefer*, *force* and *never*. If set to *allow*, responders will accept childless IKE_SAs (as indicated via notify in the IKE_SA_INIT response) while initiators continue to create regular IKE_SAs with the first CHILD_SA created during IKE_AUTH, unless the IKE_SA is initiated explicitly without any children (which will fail if the responder does not support or has disabled this extension). The effect of *prefer* is the same as *allow* on responders, but as initiator a childless IKE_SA is initiated if the responder supports it. If set to *force*, only childless initiation is accepted in either role. Finally, setting the option to *never* disables support for childless IKE_SAs as responder.

StrongSwan default: ‘"allow"’

Type: null or one of “allow”, “prefer”, “force”, “never”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children
CHILD_SA configuration sub-section. Each connection definition may have one or more sections in its **children** subsection. The section name defines the name of the CHILD_SA configuration, which must be unique within the connection (denoted <child> below).

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.ah_proposals
AH proposals to offer for the CHILD_SA. A proposal is a set of algorithms. For AH, this includes an integrity algorithm and an optional key exchange method. If a KE method is specified, CHILD_SA/Quick Mode rekeying and initial negotiation uses a separate key exchange using the negotiated method (refer to *esp_proposals* for details).

With peers that support multiple IKEv2 key exchanges (RFC 9370), up to seven additional key exchanges may be negotiated. They can be configured by prefixing the algorithm keyword with **keX_** (where X is a number between 1 and 7).

For IKEv2, multiple algorithms of the same kind can be specified in a single proposal, from which one gets selected. For IKEv1, only one algorithm per kind is allowed per proposal, more algorithms get implicitly stripped. Use multiple proposals to offer different algorithm combinations with IKEv1.

Algorithm keywords get separated using dashes. The special value *default* forms a default proposal of supported algorithms considered safe, and is usually a good choice for interoperability. By default no AH proposals are included, instead ESP is proposed.

StrongSwan default: ‘[]’

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.close_action
Action to perform after a CHILD_SA gets closed by the peer.

- The default of ‘none’ does not take any action,
- ‘trap’ installs a trap policy for the CHILD_SA.
- ‘start’ tries to re-create the CHILD_SA.

close_action does not provide any guarantee that the CHILD_SA is kept alive. It acts on explicit close messages only, but not on negotiation failures. Use trap policies to reliably re-create failed CHILD_SAs.

StrongSwan default: ‘"none"’

Type: null or one of “none”, “trap”, “start”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.copy_df

Whether to copy the DF bit to the outer IPv4 header in tunnel mode. This effectively disables Path MTU discovery (PMTUD). Controlling this behavior is not supported by all kernel interfaces.

StrongSwan default: ‘true’

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.copy_dscp

Whether to copy the DSCP (Differentiated Services Field Codepoint) header field to/from the outer IP header in tunnel mode. The value ‘out’ only copies the field from the inner to the outer header, the value ‘in’ does the opposite and only copies the field from the outer to the inner header when decapsulating, the value ‘yes’ copies the field in both directions, and the value ‘no’ disables copying the field altogether. Setting this to ‘yes’ or ‘in’ could allow an attacker to adversely affect other traffic at the receiver, which is why the default is ‘out’. Controlling this behavior is not supported by all kernel interfaces.

StrongSwan default: ‘"out"’

Type: null or one of “out”, “in”, “yes”, “no”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.copy_ecn

Whether to copy the ECN (Explicit Congestion Notification) header field to/from the outer IP header in tunnel mode. Controlling this behavior is not supported by all kernel interfaces.

StrongSwan default: ‘true’

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.dpd_action

Action to perform for this CHILD_SA on DPD timeout. The default clear closes the CHILD_SA and does not take further action. trap installs a trap policy, which will catch matching traffic and tries to re-negotiate the tunnel on-demand. restart immediately tries to re-negotiate the CHILD_SA under a fresh IKE_SA.

StrongSwan default: ‘"clear"’

Type: null or one of “clear”, “trap”, “restart”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.esp_proposals
ESP proposals to offer for the CHILD_SA. A proposal is a set of algorithms. For non-AEAD ESP proposals, this includes an integrity algorithm, an encryption algorithm, an optional key exchange method and an optional Extended Sequence Number Mode indicator. For AEAD proposals, a combined mode algorithm is used instead of the separate encryption/integrity algorithms.

If a key exchange method is specified, CHILD_SA/Quick Mode rekeying and initial negotiation use a separate key exchange using the specified method. However, for IKEv2, the keys of the CHILD_SA created implicitly with the IKE_SA will always be derived from the IKE_SA's key material. So any key exchange method specified here will only apply when the CHILD_SA is later rekeyed or is created with a separate CREATE_CHILD_SA exchange. A proposal mismatch might, therefore, not immediately be noticed when the SA is established, but may later cause rekeying to fail.

With peers that support multiple IKEv2 key exchanges (RFC 9370), up to seven additional key exchanges may be negotiated. They can be configured by prefixing the algorithm keyword with **keX_** (where X is a number between 1 and 7).

Extended Sequence Number support may be indicated with the *esn* and *noesn* values, both may be included to indicate support for both modes. If omitted, *noesn* is assumed.

For IKEv2, multiple algorithms of the same kind can be specified in a single proposal, from which one gets selected. For IKEv1, only one algorithm per kind is allowed per proposal, more algorithms get implicitly stripped. Use multiple proposals to offer different algorithm combinations with IKEv1.

Algorithm keywords get separated using dashes. The special value *default* forms a default proposal of supported algorithms considered safe, and is usually a good choice for interoperability. If no algorithms are specified for AH nor ESP, the *default* set of algorithms for ESP is included.

StrongSwan default: '["default"]'

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.hostaccess
Hostaccess variable to pass to 'updown' script.

StrongSwan default: 'false'

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.hw_offload
Enable hardware offload for this CHILD_SA, if supported by the IPsec implementation. The values 'crypto' or 'packet' enforce crypto or full packet offloading and the installation will fail if the selected mode is not supported by either kernel or device. On Linux, 'packet' also offloads policies, including trap policies. The value 'auto' enables full packet or crypto offloading, if either is supported, but the installation does not fail otherwise.

StrongSwan default: ‘"no"’

Type: null or one of “yes”, “no”, “auto”, “crypto”, “packet”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.icmp

Whether to forward certain ICMP error messages even if their source IP doesn’t match the negotiated IPsec policies.

ICMP error messages, such as Destination Unreachable, Time Exceeded or Fragmentation Needed, may be generated by a host whose IP address isn’t included in the negotiated traffic selectors and therefore doesn’t match the IPsec policies. If this option is enabled and the kernel supports it, such packets may still be forwarded. As ICMP errors contain parts of the IP packet that triggered them, the kernel will base its decision on a reverse policy lookup using that IP header.

StrongSwan default: ‘false’

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.if_id_in

XFRM interface ID set on inbound policies/SA. This allows installing duplicate policies/SAs and associates them with an interface with the same ID. The special value ‘%unique’ sets a unique interface ID on each CHILD_SA instance, beyond that the value ‘%unique-dir’ assigns a different unique interface ID for each CHILD_SA direction (in/out).

StrongSwan default: ‘"0"’

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.if_id_out

XFRM interface ID set on outbound policies/SA. This allows installing duplicate policies/SAs and associates them with an interface with the same ID. The special value ‘%unique’ sets a unique interface ID on each CHILD_SA instance, beyond that the value ‘%unique-dir’ assigns a different unique interface ID for each CHILD_SA direction (in/out).

The daemon will not install routes for CHILD_SAs that have this option set.

StrongSwan default: ‘"0"’

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.inactivity
Timeout before closing CHILD_SA after inactivity. If no traffic has been processed in either direction for the configured timeout, the CHILD_SA gets closed due to inactivity. The default value of 0 disables inactivity checks.

StrongSwan default: ‘"0s"’

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.interface
Optional interface name to restrict outbound IPsec policies.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.ipcomp
Enable IPComp compression before encryption. If enabled, IKE tries to negotiate IPComp compression to compress ESP payload data prior to encryption.

StrongSwan default: ‘false’

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.life_bytes
Maximum bytes processed before CHILD_SA gets closed. Usually this hard volume limit is never reached, because the CHILD_SA gets rekeyed before. If that fails for whatever reason, this limit closes the CHILD_SA. The default is 10% more than **rekey_bytes**.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.life_packets
Maximum number of packets processed before CHILD_SA gets closed. Usually this hard packets limit is never reached, because the CHILD_SA gets rekeyed before. If that fails for whatever reason, this limit closes the CHILD_SA.

The default is 10% more than **rekey_bytes**.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.life_time

Maximum lifetime before CHILD_SA gets closed. Usually this hard lifetime is never reached, because the CHILD_SA gets rekeyed before. If that fails for whatever reason, this limit closes the CHILD_SA. The default is 10% more than the **rekey_time**.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.local_ts

List of local traffic selectors to include in CHILD_SA. Each selector is a CIDR subnet definition, followed by an optional proto/port selector. The special value *dynamic* may be used instead of a subnet definition, which gets replaced by the tunnel outer address or the virtual IP, if negotiated. This is the default.

A protocol/port selector is surrounded by opening and closing square brackets. Between these brackets, a numeric or **getservent**(3) protocol name may be specified. After the optional protocol restriction, an optional port restriction may be specified, separated by a slash. The port restriction may be numeric, a **getservent**(3) service name, or the special value *opaque* for RFC 4301 OPAQUE selectors. Port ranges may be specified as well, none of the kernel backends currently support port ranges, though. If the protocol is *icmp* or *ipv6-icmp*, the port is interpreted as ICMP message type if it is less than 256 or as type and code if it is greater or equal to 256, with the type in the most significant 8 bits and the code in the least significant 8 bits.

When IKEv1 is used only the first selector is interpreted, except if the Cisco Unity extension plugin is used. This is due to a limitation of the IKEv1 protocol, which only allows a single pair of selectors per CHILD_SA. So to tunnel traffic matched by several pairs of selectors when using IKEv1 several children (CHILD_SAs) have to be defined that cover the selectors.

The IKE daemon uses traffic selector narrowing for IKEv1, the same way it is standardized and implemented for IKEv2. However, this may lead to problems with other implementations. To avoid that, configure identical selectors in such scenarios.

StrongSwan default: ‘["dynamic"]’

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.mark_in

Netfilter mark and mask for input traffic. On Linux, Netfilter may require marks on each packet to match an SA/policy having that option set. This allows installing duplicate policies and enables Netfilter rules to select specific SAs/policies for incoming traffic. Note that inbound marks are only set on policies, by default, unless **mark_in_sa** is enabled. The special value ‘%unique’ sets a unique mark on each CHILD_SA instance, beyond that the value ‘%unique-dir’ assigns a different unique mark for each

An additional mask may be appended to the mark, separated by ‘/’. The default mask if omitted is ‘0xffffffff’.

StrongSwan default: ‘"0/0x00000000"’

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.mark_in_sa

Whether to set **mark_in** on the inbound SA. By default, the inbound mark is only set on the inbound policy. The tuple destination address, protocol and SPI is unique and the mark is not required to find the correct SA, allowing to mark traffic after decryption instead (where more specific selectors may be used) to match different policies. Marking packets before decryption is still possible, even if no mark is set on the SA.

StrongSwan default: ‘false’

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.mark_out

Netfilter mark and mask for output traffic. On Linux, Netfilter may require marks on each packet to match a policy/SA having that option set. This allows installing duplicate policies and enables Netfilter rules to select specific policies/SAs for outgoing traffic. The special value ‘%unique’ sets a unique mark on each CHILD_SA instance, beyond that the value ‘%unique-dir’ assigns a different unique mark for each CHILD_SA direction (in/out).

An additional mask may be appended to the mark, separated by ‘/’. The default mask if omitted is ‘0xffffffff’.

StrongSwan default: ‘"0/0x00000000"’

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.mode

IPsec Mode to establish CHILD_SA with.

- ‘tunnel’ negotiates the CHILD_SA in IPsec Tunnel Mode,
- whereas ‘transport’ uses IPsec Transport Mode.
- ‘transport_proxy’ signifying the special Mobile IPv6 Transport Proxy Mode.
- ‘beet’ is the Bound End to End Tunnel mixture mode, working with fixed inner addresses without the need to include them in each packet.
- Both ‘transport’ and ‘beet’ modes are subject to mode negotiation; ‘tunnel’ mode is negotiated if the preferred mode is not available.
- ‘pass’ and ‘drop’ are used to install shunt policies which explicitly bypass the defined traffic from IPsec processing or drop it, respectively.

StrongSwan default: ‘"tunnel"’

Type: null or one of “tunnel”, “transport”, “transport_proxy”, “beet”, “pass”, “drop”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.per_cpu_sas

Enable per−CPU CHILD_SAs. Requires ‘trap’ in ‘start_action’. The value ‘encap’ enables a special type of UDP encapsulation (requires enabling ‘encap’ for the connection if there is no NAT), where a random source port is used for each outbound per−CPU SA (the destination port for all of them remains 4500). This allows using the port for RSS if the SPI can’t be used. Note that this type of behavior is not standardized and not negotiated. So regardless of whether the option is enabled, inbound per−CPU SAs with UDP−encapsulation always have the source port set to 0 as the peer’s random port is unknown if it has this option enabled.

StrongSwan default: ‘"no"’

Type: null or one of “yes”, “no”, “encap”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.policies

Whether to install IPsec policies or not. Disabling this can be useful in some scenarios e.g. MIPv6, where policies are not managed by the IKE daemon. Since 5.3.3.

StrongSwan default: ‘true’

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.policies_fwd_out

Whether to install outbound FWD IPsec policies or not. Enabling this is required in case there is a drop policy that would match and block forwarded traffic for this CHILD_SA. Since 5.5.1.

StrongSwan default: ‘false’

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.priority

Optional fixed priority for IPsec policies. This could be useful to install high−priority drop policies. The default of 0 uses dynamically calculated priorities based on the size of the traffic selectors.

StrongSwan default: ‘0’

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.rand_bytes
Byte range from which to choose a random value to subtract from **rekey_bytes**. The default is the difference between **life_bytes** and **rekey_bytes**.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.rand_packets
Packet range from which to choose a random value to subtract from **rekey_packets**. The default is the difference between **life_packets** and **rekey_packets**.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.rand_time
Time range from which to choose a random value to subtract from **rekey_time**. The default is the difference between **life_time** and **rekey_time**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.rekey_bytes
Number of bytes processed before initiating CHILD_SA rekeying.

Number of bytes processed before initiating CHILD_SA rekeying. CHILD_SA rekeying refreshes key material, optionally using a Diffie−Hellman exchange if a group is specified in the proposal.

To avoid rekey collisions initiated by both ends simultaneously, a value in the range of **rand_bytes** gets subtracted to form the effective soft volume limit.

Volume based CHILD_SA rekeying is disabled by default. If **life_bytes** is explicitly configured, **rekey_bytes** defaults to 10% less than that.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.rekey_packets
Number of packets processed before initiating CHILD_SA rekeying.

Number of packets processed before initiating CHILD_SA rekeying. CHILD_SA rekeying refreshes key material, optionally using a Diffie−Hellman exchange if a group is specified in the proposal.

To avoid rekey collisions initiated by both ends simultaneously, a value in the range of **rand_packets** gets subtracted to form the effective soft packet count limit.

Packet count based CHILD_SA rekeying is disabled by default. If **life_packets** is explicitly configured, **rekey_packets** defaults to 10% less than that.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.rekey_time
Time to schedule CHILD_SA rekeying. CHILD_SA rekeying refreshes key material, optionally using a Diffie−Hellman exchange if a group is specified in the proposal.

To avoid rekey collisions initiated by both ends simultaneously, a value in the range of **rand_time** gets subtracted to form the effective soft lifetime.

If **life_time** is explicitly configured, **rekey_time** defaults to 10% less than that, otherwise, CHILD_SA rekeying is scheduled every hour, minus **rand_time**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.remote_ts
List of remote selectors to include in CHILD_SA. See **local_ts** for a description of the selector syntax.

StrongSwan default: ‘["dynamic"]’

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.replay_window
IPsec replay window to configure for this CHILD_SA. Larger values than the default of ‘32’ are supported using the Netlink backend only, a value of ‘0’ disables IPsec replay protection.

StrongSwan default: ‘32’

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.reqid
Fixed reqid to use for this CHILD_SA. This might be helpful in some scenarios, but works only if each CHILD_SA configuration is instantiated not more than once. The default of 0 uses dynamic reqids, allocated incrementally.

StrongSwan default: ‘0’

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.set_mark_in
Netfilter mark applied to packets after the inbound IPsec SA processed them. This way it’s not necessary to mark packets via Netfilter before decryption or right afterwards to match policies or process them differently (e.g. via policy routing).

An additional mask may be appended to the mark, separated by ‘/’. The default mask if omitted is 0xffffffff. The special value ‘%same’ uses the value (but not the mask) from **mark_in** as mark value, which can be fixed, ‘%unique’ or ‘%unique-dir’.

Setting marks in XFRM input requires Linux 4.19 or higher.

StrongSwan default: ‘"0/0x00000000"’

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.children.<name>.set_mark_out
Netfilter mark applied to packets after the outbound IPsec SA processed them. This allows processing ESP packets differently than the original traffic (e.g. via policy routing).

An additional mask may be appended to the mark, separated by ‘/’. The default mask if omitted is 0xffffffff. The special value ‘%same’ uses the value (but not the mask) from **mark_out** as mark value, which can be fixed, ‘%unique_’ or ‘%unique-dir’.

Setting marks in XFRM output is supported since Linux 4.14. Setting a mask requires at least Linux 4.19.

StrongSwan default: ‘"0/0x00000000"’

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.sha256_96

HMAC−SHA−256 is used with 128−bit truncation with IPsec. For compatibility with implementations that incorrectly use 96−bit truncation this option may be enabled to configure the shorter truncation length in the kernel. This is not negotiated, so this only works with peers that use the incorrect truncation length (or have this option enabled).

StrongSwan default: ‘false’

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.start_action

Action to perform after loading the configuration.

- The default of ‘none’ loads the connection only, which then can be manually initiated or used as a responder configuration.
- The value ‘trap’ installs a trap policy, which triggers the tunnel as soon as matching traffic has been detected.
- The value ‘start’ initiates the connection actively.
- Since version 5.9.6 two modes above can be combined with ‘trap|start’, to immediately initiate a connection for which trap policies have been installed.

When unloading or replacing a CHILD_SA configuration having a **start_action** different from ‘none’, the inverse action is performed. Configurations with ‘start’ get closed, while such with ‘trap’ get uninstalled.

StrongSwan default: ‘"none"’

Type: null or one of “none”, “trap”, “start”, “trap|start”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.tfc_padding

Pads ESP packets with additional data to have a consistent ESP packet size for improved Traffic Flow Confidentiality. The padding defines the minimum size of all ESP packets sent. The default value of ‘0’ disables TFC padding, the special value ‘mtu’ adds TFC padding to create a packet size equal to the Path Maximum Transfer Unit.

StrongSwan default: ‘0’

Type: null or signed integer or value “mtu” (singular enum)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.children.<name>.updown
Updown script to invoke on CHILD_SA up and down events.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.dpd_delay
Interval to check the liveness of a peer actively using IKEv2 INFORMATIONAL exchanges or IKEv1 R_U_THERE messages. Active DPD checking is only enforced if no IKE or ESP/AH packet has been received for the configured DPD delay.

StrongSwan default: ‘"0s"’

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.dpd_timeout
Charon by default uses the normal retransmission mechanism and timeouts to check the liveness of a peer, as all messages are used for liveness checking. For compatibility reasons, with IKEv1 a custom interval may be specified; this option has no effect on connections using IKEv2.

StrongSwan default: ‘"0s"’

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.dscp
Differentiated Services Field Codepoint to set on outgoing IKE packets for this connection. The value is a six digit binary encoded string specifying the Codepoint to set, as defined in RFC 2474.

StrongSwan default: ‘"000000"’

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.encap
To enforce UDP encapsulation of ESP packets, the IKE daemon can fake the NAT detection payloads. This makes the peer believe that NAT takes place on the path, forcing it to encapsulate ESP packets in UDP.

Usually this is not required, but it can help to work around connectivity issues with too restrictive intermediary firewalls.

StrongSwan default: ‘false’

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.fragmentation
Use IKE fragmentation (proprietary IKEv1 extension or RFC 7383 IKEv2 fragmentation). Acceptable values are ‘yes’ (the default since 5.5.1), ‘accept’ (since versions:5.5.3), ‘force’ and ‘no’.

- If set to ‘yes’, and the peer supports it, oversized IKE messages will be sent in fragments.
- If set to ‘accept’, support for fragmentation is announced to the peer but the daemon does not send its own messages in fragments.
- If set to ‘force’ (only supported for IKEv1) the initial IKE message will already be fragmented if required.
- Finally, setting the option to ‘no’ will disable announcing support for this feature.

Note that fragmented IKE messages sent by a peer are always processed irrespective of the value of this option (even when set to no).

StrongSwan default: ‘"yes"’

Type: null or one of “yes”, “accept”, “force”, “no”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.if_id_in
XFRM interface ID set on inbound policies/SA, can be overridden by child config, see there for details.

The special value ‘%unique’ allocates a unique interface ID per IKE_SA, which is inherited by all its CHILD_SAs (unless overridden there), beyond that the value ‘%unique-dir’ assigns a different unique interface ID for each direction (in/out).

StrongSwan default: ‘"0"’

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.if_id_out
XFRM interface ID set on outbound policies/SA, can be overridden by child config, see there for details.

The special value ‘%unique’ allocates a unique interface ID per IKE_SA, which is inherited by all its CHILD_SAs (unless overridden there), beyond that the value ‘%unique-dir’ assigns a different unique interface ID for each direction (in/out).

StrongSwan default: ‘"0"’

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.keyingtries
Number of retransmission sequences to perform during initial connect. Instead of giving up initiation after the first retransmission sequence with the default value of ‘1’, additional sequences may be started according to the configured value. A value of ‘0’ initiates a new sequence until the connection establishes or fails with a permanent error.

StrongSwan default: ‘1’

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local
Section for a local authentication round. A local authentication round defines the rules how authentication is performed for the local peer. Multiple rounds may be defined to use IKEv2 RFC 4739 Multiple Authentication or IKEv1 XAuth.

Each round is defined in a section having ‘local’ as prefix, and an optional unique suffix. To define a single authentication round, the suffix may be omitted.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local.<name>.aaa_id
Server side EAP−Identity to expect in the EAP method. Some EAP methods, such as EAP−TLS, use an identity for the server to perform mutual authentication. This identity may differ from the IKE identity, especially when EAP authentication is delegated from the IKE responder to an AAA backend.

For EAP−(T)TLS, this defines the identity for which the server must provide a certificate in the TLS exchange.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local.<name>.auth
Authentication to perform locally.

- The default ‘pubkey’ uses public key authentication using a private key associated to a usable certificate.
- ‘psk’ uses pre−shared key authentication.
- The IKEv1 specific ‘xauth’ is used for XAuth or Hybrid authentication,
- while the IKEv2 specific ‘eap’ keyword defines EAP authentication.
- For ‘xauth’, a specific backend name may be appended, separated by a dash. The appropriate ‘xauth’ backend is selected to perform the XAuth exchange. For traditional XAuth, the ‘xauth’ method is usually defined in the second authentication round following an initial ‘pubkey’ (or ‘psk’) round.

Using ‘xauth’ in the first round performs Hybrid Mode client authentication.

- For ‘eap’, a specific EAP method name may be appended, separated by a dash. An EAP module implementing the appropriate method is selected to perform the EAP conversation.
- Since 5.4.0, if both peers support RFC 7427 (“Signature Authentication in IKEv2”) specific hash algorithms to be used during IKEv2 authentication may be configured. To do so use ‘ike:’ followed by a trust chain signature scheme constraint (see description of the **remote** section’s **auth** keyword). For example, with ‘ike:pubkey−sha384−sha256’ a public key signature scheme with either SHA−384 or SHA−256 would get used for authentication, in that order and depending on the hash algorithms supported by the peer. If no specific hash algorithms are configured, the default is to prefer an algorithm that matches or exceeds the strength of the signature key. If no constraints with ‘ike:’ prefix are configured any signature scheme constraint (without ‘ike:’ prefix) will also apply to IKEv2 authentication, unless this is disabled in *strongswan.conf*. To use RSASSA−PSS signatures use ‘rsa/pss’ instead of ‘pubkey’ or ‘rsa’ as in e.g. ‘ike:rsa/pss−sha256’. If ‘pubkey’ or ‘rsa’ constraints are configured RSASSA−PSS signatures will only be used if enabled in ‘strongswan.conf’(5).

StrongSwan default: ‘"pubkey"’

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local.<name>.cert
Section for a certificate candidate to use for authentication. Certificates in certs are transmitted as binary blobs, these sections offer more flexibility.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local.<name>.cert.<name>.file
Absolute path to the certificate to load. Passed as−is to the daemon, so it must be readable by it.

Configure either this or **handle**, but not both, in one section.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local.<name>.cert.<name>.handle
Hex−encoded CKA_ID or handle of the certificate on a token or TPM, respectively.

Configure either this or **file**, but not both, in one section.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local.<name>.cert.<name>.module
Optional PKCS#11 module name.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local.<name>.cert.<name>.slot
Optional slot number of the token that stores the certificate.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local.<name>.certs
List of certificate candidates to use for authentication. The certificates may use a relative path from the swanctl ‘x509’ directory or an absolute path.

The certificate used for authentication is selected based on the received certificate request payloads. If no appropriate CA can be located, the first certificate is used.

StrongSwan default: ‘[]’

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local.<name>.eap_id
Client EAP−Identity to use in EAP−Identity exchange and the EAP method.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local.<name>.id
IKE identity to use for authentication round. When using certificate authentication, the IKE identity must be contained in the certificate, either as subject or as subjectAltName.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local.<name>.pubkeys
List of raw public key candidates to use for authentication. The public keys may use a relative path from the swanctl 'pubkey' directory or an absolute path.

Even though multiple local public keys could be defined in principle, only the first public key in the list is used for authentication.

StrongSwan default: '[]'

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local.<name>.round
Optional numeric identifier by which authentication rounds are sorted. If not specified rounds are ordered by their position in the config file/vici message.

StrongSwan default: '0'

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local.<name>.xauth_id
Client XAuth username used in the XAuth exchange.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local_addrs
Local address(es) to use for IKE communication. Takes single IPv4/IPv6 addresses, DNS names, CIDR subnets or IP address ranges.

As initiator, the first non−range/non−subnet is used to initiate the connection from. As responder, the local destination address must match at least to one of the specified addresses, subnets or ranges.

If FQDNs are assigned they are resolved every time a configuration lookup is done. If DNS resolution times out, the lookup is delayed for that time.

StrongSwan default: '[]'

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.local_port
Local UDP port for IKE communication. By default the port of the socket backend is used, which is usually ‘500’. If port ‘500’ is used, automatic IKE port floating to port ‘4500’ is used to work around NAT issues.

Using a non−default local IKE port requires support from the socket backend in use (socket−dynamic).

StrongSwan default: ‘500’

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.mediated_by
The name of the connection to mediate this connection through. If given, the connection will be mediated through the named mediation connection. The mediation connection must have mediation enabled.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.mediation
Whether this connection is a mediation connection, that is, whether this connection is used to mediate other connections using the IKEv2 Mediation Extension. Mediation connections create no CHILD_SA.

StrongSwan default: ‘false’

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.mediation_peer
Identity under which the peer is registered at the mediation server, that is, the IKE identity the other end of this connection uses as its local identity on its connection to the mediation server. This is the identity we request the mediation server to mediate us with. Only relevant on connections that set mediated_by. If it is not given, the remote IKE identity of the first authentication round of this connection will be used.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.mobike

Enables MOBIKE on IKEv2 connections. MOBIKE is enabled by default on IKEv2 connections, and allows mobility of clients and multi−homing on servers by migrating active IPsec tunnels.

Usually keeping MOBIKE enabled is unproblematic, as it is not used if the peer does not indicate support for it. However, due to the design of MOBIKE, IKEv2 always floats to port 4500 starting from the second exchange. Some implementations don't like this behavior, hence it can be disabled.

StrongSwan default: 'true'

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.over_time

Hard IKE_SA lifetime if rekey/reauth does not complete, as time. To avoid having an IKE/ISAKMP kept alive if IKE reauthentication or rekeying fails perpetually, a maximum hard lifetime may be specified. If the IKE_SA fails to rekey or reauthenticate within the specified time, the IKE_SA gets closed.

In contrast to CHILD_SA rekeying, over_time is relative in time to the rekey_time and reauth_time values, as it applies to both.

The default is 10% of the longer of **rekey_time** and **reauth_time**.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.pools

List of named IP pools to allocate virtual IP addresses and other configuration attributes from. Each name references a pool by name from either the pools section or an external pool.

StrongSwan default: '[]'

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.ppk_id

String identifying the Postquantum Preshared Key (PPK) to be used.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.ppk_required

Whether a Postquantum Preshared Key (PPK) is required for this connection.

StrongSwan default: ‘false’

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.proposals

A proposal is a set of algorithms. For non−AEAD IKE proposals, this includes an encryption algorithm, an integrity algorithm, a pseudo−random function and a key exchange method. For AEAD proposals, instead of encryption and integrity algorithms, a combined mode algorithm is used.

With peers that support multiple IKEv2 key exchanges (RFC 9370), up to seven additional key exchanges may be negotiated. They can be configured by prefixing the algorithm keyword with **keX_** (where X is a number between 1 and 7).

For IKEv2, multiple algorithms of the same kind can be specified in a single proposal, from which one gets selected. For IKEv1, only one algorithm per kind is allowed per proposal, more algorithms get implicitly stripped. Use multiple proposals to offer different algorithm combinations with IKEv1.

Algorithm keywords get separated using dashes. The special value *default* forms a default proposal of supported algorithms considered safe, and is usually a good choice for interoperability.

StrongSwan default: ‘["default"]’

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.pull

If the default of yes is used, Mode Config works in pull mode, where the initiator actively requests a virtual IP. With no, push mode is used, where the responder pushes down a virtual IP to the initiating peer.

Push mode is currently supported for IKEv1, but not in IKEv2. It is used by a few implementations only, pull mode is recommended.

StrongSwan default: ‘true’

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.rand_time

Time range from which to choose a random value to subtract from rekey/reauth times. To avoid having both peers initiating the rekey/reauth procedure simultaneously, a random time gets subtracted from the rekey/reauth times.

The default is equal to the configured **over_time**.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.reauth_time

Time to schedule IKE reauthentication. IKE reauthentication recreates the IKE/ISAKMP SA from scratch and re−evaluates the credentials. In asymmetric configurations (with EAP or configuration payloads) it might not be possible to actively reauthenticate as responder. The IKEv2 reauthentication lifetime negotiation can instruct the client to perform reauthentication.

Reauthentication is disabled by default. Enabling it can usually result in short connection interruptions, even when using make−before−break reauthentication, which is now the default. However, they are significantly shorter than when using the legacy break−before−make approach.

StrongSwan default: ‘"0s"’

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.rekey_time

IKE rekeying refreshes key material using a Diffie−Hellman exchange, but does not re−check associated credentials. It is supported in IKEv2 only, IKEv1 performs a reauthentication procedure instead.

With the default value IKE rekeying is scheduled every 4 hours, minus the configured rand_time. If a reauth_time is configured, rekey_time defaults to zero, disabling rekeying; explicitly set both to enforce rekeying and reauthentication.

StrongSwan default: ‘"4h"’

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote

Section for a remote authentication round. A remote authentication round defines the constraints how the peers must authenticate to use this connection. Multiple rounds may be defined to use IKEv2 RFC 4739 Multiple Authentication or IKEv1 XAuth.

Each round is defined in a section having ‘remote’ as prefix, and an optional unique suffix. To define a single authentication round, the suffix may be omitted.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.auth

Authentication to expect from remote. See the **local** section's **auth** keyword description about the details of supported mechanisms.

Since 5.4.0, to require a trustchain public key strength for the remote side, specify the key type followed by the minimum strength in bits (for example 'ecdsa−384' or 'rsa−2048−ecdsa−256'). To limit the acceptable set of hashing algorithms for trustchain validation, append hash algorithms to pubkey or a key strength definition (for example 'pubkey−sha256−sha512', 'rsa−2048−sha256−sha384−sha512' or 'rsa−2048−sha256−ecdsa−256−sha256−sha384'). Unless disabled in *strongswan.conf*, or explicit IKEv2 signature constraints are configured (refer to the description of the **local** section's **auth** keyword for details), such key types and hash algorithms are also applied as constraints against IKEv2 signature authentication schemes used by the remote side. To require RSASSA−PSS signatures use 'rsa/pss' instead of 'pubkey' or 'rsa' as in e.g. 'rsa/pss−sha256'. If 'pubkey' or 'rsa' constraints are configured RSASSA−PSS signatures will only be accepted if enabled in 'strongswan.conf'(5).

To specify trust chain constraints for EAP−(T)TLS, append a colon to the EAP method, followed by the key type/size and hash algorithm as discussed above (e.g. 'eap−tls:ecdsa−384−sha384').

StrongSwan default: '"pubkey"'

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.ca_id

Identity in CA certificate to accept for authentication. The specified identity must be contained in one (intermediate) CA of the remote peer trustchain, either as subject or as subjectAltName. This has the same effect as specifying 'cacerts' to force clients under a CA to specific connections; it does not require the CA certificate to be available locally, and can be received from the peer during the IKE exchange.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.cacert

Section for a CA certificate to accept for authentication. Certificates in cacerts are transmitted as binary blobs, these sections offer more flexibility.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.cacert.<name>.file

Absolute path to the certificate to load. Passed as−is to the daemon, so it must be readable by it.

Configure either this or **handle**, but not both, in one section.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.remote.<name>.cacert.<name>.handle
Hex-encoded CKA_ID or handle of the certificate on a token or TPM, respectively.

Configure either this or **file**, but not both, in one section.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.remote.<name>.cacert.<name>.module
Optional PKCS#11 module name.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.remote.<name>.cacert.<name>.slot
Optional slot number of the token that stores the certificate.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.remote.<name>.cacerts
List of CA certificates to accept for authentication. The certificates may use a relative path from the swanctl 'x509ca' directory or an absolute path.

StrongSwan default: '[]'

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.remote.<name>.cert
Section for a certificate candidate to use for authentication. Certificates in certs are transmitted as binary blobs, these sections offer more flexibility.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.cert.<name>.file
Absolute path to the certificate to load. Passed as−is to the daemon, so it must be readable by it.

Configure either this or **handle**, but not both, in one section.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.cert.<name>.handle
Hex−encoded CKA_ID or handle of the certificate on a token or TPM, respectively.

Configure either this or **file**, but not both, in one section.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.cert.<name>.module
Optional PKCS#11 module name.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.cert.<name>.slot
Optional slot number of the token that stores the certificate.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.cert_policy
List of certificate policy OIDs the peer’s certificate must have. OIDs are specified using the numerical dotted representation.

StrongSwan default: ‘[]’

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.certs
List of certificates to accept for authentication. The certificates may use a relative path from the swanctl 'x509' directory or an absolute path.

StrongSwan default: '[]'

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.eap_id
Identity to use as peer identity during EAP authentication. If set to '%any' the EAP−Identity method will be used to ask the client for an EAP identity.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.groups
Authorization group memberships to require. The peer must prove membership to at least one of the specified groups. Group membership can be certified by different means, for example by appropriate Attribute Certificates or by an AAA backend involved in the authentication.

StrongSwan default: '[]'

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.id
IKE identity to expect for authentication round. When using certificate authentication, the IKE identity must be contained in the certificate, either as subject or as subjectAltName.

StrongSwan default: '"%any"'

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.pubkeys

List of raw public keys to accept for authentication. The public keys may use a relative path from the swanctl ‘pubkey’ directory or an absolute path.

StrongSwan default: ‘[]’

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.revocation

Certificate revocation policy for CRL or OCSP revocation.

- A ‘strict’ revocation policy fails if no revocation information is available, i.e. the certificate is not known to be unrevoked.
- ‘ifuri’ fails only if a CRL/OCSP URI is available, but certificate revocation checking fails, i.e. there should be revocation information available, but it could not be obtained.
- The default revocation policy ‘relaxed’ fails only if a certificate is revoked, i.e. it is explicitly known that it is bad.

StrongSwan default: ‘"relaxed"’

Type: null or one of “strict”, “ifuri”, “relaxed”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote.<name>.round

Optional numeric identifier by which authentication rounds are sorted. If not specified rounds are ordered by their position in the config file/vici message.

StrongSwan default: ‘0’

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.remote_addrs

Remote address(es) to use for IKE communication. Takes single IPv4/IPv6 addresses, DNS names, CIDR subnets or IP address ranges.

As initiator, the first non−range/non−subnet is used to initiate the connection to. As responder, the initiator source address must match at least to one of the specified addresses, subnets or ranges.

If FQDNs are assigned they are resolved every time a configuration lookup is done. If DNS resolution times out, the lookup is delayed for that time. To initiate a connection, at least one specific address or DNS name must be specified.

StrongSwan default: ‘[]’

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.remote_port
Remote UDP port for IKE communication. If the default of port '500' is used, automatic IKE port floating to port '4500' is used to work around NAT issues.

StrongSwan default: '500'

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.send_cert
Send certificate payloads when using certificate authentication.

- With the default of 'ifasked' the daemon sends certificate payloads only if certificate requests have been received.
- 'never' disables sending of certificate payloads altogether,
- 'always' causes certificate payloads to be sent unconditionally whenever certificate authentication is used.

StrongSwan default: '"ifasked"'

Type: null or one of "always", "never", "ifasked"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.send_certreq
Send certificate request payloads to offer trusted root CA certificates to the peer. Certificate requests help the peer to choose an appropriate certificate/private key for authentication and are enabled by default. Disabling certificate requests can be useful if too many trusted root CA certificates are installed, as each certificate request increases the size of the initial IKE packets.

StrongSwan default: 'true'

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.connections.<name>.unique
Connection uniqueness policy to enforce. To avoid multiple connections from the same user, a uniqueness policy can be enforced.

- The value 'never' does never enforce such a policy, even if a peer included INITIAL_CONTACT notification messages,
- whereas 'no' replaces existing connections for the same identity if a new one has the INITIAL_CONTACT notify.
- 'keep' rejects new connection attempts if the same user already has an active connection,

- ‘replace’ deletes any existing connection if a new one for the same user gets established.

To compare connections for uniqueness, the remote IKE identity is used. If EAP or XAuth authentication is involved, the EAP−Identity or XAuth username is used to enforce the uniqueness policy instead.

On initiators this setting specifies whether an INITIAL_CONTACT notify is sent during IKE_AUTH if no existing connection is found with the remote peer (determined by the identities of the first authentication round). Unless set to ‘never’ the client will send a notify.

StrongSwan default: ‘"no"’

Type: null or one of “no”, “never”, “keep”, “replace”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.version
IKE major version to use for connection.

- 1 uses IKEv1 aka ISAKMP,
- 2 uses IKEv2.
- A connection using the default of 0 accepts both IKEv1 and IKEv2 as responder, and initiates the connection actively with IKEv2.

StrongSwan default: ‘0’

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.connections.<name>.vips
List of virtual IPs to request in IKEv2 configuration payloads or IKEv1 Mode Config. The wildcard addresses ‘0.0.0.0’ and ‘::’ request an arbitrary address, specific addresses may be defined. The responder may return a different address, though, or none at all.

StrongSwan default: ‘[]’

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.pools
Section defining named pools. Named pools may be referenced by connections with the pools option to assign virtual IPs and other configuration attributes. Each pool must have a unique name (denoted <name> below).

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.pools.<name>.addrs
Addresses allocated in pool.

Subnet or range defining addresses allocated in pool. Accepts a single CIDR subnet defining the pool to allocate addresses from or an address range (<from>−<to>). If the address in CIDR notation is not the network ID of the subnet (e.g. 10.1.0.5/24 instead of 10.1.0.0/24), addresses below it won't be allocated to clients (they could e.g. be assigned manually to internal hosts like the VPN server itself). Pools must be unique and non−overlapping

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.pools.<name>.dhcp
Address or CIDR subnets

StrongSwan default: '[]'

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.pools.<name>.dns
Address or CIDR subnets

StrongSwan default: '[]'

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.pools.<name>.nbns
Address or CIDR subnets

StrongSwan default: '[]'

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.pools.<name>.netmask
Address or CIDR subnets

StrongSwan default: ‘[]’

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.pools.<name>.p_cscf
Address or CIDR subnets

StrongSwan default: ‘[]’

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.pools.<name>.server
Address or CIDR subnets

StrongSwan default: ‘[]’

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.pools.<name>.split_exclude
Address or CIDR subnets

StrongSwan default: ‘[]’

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.pools.<name>.split_include
Address or CIDR subnets

StrongSwan default: ‘[]’

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.pools.<name>.subnet
Address or CIDR subnets

StrongSwan default: '[]'

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.secrets.eap
EAP secret section for a specific secret. Each EAP secret is defined in a unique section having the 'eap' prefix. EAP secrets are used for XAuth authentication as well.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.secrets.eap.<name>.id
Identity the EAP/XAuth secret belongs to. Multiple unique identities may be specified, each having an 'id' prefix, if a secret is shared between multiple users.

Type: attribute set of (null or string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.secrets.eap.<name>.secret
Value of the EAP/XAuth secret. It may either be an ASCII string, a hex encoded string if it has a 0x prefix or a Base64 encoded string if it has a 0s prefix in its value.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.secrets.ecdsa
Private key decryption passphrase for a key in the 'ecdsa' folder.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.ecdsa.<name>.file
File name in the ‘ecdsa’ folder for which this passphrase should be used.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.ecdsa.<name>.secret
Value of decryption passphrase for ECDSA key.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.ike
IKE preshared secret section for a specific secret. Each IKE PSK is defined in a unique section having the ‘ike’ prefix.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.ike.<name>.id
IKE identity the IKE preshared secret belongs to. Multiple unique identities may be specified, each having an ‘id’ prefix, if a secret is shared between multiple peers.

Type: attribute set of (null or string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.ike.<name>.secret
Value of the IKE preshared secret. It may either be an ASCII string, a hex encoded string if it has a 0x prefix or a Base64 encoded string if it has a 0s prefix in its value.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.ntlm

NTLM secret section for a specific secret. Each NTLM secret is defined in a unique section having the ‘ntlm’ prefix. NTLM secrets may only be used for EAP−MSCHAPv2 authentication.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.ntlm.<name>.id

Identity the NTLM secret belongs to. Multiple unique identities may be specified, each having an id prefix, if a secret is shared between multiple users.

Type: attribute set of (null or string)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.ntlm.<name>.secret

Value of the NTLM secret, which is the NT Hash of the actual secret, that is, MD4(UTF−16LE(secret)). The resulting 16−byte value may either be given as a hex encoded string with a 0x prefix or as a Base64 encoded string with a 0s prefix.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.pkcs12

PKCS#12 decryption passphrase for a container in the ‘pkcs12’ folder.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.pkcs12.<name>.file

File name in the ‘pkcs12’ folder for which this passphrase should be used.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.pkcs12.<name>.secret
Value of decryption passphrase for PKCS#12 container.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.pkcs8
Private key decryption passphrase for a key in the ‘pkcs8’ folder.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.pkcs8.<name>.file
File name in the ‘pkcs8’ folder for which this passphrase should be used.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.pkcs8.<name>.secret
Value of decryption passphrase for PKCS#8 key.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.ppk
Postquantum Preshared Key (PPK) section for a specific secret. Each PPK is defined in a unique section having the ‘ppk’ prefix.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.ppk.<name>.id
PPK identity the PPK belongs to. Multiple unique identities may be specified, each having an ‘id’ prefix, if a secret is shared between multiple peers.

Type: attribute set of (null or string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.secrets.ppk.<name>.secret
Value of the PPK. It may either be an ASCII string, a hex encoded string if it has a '0x' prefix or a Base64 encoded string if it has a '0s' prefix in its value. Should have at least 256 bits of entropy for 128-bit security.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.secrets.private
Private key decryption passphrase for a key in the 'private' folder.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.secrets.private.<name>.file
File name in the private folder for which this passphrase should be used.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.secrets.private.<name>.secret
Value of decryption passphrase for private key.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.secrets.rsa
Private key decryption passphrase for a key in the 'rsa' folder.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.rsa.<name>.file
File name in the ‘rsa’ folder for which this passphrase should be used.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.rsa.<name>.secret
Value of decryption passphrase for RSA key.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.token
Definition for a private key that’s stored on a token/smartcard/TPM.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.token.<name>.handle
Hex−encoded CKA_ID or handle of the private key on the token or TPM, respectively.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.token.<name>.module
Optional PKCS#11 module name to access the token.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan−swanctl/module.nix>

services.strongswan−swanctl.swanctl.secrets.token.<name>.pin
Optional PIN required to access the key on the token. If none is provided the user is prompted during an interactive ‘−−load−creds’ call.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.secrets.token.<name>.slot
Optional slot number to access the token.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.secrets.xauth
EAP secret section for a specific secret. Each EAP secret is defined in a unique section having the 'eap' prefix. EAP secrets are used for XAuth authentication as well.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.secrets.xauth.<name>.id
Identity the EAP/XAuth secret belongs to. Multiple unique identities may be specified, each having an 'id' prefix, if a secret is shared between multiple users.

Type: attribute set of (null or string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.strongswan-swanctl.swanctl.secrets.xauth.<name>.secret
Value of the EAP/XAuth secret. It may either be an ASCII string, a hex encoded string if it has a 0x prefix or a Base64 encoded string if it has a 0s prefix in its value.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/strongswan-swanctl/module.nix>

services.stubby.enable
Whether to enable Stubby DNS resolver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/stubby.nix>

services.stubby.logLevel
Log verbosity (syslog keyword or level).

Type: null or one of “alert”, “crit”, “debug”, “emerg”, “error”, “info”, “notice”, “warning”, 1, 2, 7, 0, 3, 6, 5, 4

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/stubby.nix>

services.stubby.settings
Content of the Stubby configuration file. All Stubby settings may be set or queried here. The default settings are available at ‘pkgs.stubby.passthru.settingsExample’. See **https://dnsprivacy.org/wiki/display/DP/Configuring+Stubby**. A list of the public recursive servers can be found here: **https://dnsprivacy.org/wiki/display/DP/DNS+Privacy+Test+Servers**.

Type: attribute set of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
pkgs.stubby.passthru.settingsExample // {
  upstream_recursive_servers = [{
    address_data = "158.64.1.29";
    tls_auth_name = "kaitain.restena.lu";
    tls_pubkey_pinset = [{
      digest = "sha256";
      value = "7ftvIkA+UeN/ktVkovd/7rPZ6mbkhVI7/8HnFJIiLa4=";
    }];
  }];
};
```

Declared by:
<nixpkgs/nixos/modules/services/networking/stubby.nix>

services.stunnel.enable
Whether to enable the stunnel TLS tunneling service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/stunnel.nix>

services.stunnel.enableInsecureSSLv3
Enable support for the insecure SSLv3 protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/stunnel.nix>

services.stunnel.clients
Define the client configurations.

By default, verifyChain and OCSPaia are enabled and CAFile is set to ‘security.pki.caBundle’.

See “SERVICE−LEVEL OPTIONS” in **stunnel**(8).

Type: attribute set of attribute set of (null or boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  foobar = {
    accept = "0.0.0.0:8080";
    connect = "nixos.org:443";
    verifyChain = false;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/stunnel.nix>

services.stunnel.fipsMode
Enable FIPS 140−2 mode required for compliance.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/stunnel.nix>

services.stunnel.group
The group under which stunnel runs.

Type: null or string

Default:

```
"nogroup"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/stunnel.nix>

services.stunnel.logLevel
Verbosity of stunnel output.

Type: one of “emerg”, “alert”, “crit”, “err”, “warning”, “notice”, “info”, “debug”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/stunnel.nix>

services.stunnel.servers

Define the server configurations.

See “SERVICE−LEVEL OPTIONS” in **stunnel**(8).

Type: attribute set of attribute set of (null or boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  fancyWebserver = {
    accept = 443;
    cert = "/path/to/pem/file";
    connect = 8080;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/stunnel.nix>

services.stunnel.user

The user under which stunnel runs.

Type: null or string

Default:

```
"nobody"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/stunnel.nix>

services.subsonic.enable

Whether to enable Subsonic daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/subsonic.nix>

services.subsonic.contextPath

The context path, i.e., the last part of the Subsonic URL. Typically ‘/’ or ‘/subsonic’. Default ‘/’

Type: absolute path

Default:

```
"/"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/subsonic.nix>

services.subsonic.defaultMusicFolder

Configure Subsonic to use this folder for music. This option only has effect the first time Subsonic is started.

Type: absolute path

Default:

```
"/var/music"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/subsonic.nix>

services.subsonic.defaultPlaylistFolder

Configure Subsonic to use this folder for playlists. This option only has effect the first time Subsonic is started.

Type: absolute path

Default:

```
"/var/playlists"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/subsonic.nix>

services.subsonic.defaultPodcastFolder

Configure Subsonic to use this folder for Podcasts. This option only has effect the first time Subsonic is started.

Type: absolute path

Default:

```
"/var/music/Podcast"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/subsonic.nix>

services.subsonic.home

The directory where Subsonic will create files. Make sure it is writable.

Type: absolute path

Default:

```
"/var/lib/subsonic"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/subsonic.nix>

services.subsonic.httpsPort

The port on which Subsonic will listen for incoming HTTPS traffic. Set to 0 to disable.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

Declared by:

<nixpkgs/nixos/modules/services/misc/subsonic.nix>

services.subsonic.listenAddress

The host name or IP address on which to bind Subsonic. Only relevant if you have multiple network interfaces and want to make Subsonic available on only one of them. The default value will bind Subsonic to all available network interfaces.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/subsonic.nix>

services.subsonic.maxMemory
The memory limit (max Java heap size) in megabytes. Default: 100

Type: signed integer

Default:

```
100
```

Declared by:
<nixpkgs/nixos/modules/services/misc/subsonic.nix>

services.subsonic.port
The port on which Subsonic will listen for incoming HTTP traffic. Set to 0 to disable.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4040
```

Declared by:
<nixpkgs/nixos/modules/services/misc/subsonic.nix>

services.subsonic.transcoders
List of paths to transcoder executables that should be accessible from Subsonic. Symlinks will be created to each executable inside ${config.services.subsonic.home}/transcoders.

Type: list of absolute path

Default:

```
[ "${pkgs.ffmpeg.bin}/bin/ffmpeg" ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/subsonic.nix>

services.sundtek.enable
Whether to enable Sundtek driver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/sundtek.nix>

services.sunshine.enable
Whether to enable Sunshine, a self−hosted game stream host for Moonlight.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sunshine.nix>

services.sunshine.package
The sunshine package to use.

Type: package

Default:

```
pkgs.sunshine
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sunshine.nix>

services.sunshine.applications
Configuration for applications to be exposed to Moonlight. If this is set, no configuration is possible from the web UI, and must be by the ‘settings’ option.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  env = {
    PATH = "$(PATH):$(HOME)/.local/bin";
  };
  apps = [
    {
      name = "1440p Desktop";
      prep-cmd = [
        {
          do = "${pkgs.kdePackages.libkscreen}/bin/kscreen-doctor  \
output.DP-4.mode.2560x1440@144";
          undo = "${pkgs.kdePackages.libkscreen}/bin/kscreen-docto \
r output.DP-4.mode.3440x1440@144";
        }
      ];
      exclude-global-prep-cmd = "false";
      auto-detach = "true";
    }
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sunshine.nix>

services.sunshine.applications.apps
Applications to be exposed to Moonlight.

Type: list of (attribute set)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sunshine.nix>

services.sunshine.applications.env
Environment variables to be set for the applications.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sunshine.nix>

services.sunshine.autoStart
Whether sunshine should be started automatically.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sunshine.nix>

services.sunshine.capSysAdmin
Whether to give the Sunshine binary CAP_SYS_ADMIN, required for DRM/KMS screen capture.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sunshine.nix>

services.sunshine.openFirewall
Whether to automatically open ports in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sunshine.nix>

services.sunshine.settings
Settings to be rendered into the configuration file. If this is set, no configuration is possible from the web UI.

See **https://docs.lizardbyte.dev/projects/sunshine/latest/md_docs_2configuration.html** for syntax.

Type: open submodule of attribute set of (atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  sunshine_name = "nixos";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sunshine.nix>

services.sunshine.settings.port
Base port – others used are offset from this one, see **https://docs.lizardbyte.dev/projects/sunshine/latest/md_docs_2configuration.html#port** for details.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
47989
```

Declared by:
<nixpkgs/nixos/modules/services/networking/sunshine.nix>

services.supergfxd.enable
Whether to enable the supergfxd service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/supergfxd.nix>

services.supergfxd.settings
The content of /etc/supergfxd.conf. See **https://gitlab.com/asus-linux/supergfxctl/#config-options-etcsupergfxdconf**.

Type: null or JSON value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/supergfxd.nix>

services.supybot.enable
Enable Supybot, an IRC bot (also known as Limnoria).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/supybot.nix>

services.supybot.configFile
Path to initial supybot config file. This can be generated by running supybot-wizard.

Note: all paths should include the full path to the stateDir directory (backup conf data logs logs/plugins plugins tmp web).

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/networking/supybot.nix>

services.supybot.extraPackages

Extra Python packages available to supybot plugins. The value must be a function which receives the attrset defined in *python3Packages* as the sole argument.

Type: function that evaluates to a(n) list of package

Default:

```
p: []
```

Example:

```
p: [ p.lxml p.requests ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/supybot.nix>

services.supybot.plugins

Attribute set of additional plugins that will be symlinked to the *plugin* subdirectory.

Please note that you still need to add the plugins to the config file (or with '!load') using their attribute name.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
let
  plugins = pkgs.fetchzip {
    url = "https://github.com/ProgVal/Supybot-plugins/archive/57c2 \
450c.zip";
    sha256 = "077snf84ibnva3sbpzdfpfma6hcdw7dflwnhg6pw7mgnf0nd84qd" \
;
  };
in
{
  Wikipedia = "${plugins}/Wikipedia";
  Decide = ./supy-decide;
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/supybot.nix>

services.supybot.stateDir

The root directory, logs and plugins are stored here

Type: absolute path

Default:

```
/var/lib/supybot
```

Declared by:

<nixpkgs/nixos/modules/services/networking/supybot.nix>

services.suricata.enable

Whether to enable Suricata.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.enabledSources

List of sources that should be enabled. Currently sources which require a secret−code are not supported.

Type: list of string

Default:

```
[
  "abuse.ch/sslbl-blacklist"
  "abuse.ch/sslbl-c2"
  "abuse.ch/sslbl-ja3"
  "et/open"
  "etnetera/aggressive"
  "stamus/lateral"
  "oisf/trafficid"
  "tgreen/hunting"
  "pawpatrules"
  "ptrules/open"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.package

The suricata package to use.

Type: package

Default:

```
pkgs.suricata
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.disabledRules

List of rules that should be disabled.

Type: list of string

Default:

```
[
  "2270000"
  "2270001"
  "2270002"
  "2270003"
  "2270004"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings

Suricata settings

Type: open submodule of (YAML 1.1 value)

Example:

```
vars.address-groups.HOME_NET = "192.168.178.0/24";
outputs = [
  {
    fast = {
      enabled = true;
      filename = "fast.log";
      append = "yes";
    };
  }
  {
    eve-log = {
      enabled = true;
      filetype = "regular";
      filename = "eve.json";
      community-id = true;
      types = [
        {
          alert.tagged-packets = "yes";
        }
      ];
    };
  }
];
af-packet = [
  {
    interface = "eth0";
    cluster-id = "99";
    cluster-type = "cluster_flow";
    defrag = "yes";
  }
  {
    interface = "default";
  }
];
af-xdp = [
  {
    interface = "eth1";
  }
];
dpdk.interfaces = [
  {
    interface = "eth2";
  }
];
pcap = [
  {
    interface = "eth3";
  }
```

```
];
app-layer.protocols = {
  telnet.enabled = "yes";
  dnp3.enabled = "yes";
  modbus.enabled = "yes";
};
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.af-packet
Linux high speed capture support.

Type: null or (list of (open submodule of (YAML 1.1 value)))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.af-packet.*.interface
af-packet capture interface, see **upstream docs reagrding tuning**.

Type: string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.af-xdp
Linux high speed af-xdp capture support, see **docs/capture-hardware/af-xdp**.

Type: null or (list of (open submodule of (YAML 1.1 value)))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.af-xdp.*.interface
af-xdp capture interface, see **upstream docs**.

Type: string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.app-layer
app-layer configuration, see **upstream docs**.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.app−layer.error−policy
The error−policy setting applies to all app−layer parsers. Values can be “drop−flow”, “pass−flow”, “bypass”, “drop−packet”, “pass−packet”, “reject” or “ignore” (the default).

Type: one of “drop−flow”, “pass−flow”, “bypass”, “drop−packet”, “pass−packet”, “reject”, “ignore”

Default:

```
"ignore"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.app−layer.protocols
app−layer protocols, see **upstream docs**.

Type: null or (attribute set of (open submodule of (YAML 1.1 value)))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.app−layer.protocols.<name>.enabled
The option “enabled” takes 3 values − “yes”, “no”, “detection−only”. “yes” enables both detection and the parser, “no” disables both, and “detection−only” enables protocol detection only (parser disabled).

Type: one of “yes”, “no”, “detection−only”

Default:

```
"no"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.classification−file
Suricata classification configuration file.

Type: string

Default:

```
"/var/lib/suricata/rules/classification.config"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.default−log−dir
The default logging directory. Any log or output file will be placed here if it’s not specified with a full path name. This can be overridden with the −l command line parameter.

Type: string

Default:

```
"/var/log/suricata"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.default−rule−path

Path in which suricata−update managed rules are stored by default.

Type: absolute path

Default:

```
"/var/lib/suricata/rules"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.dpdk

Data Plane Development Kit is a framework for fast packet processing in data plane applications running on a wide variety of CPU architectures. DPDK's Environment Abstraction Layer (EAL) provides a generic interface to low−level resources. It is a unique way how DPDK libraries access NICs. EAL creates an API for an application to access NIC resources from the userspace level. In DPDK, packets are not retrieved via interrupt handling. Instead, the application polls the NIC for newly received packets.

DPDK allows the user space application to directly access memory where the NIC stores the packets. As a result, neither DPDK nor the application copies the packets for the inspection. The application directly processes packets via passed packet descriptors. See **docs/capture−hardware/dpdk** and **docs/configuration/suricata−yaml.html#data−plane−development−kit−dpdk**.

Type: null or (submodule)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.dpdk.eal−params.proc−type

dpdk eal−params.proc−type, see **data plane development kit docs**.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.dpdk.interfaces

See upstream docs: **docs/capture−hardware/dpdk** and **docs/configuration/suricata−yaml.html#data−plane−development−kit−dpdk**.

Type: null or (list of (open submodule of (YAML 1.1 value)))

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.dpdk.interfaces.*.interface

See upstream docs: **docs/capture−hardware/dpdk** and **docs/configuration/suricata−yaml.html#data−plane−development−kit−dpdk**.

Type: string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.exception−policy
Define a common behavior for all exception policies. In IPS mode, the default is drop−flow. For cases when that's not possible, the engine will fall to drop−packet. To fallback to old behavior (setting each of them individually, or ignoring all), set this to ignore. All values available for exception policies can be used, and there is one extra option: auto − which means drop−flow or drop−packet (as explained above) in IPS mode, and ignore in IDS mode. Exception policy values are: drop−packet, drop−flow, reject, bypass, pass−packet, pass−flow, ignore (disable).

Type: one of "auto", "drop−packet", "drop−flow", "reject", "bypass", "pass−packet", "pass−flow", "ignore"

Default:

```
"auto"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.host−mode
If the Suricata box is a router for the sniffed networks, set it to 'router'. If it is a pure sniffing setup, set it to 'sniffer−only'. If set to auto, the variable is internally switched to 'router' in IPS mode and 'sniffer−only' in IDS mode. This feature is currently only used by the reject* keywords.

Type: one of "router", "sniffer−only", "auto"

Default:

```
"auto"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.includes
Files to include in the suricata configuration. See **docs/configuration/suricata−yaml** for available options.

Type: null or (list of absolute path)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.logging.default−log−format
The default output format. Optional parameter, should default to something reasonable if not provided. Can be overridden in an output section. You can leave this out to get the default.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.logging.default−log−level

The default log level: can be overridden in an output section. Note that debug level logging will only be emitted if Suricata was compiled with the −−enable−debug configure option.

Type: one of “error”, “warning”, “notice”, “info”, “perf”, “config”, “debug”

Default:

```
"notice"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.logging.default−output−filter

A regex to filter output. Can be overridden in an output section. Defaults to empty (no filter).

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.logging.outputs.console.enable

Whether to enable logging to console.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.logging.outputs.file.enable

Whether to enable logging to file.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.logging.outputs.file.filename

Filename of the logfile.

Type: string

Default:

```
"suricata.log"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.logging.outputs.file.format
Logformat for logs written to the logfile.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.logging.outputs.file.level
Loglevel for logs written to the logfile.

Type: one of “error”, “warning”, “notice”, “info”, “perf”, “config”, “debug”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.logging.outputs.file.type
Type of logfile.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.logging.outputs.syslog.enable
Whether to enable logging to syslog.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.logging.outputs.syslog.facility
Facility to log to.

Type: string

Default:

```
"local5"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.logging.outputs.syslog.format

Logformat for logs send to syslog.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.logging.outputs.syslog.type

Type of logs send to syslog.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.logging.stacktrace−on−signal

Requires libunwind to be available when Suricata is configured and built. If a signal unexpectedly terminates Suricata, displays a brief diagnostic message with the offending stacktrace if enabled.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.outputs

Configure the type of alert (and other) logging you would like.

Valid values for <NAME> are e. g. ‘fast’, ‘eve−log’, ‘syslog’, ‘file−store’, …

- ‘fast’: a line based alerts log similar to Snort’s fast.log
- ‘eve−log’: Extensible Event Format (nicknamed EVE) event log in JSON format

For more details regarding the configuration, checkout the shipped suricata.yaml

```
nix−shell −p suricata yq coreutils−full −−command 'yq < $(dirn \
ame $(which suricata))/../etc/suricata/suricata.yaml'
```

and the **suricata documentation**.

Type: null or (list of attribute set of (open submodule of (YAML 1.1 value)))

Default:

```
null
```

Example:

```
[
  {
    fast = {
      enabled = "yes";
      filename = "fast.log";
      append = "yes";
    };
  }
```

```
{
  eve-log = {
    enabled = "yes";
    filetype = "regular";
    filename = "eve.json";
    community-id = true;
    types = [
      {
        alert.tagged-packets = "yes";
      }
    ];
  };
}
];
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.outputs.*.<name>.enabled
Whether to enable <NAME>.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.pcap
Cross platform libpcap capture support.

Type: null or (list of (open submodule of (YAML 1.1 value)))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.pcap.*.interface
pcap capture interface, see **upstream docs**.

Type: string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.pcap-file.checksum-checks
Possible values are:

- yes: checksum validation is forced
- no: checksum validation is disabled
- auto: Suricata uses a statistical approach to detect when checksum off-loading is used. (default) Warning: ‘checksum-validation’ must be set to yes to have checksum tested.

Type: one of “yes”, “no”, “auto”

Default:

```
"auto"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.plugins
Plugins – Experimental – specify the filename for each plugin shared object.

Type: null or (list of absolute path)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.reference−config−file
Suricata reference configuration file.

Type: string

Default:

```
"\${config.services.suricata.package}/etc/suricata/reference.confi \
g"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.rule−files
Files to load suricata−update managed rules, relative to ‘default−rule−path’.

Type: list of string

Default:

```
[
  "suricata.rules"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.run−as.group
Run Suricata with a specific group−id.

Type: string

Default:

```
"suricata"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.run−as.user
Run Suricata with a specific user−id.

Type: string

Default:

```
"suricata"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.stats
Engine statistics such as packet counters, memory use counters and others can be logged in several ways. A separate text log ‘stats.log’ and an EVE record type ‘stats’ are enabled by default.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.stats.enable
Whether to enable suricata global stats.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.stats.decoder−events
Add decode events to stats

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.stats.decoder−events−prefix
Decoder event prefix in stats. Has been ‘decoder’ before, but that leads to missing events in the eve.stats records.

Type: string

Default:

```
"decoder.event"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.stats.interval
The interval field (in seconds) controls the interval at which stats are updated in the log.

Type: string

Default:

```
"8"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.stats.stream−events
Add stream events as stats.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.threshold−file
Suricata threshold configuration file.

Type: string

Default:

```
"\${config.services.suricata.package}/etc/suricata/threshold.confi \
g"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.unix−command
Unix command socket that can be used to pass commands to Suricata. An external tool can then connect to get information from Suricata or trigger some modifications of the engine. Set enabled to yes to activate the feature. In auto mode, the feature will only be activated in live capture mode. You can use the filename variable to set the file name of the socket.

Type: null or (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.unix−command.enabled
Enable unix−command socket.

Type: boolean or value “auto” (singular enum)

Default:

```
"auto"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.unix−command.filename
Filename for unix−command socket.

Type: absolute path

Default:

```
"/run/suricata/suricata−command.socket"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars

Variables to be used within the suricata rules.

Type: null or (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups

The address group variables for suricata, if not defined the default value of suricata (see example) will be used. Your settings will extend the predefined values in example.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  AIM_SERVERS = "$EXTERNAL_NET";
  DC_SERVERS = "$HOME_NET";
  DNP3_CLIENT = "$HOME_NET";
  DNP3_SERVER = "$HOME_NET";
  DNS_SERVERS = "$HOME_NET";
  ENIP_CLIENT = "$HOME_NET";
  ENIP_SERVER = "$HOME_NET";
  EXTERNAL_NET = "!$HOME_NET";
  HOME_NET = "[192.168.0.0/16,10.0.0.0/8,172.16.0.0/12]";
  HTTP_SERVERS = "$HOME_NET";
  MODBUS_CLIENT = "$HOME_NET";
  MODBUS_SERVER = "$HOME_NET";
  SMTP_SERVERS = "$HOME_NET";
  SQL_SERVERS = "$HOME_NET";
  TELNET_SERVERS = "$HOME_NET";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups.AIM_SERVERS

AIM_SERVERS variable.

Type: unspecified value

Default:

```
"$EXTERNAL_NET"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups.DC_SERVERS

DC_SERVERS variable.

Type: unspecified value

Default:

```
"$HOME_NET"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups.DNP3_CLIENT
DNP3_CLIENT variable.

Type: unspecified value

Default:

```
"$HOME_NET"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups.DNP3_SERVER
DNP3_SERVER variable.

Type: unspecified value

Default:

```
"$HOME_NET"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups.DNS_SERVERS
DNS_SERVERS variable.

Type: unspecified value

Default:

```
"$HOME_NET"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups.ENIP_CLIENT
ENIP_CLIENT variable.

Type: unspecified value

Default:

```
"$HOME_NET"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups.ENIP_SERVER
ENIP_SERVER variable.

Type: unspecified value

Default:

```
"$HOME_NET"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups.EXTERNAL_NET
EXTERNAL_NET variable.

Type: unspecified value

Default:

```
"!$HOME_NET"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups.HOME_NET
HOME_NET variable.

Type: unspecified value

Default:

```
"[192.168.0.0/16,10.0.0.0/8,172.16.0.0/12]"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups.HTTP_SERVERS
HTTP_SERVERS variable.

Type: unspecified value

Default:

```
"$HOME_NET"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups.MODBUS_CLIENT
MODBUS_CLIENT variable

Type: unspecified value

Default:

```
"$HOME_NET"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups.MODBUS_SERVER
MODBUS_SERVER variable.

Type: unspecified value

Default:

```
"$HOME_NET"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups.SMTP_SERVERS
SMTP_SERVERS variable.

Type: unspecified value

Default:

```
"$HOME_NET"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups.SQL_SERVERS

SQL_SERVERS variable.

Type: unspecified value

Default:

```
"$HOME_NET"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.address−groups.TELNET_SERVERS

TELNET_SERVERS variable.

Type: unspecified value

Default:

```
"$HOME_NET"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.suricata.settings.vars.port−groups

The port group variables for suricata.

Type: null or (attribute set of string)

Default:

```
{
  DNP3_PORTS = "20000";
  FILE_DATA_PORTS = "[$HTTP_PORTS,110,143]";
  FTP_PORTS = "21";
  GENEVE_PORTS = "6081";
  HTTP_PORTS = "80";
  MODBUS_PORTS = "502";
  ORACLE_PORTS = "1521";
  SHELLCODE_PORTS = "!80";
  SSH_PORTS = "22";
  TEREDO_PORTS = "3544";
  VXLAN_PORTS = "4789";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/suricata/default.nix>

services.surrealdb.enable

Whether to enable SurrealDB, a scalable, distributed, collaborative, document−graph database, for the realtime web.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/databases/surrealdb.nix>

services.surrealdb.package

The surrealdb package to use.

Type: package

Default:

```
pkgs.surrealdb
```

Declared by:

<nixpkgs/nixos/modules/services/databases/surrealdb.nix>

services.surrealdb.dbPath

The path that surrealdb will write data to. Use null for in−memory. Can be one of “memory”, “rocksdb://:path”, “surrealkv://:path”, “tikv://:addr”, “fdb://:addr”.

Type: string

Default:

```
"rocksdb:///var/lib/surrealdb/"
```

Example:

```
"memory"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/surrealdb.nix>

services.surrealdb.extraFlags

Specify a list of additional command line flags.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--allow-all"
  "--user"
  "root"
  "--pass"
  "root"
]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/surrealdb.nix>

services.surrealdb.host

The host that surrealdb will connect to.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/surrealdb.nix>

services.surrealdb.port

The port that surrealdb will connect to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8000
```

Example:

```
8000
```

Declared by:

<nixpkgs/nixos/modules/services/databases/surrealdb.nix>

services.suwayomi−server.enable

Whether to enable Suwayomi, a free and open source manga reader server that runs extensions built for Tachiyomi.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.suwayomi−server.package

The suwayomi−server package to use.

Type: package

Default:

```
pkgs.suwayomi−server
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.suwayomi−server.dataDir

The path to the data directory in which Suwayomi−Server will download scans.

Type: absolute path

Default:

```
"/var/lib/suwayomi−server"
```

Example:

```
"/var/data/mangas"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.suwayomi−server.group

Group under which Suwayomi−Server runs.

Type: string

Default:

```
"suwayomi"
```

Example:

```
"medias"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.suwayomi−server.openFirewall
Whether to open the firewall for the port in **services.suwayomi−server.settings.server.port**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.suwayomi−server.settings
Configuration to write to *server.conf*. See **https://github.com/Suwayomi/Suwayomi−Server/wiki/Configuring−Suwayomi−Server** for more information.

Type: open submodule of (HOCON value)

Default:

```
{ }
```

Example:

```
{
  server = {
    socksProxyEnabled = true;
    socksProxyHost = "yourproxyhost.com";
    socksProxyPort = "8080";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.suwayomi−server.settings.server.basicAuthEnabled
Whether to enable basic access authentication for Suwayomi−Server. Enabling this option is useful when hosting on a public network/the Internet .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.suwayomi−server.settings.server.basicAuthPasswordFile
The password file containing the value that you have to provide when authenticating.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/secrets/suwayomi−server−password"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.suwayomi−server.settings.server.basicAuthUsername
The username value that you have to provide when authenticating.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.suwayomi−server.settings.server.downloadAsCbz
Download chapters as '.cbz' files.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.suwayomi−server.settings.server.extensionRepos
URL of repositories from which the extensions can be installed.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "https://raw.githubusercontent.com/MY_ACCOUNT/MY_REPO/repo/index. \
min.json"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.suwayomi−server.settings.server.ip
The ip that Suwayomi will bind to.

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.suwayomi−server.settings.server.localSourcePath
Path to the local source folder.

Type: absolute path

Default:

```
suwayomi−server.dataDir
```

Example:

```
"/var/data/local_mangas"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.suwayomi−server.settings.server.port
The port that Suwayomi will listen to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Example:

```
4567
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.suwayomi−server.settings.server.systemTrayEnabled
Whether to enable a system tray icon, if possible.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.suwayomi−server.user
User account under which Suwayomi−Server runs.

Type: string

Default:

```
"suwayomi"
```

Example:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/suwayomi−server.nix>

services.svnserve.enable
Whether to enable svnserve to serve Subversion repositories through the SVN protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/svnserve.nix>

services.svnserve.svnBaseDir
Base directory from which Subversion repositories are accessed.

Type: string

Default:

```
"/repos"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/svnserve.nix>

services.swapspace.enable
Whether to enable Swapspace, a dynamic swap space manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/swapspace.nix>

services.swapspace.package
The swapspace package to use.

Type: package

Default:

```
pkgs.swapspace
```

Declared by:
<nixpkgs/nixos/modules/services/system/swapspace.nix>

services.swapspace.extraArgs
Any extra arguments to pass to swapspace

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-P"
  "-v"
]
```

Declared by:
<nixpkgs/nixos/modules/services/system/swapspace.nix>

services.swapspace.installWrapper
This will add swapspace wrapped with the generated config, to environment.systemPackages

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/swapspace.nix>

services.swapspace.settings
Config file for swapspace. See the options here: **https://github.com/Tookmund/Swapspace/blob/master/swapspace.conf**

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/system/swapspace.nix>

services.swapspace.settings.buffer_elasticity
Percentage of buffer space considered to be “free”

Type: integer between 0 and 100 (both inclusive)

Default:

```
30
```

Declared by:
<nixpkgs/nixos/modules/services/system/swapspace.nix>

services.swapspace.settings.cache_elasticity
Percentage of cache space considered to be “free”

Type: integer between 0 and 100 (both inclusive)

Default:

```
80
```

Declared by:
<nixpkgs/nixos/modules/services/system/swapspace.nix>

services.swapspace.settings.cooldown
Duration (roughly in seconds) of the moratorium on swap allocation that is instated if disk space runs out, or the cooldown time after a new swapfile is successfully allocated before swapspace will consider deallocating swap space again. The default cooldown period is about 10 minutes.

Type: unsigned integer, meaning >=0

Default:

```
600
```

Declared by:
<nixpkgs/nixos/modules/services/system/swapspace.nix>

services.swapspace.settings.freetarget
Percentage of free space swapspace should aim for when adding swapspace. This should fall somewhere between lower_freelimit and upper_freelimit.

Type: integer between 2 and 99 (both inclusive)

Default:

```
30
```

Declared by:
<nixpkgs/nixos/modules/services/system/swapspace.nix>

services.swapspace.settings.lower_freelimit
Lower free−space threshold: if the percentage of free space drops below this number, additional swapspace is allocated

Type: integer between 0 and 99 (both inclusive)

Default:

```
20
```

Declared by:
<nixpkgs/nixos/modules/services/system/swapspace.nix>

services.swapspace.settings.max_swapsize
Greatest allowed size for individual swapfiles

Type: string

Default:

```
"2t"
```

Declared by:
<nixpkgs/nixos/modules/services/system/swapspace.nix>

services.swapspace.settings.min_swapsize
Smallest allowed size for individual swapfiles

Type: string

Default:

```
"4m"
```

Declared by:
<nixpkgs/nixos/modules/services/system/swapspace.nix>

services.swapspace.settings.swappath
Location where swapspace may create and delete swapfiles

Type: string

Default:

```
"/var/lib/swapspace"
```

Declared by:
<nixpkgs/nixos/modules/services/system/swapspace.nix>

services.swapspace.settings.upper_freelimit
Upper free−space threshold: if the percentage of free space exceeds this number, swapspace will attempt to free up swapspace

Type: integer between 0 and 100 (both inclusive)

Default:

```
60
```

Declared by:
<nixpkgs/nixos/modules/services/system/swapspace.nix>

services.switcherooControl.enable
Whether to enable switcheroo−control, a D−Bus service to check the availability of dual−GPU.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/switcheroo−control.nix>

services.switcherooControl.package

The switcheroo−control package to use.

Type: package

Default:

```
pkgs.switcheroo-control
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/switcheroo−control.nix>

services.sympa.enable

Whether to enable Sympa mailing list manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.database.createLocally

Whether to create a local database automatically.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.database.host

Database host address.

For MySQL, use ‘localhost’ to connect using Unix domain socket.

For PostgreSQL, use path to directory (e.g. */run/postgresql*) to connect using Unix domain socket located in this directory.

Use ‘null’ to fall back on Sympa default, or when using **services.sympa.database.createLocally**.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.database.name

Database name. When using SQLite this must be an absolute path to the database file.

Type: string

Default:

```
if database.type == "SQLite" then "/var/lib/sympa/sympa.sqlite" els \
e "sympa"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.database.passwordFile
A file containing the password for **services.sympa.database.name**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/sympa-dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.database.port
Database port. Use ‘null’ for default port.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.database.type
Database engine to use.

Type: one of “SQLite”, “PostgreSQL”, “MySQL”

Default:

```
"SQLite"
```

Example:

```
"MySQL"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.database.user
Database user. The system user name is used as a default.

Type: null or string

Default:

```
"sympa"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.domains
Email domains handled by this instance. There have to be MX records for keys of this attribute set.

Type: attribute set of (submodule)

Example:

```
{
  "lists.example.org" = {
    webHost = "lists.example.org";
    webLocation = "/";
```

```
    };
    "sympa.example.com" = {
      webHost = "example.com";
      webLocation = "/sympa";
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.domains.<name>.settings
The *robot.conf* configuration file as key value set. See **https://sympa-community.github.io/gpldoc/man/sympa.conf.5.html** for list of configuration parameters.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{ }
```

Example:

```
{
  default_max_list_members = 3;
}
```

Declared by:
<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.domains.<name>.webHost
Domain part of the web interface URL (no web interface for this domain if 'null'). DNS record of type A (or AAAA or CNAME) has to exist with this value.

Type: null or string

Default:

```
null
```

Example:

```
"archive.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.domains.<name>.webLocation
URL path part of the web interface.

Type: string

Default:

```
"/"
```

Example:

```
"/sympa"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.lang

Default Sympa language. See **https://github.com/sympa-community/sympa/tree/sympa-6.2/po/sympa** for available options.

Type: string

Default:

```
"en_US"
```

Example:

```
"cs"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.listMasters

The list of the email addresses of the listmasters (users authorized to perform global server commands).

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "postmaster@sympa.example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.mainDomain

Main domain to be used in *sympa.conf*. If 'null', one of the **services.sympa.domains** is chosen for you.

Type: null or string

Default:

```
null
```

Example:

```
"lists.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.mta.type

Mail transfer agent (MTA) integration. Use 'none' if you want to configure it yourself.

The 'postfix' integration sets up local Postfix instance that will pass incoming messages from configured domains to Sympa. You still need to configure at least outgoing message handling using e.g. **services.postfix.relayHost**.

Type: one of "postfix", "none"

Default:

```
"postfix"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.settings

The *sympa.conf* configuration file as key value set. See **https://sympa-community.github.io/gpldoc/man/sympa.conf.5.html** for list of configuration parameters.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{ }
```

Example:

```
{
  default_home = "lists";
  viewlogs_page_size = 50;
}
```

Declared by:

<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.settingsFile

Set of files to be linked in */var/lib/sympa*.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "list_data/lists.example.org/help" = {
    text = "subject This list provides help to users";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.settingsFile.<name>.enable

Whether this file should be generated. This option allows specific files to be disabled.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.settingsFile.<name>.source

Path of the source file.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.settingsFile.<name>.text

Text of the file.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.web.enable
Whether to enable Sympa web interface.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.web.fcgiProcs
Number of FastCGI processes to fork.

Type: positive integer, meaning >0

Default:

```
2
```

Declared by:
<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.web.https
Whether to use HTTPS. When nginx integration is enabled, this option forces SSL and enables ACME. Please note that Sympa web interface always uses https links even when this option is disabled.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.sympa.web.server
The webserver used for the Sympa web interface. Set it to ‘none’ if you want to configure it yourself. Further nginx configuration can be done by adapting **services.nginx.virtualHosts.«name»**.

Type: one of “nginx”, “none”

Default:

```
"nginx"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/sympa.nix>

services.synapse−auto−compressor.enable
Whether to enable synapse−auto−compressor.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse−auto−compressor.nix>

services.synapse−auto−compressor.package
The rust−synapse−compress−state package to use.

Type: package

Default:

```
pkgs.rust−synapse−compress−state
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse−auto−compressor.nix>

services.synapse−auto−compressor.postgresUrl
Connection string to postgresql in the **rust** 'postgres' **crate config format**. The module will attempt to build a URL−style connection string out of the 'services.matrix−synapse.settings.database.args' if a local synapse is enabled.

Type: string

Default:

```
let
  synapseConfig = config.services.matrix−synapse;
  args = synapseConfig.settings.database.args;
in
if synapseConfig.enable then
  ''postgresql://${args.user}${lib.optionalString (args ? password) \
 (":" + args.password)}@${
    lib.escapeURL (if (args ? host) then args.host else "/run/postg \
resql")
  }${lib.optionalString (args ? port) (":" + args.port)}${args.data \
base}''
else
  null;
```

Example:

```
"postgresql://username:password@mydomain.com:port/database"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse−auto−compressor.nix>

services.synapse−auto−compressor.settings.chunk_size
The number of state groups to work on at once. All of the entries from 'state_groups_state' are requested from the database for state groups that are worked on. Therefore small chunk sizes may be needed on machines with low memory.

Note: if the compressor fails to find space savings on the chunk as a whole (which may well happen in rooms with lots of backfill in) then the entire chunk is skipped.

Type: signed integer

Default:

```
500
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse−auto−compressor.nix>

services.synapse−auto−compressor.settings.chunks_to_compress

‘chunks_to_compress’ chunks of size ‘chunk_size’ will be compressed. The higher this number is set to, the longer the compressor will run for.

Type: signed integer

Default:

```
100
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse−auto−compressor.nix>

services.synapse−auto−compressor.settings.levels

Sizes of each new level in the compression algorithm, as a comma−separated list. The first entry in the list is for the lowest, most granular level, with each subsequent entry being for the next highest level. The number of entries in the list determines the number of levels that will be used. The sum of the sizes of the levels affects the performance of fetching the state from the database, as the sum of the sizes is the upper bound on the number of iterations needed to fetch a given set of state.

Type: list of signed integer

Default:

```
[
  100
  50
  25
]
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse−auto−compressor.nix>

services.synapse−auto−compressor.startAt

How often to run this service in systemd calendar syntax (see **systemd.time**(7))

Type: string or list of string

Default:

```
"weekly"
```

Example:

```
"daily"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse−auto−compressor.nix>

services.syncoid.enable

Whether to enable Syncoid ZFS synchronization service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.package

The sanoid package to use.

Type: package

Default:

```
pkgs.sanoid
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.commands

Syncoid commands to run.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "pool/test".target = "root@target:pool/test";
}
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.commands.<name>.extraArgs

Extra syncoid arguments for this command.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--sshport 2222"
]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.commands.<name>.localSourceAllow

Permissions granted for the **services.syncoid.user** user for local source datasets. See **https://openzfs.github.io/openzfs-docs/man/8/zfs-allow.8.html** for available permissions. Defaults to **services.syncoid.localSourceAllow** option.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.commands.<name>.localTargetAllow

Permissions granted for the **services.syncoid.user** user for local target datasets. See **https://openzfs.github.io/openzfs-docs/man/8/zfs-allow.8.html** for available permissions. Make sure to include the 'change-key' permission if you send raw encrypted datasets, the 'compression' permission if you send raw compressed datasets, and so on. For remote target datasets you'll have to set your remote user permissions by yourself.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.commands.<name>.recursive

Whether to enable the transfer of child datasets.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.commands.<name>.recvOptions

Advanced options to pass to zfs recv. Options are specified without their leading dashes and separated by spaces.

Type: strings concatenated with " "

Default:

```
""
```

Example:

```
"ux recordsize o compression=lz4"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.commands.<name>.sendOptions

Advanced options to pass to zfs send. Options are specified without their leading dashes and separated by spaces.

Type: strings concatenated with " "

Default:

```
""
```

Example:

```
"Lc e"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.commands.<name>.service

Systemd configuration specific to this syncoid service.

Type: attribute set

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.commands.<name>.source

Source ZFS dataset. Can be either local or remote. Defaults to the attribute name.

Type: string

Example:

```
"pool/dataset"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.commands.<name>.sshKey

SSH private key file to use to login to the remote system. Defaults to **services.syncoid.sshKey** option.

Type: null or (string or absolute path convertible to it)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.commands.<name>.target

Target ZFS dataset. Can be either local («pool/dataset») or remote («user@server:pool/dataset»).

Type: string

Example:

```
"user@server:pool/dataset"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.commands.<name>.useCommonArgs

Whether to add the configured common arguments to this command.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.commonArgs

Arguments to add to every syncoid command, unless disabled for that command. See **https://github.com/jimsalterjrs/sanoid/#syncoid-command-line-options** for available options.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--no-sync-snap"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.group
The group for the service.

Type: string

Default:

```
"syncoid"
```

Example:

```
"backup"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.interval
Run syncoid at this interval. The default is to run hourly.

Must be in the format described in **systemd.time**(7). This is equivalent to adding a corresponding timer unit with **OnCalendar** set to the value given here.

Set to an empty list to avoid starting syncoid automatically.

Type: string or list of string

Default:

```
"hourly"
```

Example:

```
"*-*-* *:15:00"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.localSourceAllow
Permissions granted for the **services.syncoid.user** user for local source datasets. See **https://openzfs.github.io/openzfs-docs/man/8/zfs-allow.8.html** for available permissions.

Type: list of string

Default:

```
[
  "bookmark"
  "hold"
  "send"
  "snapshot"
  "destroy"
  "mount"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.localTargetAllow

Permissions granted for the **services.syncoid.user** user for local target datasets. See **https://openzfs.github.io/openzfs-docs/man/8/zfs-allow.8.html** for available permissions. Make sure to include the 'change-key' permission if you send raw encrypted datasets, the 'compression' permission if you send raw compressed datasets, and so on. For remote target datasets you'll have to set your remote user permissions by yourself.

Type: list of string

Default:

```
[
  "change-key"
  "compression"
  "create"
  "mount"
  "mountpoint"
  "receive"
  "rollback"
]
```

Example:

```
[
  "create"
  "mount"
  "receive"
  "rollback"
]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.service

Systemd configuration common to all syncoid services.

Type: attribute set

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.sshKey

SSH private key file to use to login to the remote system. Can be overridden in individual commands.

Type: null or (string or absolute path convertible to it)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncoid.user

The user for the service. ZFS privilege delegation will be automatically configured for any local pools used by syncoid if this option is set to a user other than root. The user will be given the "hold" and "send" privileges on any pool that has datasets being sent and the "create", "mount", "receive", and "rollback" privileges on any pool that has datasets being received.

Type: string

Default:

```
"syncoid"
```

Example:

```
"backup"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/syncoid.nix>

services.syncplay.enable
If enabled, start the Syncplay server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.package
The syncplay-nogui package to use.

Type: package

Default:

```
pkgs.syncplay-nogui
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.certDir
TLS certificates directory to use for encryption. See **https://github.com/Syncplay/syncplay/wiki/TLS-support**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.chat
Chat with users in the same room.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.extraArgs
Additional arguments to be passed to the service.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.interfaceIpv4
The IP address to bind to for IPv4. Leaving it empty defaults to using all.

Type: string

Default:
""

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.interfaceIpv6
The IP address to bind to for IPv6. Leaving it empty defaults to using all.

Type: string

Default:
""

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.ipv4Only
Listen only on IPv4 when strting the server.

Type: boolean

Default:
`false`

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.ipv6Only
Listen only on IPv6 when strting the server.

Type: boolean

Default:
`false`

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.isolateRooms
Enable room isolation.

Type: boolean

Default:
`false`

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.maxChatMessageLength
Maximum number of characters in a chat message.

Type: unsigned integer, meaning >=0

Default:

```
150
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.maxUsernameLength
Maximum number of characters in a username.

Type: unsigned integer, meaning >=0

Default:

```
16
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.motd
Text to display when users join. The motd will be readable in the nix store and the processlist. If this is not intended use ‘motdFile’ instead. Will be overriden by **services.syncplay.motdFile**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.motdFile
Path to text to display when users join. Will override **services.syncplay.motd**.

Type: null or string

Default:

```
if services.syncplay.motd != null then (builtins.toFile "motd" serv \
ices.syncplay.motd) else null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.passwordFile
Path to the file that contains the server password. If ‘null’, the server doesn’t require a password.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.permanentRooms
List of rooms that will be listed even if the room is empty. Will be overriden by **services.syncplay.permanentRoomsFile**.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.permanentRoomsFile

File with list of rooms that will be listed even if the room is empty, newline delimited. Will override **services.syncplay.permanentRooms**.

Type: null or string

Default:

```
if services.syncplay.permanentRooms != [ ] then (builtins.toFile "p \
erm" (builtins.concatStringsSep "\n" services.syncplay.permanentRo \
oms)) else null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.port

TCP port to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8999
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.ready

Check readiness of users.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.roomsDBFile

Path to SQLite database file to store room states. Relative to the working directory provided by systemd.

Type: null or string

Default:

```
null
```

Example:

```
"rooms.db"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.salt

Salt to allow room operator passwords generated by this server instance to still work when the server is restarted. The salt will be readable in the nix store and the processlist. If this is not intended use ‘saltFile’ instead. Mutually exclusive with **services.syncplay.saltFile**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.saltFile
Path to the file that contains the server salt. This allows room operator passwords generated by this server instance to still work when the server is restarted. 'null', the server doesn't load the salt from a file. Mutually exclusive with **services.syncplay.salt**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.statsDBFile
Path to SQLite database file to store stats. Relative to the working directory provided by systemd.

Type: null or string

Default:

```
null
```

Example:

```
"stats.db"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncplay.useACMEHost
If set, use NixOS−generated ACME certificate with the specified name for TLS.

Note that it requires **security.acme** to be setup, e.g., credentials provided if using DNS−01 validation.

Type: null or string

Default:

```
null
```

Example:

```
"syncplay.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncplay.nix>

services.syncthing.enable
Whether to enable Syncthing, a self−hosted open−source alternative to Dropbox and Bittorrent Sync.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.package

The syncthing package to use.

Type: package

Default:

```
pkgs.syncthing
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.all_proxy

Overwrites the all_proxy environment variable for the Syncthing process to the given value. This is normally used to let Syncthing connect through a SOCKS5 proxy server. See **https://docs.syncthing.net/users/proxying.html**.

Type: null or string

Default:

```
null
```

Example:

```
"socks5://address.com:1234"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.cert

Path to the 'cert.pem' file, which will be copied into Syncthing's **configDir**.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.configDir

The path where the settings and keys will exist.

Type: absolute path

Default:

- if stateVersion >= 19.03:

  ```
  config.services.syncthing.dataDir + "/.config/syncthing"
  ```

- otherwise:

  ```
  config.services.syncthing.dataDir
  ```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.dataDir

The path where synchronised directories will exist.

Type: absolute path

Default:

```
"/var/lib/syncthing"
```

Example:

```
"/home/yourUser"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.databaseDir
The directory containing the database and logs.

Type: absolute path

Default:

```
config.services.syncthing.configDir
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.extraFlags
Extra flags passed to the syncthing command in the service definition.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--reset-deltas"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.group
The group to run Syncthing under. By default, a group named ‘syncthing’ will be created.

Type: string

Default:

```
"syncthing"
```

Example:

```
"yourGroup"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.guiAddress
The address to serve the web interface at.

Type: string

Default:

```
"127.0.0.1:8384"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.guiPasswordFile
Path to file containing the plaintext password for Syncthing’s GUI.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.key
Path to the ‘key.pem’ file, which will be copied into Syncthing’s **configDir**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.openDefaultPorts
Whether to open the default ports in the firewall: TCP/UDP 22000 for transfers and UDP 21027 for discovery.

If multiple users are running Syncthing on this machine, you will need to manually open a set of ports for each instance and leave this disabled. Alternatively, if you are running only a single instance on this machine using the default ports, enable this.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.overrideDevices
Whether to delete the devices which are not configured via the **devices** option. If set to ‘false’, devices added via the web interface will persist and will have to be deleted manually.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.overrideFolders
Whether to delete the folders which are not configured via the **folders** option. If set to ‘false’, folders added via the web interface will persist and will have to be deleted manually.

Type: boolean

Default: true unless any device has the **autoAcceptFolders** option set to true.

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.relay.enable

Whether to enable Syncthing relay service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing-relay.nix>

services.syncthing.relay.extraOptions

Extra command line arguments to pass to strelaysrv.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing-relay.nix>

services.syncthing.relay.globalRateBps

Global bandwidth rate limit in bytes per second.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing-relay.nix>

services.syncthing.relay.listenAddress

Address to listen on for relay traffic.

Type: string

Default:

```
""
```

Example:

```
"1.2.3.4"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing-relay.nix>

services.syncthing.relay.perSessionRateBps

Per session bandwidth rate limit in bytes per second.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing-relay.nix>

services.syncthing.relay.pools

Relay pools to join. If null, uses the default global pool.

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing−relay.nix>

services.syncthing.relay.port

Port to listen on for relay traffic. This port should be added to ‘networking.firewall.allowedTCPPorts’.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
22067
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing−relay.nix>

services.syncthing.relay.providedBy

Human−readable description of the provider of the relay (you).

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing−relay.nix>

services.syncthing.relay.statusListenAddress

Address to listen on for serving the relay status API.

Type: string

Default:

```
""
```

Example:

```
"1.2.3.4"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing−relay.nix>

services.syncthing.relay.statusPort

Port to listen on for serving the relay status API. This port should be added to ‘networking.firewall.allowedTCPPorts’.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
22070
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing−relay.nix>

services.syncthing.settings

Extra configuration options for Syncthing. See **https://docs.syncthing.net/users/config.html**. Note that this attribute set does not exactly match the documented xml format. Instead, this is the format of the json rest api. There are slight differences. For example, this xml:

```
<options>
  <listenAddress>default</listenAddress>
  <minHomeDiskFree unit="%">1</minHomeDiskFree>
</options>
```

corresponds to the json:

```
{
  options: {
    listenAddresses = [
      "default"
    ];
    minHomeDiskFree = {
      unit = "%";
      value = 1;
    };
  };
}
```

Type: open submodule of (JSON value)

Default:

```
{ }
```

Example:

```
{
  gui = {
    theme = "black";
  };
  options = {
    localAnnounceEnabled = false;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.devices

Peers/devices which Syncthing should communicate with.

Note that you can still add devices manually, but those changes will be reverted on restart if **overrideDevices** is enabled.

Type: attribute set of (open submodule of (JSON value))

Default:

```
{ }
```

Example:

```
{
  bigbox = {
    addresses = [
      "tcp://192.168.0.10:51820"
    ];
```

```
    id = "7CFNTQM-IMTJBHJ-3UWRDIU-ZGQJFR6-VCXZ3NB-XUH3KZO-N52 \
ITXR-LAIYUAU";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.devices.<name>.autoAcceptFolders
Automatically create or share folders that this device advertises at the default path. See **https://docs.syncthing.net/users/config.html?highlight=autoaccept#config-file-format**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.devices.<name>.id
The device ID. See **https://docs.syncthing.net/dev/device-ids.html**.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.devices.<name>.name
The name of the device.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.folders
Folders which should be shared by Syncthing.

Note that you can still add folders manually, but those changes will be reverted on restart if **overrideFolders** is enabled.

Type: attribute set of (open submodule of (JSON value))

Default:

```
{ }
```

Example:

```
{
  "/home/user/sync" = {
    id = "syncme";
    devices = [ "bigbox" ];
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.folders.<name>.enable

Whether to share this folder. This option is useful when you want to define all folders in one place, but not every machine should share all folders.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.folders.<name>.copyOwnershipFromParent

On Unix systems, tries to copy file/folder ownership from the parent directory (the directory it's located in). Requires running Syncthing as a privileged user, or granting it additional capabilities (e.g. CAP_CHOWN on Linux).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.folders.<name>.devices

The devices this folder should be shared with. Each device must be defined in the **devices** option.

A list of either strings or attribute sets, where values are device names or device configurations.

Type: list of (string or (open submodule of (JSON value)))

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.folders.<name>.id

The ID of the folder. Must be the same on all devices.

Type: string

Default:

```
"‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.folders.<name>.ignorePatterns

Syncthing can be configured to ignore certain files in a folder using ignore patterns. Enter them as a list of strings, one string per line. See the Syncthing documentation for syntax: **https://docs.syncthing.net/users/ignoring.html** Patterns set using the WebUI will be overridden if you define this option. If you want to override the ignore patterns to be empty, use 'ignorePatterns = []'. Deleting the 'ignorePatterns' option will not remove the patterns from Syncthing automatically because patterns are only handled by the module if this option is defined. Either use 'ignorePatterns = []' before deleting the option or remove the patterns afterwards using the WebUI.

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "// This is a comment"
  "*.part // Firefox downloads and other things"
  "*.crdownload // Chrom(ium|e) downloads"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.folders.<name>.label
The label of the folder.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.folders.<name>.path
The path to the folder which should be shared. Only absolute paths (starting with '/') and paths relative to the **user**' s home directory (starting with '~/') are allowed.

Type: string starting with / or ~/

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.folders.<name>.type
Controls how the folder is handled by Syncthing. See **https://docs.syncthing.net/users/config.html#config-option-folder.type**.

Type: one of "sendreceive", "sendonly", "receiveonly", "receiveencrypted"

Default:

```
"sendreceive"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.folders.<name>.versioning
How to keep changed/deleted files with Syncthing. There are 4 different types of versioning with different parameters. See **https://docs.syncthing.net/users/versioning.html**.

Type: null or (open submodule of (JSON value))

Default:

```
null
```

Example:

```
[
  {
    versioning = {
      type = "simple";
      params.keep = "10";
    };
```

```
    }
    {
      versioning = {
        type = "trashcan";
        params.cleanoutDays = "1000";
      };
    }
    {
      versioning = {
        type = "staggered";
        fsPath = "/syncthing/backup";
        params = {
          cleanInterval = "3600";
          maxAge = "31536000";
        };
      };
    }
    {
      versioning = {
        type = "external";
        params.versionsPath = pkgs.writers.writeBash "backup" ''
          folderpath="$1"
          filepath="$2"
          rm -rf "$folderpath/$filepath"
        '';
      };
    }
  ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.folders.<name>.versioning.type

The type of versioning. See **https://docs.syncthing.net/users/versioning.html**.

Type: one of “external”, “simple”, “staggered”, “trashcan”

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.options

The options element contains all other global configuration options

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.options.limitBandwidthInLan

Whether to apply bandwidth limits to devices in the same broadcast domain as the local device.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.options.localAnnounceEnabled
Whether to send announcements to the local LAN, also use such announcements to find other devices.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.options.localAnnouncePort
The port on which to listen and send IPv4 broadcast announcements to.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.options.maxFolderConcurrency
This option controls how many folders may concurrently be in I/O−intensive operations such as syncing or scanning. The mechanism is described in detail in a **separate chapter**.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.options.relaysEnabled
When true, relays will be connected to and potentially used for device to device connections.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.settings.options.urAccepted
Whether the user has accepted to submit anonymous usage data. The default, 0, mean the user has not made a choice, and Syncthing will ask at some point in the future. “−1” means no, a number above zero means that that version of usage reporting has been accepted.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.systemService

Whether to auto−launch Syncthing as a system service.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.syncthing.user

The user to run Syncthing as. By default, a user named ‘syncthing’ will be created whose home directory is **dataDir**.

Type: string

Default:

```
"syncthing"
```

Example:

```
"yourUser"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/syncthing.nix>

services.synergy.client.enable

Whether to enable the Synergy client (receive keyboard and mouse events from a Synergy server).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/synergy.nix>

services.synergy.client.autoStart

Whether the Synergy client should be started automatically.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/synergy.nix>

services.synergy.client.screenName

Use the given name instead of the hostname to identify ourselves to the server.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/misc/synergy.nix>

services.synergy.client.serverAddress

The server address is of the form: [hostname][:port]. The hostname must be the address or hostname of the server. The port overrides the default port, 24800.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/misc/synergy.nix>

services.synergy.server.enable

Whether to enable the Synergy server (send keyboard and mouse events).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/synergy.nix>

services.synergy.server.address

Address on which to listen for clients.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/misc/synergy.nix>

services.synergy.server.autoStart

Whether the Synergy server should be started automatically.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/synergy.nix>

services.synergy.server.configFile

The Synergy server configuration file.

Type: absolute path

Default:

```
"/etc/synergy-server.conf"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/synergy.nix>

services.synergy.server.screenName

Use the given name instead of the hostname to identify this screen in the configuration.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/synergy.nix>

services.synergy.server.tls.enable
Whether TLS encryption should be used.

Using this requires a TLS certificate that can be generated by starting the Synergy GUI once and entering a valid product key.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/synergy.nix>

services.synergy.server.tls.cert
The TLS certificate to use for encryption.

Type: null or string

Default:

```
null
```

Example:

```
"~/.synergy/SSL/Synergy.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/synergy.nix>

services.syslog−ng.enable
Whether to enable the syslog−ng daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/logging/syslog−ng.nix>

services.syslog−ng.package
The syslogng package to use.

Type: package

Default:

```
pkgs.syslogng
```

Declared by:
<nixpkgs/nixos/modules/services/logging/syslog−ng.nix>

services.syslog−ng.configHeader
The very first lines of the configuration file. Should usually contain the syslog−ng version header.

Type: strings concatenated with “\n”

Default:

```
@version: 4.4
@include "scl.conf"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/syslog−ng.nix>

services.syslog−ng.extraConfig
Configuration added to the end of ‘syslog−ng.conf’.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/logging/syslog−ng.nix>

services.syslog−ng.extraModulePaths
A list of paths that should be included in syslog−ng’s ‘−−module−path’ option. They should usually end in ‘/lib/syslog−ng’

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/logging/syslog−ng.nix>

services.syslogd.enable
Whether to enable syslogd. Note that systemd also logs syslog messages, so you normally don’t need to run syslogd.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/logging/syslogd.nix>

services.syslogd.enableNetworkInput
Accept logging through UDP. Option −r of **syslogd**(8).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/logging/syslogd.nix>

services.syslogd.defaultConfig
The default *syslog.conf* file configures a fairly standard setup of log files, which can be extended by means of *extraConfig*.

Type: strings concatenated with “\n”

Default:

```
# Send emergency messages to all users.
*.emerg                         *

# "local1" is used for dhcpd messages.
local1.*                       -/var/log/dhcpd
```

```
mail.*                          -/var/log/mail

*.=warning;*.=err               -/var/log/warn
*.crit                           /var/log/warn

*.*;mail.none;local1.none       -/var/log/messages
```

Declared by:
<nixpkgs/nixos/modules/services/logging/syslogd.nix>

services.syslogd.extraConfig
Additional text appended to *syslog.conf*, i.e. the contents of *defaultConfig*.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
"news.* -/var/log/news"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/syslogd.nix>

services.syslogd.extraParams
Additional parameters passed to **syslogd**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-m 0"
]
```

Declared by:
<nixpkgs/nixos/modules/services/logging/syslogd.nix>

services.syslogd.tty
The tty device on which syslogd will print important log messages. Leave this option blank to disable tty logging.

Type: string

Default:

```
"tty10"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/syslogd.nix>

services.sysprof.enable
Whether to enable sysprof profiling daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/sysprof.nix>

services.sysstat.enable
Whether to enable sar system activity collection.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/sysstat.nix>

services.sysstat.collect−args
Arguments to pass sa1 when collecting statistics

Type: string

Default:

```
"1 1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/sysstat.nix>

services.sysstat.collect−frequency
OnCalendar specification for sysstat−collect

Type: string

Default:

```
"*:00/10"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/sysstat.nix>

services.system−config−printer.enable
Whether to enable system−config−printer, a service for CUPS administration used by printing interfaces.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system−config−printer.nix>

services.system76−scheduler.enable
Whether to enable system76−scheduler.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.package
Which System76−Scheduler package to use.

Type: package

Default:

```
pkgs.system76−scheduler
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.assignments
Process profile assignments.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  nix−builds = {
    nice = 15;
    class = "batch";
    ioClass = "idle";
    matchers = [
      "nix−daemon"
    ];
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.assignments.<name>.class
CPU scheduler class.

Type: null or one of “idle”, “batch”, “other”, “rr”, “fifo”

Default:

```
null
```

Example:

```
"batch"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.assignments.<name>.ioClass
IO scheduler class.

Type: null or one of “idle”, “best−effort”, “realtime”

Default:

```
null
```

Example:

```
"best−effort"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.assignments.<name>.ioPrio
IO scheduler priority.

Type: null or integer between 0 and 7 (both inclusive)

Default:

```
null
```

Example:

```
4
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.assignments.<name>.matchers
Process matchers.

Type: null or (list of string)

Default:

```
[ ]
```

Example:

```
[
  "include cgroup=\"/user.slice/*.service\" parent=\"systemd\""
  "emacs"
]
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.assignments.<name>.nice
Niceness.

Type: null or integer between −20 and 19 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.assignments.<name>.prio
CPU scheduler priority.

Type: null or integer between 1 and 99 (both inclusive)

Default:

```
null
```

Example:

```
49
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.exceptions
Processes that are left alone.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "include descends=\"schedtool\""
  "schedtool"
]
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.cfsProfiles.enable
Tweak CFS latency parameters when going on/off battery

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.cfsProfiles.default.bandwidth−size
‘sched_cfs_bandwidth_slice_us’.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.cfsProfiles.default.latency
‘sched_latency_ns’.

Type: signed integer

Default:

```
6
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.cfsProfiles.default.nr−latency
‘sched_nr_latency’.

Type: signed integer

Default:

```
8
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.cfsProfiles.default.preempt
Preemption mode.

Type: one of “none”, “voluntary”, “full”

Default:

```
"voluntary"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.cfsProfiles.default.wakeup−granularity
‘sched_wakeup_granularity_ns’.

Type: floating point number

Default:

```
1.0
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.cfsProfiles.responsive.bandwidth−size
‘sched_cfs_bandwidth_slice_us’.

Type: signed integer

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.cfsProfiles.responsive.latency
‘sched_latency_ns’.

Type: signed integer

Default:

```
4
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.cfsProfiles.responsive.nr−latency
‘sched_nr_latency’.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.cfsProfiles.responsive.preempt
Preemption mode.

Type: one of “none”, “voluntary”, “full”

Default:

```
"full"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.cfsProfiles.responsive.wakeup−granularity
'sched_wakeup_granularity_ns'.

Type: floating point number

Default:

```
0.5
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.enable
Tweak scheduling of individual processes in real time.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.foregroundBoost.enable
Boost foreground process priorities.

(And de−boost background ones). Note that this option needs cooperation from the desktop environment to work. On Gnome the client side is implemented by the "System76 Scheduler" shell extension.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.foregroundBoost.background.class
CPU scheduler class.

Type: null or one of "idle", "batch", "other", "rr", "fifo"

Default:

```
null
```

Example:

```
"batch"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.foregroundBoost.background.ioClass
IO scheduler class.

Type: null or one of "idle", "best−effort", "realtime"

Default:

```
"idle"
```

Example:

```
"best-effort"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.foregroundBoost.background.ioPrio
IO scheduler priority.

Type: null or integer between 0 and 7 (both inclusive)

Default:

```
null
```

Example:

```
4
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.foregroundBoost.background.matchers
Process matchers.

Type: null or (list of string)

Default:

```
[ ]
```

Example:

```
[
  "include cgroup=\"/user.slice/*.service\" parent=\"systemd\""
  "emacs"
]
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.foregroundBoost.background.nice
Niceness.

Type: null or integer between −20 and 19 (both inclusive)

Default:

```
6
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.foregroundBoost.background.prio
CPU scheduler priority.

Type: null or integer between 1 and 99 (both inclusive)

Default:

```
null
```

Example:

```
49
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.foregroundBoost.foreground.class
CPU scheduler class.

Type: null or one of “idle”, “batch”, “other”, “rr”, “fifo”

Default:

```
null
```

Example:

```
"batch"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.foregroundBoost.foreground.ioClass
IO scheduler class.

Type: null or one of “idle”, “best−effort”, “realtime”

Default:

```
"best-effort"
```

Example:

```
"best-effort"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.foregroundBoost.foreground.ioPrio
IO scheduler priority.

Type: null or integer between 0 and 7 (both inclusive)

Default:

Example:

```
4
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.foregroundBoost.foreground.matchers
Process matchers.

Type: null or (list of string)

Default:

```
[ ]
```

Example:

```
[
  "include cgroup=\"/user.slice/*.service\" parent=\"systemd\""
  "emacs"
]
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.foregroundBoost.foreground.nice
Niceness.

Type: null or integer between −20 and 19 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.foregroundBoost.foreground.prio
CPU scheduler priority.

Type: null or integer between 1 and 99 (both inclusive)

Default:

```
null
```

Example:

```
49
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.pipewireBoost.enable
Boost Pipewire client priorities.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.pipewireBoost.profile.class
CPU scheduler class.

Type: null or one of “idle”, “batch”, “other”, “rr”, “fifo”

Default:

```
null
```

Example:

```
"batch"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.pipewireBoost.profile.ioClass
IO scheduler class.

Type: null or one of “idle”, “best−effort”, “realtime”

Default:

```
"best-effort"
```

Example:

```
"best-effort"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.pipewireBoost.profile.ioPrio
IO scheduler priority.

Type: null or integer between 0 and 7 (both inclusive)

Default:

Example:

```
4
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.pipewireBoost.profile.matchers
Process matchers.

Type: null or (list of string)

Default:

```
[ ]
```

Example:

```
[
  "include cgroup=\"/user.slice/*.service\" parent=\"systemd\""
  "emacs"
]
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.pipewireBoost.profile.nice
Niceness.

Type: null or integer between −20 and 19 (both inclusive)

Default:

```
−6
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.pipewireBoost.profile.prio
CPU scheduler priority.

Type: null or integer between 1 and 99 (both inclusive)

Default:

```
null
```

Example:

```
49
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.refreshInterval
Process list poll interval, in seconds

Type: signed integer

Default:

```
60
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.settings.processScheduler.useExecsnoop
Use execsnoop (otherwise poll the precess list periodically).

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.system76−scheduler.useStockConfig
Use the (reasonable and featureful) stock configuration.

When this option is ‘true’, ‘services.system76−scheduler.settings’ are ignored.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/system76−scheduler.nix>

services.systembus−notify.enable
Whether to enable System bus notification support

WARNING: enabling this option (while convenient) should *not* be done on a machine where you do not trust the other users as it allows any other local user to DoS your session by spamming notifications .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/systembus−notify.nix>

services.systemd−lock−handler.enable
Whether to enable systemd−lock−handler.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/systemd−lock−handler.nix>

services.systemd−lock−handler.package
The systemd−lock−handler package to use.

Type: package

Default:

```
pkgs.systemd−lock−handler
```

Declared by:
<nixpkgs/nixos/modules/services/system/systemd−lock−handler.nix>

services.szurubooru.enable
Whether to enable Szurubooru, an image board engine dedicated for small and medium communities.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.client.package
The client package to use.

Type: package

Default:

```
pkgs.szurubooru.client
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.dataDir
The path to the data directory in which Szurubooru will store its data.

Type: absolute path

Default:

```
"/var/lib/szurubooru"
```

Example:

```
"/var/lib/szuru"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.database.host
Host on which the PostgreSQL database runs.

Type: string

Default:

```
"localhost"
```

Example:

```
"192.168.1.2"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.database.name
Name of the PostgreSQL database.

Type: string

Default:

```
szurubooru.database.name
```

Example:

```
"szuru"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.database.passwordFile
A file containing the password for the PostgreSQL user.

Type: absolute path

Example:

```
"/run/secrets/szurubooru−db−password"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/szurubooru.nix>

services.szurubooru.database.port
The port under which PostgreSQL listens to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5432
