NAME

configuration.nix − NixOS system configuration specification

DESCRIPTION

The file */etc/nixos/configuration.nix* contains the declarative specification of your NixOS system configuration. The command **nixos−rebuild** takes this file and realises the system configuration specified therein.

OPTIONS

You can use the following options in *configuration.nix*.

<imports = [pkgs.ghostunnel.services.default]>

This is a **modular service**, which can be imported into a NixOS configuration using the 'system.services' option.

Type: submodule

<imports = [pkgs.ghostunnel.services.default]>.ghostunnel.package

Package to use for ghostunnel

Type: package

Default:

```
"The ghostunnel package that provided this module."
```

Declared by:

<nixpkgs/pkgs/by−name/gh/ghostunnel/service.nix>

<imports = [pkgs.ghostunnel.services.default]>.ghostunnel.allowAll

If true, allow all clients, do not check client cert subject.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/pkgs/by−name/gh/ghostunnel/service.nix>

<imports = [pkgs.ghostunnel.services.default]>.ghostunnel.allowCN

Allow client if common name appears in the list.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/pkgs/by−name/gh/ghostunnel/service.nix>

<imports = [pkgs.ghostunnel.services.default]>.ghostunnel.allowDNS

Allow client if DNS subject alternative name appears in the list.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/pkgs/by−name/gh/ghostunnel/service.nix>

<imports = [pkgs.ghostunnel.services.default]>.ghostunnel.allowOU
Allow client if organizational unit name appears in the list.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/pkgs/by−name/gh/ghostunnel/service.nix>

<imports = [pkgs.ghostunnel.services.default]>.ghostunnel.allowURI
Allow client if URI subject alternative name appears in the list.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/pkgs/by−name/gh/ghostunnel/service.nix>

<imports = [pkgs.ghostunnel.services.default]>.ghostunnel.cacert
Path to CA bundle file (PEM/X509). Uses system trust store if ‘null’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/pkgs/by−name/gh/ghostunnel/service.nix>

<imports = [pkgs.ghostunnel.services.default]>.ghostunnel.cert
Path to certificate (PEM with certificate chain).

Not required if ‘keystore’ is set.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/pkgs/by−name/gh/ghostunnel/service.nix>

<imports = [pkgs.ghostunnel.services.default]>.ghostunnel.disableAuthentication
Disable client authentication, no client certificate will be required.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/pkgs/by−name/gh/ghostunnel/service.nix>

<imports = [pkgs.ghostunnel.services.default]>.ghostunnel.extraArguments
Extra arguments to pass to ‘ghostunnel server’

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/pkgs/by−name/gh/ghostunnel/service.nix>

<imports = [pkgs.ghostunnel.services.default]>.ghostunnel.key
Path to certificate private key (PEM with private key).

Not required if ‘keystore’ is set.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/pkgs/by−name/gh/ghostunnel/service.nix>

<imports = [pkgs.ghostunnel.services.default]>.ghostunnel.keystore
Path to keystore (combined PEM with cert/key, or PKCS12 keystore).

NB: storepass is not supported because it would expose credentials via ‘/proc/*/cmdline’.

Specify this or ‘cert’ and ‘key’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/pkgs/by−name/gh/ghostunnel/service.nix>

<imports = [pkgs.ghostunnel.services.default]>.ghostunnel.listen
Address and port to listen on (can be HOST:PORT, unix:PATH).

Type: string

Declared by:
<nixpkgs/pkgs/by−name/gh/ghostunnel/service.nix>

<imports = [pkgs.ghostunnel.services.default]>.ghostunnel.target
Address to forward connections to (can be HOST:PORT or unix:PATH).

Type: string

Declared by:
<nixpkgs/pkgs/by−name/gh/ghostunnel/service.nix>

<imports = [pkgs.ghostunnel.services.default]>.ghostunnel.unsafeTarget
If set, does not limit target to localhost, 127.0.0.1, [::1], or UNIX sockets.

This is meant to protect against accidental unencrypted traffic on untrusted networks.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/pkgs/by−name/gh/ghostunnel/service.nix>

<imports = [pkgs.ktls−utils.services.default]>
This is a **modular service**, which can be imported into a NixOS configuration using the ‘system.services’ option.

Type: submodule

<imports = [pkgs.ktls−utils.services.default]>.tlshd.package

Package to use for tlshd.

Type: package

Default: The ktls−utils package that provided this module.

Declared by:
<nixpkgs/pkgs/by−name/kt/ktls−utils/service.nix>

<imports = [pkgs.ktls−utils.services.default]>.tlshd.settings
Configuration for tlshd in INI format. See **tlshd.conf**(5) for available options.

Type: attribute set of attribute set of string

Default:

```
{ }
```

Example:

```
{
  "authenticate.server" = {
    "x509.certificate" = "/var/lib/tlshd/cert.pem";
    "x509.private_key" = "/var/lib/tlshd/key.pem";
    "x509.truststore" = "/var/lib/tlshd/truststore.pem";
  };
}
```

Declared by:
<nixpkgs/pkgs/by−name/kt/ktls−utils/service.nix>

<imports = [pkgs.php.services.default]>
This is a **modular service**, which can be imported into a NixOS configuration using the 'system.services' option.

Type: submodule

<imports = [pkgs.php.services.default]>.php−fpm.package
PHP package to use for php−fpm

Type: package

Default: The PHP package that provided this module.

Example:

```
php.buildEnv {
  extensions =
    { all, ... }:
    with all;
    [
      imagick
      opcache
    ];
  extraConfig = "memory_limit=256M";
}
```

Declared by:
<nixpkgs/pkgs/development/interpreters/php/service.nix>

<imports = [pkgs.php.services.default]>.php−fpm.settings

PHP FPM configuration. Refer to **upstream documentation** for details on supported values.

Type: open submodule of attribute set of (string or signed integer or boolean or (open submodule of attribute set of (string or signed integer or boolean)))

Default:

```
{ }
```

Example:

```
{
  log_level = "debug";
  log_limit = 2048;
  mypool = {
    "user" = "php";
    "group" = "php";
    "listen.owner" = "caddy";
    "listen.group" = "caddy";
    "pm" = "dynamic";
    "pm.max_children" = 75;
    "pm.start_servers" = 10;
    "pm.min_spare_servers" = 5;
    "pm.max_spare_servers" = 20;
    "pm.max_requests" = 500;
  }
}
```

Declared by:

<nixpkgs/pkgs/development/interpreters/php/service.nix>

<imports = [pkgs.php.services.default]>.php−fpm.settings.log_level

Error log level.

Type: one of “alert”, “error”, “warning”, “notice”, “debug”

Default:

```
"notice"
```

Declared by:

<nixpkgs/pkgs/development/interpreters/php/service.nix>

<imports = [pkgs.snid.services.default]>

This is a **modular service**, which can be imported into a NixOS configuration using the ‘system.services’ option.

Type: submodule

<imports = [pkgs.snid.services.default]>.snid.package

Package to use for snid.

Type: package

Default:

```
"The snid package that provided this module."
```

Declared by:

<nixpkgs/pkgs/by−name/sn/snid/service.nix>

<imports = [pkgs.snid.services.default]>.snid.backendCidrs

Subnets to which connections may be forwarded. Connections to addresses outside these subnets are rejected. Used in ‘nat46’ and ‘tcp’ modes.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "2001:db8::/64"
  "192.0.2.0/24"
]
```

Declared by:

<nixpkgs/pkgs/by−name/sn/snid/service.nix>

<imports = [pkgs.snid.services.default]>.snid.backendPort

Port number to connect to on the backend in TCP mode. If null, snid uses the same port as the inbound connection.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/pkgs/by−name/sn/snid/service.nix>

<imports = [pkgs.snid.services.default]>.snid.defaultHostname

Hostname to use if a client does not include the SNI extension. If null, SNI−less connections will be terminated with a TLS alert.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/pkgs/by−name/sn/snid/service.nix>

<imports = [pkgs.snid.services.default]>.snid.listen

Addresses to listen on, in go−listener syntax.

Examples: ‘"tcp:443"’, ‘"tcp:0.0.0.0:443"’, ‘"tcp:192.0.2.4:443"’.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "tcp:0.0.0.0:443"
]
```

Declared by:

<nixpkgs/pkgs/by−name/sn/snid/service.nix>

<imports = [pkgs.snid.services.default]>.snid.mode
Proxy mode. One of ‘nat46’, ‘tcp’, or ‘unix’.

Type: one of “nat46”, “tcp”, “unix”

Declared by:
<nixpkgs/pkgs/by−name/sn/snid/service.nix>

<imports = [pkgs.snid.services.default]>.snid.nat46Prefix
IPv6 prefix for the source address when connecting to the backend in NAT46 mode. The client’s IPv4 address is placed in the lower 4 bytes.

Note: this prefix must be routed to the local host, e.g.

```
ip route add local 64:ff9b:1::/96 dev lo
```

Type: null or string

Default:

```
null
```

Example:

```
"64:ff9b:1::"
```

Declared by:
<nixpkgs/pkgs/by−name/sn/snid/service.nix>

<imports = [pkgs.snid.services.default]>.snid.proxyProto
Use PROXY protocol v2 to convey the client IP address to the backend. Applicable in ‘tcp’ and ‘unix’ modes.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/pkgs/by−name/sn/snid/service.nix>

<imports = [pkgs.snid.services.default]>.snid.unixDirectory
Path to the directory containing UNIX domain sockets, used in ‘unix’ mode.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/pkgs/by−name/sn/snid/service.nix>

_module.args
Additional arguments passed to each module in addition to ones like ‘lib’, ‘config’, and ‘pkgs’, ‘modulesPath’.

This option is also available to all submodules. Submodules do not inherit args from their parent module, nor do they provide args to their parent module or sibling submodules. The sole exception to this is the argument ‘name’ which is provided by parent modules to a submodule and contains the attribute name the submodule is bound to, or a unique generated name if it is not bound to an attribute.

Some arguments are already passed by default, of which the following *cannot* be changed with this option:

- *lib*: The nixpkgs library.
- *config*: The results of all options after merging the values from all modules together.

- *options*: The options declared in all modules.
- *specialArgs*: The ‘specialArgs’ argument passed to ‘evalModules’.
- All attributes of *specialArgs*

  Whereas option values can generally depend on other option values thanks to laziness, this does not apply to ‘imports’, which must be computed statically before anything else.

  For this reason, callers of the module system can provide ‘specialArgs’ which are available during import resolution.

  For NixOS, ‘specialArgs’ includes *modulesPath*, which allows you to import extra modules from the nixpkgs package tree without having to somehow make the module aware of the location of the ‘nixpkgs’ or NixOS directories.

```
{ modulesPath, ... }: {
  imports = [
    (modulesPath + "/profiles/minimal.nix")
  ];
}
```

For NixOS, the default value for this option includes at least this argument:

- *pkgs*: The nixpkgs package set according to the **nixpkgs.pkgs** option.

Type: lazy attribute set of raw value

Default:

```
{ }
```

Declared by:
<nixpkgs/lib/modules.nix>

appstream.enable

Whether to install files to support the **AppStream metadata specification**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/appstream.nix>

boot.enableContainers

Whether to enable support for NixOS containers.

Type: boolean

Default:

```
config.containers != { }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

boot.bcache.enable

Whether to enable bcache mount support.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/bcache.nix>

boot.bcachefs.package
The bcachefs−tools package to use. This package should also provide a passthru ‘kernelModule’ attribute to build the out−of−tree kernel module.

Type: package

Default:

```
pkgs.bcachefs-tools
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/bcachefs.nix>

boot.binfmt.addEmulatedSystemsToNixSandbox
Whether to add the **boot.binfmt.emulatedSystems** to **nix.settings.extra−platforms**. Disable this to use remote builders for those platforms, while allowing testing binaries locally.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/binfmt.nix>

boot.binfmt.emulatedSystems
List of systems to emulate. Will also configure Nix to support your new systems. Warning: the builder can execute all emulated systems within the same build, which introduces impurities in the case of cross compilation.

Type: list of (one of “aarch64−linux”, “aarch64_be−linux”, “alpha−linux”, “armv6l−linux”, “armv7l−linux”, “i386−linux”, “i486−linux”, “i586−linux”, “i686−linux”, “i686−windows”, “loongarch64−linux”, “mips−linux”, “mips64−linux”, “mips64−linuxabin32”, “mips64el−linux”, “mips64el−linuxabin32”, “mipsel−linux”, “powerpc−linux”, “powerpc64−linux”, “powerpc64le−linux”, “riscv32−linux”, “riscv64−linux”, “s390x−linux”, “sparc−linux”, “sparc64−linux”, “wasm32−wasi”, “wasm64−wasi”, “x86_64−linux”, “x86_64−windows”)

Default:

```
[ ]
```

Example:

```
[
  "wasm32-wasi"
  "x86_64-windows"
  "aarch64-linux"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/binfmt.nix>

boot.binfmt.preferStaticEmulators

Whether to use static emulators when available.

This enables the kernel to preload the emulator binaries when the binfmt registrations are added, obviating the need to make the emulator binaries available inside chroots and chroot−like sandboxes.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/binfmt.nix>

boot.binfmt.registrations

Extra binary formats to register with the kernel. See **https://www.kernel.org/doc/html/latest/admin−guide/binfmt−misc.html** for more details.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/binfmt.nix>

boot.binfmt.registrations.<name>.fixBinary

Whether to open the interpreter file as soon as the registration is loaded, rather than waiting for a relevant file to be invoked.

See the description of the 'F' flag in the kernel docs for more details.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/binfmt.nix>

boot.binfmt.registrations.<name>.interpreter

The interpreter to invoke to run the program.

Note that the actual registration will point to /run/binfmt/${name}, so the kernel interpreter length limit doesn't apply.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/system/boot/binfmt.nix>

boot.binfmt.registrations.<name>.magicOrExtension

The magic number or extension to match on.

Type: string

Declared by:

<nixpkgs/nixos/modules/system/boot/binfmt.nix>

boot.binfmt.registrations.<name>.mask

A mask to be ANDed with the byte sequence of the file before matching

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/system/boot/binfmt.nix>

boot.binfmt.registrations.<name>.matchCredentials

Whether to launch with the credentials and security token of the binary, not the interpreter (e.g. setuid bit).

See the description of the ‘C’ flag in the kernel docs for more details.

Implies/requires openBinary = true.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/binfmt.nix>

boot.binfmt.registrations.<name>.offset

The byte offset of the magic number used for recognition.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/system/boot/binfmt.nix>

boot.binfmt.registrations.<name>.openBinary

Whether to pass the binary to the interpreter as an open file descriptor, instead of a path.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/binfmt.nix>

boot.binfmt.registrations.<name>.preserveArgvZero

Whether to pass the original argv[0] to the interpreter.

See the description of the ‘P’ flag in the kernel docs for more details;

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/binfmt.nix>

boot.binfmt.registrations.<name>.recognitionType

Whether to recognize executables by magic number or extension.

Type: one of “magic”, “extension”

Default:

```
"magic"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/binfmt.nix>

boot.binfmt.registrations.<name>.wrapInterpreterInShell

Whether to wrap the interpreter in a shell script.

This allows a shell command to be set as the interpreter.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/binfmt.nix>

boot.blacklistedKernelModules

Set of names of kernel modules that should not be loaded automatically by the hardware probing code. This can either be a list of modules or an attrset. In an attrset, names that are set to ‘true’ represent modules that will be blacklisted.

Type: (attribute set of boolean) or (list of string) convertible to it

Default:

```
{ }
```

Example:

```
[
  "cirrusfb"
  "i2c_piix4"
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/modprobe.nix>

boot.bootspec.enableValidation

Whether to enable the validation of bootspec documents for each build. This will introduce Go in the build−time closure as we are relying on **Cuelang** for schema validation. Enable this option if you want to ascertain that your documents are correct .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/activation/bootspec.nix>

boot.bootspec.package

The bootspec package to use.

Type: package

Default:

```
pkgs.bootspec
```

Declared by:

<nixpkgs/nixos/modules/system/activation/bootspec.nix>

boot.bootspec.extensions

User−defined data that extends the bootspec document.

To reduce incompatibility and prevent names from clashing between applications, it is **highly recommended** to use a unique namespace for your extensions.

Type: attribute set of anything

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/activation/bootspec.nix>

boot.consoleLogLevel

The kernel console ‘loglevel’. All Kernel Messages with a log level smaller than this setting will be printed to the console.

Type: signed integer

Default:

```
4
```

Declared by:

<nixpkgs/nixos/modules/system/boot/kernel.nix>

boot.crashDump.enable

If enabled, NixOS will set up a kernel that will boot on crash, and leave the user in systemd rescue to be able to save the crashed kernel dump at /proc/vmcore. It also activates the NMI watchdog.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/misc/crashdump.nix>

boot.crashDump.kernelParams

Parameters that will be passed to the kernel kexec−ed on crash.

Type: list of string

Default:

```
[
  "1"
  "boot.shell_on_fail"
]
```

Declared by:
<nixpkgs/nixos/modules/misc/crashdump.nix>

boot.crashDump.reservedMemory
The amount of memory reserved for the crashdump kernel. If you choose a too high value, dmesg will mention “crashkernel reservation failed”.

Type: string

Default:

```
"128M"
```

Declared by:
<nixpkgs/nixos/modules/misc/crashdump.nix>

boot.devShmSize
Size limit for the /dev/shm tmpfs. Look at **mount**(8), tmpfs size option, for the accepted syntax.

Type: string

Default:

```
"50%"
```

Example:

```
"256m"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

boot.devSize
Size limit for the /dev tmpfs. Look at **mount**(8), tmpfs size option, for the accepted syntax.

Type: string

Default:

```
"5%"
```

Example:

```
"32m"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

boot.extraModprobeConfig
Any additional configuration to be appended to the generated *modprobe.conf*. This is typically used to specify module options. See **modprobe.d**(5) for details.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  options parport_pc io=0x378 irq=7 dma=1
```

Declared by:
<nixpkgs/nixos/modules/system/boot/modprobe.nix>

boot.extraModulePackages

A list of additional packages supplying kernel modules.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ config.boot.kernelPackages.nvidia_x11 ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/kernel.nix>

boot.extraSystemdUnitPaths

Additional paths that get appended to the SYSTEMD_UNIT_PATH environment variable that can contain mutable unit files.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/stage−2.nix>

boot.growPartition

Whether to enable growing the root partition on boot.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/grow−partition.nix>

boot.hardwareScan

Whether to try to load kernel modules for all detected hardware. Usually this does a good job of providing you with the modules you need, but sometimes it can crash the system or cause other nasty effects.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/udev.nix>

boot.initrd.enable

Whether to enable the NixOS initial RAM disk (initrd). This may be needed to perform some initialisation tasks (like mounting network/encrypted file systems) before continuing the boot process.

Type: boolean

Default:

```
!config.boot.isContainer
```

Declared by:
<nixpkgs/nixos/modules/system/boot/stage−1.nix>

boot.initrd.allowMissingModules
Whether the initrd can be built even though modules listed in **boot.initrd.kernelModules** or **boot.initrd.availableKernelModules** are missing from the kernel. This is useful when combining configurations that include a lot of modules, such as **hardware.enableAllHardware**, with kernels that don't provide as many modules as typical NixOS kernels.

Note that enabling this is discouraged. Instead, try disabling individual modules by setting e.g. 'boot.initrd.availableKernelModules.foo = lib.mkForce false;'

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/kernel.nix>

boot.initrd.availableKernelModules
The set of kernel modules in the initial ramdisk used during the boot process. This set must include all modules necessary for mounting the root device. That is, it should include modules for the physical device (e.g., SCSI drivers) and for the file system (e.g., ext3). The set specified here is automatically closed under the module dependency relation, i.e., all dependencies of the modules list here are included automatically. The modules listed here are available in the initrd, but are only loaded on demand (e.g., the ext3 module is loaded automatically when an ext3 filesystem is mounted, and modules for PCI devices are loaded when they match the PCI ID of a device in your system). To force a module to be loaded, include it in **boot.initrd.kernelModules**.

This can either be a list of modules, or an attrset. In an attrset, names that are set to 'true' represent modules that will be included. Note that setting these names to 'false' does not prevent the module from being loaded. For that, use **boot.blacklistedKernelModules**.

Type: (attribute set of boolean) or (list of string) convertible to it

Default:

```
{ }
```

Example:

```
[
  "sata_nv"
  "ext3"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/kernel.nix>

boot.initrd.checkJournalingFS
Whether to run **fsck** on journaling filesystems such as ext3.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/stage−1.nix>

boot.initrd.clevis.enable
Whether to enable Clevis in initrd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/clevis.nix>

boot.initrd.clevis.package
The clevis package to use.

Type: package

Default:

```
pkgs.clevis
```

Declared by:
<nixpkgs/nixos/modules/system/boot/clevis.nix>

boot.initrd.clevis.devices
Encrypted devices that need to be unlocked at boot using Clevis

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/clevis.nix>

boot.initrd.clevis.devices.<name>.secretFile
Clevis JWE file used to decrypt the device at boot, in concert with the chosen pin (one of TPM2, Tang server, or SSS).

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/system/boot/clevis.nix>

boot.initrd.clevis.useTang
Whether the Clevis JWE file used to decrypt the devices uses a Tang server as a pin.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/clevis.nix>

boot.initrd.compressor
The compressor to use on the initrd image. May be any of:

- The name of one of the predefined compressors, see *pkgs/build−support/kernel/initrd−compressor−meta.nix* for the definitions.
- A function which, given the nixpkgs package set, returns the path to a compressor tool, e.g. ‘pkgs: "${pkgs.pigz}/bin/pigz"’
- (not recommended, because it does not work when cross−compiling) the full path to a compressor

tool, e.g. ‘"${pkgs.pigz}/bin/pigz"’

The given program should read data from stdin and write it to stdout compressed.

Type: string or function that evaluates to a(n) string

Default: zstd if the kernel supports it (5.9+), gzip if not

Example:

```
"xz"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/stage-1.nix>

boot.initrd.compressorArgs
Arguments to pass to the compressor for the initrd image, or null to use the compressor’s defaults.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/stage-1.nix>

boot.initrd.extraFiles
Extra files to link and copy in to the initrd.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/stage-1.nix>

boot.initrd.extraFiles.<name>.source
The object to make available inside the initrd.

Type: package

Declared by:
<nixpkgs/nixos/modules/system/boot/stage-1.nix>

boot.initrd.extraFirmwarePaths
Other firmware files (relative to ‘"${config.hardware.firmware}/lib/firmware"’) to include in the final initrd we are building.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/stage-1.nix>

boot.initrd.includeDefaultModules
This option, if set, adds a collection of default kernel modules to **boot.initrd.availableKernelModules** and **boot.initrd.kernelModules**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/kernel.nix>

boot.initrd.kernelModules
Set of modules that are always loaded by the initrd.

This can either be a list of modules, or an attrset. In an attrset, names that are set to 'true' represent modules that will be included. Note that setting these names to 'false' does not prevent the module from being loaded. For that, use **boot.blacklistedKernelModules**.

Type: (attribute set of boolean) or (list of string) convertible to it

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/kernel.nix>

boot.initrd.luks.cryptoModules
A list of cryptographic kernel modules needed to decrypt the root device(s). The default includes all common modules.

Type: list of string

Default:

```
[
  "aes"
  "blowfish"
  "twofish"
  "serpent"
  "cbc"
  "xts"
  "lrw"
  "sha1"
  "sha256"
  "sha512"
  "af_alg"
  "algif_skcipher"
  "cryptd"
  "input_leds"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices
The encrypted disk that should be opened before the root filesystem is mounted. Both LVM−over−LUKS and LUKS−over−LVM setups are supported. The unencrypted devices can be accessed as */dev/mapper/«name»*.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  luksroot = {
    device = "/dev/disk/by−uuid/430e9eff−d852−4f68−aa3b−2fa359 \
```

```
9ebe08";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.allowDiscards
Whether to allow TRIM requests to the underlying device. This option has security implications; please read the LUKS documentation before activating it. This option is incompatible with authenticated encryption (dm−crypt stacked over dm−integrity).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.bypassWorkqueues
Whether to bypass dm−crypt's internal read and write workqueues. Enabling this should improve performance on SSDs; see **here** for more information. Needs Linux 5.9 or later.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.crypttabExtraOpts
Only used with systemd stage 1.

Extra options to append to the last column of the generated crypttab file.

Type: list of (optionally newline−terminated) single−line string

Default:

```
[ ]
```

Example:

```
[
  "_netdev"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.device
Path of the underlying encrypted block device.

Type: string

Example:

```
"/dev/disk/by−uuid/430e9eff−d852−4f68−aa3b−2fa3599ebe08"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.fallbackToPassword

Whether to fallback to interactive passphrase prompt if the keyfile cannot be found. This will prevent unattended boot should the keyfile go missing.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.fido2.credential

The FIDO2 credential ID.

Type: null or string

Default:

```
null
```

Example:

```
"f1d00200d8dc783f7fb1e10ace8da27f8312d72692abfca2f7e4960a73f48e82e1 \
f7571f6ebfcee9fb434f9886ccc8fcc52a6614d8d2"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.fido2.credentials

List of FIDO2 credential IDs.

Use this if you have multiple FIDO2 keys you want to use for the same luks device.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "f1d00200d8dc783f7fb1e10ace8da27f8312d72692abfca2f7e4960a73f48e82 \
e1f7571f6ebfcee9fb434f9886ccc8fcc52a6614d8d2"
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.fido2.gracePeriod

Time in seconds to wait for the FIDO2 key.

Type: signed integer

Default:

```
10
```

Declared by:

<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.fido2.passwordLess
Defines whatever to use an empty string as a default salt.

Enable only when your device is PIN protected, such as **Trezor**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.gpgCard
The option to use this LUKS device with a GPG encrypted luks password by the GPG Smartcard. If null (the default), GPG−Smartcard will be disabled for this device.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.gpgCard.encryptedPass
Path to the GPG encrypted passphrase.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.gpgCard.gracePeriod
Time in seconds to wait for the GPG Smartcard.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.gpgCard.publicKey
Path to the Public Key.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.header
The name of the file or block device that should be used as header for the encrypted device.

Type: null or string

Default:

```
null
```

Example:

```
"/root/header.img"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.keyFile
The name of the file (can be a raw device or a partition) that should be used as the decryption key for the encrypted device. If not specified, you will be prompted for a passphrase instead.

Type: null or string

Default:

```
null
```

Example:

```
"/dev/sdb1"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.keyFileOffset
The offset of the key file. Use this in combination with ‘keyFileSize’ to use part of a file as key file (often the case if a raw device or partition is used as a key file). If not specified, the key begins at the first byte of ‘keyFile’.

Type: null or signed integer

Default:

```
null
```

Example:

```
4096
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.keyFileSize
The size of the key file. Use this if only the beginning of the key file should be used as a key (often the case if a raw device or partition is used as key file). If not specified, the whole ‘keyFile’ will be used decryption, instead of just the first ‘keyFileSize’ bytes.

Type: null or signed integer

Default:

```
null
```

Example:

```
4096
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.keyFileTimeout
The amount of time in seconds for a keyFile to appear before timing out and trying passwords.

Type: null or signed integer

Default:

```
null
```

Example:

```
5
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.postOpenCommands
Commands that should be run right after we have mounted our LUKS device.

Type: strings concatenated with “\n”

Default:
```
""
```

Example:
```
umount /tmp/persistent
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.preLVM
Whether the luksOpen will be attempted before LVM scan or after it.

Type: boolean

Default:
```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.preOpenCommands
Commands that should be run right before we try to mount our LUKS device. This can be useful, if the keys needed to open the drive is on another partition.

Type: strings concatenated with “\n”

Default:
```
""
```

Example:
```
mkdir -p /tmp/persistent
mount -t zfs rpool/safe/persistent /tmp/persistent
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.tryEmptyPassphrase
If keyFile fails then try an empty passphrase first before prompting for password.

Type: boolean

Default:
```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.yubikey
The options to use for this LUKS device in YubiKey−PBA. If null (the default), YubiKey−PBA will be disabled for this device.

Type: null or (submodule)

Default:
```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.yubikey.gracePeriod
Time in seconds to wait for the YubiKey.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.yubikey.iterationStep
How much the iteration count for PBKDF2 is increased at each successful authentication.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.yubikey.keyLength
Length of the LUKS slot key derived with PBKDF2 in byte.

Type: signed integer

Default:

```
64
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.yubikey.saltLength
Length of the new salt in byte (64 is the effective maximum).

Type: signed integer

Default:

```
16
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.yubikey.slot
Which slot on the YubiKey to challenge.

Type: signed integer

Default:

```
2
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.yubikey.storage.device
An unencrypted device that will temporarily be mounted in stage−1. Must contain the current salt to create the challenge for this LUKS device.

Type: absolute path

Default:

```
"/dev/sda1"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.yubikey.storage.fsType
The filesystem of the unencrypted device.

Type: string

Default:

```
"vfat"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.yubikey.storage.path
Absolute path of the salt on the unencrypted device with that device's root directory as "/".

Type: string

Default:

```
"/crypt-storage/default"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.devices.<name>.yubikey.twoFactor
Whether to use a passphrase and a YubiKey (true), or only a YubiKey (false).

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.fido2Support
Enables support for authenticating with FIDO2 devices.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.gpgSupport
Enables support for authenticating with a GPG encrypted password.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.mitigateDMAAttacks
Unless enabled, encryption keys can be easily recovered by an attacker with physical access to any machine with PCMCIA, ExpressCard, ThunderBolt or FireWire port. More information is available at **https://en.wikipedia.org/wiki/DMA_attack**.

This option blacklists FireWire drivers, but doesn't remove them. You can manually load the drivers if

you need to use a FireWire device, but don't forget to unload them!

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.reusePassphrases
When opening a new LUKS device try reusing last successful passphrase.

Useful for mounting a number of devices that use the same passphrase without retyping it several times.

Such setup can be useful if you use **cryptsetup luksSuspend**. Different LUKS devices will still have different master keys even when using the same passphrase.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.luks.yubikeySupport
Enables support for authenticating with a YubiKey on LUKS devices. See the NixOS wiki for information on how to properly setup a LUKS device and a YubiKey to work with this feature.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/luksroot.nix>

boot.initrd.network.enable
Add network connectivity support to initrd. The network may be configured using the 'ip' kernel parameter, as described in **the kernel documentation**. Otherwise, if **networking.useDHCP** is enabled, an IP address is acquired using DHCP.

You should add the module(s) required for your network card to boot.initrd.availableKernelModules. 'lspci −v | grep −iA8 'network\|ethernet'' will tell you which.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/initrd−network.nix>

boot.initrd.network.flushBeforeStage2
Whether to clear the configuration of the interfaces that were set up in the initrd right before stage 2 takes over. Stage 2 will do the regular network configuration based on the NixOS networking options.

The default is false when systemd is enabled in initrd, because the systemd−networkd documentation suggests it.

Type: boolean

Default:

```
"!config.boot.initrd.systemd.enable"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/initrd-network.nix>

boot.initrd.network.ifstate.enable
Whether to enable initrd networking using IfState.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ifstate.nix>

boot.initrd.network.ifstate.package
The initrd IfState package to use.

Type: package

Default:

```
pkgs.ifstate.override { withConfigValidation = false; }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ifstate.nix>

boot.initrd.network.ifstate.allowIfstateToDrasticlyIncreaseInitrdSize
IfState in initrd drastically increases the size of initrd, your boot partition may be too small and/or you may have significantly fewer generations. By setting this option, you acknowledge this fact and keep it in mind when reporting issues.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ifstate.nix>

boot.initrd.network.ifstate.cleanupSettings
Content of IfState's initrd cleanup configuration file. See **https://ifstate.net/2.0/schema/** for details. This configuration gets applied before systemd switches to stage two. The goal is to deconfigurate the whole network in order to prevent access to services, before the firewall is configured. The stage two IfState configuration will start after the firewall is configured.

Type: YAML 1.1 value

Default:

```
{
  interfaces = { };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ifstate.nix>

boot.initrd.network.ifstate.settings

Content of IfState's initrd configuration file. See **https://ifstate.net/2.2/schema/** for details.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ifstate.nix>

boot.initrd.network.openvpn.enable

Starts an OpenVPN client during initrd boot. It can be used to e.g. remotely accessing the SSH service controlled by **boot.initrd.network.ssh** or other network services included. Service is killed when stage−1 boot is finished.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/initrd−openvpn.nix>

boot.initrd.network.openvpn.configuration

The configuration file for OpenVPN.

Warning
Unless your bootloader supports initrd secrets, this configuration is stored insecurely in the global Nix store.

Type: absolute path

Example:

```
./configuration.ovpn
```

Declared by:

<nixpkgs/nixos/modules/system/boot/initrd−openvpn.nix>

boot.initrd.network.postCommands

Shell commands to be executed after stage 1 of the boot has initialised the network.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/initrd−network.nix>

boot.initrd.network.ssh.enable

Start SSH service during initrd boot. It can be used to debug failing boot on a remote server, enter passphrase for an encrypted partition etc. Service is killed when stage−1 boot is finished.

The sshd configuration is largely inherited from **services.openssh**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/initrd-ssh.nix>

boot.initrd.network.ssh.authorizedKeyFiles
Authorized keys taken from files for the root user on initrd. You can combine the 'authorizedKeyFiles' and 'authorizedKeys' options.

Type: list of absolute path

Default:

```
config.users.users.root.openssh.authorizedKeys.keyFiles
```

Declared by:
<nixpkgs/nixos/modules/system/boot/initrd-ssh.nix>

boot.initrd.network.ssh.authorizedKeys
Authorized keys for the root user on initrd. You can combine the 'authorizedKeys' and 'authorizedKeyFiles' options.

Type: list of string

Default:

```
config.users.users.root.openssh.authorizedKeys.keys
```

Example:

```
[
  "ssh-rsa AAAAB3NzaC1yc2etc/etc/etcjwrsh8e596z6J0l7 example@host"
  "ssh-ed25519 AAAAC3NzaCetcetera/etceteraJZMfk3QPfQ foo@bar"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/initrd-ssh.nix>

boot.initrd.network.ssh.extraConfig
Verbatim contents of *sshd_config*.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/initrd-ssh.nix>

boot.initrd.network.ssh.hostKeys
Specify SSH host keys to import into the initrd.

To generate keys, use **ssh-keygen**(1) as root:

```
ssh-keygen -t rsa -N "" -f /etc/secrets/initrd/ssh_host_rsa_key
ssh-keygen -t ed25519 -N "" -f /etc/secrets/initrd/ssh_host_ed2 \
5519_key
```

Warning
Unless your bootloader supports initrd secrets, these keys are stored insecurely in the global Nix store. Do NOT use your regular SSH host private keys for this purpose or you'll expose them to regular users!

Additionally, even if your initrd supports secrets, if you're using initrd SSH to unlock an encrypted disk then using your regular host keys exposes the private keys on your unencrypted boot partition.

Type: list of (string or absolute path)

Default:

```
[ ]
```

Example:

```
[
  "/etc/secrets/initrd/ssh_host_rsa_key"
  "/etc/secrets/initrd/ssh_host_ed25519_key"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/initrd-ssh.nix>

boot.initrd.network.ssh.ignoreEmptyHostKeys
Allow leaving **config.boot.initrd.network.ssh.hostKeys** empty, to deploy ssh host keys out of band.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/initrd-ssh.nix>

boot.initrd.network.ssh.port
Port on which SSH initrd service should listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
22
```

Declared by:
<nixpkgs/nixos/modules/system/boot/initrd-ssh.nix>

boot.initrd.network.ssh.shell
Login shell of the remote user. Can be used to limit actions user can do.

Type: null or string

Default:

```
"\"/bin/ash\""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/initrd-ssh.nix>

boot.initrd.network.udhcpc.enable
Enables the udhcpc service during stage 1 of the boot process. This defaults to **networking.useDHCP**. Therefore, this useful if useDHCP is off but the initramfs should do dhcp.

Type: boolean

Default:

```
config.networking.useDHCP
```

Declared by:
<nixpkgs/nixos/modules/system/boot/initrd-network.nix>

boot.initrd.network.udhcpc.extraArgs

Additional command−line arguments passed verbatim to udhcpc if **boot.initrd.network.enable** and **boot.initrd.network.udhcpc.enable** are enabled.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/initrd−network.nix>

boot.initrd.nix−store−veritysetup.enable

Whether to enable nix−store−veritysetup.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/nix−store−veritysetup.nix>

boot.initrd.postDeviceCommands

Shell commands to be executed immediately after stage 1 of the boot has loaded kernel modules and created device nodes in */dev*.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/stage−1.nix>

boot.initrd.postMountCommands

Shell commands to be executed immediately after the stage 1 filesystems have been mounted.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/stage−1.nix>

boot.initrd.postResumeCommands

Shell commands to be executed immediately after attempting to resume.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/stage−1.nix>

boot.initrd.preDeviceCommands

Shell commands to be executed before udev is started to create device nodes.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/stage−1.nix>

boot.initrd.preFailCommands

Shell commands to be executed before the failure prompt is shown.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/stage−1.nix>

boot.initrd.preLVMCommands

Shell commands to be executed immediately before LVM discovery.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/stage−1.nix>

boot.initrd.prepend

Other initrd files to prepend to the final initrd we are building.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/stage−1.nix>

boot.initrd.secrets

Secrets to append to the initrd. The attribute name is the path the secret should have inside the initrd, the value is the path it should be copied from (or null for the same path inside and out).

Note that ‘nixos−rebuild switch’ will generate the initrd also for past generations, so if secrets are moved or deleted you will also have to garbage collect the generations that use those secrets.

Type: attribute set of (null or absolute path)

Default:

```
{ }
```

Example:

```
{ "/etc/dropbear/dropbear_rsa_host_key" =
    ./secret−dropbear−key;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/stage-1.nix>

boot.initrd.services.bcache.enable
This will only be used when systemd is used in stage 1.

Whether to enable bcache support in the initrd.

Type: boolean

Default:

```
config.boot.initrd.systemd.enable && config.boot.bcache.enable
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/bcache.nix>

boot.initrd.services.lvm.enable
This will only be used when systemd is used in stage 1.

Whether to enable booting from LVM2 in the initrd.

Type: boolean

Default:

```
config.boot.initrd.systemd.enable && config.services.lvm.enable
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/lvm.nix>

boot.initrd.services.resolved.enable
Whether to enable resolved for stage 1 networking. Uses the toplevel 'services.resolved' options for 'resolved.conf'

Type: unspecified value

Default:

```
"config.boot.initrd.systemd.network.enable"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/resolved.nix>

boot.initrd.services.udev.packages
This will only be used when systemd is used in stage 1.

List of packages containing **udev** rules that will be copied to stage 1. All files found in *«pkg»/etc/udev/rules.d* and *«pkg»/lib/udev/rules.d* will be included.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/udev.nix>

boot.initrd.services.udev.binPackages

This will only be used when systemd is used in stage 1.

Packages to search for binaries that are referenced by the udev rules in stage 1. This list always contains /bin of the initrd.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/udev.nix>

boot.initrd.services.udev.rules

udev rules to include in the initrd *only*. They'll be written into file *99−local.rules*. Thus they are read and applied after the essential initrd rules.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
  SUBSYSTEM=="net", ACTION=="add", DRIVERS=="?*", ATTR{address}=="0 \
0:1D:60:B9:6D:4F", KERNEL=="eth*", NAME="my_fast_network_card"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/udev.nix>

boot.initrd.stage1Greeting

The greeting message displayed during NixOS stage 1 boot.

Type: string

Default:

```
"<<< ${config.system.nixos.distroName} Stage 1 >>>"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/stage−1.nix>

boot.initrd.supportedFilesystems

Names of supported filesystem types, or an attribute set of file system types and their state. The set form may be used together with 'lib.mkForce' to explicitly disable support for specific filesystems, e.g. to disable ZFS with an unsupported kernel.

Type: (attribute set of boolean) or (list of string) convertible to it

Default:

```
{ }
```

Example:

```
{
  btrfs = true;
  zfs = lib.mkForce false;
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/stage−1.nix>

boot.initrd.systemd.enable

Whether to enable systemd in initrd. The unit options such as **boot.initrd.systemd.services** are the same as their stage 2 counterparts such as **systemd.services**, except that ‘restartTriggers’ and ‘reloadTriggers’ are not supported.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.package

The systemd package to use.

Type: package

Default:

```
config.systemd.package
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.packages

Packages providing systemd units and hooks.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.systemd-cryptsetup-generator ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.additionalUpstreamUnits

Additional units shipped with systemd that shall be enabled.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "debug-shell.service"
  "systemd-quotacheck.service"
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.automounts

Definition of systemd automount units. This is a list instead of an attrSet, because systemd mandates the names to be derived from the ‘where’ attribute.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.contents

Set of files that have to be linked into the initrd

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/etc/machine-id".source = /etc/machine-id;
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.contents.<name>.enable

Whether to enable copying of this file and symlinking it.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.contents.<name>.dlopen.features

Features to enable via dlopen ELF notes. These will be in addition to anything included via ‘usePriority’, regardless of their priority.

Type: list of (optionally newline−terminated) single−line string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.contents.<name>.dlopen.usePriority

Priority of dlopen ELF notes to include. “required” is minimal, “recommended” includes “required”, and “suggested” includes “recommended”.

See: **https://systemd.io/ELF_DLOPEN_METADATA/**

Type: one of “required”, “recommended”, “suggested”

Default:

```
"recommended"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.contents.<name>.source
Path of the source file.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.contents.<name>.target
Path of the symlink.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.contents.<name>.text
Text of the file.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.dbus.enable
Whether to enable dbus in stage 1.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/dbus.nix>

boot.initrd.systemd.dmVerity.enable
Mount verity−protected block devices in the initrd.

Enabling this option allows to use ‘systemd−veritysetup’ and ‘systemd−veritysetup−generator’ in the initrd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/dm-verity.nix>

boot.initrd.systemd.emergencyAccess
Set to true for unauthenticated emergency access, and false or null for no emergency access.

Can also be set to a hashed super user password to allow authenticated access to the emergency mode.

For emergency access after initrd, use 'systemd.enableEmergencyMode' instead.

Type: boolean or null or (string, not containing newlines or colons)

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.extraBin
Tools to add to /bin

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  umount = "${pkgs.util-linux}/bin/umount";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.fido2.enable
Whether to enable systemd FIDO2 support.

Type: boolean

Default:

```
config.boot.initrd.systemd.package.withFido2
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/fido2.nix>

boot.initrd.systemd.groups
Groups to include in initrd.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/config/users-groups.nix>

boot.initrd.systemd.groups.<name>.gid

ID of the group in initrd.

Type: signed integer

Default:

```
config.users.groups.${name}.gid
```

Declared by:

<nixpkgs/nixos/modules/config/users−groups.nix>

boot.initrd.systemd.initrdBin

Packages to include in /bin for the stage 1 emergency shell.

Type: list of package

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.managerEnvironment

Environment variables of PID 1. These variables are *not* passed to started units.

Type: attribute set of (null or string or absolute path or package)

Default:

```
{
  PATH = "/bin:/sbin";
}
```

Example:

```
{
  SYSTEMD_LOG_LEVEL = "debug";
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.mounts

Definition of systemd mount units. This is a list instead of an attrSet, because systemd mandates the names to be derived from the ‘where’ attribute.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.network.enable

Whether to enable networkd or not.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

boot.initrd.systemd.network.config
Definition of global systemd network config.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

boot.initrd.systemd.network.links
Definition of systemd network links.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

boot.initrd.systemd.network.netdevs
Definition of systemd network devices.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

boot.initrd.systemd.network.networks
Definition of systemd networks.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>
<nixpkgs/nixos/modules/system/boot/networkd.nix>

boot.initrd.systemd.network.wait−online.enable
Whether to enable the systemd−networkd−wait−online service.

systemd−networkd−wait−online can timeout and fail if there are no network interfaces available for it to manage. When systemd−networkd is enabled but a different service is responsible for managing the system's internet connection (for example, NetworkManager or connman are used to manage WiFi connections), this service is unnecessary and can be disabled.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

boot.initrd.systemd.network.wait−online.anyInterface
Whether to consider the network online when any interface is online, as opposed to all of them. This is useful on portable machines with a wired and a wireless interface, for example.

This is on by default if **networking.useDHCP** is enabled.

Type: boolean

Default:

```
"config.networking.useDHCP"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

boot.initrd.systemd.network.wait−online.extraArgs
Extra command−line arguments to pass to systemd−networkd−wait−online. These also affect per−interface ‘systemd−network−wait−online@’ services.

See **systemd−networkd−wait−online.service**(8) for all available options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

boot.initrd.systemd.network.wait−online.ignoredInterfaces
Network interfaces to be ignored when deciding if the system is online.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "wg0"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

boot.initrd.systemd.network.wait−online.timeout
Time to wait for the network to come online, in seconds. Set to 0 to disable.

Type: unsigned integer, meaning >=0

Default:

```
120
```

Example:

Declared by:
<nixpkgs/nixos/modules/system/boot/networkd.nix>

boot.initrd.systemd.paths

Definition of systemd path units.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.repart.enable

Grow and add partitions to a partition table at boot time in the initrd. systemd−repart only works with GPT partition tables.

To run systemd−repart after the initrd, see ‘options.systemd.repart.enable’.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/repart.nix>

boot.initrd.systemd.repart.device

The device to operate on.

If ‘device == null’, systemd−repart will operate on the device backing the root partition. So in order to dynamically *create* the root partition in the initrd you need to set a device.

Type: null or string

Default:

```
null
```

Example:

```
"/dev/vda"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/repart.nix>

boot.initrd.systemd.repart.discard

Controls whether to issue the BLKDISCARD I/O control command on the space taken up by any added partitions or on the space in between them. Usually, it’s a good idea to issue this request since it tells the underlying hardware that the covered blocks shall be considered empty, improving performance.

See **systemd−repart**(8) for details.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/repart.nix>

boot.initrd.systemd.repart.empty

Controls how to operate on empty devices that contain no partition table yet. See **systemd−repart**(8) for details.

Type: one of “refuse”, “allow”, “require”, “force”, “create”

Default:

```
"refuse"
```

Example:

```
"require"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/repart.nix>

boot.initrd.systemd.repart.extraArgs

Extra command−line arguments to pass to systemd−repart.

See **systemd−repart**(8) for all available options.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/repart.nix>

boot.initrd.systemd.root

Controls how systemd will interpret the root FS in initrd. See **kernel−command−line**(7). NixOS currently does not allow specifying the root file system itself this way. Instead, the ‘fstab’ value is used in order to interpret the root file system specified with the ‘fileSystems’ option. If root shall be omitted, set this option to ‘null’.

Type: null or one of “fstab”, “gpt−auto”

Default:

```
"fstab"
```

Example:

```
"gpt-auto"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.services

Definition of systemd service units.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.settings.Manager

Options for the global systemd service manager used in initrd. See **systemd−system.conf**(5) man page for available options.

Type: open submodule of attribute set of (systemd option)

Default:

```
{
  DefaultEnvironment = "PATH=/bin:/sbin";
}
```

Example:

```
{
  KExecWatchdogSec = "5min";
  RebootWatchdogSec = "10min";
  RuntimeWatchdogSec = "30s";
  WatchdogDevice = "/dev/watchdog";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.slices
Definition of slice configurations.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.sockets
Definition of systemd socket units.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.storePaths
Store paths to copy into the initrd as well.

Type: list of ((submodule) or ((optionally newline−terminated) single−line string or package) convertible to it)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.storePaths.*.enable
Whether to enable copying of this file and symlinking it.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.storePaths.*.dlopen.features
Features to enable via dlopen ELF notes. These will be in addition to anything included via ‘usePriority’, regardless of their priority.

Type: list of (optionally newline−terminated) single−line string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.storePaths.*.dlopen.usePriority
Priority of dlopen ELF notes to include. “required” is minimal, “recommended” includes “required”, and “suggested” includes “recommended”.

See: **https://systemd.io/ELF_DLOPEN_METADATA/**

Type: one of “required”, “recommended”, “suggested”

Default:

```
"recommended"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.storePaths.*.source
Path of the source file.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.storePaths.*.target
Path of the symlink.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.suppressedStorePaths
Store paths specified in the storePaths option that should not be copied.

Type: list of (optionally newline−terminated) single−line string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.suppressedUnits

A list of units to skip when generating system systemd configuration directory. This has priority over upstream units, **boot.initrd.systemd.units**, and **boot.initrd.systemd.additionalUpstreamUnits**. The main purpose of this is to prevent a upstream systemd unit from being added to the initrd with any modifications made to it by other NixOS modules.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "systemd-backlight@.service"
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.targets

Definition of systemd target units.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.timers

Definition of systemd timer units.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.tmpfiles.settings

Similar to **systemd.tmpfiles.settings** but the rules are only applied by systemd−tmpfiles before ‘initrd−switch−root.target’.

See **bootup**(7).

Type: attribute set of attribute set of attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "10-mypackage" = {
    "/var/lib/my-service/statefolder" = {
      d = {
        group = "root";
        mode = "0755";
        user = "root";
      };
```

```
      };
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

boot.initrd.systemd.tmpfiles.settings.<config−name>.<path>.<tmpfiles−type>.age
Delete a file when it reaches a certain age.

If a file or directory is older than the current time minus the age field, it is deleted.

If set to ‘"−"’ no automatic clean−up is done.

Type: string

Default:

```
"−"
```

Example:

```
"10d"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

boot.initrd.systemd.tmpfiles.settings.<config−name>.<path>.<tmpfiles−type>.argument
An argument whose meaning depends on the type of operation.

Please see the upstream documentation for the meaning of this parameter in different situations: **tmpfiles.d**(5)

Type: string

Default:

```
""
```

Example:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

boot.initrd.systemd.tmpfiles.settings.<config−name>.<path>.<tmpfiles−type>.group
The group of the file.

This may either be a numeric ID or a user/group name.

If omitted or when set to ‘"−"’, the user and group of the user who invokes systemd−tmpfiles is used.

Type: string

Default:

```
"−"
```

Example:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

boot.initrd.systemd.tmpfiles.settings.<config−name>.<path>.<tmpfiles−type>.mode

The file access mode to use when creating this file or directory.

Type: string

Default:

```
"−"
```

Example:

```
"0755"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

boot.initrd.systemd.tmpfiles.settings.<config−name>.<path>.<tmpfiles−type>.type

The type of operation to perform on the file.

The type consists of a single letter and optionally one or more modifier characters.

Please see the upstream documentation for the available types and more details: **tmpfiles.d**(5)

Type: string

Default:

```
"‹tmpfiles−type›"
```

Example:

```
"d"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

boot.initrd.systemd.tmpfiles.settings.<config−name>.<path>.<tmpfiles−type>.user

The user of the file.

This may either be a numeric ID or a user/group name.

If omitted or when set to ‘"−"’, the user and group of the user who invokes systemd−tmpfiles is used.

Type: string

Default:

```
"−"
```

Example:

```
"root"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/tmpfiles.nix>

boot.initrd.systemd.tpm2.enable

Whether to enable systemd initrd TPM2 support.

Type: boolean

Default:

```
"boot.initrd.systemd.package.withTpm2Units"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/tpm2.nix>

boot.initrd.systemd.units
Definition of systemd units.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/initrd.nix>

boot.initrd.systemd.users
Users to include in initrd.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

boot.initrd.systemd.users.<name>.group
Group the user belongs to in initrd.

Type: (optionally newline−terminated) single−line string

Default:

```
config.users.users.${name}.group
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

boot.initrd.systemd.users.<name>.shell
The path to the user’s shell in initrd.

Type: absolute path, not containing newlines or colons

Default:

```
${pkgs.shadow}/bin/nologin
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

boot.initrd.systemd.users.<name>.uid
ID of the user in initrd.

Type: signed integer

Default:

```
config.users.users.${name}.uid
```

Declared by:
<nixpkgs/nixos/modules/config/users−groups.nix>

boot.initrd.unl0kr.enable
Whether to enable the unl0kr on−screen keyboard in initrd to unlock LUKS.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/unl0kr.nix>

boot.initrd.unl0kr.package
The buffybox package to use.

Type: package

Default:

```
pkgs.buffybox
```

Declared by:
<nixpkgs/nixos/modules/system/boot/unl0kr.nix>

boot.initrd.unl0kr.allowVendorDrivers
Whether to load additional drivers for certain vendors (I.E: Wacom, Intel, etc.)

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/unl0kr.nix>

boot.initrd.unl0kr.settings
Configuration for ‘unl0kr’.

See ‘unl0kr.conf(5)’ for supported values.

Alternatively, visit ‘https://gitlab.postmarketos.org/postmarketOS/buffybox/−/blob/3.2.0/unl0kr/unl0kr.conf’

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  general.animations = true;
  general.backend = "drm";
  theme = {
    default = "pmos-dark";
    alternate = "pmos-light";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/unl0kr.nix>

boot.initrd.verbose

Verbosity of the initrd. Please note that disabling verbosity removes only the mandatory messages generated by the NixOS scripts. For a completely silent boot, you might also want to set the two following configuration options:

- ‘boot.consoleLogLevel = 0;’
- ‘boot.kernelParams = ["quiet" "udev.log_level=3"];’

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/stage−1.nix>

boot.isContainer

Whether this NixOS machine is a lightweight container running in another NixOS system.

Type: boolean

Default:

```
"config.boot.isNspawnContainer"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

boot.isNspawnContainer

Whether the machine is running in an nspawn container. This option is added because **boot.isContainer** is heavily used for non−nspawn environments as well, hence nspawn−specific settings are guarded by this option.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

boot.iscsi−initiator.discoverPortal

iSCSI portal to boot from.

Type: null or string

Default:

```
null
```

Example:

```
"192.168.1.1:3260"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/iscsi/root−initiator.nix>

boot.iscsi−initiator.extraConfig

Extra lines to append to /etc/iscsid.conf

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iscsi/root−initiator.nix>

boot.iscsi−initiator.extraConfigFile
Append an additional file's contents to '/etc/iscsid.conf'. Use a non−store path and store passwords in this file. Note: the file specified here must be available in the initrd, see: 'boot.initrd.secrets'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iscsi/root−initiator.nix>

boot.iscsi−initiator.extraIscsiCommands
Extra iscsi commands to run in the initrd.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iscsi/root−initiator.nix>

boot.iscsi−initiator.logLevel
Higher numbers elicits more logs.

Type: signed integer

Default:

```
1
```

Example:

```
8
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iscsi/root−initiator.nix>

boot.iscsi−initiator.loginAll
Do not log into a specific target on the portal, but to all that we discover. This overrides setting target.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iscsi/root−initiator.nix>

boot.iscsi−initiator.name
Name of the iSCSI initiator to boot from. Note, booting from iscsi requires networkd based networking.

Type: null or string

Default:

```
null
```

Example:

```
"iqn.2020−08.org.linux−iscsi.initiatorhost:example"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iscsi/root−initiator.nix>

boot.iscsi−initiator.target
Name of the iSCSI target to boot from.

Type: null or string

Default:

```
null
```

Example:

```
"iqn.2020−08.org.linux−iscsi.targethost:example"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iscsi/root−initiator.nix>

boot.kernel.enable
Whether to enable the Linux kernel. This is useful for systemd−like containers which do not require a kernel.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/kernel.nix>

boot.kernel.randstructSeed
Provides a custom seed for the *RANDSTRUCT* security option of the Linux kernel. Note that *RANDSTRUCT* is only enabled in NixOS hardened kernels. Using a custom seed requires building the kernel and dependent packages locally, since this customization happens at build time.

Type: string

Default:

```
""
```

Example:

```
"my secret seed"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/kernel.nix>

boot.kernel.sysctl
Runtime parameters of the Linux kernel, as set by **sysctl**(8). Note that sysctl parameters names must be enclosed in quotes (e.g. ‘"vm.swappiness"’ instead of ‘vm.swappiness’). The value of each parameter may be a string, integer, boolean, or null (signifying the option will not appear at all).

Type: open submodule of attribute set of (sysctl option value)

Default:

```
{ }
```

Example:

```
{ "net.ipv4.tcp_syncookies" = false; "vm.swappiness" = 60; }
```

Declared by:
<nixpkgs/nixos/modules/config/sysctl.nix>

boot.kernel.sysctl."net.core.rmem_max"
The maximum receive socket buffer size in bytes. In case of conflicting values, the highest will be used.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/sysctl.nix>

boot.kernel.sysctl."net.core.wmem_max"
The maximum send socket buffer size in bytes. In case of conflicting values, the highest will be used.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/sysctl.nix>

boot.kernel.sysfs
sysfs attributes to be set as soon as they become available.

Attribute names represent path components in the sysfs filesystem and cannot be '.' or '..' nor contain any slash character ('/').

Names may contain shell-style glob patterns ('*', '?' and '[…]') matching a single path component, these should however be used with caution, as they may produce unexpected results if attribute paths overlap.

Values will be converted to strings, with list elements concatenated with commata and booleans converted to numeric values ('0' or '1').

'null' values are ignored, allowing removal of values defined in other modules, as are empty attribute sets.

List values defined in different modules will *not* be concatenated.

This option may only be used for attributes which can be set idempotently, as the configured values might be written more than once.

Type: open submodule of nested attribute set of null or sysfs attribute values

Default:

```
{ }
```

Example:

```
{
  # enable transparent hugepages with deferred defragmentaion
  kernel.mm.transparent_hugepage = {
    enabled = "always";
    defrag = "defer";
    shmem_enabled = "within_size";
  };
  devices.system.cpu = {
    # configure powesave frequency governor for all CPUs
    # the [0-9]* glob pattern ensures that other paths
    # like cpufreq or cpuidle are not matched
```

```
      "cpu[0-9]*" = {
        scaling_governor = "powersave";
        energy_performance_preference = 8;
      };
      # disable frequency boost
      intel_pstate.no_turbo = true;
    };
}
```

Declared by:
<nixpkgs/nixos/modules/config/sysfs.nix>

boot.kernelModules
The set of kernel modules to be loaded in the second stage of the boot process. Note that modules that are needed to mount the root file system should be added to **boot.initrd.availableKernelModules** or **boot.initrd.kernelModules**.

This can either be a list of modules, or an attrset. In an attrset, names that are set to 'true' represent modules that will be included. Note that setting these names to 'false' does not prevent the module from being loaded. For that, use **boot.blacklistedKernelModules**.

Type: (attribute set of boolean) or (list of string) convertible to it

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/kernel.nix>

boot.kernelPackages
This option allows you to override the Linux kernel used by NixOS. Since things like external kernel module packages are tied to the kernel you're using, it also overrides those. This option is a function that takes Nixpkgs as an argument (as a convenience), and returns an attribute set containing at the very least an attribute *kernel*. Additional attributes may be needed depending on your configuration. For instance, if you use the NVIDIA X driver, then it also needs to contain an attribute *nvidia_x11*.

Please note that we strictly support kernel versions that are maintained by the Linux developers only. More information on the availability of kernel versions is documented **in the Linux section of the manual**.

Type: raw value

Default:

```
pkgs.linuxPackages
```

Example:

```
pkgs.linuxKernel.packages.linux_5_10
```

Declared by:
<nixpkgs/nixos/modules/system/boot/kernel.nix>

boot.kernelParams
Parameters added to the kernel command line.

Type: list of string, with spaces inside double quotes

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/kernel.nix>

boot.kernelPatches

A list of additional patches to apply to the kernel.

Every item should be an attribute set with the following attributes:

```
{
  name = "foo";                  # descriptive name, required
  patch = ./foo.patch;           # path or derivation that contains  \
the patch source
                                 # (required, but can be null if onl \
y config changes
                                 # are needed)
  structuredExtraConfig = {      # attrset of extra configuration pa \
rameters without the CONFIG_ prefix
    FOO = lib.kernel.yes;        # (optional)
  };                             # values should generally be lib.ke \
rnel.yes,
                                 # lib.kernel.no or lib.kernel.modul \
e
  features = {                   # attrset of extra "features" the k \
ernel is considered to have
    foo = true;                  # (may be checked by other NixOS mo \
dules, optional)
  };
  extraConfig = "FOO y";         # extra configuration options in st \
ring form without the CONFIG_ prefix
                                 # (optional, multiple lines allowed \
 to specify multiple options)
                                 # (deprecated, use structuredExtraC \
onfig instead)
}
```

There's a small set of existing kernel patches in Nixpkgs, available as 'pkgs.kernelPatches', that follow this format and can be used directly.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    name = "foo";
    patch = ./foo.patch;
    structuredExtraConfig.FOO = lib.kernel.yes;
    features.foo = true;
  }
  {
    name = "foo-ml-mbox";
    patch = (fetchurl {
      url = "https://lore.kernel.org/lkml/19700205182810.58382-1- \
email@domain/t.mbox.gz";
```

```
      hash = "sha256-...";
    });
  }
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/kernel.nix>

boot.kexec.enable
Whether to enable kexec.

Type: boolean

Default:

```
lib.meta.availableOn pkgs.stdenv.hostPlatform pkgs.kexec-tools
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/kexec.nix>

boot.loader.efi.canTouchEfiVariables
Whether the installation process is allowed to modify EFI boot variables.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/efi.nix>

boot.loader.efi.efiSysMountPoint
Where the EFI System Partition is mounted.

Type: string

Default:

```
"/boot"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/efi.nix>

boot.loader.external.enable
Whether to enable using an external tool to install your bootloader.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/external/external.nix>

boot.loader.external.installHook

The full path to a program of your choosing which performs the bootloader installation process.

The program will be called with an argument pointing to the output of the system's toplevel.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/external/external.nix>

boot.loader.generationsDir.enable

Whether to create symlinks to the system generations under '/boot'. When enabled, '/boot/default/kernel', '/boot/default/initrd', etc., are updated to point to the current generation's kernel image, initial RAM disk, and other bootstrap files.

This optional is not necessary with boot loaders such as GNU GRUB for which the menu is updated to point to the latest bootstrap files. However, it is needed for U−Boot on platforms where the boot command line is stored in flash memory rather than in a menu file.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/generations−dir/generations−dir.nix>

boot.loader.generationsDir.copyKernels

Whether to copy the necessary boot files into /boot, so /nix/store is not needed by the boot loader.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/generations−dir/generations−dir.nix>

boot.loader.generic−extlinux−compatible.enable

Whether to generate an extlinux−compatible configuration file under '/boot/extlinux.conf'. For instance, U−Boot's generic distro boot support uses this file format.

See **U−boot's documentation** for more information.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/generic−extlinux−compatible>

boot.loader.generic−extlinux−compatible.configurationLimit

Maximum number of configurations in the boot menu.

Type: signed integer

Default:

```
20
```

Example:

```
10
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/generic−extlinux−compatible>

boot.loader.generic−extlinux−compatible.mirroredBoots
Mirror the boot configuration to multiple paths.

Type: list of (submodule)

Default:

```
[
  {
    path = "/boot";
  }
]
```

Example:

```
[
  {
    path = "/boot1";
  }
  {
    path = "/boot2";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/generic−extlinux−compatible>

boot.loader.generic−extlinux−compatible.mirroredBoots.*.path
The path to the boot directory where the extlinux−compatible configuration files will be written.

Type: string

Example:

```
"/boot1"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/generic−extlinux−compatible>

boot.loader.generic−extlinux−compatible.populateCmd
Contains the builder command used to populate an image, honoring all options except the '−c <path−to−default−configuration>' argument. Useful to have for sdImage.populateRootCommands

Type: string *(read only)*

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/generic−extlinux−compatible>

boot.loader.generic−extlinux−compatible.useGenerationDeviceTree
Whether to generate Device Tree−related directives in the extlinux configuration.

When enabled, the bootloader will attempt to load the device tree binaries from the generation's kernel.

Note that this affects all generations, regardless of the setting value used in their configurations.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/generic−extlinux−compatible>

boot.loader.grub.enable
Whether to enable the GNU GRUB boot loader.

Type: boolean

Default:

```
!config.boot.isContainer
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.enableCryptodisk
Enable support for encrypted partitions. GRUB should automatically unlock the correct encrypted partition and look for filesystems.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.backgroundColor
Background color to be used for GRUB to fill the areas the image isn't filling.

Type: null or string

Default:

```
null
```

Example:

```
"#7EBAE4"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.configurationLimit
Maximum of configurations in boot menu. GRUB has problems when there are too many entries.

Type: signed integer

Default:

```
100
```

Example:

```
120
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.configurationName
GRUB entry name instead of default.

Type: string

Default:

```
""
```

Example:

```
"Stable 2.6.21"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.copyKernels
Whether the GRUB menu builder should copy kernels and initial ramdisks to /boot. This is done automatically if /boot is on a different partition than /.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.default
Index of the default menu item to be booted. Can also be set to “saved”, which will make GRUB select the menu item that was used at the last boot.

Type: signed integer or string

Default:

```
"0"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.device
The device on which the GRUB boot loader will be installed. The special value ‘nodev’ means that a GRUB boot menu will be generated, but GRUB itself will not actually be installed. To install GRUB on multiple devices, use ‘boot.loader.grub.devices’.

Type: string

Default:

```
""
```

Example:

```
"/dev/disk/by-id/wwn-0x500001234567890a"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.devices
The devices on which the boot loader, GRUB, will be installed. Can be used instead of ‘device’ to install GRUB onto multiple devices.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/dev/disk/by-id/wwn-0x500001234567890a"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.efiInstallAsRemovable
Whether to invoke ‘grub−install’ with ‘−−removable’.

Unless you turn this on, GRUB will install itself somewhere in ‘boot.loader.efi.efiSysMountPoint’ (exactly where depends on other config variables). If you’ve set ‘boot.loader.efi.canTouchEfiVariables’ *AND* you are currently booted in UEFI mode, then GRUB will use ‘efibootmgr’ to modify the boot order in the EFI variables of your firmware to include this location. If you are *not* booted in UEFI mode at the time GRUB is being installed, the NVRAM will not be modified, and your system will not find GRUB at boot time. However, GRUB will still return success so you may miss the warning that gets printed (“‘efibootmgr: EFI variables are not supported on this system.’”).

If you turn this feature on, GRUB will install itself in a special location within ‘efiSysMountPoint’ (namely ‘EFI/boot/boot$arch.efi’) which the firmwares are hardcoded to try first, regardless of NVRAM EFI variables.

To summarize, turn this on if:

- You are installing NixOS and want it to boot in UEFI mode, but you are currently booted in legacy mode
- You want to make a drive that will boot regardless of the NVRAM state of the computer (like a USB “removable” drive)
- You simply dislike the idea of depending on NVRAM state to make your drive bootable

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.efiSupport
Whether GRUB should be built with EFI support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.entryOptions
Options applied to the primary NixOS menu entry.

Type: null or string

Default:

```
"--class nixos --unrestricted"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.extraConfig
Additional GRUB commands inserted in the configuration file just before the menu entries.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  serial --unit=0 --speed=115200 --word=8 --parity=no --s \
top=1
  terminal_input --append serial
  terminal_output --append serial
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.extraEntries
Any additional entries you want added to the GRUB boot menu.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
# GRUB 2 example
menuentry "Windows 7" {
  chainloader (hd0,4)+1
}

# GRUB 2 with UEFI example, chainloading another distro
menuentry "Fedora" {
  set root=(hd1,1)
  chainloader /efi/fedora/grubx64.efi
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.extraEntriesBeforeNixOS
Whether extraEntries are included before the default option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.extraFiles
A set of files to be copied to */boot*. Each attribute name denotes the destination file name in */boot*, while the corresponding attribute value specifies the source file.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{ "memtest.bin" = pkgs.memtest86plus.efi; }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.extraGrubInstallArgs

Additional arguments passed to ‘grub−install’.

A use case for this is to build specific GRUB2 modules directly into the GRUB2 kernel image, so that they are available and activated even in the ‘grub rescue’ shell.

They are also necessary when the BIOS/UEFI is bugged and cannot correctly read large disks (e.g. above 2 TB), so GRUB2’s own ‘nativedisk’ and related modules can be used to use its own disk drivers. The example shows one such case. This is also useful for booting from USB. See the **GRUB source code** for which disk modules are available.

The list elements are passed directly as ‘argv’ arguments to the ‘grub−install’ program, in order.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−modules=nativedisk ahci pata part_gpt part_msdos diskfilter  \
mdraid1x lvm ext2"
]
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.extraInstallCommands

Additional shell commands inserted in the bootloader installer script after generating menu entries.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  # the example below generates detached signatures that GRUB can v \
erify
  # https://www.gnu.org/software/grub/manual/grub/grub.html#Using− \

  export GNUPGHOME=$old_gpg_home
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.extraPerEntryConfig

Additional GRUB commands inserted in the configuration file at the start of each NixOS menu entry.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"root (hd0)"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.extraPrepareConfig

Additional bash commands to be run at the script that prepares the GRUB menu entries.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.font

Path to a TrueType, OpenType, or pf2 font to be used by Grub.

Type: null or absolute path

Default:

```
"${pkgs.grub2}/share/grub/unicode.pf2"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.fontSize

Font size for the grub menu. Ignored unless ‘font’ is set to a ttf or otf font.

Type: null or signed integer

Default:

```
null
```

Example:

```
16
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.forceInstall

Whether to try and forcibly install GRUB even if problems are detected. It is not recommended to enable this unless you know what you are doing.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.forcei686

Whether to force the use of a ia32 boot loader on x64 systems. Required to install and run NixOS on 64bit x86 systems with 32bit (U)EFI.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.fsIdentifier

Determines how GRUB will identify devices when generating the configuration file. A value of uuid / label signifies that grub will always resolve the uuid or label of the device before using it in the configuration. A value of provided means that GRUB will use the device name as show in **df** or **mount**. Note, zfs zpools / datasets are ignored and will always be mounted using their labels.

Type: one of “uuid”, “label”, “provided”

Default:

```
"uuid"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.gfxmodeBios

The gfxmode to pass to GRUB when loading a graphical boot interface under BIOS.

Type: string

Default:

```
"1024x768"
```

Example:

```
"auto"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.gfxmodeEfi

The gfxmode to pass to GRUB when loading a graphical boot interface under EFI.

Type: string

Default:

```
"auto"
```

Example:

```
"1024x768"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.gfxpayloadBios

The gfxpayload to pass to GRUB when loading a graphical boot interface under BIOS.

Type: string

Default:

```
"text"
```

Example:

```
"keep"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.gfxpayloadEfi
The gfxpayload to pass to GRUB when loading a graphical boot interface under EFI.

Type: string

Default:

```
"keep"
```

Example:

```
"text"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.ipxe
Set of iPXE scripts available for booting from the GRUB boot menu.

Type: attribute set of (absolute path or string)

Default:

```
{ }
```

Example:

```
{ demo = ''
    #!ipxe
    dhcp
    chain http://boot.ipxe.org/demo/boot.php
  '';
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/ipxe.nix>

boot.loader.grub.memtest86.enable
Make Memtest86+, a memory testing program, available from the GRUB boot menu.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/memtest.nix>

boot.loader.grub.memtest86.params
Parameters added to the Memtest86+ command line. As of memtest86+ 5.01 the following list of (apparently undocumented) parameters are accepted:

- ‘console=...’, set up a serial console. Examples: ‘console=ttyS0’, ‘console=ttyS0,9600’ or ‘console=ttyS0,115200n8’.
- ‘btrace’, enable boot trace.
- ‘maxcpus=N’, limit number of CPUs.
- ‘onepass’, run one pass and exit if there are no errors.
- ‘tstlist=...’, list of tests to run. Example: ‘0,1,2’.

- ‘cpumask=...’, set a CPU mask, to select CPUs to use for testing.

This list of command line options was obtained by reading the Memtest86+ source code.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "console=ttyS0,115200"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/memtest.nix>

boot.loader.grub.mirroredBoots

Mirror the boot configuration to multiple partitions and install grub to the respective devices corresponding to those partitions.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    devices = [
      "/dev/disk/by-id/wwn-0x500001234567890a"
    ];
    path = "/boot1";
  }
  {
    devices = [
      "/dev/disk/by-id/wwn-0x500009876543210a"
    ];
    path = "/boot2";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.mirroredBoots.*.devices

The path to the devices which will have the GRUB MBR written. Note these are typically device paths and not paths to partitions.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/dev/disk/by-id/wwn-0x500001234567890a"
  "/dev/disk/by-id/wwn-0x500009876543210a"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.mirroredBoots.*.efiBootloaderId
The id of the bootloader to store in efi nvram. The default is to name it NixOS and append the path or efiSysMountPoint. This is only used if 'boot.loader.efi.canTouchEfiVariables' is true.

Type: null or string

Default:

```
null
```

Example:

```
"NixOS-fsid"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.mirroredBoots.*.efiSysMountPoint
The path to the efi system mount point. Usually this is the same partition as the above path and can be left as null.

Type: null or string

Default:

```
null
```

Example:

```
"/boot1/efi"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.mirroredBoots.*.path
The path to the boot directory where GRUB will be written. Generally this boot path should double as an EFI path.

Type: string

Example:

```
"/boot1"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.splashImage
Background image used for GRUB. Set to 'null' to run GRUB in text mode.

Note
File must be one of .png, .tga, .jpg, or .jpeg. JPEG images must not be progressive. The image will be scaled if necessary to fit the screen.

Type: null or absolute path

Default:

```
null
```

Example:

```
./my-background.png
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.splashMode
Whether to stretch the image or show the image in the top−left corner unstretched.

Type: one of “normal”, “stretch”

Default:

```
"stretch"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.storePath
Path to the Nix store when looking for kernels at boot. Only makes sense when copyKernels is false.

Type: string

Default:

```
"/nix/store"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.subEntryOptions
Options applied to the secondary NixOS submenu entry.

Type: null or string

Default:

```
"--class nixos"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.theme
Path to the grub theme to be used.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.kdePackages.breeze-grub}/grub/themes/breeze"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.timeoutStyle
- ‘menu’ shows the menu.
- ‘countdown’ uses a text−mode countdown.
- ‘hidden’ hides GRUB entirely.

When using a theme, the default value (‘menu’) is appropriate for the graphical countdown.

When attempting to do flicker−free boot, ‘hidden’ should be used.

See the **GRUB documentation section about** ‘timeout_style’.

> **Note**
> If this option is set to ‘countdown’ or ‘hidden’ […] and ESC or F4 are pressed, or SHIFT is held down during that time, it will display the menu and wait for input.

From: **Simple configuration handling page, under GRUB_TIMEOUT_STYLE**.

Type: one of “menu”, “countdown”, “hidden”

Default:

```
"menu"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.useOSProber

If set to true, append entries for other OSs detected by os−prober.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.users

User accounts for GRUB. When specified, the GRUB command line and all boot options except the default are password−protected. All passwords and hashes provided will be stored in /boot/grub/grub.cfg, and will be visible to any local user who can read this file. Additionally, any passwords and hashes provided directly in a Nix configuration (as opposed to external files) will be copied into the Nix store, and will be visible to all local users.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  root = {
    hashedPasswordFile = "/path/to/file";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.users.<name>.hashedPassword

Specifies the password hash for the account, generated with grub−mkpasswd−pbkdf2. This hash will be copied to the Nix store, and will be visible to all local users.

Type: null or string

Default:

```
null
```

Example:

```
"grub.pbkdf2.sha512.10000.674DFFDEF76E13EA...2CC972B102CF4355"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.users.<name>.hashedPasswordFile

Specifies the path to a file containing the password hash for the account, generated with grub−mk-passwd−pbkdf2. This hash will be stored in /boot/grub/grub.cfg, and will be visible to any local user who can read this file.

Type: null or string

Default:

```
null
```

Example:

```
"/path/to/file"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.users.<name>.password

Specifies the clear text password for the account. This password will be copied to the Nix store, and will be visible to all local users.

Type: null or string

Default:

```
null
```

Example:

```
"Pa$$w0rd!"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.users.<name>.passwordFile

Specifies the path to a file containing the clear text password for the account. This password will be stored in /boot/grub/grub.cfg, and will be visible to any local user who can read this file.

Type: null or string

Default:

```
null
```

Example:

```
"/path/to/file"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.grub.zfsSupport

Whether GRUB should be built against libzfs.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/grub/grub.nix>

boot.loader.initScript.enable

Some systems require a /sbin/init script which is started. Or having it makes starting NixOS easier. This applies to some kind of hosting services and user mode linux.

Additionally this script will create /boot/init−other−configurations−contents.txt containing contents of remaining configurations. You can copy paste them into /sbin/init manually running a rescue system or such.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/init−script/init−script.nix>

boot.loader.limine.enable

Whether to enable the Limine Bootloader.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.enableEditor

Whether to allow editing the boot entries before booting them. It is recommended to set this to false, as it allows gaining root access by passing ‘init=/bin/sh’ as a kernel parameter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.package

The limine package to use.

Type: package

Default:

```
pkgs.limine
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.additionalFiles

A set of files to be copied to */boot*. Each attribute name denotes the destination file name in */boot*, while the corresponding attribute value specifies the source file.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{ "efi/memtest86/memtest86.efi" = "${pkgs.memtest86-efi}/BOOTX64.e \
fi"; }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.biosDevice
Device to install the BIOS version of limine on.

Type: string

Default:

```
"nodev"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.biosSupport
Whether or not to install limine for BIOS.

Type: boolean

Default:

```
!config.boot.loader.limine.efiSupport && pkgs.stdenv.hostPlatform.i \
sx86
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.efiInstallAsRemovable
Whether or not to install the limine EFI files as removable.

See **boot.loader.grub.efiInstallAsRemovable**

Type: boolean

Default:

```
!config.boot.loader.efi.canTouchEfiVariables
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.efiSupport
Whether or not to install the limine EFI files.

Type: boolean

Default:

```
pkgs.stdenv.hostPlatform.isEfi
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.enrollConfig
Whether or not to enroll the config. Only works on EFI!

Type: boolean

Default:

```
boot.loader.limine.panicOnChecksumMismatch
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.extraConfig
A string which is prepended to limine.conf. The config format can be found **here**.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
serial: yes
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.extraEntries
A string which is appended to the end of limine.conf. The config format can be found **here**.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
/memtest86
  protocol: chainload
  path: boot():///efi/memtest86/memtest86.efi
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.force
Force installation even if the safety checks fail, use absolutely only if necessary!

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.maxGenerations

Maximum number of latest generations in the boot menu. Useful to prevent boot partition of running out of disk space. ‘null’ means no limit i.e. all generations that were not garbage collected yet.

Type: null or signed integer

Default:

```
null
```

Example:

```
50
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.panicOnChecksumMismatch

Whether or not checksum validation failure should be a fatal error at boot time.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.partitionIndex

The 1−based index of the dedicated partition for limine’s second stage.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.resolution

The framebuffer resolution to set when booting Linux entries. This controls the GOP mode that Limine sets before handing off to the kernel, which affects early boot graphics (e.g., simpledrm, efifb).

Format: ‘<width>x<height>’ or ‘<width>x<height>x<bpp>’. If bpp is omitted, defaults to 32.

Note: Refresh rate is not supported because the UEFI GOP protocol only defines framebuffer dimensions and pixel format, not display timing. Refresh rate is determined later by the GPU driver based on EDID.

This is distinct from **boot.loader.limine.style.interface.resolution** which only affects the Limine bootloader’s own menu interface.

Type: null or string

Default:

```
null
```

Example:

```
"1920x1080x32"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.secureBoot.enable
Whether to use sign the limine binary with sbctl.

Note
This requires you to already have generated the keys and enrolled them with **sbctl**.

To create keys use **sbctl create−keys**.

To enroll them first reset secure boot to “Setup Mode”. This is device specific. Then enroll them using **sbctl enroll−keys −m −f**.

You can now rebuild your system with this option enabled.

Afterwards turn setup mode off and enable secure boot.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.secureBoot.autoEnrollKeys.enable
Enroll automatically generated keys

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.secureBoot.autoEnrollKeys.extraArgs
Extra arguments passed to sbctl

Type: list of string

Default:

```
[
  "--microsoft"
  "--firmware-builtin"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.secureBoot.autoGenerateKeys
Generate keys automatically when none exists during bootloader installation

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.secureBoot.sbctl
The sbctl package to use.

Type: package

Default:

```
pkgs.sbctl
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.backdrop
Color to fill the rest of the screen with when wallpaper_style is centered in RRGGBB format.

Type: null or string

Default:

```
null
```

Example:

```
"7EBAE4"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.graphicalTerminal.background
Text background color (TTRRGGBB). TT is transparency.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.graphicalTerminal.brightBackground
Text background bright color (RRGGBB).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.graphicalTerminal.brightForeground
Text foreground bright color (RRGGBB).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.graphicalTerminal.brightPalette
A ; seperated array of 8 colors in the format RRGGBB: dark gray, bright red, bright green, yellow, bright blue, bright magenta, bright cyan, and white.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.graphicalTerminal.font.scale
The scale of the font in the format <width>x<height>.

Type: null or string

Default:

```
null
```

Example:

```
2x2
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.graphicalTerminal.font.spacing
The horizontal spacing between characters in pixels.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.graphicalTerminal.foreground
Text foreground color (RRGGBB).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.graphicalTerminal.margin
The amount of margin around the terminal.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.graphicalTerminal.marginGradient
The thickness in pixels for the margin around the terminal.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.graphicalTerminal.palette
A ; seperated array of 8 colors in the format RRGGBB: black, red, green, brown, blue, magenta, cyan, and gray.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.interface.branding
The title at the top of the screen.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.interface.brandingColor
Color of the title at the top of the screen in RRGGBB format (Limine defaults to #00AAAA (cyan)).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.interface.helpColor
Color of the help text displayed beside keybinds in RRGGBB format (Limine defaults to #00AA00 (dark green)).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.interface.helpColorBright
Color of the bright help text used for the auto−boot countdown digit in RRGGBB format (Limine defaults to #55FF55 (bright green)).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.interface.helpHidden
Whether or not to hide the keybinds at the top of the screen.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.interface.resolution
The resolution of the interface.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.wallpaperStyle
How the wallpaper should be fit to the screen.

Type: one of “centered”, “stretched”, “tiled”

Default:

```
"stretched"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.style.wallpapers
A list of wallpapers. If more than one is specified, a random one will be selected at boot.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[ pkgs.nixos-artwork.wallpapers.simple-dark-gray-bootloader.gno \
meFilePath ]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.limine.validateChecksums
Whether to validate file checksums before booting.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/limine/limine.nix>

boot.loader.refind.enable
Whether to enable the rEFInd boot loader.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/refind/refind.nix>

boot.loader.refind.package
The refind package to use.

Type: package

Default:

```
pkgs.refind
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/refind/refind.nix>

boot.loader.refind.additionalFiles
A set of files to be copied to */boot*. Each attribute name denotes the destination file name in */boot*, while the corresponding attribute value specifies the source file.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{ "efi/memtest86/memtest86.efi" = "${pkgs.memtest86-efi}/BOOTX64.e \
fi"; }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/refind/refind.nix>

boot.loader.refind.efiInstallAsRemovable
Whether or not to install the rEFInd EFI files as removable.

See **boot.loader.grub.efiInstallAsRemovable**

Type: boolean

Default:

```
!config.boot.loader.efi.canTouchEfiVariables
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/refind/refind.nix>

boot.loader.refind.extraConfig
A string which is prepended to refind.conf.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/refind/refind.nix>

boot.loader.refind.maxGenerations
Maximum number of latest generations in the boot menu. Useful to prevent boot partition of running out of disk space. 'null' means no limit i.e. all generations that were not garbage collected yet.

Type: null or signed integer

Default:

```
null
```

Example:

```
50
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/refind/refind.nix>

boot.loader.systemd−boot.enable
Whether to enable the systemd−boot (formerly gummiboot) EFI boot manager. For more information about systemd−boot: **https://www.freedesktop.org/wiki/Software/systemd/systemd−boot/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.configurationLimit
Maximum number of latest generations in the boot menu. Useful to prevent boot partition running out of disk space.

'null' means no limit i.e. all generations that have not been garbage collected yet.

Type: null or signed integer

Default:

```
null
```

Example:

```
120
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.consoleMode

The resolution of the console. The following values are valid:

- ‘"0"’: Standard UEFI 80x25 mode
- ‘"1"’: 80x50 mode, not supported by all devices
- ‘"2"’: The first non−standard mode provided by the device firmware, if any
- ‘"5"’: Applicable for SteamDeck where this mode represent horizontal mode
- ‘"auto"’: Pick a suitable mode automatically using heuristics
- ‘"max"’: Pick the highest−numbered available mode
- ‘"keep"’: Keep the mode selected by firmware (the default)

Type: one of “0”, “1”, “2”, “5”, “auto”, “max”, “keep”

Default:

```
"keep"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.editor

Whether to allow editing the kernel command−line before boot. It is recommended to set this to false, as it allows gaining root access by passing init=/bin/sh as a kernel parameter. However, it is enabled by default for backwards compatibility.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.edk2−uefi−shell.enable

Make the EDK2 UEFI Shell available from the systemd−boot menu. It can be used to manually boot other operating systems or for debugging.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.edk2−uefi−shell.sortKey

‘systemd−boot’ orders the menu entries by their sort keys, so if you want something to appear after all the NixOS entries, it should start with *o* or onwards.

See also **boot.loader.systemd−boot.sortKey**…

Type: string

Default:

```
"o_edk2−uefi−shell"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.extraEntries

Any additional entries you want added to the ‘systemd−boot’ menu. These entries will be copied to *$BOOT/loader/entries*. Each attribute name denotes the destination file name, and the corresponding attribute value is the contents of the entry.

To control the ordering of the entry in the boot menu, use the sort−key field, see **https://uapi−group.org/specifications/specs/boot_loader_specification/#sorting** and **boot.loader.systemd−boot.sortKey**.

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Example:

```
{ "memtest86.conf" = ''
  title Memtest86+
  efi /efi/memtest86/memtest.efi
  sort−key z_memtest
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.extraFiles

A set of files to be copied to *$BOOT*. Each attribute name denotes the destination file name in *$BOOT*, while the corresponding attribute value specifies the source file.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{ "efi/memtest86/memtest.efi" = pkgs.memtest86plus.efi; }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.extraInstallCommands

Additional shell commands inserted in the bootloader installer script after generating menu entries. It can be used to expand on extra boot entries that cannot incorporate certain pieces of information (such as the resulting ‘init=’ kernel parameter).

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  default_cfg=$(cat /boot/loader/loader.conf | grep default | awk ' \
{print $2}')
  init_value=$(cat /boot/loader/entries/$default_cfg | grep init= | \
 awk '{print $2}')
  sed −i "s|@INIT@|$init_value|g" /boot/custom/config_with_placeho \
lder.conf
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.graceful

Invoke ‘bootctl install’ with the ‘−−graceful’ option, which ignores errors when EFI variables cannot be written or when the EFI System Partition cannot be found. Currently only applies to random seed operations.

Only enable this option if ‘systemd−boot’ otherwise fails to install, as the scope or implication of the ‘−−graceful’ option may change in the future.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.installDeviceTree

Install the devicetree blob specified by ‘config.hardware.deviceTree.name’ to the ESP and instruct systemd−boot to pass this DTB to linux.

Type: unspecified value

Default:

```
"with config.hardware.deviceTree; enable && name != null"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.memtest86.enable

Make Memtest86+ available from the systemd−boot menu. Memtest86+ is a program for testing memory.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.memtest86.sortKey

‘systemd−boot’ orders the menu entries by their sort keys, so if you want something to appear after all the NixOS entries, it should start with *o* or onwards.

See also **boot.loader.systemd−boot.sortKey**.

Type: string

Default:

```
"o_memtest86"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.netbootxyz.enable

Make ‘netboot.xyz’ available from the ‘systemd−boot’ menu. ‘netboot.xyz’ is a menu system that allows you to boot OS installers and utilities over the network.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.netbootxyz.sortKey
'systemd−boot' orders the menu entries by their sort keys, so if you want something to appear after all the NixOS entries, it should start with *o* or onwards.

See also **boot.loader.systemd−boot.sortKey**.

Type: string

Default:

```
"o_netbootxyz"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.rebootForBitlocker
Enable *EXPERIMENTAL* BitLocker support.

Try to detect BitLocker encrypted drives along with an active TPM. If both are found and Windows Boot Manager is selected in the boot menu, set the "BootNext" EFI variable and restart the system. The firmware will then start Windows Boot Manager directly, leaving the TPM PCRs in expected states so that Windows can unseal the encryption key.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.sortKey
The sort key used for the NixOS bootloader entries. This key determines sorting relative to non−NixOS entries. See also **https://uapi−group.org/specifications/specs/boot_loader_specification/#sorting**

This option can also be used to control the sorting of NixOS specialisations.

By default, specialisations inherit the sort key of their parent generation and will have the same value for both the sort−key and the version (i.e. the generation number), systemd−boot will therefore sort them based on their file name, meaning that in your boot menu you will have each main generation directly followed by its specialisations sorted alphabetically by their names.

If you want a different ordering for a specialisation, you can override its sort−key which will cause the specialisation to be uncoupled from its parent generation. It will then be sorted by its new sort−key just like any other boot entry.

The sort−key is stored in the generation's bootspec, which means that generations keep their sort−keys even if the original definition of the generation was removed from the NixOS configuration. It also means that updating the sort−key will only affect new generations, while old ones will keep the sort−key that they were originally built with.

Type: string

Default:

```
"nixos"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.windows

Make Windows bootable from systemd−boot. This option is not necessary when Windows and NixOS use the same EFI System Partition (ESP). In that case, Windows will automatically be detected by systemd−boot.

However, if Windows is installed on a separate drive or ESP, you can use this option to add a menu entry for each installation manually.

The attribute name is used for the title of the menu entry and internal file names.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "10".efiDeviceHandle = "HD0c3";
  "11−ame" = {
    title = "Windows 11 Ameliorated Edition";
    efiDeviceHandle = "HD0b1";
  };
  "11−home" = {
    title = "Windows 11 Home";
    efiDeviceHandle = "FS1";
    sortKey = "z_windows";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.windows.<name>.efiDeviceHandle

The device handle of the EFI System Partition (ESP) where the Windows bootloader is located. This is the device handle that the EDK2 UEFI Shell uses to load the bootloader.

To find this handle, follow these steps:

1. Set **boot.loader.systemd−boot.edk2−uefi−shell.enable** to ‘true’
2. Run ‘nixos−rebuild boot’
3. Reboot and select “EDK2 UEFI Shell” from the systemd−boot menu
4. Run ‘map −c’ to list all consistent device handles
5. For each device handle (for example, ‘HD0c1’), run ‘ls HD0c1:\EFI’
6. If the output contains the directory ‘Microsoft’, you might have found the correct device handle
7. Run ‘HD0c1:\EFI\Microsoft\Boot\Bootmgfw.efi’ to check if Windows boots correctly
8. If it does, this device handle is the one you need (in this example, ‘HD0c1’)

This option is required, there is no useful default.

Type: string

Example:

```
"HD1b3"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.windows.<name>.sortKey

‘systemd−boot’ orders the menu entries by their sort keys, so if you want something to appear after all the NixOS entries, it should start with *o* or onwards.

See also **boot.loader.systemd−boot.sortKey**…

Type: string

Default:

```
"attribute name of this entry, prefixed with \"o_windows_\""
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.windows.<name>.title

The title of the boot menu entry.

Type: string

Default:

```
"attribute name of this entry, prefixed with \"Windows \""
```

Example:

```
"Michaelsoft Binbows"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.systemd−boot.xbootldrMountPoint

Where the XBOOTLDR partition is mounted.

If set, this partition will be used as $BOOT to store boot loader entries and extra files instead of the EFI partition. As per the bootloader specification, it is recommended that the EFI and XBOOTLDR partitions be mounted at ‘/efi’ and ‘/boot’, respectively.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/systemd−boot/systemd−boot.nix>

boot.loader.timeout

Timeout (in seconds) until loader boots the default menu item. Use null if the loader menu should be displayed indefinitely.

Type: null or signed integer

Default:

```
5
```

Declared by:

<nixpkgs/nixos/modules/system/boot/loader/loader.nix>

boot.modprobeConfig.enable

Whether to enable modprobe config. This is useful for systems like containers which do not require a kernel.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/modprobe.nix>

boot.modprobeConfig.useUbuntuModuleBlacklist
Whether to enable Ubuntu distro's module blacklist.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/modprobe.nix>

boot.nixStoreMountOpts
Defines the mount options used on a bind mount for the */nix/store*. This affects the whole system except the nix store daemon, which will undo the bind mount.

'ro' enforces immutability of the Nix store. The store daemon should already not put device mappers or suid binaries in the store, meaning 'nosuid' and 'nodev' enforce what should already be the case.

Type: list of non−empty string

Default:

```
[
  "ro"
  "nodev"
  "nosuid"
]
```

Declared by:
<nixpkgs/nixos/modules/system/boot/stage−2.nix>

boot.plymouth.enable
Whether to enable Plymouth boot splash screen.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/plymouth.nix>

boot.plymouth.package
The plymouth package to use.

Type: package

Default:

```
pkgs.plymouth.override {
  systemd = config.boot.initrd.systemd.package;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/plymouth.nix>

boot.plymouth.extraConfig
Literal string to append to ‘configFile’ and the config file generated by the plymouth module.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/plymouth.nix>

boot.plymouth.font
Font file made available for displaying text on the splash screen.

Type: absolute path

Default:

```
"${pkgs.dejavu_fonts.minimal}/share/fonts/truetype/DejaVuSans.ttf"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/plymouth.nix>

boot.plymouth.logo
Logo which is displayed on the splash screen. Currently supports PNG file format only.

Type: absolute path

Default:

```
"${pkgs.nixos-icons}/share/icons/hicolor/48x48/apps/nix-snowflake \
-white.png"
```

Example:

```
pkgs.fetchurl {
  url = "https://nixos.org/logo/nixos-hires.png";
  sha256 = "1ivzgd7iz0i06y36p8m5w48fd8pjqwxhdaavc0pxs7w1g7mcy5si";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/plymouth.nix>

boot.plymouth.theme
Splash screen theme.

Type: string

Default:

```
"bgrt"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/plymouth.nix>

boot.plymouth.themePackages
Extra theme packages for plymouth.

Type: list of package

Default: A NixOS branded variant of the breeze theme when config.boot.plymouth.theme == "breeze", otherwise [ ].

Declared by:
<nixpkgs/nixos/modules/system/boot/plymouth.nix>

boot.plymouth.tpm2−totp.enable
Whether to display a TOTP during boot using tpm2−totp and Plymouth.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/plymouth−tpm2−totp.nix>

boot.plymouth.tpm2−totp.package
The tpm2−totp package to use.

Type: package

Default:

```
pkgs.tpm2−totp−with−plymouth
```

Declared by:
<nixpkgs/nixos/modules/system/boot/plymouth−tpm2−totp.nix>

boot.postBootCommands
Shell commands to be executed just before systemd is started.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"rm −f /var/log/messages"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/stage−2.nix>

boot.resumeDevice
Device for manual resume attempt during boot. This should be used primarily if you want to resume from file. If left empty, the swap partitions are used. Specify here the device where the file resides. You should also use *boot.kernelParams* to specify ‘«resume_offset»’.

Type: string

Default:

```
""
```

Example:

```
"/dev/sda3"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/stage−1.nix>

boot.runSize

Size limit for the /run tmpfs. Look at **mount**(8), tmpfs size option, for the accepted syntax.

Type: string

Default:

```
"25%"
```

Example:

```
"256m"
```

Declared by:

<nixpkgs/nixos/modules/tasks/filesystems.nix>

boot.specialFileSystems.<name>.enable

Whether to enable the filesystem mount.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/tasks/filesystems.nix>

boot.specialFileSystems.<name>.depends

List of paths that should be mounted before this one. This filesystem's **device** and **mountPoint** are always checked and do not need to be included explicitly. If a path is added to this list, any other filesystem whose mount point is a parent of the path will be mounted before this filesystem. The paths do not need to actually be the **mountPoint** of some other filesystem.

This is useful for mounts which require keys and/or configuration files residing on another filesystem.

Type: list of string (with check: non−empty without trailing slash)

Default:

```
[ ]
```

Example:

```
[
  "/persist"
]
```

Declared by:

<nixpkgs/nixos/modules/tasks/filesystems.nix>

boot.specialFileSystems.<name>.device

The device as passed to 'mount'.

This can be any of:

- a filename of a block special device such as '/dev/sdc3'
- a tag such as 'UUID=fdd68895−c307−4549−8c9c−90e44c71f5b7'
- (for bind mounts only) the source path
- something else depending on the **fsType**. For example, 'nfs' device may look like 'knuth.cwi.nl:/dir'

This is called 'device' in **mount**(8) and 'fs_spec' in **fstab**(5).

Type: null or string (with check: non−empty)

Default:

```
null
```

Example:

```
"/dev/sda"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

boot.specialFileSystems.<name>.fsType
Type of the file system.

This is the ‘fstype’ passed to ‘−t’ in the **mount**(8) command, and is called ‘fs_vfstype’ in **fstab**(5).

Type: string (with check: non−empty)

Example:

```
"ext3"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

boot.specialFileSystems.<name>.mountPoint
Location where the file system will be mounted.

This is called ‘mountpoint’ in **mount**(8) and ‘fs_file’ in **fstab**(5)

Type: string (with check: non−empty without trailing slash)

Default:

```
"‹name›"
```

Example:

```
"/mnt/usb"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

boot.specialFileSystems.<name>.options
Options used to mount the file system.

This is called ‘options’ in **mount**(8) and ‘fs_mntops’ in **fstab**(5)

Some options that can be used for all mounts are documented in **mount**(8) under ‘FILESYSTEM−INDEPENDENT MOUNT OPTIONS’.

Options that systemd understands are documented in **systemd.mount**(5) under ‘FSTAB’.

Each filesystem supports additional options, see the docs for that filesystem.

Type: non−empty (list of string (with check: non−empty))

Default:

```
[
  "defaults"
]
```

Example:

```
[
  "data=journal"
]
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

boot.specialFileSystems.<name>.stratis.poolUuid
UUID of the stratis pool that the fs is located in

This is only relevant if you are using **stratis**.

Type: null or string

Default:

```
null
```

Example:

```
"04c68063-90a5-4235-b9dd-6180098a20d9"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

boot.stage2Greeting
The greeting message displayed during NixOS stage 2 boot.

Type: string

Default:

```
"<<< ${config.system.nixos.distroName} Stage 2 >>>"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/stage-2.nix>

boot.supportedFilesystems
Names of supported filesystem types, or an attribute set of file system types and their state. The set form may be used together with 'lib.mkForce' to explicitly disable support for specific filesystems, e.g. to disable ZFS with an unsupported kernel.

Type: (attribute set of boolean) or (list of string) convertible to it

Default:

```
{ }
```

Example:

```
{
  btrfs = true;
  zfs = lib.mkForce false;
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

boot.swraid.enable
Whether to enable support for Linux MD RAID arrays.

When this is enabled, mdadm will be added to the system path, and MD RAID arrays will be detected and activated automatically, both in stage-1 (initramfs) and in stage-2 (the final NixOS system).

This should be enabled if you want to be able to access and/or boot from MD RAID arrays. **nixos-generate-config** should detect it correctly in the standard installation procedure.

Type: boolean

Default:

```
"'true' if stateVersion is older than 23.11"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/swraid.nix>

boot.swraid.mdadmConf
Contents of */etc/mdadm.conf*.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/tasks/swraid.nix>

boot.systemdExecutable
The program to execute to start systemd.

Type: string

Default:

```
"/run/current-system/systemd/lib/systemd/systemd"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/stage-2.nix>

boot.tmp.cleanOnBoot
Whether to delete all files in */tmp* during boot.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/tmp.nix>

boot.tmp.tmpfsHugeMemoryPages
- ‘never’ − Do not allocate huge memory pages. This is the default.
- ‘always’ − Attempt to allocate huge memory page every time a new page is needed.
- ‘within_size’ − Only allocate huge memory pages if it will be fully within i_size. Also respect madvise(2) hints. Recommended.
- ‘advise’ − Only allocate huge memory pages if requested with madvise(2).

Type: one of “never”, “always”, “within_size”, “advise”

Default:

```
"never"
```

Example:

```
"within_size"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/tmp.nix>

boot.tmp.tmpfsSize

Size of tmpfs in percentage. Percentage is defined by systemd.

Type: string or (positive integer, meaning >0)

Default:

```
"50%"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/tmp.nix>

boot.tmp.useTmpfs

Whether to mount a tmpfs on */tmp* during boot.

Note

Large Nix builds can fail if the mounted tmpfs is not large enough. In such a case either increase the tmpfsSize or disable this option.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/system/boot/tmp.nix>

boot.tmp.useZram

Whether to mount a zram device on */tmp* during boot.

Note

Large Nix builds can fail if the mounted zram device is not large enough. In such a case either increase the zramSettings.zram−size or disable this option.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/zram−as−tmp.nix>

boot.tmp.zramSettings.compression−algorithm

The compression algorithm to use for the zram device.

See: **https://github.com/systemd/zram−generator/blob/main/zram−generator.conf.example**

Type: string

Default:

```
"zstd"
```

Example:

```
"lzo−rle"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/zram−as−tmp.nix>

boot.tmp.zramSettings.fs−type

The file system to put on the device.

See: **https://github.com/systemd/zram−generator/blob/main/zram−generator.conf.example**

Type: string

Default:

```
"ext4"
```

Example:

```
"ext2"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/zram−as−tmp.nix>

boot.tmp.zramSettings.options

By default, file systems and swap areas are trimmed on−the−go by setting “discard”. Setting this to the empty string clears the option.

See: **https://github.com/systemd/zram−generator/blob/main/zram−generator.conf.example**

Type: string

Default:

```
"X−mount.mode=1777,discard"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/zram−as−tmp.nix>

boot.tmp.zramSettings.zram−size

The size of the zram device, as a function of MemTotal, both in MB. For example, if the machine has 1 GiB, and zram−size=ram/4, then the zram device will have 256 MiB. Fractions in the range 0.1–0.5 are recommended

See: **https://github.com/systemd/zram−generator/blob/main/zram−generator.conf.example**

Type: string

Default:

```
"ram * 0.5"
```

Example:

```
"min(ram / 2, 4096)"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/zram−as−tmp.nix>

boot.uki.configFile

The configuration file passed to **ukify**(1) to create the UKI.

By default this configuration file is created from **boot.uki.settings**.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/system/boot/uki.nix>

boot.uki.name

Name of the UKI

Type: string

Declared by:
<nixpkgs/nixos/modules/system/boot/uki.nix>

boot.uki.settings
The configuration settings for ukify. These control what the UKI contains and how it is built.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/system/boot/uki.nix>

boot.uki.tries
Number of boot attempts before this UKI is considered bad.

If no tries are specified (the default) automatic boot assessment remains inactive.

See documentation on **Automatic Boot Assessment** and **boot counting** for more information.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/uki.nix>

boot.uki.version
Version of the image or generation the UKI belongs to

Type: null or string

Default:

```
config.system.image.version
```

Declared by:
<nixpkgs/nixos/modules/system/boot/uki.nix>

boot.uvesafb.enable
Whether to enable uvesafb.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/uvesafb.nix>

boot.uvesafb.gfx-mode
Screen resolution in modedb format. See **uvesafb** and **modedb** documentation for more details. The default value is a sensible default but may be not ideal for all setups.

Type: string

Default:

```
"1024x768-32"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/uvesafb.nix>

boot.uvesafb.v86d.package
Which v86d package to use with uvesafb

Type: package

Default:

```
config.boot.kernelPackages.v86d.overrideAttrs (old: {
          hardeningDisable = [ "all" ];
        })''
```

Declared by:
<nixpkgs/nixos/modules/system/boot/uvesafb.nix>

boot.vesa
(Deprecated) This option, if set, activates the VESA 800x600 video mode on boot and disables kernel modesetting. It is equivalent to specifying '["vga=0x317" "nomodeset"]' in the **boot.kernelParams** option. This option is deprecated as of 2020: Xorg now works better with modesetting, and you might want a different VESA vga setting, anyway.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/kernel.nix>

boot.zfs.enabled
True if ZFS filesystem support is enabled

Type: boolean *(read only)*

Default: true if ZFS filesystem support is enabled

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

boot.zfs.package
Configured ZFS userland tools package.

Type: package

Default:

```
pkgs.zfs
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

boot.zfs.devNodes
Name of directory from which to import ZFS device, this is passed to 'zpool import' as the value of the '−d' option.

For guidance on choosing this value, see **the ZFS documentation**.

Type: absolute path

Default:

```
"/dev/disk/by-id"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

boot.zfs.extraPools
Name or GUID of extra ZFS pools that you wish to import during boot.

Usually this is not necessary. Instead, you should set the mountpoint property of ZFS filesystems to 'legacy' and add the ZFS filesystems to NixOS's **fileSystems** option, which makes NixOS automatically import the associated pool.

However, in some cases (e.g. if you have many filesystems) it may be preferable to exclusively use ZFS commands to manage filesystems. If so, since NixOS/systemd will not be managing those filesystems, you will need to specify the ZFS pool here so that NixOS automatically imports it on every boot.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "tank"
  "data"
]
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

boot.zfs.forceImportAll
Forcibly import all ZFS pool(s).

It is highly recommended to keep this option disabled as it bypasses ZFS safeguard that protect your pools.

See **boot.zfs.forceImportRoot** for details.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

boot.zfs.forceImportRoot
Forcibly import the ZFS root pool(s) during early boot.

It is highly recommended to keep this option disabled as it bypasses ZFS safeguard that protect your pools.

If NixOS fails to boot because it cannot import the root pool, you should boot with the 'zfs_force=1' option as a kernel parameter (e.g. by manually editing the kernel params via your bootloader). You should only need to do this after unclean shutdowns.

Type: boolean

Default:

```
lib.versionOlder config.system.stateVersion "26.11"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

boot.zfs.passwordTimeout

Timeout in seconds to wait for password entry for decrypt at boot.

Defaults to 0, which waits forever.

Type: signed integer

Default:

Declared by:

<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

boot.zfs.pools

Configuration for individual pools to override global defaults.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

boot.zfs.pools.<name>.devNodes

Name of directory from which to import ZFS device, this is passed to ‘zpool import’ as the value of the ‘−d’ option.

For guidance on choosing this value, see **the ZFS documentation**.

Type: absolute path

Default:

```
"config.boot.zfs.devNodes"
```

Declared by:

<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

boot.zfs.removeLinuxDRM

Patch the kernel to change symbols needed by ZFS from EXPORT_SYMBOL_GPL to EXPORT_SYMBOL.

Currently has no effect, but may again in future if a kernel update breaks ZFS due to symbols being newly changed to GPL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

boot.zfs.requestEncryptionCredentials

If true on import encryption keys or passwords for all encrypted datasets are requested. To only decrypt selected datasets supply a list of dataset names instead. For root pools the encryption key can be supplied via both an interactive prompt (keylocation=prompt) and from a file (keylocation=file://).

Type: boolean or list of string

Default:

```
true
```

Example:

```
[
```

```
  "tank"
  "data"
]
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

boot.zfs.unsafeAllowHibernation
Allow hibernation (suspend to disk) support. This is generally considered **UNSAFE**, is not well supported by openzfs, and could lead to corruption and data loss.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

boot.zfs.useKeyringForCredentials
Whether to enable Uses the kernel keyring for encryption credentials with keyname=zfs−<poolname>.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/zfs.nix>

boot.zswap.enable
Whether to enable Zswap (Compressed Cache for Swap Pages).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/zswap.nix>

boot.zswap.acceptThresholdPercent
Threshold percentage at which zswap starts accepting pages again after the pool becomes full (1−100).

This parameter provides hysteresis to prevent pool oscillation. When the pool usage drops below this threshold, zswap starts accepting new pages. Default is 90% as recommended by kernel documentation.

Type: integer between 1 and 100 (both inclusive)

Default:

```
90
```

Declared by:
<nixpkgs/nixos/modules/system/boot/zswap.nix>

boot.zswap.compressor

Compression algorithm to use for zswap.

Available options:

- 'zstd': Best compression ratio, excellent for Nix builds (default)
- 'lz4': Fastest compression, lowest latency
- 'lz4hc': High−compression variant of lz4, slower but better ratio
- 'lzo': Good balance of speed and compression (kernel default)
- 'deflate': Higher compression, slower processing
- '842': Hardware−accelerated compression on supported systems

Note: The chosen algorithm must be supported by your kernel configuration.

Type: one of "zstd", "lz4", "lzo", "lz4hc", "deflate", "842"

Default:

```
"zstd"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/zswap.nix>

boot.zswap.maxPoolPercent

The maximum percentage of system memory that Zswap can occupy (1−100).

Higher values provide more compression cache but increase memory pressure. Default is 25% (higher than kernel default of 20%) for better Nix build performance.

Recommended ranges:

- Desktop systems: 15−25%
- Low−memory systems: 30−50%
- Server systems: 10−20%

Type: integer between 1 and 100 (both inclusive)

Default:

```
25
```

Declared by:

<nixpkgs/nixos/modules/system/boot/zswap.nix>

boot.zswap.shrinkerEnabled

Enable the zswap shrinker to reclaim memory when under pressure.

When enabled, the shrinker will automatically reclaim compressed pages from the zswap pool when the system is under memory pressure, helping to prevent out−of−memory situations.

It is recommended to keep this enabled for most workloads, especially on systems with limited memory.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/zswap.nix>

boot.zswap.zpool

Kernel zpool allocator. 'zsmalloc' is strongly recommended for kernels >= 6.3 as it offers the best density. For older kernels, 'zbud' is the fallback.

Note: 'z3fold' was removed from Linux kernel 6.8 and later.

Type: one of "zsmalloc", "zbud"

Default:

```
if kernel >= 6.3 then "zsmalloc" else "zbud"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/zswap.nix>

console.enable

Whether to enable virtual console.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/console.nix>

console.packages

List of additional packages that provide console fonts, keymaps and other resources for virtual consoles use.

Type: list of package

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/config/console.nix>

console.colors

The 16 colors palette used by the virtual consoles. Leave empty to use the default colors. Colors must be in hexadecimal format and listed in order from color 0 to color 15.

Type: list of string matching the pattern [[:xdigit:]]{6}

Default:

```
[ ]
```

Example:

```
[
  "002b36"
  "dc322f"
  "859900"
  "b58900"
  "268bd2"
  "d33682"
  "2aa198"
  "eee8d5"
  "002b36"
  "cb4b16"
  "586e75"
  "657b83"
  "839496"
  "6c71c4"
  "93a1a1"
  "fdf6e3"
```

```
]
```

Declared by:
<nixpkgs/nixos/modules/config/console.nix>

console.earlySetup
Enable setting virtual console options as early as possible (in initrd).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/console.nix>

console.font
The font used for the virtual consoles. Can be ‘null’, a font name, or a path to a PSF font file.

Use ‘null’ to let the kernel choose a built−in font. The default is 8x16, and, as of Linux 5.3, Terminus 32 bold for display resolutions of 2560x1080 and higher. These fonts cover the **IBM437** character set.

Type: null or string or absolute path

Default:

```
null
```

Example:

```
"LatArCyrHeb−16"
```

Declared by:
<nixpkgs/nixos/modules/config/console.nix>

console.keyMap
The keyboard mapping table for the virtual consoles.

Type: string or absolute path

Default:

```
"us"
```

Example:

```
"fr"
```

Declared by:
<nixpkgs/nixos/modules/config/console.nix>

console.useXkbConfig
If set, configure the virtual console keymap from the xserver keyboard settings.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/console.nix>

containers

A set of NixOS system configurations to be run as lightweight containers. Each container appears as a service ‘container−«name»’ on the host system, allowing it to be started and stopped via **systemctl**.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{ webserver =
    { path = "/nix/var/nix/profiles/webserver";
    };
  database =
    { config =
        { config, pkgs, ... }:
        { services.postgresql.enable = true;
          services.postgresql.package = pkgs.postgresql_14;
          system.stateVersion = "26.05";
        };
    };
}
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.enableTun

Allows the container to create and setup tunnel interfaces by granting the ‘NET_ADMIN’ capability and enabling access to ‘/dev/net/tun’.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.additionalCapabilities

Grant additional capabilities to the container. See the **capabilities**(7) and **systemd−nspawn**(1) man pages for more information.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "CAP_NET_ADMIN"
  "CAP_MKNOD"
]
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.allowedDevices

A list of device nodes to which the containers has access to.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    modifier = "rwm";
    node = "/dev/net/tun";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.allowedDevices.*.modifier

Device node access modifier. Takes a combination ‘r’ (read), ‘w’ (write), and ‘m’ (mknod). See the **systemd.resource−control**(5) man page for more information.

Type: string

Example:

```
"rw"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.allowedDevices.*.node

Path to device node

Type: string

Example:

```
"/dev/net/tun"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.autoStart

Whether the container is automatically started at boot−time.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.bindMounts

An extra list of directories that is bound to the container.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{ "/home" = { hostPath = "/home/alice";
              isReadOnly = false; };
}
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.bindMounts.<name>.hostPath
Location of the host path to be mounted.

Type: null or string

Default:

```
null
```

Example:

```
"/home/alice"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.bindMounts.<name>.isReadOnly
Determine whether the mounted path will be accessed in read−only mode.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.bindMounts.<name>.mountPoint
Mount point on the container file system.

Type: string

Example:

```
"/mnt/usb"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.config
A specification of the desired configuration of this container, as a NixOS module.

Type: Toplevel NixOS config

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.ephemeral
Runs container in ephemeral mode with the empty root filesystem at boot. This way container will be bootstrapped from scratch on each boot and will be cleaned up on shutdown leaving no traces behind. Useful for completely stateless, reproducible containers.

Note that this option might require to do some adjustments to the container configuration, e.g. you might want to set *systemd.network.networks.$interface.dhcpV4Config.ClientIdentifier* to “mac” if you use *macvlans* option. This way dhcp client identifier will be stable between the container restarts.

Note that the container journal will not be linked to the host if this option is enabled.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.extraFlags

Extra flags passed to the systemd−nspawn command. See **systemd−nspawn**(1) for details.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−drop−capability=CAP_SYS_CHROOT"
]
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.extraVeths

Extra veth−pairs to be created for the container.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.extraVeths.<name>.forwardPorts

List of forwarded ports from host to container. Each forwarded port is specified by protocol, hostPort and containerPort. By default, protocol is tcp and hostPort and containerPort are assumed to be the same if containerPort is not explicitly given.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    containerPort = 80;
    hostPort = 8080;
    protocol = "tcp";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.extraVeths.<name>.forwardPorts.*.containerPort

Target port of container

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.extraVeths.<name>.forwardPorts.*.hostPort
Source port of the external interface on host

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.extraVeths.<name>.forwardPorts.*.protocol
The protocol specifier for port forwarding between host and container

Type: string

Default:

```
"tcp"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.extraVeths.<name>.hostAddress
The IPv4 address assigned to the host interface. (Not used when hostBridge is set.)

Type: null or string

Default:

```
null
```

Example:

```
"10.231.136.1"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.extraVeths.<name>.hostAddress6
The IPv6 address assigned to the host interface. (Not used when hostBridge is set.)

Type: null or string

Default:

```
null
```

Example:

```
"fc00::1"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.extraVeths.<name>.hostBridge
Put the host−side of the veth−pair into the named bridge. Only one of hostAddress* or hostBridge can be given.

Type: null or string

Default:

```
null
```

Example:

```
"br0"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.extraVeths.<name>.localAddress
The IPv4 address assigned to the interface in the container. If a hostBridge is used, this should be given with netmask to access the whole network. Otherwise the default netmask is /32 and routing is set up from localAddress to hostAddress and back.

Type: null or string

Default:

```
null
```

Example:

```
"10.231.136.2"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.extraVeths.<name>.localAddress6
The IPv6 address assigned to the interface in the container. If a hostBridge is used, this should be given with netmask to access the whole network. Otherwise the default netmask is /128 and routing is set up from localAddress6 to hostAddress6 and back.

Type: null or string

Default:

```
null
```

Example:

```
"fc00::2"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.extraVeths.<name>.localMacAddress
The MAC address assigned to the interface in the container. This address is assigned early during container boot, and can thus be reliably used for setups like IPv6 SLAAC with router advertisements. If this option is not specified, the veth devices gets assigned a random, locally−administered unicast MAC address.

Type: null or string matching the pattern ([0−9a−fA−F]{2}:){5}[0−9a−fA−F]{2}

Default:

```
null
```

Example:

```
"de:b7:73:01:10:90"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.flake
The Flake URI of the NixOS configuration to use for the container. Replaces the option **containers.<name>.path**.

Type: null or string

Default:

```
null
```

Example:

```
"github:NixOS/nixpkgs/master"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos-containers.nix>

containers.<name>.forwardPorts

List of forwarded ports from host to container. Each forwarded port is specified by protocol, hostPort and containerPort. By default, protocol is tcp and hostPort and containerPort are assumed to be the same if containerPort is not explicitly given.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    containerPort = 80;
    hostPort = 8080;
    protocol = "tcp";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos-containers.nix>

containers.<name>.forwardPorts.*.containerPort

Target port of container

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos-containers.nix>

containers.<name>.forwardPorts.*.hostPort

Source port of the external interface on host

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos-containers.nix>

containers.<name>.forwardPorts.*.protocol

The protocol specifier for port forwarding between host and container

Type: string

Default:

```
"tcp"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos-containers.nix>

containers.<name>.hostAddress

The IPv4 address assigned to the host interface. (Not used when hostBridge is set.)

Type: null or string

Default:

```
null
```

Example:

```
"10.231.136.1"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.hostAddress6

The IPv6 address assigned to the host interface. (Not used when hostBridge is set.)

Type: null or string

Default:

```
null
```

Example:

```
"fc00::1"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.hostBridge

Put the host−side of the veth−pair into the named bridge. Only one of hostAddress* or hostBridge can be given.

Type: null or string

Default:

```
null
```

Example:

```
"br0"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.interfaces

The list of interfaces to be moved into the container.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "eth1"
  "eth2"
]
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.localAddress

The IPv4 address assigned to the interface in the container. If a hostBridge is used, this should be given with netmask to access the whole network. Otherwise the default netmask is /32 and routing is set up from localAddress to hostAddress and back.

Type: null or string

Default:

```
null
```

Example:

```
"10.231.136.2"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.localAddress6

The IPv6 address assigned to the interface in the container. If a hostBridge is used, this should be given with netmask to access the whole network. Otherwise the default netmask is /128 and routing is set up from localAddress6 to hostAddress6 and back.

Type: null or string

Default:

```
null
```

Example:

```
"fc00::2"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.localMacAddress

The MAC address assigned to the interface in the container. This address is assigned early during container boot, and can thus be reliably used for setups like IPv6 SLAAC with router advertisements. If this option is not specified, the veth devices gets assigned a random, locally−administered unicast MAC address.

Type: null or string matching the pattern ([0−9a−fA−F]{2}:){5}[0−9a−fA−F]{2}

Default:

```
null
```

Example:

```
"de:b7:73:01:10:90"
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.macvlans

The list of host interfaces from which macvlans will be created. For each interface specified, a macvlan interface will be created and moved to the container.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "eth1"
```

```
  "eth2"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.networkNamespace
Takes the path to a file representing a kernel network namespace that the container shall run in. The specified path should refer to a (possibly bind−mounted) network namespace file, as exposed by the kernel below /proc/<PID>/ns/net. This makes the container enter the given network namespace. One of the typical use cases is to give a network namespace under /run/netns created by **ip−netns**(8). Note that this option cannot be used together with other network−related options, such as −−private−network or −−network−interface=.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.nixpkgs
A path to the nixpkgs that provide the modules, pkgs and lib for evaluating the container.

To only change the ‘pkgs’ argument used inside the container modules, set the ‘nixpkgs.*’ options in the container **config**. Setting ‘config.nixpkgs.pkgs = pkgs’ speeds up the container evaluation by reusing the system pkgs, but the ‘nixpkgs.config’ option in the container config is ignored in this case.

Type: absolute path

Default:

```
pkgs.path
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.path
As an alternative to specifying **config**, you can specify the path to the evaluated NixOS system configuration, typically a symlink to a system profile.

Type: absolute path

Example:

```
"/nix/var/nix/profiles/per−container/webserver"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.privateNetwork
Whether to give the container its own private virtual Ethernet interface. The interface is called ‘eth0’, and is hooked up to the interface ‘ve−«container−name»’ on the host. If this option is not set, then the container shares the network interfaces of the host, and can bind to any port on any interface.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.privateUsers
Whether to give the container its own private UIDs/GIDs space (user namespacing). Disabled by default (‘no’).

If set to a number (usually above host’s UID/GID range: 65536), user namespacing is enabled and the container UID/GIDs will start at that number.

If set to ‘identity’, mostly equivalent to ‘0’, this will only provide process capability isolation (no UID/GID isolation, as they are the same as host).

If set to ‘pick’, user namespacing is enabled and the UID/GID range is automatically chosen, so that no overlapping UID/GID ranges are assigned to multiple containers. This is the recommanded option as it enhances container security massively and operates fully automatically in most cases.

See **https://www.freedesktop.org/software/systemd/man/latest/systemd−nspawn.html#−−private−users=** for details.

Type: 32 bit unsigned integer; between 0 and 4294967295 (both inclusive) or one of “no”, “identity”, “pick”

Default:

```
"no"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.restartIfChanged
Whether the container should be restarted during a NixOS configuration switch if its definition has changed.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.specialArgs
A set of special arguments to be passed to NixOS modules. This will be merged into the ‘specialArgs’ used to evaluate the NixOS configurations.

Type: attribute set of unspecified value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.timeoutStartSec
Time for the container to start. In case of a timeout, the container processes get killed. See **systemd.time**(7) for more information about the format.

Type: string

Default:

```
"1min"
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

containers.<name>.tmpfs
Mounts a set of tmpfs file systems into the container. Multiple paths can be specified. Valid items must conform to the −−tmpfs argument of systemd−nspawn. See **systemd−nspawn**(1) for details.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/var"
]
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/nixos−containers.nix>

documentation.enable
Whether to install documentation of packages from **environment.systemPackages** into the generated system path.

See “Multiple−output packages” chapter in the nixpkgs manual for more info.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/misc/documentation.nix>

documentation.dev.enable
Whether to install documentation targeted at developers.

- This includes man pages targeted at developers if **documentation.man.enable** is set (this also includes “devman” outputs).
- This includes info pages targeted at developers if **documentation.info.enable** is set (this also includes “devinfo” outputs).
- This includes other pages targeted at developers if **documentation.doc.enable** is set (this also includes “devdoc” outputs).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/misc/documentation.nix>

documentation.doc.enable
Whether to install documentation distributed in packages’ ‘/share/doc’. Usually plain text and/or HTML. This also includes “doc” outputs.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/misc/documentation.nix>

documentation.info.enable
Whether to install info pages and the **info** command. This also includes “info” outputs.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/misc/documentation.nix>

documentation.man.enable
Whether to install manual pages. This also includes ‘man’ outputs.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/misc/documentation.nix>

documentation.man.cache.enable
Whether to generate the manual page index caches. This allows searching for a page or keyword using utilities like **apropos**(1) and the ‘−k’ option of **man**(1).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/misc/documentation.nix>

documentation.man.cache.generateAtRuntime
Whether to generate the manual page index caches at runtime using a systemd service.

Note
This is currently only supported by the man−db module.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/misc/documentation.nix>

documentation.man.man−db.enable
Whether to enable man−db as the default man page viewer.

Type: boolean

Default:

```
config.documentation.man.enable
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/misc/man−db.nix>

documentation.man.man−db.package
The ‘man−db’ derivation to use. Useful to override configuration options used for the package.

Type: package

Default:

```
pkgs.man-db
```

Declared by:
<nixpkgs/nixos/modules/misc/man−db.nix>

documentation.man.man−db.manualPages
The manual pages to generate caches for if **documentation.man.cache.enable** is enabled. Must be a path to a directory with man pages under ‘/share/man’; see the source for an example. Advanced users can make this a content−addressed derivation to save a few rebuilds.

Type: absolute path

Default: all man pages in **config.environment.systemPackages**

Declared by:
<nixpkgs/nixos/modules/misc/man−db.nix>

documentation.man.mandoc.enable
Whether to enable mandoc as the default man page viewer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/misc/mandoc.nix>

documentation.man.mandoc.package
The ‘mandoc’ derivation to use. Useful to override configuration options used for the package.

Type: package

Default:

```
pkgs.mandoc
```

Declared by:
<nixpkgs/nixos/modules/misc/mandoc.nix>

documentation.man.mandoc.cachePath
Change the paths where mandoc **makewhatis**(8)generates the manual page index caches. **documentation.man.cache.enable** should be enabled to allow cache generation. This list should only include the paths to manpages installed in the system configuration, i. e. /run/current−system/sw/share/man. **makewhatis**(8) creates a database in each directory using the files ‘mansection/[arch/]title.section’ and ‘catsection/[arch/]title.0’ in it. If a directory contains no manual pages, no database is created in that directory. This option only needs to be set manually if extra paths should be indexed or **documentation.man.manPath** contains paths that can’t be indexed.

Type: list of string

Default:

```
config.documentation.man.mandoc.manPath
```

Example:

```
[ "share/man" "share/man/fr" ]
```

Declared by:
<nixpkgs/nixos/modules/misc/mandoc.nix>

documentation.man.mandoc.extraConfig
Extra configuration to write to **man.conf**(5).

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/misc/mandoc.nix>

documentation.man.mandoc.manPath
Change the paths included in the MANPATH environment variable, i. e. the directories where **man**(1) looks for section−specific directories of man pages. You only need to change this setting if you want extra man pages (e. g. in non−english languages). All values must be strings that are a valid path from the target prefix (without including it). The first value given takes priority. Note that this will not add manpath directives to **man.conf**(5).

Type: list of string

Default:

```
[
  "share/man"
]
```

Example:

```
[ "share/man" "share/man/fr" ]
```

Declared by:
<nixpkgs/nixos/modules/misc/mandoc.nix>

documentation.man.mandoc.settings
Configuration for **man.conf**(5)

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/misc/mandoc.nix>

documentation.man.mandoc.settings.manpath
Override the default search path for **man**(1), **apropos**(1), and **makewhatis**(8). It can be used multiple times to specify multiple paths, with the order determining the manual page search order. This is not recommended in favor of **documentation.man.mandoc.manPath**, but if it's needed to specify the manpath in this way, set **documentation.man.mandoc.manPath** to an empty list ('[]').

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "/run/current-system/sw/share/man" ]
```

Declared by:
<nixpkgs/nixos/modules/misc/mandoc.nix>

documentation.man.mandoc.settings.output.fragment
Whether to omit the <!DOCTYPE> declaration and the <html>, <head>, and <body> elements and only emit the subtree below the <body> element in HTML output of **mandoc**(1). The style argument will be ignored. This is useful when embedding manual content within existing documents.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/misc/mandoc.nix>

documentation.man.mandoc.settings.output.includes
A string of relative path used as a template for the output path of linked header files (usually via the In macro) in HTML output. Instances of '%I' are replaced with the include filename. The default is not to present a hyperlink.

Type: null or string

Default:

```
null
```

Example:

```
../src/%I.html
```

Declared by:
<nixpkgs/nixos/modules/misc/mandoc.nix>

documentation.man.mandoc.settings.output.indent
Number of blank characters at the left margin for normal text, default of '5' for **mdoc**(7) and '7' for **man**(7). Increasing this is not recommended; it may result in degraded formatting, for example overfull lines or ugly line breaks. When output is to a pager on a terminal that is less than 66 columns wide, the default is reduced to three columns.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/misc/mandoc.nix>

documentation.man.mandoc.settings.output.man
A template for linked manuals (usually via the Xr macro) in HTML output. Instances of '%N' and '%S' are replaced with the linked manual's name and section, respectively. If no section is included, section 1 is assumed. The default is not to present a hyperlink. If two formats are given and a file %N.%S exists in the current directory, the first format is used; otherwise, the second format is used.

Type: null or string

Default:

```
null
```

Example:

```
../html%S/%N.%S.html
```

Declared by:
<nixpkgs/nixos/modules/misc/mandoc.nix>

documentation.man.mandoc.settings.output.paper
This option is for generating PostScript and PDF output. The paper size name may be one of ‘a3’, ‘a4’, ‘a5’, ‘legal’, or ‘letter’. You may also manually specify dimensions as ‘NNxNN’, width by height in millimetres. If an unknown value is encountered, letter is used. Output pages default to letter sized and are rendered in the Times font family, 11−point. Margins are calculated as 1/9 the page length and width. Line−height is 1.4m.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/misc/mandoc.nix>

documentation.man.mandoc.settings.output.style
Path to the file used for an external style−sheet. This must be a valid absolute or relative URI.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/misc/mandoc.nix>

documentation.man.mandoc.settings.output.toc
Whether to enable printing a table of contents near the beginning of the HTML output of **mandoc**(1) if an input file contains at least two non−standard sections .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/misc/mandoc.nix>

documentation.man.mandoc.settings.output.width
The ASCII and UTF−8 output width, default is ‘78’. When output is a pager on a terminal that is less than 79 columns wide, the default is reduced to one less than the terminal width. In any case, lines that are output in literal mode are never wrapped and may exceed the output width.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/misc/mandoc.nix>

documentation.nixos.enable

Whether to install NixOS's own documentation.

- This includes man pages like **configuration.nix**(5) if **documentation.man.enable** is set.
- This includes the HTML manual and the **nixos-help** command if **documentation.doc.enable** is set.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/misc/documentation.nix>

documentation.nixos.checkRedirects

Check redirects for manualHTML.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/misc/documentation.nix>

documentation.nixos.extraModuleSources

Which extra NixOS module paths the generated NixOS's documentation should strip from options.

Type: list of (absolute path or string)

Default:

```
[ ]
```

Example:

```
# e.g. with options from modules in ${pkgs.customModules}/nix:
[ pkgs.customModules ]
```

Declared by:

<nixpkgs/nixos/modules/misc/documentation.nix>

documentation.nixos.extraModules

Modules for which to show options even when not imported.

Type: list of raw value

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/misc/documentation.nix>

documentation.nixos.includeAllModules

Whether the generated NixOS's documentation should include documentation for all the options from all the NixOS modules included in the current 'configuration.nix'. Disabling this will make the manual generator to ignore options defined outside of 'baseModules'.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/misc/documentation.nix>

documentation.nixos.options.splitBuild
Whether to split the option docs build into a cacheable and an uncacheable part. Splitting the build can substantially decrease the amount of time needed to build the manual, but some user modules may be incompatible with this splitting.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/misc/documentation.nix>

documentation.nixos.options.warningsAreErrors
Treat warning emitted during the option documentation build (eg for missing option descriptions) as errors.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/misc/documentation.nix>

ec2.zfs.datasets
Datasets to create under the ‘tank’ and ‘boot’ zpools.

NOTE: This option is used only at image creation time, and does not attempt to declaratively create or manage datasets on an existing system.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/amazon−options.nix>

ec2.zfs.datasets.<name>.mount
Where to mount this dataset.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/amazon−options.nix>

ec2.zfs.datasets.<name>.properties
Properties to set on this dataset.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/amazon−options.nix>

environment.enableAllTerminfo
Whether to install all terminfo outputs

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/terminfo.nix>

environment.enableDebugInfo
Some NixOS packages provide debug symbols. However, these are not included in the system closure by default to save disk space. Enabling this option causes the debug symbols to appear in */run/current−system/sw/lib/debug/.build−id*, where tools such as **gdb** can find them. If you need debug symbols for a package that doesn't provide them by default, you can enable them as follows:

```
nixpkgs.config.packageOverrides = pkgs: {
  hello = pkgs.hello.overrideAttrs (oldAttrs: {
    separateDebugInfo = true;
  });
};
```

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/debug−info.nix>

environment.budgie.excludePackages
Which packages Budgie should exclude from the default environment.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.mate−terminal ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/budgie.nix>

environment.checkConfigurationOptions
Alias of **_module.check**.

Type: boolean

Declared by:
<nixpkgs/nixos/modules/rename.nix>

environment.cinnamon.excludePackages
Which packages cinnamon should exclude from the default environment

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.blueman ]
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/cinnamon.nix>

environment.corePackages
Set of core packages for a normal interactive system.

Only change this if you know what you're doing!

Like with systemPackages, packages are installed to */run/current−system/sw*. They are automatically available to all users, and are automatically updated every time you rebuild the system configuration.

Type: list of package

Default: these packages, with their meta.priority numerically increased (thus lowering their installation priority):

```
[ pkgs.acl pkgs.attr pkgs.bashInteractive pkgs.bzip2 pkgs.coreutils \
−full pkgs.cpio pkgs.curl pkgs.diffutils pkgs.findutils pkgs.gawk  \
pkgs.getent pkgs.getconf pkgs.gnugrep pkgs.gnupatch pkgs.gnused pkg \
s.gnutar pkgs.gzip pkgs.xz pkgs.less pkgs.libcap pkgs.ncurses pkgs. \
netcat pkgs.mkpasswd pkgs.procps pkgs.su pkgs.time pkgs.util−linux \
 pkgs.which pkgs.zstd ]
```

Example:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/config/system−path.nix>

environment.cosmic.excludePackages
List of packages to exclude from the COSMIC environment.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.cosmic−player ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/cosmic.nix>

environment.debuginfodServers
List of urls of debuginfod servers for tools like **gdb** and **valgrind** to use.

Unrelated to **environment.enableDebugInfo**.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/config/debug−info.nix>

environment.defaultPackages

Set of default packages that aren't strictly necessary for a running system, entries can be removed for a more minimal NixOS installation.

Like with systemPackages, packages are installed to */run/current−system/sw*. They are automatically available to all users, and are automatically updated every time you rebuild the system configuration.

Type: list of package

Default: these packages, with their meta.priority numerically increased (thus lowering their installation priority):

```
[ pkgs.perl pkgs.rsync pkgs.strace ]
```

Example:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/config/system−path.nix>

environment.enlightenment.excludePackages

Which packages Enlightenment should exclude from the default environment

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.enlightenment.ephoto ]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/desktop−managers/enlightenment.nix>

environment.etc

Set of files that have to be linked in */etc*.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{ example−configuration−file =
    { source = "/nix/store/.../etc/dir/file.conf.example";
      mode = "0440";
    };
  "default/useradd".text = "GROUP=100 ...";
}
```

Declared by:

<nixpkgs/nixos/modules/system/etc/etc.nix>

environment.etc.<name>.enable

Whether this /etc file should be generated. This option allows specific /etc files to be disabled.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/etc/etc.nix>

environment.etc.<name>.gid
GID of created file. Only takes effect when the file is copied (that is, the mode is not 'symlink').

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/system/etc/etc.nix>

environment.etc.<name>.group
Group name of file owner.

Only takes effect when the file is copied (that is, the mode is not 'symlink').

When 'services.userborn.enable', this option has no effect. You have to assign a 'gid' instead. Otherwise this option takes precedence over 'gid'.

Type: string

Default:

```
"+0"
```

Declared by:
<nixpkgs/nixos/modules/system/etc/etc.nix>

environment.etc.<name>.mode
If set to something else than 'symlink', the file is copied instead of symlinked, with the given file mode.

Type: string

Default:

```
"symlink"
```

Example:

```
"0600"
```

Declared by:
<nixpkgs/nixos/modules/system/etc/etc.nix>

environment.etc.<name>.source
Path of the source file.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/system/etc/etc.nix>

environment.etc.<name>.target
Name of symlink (relative to */etc*). Defaults to the attribute name.

Type: string

Declared by:
<nixpkgs/nixos/modules/system/etc/etc.nix>

environment.etc.<name>.text
Text of the file.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/etc/etc.nix>

environment.etc.<name>.uid
UID of created file. Only takes effect when the file is copied (that is, the mode is not 'symlink').

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/system/etc/etc.nix>

environment.etc.<name>.user
User name of file owner.

Only takes effect when the file is copied (that is, the mode is not 'symlink').

When 'services.userborn.enable', this option has no effect. You have to assign a 'uid' instead. Otherwise this option takes precedence over 'uid'.

Type: string

Default:

```
"+0"
```

Declared by:
<nixpkgs/nixos/modules/system/etc/etc.nix>

environment.extraInit
Shell script code called during global environment initialisation after all variables and profileVariables have been set. This code is assumed to be shell−independent, which means you should stick to pure sh without sh word split.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/config/shells−environment.nix>

environment.extraOutputsToInstall
Entries listed here will be appended to the 'meta.outputsToInstall' attribute for each package in 'environment.systemPackages', and the files from the corresponding derivation outputs symlinked into */run/current−system/sw*.

For example, this can be used to install the 'dev' and 'info' outputs for all packages in the system environment, if they are available.

To use specific outputs instead of configuring them globally, select the corresponding attribute on the package derivation, e.g. 'libxml2.dev' or 'coreutils.info'.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "dev"
  "info"
]
```

Declared by:
<nixpkgs/nixos/modules/config/system−path.nix>

environment.extraSetup
Shell fragments to be run after the system environment has been created. This should only be used for things that need to modify the internals of the environment, e.g. generating MIME caches. The environment being built can be accessed at $out.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/config/system−path.nix>

environment.freetds
Configure freetds database entries. Each attribute denotes a section within freetds.conf, and the value (a string) is the config content for that section. When at least one entry is configured the global environment variables FREETDSCONF, FREETDS and SYBASE will be configured to allow the programs that use freetds to find the library and config.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{ MYDATABASE = ''
    host = 10.0.2.100
    port = 1433
    tds version = 7.2
  '';
}
```

Declared by:
<nixpkgs/nixos/modules/programs/freetds.nix>

environment.gnome.excludePackages
Which packages gnome should exclude from the default environment

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.showtime ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/gnome.nix>

environment.homeBinInPath
Include ~/bin/ in $PATH.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/shells−environment.nix>

environment.interactiveShellInit
Shell script code called during interactive shell initialisation. This code is assumed to be shell−independent, which means you should stick to pure sh without sh word split.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/config/shells−environment.nix>

environment.ldso
The executable to link into the normal FHS location of the ELF loader.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/ldso.nix>

environment.ldso32
The executable to link into the normal FHS location of the 32−bit ELF loader.

This currently only works on x86_64 architectures.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/ldso.nix>

environment.localBinInPath
Add ~/.local/bin/ to $PATH

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/shells−environment.nix>

environment.loginShellInit
Shell script code called during login shell initialisation. This code is assumed to be shell−independent, which means you should stick to pure sh without sh word split.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/config/shells−environment.nix>

environment.lxqt.excludePackages

Which LXQt packages to exclude from the default environment

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [ lxqt.qterminal ]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/desktop−managers/lxqt.nix>

environment.mate.excludePackages

Which MATE packages to exclude from the default environment

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.mate−terminal pkgs.pluma ]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/desktop−managers/mate.nix>

environment.memoryAllocator.provider

The system−wide memory allocator.

Briefly, the system−wide memory allocator providers are:

- ‘libc’: the standard allocator provided by libc
- ‘graphene−hardened’: Hardened memory allocator coming from GrapheneOS project. The default configuration template has all normal optional security features enabled and is quite aggressive in terms of sacrificing performance and memory usage for security.
- ‘graphene−hardened−light’: Hardened memory allocator coming from GrapheneOS project. The light configuration template disables the slab quarantines, write after free check, slot randomization and raises the guard slab interval from 1 to 8 but leaves zero−on−free and slab canaries enabled. The light configuration has solid performance and memory usage while still being far more secure than mainstream allocators with much better security properties.
- ‘jemalloc’: A general purpose allocator that emphasizes fragmentation avoidance and scalable concurrency support.
- ‘mimalloc’: A compact and fast general purpose allocator, which may optionally be built with mitigations against various heap vulnerabilities.
- ‘scudo’: A user−mode allocator based on LLVM Sanitizer’s CombinedAllocator, which aims at providing additional mitigations against heap based vulnerabilities, while maintaining good performance.

  Warning
  Selecting an alternative allocator (i.e., anything other than ‘libc’) may result in instability, data loss, and/or service failure.

Type: one of “libc”, “graphene−hardened”, “graphene−hardened−light”, “jemalloc”, “mimalloc”, “scudo”

Default:

```
"libc"
```

Declared by:
<nixpkgs/nixos/modules/config/malloc.nix>

environment.pantheon.excludePackages
Which packages pantheon should exclude from the default environment

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.pantheon.elementary-camera ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/pantheon.nix>

environment.pathsToLink
List of directories to be symlinked in */run/current-system/sw*.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/"
]
```

Declared by:
<nixpkgs/nixos/modules/config/system-path.nix>

environment.plasma6.excludePackages
List of default packages to exclude from the configuration

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.kdePackages.elisa ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/plasma6.nix>

environment.profileRelativeEnvVars
Attribute set of environment variable. Each attribute maps to a list of relative paths. Each relative path is appended to the each profile of **environment.profiles** to form the content of the corresponding environment variable.

Type: attribute set of list of string

Default:

```
{ }
```

Example:

```
{
  MANPATH = [
    "/man"
```

```
    "/share/man"
  ];
  PATH = [
    "/bin"
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/config/shells−environment.nix>

environment.profileRelativeSessionVariables

Attribute set of environment variable used in the global environment. These variables will be set by PAM early in the login process.

Variable substitution is available as described in **pam_env.conf**(5).

Each attribute maps to a list of relative paths. Each relative path is appended to the each profile of **environment.profiles** to form the content of the corresponding environment variable.

Also, these variables are merged into **environment.profileRelativeEnvVars** and it is therefore not possible to use PAM style variables such as '@{HOME}'.

Type: attribute set of list of string

Default:

```
{ }
```

Example:

```
{
  MANPATH = [
    "/man"
    "/share/man"
  ];
  PATH = [
    "/bin"
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/config/system−environment.nix>

environment.profiles

A list of profiles used to setup the global environment.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/config/shells−environment.nix>

environment.sessionVariables

A set of environment variables used in the global environment. These variables will be set by PAM early in the login process.

The value of each session variable can be either a string or a list of strings. The latter is concatenated, interspersed with colon characters.

Setting a variable to 'null' does nothing. You can override a variable set by another module to 'null' to unset it.

Note, due to limitations in the PAM format values may not contain the '"' character.

Also, these variables are merged into **environment.variables** and it is therefore not possible to use PAM style variables such as '@{HOME}'.

Type: attribute set of (null or (list of (signed integer or string or absolute path)) or signed integer or string or absolute path)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/config/system−environment.nix>

environment.shellAliases

An attribute set that maps aliases (the top level attribute names in this option) to command strings or directly to build outputs. The aliases are added to all users' shells. Aliases mapped to 'null' are ignored.

Type: attribute set of (null or string or absolute path)

Default:

```
{ }
```

Example:

```
{
  l = null;
  ll = "ls -l";
}
```

Declared by:

<nixpkgs/nixos/modules/config/shells−environment.nix>

environment.shellInit

Shell script code called during shell initialisation. This code is assumed to be shell−independent, which means you should stick to pure sh without sh word split.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/config/shells−environment.nix>

environment.shells

A list of permissible login shells for user accounts. No need to mention '/bin/sh' here, it is placed into this list implicitly.

Type: list of (package or absolute path)

Default:

```
[ ]
```

Example:

```
[ pkgs.bashInteractive pkgs.zsh ]
```

Declared by:

<nixpkgs/nixos/modules/config/shells−environment.nix>

environment.stub−ld.enable

Install a stub ELF loader to print an informative error message in the event that a user attempts to run an ELF binary not compiled for NixOS.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/config/stub−ld.nix>

environment.systemPackages

The set of packages that appear in /run/current−system/sw. These packages are automatically available to all users, and are automatically updated every time you rebuild the system configuration. (The latter is the main difference with installing them in the default profile, */nix/var/nix/profiles/default*.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.firefox pkgs.thunderbird ]
```

Declared by:

<nixpkgs/nixos/modules/config/system−path.nix>

environment.unixODBCDrivers

Specifies Unix ODBC drivers to be registered in */etc/odbcinst.ini*. You may also want to add 'pkgs.unixodbc' to the system path to get a command line client to connect to ODBC databases.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs.unixodbcDrivers; [ sqlite psql ]
```

Declared by:

<nixpkgs/nixos/modules/config/unix−odbc−drivers.nix>

environment.variables

A set of environment variables used in the global environment. These variables will be set on shell initialisation (e.g. in /etc/profile).

The value of each variable can be either a string or a list of strings. The latter is concatenated, interspersed with colon characters.

Setting a variable to 'null' does nothing. You can override a variable set by another module to 'null' to unset it.

Type: attribute set of (null or (list of (signed integer or string or absolute path)) or signed integer or string or absolute path)

Default:

```
{ }
```

Example:

```
{
  EDITOR = "nvim";
  VISUAL = "nvim";
}
```

Declared by:

<nixpkgs/nixos/modules/config/shells−environment.nix>

environment.wordlist.enable

Whether to enable environment variables for lists of words.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/misc/wordlist.nix>

environment.wordlist.lists

A set with the key names being the environment variable you'd like to set and the values being a list of paths to text documents containing lists of words. The various files will be merged, sorted, duplicates removed, and extraneous spacing removed.

If you have a handful of words that you want to add to an already existing wordlist, you may find 'builtins.toFile' useful for this task.

Type: attribute set of non−empty (list of absolute path)

Default:

```
{
  WORDLIST = [ "${pkgs.scowl}/share/dict/words.txt" ];
}
```

Example:

```
{
  WORDLIST = [ "${pkgs.scowl}/share/dict/words.txt" ];
  AUGMENTED_WORDLIST = [
    "${pkgs.scowl}/share/dict/words.txt"
    "${pkgs.scowl}/share/dict/words.variants.txt"
    (builtins.toFile "extra−words" ''
      desynchonization
      oobleck'')
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/misc/wordlist.nix>

environment.wvdial.dialerDefaults

Contents of the "Dialer Defaults" section of <filename>/etc/wvdial.conf</filename>.

Type: string

Default:

```
""
```

Example:

```
"Init1 = AT+CGDCONT=1,\"IP\",\"internet.t-mobile\""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wvdial.nix>

environment.wvdial.pppDefaults

Default ppp settings for wvdial.

Type: string

Default:

```
noipdefault
usepeerdns
defaultroute
persist
noauth
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wvdial.nix>

environment.xfce.excludePackages

Which packages XFCE should exclude from the default environment

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.xfce4-volumed-pulse ]
```

Declared by:

<nixpkgs/nixos/modules/services/x11/desktop-managers/xfce.nix>

fileSystems

The file systems to be mounted. It must include an entry for the root directory (‘mountPoint = "/"’). Each entry in the list is an attribute set with the following fields: ‘mountPoint’, ‘device’, ‘fsType’ (a file system type recognised by **mount**), and ‘options’ (the mount options passed to **mount** using the **-o** flag; defaults to ‘["defaults"]’).

Instead of specifying ‘device’, you can also specify a volume label (‘label’) for file systems that support it, such as ext2/ext3 (see **mke2fs -L**).

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/".device = "/dev/hda1";
  "/data" = {
    device = "/dev/hda2";
    fsType = "ext3";
    options = [ "data=journal" ];
  };
  "/bigdisk".label = "bigdisk";
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/overlayfs.nix>
<nixpkgs/nixos/modules/tasks/filesystems.nix>
<nixpkgs/nixos/modules/tasks/encrypted−devices.nix>
<nixpkgs/nixos/modules/system/boot/stage−1.nix>

fileSystems.<name>.enable

Whether to enable the filesystem mount.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

fileSystems.<name>.autoFormat

If the device does not currently contain a filesystem (as determined by **blkid**), then automatically format it with the filesystem type specified in **fsType**. Use with caution.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

fileSystems.<name>.autoResize

If set, the filesystem is grown to its maximum size before being mounted. (This is typically the size of the containing partition.) This is currently only supported for ext2/3/4 filesystems that are mounted during early boot.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

fileSystems.<name>.depends

List of paths that should be mounted before this one. This filesystem's **device** and **mountPoint** are always checked and do not need to be included explicitly. If a path is added to this list, any other filesystem whose mount point is a parent of the path will be mounted before this filesystem. The paths do not need to actually be the **mountPoint** of some other filesystem.

This is useful for mounts which require keys and/or configuration files residing on another filesystem.

Type: list of string (with check: non−empty without trailing slash)

Default:

```
[ ]
```

Example:

```
[
  "/persist"
```

```
]
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

fileSystems.<name>.device
The device as passed to ‘mount’.

This can be any of:

- a filename of a block special device such as ‘/dev/sdc3’
- a tag such as ‘UUID=fdd68895−c307−4549−8c9c−90e44c71f5b7’
- (for bind mounts only) the source path
- something else depending on the **fsType**. For example, ‘nfs’ device may look like ‘knuth.cwi.nl:/dir’

This is called ‘device’ in **mount**(8) and ‘fs_spec’ in **fstab**(5).

Type: null or string (with check: non−empty)

Default:

```
null
```

Example:

```
"/dev/sda"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

fileSystems.<name>.encrypted.enable
The block device is backed by an encrypted one, adds this device as a initrd luks entry.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/encrypted−devices.nix>

fileSystems.<name>.encrypted.blkDev
Location of the backing encrypted device.

Type: null or string

Default:

```
null
```

Example:

```
"/dev/sda1"
```

Declared by:
<nixpkgs/nixos/modules/tasks/encrypted−devices.nix>

fileSystems.<name>.encrypted.keyFile
Path to a keyfile used to unlock the backing encrypted device. When systemd stage 1 is not enabled, at the time this keyfile is accessed, the ‘neededForBoot’ filesystems (see ‘utils.fsNeededForBoot’) will have been mounted under ‘/mnt−root’, so the keyfile path should usually start with “/mnt−root/”. When systemd stage 1 is enabled, ‘fsNeededForBoot’ file systems will be mounted as needed under ‘/sysroot’, and the keyfile will not be accessed until its requisite mounts are done.

Type: null or string

Default:

```
null
```

Example:

```
"/mnt-root/root/.swapkey"
```

Declared by:
<nixpkgs/nixos/modules/tasks/encrypted-devices.nix>

fileSystems.<name>.encrypted.label
Label of the unlocked encrypted device. Set ‘fileSystems.<name?>.device’ to ‘/dev/mapper/<label>’ to mount the unlocked device.

Type: null or string

Default:

```
null
```

Example:

```
"rootfs"
```

Declared by:
<nixpkgs/nixos/modules/tasks/encrypted-devices.nix>

fileSystems.<name>.fsType
Type of the file system.

This is the ‘fstype’ passed to ‘-t’ in the **mount**(8) command, and is called ‘fs_vfstype’ in **fstab**(5).

Type: string (with check: non-empty)

Example:

```
"ext3"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

fileSystems.<name>.label
Label of the device. This simply sets **device** to ‘/dev/disk/by-label/${label}’. Note that devices will not have a label unless they contain a filesystem which supports labels, such as ext4 or fat32.

Type: null or string (with check: non-empty)

Default:

```
null
```

Example:

```
"root-partition"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

fileSystems.<name>.mountPoint
Location where the file system will be mounted.

This is called ‘mountpoint’ in **mount**(8) and ‘fs_file’ in **fstab**(5)

Type: string (with check: non-empty without trailing slash)

Default:

```
"‹name›"
```

Example:

```
"/mnt/usb"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

fileSystems.<name>.neededForBoot
If set, this file system will be mounted in the initial ramdisk. Note that the file system will always be mounted in the initial ramdisk if its mount point is one of the following: */*, */nix*, */nix/store*, */var*, */var/log*, */var/lib*, */var/lib/nixos*, */etc*, */usr*.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/stage−1.nix>

fileSystems.<name>.noCheck
Disable running fsck on this filesystem.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

fileSystems.<name>.options
Options used to mount the file system.

This is called ‘options’ in **mount**(8) and ‘fs_mntops’ in **fstab**(5)

Some options that can be used for all mounts are documented in **mount**(8) under ‘FILESYSTEM−INDEPENDENT MOUNT OPTIONS’.

Options that systemd understands are documented in **systemd.mount**(5) under ‘FSTAB’.

Each filesystem supports additional options, see the docs for that filesystem.

Type: non−empty (list of string (with check: non−empty))

Default:

```
[
  "defaults"
]
```

Example:

```
[
  "data=journal"
]
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

fileSystems.<name>.overlay.lowerdir
The list of path(s) to the lowerdir(s).

To create a writable overlay, you MUST provide an ‘upperdir’ and a ‘workdir’.

You can create a read−only overlay when you provide multiple (at least 2!) lowerdirs and neither an ‘upperdir’ nor a ‘workdir’.

Type: null or (non−empty (list of (string or path in the Nix store)))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/overlayfs.nix>

fileSystems.<name>.overlay.upperdir
The path to the upperdir.

If this is null, a read−only overlay is created using the lowerdir.

If the filesystem is ‘neededForBoot’, this will be prefixed with ‘/sysroot’, unless ‘useStage1BaseDirectories’ is set to ‘true’.

If you set this to some value you MUST also set ‘workdir’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/overlayfs.nix>

fileSystems.<name>.overlay.useStage1BaseDirectories
If enabled, ‘lowerdir’, ‘upperdir’ and ‘workdir’ will be prefixed with ‘/sysroot’.

Disabling this can be useful to create an overlay over directories which aren’t on the real root.

Disabling this does not work with the scripted (i.e. non−systemd) initrd.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/overlayfs.nix>

fileSystems.<name>.overlay.workdir
The path to the workdir.

If the filesystem is ‘neededForBoot’, this will be prefixed with ‘/sysroot’, unless ‘useStage1BaseDirectories’ is set to ‘true’.

This MUST be set if you set ‘upperdir’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/overlayfs.nix>

fileSystems.<name>.stratis.poolUuid
UUID of the stratis pool that the fs is located in

This is only relevant if you are using **stratis**.

Type: null or string

Default:

```
null
```

Example:

```
"04c68063−90a5−4235−b9dd−6180098a20d9"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems.nix>

fonts.enableDefaultPackages
Enable a basic set of fonts providing several styles and families and reasonable coverage of Unicode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/fonts/packages.nix>

fonts.enableGhostscriptFonts
Whether to add the fonts provided by Ghostscript (such as various URW fonts and the “Base−14” Postscript fonts) to the list of system fonts, making them available to X11 applications.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/fonts/ghostscript.nix>

fonts.packages
List of primary font packages.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[ pkgs.dejavu_fonts ]
```

Declared by:
<nixpkgs/nixos/modules/config/fonts/packages.nix>

fonts.fontDir.enable
Whether to create a directory with links to all fonts in */run/current−system/sw/share/X11/fonts*.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/fonts/fontdir.nix>

fonts.fontDir.decompressFonts
Whether to decompress fonts in */run/current−system/sw/share/X11/fonts*.

Type: boolean

Default:

```
config.programs.xwayland.enable
```

Declared by:
<nixpkgs/nixos/modules/config/fonts/fontdir.nix>

fonts.fontconfig.enable

If enabled, a Fontconfig configuration file will be built pointing to a set of default fonts. If you don't care about running X11 applications or any other program that uses Fontconfig, you can turn this option off and prevent a dependency on all those fonts.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.allowBitmaps

Allow bitmap fonts. Set to 'false' to ban all bitmap fonts.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.allowType1

Allow Type−1 fonts. Default is 'false' because of poor rendering.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.antialias

Enable font antialiasing. At high resolution (> 200 DPI), antialiasing has no visible effect; users of such displays may want to disable this option.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.cache32Bit

Generate system fonts cache for 32−bit applications.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.defaultFonts.emoji

System−wide default emoji font(s). Multiple fonts may be listed in case a font does not support all emoji.

Note that fontconfig matches color emoji fonts preferentially, so if you want to use a black and white font while having a color font installed (eg. Noto Color Emoji installed alongside Noto Emoji), fontconfig will still choose the color font even when it is later in the list.

Type: list of string

Default:

```
[
  "Noto Color Emoji"
]
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.defaultFonts.monospace

System−wide default monospace font(s). Multiple fonts may be listed in case multiple languages must be supported.

Type: list of string

Default:

```
[
  "DejaVu Sans Mono"
]
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.defaultFonts.sansSerif

System−wide default sans serif font(s). Multiple fonts may be listed in case multiple languages must be supported.

Type: list of string

Default:

```
[
  "DejaVu Sans"
]
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.defaultFonts.serif

System−wide default serif font(s). Multiple fonts may be listed in case multiple languages must be supported.

Type: list of string

Default:

```
[
  "DejaVu Serif"
]
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.hinting.enable

Enable font hinting. Hinting aligns glyphs to pixel boundaries to improve rendering sharpness at low resolution. At high resolution (> 200 dpi) hinting will do nothing (at best); users of such displays may want to disable this option.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.hinting.autohint

Enable the autohinter in place of the default interpreter. The results are usually lower quality than correctly−hinted fonts, but better than unhinted fonts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.hinting.style

Hintstyle is the amount of font reshaping done to line up to the grid.

slight will make the font more fuzzy to line up to the grid but will be better in retaining font shape, while full will be a crisp font that aligns well to the pixel grid but will lose a greater amount of font shape.

Type: one of “none”, “slight”, “medium”, “full”

Default:

```
"slight"
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.includeUserConf

Include the user configuration from *~/.config/fontconfig/fonts.conf* or *~/.config/fontconfig/conf.d*.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.localConf

System−wide customization file contents, has higher priority than ‘defaultFonts’ settings.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.subpixel.lcdfilter

FreeType LCD filter. At high resolution (> 200 DPI), LCD filtering has no visible effect; users of such displays may want to select ‘none’.

Type: one of “none”, “default”, “light”, “legacy”

Default:

```
"default"
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.subpixel.rgba

Subpixel order. The overwhelming majority of displays are ‘rgb’ in their normal orientation. Select ‘vrgb’ for mounting such a display 90 degrees clockwise from its normal orientation or ‘vbgr’ for mounting 90 degrees counter−clockwise. Select ‘bgr’ in the unlikely event of mounting 180 degrees from the normal orientation. Reverse these directions in the improbable event that the display’s native subpixel order is ‘bgr’.

Type: one of “rgb”, “bgr”, “vrgb”, “vbgr”, “none”

Default:

```
"none"
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

fonts.fontconfig.useEmbeddedBitmaps

Use embedded bitmaps in fonts like Calibri.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/fonts/fontconfig.nix>

gtk.iconCache.enable

Whether to build icon theme caches for GTK applications.

Type: boolean

Default:

```
config.services.xserver.enable
```

Declared by:

<nixpkgs/nixos/modules/config/gtk/gtk−icon−cache.nix>

hardware.enableAllFirmware

Whether to enable all firmware, including **unfree packages that must be explictly allowed**.

Alternatively, use the **hardware.enableRedistributableFirmware** option.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/all−firmware.nix>

hardware.enableAllHardware
Whether to enable Enable support for most hardware.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/all−hardware.nix>

hardware.enableRedistributableFirmware
Whether to enable firmware with a license allowing redistribution.

Type: boolean

Default:

```
config.hardware.enableAllFirmware
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/all−firmware.nix>

hardware.acpilight.enable
Enable acpilight. This will allow brightness control via xbacklight from users in the video group

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/acpilight.nix>

hardware.alsa.enable
Whether to set up the user space part of the Advanced Linux Sound Architecture (ALSA)

Warning
Enable this option only if you want to use ALSA as your main sound system, not if you’re using a sound server (e.g. PulseAudio or Pipewire).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.enableBluetooth
Whether to enable Bluetooth audio support via BlueALSA.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.enableOSSEmulation
Whether to enable the OSS emulation.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.enablePersistence
Whether to enable ALSA sound card state saving on shutdown. This is generally not necessary if you're using an external sound server.

Type: boolean

Default:

```
config.hardware.alsa.enable
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.enableRecorder
Whether to set up a loopback device that continuously records and allows to play back audio from the computer.

The loopback device is named 'pcm.recorder', audio can be saved by capturing from this device as with any microphone.

Note
By default the output is duplicated to the recorder assuming stereo audio, for a more complex layout you have to override the pcm.splitter device using 'hardware.alsa.config'. See the generated /etc/asound.conf for its definition.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.cardAliases
Assign custom names and reorder the sound cards.

Note
You can find the card ids by looking at '/proc/asound/cards'.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  soundchip = { driver = "snd_intel_hda"; id = 0; };
  videocard = { driver = "snd_intel_hda"; id = 1; };
  usb       = { driver = "snd_usb_audio"; id = 2; };
}
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.cardAliases.<name>.driver
Name of the kernel module that provides the card.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.cardAliases.<name>.id
The ID of the sound card

Type: signed integer

Default:

```
"default"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.config
The content of the system−wide ALSA configuration (/etc/asound.conf).

Documentation of the configuration language and examples can be found in the unofficial ALSA wiki: **https://alsa.opensrc.org/Asoundrc**

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
# Send audio to a remote host via SSH
pcm.remote {
  @args [ HOSTNAME ]
  @args.HOSTNAME { type string }
  type file
  format raw
  slave.pcm pcm.null
  file {
    @func concat
    strings [
      "| ${lib.getExec pkgs.openssh} −C "
      $HOSTNAME
      " aplay −f %f −c %c −r %r −"
    ]
  }
}
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.controls
Virtual volume controls (softvols) to add to a sound card. These can be used to control the volume of specific applications or a digital output device (HDMI video card).

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  firefox = { device = "front"; maxVolume = -25.0; };
  mpv     = { device = "front"; maxVolume = -25.0; };
  # and run programs with ‘env ALSA_AUDIO_OUT=<name>‘
}
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.controls.<name>.card
Name of the PCM card to control (slave).

Type: string

Default:

```
"default"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.controls.<name>.device
Name of the PCM device to control (slave).

Type: string

Default:

```
"default"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.controls.<name>.maxVolume
The maximum volume in dB.

Type: floating point number

Default:

```
0.0
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.controls.<name>.name
Name of the control, as it appears in ‘alsamixer’. If null it will be the same as the softvol device name.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.defaultDevice.capture
The default capture device (i.e. microphone). Leave empty to let ALSA pick the default automatically.

Note
The device can be changed at runtime by setting the ALSA_AUDIO_IN environment variables (but only before starting a program).

Type: string

Default:

```
""
```

Example:

```
"dsnoop:CARD=0,DEV=2"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.defaultDevice.playback
The default playback device. Leave empty to let ALSA pick the default automatically.

Note
The device can be changed at runtime by setting the ALSA_AUDIO_OUT environment variables (but only before starting a program).

Type: string

Default:

```
""
```

Example:

```
"dmix:CARD=1,DEV=0"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.deviceAliases
Assign custom names to sound cards.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  hdmi1 = "hw:CARD=videocard,DEV=5";
  hdmi2 = "hw:CARD=videocard,DEV=6";
}
```

Declared by:
<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.alsa.plugins

List of ALSA plugins to be added to the search path.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.bluez-alsa ]
```

Declared by:

<nixpkgs/nixos/modules/services/audio/alsa.nix>

hardware.amdgpu.initrd.enable

Whether to enable loading ‘amdgpu’ kernelModule in stage 1. Can fix lower resolution in boot screen during initramfs phase .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/amdgpu.nix>

hardware.amdgpu.legacySupport.enable

Whether to enable using ‘amdgpu’ kernel driver instead of ‘radeon’ for Southern Islands (Radeon HD 7000) series and Sea Islands (Radeon HD 8000) series cards. Note: this removes support for analog video outputs, which is only available in the ‘radeon’ driver .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/amdgpu.nix>

hardware.amdgpu.opencl.enable

Whether to enable OpenCL support using ROCM runtime library.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/amdgpu.nix>

hardware.amdgpu.overdrive.enable

Whether to enable ‘amdgpu’ overdrive mode for overclocking.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/amdgpu.nix>

hardware.amdgpu.overdrive.ppfeaturemask

Sets the ‘amdgpu.ppfeaturemask’ kernel option. It can be used to enable the overdrive bit. Default is ‘0xfffd7fff’ as it is less likely to cause flicker issues. Setting it to ‘0xffffffff’ enables all features, but also can be unstable. See **the kernel documentation** for more information.

Type: string

Default:

```
"0xfffd7fff"
```

Example:

```
"0xffffffff"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/amdgpu.nix>

hardware.amdgpu.zluda.enable

Whether to enable CUDA support using ZLUDA runtime library.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/amdgpu.nix>

hardware.amdgpu.zluda.package

The zluda package to use.

Type: package

Default:

```
pkgs.zluda
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/amdgpu.nix>

hardware.apple.touchBar.enable

Whether to enable support for the Touch Bar on some Apple laptops using tiny−dfr.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/apple−touchbar.nix>

hardware.apple.touchBar.package
The tiny−dfr package to use.

Type: package

Default:

```
pkgs.tiny−dfr
```

Declared by:
<nixpkgs/nixos/modules/hardware/apple−touchbar.nix>

hardware.apple.touchBar.settings
Configuration for tiny−dfr. See **example configuration** for available options.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  MediaLayerDefault = true;
  ShowButtonOutlines = false;
  EnablePixelShift = true;
}
```

Declared by:
<nixpkgs/nixos/modules/hardware/apple−touchbar.nix>

hardware.bladeRF.enable
Enables udev rules for BladeRF devices. By default grants access to users in the “bladerf” group. You may want to install the libbladeRF package.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/bladeRF.nix>

hardware.block.defaultScheduler
Default block I/O scheduler.

Unless ‘null’, the value is assigned through a udev rule matching all block devices.

Type: null or udev rule value

Default:

```
null
```

Example:

```
"kyber"
```

Declared by:
<nixpkgs/nixos/modules/hardware/iosched.nix>

hardware.block.defaultSchedulerExclude
Device name pattern to exclude from default scheduler assignment through **config.hardware.block.defaultScheduler** and **config.hardware.block.defaultSchedulerRotational**.

By default this excludes loop devices which generally do not benefit from extra I/O scheduling in addition to the scheduling already performed for their backing devices.

This setting does not affect **config.hardware.block.scheduler**.

Type: null or udev rule value

Default:

```
"loop[0-9]*"
```

Declared by:
<nixpkgs/nixos/modules/hardware/iosched.nix>

hardware.block.defaultSchedulerRotational
Default block I/O scheduler for rotational drives (e.g. hard disks).

Unless ‘null’, the value is assigned through a udev rule matching all rotational block devices.

This option takes precedence over **config.hardware.block.defaultScheduler**.

Type: null or udev rule value

Default:

```
null
```

Example:

```
"bfq"
```

Declared by:
<nixpkgs/nixos/modules/hardware/iosched.nix>

hardware.block.scheduler
Assign block I/O scheduler by device name pattern.

Names are matched using the **udev**(7) pattern syntax:

‘*’
: Matches zero or more characters.

‘?’
: Matches any single character.

‘[]’
: Matches any single character specified in the brackets. Ranges are supported via the ‘−’ character.

‘|’
: Separates alternative patterns.

Please note that overlapping patterns may produce unexpected results. More complex configurations requiring these should instead be specified directly through custom udev rules, for example via **config.services.udev.extraRules**, to ensure correct ordering.

Available schedulers depend on the kernel configuration but modern Linux systems typically support:

‘none’
: No-operation scheduler with no re-ordering of requests. Suitable for devices with fast random I/O such as NVMe SSDs.

‘mq−deadline’
: Simple latency-oriented general-purpose scheduler.

‘kyber’
: Simple latency-oriented scheduler for fast multi-queue devices like NVMe SSDs.

‘bfq’
: Complex fairness-oriented scheduler. Higher processing overhead, but good interactive response, especially with slower devices.

Schedulers assigned through this option take precedence over **config.hardware.block.defaultScheduler** and **config.hardware.block.defaultSchedulerRotational** but may be overridden by other udev rules.

Type: attribute set of udev rule value

Default:

```
{ }
```

Example:

```
{
  "mmcblk[0−9]*" = "bfq";
  "nvme[0−9]*" = "kyber";
}
```

Declared by:
<nixpkgs/nixos/modules/hardware/iosched.nix>

hardware.bluetooth.enable
Whether to enable support for Bluetooth.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/bluetooth.nix>

hardware.bluetooth.package
The bluez package to use.

Type: package

Default:

```
pkgs.bluez
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/bluetooth.nix>

hardware.bluetooth.disabledPlugins
Built−in plugins to disable

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/bluetooth.nix>

hardware.bluetooth.hsphfpd.enable
Whether to enable support for hsphfpd[−prototype] implementation.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/bluetooth.nix>

hardware.bluetooth.input
Set configuration for the input service (/etc/bluetooth/input.conf). See **https://github.com/bluez/bluez/blob/master/profiles/input/input.conf** for full list of options.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  General = {
    ClassicBondedOnly = true;
    IdleTimeout = 30;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/bluetooth.nix>

hardware.bluetooth.network
Set configuration for the network service (/etc/bluetooth/network.conf). See **https://github.com/bluez/bluez/blob/master/profiles/network/network.conf** for full list of options.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  General = {
    DisableSecurity = true;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/bluetooth.nix>

hardware.bluetooth.powerOnBoot

Whether to power up the default Bluetooth controller on boot.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/bluetooth.nix>

hardware.bluetooth.settings

Set configuration for system−wide bluetooth (/etc/bluetooth/main.conf). See **https://github.com/bluez/bluez/blob/master/src/main.conf** for full list of options.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  General = {
    ControllerMode = "bredr";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/bluetooth.nix>

hardware.brillo.enable

Whether to enable brillo in userspace. This will allow brightness control from users in the video group .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/brillo.nix>

hardware.bumblebee.enable

Enable the bumblebee daemon to manage Optimus hybrid video cards. This should power off secondary GPU until its use is requested by running an application with optirun.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/bumblebee.nix>

hardware.bumblebee.connectDisplay

Set to true if you intend to connect your discrete card to a monitor. This option will set up your Nvidia card for EDID discovery and to turn on the monitor signal.

Only nvidia driver is supported so far.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/bumblebee.nix>

hardware.bumblebee.driver

Set driver used by bumblebeed. Supported are nouveau and nvidia.

Type: one of “nvidia”, “nouveau”

Default:

```
"nvidia"
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/bumblebee.nix>

hardware.bumblebee.group

Group for bumblebee socket

Type: string

Default:

```
"wheel"
```

Example:

```
"video"
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/bumblebee.nix>

hardware.bumblebee.pmMethod

Set preferred power management method for unused card.

Type: one of “auto”, “bbswitch”, “switcheroo”, “none”

Default:

```
"auto"
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/bumblebee.nix>

hardware.ckb-next.enable

Whether to enable the Corsair keyboard/mouse driver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/ckb-next.nix>

hardware.ckb-next.package
The ckb-next package to use.

Type: package

Default:

```
pkgs.ckb-next
```

Declared by:
<nixpkgs/nixos/modules/hardware/ckb-next.nix>

hardware.ckb-next.gid
Limit access to the ckb daemon to a particular group.

Type: null or signed integer

Default:

```
null
```

Example:

```
100
```

Declared by:
<nixpkgs/nixos/modules/hardware/ckb-next.nix>

hardware.coral.pcie.enable
Whether to enable Coral PCIe support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/coral.nix>

hardware.coral.usb.enable
Whether to enable Coral USB support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/coral.nix>

hardware.cpu.amd.microcodePackage
The microcode-amd package to use.

Type: package

Default:

```
pkgs.microcode-amd
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/amd−microcode.nix>

hardware.cpu.amd.ryzen−smu.enable
Whether to enable ryzen_smu, a linux kernel driver that exposes access to the SMU (System Management Unit) for certain AMD Ryzen Processors.

WARNING: Damage cause by use of your AMD processor outside of official AMD specifications or outside of factory settings are not covered under any AMD product warranty and may not be covered by your board or system manufacturer's warranty .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/amd−ryzen−smu.nix>

hardware.cpu.amd.sev.enable
Whether to enable access to the AMD SEV device.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/amd−sev.nix>

hardware.cpu.amd.sev.group
Group to assign to the SEV device.

Type: string

Default:

```
"sev"
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/amd−sev.nix>

hardware.cpu.amd.sev.mode
Mode to set for the SEV device.

Type: string

Default:

```
"0660"
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/amd−sev.nix>

hardware.cpu.amd.sev.user
Owner to assign to the SEV device.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/amd-sev.nix>

hardware.cpu.amd.sevGuest.enable
Whether to enable access to the AMD SEV guest device.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/amd-sev.nix>

hardware.cpu.amd.sevGuest.group
Group to assign to the SEV guest device.

Type: string

Default:

```
"sev-guest"
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/amd-sev.nix>

hardware.cpu.amd.sevGuest.mode
Mode to set for the SEV guest device.

Type: string

Default:

```
"0660"
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/amd-sev.nix>

hardware.cpu.amd.sevGuest.user
Owner to assign to the SEV guest device.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/amd-sev.nix>

hardware.cpu.amd.updateMicrocode

Update the CPU microcode for AMD processors.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/hardware/cpu/amd−microcode.nix>

hardware.cpu.intel.microcodePackage

The microcode−intel package to use.

Type: package

Default:

```
pkgs.microcode−intel
```

Declared by:

<nixpkgs/nixos/modules/hardware/cpu/intel−microcode.nix>

hardware.cpu.intel.npu.enable

Whether to enable Intel NPU support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/cpu/intel−npu.nix>

hardware.cpu.intel.sgx.enableDcapCompat

Whether to enable backward compatibility for SGX software build for the out−of−tree Intel SGX DCAP driver.

Creates symbolic links for the SGX devices ‘/dev/sgx_enclave’ and ‘/dev/sgx_provision’ to make them available as ‘/dev/sgx/enclave’ and ‘/dev/sgx/provision’, respectively.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/cpu/intel−sgx.nix>

hardware.cpu.intel.sgx.provision.enable

Whether to enable access to the Intel SGX provisioning device.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/intel−sgx.nix>

hardware.cpu.intel.sgx.provision.group
Group to assign to the SGX provisioning device.

Type: string

Default:

```
"sgx_prv"
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/intel−sgx.nix>

hardware.cpu.intel.sgx.provision.mode
Mode to set for the SGX provisioning device.

Type: string

Default:

```
"0660"
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/intel−sgx.nix>

hardware.cpu.intel.sgx.provision.user
Owner to assign to the SGX provisioning device.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/intel−sgx.nix>

hardware.cpu.intel.updateMicrocode
Update the CPU microcode for Intel processors.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/intel−microcode.nix>

hardware.cpu.x86.msr.enable
Whether to enable the ‘msr’ (Model−Specific Registers) kernel module and configure ‘udev’ rules for its devices (usually ‘/dev/cpu/*/msr’).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/x86−msr.nix>

hardware.cpu.x86.msr.group

Group to set for devices of the ‘msr’ kernel subsystem.

Type: string

Default:

```
"msr"
```

Example:

```
"users"
```

Declared by:

<nixpkgs/nixos/modules/hardware/cpu/x86−msr.nix>

hardware.cpu.x86.msr.mode

Mode to set for devices of the ‘msr’ kernel subsystem.

Type: string

Default:

```
"0640"
```

Example:

```
"0660"
```

Declared by:

<nixpkgs/nixos/modules/hardware/cpu/x86−msr.nix>

hardware.cpu.x86.msr.owner

Owner to set for devices of the ‘msr’ kernel subsystem.

Type: string

Default:

```
"root"
```

Example:

```
"alice"
```

Declared by:

<nixpkgs/nixos/modules/hardware/cpu/x86−msr.nix>

hardware.cpu.x86.msr.settings

Parameters for the ‘msr’ kernel module.

Type: open submodule of attribute set of (boolean or signed integer or string)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/hardware/cpu/x86−msr.nix>

hardware.cpu.x86.msr.settings.allow−writes

Whether to allow writes to MSRs (‘"on"’) or not (‘"off"’).

Type: null or one of “on”, “off”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/hardware/cpu/x86−msr.nix>

hardware.decklink.enable
Whether to enable hardware support for the Blackmagic Design Decklink audio/video interfaces.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/decklink.nix>

hardware.deviceTree.enable
Build device tree files. These are used to describe the non−discoverable hardware of a system.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/device−tree.nix>

hardware.deviceTree.dtbSource
Path to dtb directory that overlays and other processing will be applied to. Uses device trees bundled with the Linux kernel by default.

Type: absolute path

Default:

```
${cfg.kernelPackage}/dtbs
```

Declared by:
<nixpkgs/nixos/modules/hardware/device−tree.nix>

hardware.deviceTree.dtboBuildExtraIncludePaths
Additional include paths that will be passed to the preprocessor when creating the final .dts to compile into .dtbo

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  ./my_custom_include_dir_1
  ./custom_include_dir_2
]
```

Declared by:
<nixpkgs/nixos/modules/hardware/device−tree.nix>

hardware.deviceTree.dtboBuildExtraPreprocessorFlags

Additional flags to pass to the preprocessor during dtbo compilations

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "-DMY_DTB_DEFINE" ]
```

Declared by:

<nixpkgs/nixos/modules/hardware/device-tree.nix>

hardware.deviceTree.filter

Only include .dtb files matching glob expression.

Type: null or string

Default:

```
null
```

Example:

```
"*rpi*.dtb"
```

Declared by:

<nixpkgs/nixos/modules/hardware/device-tree.nix>

hardware.deviceTree.kernelPackage

Kernel package where device tree include directory is from. Also used as default source of dtb package to apply overlays to

Type: absolute path

Default:

```
config.boot.kernelPackages.kernel
```

Example:

```
pkgs.linux_latest
```

Declared by:

<nixpkgs/nixos/modules/hardware/device-tree.nix>

hardware.deviceTree.name

The name of an explicit dtb to be loaded, relative to the dtb base. Useful in extlinux scenarios if the bootloader doesn't pick the right .dtb file from FDTDIR.

Type: null or string

Default:

```
null
```

Example:

```
"some-dtb.dtb"
```

Declared by:

<nixpkgs/nixos/modules/hardware/device-tree.nix>

hardware.deviceTree.overlays

List of overlays to apply to base device−tree (.dtb) files.

Type: list of ((submodule) or absolute path convertible to it)

Default:

```
[ ]
```

Example:

```
[
  { name = "pps"; dtsFile = ./dts/pps.dts; }
  { name = "spi";
    dtsText = "...";
  }
  { name = "precompiled"; dtboFile = ./dtbos/example.dtbo; }
]
```

Declared by:

<nixpkgs/nixos/modules/hardware/device−tree.nix>

hardware.deviceTree.overlays.*.dtboFile

Path to .dtbo compiled overlay file.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/hardware/device−tree.nix>

hardware.deviceTree.overlays.*.dtsFile

Path to .dts overlay file, overlay is applied to each .dtb file matching “compatible” of the overlay.

Type: null or absolute path

Default:

```
null
```

Example:

```
./dts/overlays.dts
```

Declared by:

<nixpkgs/nixos/modules/hardware/device−tree.nix>

hardware.deviceTree.overlays.*.dtsText

Literal DTS contents, overlay is applied to each .dtb file matching “compatible” of the overlay.

Type: null or string

Default:

```
null
```

Example:

```
  /dts-v1/;
  /plugin/;
  / {
          compatible = "raspberrypi";
  };
  &{/soc} {
```

```
                pps {
                        compatible = "pps-gpio";
                        status = "okay";
                };
        };
```

Declared by:
<nixpkgs/nixos/modules/hardware/device-tree.nix>

hardware.deviceTree.overlays.*.filter
Only apply to .dtb files matching glob expression.

Type: null or string

Default:

```
null
```

Example:

```
"*rpi*.dtb"
```

Declared by:
<nixpkgs/nixos/modules/hardware/device-tree.nix>

hardware.deviceTree.overlays.*.name
Name of this overlay

Type: string

Declared by:
<nixpkgs/nixos/modules/hardware/device-tree.nix>

hardware.digitalbitbox.enable
Enables udev rules for Digital Bitbox devices.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/digitalbitbox.nix>

hardware.digitalbitbox.package
The digitalbitbox package to use. This can be used to install a package with udev rules that differ from the defaults.

Type: package

Default:

```
pkgs.digitalbitbox
```

Declared by:
<nixpkgs/nixos/modules/hardware/digitalbitbox.nix>

hardware.display.edid.enable
Enables handling of EDID files

Type: boolean

Default:

```
config.hardware.display.edid.packages != null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/display.nix>

hardware.display.edid.packages
List of packages containing EDID binary files at ‘$out/lib/firmware/edid’. Such files will be available for use in ‘drm.edid_firmware’ kernel parameter as ‘edid/<filename>’.

You can craft one directly here or use sibling options ‘linuxhw’ and ‘modelines’.

Type: list of package

Default:

```
[ ]
```

Example:

```
[
  (pkgs.runCommand "edid-custom" {} ''
    mkdir -p "$out/lib/firmware/edid"
    base64 -d > "$out/lib/firmware/edid/custom1.bin" <<'EOF'
    <insert your base64 encoded EDID file here `base64 < /sys/class \
/drm/card0-.../edid`>
    EOF
  '')
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/display.nix>

hardware.display.edid.linuxhw
Exposes EDID files from users-sourced database at **https://github.com/linuxhw/EDID**

Attribute names will be mapped to EDID filenames ‘<NAME>.bin’.

Attribute values are lists of ‘awk’ regexp patterns that (together) must match exactly one line in either of:

- **AnalogDisplay.md**
- **DigitalDisplay.md**

There is no universal way of locating your device config, but here are some practical tips:

1. locate your device:
   - find your model number (second column)
   - locate manufacturer (first column) and go through the list manually
2. narrow down results using other columns until there is only one left:
   - ‘Name’ column
   - production date (‘Made’ column)
   - resolution ‘Res’
   - screen diagonal (‘Inch’ column)
   - as a last resort use ‘ID’ from the last column

Type: attribute set of list of string

Default:

```
{ }
```

Example:

```
{
  PG278Q_2014 = [ "PG278Q" "2014" ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/display.nix>

hardware.display.edid.modelines
Attribute set of XFree86 Modelines automatically converted and exposed as ‘edid/<name>.bin’ files in initrd. See for more information:

- **https://en.wikipedia.org/wiki/XFree86_Modeline**

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "PG278Q_60" = "    241.50   2560 2608 2640 2720   1440 1443 1448  \
1481   -hsync +vsync";
  "PG278Q_120" = "   497.75   2560 2608 2640 2720   1440 1443 1448  \
1525   +hsync -vsync";
  "U2711_60" = "     241.50   2560 2600 2632 2720   1440 1443 1448  \
1481   -hsync +vsync";
}
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/display.nix>

hardware.display.outputs
Hardware/kernel−level configuration of specific outputs.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  edid.modelines."PG278Q_60" = "241.50   2560 2608 2640 2720   1440 \
 1443 1448 1481   -hsync +vsync";
  outputs."DP-1".edid = "PG278Q_60.bin";
  outputs."DP-1".mode = "e";
}
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/display.nix>

hardware.display.outputs.<name>.edid
An EDID filename to be used for configured display, as in ‘edid/<filename>’. See for more information:

- ‘hardware.display.edid.packages’
- **https://wiki.archlinux.org/title/Kernel_mode_setting#Forcing_modes_and_EDID**

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/display.nix>

hardware.display.outputs.<name>.mode

A 'video' kernel parameter (framebuffer mode) configuration for the specific output:

```
<xres>x<yres>[M][R][-<bpp>][@<refresh>][i][m][eDd]
```

See for more information:

- **https://docs.kernel.org/fb/modedb.html**
- **https://wiki.archlinux.org/title/Kernel_mode_setting#Forcing_modes**

Type: null or string

Default:

```
null
```

Example:

```
"e"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/display.nix>

hardware.facetimehd.enable

Whether to enable the facetimehd kernel module.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/webcam/facetimehd.nix>

hardware.facetimehd.withCalibration

Whether to include sensor calibration files for facetimehd. This makes colors look much better but is experimental, see **https://github.com/patjak/facetimehd/wiki/Extracting-the-sensor-calibration-files** for details.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/webcam/facetimehd.nix>

hardware.facter.enable

Whether to enable automatic hardware configuration using a report generated by nixos-facter.

See **https://nix-community.github.io/nixos-facter/** for more information.

Type: boolean

Default:

```
config.hardware.facter.report != { }
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter>

hardware.facter.debug.nix−diff
A shell application which will produce a nix−diff of the system closure with and without facter enabled.

Type: package

Declared by:
<nixpkgs/nixos/modules/hardware/facter/debug.nix>

hardware.facter.debug.nvd
A shell application which will produce an nvd diff of the system closure with and without facter enabled.

Type: package

Declared by:
<nixpkgs/nixos/modules/hardware/facter/debug.nix>

hardware.facter.detected.bluetooth.enable
Whether to enable Enable the Facter bluetooth module.

Type: boolean

Default:

```
"hardware dependent"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/bluetooth.nix>

hardware.facter.detected.boot.disk.kernelModules
List of kernel modules that are needed to access the disk.

Type: list of string

Default:

```
"hardware dependent"
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/disk.nix>

hardware.facter.detected.boot.graphics.kernelModules
List of kernel modules to load at boot for the graphics card.

Type: list of string

Default:

```
"hardware dependent"
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/graphics>

hardware.facter.detected.boot.initrd.networking.kernelModules
List of kernel modules to include in the initrd to support networking.

Type: list of string

Default:

```
"hardware dependent"
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/networking/initrd.nix>

hardware.facter.detected.boot.keyboard.kernelModules
List of kernel modules to include in the initrd to support the keyboard.

Type: list of string

Default:

```
"hardware dependent"
```

Example:

```
[
  "usbhid"
]
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/keyboard.nix>

hardware.facter.detected.camera.ipu6.enable
Whether to enable webcams using ipu6 from Intel.

Type: boolean

Default:

```
"hardware dependent"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/camera/ipu6.nix>

hardware.facter.detected.dhcp.enable
Whether to enable Facter dhcp module.

Type: boolean

Default:

```
"hardware dependent"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/networking>

hardware.facter.detected.dhcp.interfaces
List of network interface names to configure with DHCP. Defaults to auto−detected physical interfaces.

Type: list of string

Default:

```
automatically detected from facter report
```

Example:

```
[
  "eth0"
  "wlan0"
]
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/networking>

hardware.facter.detected.fingerprint.enable
Whether to enable Fingerprint devices.

Type: boolean

Default:

```
"hardware dependent"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/fingerprint>

hardware.facter.detected.graphics.enable
Whether to enable Enable the Graphics module.

Type: boolean

Default:

```
"hardware dependent"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/graphics>

hardware.facter.detected.graphics.amd.enable
Whether to enable Enable the AMD Graphics module.

Type: boolean

Default:

```
"hardware dependent"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/graphics/amd.nix>

hardware.facter.detected.networking.intel._2200BG.enable
Whether to enable the Facter Intel 2200BG module.

Type: boolean

Default:

```
"hardware dependent"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/networking/intel.nix>

hardware.facter.detected.networking.intel._3945ABG.enable
Whether to enable the Facter Intel 3945ABG module.

Type: boolean

Default:

```
"hardware dependent"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/networking/intel.nix>

hardware.facter.detected.uefi.supported
Whether to enable the facter uefi module.

Type: boolean

Default:

```
"hardware dependent"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/boot.nix>

hardware.facter.detected.virtualisation.hyperv.enable
Whether to enable Enable the Facter Virtualisation Hyper−V module.

Type: boolean

Default:

```
"environment dependent"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/virtualisation.nix>

hardware.facter.detected.virtualisation.none.enable
Whether to enable Enable the Facter Virtualisation None module.

Type: boolean

Default:

```
"environment dependent"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/virtualisation.nix>

hardware.facter.detected.virtualisation.oracle.enable
Whether to enable Enable the Facter Virtualisation Oracle module.

Type: boolean

Default:

```
"environment dependent"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/virtualisation.nix>

hardware.facter.detected.virtualisation.parallels.enable
Whether to enable Enable the Facter Virtualisation Parallels module.

Type: boolean

Default:

```
"environment dependent"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/virtualisation.nix>

hardware.facter.detected.virtualisation.qemu.enable
Whether to enable Enable the Facter Virtualisation Qemu module.

Type: boolean

Default:

```
"environment dependent"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/virtualisation.nix>

hardware.facter.detected.virtualisation.virtio_scsi.enable
Whether to enable Enable the Facter Virtualisation Virtio SCSI module.

Type: boolean

Default:

```
"hardware dependent"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter/virtualisation.nix>

hardware.facter.report
Hardware report data generated by nixos−facter.

See **https://nix−community.github.io/nixos−facter/** for more information.

Type: attribute set of anything

Default:

```
"A JSON import from config.hardware.facter.reportPath (if not null) \
, {} otherwise."
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter>

hardware.facter.reportPath
Path to a hardware report generated by nixos−facter.

To generate a report, run the following as root:

```
nix−shell −p nixos−facter −−run nixos−facter > facter.json
```

See **https://nix−community.github.io/nixos−facter/** for more information.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/hardware/facter>

hardware.fancontrol.enable
Whether to enable software fan control (requires fancontrol.config).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/fancontrol.nix>

hardware.fancontrol.config
Required fancontrol configuration file content. See **pwmconfig**(8) from the lm_sensors package.

Type: strings concatenated with "\n"

Example:

```
  # Configuration file generated by pwmconfig
  INTERVAL=10
  DEVPATH=hwmon3=devices/virtual/thermal/thermal_zone2 hwmon4=devic \
es/platform/f71882fg.656
  DEVNAME=hwmon3=soc_dts1 hwmon4=f71869a
  FCTEMPS=hwmon4/device/pwm1=hwmon3/temp1_input
  FCFANS=hwmon4/device/pwm1=hwmon4/device/fan1_input
  MINTEMP=hwmon4/device/pwm1=35
  MAXTEMP=hwmon4/device/pwm1=65
  MINSTART=hwmon4/device/pwm1=150
  MINSTOP=hwmon4/device/pwm1=0
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/fancontrol.nix>

hardware.firmware
List of packages containing firmware files. Such files will be loaded automatically if the kernel asks for them (i.e., when it has detected specific hardware that requires firmware to function). If multiple packages contain firmware files with the same name, the first package in the list takes precedence. Note that you must rebuild your system if you add files to any of these directories.

Type: list of package

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/udev.nix>

hardware.firmwareCompression

Whether to compress firmware files. Defaults depend on the kernel version. For kernels older than 5.3, firmware files are not compressed. For kernels 5.3 and newer, firmware files are compressed with xz. For kernels 5.19 and newer, firmware files are compressed with zstd.

Type: one of “xz”, “zstd”, “none”

Default:

```
"auto"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/udev.nix>

hardware.flipperzero.enable

Whether to enable udev rules and software for Flipper Zero devices.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/flipperzero.nix>

hardware.flirc.enable

Whether to enable software to configure a Flirc USB device.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/flirc.nix>

hardware.fw−fanctrl.enable

Whether to enable the fw−fanctrl systemd service and install the needed packages.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/fw−fanctrl.nix>

hardware.fw−fanctrl.package

The fw−fanctrl package to use.

Type: package

Default:

```
pkgs.fw−fanctrl
```

Declared by:

<nixpkgs/nixos/modules/hardware/fw−fanctrl.nix>

hardware.fw−fanctrl.config

Additional config entries for the fw−fanctrl service (documentation: **https://github.com/TamtamHero/fw−fanctrl/blob/main/doc/configuration.md**)

Type: open submodule of attribute set of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/hardware/fw−fanctrl.nix>

hardware.fw−fanctrl.config.defaultStrategy

Default strategy to use

Type: string

Default:

```
"lazy"
```

Declared by:

<nixpkgs/nixos/modules/hardware/fw−fanctrl.nix>

hardware.fw−fanctrl.config.strategies

Additional strategies which can be used by fw−fanctrl

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/hardware/fw−fanctrl.nix>

hardware.fw−fanctrl.config.strategies.<name>.fanSpeedUpdateFrequency

How often the fan speed should be updated in seconds

Type: unsigned integer, meaning >=0

Default:

```
5
```

Declared by:

<nixpkgs/nixos/modules/hardware/fw−fanctrl.nix>

hardware.fw−fanctrl.config.strategies.<name>.movingAverageInterval

Interval (seconds) of the last temperatures to use to calculate the average temperature

Type: unsigned integer, meaning >=0

Default:

```
25
```

Declared by:
<nixpkgs/nixos/modules/hardware/fw−fanctrl.nix>

hardware.fw−fanctrl.config.strategies.<name>.speedCurve
How should the speed curve look like

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/hardware/fw−fanctrl.nix>

hardware.fw−fanctrl.config.strategies.<name>.speedCurve.*.speed
Percent how fast the fan should run at

Type: integer between 0 and 100 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/hardware/fw−fanctrl.nix>

hardware.fw−fanctrl.config.strategies.<name>.speedCurve.*.temp
Temperature in °C at which the fan speed should be changed

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/hardware/fw−fanctrl.nix>

hardware.fw−fanctrl.config.strategyOnDischarging
Default strategy on discharging

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/hardware/fw−fanctrl.nix>

hardware.fw−fanctrl.disableBatteryTempCheck
Disable checking battery temperature sensor

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/fw−fanctrl.nix>

hardware.fw−fanctrl.ectoolPackage
The fw−ectool package to use.

Type: package

Default:

```
pkgs.fw-ectool
```

Declared by:
<nixpkgs/nixos/modules/hardware/fw−fanctrl.nix>

hardware.glasgow.enable
Enables Glasgow udev rules and ensures ‘plugdev’ group exists. This is a prerequisite to using Glasgow without being root.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/glasgow.nix>

hardware.gpgSmartcards.enable
Whether to enable udev rules for gnupg smart cards.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/gpgsmartcards.nix>

hardware.graphics.enable
Whether to enable hardware accelerated graphics drivers.

This is required to allow most graphical applications and environments to use hardware rendering, video encode/decode acceleration, etc.

This option should be enabled by default by the corresponding modules, so you do not usually have to set it yourself.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/graphics.nix>

hardware.graphics.enable32Bit
On 64−bit systems, whether to also install 32−bit drivers for 32−bit applications (such as Wine).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/graphics.nix>

hardware.graphics.package
The package that provides the default driver set.

Type: package

Declared by:
<nixpkgs/nixos/modules/hardware/graphics.nix>

hardware.graphics.package32
The package that provides the 32−bit driver set. Used when **enable32Bit** is enabled.

Type: package

Declared by:
<nixpkgs/nixos/modules/hardware/graphics.nix>

hardware.graphics.extraPackages
Additional packages to add to the default graphics driver lookup path. This can be used to add OpenCL drivers, VA−API/VDPAU drivers, etc.

Note
intel−media−driver supports hardware Broadwell (2014) or newer. Older hardware should use the mostly unmaintained intel−vaapi−driver driver.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [ intel-media-driver intel-ocl intel-vaapi-driver ]
```

Declared by:
<nixpkgs/nixos/modules/hardware/graphics.nix>

hardware.graphics.extraPackages32
Additional packages to add to 32−bit graphics driver lookup path on 64−bit systems. Used when **enable32Bit** is set. This can be used to add OpenCL drivers, VA−API/VDPAU drivers, etc.

Note
intel−media−driver supports hardware Broadwell (2014) or newer. Older hardware should use the mostly unmaintained intel−vaapi−driver driver.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs.pkgsi686Linux; [ intel-media-driver intel-vaapi-drive \
r ]
```

Declared by:
<nixpkgs/nixos/modules/hardware/graphics.nix>

hardware.hackrf.enable
Enables hackrf udev rules and ensures ‘plugdev’ group exists. This is a prerequisite to using HackRF devices without being root, since HackRF USB descriptors will be owned by plugdev through udev. Ensure your user is a member of the ‘plugdev’ group after enabling.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/hackrf.nix>

hardware.hid−fanatecff.enable
Whether to enable hid−fanatecff, a Linux kernel driver that aims to add support for Fanatec devices.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/hid−fanatecff.nix>

hardware.i2c.enable
Whether to enable i2c devices support. By default access is granted to users in the “i2c” group (will be created if non−existent) and any user with a seat, meaning logged on the computer locally .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/i2c.nix>

hardware.i2c.group
Grant access to i2c devices (/dev/i2c−*) to users in this group.

Type: string

Default:

```
"i2c"
```

Declared by:
<nixpkgs/nixos/modules/hardware/i2c.nix>

hardware.infiniband.enable
Whether to enable Infiniband support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/infiniband.nix>

hardware.infiniband.guids

A list of infiniband port guids on the system. This is discoverable using ‘ibstat −p’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "0xe8ebd30000eee2e1"
]
```

Declared by:

<nixpkgs/nixos/modules/hardware/infiniband.nix>

hardware.inputmodule.enable

Whether to enable Support for Framework input modules.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/inputmodule.nix>

hardware.intel−gpu−tools.enable

Whether to enable a setcap wrapper for intel−gpu−tools.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/intel−gpu−tools.nix>

hardware.ipu6.enable

Whether to enable support for Intel IPU6/MIPI cameras.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/webcam/ipu6.nix>

hardware.ipu6.platform

Choose the version for your hardware platform.

Use ‘ipu6’ for Tiger Lake, ‘ipu6ep’ for Alder Lake or Raptor Lake, and ‘ipu6epmtl’ for Meteor Lake.

Type: one of “ipu6”, “ipu6ep”, “ipu6epmtl”

Declared by:

<nixpkgs/nixos/modules/hardware/video/webcam/ipu6.nix>

hardware.ipu6.videoDeviceNumber

v4l2loopback device number for the relay output (‘/dev/videoN’).

Must be fixed so application camera permission grants, which are keyed to the PipeWire node name (derived from the sysfs device path), survive reboots. Choose a number above the IPU6 raw node range (typically 3−34) and any other v4l2loopback devices on the system.

Type: signed integer

Default:

```
50
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/webcam/ipu6.nix>

hardware.keyboard.qmk.enable

Whether to enable non−root access to the firmware of QMK keyboards.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/keyboard/qmk.nix>

hardware.keyboard.qmk.keychronSupport

Whether to enable udev rules for keychron QMK based keyboards.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/keyboard/qmk.nix>

hardware.keyboard.teck.enable

Whether to enable non−root access to the firmware of TECK keyboards.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/keyboard/teck.nix>

hardware.keyboard.uhk.enable
Whether to enable non−root access to the firmware of UHK keyboards. You need it when you want to flash a new firmware on the keyboard. Access to the keyboard is granted to users in the “input” group. You may want to install the uhk−agent package .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/keyboard/uhk.nix>

hardware.keyboard.zsa.enable
Whether to enable udev rules for keyboards from ZSA like the ErgoDox EZ, Planck EZ and Moonlander Mark I. You need it when you want to flash a new configuration on the keyboard or use their live training in the browser. You may want to install the wally−cli package .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/keyboard/zsa.nix>

hardware.kryoflux.enable
Enables kryoflux udev rules, ensures ‘floppy’ group exists. This is a prerequisite to using devices supported by kryoflux without being root, since kryoflux device descriptors will be owned by floppy through udev.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/kryoflux.nix>

hardware.kryoflux.package
The kryoflux package to use.

Type: package

Default:

```
pkgs.kryoflux
```

Declared by:
<nixpkgs/nixos/modules/hardware/kryoflux.nix>

hardware.ksm.enable

Whether to enable Linux kernel Same−Page Merging.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/ksm.nix>

hardware.ksm.sleep

How many milliseconds ksmd should sleep between scans. Setting it to ‘null’ uses the kernel’s default time.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/hardware/ksm.nix>

hardware.ledger.enable

Whether to enable udev rules for Ledger devices.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/ledger.nix>

hardware.libftdi.enable

Whether to enable udev rules for devices supported by libftdi.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/libftdi.nix>

hardware.libftdi.package

The libftdi1 package to use.

Type: package

Default:

```
pkgs.libftdi1
```

Declared by:
<nixpkgs/nixos/modules/hardware/libftdi.nix>

hardware.libjaylink.enable
Whether to enable udev rules for devices supported by libjaylink. Add users to the ‘jlink’ group in order to grant them access .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/libjaylink.nix>

hardware.libjaylink.package
The libjaylink package to use.

Type: package

Default:

```
pkgs.libjaylink
```

Declared by:
<nixpkgs/nixos/modules/hardware/libjaylink.nix>

hardware.logitech.lcd.enable
Whether to enable support for Logitech LCD Devices.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/logitech.nix>

hardware.logitech.lcd.devices
List of USB device ids supported by g15daemon.

You most likely do not need to change this.

Type: list of string

Default:

```
[
  "0a07"
  "c222"
  "c225"
  "c227"
  "c251"
]
```

Declared by:
<nixpkgs/nixos/modules/hardware/logitech.nix>

hardware.logitech.lcd.startWhenNeeded
Only run the service when an actual supported device is plugged.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/logitech.nix>

hardware.logitech.wireless.enable
Whether to enable support for Logitech Wireless Devices.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/logitech.nix>

hardware.logitech.wireless.enableGraphical
Enable graphical support applications.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/logitech.nix>

hardware.mcelog.enable
Enable the Machine Check Exception logger.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/mcelog.nix>

hardware.mwProCapture.enable
Whether to enable the Magewell Pro Capture family kernel module.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/capture/mwprocapture.nix>

hardware.new−lg4ff.enable
Enables improved Linux module drivers for Logitech driving wheels. This will replace the existing in−kernel hid−logitech modules. Works most notably on the Logitech G25, G27, G29 and Driving Force (GT).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/new−lg4ff.nix>

hardware.nfc−nci.enable
Whether to enable PN5xx kernel module with udev rules, libnfc−nci userland, and optional ifdnfc−nci PC/SC driver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/nfc−nci.nix>

hardware.nfc−nci.enableIFD
Register ifdnfc−nci as a serial reader with pcscd.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/nfc−nci.nix>

hardware.nfc−nci.settings
Configuration to be written to the libncf−nci configuration files. To understand the configuration format, refer to **https://github.com/NXPNFCLinux/linux_libnfc−nci/tree/master/conf**.

Type: attribute set

Default:

```
{
  init = {
    NXPLOG_EXTNS_LOGLEVEL = "0x01";
    NXPLOG_FWDNLD_LOGLEVEL = "0x00";
    NXPLOG_GLOBAL_LOGLEVEL = "0x01";
    NXPLOG_NCIHAL_LOGLEVEL = "0x01";
    NXPLOG_NCIR_LOGLEVEL = "0x01";
    NXPLOG_NCIX_LOGLEVEL = "0x01";
    NXPLOG_TML_LOGLEVEL = "0x01";
    NXP_ACT_PROP_EXTN = "{2F, 02, 00}";
    NXP_CORE_STANDBY = "{2F, 00, 01, 01}";
    NXP_I2C_FRAGMENTATION_ENABLED = "0x01";
```

```
  NXP_NFC_DEV_NODE = "\"/dev/pn544\"";
  NXP_NFC_PROFILE_EXTN = ''
    {20, 02, 05, 01,
      A0, 44, 01, 00
    }
  '';
};
nci = {
  APPL_TRACE_LEVEL = "0x01";
  HOST_LISTEN_TECH_MASK = "0x07";
  P2P_LISTEN_TECH_MASK = "0xC5";
  POLLING_TECH_MASK = "0xEF";
  PROTOCOL_TRACE_LEVEL = "0x01";
};
pn54x = {
  MIFARE_READER_ENABLE = "0x01";
  NXP_CORE_CONF = ''

```
        NXP_SYS_CLK_FREQ_SEL = "0x00";
        NXP_SYS_CLK_SRC_SEL = "0x01";
        NXP_SYS_CLOCK_TO_CFG = "0x01";
      };
    }
```

Declared by:
<nixpkgs/nixos/modules/hardware/nfc−nci.nix>

hardware.nitrokey.enable
Enables udev rules for Nitrokey devices.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/nitrokey.nix>

hardware.nvidia.enabled
True if NVIDIA support is enabled

Type: boolean *(read only)*

Default: true if NVIDIA support is enabled

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.package
The NVIDIA driver package to use.

Prefer using **hardware.nvidia.branch** when possible.

If you set this option, it is recommended to pick a package from ‘config.boot.kernelPackages.nvidiaPackages’ so the driver build matches your configured kernel.

For custom versions, you can use ‘nvidiaPackages.mkDriver’; see ‘pkgs/os−specific/linux/nvidia−x11/default.nix’ for examples.

Type: package

Default:

```
config.boot.kernelPackages.nvidiaPackages.${config.hardware.nvidia. \
branch}
```

Example:

```
config.boot.kernelPackages.nvidiaPackages.legacy_470
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.branch
The branch of the NVIDIA driver to use.

Note: if **hardware.nvidia.package** is set, it overrides this option.

Commonly interesting branches for end users:

- production, new_feature, beta: NVIDIA’s official production / new feature / beta release branches.
- stable: The default; the highest stable version.
- latest: Whichever is newer of ‘production’ and ‘new_feature’.

- bleeding_edge: Whichever is newer of ‘latest’ and ‘beta’.
- legacy_580: The long−lived 580 series (LTSB), for GPUs that newer driver branches no longer support (often Maxwell through Volta; roughly GeForce GTX 9xx through 10xx, plus rare Volta cards like TITAN V).
- vulkan_beta: The Vulkan developer beta driver, for users interested in testing new Vulkan features.

Type: one of the available driver branches in `pkgs/os−specific/linux/nvidia−x11/default.nix`

Default:

```
if config.hardware.nvidia.datacenter.enable then "dc" else "stable"
```

Example:

```
"bleeding_edge"
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.datacenter.enable

Whether to enable Data Center drivers for NVIDIA cards on a NVLink topology .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.datacenter.settings

Additional configuration options for fabricmanager.

Type: attribute set of (atom (null, bool, int, float or string))

Default:

```
{
  LOG_LEVEL=4;
  LOG_FILE_NAME="/var/log/fabricmanager.log";
  LOG_APPEND_TO_LOG=1;
  LOG_FILE_MAX_SIZE=1024;
  LOG_USE_SYSLOG=0;
  DAEMONIZE=1;
  BIND_INTERFACE_IP="127.0.0.1";
  STARTING_TCP_PORT=16000;
  FABRIC_MODE=0;
  FABRIC_MODE_RESTART=0;
  STATE_FILE_NAME="/var/tmp/fabricmanager.state";
  FM_CMD_BIND_INTERFACE="127.0.0.1";
  FM_CMD_PORT_NUMBER=6666;
  FM_STAY_RESIDENT_ON_FAILURES=0;
  ACCESS_LINK_FAILURE_MODE=0;
  TRUNK_LINK_FAILURE_MODE=0;
  NVSWITCH_FAILURE_MODE=0;
  ABORT_CUDA_JOBS_ON_FM_EXIT=1;
}
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.dynamicBoost.enable
Whether to enable dynamic Boost balances power between the CPU and the GPU for improved performance on supported laptops using the nvidia−powerd daemon. For more information, see the NVIDIA docs, on Chapter 23. Dynamic Boost on Linux .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.forceFullCompositionPipeline
Whether to enable forcefully the full composition pipeline. This sometimes fixes screen tearing issues. This has been reported to reduce the performance of some OpenGL applications and may produce issues in WebGL. It also drastically increases the time the driver needs to clock down after load .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.gsp.enable
Whether to enable the GPU System Processor (GSP) on the video card .

Type: boolean

Default:

```
config.hardware.nvidia.open == true || lib.versionAtLeast config.ha \
rdware.nvidia.package.version "555"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.modesetting.enable
Whether to enable kernel modesetting when using the NVIDIA proprietary driver.

Enabling this fixes screen tearing when using Optimus via PRIME (see **hardware.nvidia.prime.sync.enable**. This is not enabled by default because it is not officially supported by NVIDIA and would not work with SLI.

Enabling this and using version 545 or newer of the proprietary NVIDIA driver causes it to provide its own framebuffer device, which can cause Wayland compositors to work when they otherwise wouldn’t. .

Type: boolean

Default:

```
lib.versionAtLeast cfg.package.version "535"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.moduleParams
Additional parameters to pass to the NVIDIA kernel module.

Type: attribute set of attribute set of raw value

Default:

```
{ }
```

Example:

```
{
  nvidia = {
    NVreg_UsePageAttributeTable = 1;
    NVreg_RegistryDwords = "EnableBrightnessControl=1"
  };
}
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.nvidiaPersistenced
Whether to enable nvidia−persistenced a update for NVIDIA GPU headless mode, i.e. It ensures all GPUs stay awake even during headless mode .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.nvidiaSettings
Whether to enable nvidia−settings, NVIDIA's GUI configuration tool .

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.open

Whether to enable the open source NVIDIA kernel module.

Type: null or boolean

Default:

```
if lib.versionOlder config.hardware.nvidia.package.version "560" th \
en false else null
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.powerManagement.enable

Whether to enable experimental power management through systemd. For more information, see the NVIDIA docs, on Chapter 21. Configuring Power Management Support .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.powerManagement.finegrained

Whether to enable experimental power management of PRIME offload. For more information, see the NVIDIA docs, on Chapter 22. PCI−Express Runtime D3 (RTD3) Power Management .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.powerManagement.kernelSuspendNotifier

Whether to enable NVIDIA driver support for kernel suspend notifiers, which allows the driver to be notified of suspend and resume events by the kernel, rather than relying on systemd services. Requires NVIDIA driver version 595 or newer, and the open source kernel modules. .

Type: boolean

Default:

```
config.hardware.nvidia.open == true && lib.versionAtLeast config.ha \
rdware.nvidia.package.version "595"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.prime.allowExternalGpu
Whether to enable configuring X to allow external NVIDIA GPUs when using Prime [Reverse] sync optimus .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.prime.amdgpuBusId
Bus ID of the AMD APU. You can find it using lspci; for example if lspci shows the AMD APU at "0001:02:03.4", set this option to "PCI:2@1:3:4".

lspci might omit the PCI domain (0001 in above example) if it is zero. In which case, use "@0" instead.

Please be aware that this option takes decimal address while lspci reports hexadecimal address. So for device at domain "10000", use "@65536".

Type: string matching the pattern ([[:print:]]+:[0−9]{1,3}(@[0−9]{1,10})?:[0−9]{1,2}:[0−9])?

Default:

```
""
```

Example:

```
"PCI:4@0:0:0"
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.prime.intelBusId
Bus ID of the Intel GPU. You can find it using lspci; for example if lspci shows the Intel GPU at "0001:02:03.4", set this option to "PCI:2@1:3:4".

lspci might omit the PCI domain (0001 in above example) if it is zero. In which case, use "@0" instead.

Please be aware that this option takes decimal address while lspci reports hexadecimal address. So for device at domain "10000", use "@65536".

Type: string matching the pattern ([[:print:]]+:[0−9]{1,3}(@[0−9]{1,10})?:[0−9]{1,2}:[0−9])?

Default:

```
""
```

Example:

```
"PCI:0@0:2:0"
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.prime.nvidiaBusId

Bus ID of the NVIDIA GPU. You can find it using lspci; for example if lspci shows the NVIDIA GPU at "0001:02:03.4", set this option to "PCI:2@1:3:4".

lspci might omit the PCI domain (0001 in above example) if it is zero. In which case, use "@0" instead.

Please be aware that this option takes decimal address while lspci reports hexadecimal address. So for device at domain "10000", use "@65536".

Type: string matching the pattern ([[:print:]]+:[0−9]{1,3}(@[0−9]{1,10})?:[0−9]{1,2}:[0−9])?

Default:

```
""
```

Example:

```
"PCI:1@0:0:0"
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.prime.offload.enable

Whether to enable render offload support using the NVIDIA proprietary driver via PRIME.

If this is enabled, then the bus IDs of the NVIDIA and Intel/AMD GPUs have to be specified (**hardware.nvidia.prime.nvidiaBusId** and **hardware.nvidia.prime.intelBusId** or **hardware.nvidia.prime.amdgpuBusId**) .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.prime.offload.enableOffloadCmd

Whether to enable adding a 'nvidia−offload' convenience script to **environment.systemPackages** for offloading programs to an nvidia device. To work, you must also enable **hardware.nvidia.prime.offload.enable** or **hardware.nvidia.prime.reverseSync.enable**.

Example usage: 'nvidia−offload sauerbraten_client'

This script can be renamed with **hardware.nvidia.prime.offload.enableOffloadCmd**. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.prime.offload.offloadCmdMainProgram

Specifies the CLI name of the **hardware.nvidia.prime.offload.enableOffloadCmd** convenience script for offloading programs to an nvidia device.

Type: string

Default:

```
"nvidia-offload"
```

Example:

```
"prime-run"
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.prime.reverseSync.enable

Whether to enable NVIDIA Optimus support using the NVIDIA proprietary driver via reverse PRIME. If enabled, the Intel/AMD GPU will be used for all rendering, while enabling output to displays attached only to the NVIDIA GPU without a multiplexer.

Warning: This feature is relatively new, depending on your system this might work poorly. AMD support, especially so. See: **https://forums.developer.nvidia.com/t/the-all-new-outputsink-feature-aka-reverse-prime/129828**

Note that this option only has any effect if the "nvidia" driver is specified in **services.xserver.videoDrivers**, and it should preferably be the only driver there.

If this is enabled, then the bus IDs of the NVIDIA and Intel/AMD GPUs have to be specified (**hardware.nvidia.prime.nvidiaBusId** and **hardware.nvidia.prime.intelBusId** or **hardware.nvidia.prime.amdgpuBusId**).

If you enable this, you may want to also enable kernel modesetting for the NVIDIA driver (**hardware.nvidia.modesetting.enable**) in order to prevent tearing.

Note that this configuration will only be successful when a display manager for which the **services.xserver.displayManager.setupCommands** option is supported is used .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.prime.reverseSync.setupCommands.enable

Whether to enable configure the display manager to be able to use the outputs attached to the NVIDIA GPU. Disable in order to configure the NVIDIA GPU outputs manually using xrandr. Note that this configuration will only be successful when a display manager for which the **services.xserver.displayManager.setupCommands** option is supported is used .

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.prime.sync.enable
Whether to enable NVIDIA Optimus support using the NVIDIA proprietary driver via PRIME. If enabled, the NVIDIA GPU will be always on and used for all rendering, while enabling output to displays attached only to the integrated Intel/AMD GPU without a multiplexer.

Note that this option only has any effect if the "nvidia" driver is specified in **services.xserver.videoDrivers**, and it should preferably be the only driver there.

If this is enabled, then the bus IDs of the NVIDIA and Intel/AMD GPUs have to be specified (**hardware.nvidia.prime.nvidiaBusId** and **hardware.nvidia.prime.intelBusId** or **hardware.nvidia.prime.amdgpuBusId**).

If you enable this, you may want to also enable kernel modesetting for the NVIDIA driver (**hardware.nvidia.modesetting.enable**) in order to prevent tearing.

Note that this configuration will only be successful when a display manager for which the **services.xserver.displayManager.setupCommands** option is supported is used .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia.videoAcceleration
Whether to enable video acceleration (VA−API).

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/video/nvidia.nix>

hardware.nvidia−container−toolkit.enable
Enable dynamic CDI configuration for Nvidia devices by running nvidia−container−toolkit on boot.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/nvidia−container−toolkit>

hardware.nvidia−container−toolkit.enable−hooks

List of hooks to enable when generating the CDI specification. Each hook name will be passed as '−−enable−hook <hook−name>' to nvidia−ctk. Set to an empty list to enable no hooks.

Type: list of non−empty string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/nvidia−container−toolkit>

hardware.nvidia−container−toolkit.package

The nvidia−container−toolkit package to use.

Type: package

Default:

```
pkgs.nvidia-container-toolkit
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/nvidia−container−toolkit>

hardware.nvidia−container−toolkit.csv−files

The path to the list of CSV files to use when generating the CDI specification in CSV mode.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/nvidia−container−toolkit>

hardware.nvidia−container−toolkit.device−name−strategy

Specify the strategy for generating device names, passed to 'nvidia−ctk cdi generate'. This will affect how you reference the device using 'nvidia.com/gpu=' in the container runtime.

Type: one of "index", "uuid", "type−index"

Default:

```
"index"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/nvidia−container−toolkit>

hardware.nvidia−container−toolkit.disable−hooks

List of hooks to disable when generating the CDI specification. Each hook name will be passed as '−−disable−hook <hook−name>' to nvidia−ctk. Set to an empty list to disable no hooks.

Type: list of non−empty string

Default:

```
[
  "create-symlinks"
]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/nvidia−container−toolkit>

hardware.nvidia−container−toolkit.discovery−mode
The mode to use when discovering the available entities.

Type: one of “auto”, “csv”, “nvml”, “wsl”

Default:

```
"auto"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/nvidia−container−toolkit>

hardware.nvidia−container−toolkit.extraArgs
Extra arguments to be passed to nvidia−ctk.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/nvidia−container−toolkit>

hardware.nvidia−container−toolkit.mount−nvidia−docker−1−directories
Mount nvidia−docker−1 directories on containers: /usr/local/nvidia/lib and /usr/local/nvidia/lib64.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/nvidia−container−toolkit>

hardware.nvidia−container−toolkit.mount−nvidia−executables
Mount executables nvidia−smi, nvidia−cuda−mps−control, nvidia−cuda−mps−server, nvidia−debug-dump, nvidia−powerd and nvidia−ctk on containers.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/nvidia−container−toolkit>

hardware.nvidia−container−toolkit.mounts
Mounts to be added to every container under the Nvidia CDI profile.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/nvidia−container−toolkit>

hardware.nvidia−container−toolkit.mounts.*.containerPath
Container path.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/hardware/nvidia-container-toolkit>

hardware.nvidia-container-toolkit.mounts.*.hostPath
Host path.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/hardware/nvidia-container-toolkit>

hardware.nvidia-container-toolkit.mounts.*.mountOptions
Mount options.

Type: list of string

Default:

```
[
  "ro"
  "nosuid"
  "nodev"
  "bind"
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/nvidia-container-toolkit>

hardware.nvidia-container-toolkit.suppressNvidiaDriverAssertion
Suppress the assertion for installing Nvidia driver. Useful in WSL where drivers are mounted from Windows, not provided by NixOS.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/nvidia-container-toolkit>

hardware.nvidiaOptimus.disable
Completely disable the NVIDIA graphics card and use the integrated graphics processor instead.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/nvidia-optimus.nix>

hardware.onlykey.enable
Enable OnlyKey device (https://crp.to/p/) support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/onlykey/default.nix>

hardware.openrazer.enable

Whether to enable OpenRazer drivers and userspace daemon .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/openrazer.nix>

hardware.openrazer.packages.daemon

The openrazer−daemon package to use.

Type: package

Default:

```
pkgs.python3Packages.openrazer−daemon
```

Declared by:

<nixpkgs/nixos/modules/hardware/openrazer.nix>

hardware.openrazer.packages.kernel

The openrazer kernel package to use.

Type: package

Default:

```
config.boot.kernelPackages.openrazer
```

Declared by:

<nixpkgs/nixos/modules/hardware/openrazer.nix>

hardware.openrazer.batteryNotifier

Settings for device battery notifications.

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/hardware/openrazer.nix>

hardware.openrazer.batteryNotifier.enable

Mouse battery notifier.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/openrazer.nix>

hardware.openrazer.batteryNotifier.frequency

How often battery notifications should be shown (in seconds). A value of 0 disables notifications.

Type: signed integer

Default:

```
600
```

Declared by:

<nixpkgs/nixos/modules/hardware/openrazer.nix>

hardware.openrazer.batteryNotifier.percentage

At what battery percentage the device should reach before sending notifications.

Type: signed integer

Default:

```
33
```

Declared by:

<nixpkgs/nixos/modules/hardware/openrazer.nix>

hardware.openrazer.devicesOffOnScreensaver

Turn off the devices when the systems screensaver kicks in.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/openrazer.nix>

hardware.openrazer.keyStatistics

Collects number of keypresses per hour per key used to generate a heatmap.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/hardware/openrazer.nix>

hardware.openrazer.syncEffectsEnabled

Set the sync effects flag to true so any assignment of effects will work across devices.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/openrazer.nix>

hardware.openrazer.users

Usernames to be added to the “openrazer” group, so that they can start and interact with the OpenRazer userspace daemon.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/hardware/openrazer.nix>

hardware.openrazer.verboseLogging
Whether to enable verbose logging. Logs debug messages.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/openrazer.nix>

hardware.opentabletdriver.enable
Enable OpenTabletDriver udev rules, user service and blacklist kernel modules known to conflict with OpenTabletDriver.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/opentabletdriver.nix>

hardware.opentabletdriver.package
The opentabletdriver package to use.

Type: package

Default:

```
pkgs.opentabletdriver
```

Declared by:
<nixpkgs/nixos/modules/hardware/opentabletdriver.nix>

hardware.opentabletdriver.blacklistedKernelModules
Blacklist of kernel modules known to conflict with OpenTabletDriver.

Type: list of string

Default:

```
[
  "hid-uclogic"
  "wacom"
]
```

Declared by:
<nixpkgs/nixos/modules/hardware/opentabletdriver.nix>

hardware.opentabletdriver.daemon.enable
Whether to start OpenTabletDriver daemon as a systemd user service.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/opentabletdriver.nix>

hardware.parallels.enable

This enables Parallels Tools for Linux guests.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/parallels−guest.nix>

hardware.parallels.package

The prl−tools package to use.

Type: package

Default:

```
pkgs.prl−tools
```

Declared by:

<nixpkgs/nixos/modules/virtualisation/parallels−guest.nix>

hardware.pcmcia.enable

Enable this option to support PCMCIA card.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/hardware/pcmcia.nix>

hardware.pcmcia.config

Path to the configuration file which maps the memory, IRQs and ports used by the PCMCIA hardware.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/hardware/pcmcia.nix>

hardware.pcmcia.firmware

List of firmware used to handle specific PCMCIA card.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/hardware/pcmcia.nix>

hardware.printers.ensureDefaultPrinter

Ensures the named printer is the default CUPS printer / printer queue.

Type: null or printable string without spaces, # and /

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/hardware/printers.nix>

hardware.printers.ensurePrinters
Will regularly ensure that the given CUPS printers are configured as declared here. If a printer's options are manually changed afterwards, they will be overwritten eventually. This option will never delete any printer, even if removed from this list. You can check existing printers with **lpstat −s** and remove printers with **lpadmin −x <printer−name>**. Printers not listed here can still be manually configured.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/hardware/printers.nix>

hardware.printers.ensurePrinters.*.description
Optional human−readable description.

Type: null or string

Default:

```
null
```

Example:

```
"Brother HL−5140"
```

Declared by:
<nixpkgs/nixos/modules/hardware/printers.nix>

hardware.printers.ensurePrinters.*.deviceUri
How to reach the printer. **lpinfo −v** shows a list of supported device URIs and schemes.

Type: string

Example:

```
"ipp://printserver.local/printers/BrotherHL_Workroom"
"usb://HP/DESKJET%20940C?serial=CN16E6C364BH"
```

Declared by:
<nixpkgs/nixos/modules/hardware/printers.nix>

hardware.printers.ensurePrinters.*.location
Optional human−readable location.

Type: null or string

Default:

```
null
```

Example:

```
"Workroom"
```

Declared by:
<nixpkgs/nixos/modules/hardware/printers.nix>

hardware.printers.ensurePrinters.*.model

Location of the ppd driver file for the printer. **lpinfo −m** shows a list of supported models.

Type: string

Example:

```
"gutenprint.${lib.versions.majorMinor (lib.getVersion pkgs.gutenpri \
nt)}://brother-hl-5140/expert"
```

Declared by:

<nixpkgs/nixos/modules/hardware/printers.nix>

hardware.printers.ensurePrinters.*.name

Name of the printer / printer queue. May contain any printable characters except “/”, “#”, and space.

Type: printable string without spaces, # and /

Example:

```
"BrotherHL_Workroom"
```

Declared by:

<nixpkgs/nixos/modules/hardware/printers.nix>

hardware.printers.ensurePrinters.*.ppdOptions

Sets PPD options for the printer. **lpoptions [−p printername] −l** shows supported PPD options for the given printer.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  Duplex = "DuplexNoTumble";
  PageSize = "A4";
}
```

Declared by:

<nixpkgs/nixos/modules/hardware/printers.nix>

hardware.raid.HPSmartArray.enable

Whether to enable HP Smart Array kernel modules and CLI utility.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/raid/hpsa.nix>

hardware.rasdaemon.enable

Whether to enable RAS logging daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/rasdaemon.nix>

hardware.rasdaemon.package
The rasdaemon package to use.

Type: package

Default:

```
pkgs.rasdaemon
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/rasdaemon.nix>

hardware.rasdaemon.config
rasdaemon configuration, currently only used for CE PFA for details, read rasdaemon.outPath/etc/sysconfig/rasdaemon's comments

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
# defaults from included config
PAGE_CE_REFRESH_CYCLE="24h"
PAGE_CE_THRESHOLD="50"
PAGE_CE_ACTION="soft"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/rasdaemon.nix>

hardware.rasdaemon.extraModules
extra kernel modules to load

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "i7core_edac"
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/rasdaemon.nix>

hardware.rasdaemon.labels
Additional memory module label descriptions to be placed in /etc/ras/dimm_labels.d/labels

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
# vendor and model may be shown by 'ras-mc-ctl --mainboard'
```

```
vendor: ASRock
  product: To Be Filled By O.E.M.
  model: B450M Pro4
    # these labels are names for the motherboard slots
    # the numbers may be shown by ‘ras-mc-ctl --error-count‘
    # they are mc:csrow:channel
    DDR4_A1: 0.2.0;  DDR4_B1: 0.2.1;
    DDR4_A2: 0.3.0;  DDR4_B2: 0.3.1;
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/rasdaemon.nix>

hardware.rasdaemon.mainboard
Custom mainboard description, see **ras−mc−ctl**(8) for more details.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
vendor = ASRock
model = B450M Pro4

# it should default to such values from
# /sys/class/dmi/id/board_[vendor|name]
# alternatively one can supply a script
# that returns the same format as above

script = <path to script>
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/rasdaemon.nix>

hardware.rasdaemon.record
record events via sqlite3, required for ras−mc−ctl

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/rasdaemon.nix>

hardware.rasdaemon.testing
Whether to enable error injection infrastructure.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/rasdaemon.nix>

hardware.rtl−sdr.enable

Enables rtl−sdr udev rules, ensures ‘plugdev’ group exists, and blacklists DVB kernel modules. This is a prerequisite to using devices supported by rtl−sdr without being root, since rtl−sdr USB descriptors will be owned by plugdev through udev.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/hardware/rtl−sdr.nix>

hardware.rtl−sdr.package

The rtl−sdr package to use.

Type: package

Default:

```
pkgs.rtl−sdr
```

Declared by:

<nixpkgs/nixos/modules/hardware/rtl−sdr.nix>

hardware.saleae−logic.enable

Whether to enable udev rules for Saleae Logic devices.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/saleae−logic.nix>

hardware.saleae−logic.package

Saleae Logic package to use.

Type: package

Default:

```
pkgs.saleae−logic−2
```

Declared by:

<nixpkgs/nixos/modules/hardware/saleae−logic.nix>

hardware.sane.enable

Enable support for SANE scanners.

Note

Users in the “scanner” group will gain access to the scanner, or the “lp” group if it’s also a printer.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane.nix>

hardware.sane.backends−package
The sane−backends package to use.

Type: package

Default:

```
pkgs.sane-backends
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane.nix>

hardware.sane.brscan4.enable
When enabled, will automatically register the “brscan4” sane backend and bring configuration files to their expected location.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane_extra_backends/brscan4.nix>

hardware.sane.brscan4.netDevices
The list of network devices that will be registered against the brscan4 sane backend.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  office1 = {
    ip = "192.168.1.2";
    model = "MFC-7860DW";
  };
  office2 = {
    model = "MFC-7860DW";
    nodename = "BRW0080927AFBCE";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane_extra_backends/brscan4.nix>

hardware.sane.brscan4.netDevices.<name>.ip
The ip address of the device. If undefined, you will have to provide a nodename.

Type: null or string

Default:

```
null
```

Example:

```
"192.168.1.2"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane_extra_backends/brscan4.nix>

hardware.sane.brscan4.netDevices.<name>.model
The model of the network device.

Type: string

Example:

```
"MFC-7860DW"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane_extra_backends/brscan4.nix>

hardware.sane.brscan4.netDevices.<name>.name
The friendly name you give to the network device. If undefined, the name of attribute will be used.

Type: string

Example:

```
"office1"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane_extra_backends/brscan4.nix>

hardware.sane.brscan4.netDevices.<name>.nodename
The node name of the device. If undefined, you will have to provide an ip.

Type: null or string

Default:

```
null
```

Example:

```
"BRW0080927AFBCE"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane_extra_backends/brscan4.nix>

hardware.sane.brscan5.enable
Whether to enable the Brother brscan5 sane backend.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane_extra_backends/brscan5.nix>

hardware.sane.brscan5.netDevices
The list of network devices that will be registered against the brscan5 sane backend.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  office1 = {
    ip = "192.168.1.2";
    model = "MFC-7860DW";
  };
  office2 = {
    model = "MFC-7860DW";
    nodename = "BRW0080927AFBCE";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane_extra_backends/brscan5.nix>

hardware.sane.brscan5.netDevices.<name>.ip
The ip address of the device. If undefined, you will have to provide a nodename.

Type: null or string

Default:

```
null
```

Example:

```
"192.168.1.2"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane_extra_backends/brscan5.nix>

hardware.sane.brscan5.netDevices.<name>.model
The model of the network device.

Type: string

Example:

```
"ADS-1200"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane_extra_backends/brscan5.nix>

hardware.sane.brscan5.netDevices.<name>.name
The friendly name you give to the network device. If undefined, the name of attribute will be used.

Type: string

Example:

```
"office1"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane_extra_backends/brscan5.nix>

hardware.sane.brscan5.netDevices.<name>.nodename
The node name of the device. If undefined, you will have to provide an ip.

Type: null or string

Default:

```
null
```

Example:

```
"BRW0080927AFBCE"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane_extra_backends/brscan5.nix>

hardware.sane.disabledDefaultBackends
Names of backends which are enabled by default but should be disabled. See '$SANE_CONFIG_DIR/dll.conf' for the list of possible names.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "v4l"
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane.nix>

hardware.sane.drivers.scanSnap.enable
Whether to enable drivers for the Fujitsu ScanSnap scanners.

The driver files are unfree and extracted from the Windows driver image.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane.nix>

hardware.sane.drivers.scanSnap.package
The epjitsu package to use. Useful if you want to extract the driver files yourself.

The process is described in the */etc/sane.d/epjitsu.conf* file in the 'sane−backends' package.

Type: package

Default:

```
pkgs.sane-drivers.epjitsu
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane.nix>

hardware.sane.dsseries.enable
When enabled, will automatically register the "dsseries" SANE backend.

This supports the Brother DSmobile scanner series, including the DS−620, DS−720D, DS−820W, and DS−920DW scanners.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane_extra_backends/dsseries.nix>

hardware.sane.extraBackends
Packages providing extra SANE backends to enable.

Note
The example contains the package for HP scanners, and the package for Apple AirScan and Microsoft WSD support (supports many vendors/devices).

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[ pkgs.hplipWithPlugin pkgs.sane-airscan ]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane.nix>

hardware.sane.netConf
Network hosts that should be probed for remote scanners.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"192.168.0.16"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane.nix>

hardware.sane.openFirewall
Open ports needed for discovery of scanners on the local network, e.g. needed for Canon scanners (BJNP protocol).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane.nix>

hardware.sane.snapshot
Use a development snapshot of SANE scanner drivers.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/sane.nix>

hardware.sata.timeout.enable

Whether to enable SATA drive timeouts.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/sata.nix>

hardware.sata.timeout.deciSeconds

Set SCT Error Recovery Control timeout in deciseconds for use in RAID configurations.

Values are as follows: 0 = disable SCT ERT 70 = default in consumer drives (7 seconds)

Maximum is disk dependant but probably 60 seconds.

Type: signed integer

Example:

```
70
```

Declared by:

<nixpkgs/nixos/modules/hardware/sata.nix>

hardware.sata.timeout.drives

List of drives for which to configure the timeout.

Type: list of (submodule)

Declared by:

<nixpkgs/nixos/modules/hardware/sata.nix>

hardware.sata.timeout.drives.*.idBy

The method to identify the drive.

Type: one of “path”, “wwn”

Default:

```
"path"
```

Declared by:

<nixpkgs/nixos/modules/hardware/sata.nix>

hardware.sata.timeout.drives.*.name

Drive name without the full path.

Type: string

Declared by:

<nixpkgs/nixos/modules/hardware/sata.nix>

hardware.sensor.hddtemp.enable

Enable this option to support HDD/SSD temperature sensors.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/sensor/hddtemp.nix>

hardware.sensor.hddtemp.dbEntries
Additional DB entries

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/hardware/sensor/hddtemp.nix>

hardware.sensor.hddtemp.drives
List of drives to monitor. If you pass /dev/disk/by−path/* entries the symlinks will be resolved as hddtemp doesn’t like names with colons.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/hardware/sensor/hddtemp.nix>

hardware.sensor.hddtemp.extraArgs
Additional arguments passed to the daemon.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/hardware/sensor/hddtemp.nix>

hardware.sensor.hddtemp.unit
Celsius or Fahrenheit

Type: one of “C”, “F”

Default:

```
"C"
```

Declared by:
<nixpkgs/nixos/modules/hardware/sensor/hddtemp.nix>

hardware.sensor.iio.enable
Enable this option to support IIO sensors with iio−sensor−proxy.

IIO sensors are used for orientation and ambient light sensors on some mobile devices.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/sensor/iio.nix>

hardware.sensor.iio.package

The iio−sensor−proxy package to use.

Type: package

Default:

```
pkgs.iio-sensor-proxy
```

Declared by:

<nixpkgs/nixos/modules/hardware/sensor/iio.nix>

hardware.sheep_net.enable

Enables sheep_net udev rules, ensures ‘sheep_net’ group exists, and adds sheep−net to boot.kernelModules and boot.extraModulePackages

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/hardware/sheep−net.nix>

hardware.spacenavd.enable

Whether to enable spacenavd to support 3DConnexion devices.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/spacenavd.nix>

hardware.steam−hardware.enable

Enable udev rules for Steam hardware such as the Steam Controller, other supported controllers and the HTC Vive

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/hardware/steam−hardware.nix>

hardware.system76.enableAll

Whether to enable all recommended configuration for system76 systems.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/system−76.nix>

hardware.system76.firmware−daemon.enable
Whether to enable the system76 firmware daemon

Type: boolean

Default:

```
config.hardware.system76.enableAll
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/system−76.nix>

hardware.system76.kernel−modules.enable
Whether to make the system76 out−of−tree kernel modules available

Type: boolean

Default:

```
config.hardware.system76.enableAll
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/system−76.nix>

hardware.system76.power−daemon.enable
Whether to enable the system76 power daemon

Type: boolean

Default:

```
config.hardware.system76.enableAll
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/system−76.nix>

hardware.tenstorrent.enable
Whether to enable Tenstorrent driver & utilities.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/tenstorrent.nix>

hardware.trackpoint.enable

Enable sensitivity and speed configuration for trackpoints.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.device

The device name of the trackpoint. You can check with xinput. Some newer devices (example x1c6) use "TPPS/2 Elan TrackPoint".

Type: string

Default:

```
"TPPS/2 IBM TrackPoint"
```

Declared by:

<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.draghys

The drag hysteresis controls how hard it is to drag with z−axis pressed.

Type: signed integer

Default:

```
255
```

Example:

```
200
```

Declared by:

<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.drift_time

This parameter controls the period of time to test for a 'hands off' condition (i.e. when no force is applied) before a drift (noise) calibration occurs.

IBM Trackpoints have a feature to compensate for drift by recalibrating themselves periodically. By default, if for 0.5 seconds there is no change in position, it's used as the new zero. This duration is too low. Often, the calibration happens when the trackpoint is in fact being used.

Type: signed integer

Default:

```
5
```

Example:

```
100
```

Declared by:

<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.emulateWheel

Enable scrolling while holding the middle mouse button.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.ext_dev
Disable or enable external pointing device.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.fakeButtons
Switch to “bare” PS/2 mouse support in case Trackpoint buttons are not recognized properly. This can happen for example on models like the L430, T450, T450s, on which the Trackpoint buttons are actually a part of the Synaptics touchpad.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.inertia
Negative inertia factor. High values cause the cursor to snap backward when the trackpoint is released.

Type: signed integer

Default:

```
6
```

Example:

```
10
```

Declared by:
<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.jenks
Minimum curvature in degrees required to generate a double click without a release.

Type: signed integer

Default:

```
135
```

Example:

```
100
```

Declared by:
<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.mindrag

Minimum amount of force needed to trigger dragging.

Type: signed integer

Default:

```
20
```

Example:

```
30
```

Declared by:

<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.press_to_select

Setting this to true will enable the Press to Select functions like tapping the control stick to simulate a left click, and setting false will disable it.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.reach

Backup range for z−axis press.

Type: signed integer

Default:

```
10
```

Example:

```
20
```

Declared by:

<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.sensitivity

Trackpoint sensitivity.

Type: signed integer

Default:

```
128
```

Example:

```
255
```

Declared by:

<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.skipback

When the skipback bit is set, backup cursor movement during releases from drags will be suppressed. The default value for this bit is 0.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.speed

Speed of the trackpoint cursor.

Type: signed integer

Default:

```
97
```

Example:

```
255
```

Declared by:

<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.thresh

Minimum value for z−axis force required to trigger a press or release, relative to the running average.

Type: signed integer

Default:

```
8
```

Example:

```
10
```

Declared by:

<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.upthresh

The offset from the running average required to generate a select (click) on z−axis on release.

Type: signed integer

Default:

```
255
```

Example:

```
250
```

Declared by:

<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.trackpoint.ztime

This attribute determines how sharp a press has to be in order to be recognized.

Type: signed integer

Default:

```
38
```

Example:

```
50
```

Declared by:

<nixpkgs/nixos/modules/tasks/trackpoint.nix>

hardware.tuxedo−drivers.enable

Whether to enable The tuxedo−drivers driver enables access to the following on TUXEDO notebooks:

- Driver for Fn−keys
- SysFS control of brightness/color/mode for most TUXEDO keyboards
- Hardware I/O driver for TUXEDO Control Center

For more inforation it is best to check at the source code description: **https://gitlab.com/tuxedocomputers/development/packages/tuxedo−drivers** .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/tuxedo−drivers.nix>

hardware.tuxedo−drivers.settings.charging−priority

These options manage the trade−off between battery charging and CPU performance when the USB−C power supply cannot provide sufficient power for both simultaneously:

- ‘charge_battery’ prioritizes battery charging (driver default)
- ‘performance’ prioritizes maximum CPU performance

Type: null or one of “charge_battery”, “performance”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/hardware/tuxedo−drivers.nix>

hardware.tuxedo−drivers.settings.charging−profile

The maximum charge level to help reduce battery wear:

- ‘high_capacity’ charges to 100% (driver default)
- ‘balanced’ charges to 90%
- ‘stationary’ charges to 80% (maximum lifespan)

Note: Regardless of the configured charging profile, the operating system will always report the battery as being charged to 100%.

Type: null or one of “high_capacity”, “balanced”, “stationary”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/hardware/tuxedo-drivers.nix>

hardware.tuxedo-drivers.settings.fn-lock
Enables or disables the laptop keyboard's Function (Fn) lock at boot.

When set to 'true', the Fn lock is enabled, allowing the function keys (F1–F12) to control brightness, volume etc.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/hardware/tuxedo-drivers.nix>

hardware.tuxedo-rs.enable
Whether to enable Rust utilities for interacting with hardware from TUXEDO Computers.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuxedo-rs.nix>

hardware.tuxedo-rs.tailor-gui.enable
Whether to enable tailor-gui, an alternative to TUXEDO Control Center, written in Rust.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/tuxedo-rs.nix>

hardware.ubertooth.enable
Whether to enable Ubertooth software and its udev rules.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/ubertooth.nix>

hardware.ubertooth.group

Group for Ubertooth's udev rules.

Type: string

Default:

```
"ubertooth"
```

Example:

```
"wheel"
```

Declared by:

<nixpkgs/nixos/modules/hardware/ubertooth.nix>

hardware.uinput.enable

Whether to enable uinput support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/uinput.nix>

hardware.uni−sync.enable

Whether to enable udev rules and software for Lian Li Uni Controllers.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/uni−sync.nix>

hardware.uni−sync.package

The uni−sync package to use.

Type: package

Default:

```
pkgs.uni−sync
```

Declared by:

<nixpkgs/nixos/modules/hardware/uni−sync.nix>

hardware.uni−sync.devices

List of controllers with their configurations.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
```

```
    {
      device_id = "VID:1111/PID:11111/SN:1111111111";
      sync_rgb = true;
      channels = [
        {
          mode = "PWM";
        }
        {
          mode = "Manual";
          speed = 100;
        }
        {
          mode = "Manual";
          speed = 54;
        }
        {
          mode = "Manual";
          speed = 0;
        }
      ];
    }
    {
      device_id = "VID:1010/PID:10101/SN:1010101010";
      sync_rgb = false;
      channels = [
        {
          mode = "Manual";
          speed = 0;
        }
      ];
    }
  ]
```

Declared by:

<nixpkgs/nixos/modules/hardware/uni-sync.nix>

hardware.uni-sync.devices.*.channels

List of channels connected to the controller.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    mode = "PWM";
  }
  {
    mode = "Manual";
    speed = 100;
  }
  {
    mode = "Manual";
```

```
    speed = 54;
  }
  {
    mode = "Manual";
    speed = 0;
  }
]
```

Declared by:
<nixpkgs/nixos/modules/hardware/uni-sync.nix>

hardware.uni-sync.devices.*.channels.*.mode
"PWM" to enable PWM sync. "Manual" to set speed.

Type: one of "Manual", "PWM"

Default:

```
"Manual"
```

Example:

```
"PWM"
```

Declared by:
<nixpkgs/nixos/modules/hardware/uni-sync.nix>

hardware.uni-sync.devices.*.channels.*.speed
Fan speed as percentage (clamped between 0 and 100).

Type: signed integer

Default:

```
"50"
```

Example:

```
"100"
```

Declared by:
<nixpkgs/nixos/modules/hardware/uni-sync.nix>

hardware.uni-sync.devices.*.device_id
Unique device ID displayed at each startup.

Type: string

Example:

```
"VID:1111/PID:11111/SN:1111111111"
```

Declared by:
<nixpkgs/nixos/modules/hardware/uni-sync.nix>

hardware.uni-sync.devices.*.sync_rgb
Enable ARGB header sync.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/uni−sync.nix>

hardware.usb−modeswitch.enable
Enable this option to support certain USB WLAN and WWAN adapters.

These network adapters initial present themselves as Flash Drives containing their drivers. This option enables automatic switching to the networking mode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/usb−modeswitch.nix>

hardware.usbStorage.manageShutdown
Enable this option to gracefully spin−down external storage during shutdown. If you suspect improper head parking after poweroff, install ‘smartmontools’ and check for the ‘Power−Off_Retract_Count’ field for an increment.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/usb−storage.nix>

hardware.wirelessRegulatoryDatabase
Whether to enable loading the wireless regulatory database at boot.

Type: boolean

Default: Enabled if proprietary firmware is allowed via **enableRedistributableFirmware** or **enableAllFirmware**.

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/all−firmware.nix>

hardware.wooting.enable
Whether to enable support for Wooting keyboards.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/wooting.nix>

hardware.xone.enable

Whether to enable the xone driver for Xbox One and Xbox Series X|S accessories.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/xone.nix>

hardware.xpad−noone.enable

Whether to enable the Xpad driver from the Linux kernel with support for Xbox One controllers removed.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/xpad−noone.nix>

hardware.xpadneo.enable

Whether to enable the xpadneo driver for Xbox One wireless controllers.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/hardware/xpadneo.nix>

hardware.xpadneo.quirks

Controller−specific quirk flags, keyed by MAC address. Flags are combined as a bitmask to address compatibility issues with specific controllers.

The value is a sum of individual flag values. For example, to apply flags 1, 2, and 4, use ‘7’ (1 + 2 + 4). To apply flags 2, 4, and 32, use ‘38’ (2 + 4 + 32).

See **https://github.com/atar−axis/xpadneo/blob/master/docs/CONFIGURATION.md** for available quirk flags and their values.

Type: attribute set of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
{ }
```

Example:

```
{
  "11:22:33:44:55:66" = 7; # Applies flags 1 + 2 + 4
}
```

Declared by:
<nixpkgs/nixos/modules/hardware/xpadneo.nix>

hardware.xpadneo.rumbleAttenuation
Force feedback attenuation settings. Higher values reduce rumble strength.

See **https://github.com/atar-axis/xpadneo/blob/master/docs/CONFIGURATION.md** for more information.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  overall = 50;   # 50% overall rumble
  triggers = 50;  # 25% trigger rumble (50% of 50%)
}
```

Declared by:
<nixpkgs/nixos/modules/hardware/xpadneo.nix>

hardware.xpadneo.rumbleAttenuation.overall
Overall force feedback attenuation as a percentage. '0' means full rumble, '100' means no rumble. Applies to both main and trigger rumble.

Type: integer between 0 and 100 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/hardware/xpadneo.nix>

hardware.xpadneo.rumbleAttenuation.triggers
Extra attenuation for trigger rumble as a percentage, applied on top of **overall**. For example, 'overall = 50' and 'triggers = 50' results in 50% main rumble and 25% trigger rumble. Set to '100' to disable trigger rumble while keeping main rumble. 'null' means no extra trigger attenuation.

Type: null or integer between 0 and 100 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/hardware/xpadneo.nix>

hardware.xpadneo.settings
Kernel module parameters for hid_xpadneo. These are passed directly to the module via modprobe.

See **https://github.com/atar-axis/xpadneo/blob/master/docs/CONFIGURATION.md** for available parameters and their values.

Type: attribute set of (signed integer or string)

Default:

```
{ }
```

Example:

```
{
  disable_deadzones = 1;
  trigger_rumble_mode = 2;
```

```
  disable_shift_mode = 1;
}
```

Declared by:
<nixpkgs/nixos/modules/hardware/xpadneo.nix>

i18n.defaultCharset
The default locale character set.

Type: string

Default:

```
"UTF-8"
```

Example:

```
"ISO-8859-8"
```

Declared by:
<nixpkgs/nixos/modules/config/i18n.nix>

i18n.defaultLocale
The default locale. It determines the language for program messages, the format for dates and times, sort order, and so on. Setting the default character set is done via **i18n.defaultCharset**.

Type: string

Default:

```
"en_US.UTF-8"
```

Example:

```
"nl_NL.UTF-8"
```

Declared by:
<nixpkgs/nixos/modules/config/i18n.nix>

i18n.extraLocaleSettings
A set of additional system−wide locale settings other than ‘LANG’ which can be configured with **i18n.defaultLocale**. Note that the ‘/UTF−8’ suffix used in **i18n.extraLocales** indicates a character set, and it must not be added manually here. To use a non−‘UTF−8’ character set such as ISO−XXXX−8, the **i18n.localeCharsets** can be used.

Note that if the ‘LANGUAGE’ **key** is used in this option, it is ignored when computing the locales required to be installed, because the possible values of this key are more diverse and flexible then the others.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  LC_MESSAGES = "en_US.UTF-8";
  LC_TIME = "de_DE.UTF-8";
}
```

Declared by:
<nixpkgs/nixos/modules/config/i18n.nix>

i18n.extraLocales

Additional locales that the system should support, besides the ones configured with **i18n.defaultLocale** and **i18n.extraLocaleSettings**. Set this to ‘"all"’ to install all available locales.

Type: (list of string) or value “all” (singular enum)

Default:

```
[ ]
```

Example:

```
[
  "nl_NL.UTF-8/UTF-8"
]
```

Declared by:

<nixpkgs/nixos/modules/config/i18n.nix>

i18n.glibcLocales

Customized pkg.glibcLocales package.

Changing this option can disable handling of i18n.defaultLocale and supportedLocale.

Type: absolute path

Default:

```
pkgs.glibcLocales.override {
  allLocales = lib.elem "all" config.i18n.supportedLocales;
  locales = config.i18n.supportedLocales;
}
```

Example:

```
pkgs.glibcLocales
```

Declared by:

<nixpkgs/nixos/modules/config/i18n.nix>

i18n.inputMethod.enable

Whether to enable an additional input method type.

Type: boolean

Default: true if the deprecated option enabled is set, false otherwise

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/i18n/input-method/default.nix>

i18n.inputMethod.enableGtk2

Whether to enable Gtk2 support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/default.nix>

i18n.inputMethod.enableGtk3
Whether to enable Gtk3 support.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/default.nix>

i18n.inputMethod.enabled
Deprecated − use ‘type’ and ‘enable = true’ instead

Type: null or one of “ibus”, “fcitx5”, “nabi”, “uim”, “hime”, “kime”

Default:

```
null
```

Example:

```
"fcitx5"
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/default.nix>

i18n.inputMethod.fcitx5.addons
Enabled Fcitx5 addons.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [ fcitx5−rime ]
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/fcitx5.nix>

i18n.inputMethod.fcitx5.ignoreUserConfig
Ignore the user configures. **Warning**: When this is enabled, the user config files are totally ignored and the user dict can’t be saved and loaded.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/fcitx5.nix>

i18n.inputMethod.fcitx5.quickPhrase

Quick phrases.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  smile = "∀";
  angry = "()";
}
```

Declared by:

<nixpkgs/nixos/modules/i18n/input−method/fcitx5.nix>

i18n.inputMethod.fcitx5.quickPhraseFiles

Quick phrase files.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  words = ./words.mb;
  numbers = ./numbers.mb;
}
```

Declared by:

<nixpkgs/nixos/modules/i18n/input−method/fcitx5.nix>

i18n.inputMethod.fcitx5.settings.addons

The addon configures in ‘conf’ folder in ini format with global sections. Each item is written to the corresponding file.

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{ pinyin.globalSection.EmojiEnabled = "True"; }
```

Declared by:

<nixpkgs/nixos/modules/i18n/input−method/fcitx5.nix>

i18n.inputMethod.fcitx5.settings.globalOptions

The global options in ‘config’ file in ini format.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/fcitx5.nix>

i18n.inputMethod.fcitx5.settings.inputMethod
The input method configure in ‘profile’ file in ini format.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/fcitx5.nix>

i18n.inputMethod.fcitx5.waylandFrontend
Use the Wayland input method frontend. See **Using Fcitx 5 on Wayland**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/fcitx5.nix>

i18n.inputMethod.ibus.engines
Enabled IBus engines. Available engines are: ‘anthy’, ‘bamboo’, ‘cangjie’, ‘chewing’, ‘hangul’, ‘libpinyin’, ‘libthai’, ‘m17n’, ‘mozc’, ‘mozc−ut’, ‘pinyin’, ‘rime’, ‘table’, ‘table−chinese’, ‘table−others’, ‘typing−booster’, ‘typing−booster−unwrapped’, ‘uniemoji’.

Type: list of ibus−engine

Default:

```
[ ]
```

Example:

```
with pkgs.ibus−engines; [ mozc hangul ]
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/ibus.nix>

i18n.inputMethod.ibus.panel
Replace the IBus panel with another panel.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.kdePackages.plasma−desktop}/libexec/kimpanel−ibus−panel"
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/ibus.nix>

i18n.inputMethod.ibus.waylandFrontend
Use the Wayland input method frontend. This doesn’t set ‘GTK_IM_MODULE’ and ‘QT_IM_MODULE’ environment variables. See **Using Fcitx 5 on Wayland**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/ibus.nix>

i18n.inputMethod.kime.daemonModules
List of enabled daemon modules

Type: list of (one of “Xim”, “Wayland”, “Indicator”)

Default:

```
[
  "Xim"
  "Wayland"
  "Indicator"
]
```

Example:

```
[
  "Xim"
  "Indicator"
]
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/kime.nix>

i18n.inputMethod.kime.extraConfig
extra kime configuration. Refer to **https://github.com/Riey/kime/blob/v3.1.1/docs/CONFIGURATION.md** for details on supported values.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/kime.nix>

i18n.inputMethod.kime.iconColor
Color of the indicator icon

Type: one of “Black”, “White”

Default:

```
"Black"
```

Example:

```
"White"
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/kime.nix>

i18n.inputMethod.type
Select the enabled input method. Input methods is a software to input symbols that are not available on standard input devices.

Input methods are specially used to input Chinese, Japanese and Korean characters.

Currently the following input methods are available in NixOS:

- ibus: The intelligent input bus, extra input engines can be added using ‘i18n.inputMethod.ibus.engines’.

- fcitx5: The next generation of fcitx, addons (including engines, dictionaries, skins) can be added using 'i18n.inputMethod.fcitx5.addons'.
- nabi: A Korean input method based on XIM. Nabi doesn't support Qt 5.
- uim: The universal input method, is a library with a XIM bridge. uim mainly support Chinese, Japanese and Korean.
- hime: An extremely easy−to−use input method framework.
- kime: Koream IME.

Type: null or one of "ibus", "fcitx5", "nabi", "uim", "hime", "kime"

Default: The value of the deprecated option enabled, defaulting to null

Example:

```
"fcitx5"
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/default.nix>

i18n.inputMethod.uim.toolbar
selected UIM toolbar.

Type: one of "gtk", "gtk3", "gtk−systray", "gtk3−systray", "qt5"

Default:

```
"gtk"
```

Example:

```
"gtk−systray"
```

Declared by:
<nixpkgs/nixos/modules/i18n/input−method/uim.nix>

i18n.localeCharsets
Per each **i18n.extraLocaleSettings**, choose the character set to use for it. Essentially defaults to UTF−8 for all of them.

Note that for a locale category that uses the 'C' locale, setting a character set to it via this setting is ignored.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  LC_MESSAGES = "ISO−8859−15";
  LC_TIME = "ISO−8859−1";
}
```

Declared by:
<nixpkgs/nixos/modules/config/i18n.nix>

image.baseName
Basename of the image filename without any extension (e.g. 'image_1').

Type: string

Default:

```
nixos−image−${config.system.nixos.label}−${pkgs.stdenv.hostPlatf \
orm.system}
```

Declared by:
<nixpkgs/nixos/modules/image/file−options.nix>

image.extension
Extension of the image filename (e.g. ‘raw’).

Type: string

Declared by:
<nixpkgs/nixos/modules/image/file−options.nix>

image.fileName
Filename of the image including all extensions (e.g ‘image_1.raw’ or ‘image_1.raw.zst’).

Type: string

Default:

```
${config.image.baseName}.${config.image.extension}
```

Declared by:
<nixpkgs/nixos/modules/image/file−options.nix>

image.filePath
Path of the image, relative to ‘$out’ in ‘system.build.image’. While it defaults to ‘config.image.fileName’, it can be different for builders where the image is in sub directory, such as ‘iso’, ‘sd−card’ or ‘kexec’ images.

Type: string

Default:

```
config.image.fileName
```

Declared by:
<nixpkgs/nixos/modules/image/file−options.nix>

image.modules
image−specific NixOS Modules used for ‘system.build.images’.

Type: attribute set of module

Declared by:
<nixpkgs/nixos/modules/image/images.nix>

image.repart.package
The systemd−repart package to use.

Type: package

Default:

```
pkgs.buildPackages.systemd
```

Example:

```
pkgs.buildPackages.systemdMinimal.override { withCryptsetup = true; \
 }
```

Declared by:
<nixpkgs/nixos/modules/image/repart.nix>

image.repart.compression.enable

Whether to enable Image compression.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/image/repart.nix>

image.repart.compression.algorithm

Compression algorithm

Type: one of “zstd”, “xz”, “zstd−seekable”

Default:

```
"zstd"
```

Declared by:

<nixpkgs/nixos/modules/image/repart.nix>

image.repart.compression.level

Compression level. The available range depends on the used algorithm.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/image/repart.nix>

image.repart.imageSize

Size of the produced image in bytes with optional K, M, G, T suffix, or ‘auto’ to determine the minimal size automatically

Type: string matching the pattern ^([0−9]+[KMGTP]?|auto)$

Default:

```
"auto"
```

Example:

```
"512G"
```

Declared by:

<nixpkgs/nixos/modules/image/repart.nix>

image.repart.mkfsOptions

Specify extra options for created file systems. The specified options are converted to individual environment variables of the format ‘SYSTEMD_REPART_MKFS_OPTIONS_<FSTYPE>’.

See **upstream systemd documentation** for information about the usage of these environment variables.

The example would produce the following environment variable:

```
SYSTEMD_REPART_MKFS_OPTIONS_VFAT="−S 512 −c"
```

Type: attribute set of list of string

Default:

```
{ }
```

Example:

```
{
  vfat = [ "-S 512" "-c" ];
}
```

Declared by:

<nixpkgs/nixos/modules/image/repart.nix>

image.repart.name

Name of the image.

If this option is unset but config.system.image.id is set, config.system.image.id is used as the default value.

Type: string

Declared by:

<nixpkgs/nixos/modules/image/repart.nix>

image.repart.partitions

Specify partitions as a set of the names of the partitions with their configuration as the key.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "10-esp" = {
    contents = {
      "/EFI/BOOT/BOOTX64.EFI".source =
        "${pkgs.systemd}/lib/systemd/boot/efi/systemd-bootx64.efi" \
;
    };
    repartConfig = {
      Type = "esp";
      Format = "vfat";
    };
  };
  "20-root" = {
    storePaths = [ config.system.build.toplevel ];
    repartConfig = {
      Type = "root";
      Format = "ext4";
      Minimize = "guess";
    };
  };
};
```

Declared by:

<nixpkgs/nixos/modules/image/repart.nix>

image.repart.partitions.<name>.contents

The contents to end up in the filesystem image.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/EFI/BOOT/BOOTX64.EFI".source =
    "${pkgs.systemd}/lib/systemd/boot/efi/systemd-bootx64.efi";
  "/loader/entries/nixos.conf".source = systemdBootEntry;
}
```

Declared by:
<nixpkgs/nixos/modules/image/repart.nix>

image.repart.partitions.<name>.contents.<name>.source
Path of the source file.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/image/repart.nix>

image.repart.partitions.<name>.nixStorePrefix
The prefix to use for store paths. Defaults to '/nix/store'. This is useful when you want to build a partition that only contains store paths and is mounted under '/nix/store' or if you want to create the store paths below a parent path (e.g., '/@nix/nix/store').

Type: absolute path

Default:

```
"/nix/store"
```

Declared by:
<nixpkgs/nixos/modules/image/repart.nix>

image.repart.partitions.<name>.repartConfig
Specify the repart options for a partition as a structural setting. See **repart.d**(5) for all available options.

Type: attribute set of (string or signed integer or boolean or list of string)

Default:

```
{ }
```

Example:

```
{
  SizeMaxBytes = "2G";
  SizeMinBytes = "512M";
  Type = "home";
}
```

Declared by:
<nixpkgs/nixos/modules/image/repart.nix>

image.repart.partitions.<name>.storePaths
The store paths to include in the partition.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/image/repart.nix>

image.repart.sectorSize

The sector size of the disk image produced by systemd−repart. This value must be a power of 2 between 512 and 4096.

Type: null or signed integer

Default:

```
512
```

Example:

```
4096
```

Declared by:

<nixpkgs/nixos/modules/image/repart.nix>

image.repart.seed

A UUID to use as a seed. You can set this to ‘random’ to explicitly randomize the partition UUIDs. See **systemd−repart**(8) for more information.

Type: null or string

Default:

```
"0867da16−f251−457d−a9e8−c31f9a3c220b"
```

Declared by:

<nixpkgs/nixos/modules/image/repart.nix>

image.repart.split

Enables generation of split artifacts from partitions. If enabled, for each partition with SplitName= set, a separate output file containing just the contents of that partition is generated.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/image/repart.nix>

image.repart.verityStore.enable

Whether to enable building images with a dm−verity protected nix store.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/image/repart−verity−store.nix>

image.repart.verityStore.partitionIds.esp

Specify the attribute name of the ESP.

Type: string

Default:

```
"00−esp"
```

Declared by:
<nixpkgs/nixos/modules/image/repart−verity−store.nix>

image.repart.verityStore.partitionIds.store
Specify the attribute name of the store partition.

Type: string

Default:

```
"20−store"
```

Declared by:
<nixpkgs/nixos/modules/image/repart−verity−store.nix>

image.repart.verityStore.partitionIds.store−verity
Specify the attribute name of the store's dm−verity hash partition.

Type: string

Default:

```
"10−store−verity"
```

Declared by:
<nixpkgs/nixos/modules/image/repart−verity−store.nix>

image.repart.verityStore.ukiPath
Specify the location on the ESP where the UKI is placed.

Type: string

Default:

```
"/EFI/Linux/\${config.system.boot.loader.ukiFile}"
```

Declared by:
<nixpkgs/nixos/modules/image/repart−verity−store.nix>

image.repart.version
Version of the image

Type: null or string

Default:

```
config.system.image.version
```

Declared by:
<nixpkgs/nixos/modules/image/repart.nix>

lib
This option allows modules to define helper functions, constants, etc.

Type: attribute set of (attribute set)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/misc/lib.nix>

location.latitude
Your current latitude, between '−90.0' and '90.0'. Must be provided along with longitude.

Type: floating point number

Declared by:
<nixpkgs/nixos/modules/config/locale.nix>

location.longitude
Your current longitude, between between ‘−180.0’ and ‘180.0’. Must be provided along with latitude.

Type: floating point number

Declared by:
<nixpkgs/nixos/modules/config/locale.nix>

location.provider
The location provider to use for determining your location. If set to ‘manual’ you must also provide latitude/longitude.

Type: one of “manual”, “geoclue2”

Default:

```
"manual"
```

Declared by:
<nixpkgs/nixos/modules/config/locale.nix>

meta.maintainers
List of maintainers of each module. This option should be defined at most once per module.

The option value is not a list of maintainers, but an attribute set that maps module file names to lists of maintainers.

Type: list of lib.maintainers

Default:

```
[ ]
```

Example:

```
[ lib.maintainers.alice lib.maintainers.bob ]
```

Declared by:
<nixpkgs/modules/generic/meta−maintainers.nix>

meta.teams
List of team maintainers of each module. This option should be defined at most once per module.

Type: list of lib.teams

Default:

```
[ ]
```

Example:

```
[ lib.teams.acme lib.teams.haskell ]
```

Declared by:
<nixpkgs/modules/generic/meta−maintainers.nix>

networking.enableB43Firmware
Turn on this option if you want firmware for the NICs supported by the b43 module.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/network/b43.nix>

networking.enableIPv6
Whether to enable support for IPv6.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.enableIntel2200BGFirmware
Turn on this option if you want firmware for the Intel PRO/Wireless 2200BG to be loaded automatically. This is required if you want to use this device.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/network/intel−2200bg.nix>

networking.bonds
This option allows you to define bond devices that aggregate multiple, underlying networking interfaces together. The value of this option is an attribute set. Each attribute specifies a bond, with the attribute name specifying the name of the bond's network interface

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  bond0 = {
    interfaces = [ "eth0" "wlan0" ];
    driverOptions = {
  miimon = "100";
  mode = "active−backup";
}
;
  };
  anotherBond.interfaces = [ "enp4s0f0" "enp4s0f1" "enp5s0f0" "enp5 \
s0f1" ];
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.bonds.<name>.driverOptions
Options for the bonding driver. Documentation can be found in **https://www.kernel.org/doc/Documentation/networking/bonding.txt**

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  miimon = "100";
  mode = "active-backup";
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/network-interfaces.nix>

networking.bonds.<name>.interfaces
The interfaces to bond together

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "enp4s0f0"
  "enp4s0f1"
  "wlan0"
]
```

Declared by:
<nixpkgs/nixos/modules/tasks/network-interfaces.nix>

networking.bonds.<name>.lacp_rate
DEPRECATED, use ‘driverOptions’. Option specifying the rate in which we’ll ask our link partner to transmit LACPDU packets in 802.3ad mode.

Type: null or string

Default:

```
null
```

Example:

```
"fast"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network-interfaces.nix>

networking.bonds.<name>.miimon
DEPRECATED, use ‘driverOptions’. Miimon is the number of millisecond in between each round of polling by the device driver for failed links. By default polling is not enabled and the driver is trusted to properly detect and handle failure scenarios.

Type: null or signed integer

Default:

```
null
```

Example:

```
100
```

Declared by:
<nixpkgs/nixos/modules/tasks/network-interfaces.nix>

networking.bonds.<name>.mode

DEPRECATED, use ‘driverOptions’. The mode which the bond will be running. The default mode for the bonding driver is balance−rr, optimizing for throughput. More information about valid modes can be found at https://www.kernel.org/doc/Documentation/networking/bonding.txt

Type: null or string

Default:

```
null
```

Example:

```
"active-backup"
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.bonds.<name>.xmit_hash_policy

DEPRECATED, use ‘driverOptions’. Selects the transmit hash policy to use for slave selection in balance−xor, 802.3ad, and tlb modes.

Type: null or string

Default:

```
null
```

Example:

```
"layer2+3"
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.bridges

This option allows you to define Ethernet bridge devices that connect physical networks together. The value of this option is an attribute set. Each attribute specifies a bridge, with the attribute name specifying the name of the bridge’s network interface.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  br0 = {
    interfaces = [
      "eth0"
      "eth1"
    ];
  };
  br1 = {
    interfaces = [
      "eth2"
      "wlan0"
    ];
  };
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.bridges.<name>.interfaces
The physical network interfaces connected by the bridge.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "eth0"
  "eth1"
]
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.bridges.<name>.rstp
Whether the bridge interface should enable rstp.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.defaultGateway
The default gateway. It can be left empty if it is auto−detected through DHCP. It can be specified as a string or an option set along with a network interface.

Type: null or ((submodule) or string convertible to it)

Default:

```
null
```

Example:

```
{
  address = "131.211.84.1";
  interface = "enp3s0";
  source = "131.211.84.2";
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.defaultGateway.address
The default gateway address.

Type: string

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.defaultGateway.interface
The default gateway interface.

Type: null or string

Default:

```
null
```

Example:

```
"enp0s3"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.defaultGateway.metric
The default gateway metric/preference.

Type: null or signed integer

Default:

```
null
```

Example:

```
42
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.defaultGateway.source
The default source address.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.defaultGateway6
The default ipv6 gateway. It can be left empty if it is auto−detected through DHCP. It can be specified as a string or an option set along with a network interface.

Type: null or ((submodule) or string convertible to it)

Default:

```
null
```

Example:

```
{
  address = "2001:4d0:1e04:895::1";
  interface = "enp3s0";
  source = "2001:4d0:1e04:895::2";
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.defaultGateway6.address
The default gateway address.

Type: string

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.defaultGateway6.interface
The default gateway interface.

Type: null or string

Default:

```
null
```

Example:

```
"enp0s3"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.defaultGateway6.metric
The default gateway metric/preference.

Type: null or signed integer

Default:

```
null
```

Example:

```
42
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.defaultGateway6.source
The default source address.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.defaultGatewayWindowSize
The window size of the default gateway. It limits maximal data bursts that TCP peers are allowed to send to us.

Type: null or signed integer

Default:

```
null
```

Example:

```
524288
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.dhcpcd.enable

Whether to enable dhcpcd for device configuration. This is mainly to explicitly disable dhcpcd (for example when using networkd).

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dhcpcd.nix>

networking.dhcpcd.IPv6rs

Force enable or disable solicitation and receipt of IPv6 Router Advertisements. This is required, for example, when using a static unique local IPv6 address (ULA) and global IPv6 address auto−configuration with SLAAC.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dhcpcd.nix>

networking.dhcpcd.allowInterfaces

Enable the DHCP client for any interface whose name matches any of the shell glob patterns in this list. Any interface not explicitly matched by this pattern will be denied. This pattern only applies when non−null.

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dhcpcd.nix>

networking.dhcpcd.allowSetuid

Whether to relax the security sandbox to allow running setuid binaries (e.g. ‘sudo’) in the dhcpcd hooks.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dhcpcd.nix>

networking.dhcpcd.denyInterfaces

Disable the DHCP client for any interface whose name matches any of the shell glob patterns in this list. The purpose of this option is to blacklist virtual interfaces such as those created by Xen, libvirt, LXC, etc.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dhcpcd.nix>

networking.dhcpcd.extraConfig

Literal string to append to the config file generated for dhcpcd.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dhcpcd.nix>

networking.dhcpcd.persistent

Whether to leave interfaces configured on dhcpcd daemon shutdown. Set to true if you have your root or store mounted over the network or this machine accepts SSH connections through DHCP interfaces and clients should be notified when it shuts down.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dhcpcd.nix>

networking.dhcpcd.runHook

Shell code that will be run after all other hooks. See ‘man dhcpcd−run−hooks’ for details on what is possible.

Note

To use sudo or similar tools in your script you may have to set:

```
networking.dhcpcd.allowSetuid = true;
```

In addition, as most of the filesystem is inaccessible to dhcpcd by default, you may want to define some exceptions, e.g.

```
systemd.services.dhcpcd.serviceConfig.ReadOnlyPaths = [
  "/run/user/1000/bus"  # to send desktop notifications
];
```

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"if [[ $reason =~ BOUND ]]; then echo $interface: Routers are $n \
ew_routers − were $old_routers; fi"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dhcpcd.nix>

networking.dhcpcd.setHostname

Whether to set the machine hostname based on the information received from the DHCP server.

Note

The hostname will be changed only if the current one is the empty string, ‘localhost’ or ‘nixos’.

Polkit (**security.polkit.enable**) is also required.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dhcpcd.nix>

networking.dhcpcd.wait
This option specifies when the dhcpcd service will fork to background. If set to “background”, dhcpcd will fork to background immediately. If set to “ipv4” or “ipv6”, dhcpcd will wait for the corresponding IP address to be assigned. If set to “any”, dhcpcd will wait for any type (IPv4 or IPv6) to be assigned. If set to “both”, dhcpcd will wait for both an IPv4 and an IPv6 address before forking. The option “if−carrier−up” is equivalent to “any” if either ethernet is plugged or WiFi is powered, and to “background” otherwise.

Type: one of “background”, “any”, “ipv4”, “ipv6”, “both”, “if−carrier−up”

Default:

```
"any"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dhcpcd.nix>

networking.domain
The system domain name. Used to populate the **fqdn** value.

Warning
The domain name is not configured for DNS resolution purposes, see **search** instead.

Type: null or string

Default:

```
null
```

Example:

```
"home.arpa"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.extraHosts
Additional verbatim entries to be appended to */etc/hosts*. For adding hosts from derivation results, use **networking.hostFiles** instead.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"192.168.0.1 lanlocalhost"
```

Declared by:
<nixpkgs/nixos/modules/config/networking.nix>

networking.firewall.enable
Whether to enable the firewall. This is a simple stateful firewall that blocks connection attempts to unauthorised TCP or UDP ports on this machine.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.package
The package to use for running the firewall service.

Type: package

Default:

```
if config.networking.nftables.enable then "pkgs.nftables" else "pkg \
s.iptables"
```

Example:

```
pkgs.iptables-legacy
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.allowPing
Whether to respond to incoming ICMPv4 echo requests (“pings”). ICMPv6 pings are always allowed because the larger address space of IPv6 makes network scanning much less effective.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.allowedTCPPortRanges
A range of TCP ports on which incoming connections are accepted.

Type: list of attribute set of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[ ]
```

Example:

```
[
  {
    from = 8999;
    to = 9003;
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.allowedTCPPorts
List of TCP ports on which incoming connections are accepted.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[ ]
```

Example:

```
[
  22
  80
```

```
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.allowedUDPPortRanges
Range of open UDP ports.

Type: list of attribute set of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[ ]
```

Example:

```
[
  {
    from = 60000;
    to = 61000;
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.allowedUDPPorts
List of open UDP ports.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[ ]
```

Example:

```
[
  53
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.autoLoadConntrackHelpers
Whether to auto−load connection−tracking helpers. See the description at networking.firewall.connectionTrackingModules

(needs kernel 3.5+)

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.backend
Underlying implementation for the firewall service.

Type: one of “iptables”, “nftables”, “firewalld”

Default:

```
if config.services.firewalld.enable then
  "firewalld"
```

```
else if config.networking.nftables.enable then
  "nftables"
else
  "iptables"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.checkReversePath

Performs a reverse path filter test on a packet. If a reply to the packet would not be sent via the same interface that the packet arrived on, it is refused.

If using asymmetric routing or other complicated routing, set this option to loose mode or disable it and setup your own counter−measures.

This option can be either true (or "strict"), "loose" (only drop the packet if the source address is not reachable via any interface) or false.

Type: boolean or one of "strict", "loose"

Default: true except if the iptables based firewall is in use and the kernel lacks rpfilter support

Example:

```
"loose"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.connectionTrackingModules

List of connection−tracking helpers that are auto−loaded. The complete list of possible values is given in the example.

As helpers can pose as a security risk, it is advised to set this to an empty list and disable the setting networking.firewall.autoLoadConntrackHelpers unless you know what you are doing. Connection tracking is disabled by default.

Loading of helpers is recommended to be done through the CT target. More info: **https://home.regit.org/netfilter−en/secure−use−of−helpers/**

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "ftp"
  "irc"
  "sane"
  "sip"
  "tftp"
  "amanda"
  "h323"
  "netbios_sn"
  "pptp"
  "snmp"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.extraCommands
Additional shell commands executed as part of the firewall initialisation script. These are executed just before the final “reject” firewall rule is added, so they can be used to allow packets that would otherwise be refused.

This option only works with the iptables based firewall.

Type: strings concatenated with “\n”

Default:
```
""
```

Example:
```
"iptables -A INPUT -p icmp -j ACCEPT"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall-iptables.nix>

networking.firewall.extraForwardRules
Additional nftables rules to be appended to the forward-allow chain.

This option only works with the nftables based firewall.

Type: strings concatenated with “\n”

Default:
```
""
```

Example:
```
"iifname wg0 accept"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall-nftables.nix>

networking.firewall.extraInputRules
Additional nftables rules to be appended to the input-allow chain.

This option only works with the nftables based firewall.

Type: strings concatenated with “\n”

Default:
```
""
```

Example:
```
"ip6 saddr { fc00::/7, fe80::/10 } tcp dport 24800 accept"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall-nftables.nix>

networking.firewall.extraPackages
Additional packages to be included in the environment of the system as well as the path of networking.firewall.extraCommands.

Type: list of package

Default:
```
[ ]
```

Example:

```
[ pkgs.ipset ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.extraReversePathFilterRules
Additional nftables rules to be appended to the rpfilter−allow chain.

This option only works with the nftables based firewall.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"fib daddr . mark . iif type local accept"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall−nftables.nix>

networking.firewall.extraStopCommands
Additional shell commands executed as part of the firewall shutdown script. These are executed just after the removal of the NixOS input rule, or if the service enters a failed state.

This option only works with the iptables based firewall.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"iptables −P INPUT ACCEPT"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall−iptables.nix>

networking.firewall.filterForward
Enable filtering in IP forwarding.

This option only works with the nftables based firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.interfaces
Interface−specific open ports.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.interfaces.<name>.allowedTCPPortRanges

A range of TCP ports on which incoming connections are accepted.

Type: list of attribute set of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[ ]
```

Example:

```
[
  {
    from = 8999;
    to = 9003;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.interfaces.<name>.allowedTCPPorts

List of TCP ports on which incoming connections are accepted.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[ ]
```

Example:

```
[
  22
  80
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.interfaces.<name>.allowedUDPPortRanges

Range of open UDP ports.

Type: list of attribute set of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[ ]
```

Example:

```
[
  {
    from = 60000;
    to = 61000;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.interfaces.<name>.allowedUDPPorts

List of open UDP ports.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[ ]
```

Example:

```
[
  53
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.logRefusedConnections

Whether to log rejected or dropped incoming connections. Note: The logs are found in the kernel logs, i.e. dmesg or journalctl −k.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.logRefusedPackets

Whether to log all rejected or dropped incoming packets. This tends to give a lot of log messages, so it's mostly useful for debugging. Note: The logs are found in the kernel logs, i.e. dmesg or journalctl −k.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.logRefusedUnicastsOnly

If **networking.firewall.logRefusedPackets** and this option are enabled, then only log packets specifically directed at this machine, i.e., not broadcasts or multicasts.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.logReversePathDrops

Logs dropped packets failing the reverse path filter test if the option networking.firewall.checkReversePath is enabled.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.pingLimit
If pings are allowed, this allows setting rate limits on them.

For the iptables based firewall, it should be set like “–limit 1/minute −−limit−burst 5”.

For the nftables based firewall, it should be set like “2/second” or “1/minute burst 5 packets”.

Type: null or strings concatenated with " "

Default:

```
null
```

Example:

```
"−−limit 1/minute −−limit−burst 5"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.rejectPackets
If set, refused packets are rejected rather than dropped (ignored). This means that an ICMP “port unreachable” error message is sent back to the client (or a TCP RST packet in case of an existing connection). Rejecting packets makes port scanning somewhat easier.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.firewall.trustedInterfaces
Traffic coming in from these interfaces will be accepted unconditionally. Traffic from the loopback (lo) interface will always be accepted.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "enp0s2"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewall.nix>

networking.fooOverUDP
This option allows you to configure Foo Over UDP and Generic UDP Encapsulation endpoints. See **ip−fou**(8) for details.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
```

```
  backup = {
    port = 9002;
  };
  primary = {
    local = {
      address = "192.0.2.1";
      dev = "eth0";
    };
    port = 9001;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.fooOverUDP.<name>.local
Local address (and optionally device) to bind to using the given port.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  address = "203.0.113.22";
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.fooOverUDP.<name>.local.address
Local address to bind to. The address must be available when the FOU endpoint is created, using the scripted network setup this can be achieved either by setting ‘dev’ or adding dependency information to ‘systemd.services.<name>−fou−encap’; it isn’t supported when using networkd.

Type: string

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.fooOverUDP.<name>.local.dev
Network device to bind to.

Type: null or string

Default:

```
null
```

Example:

```
"eth0"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.fooOverUDP.<name>.port

Local port of the encapsulation UDP socket.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.fooOverUDP.<name>.protocol

Protocol number of the encapsulated packets. Specifying ‘null’ (the default) creates a GUE endpoint, specifying a protocol number will create a FOU endpoint.

Type: null or integer between 1 and 255 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.fqdn

The fully qualified domain name (FQDN) of this host. By default, it is the result of combining ‘networking.hostName’ and ‘networking.domain.’

Using this option will result in an evaluation error if the hostname is empty or no domain is specified.

Modules that accept a mere ‘networking.hostName’ but prefer a fully qualified domain name may use ‘networking.fqdnOrHostName’ instead.

Type: string

Default:

```
"${networking.hostName}.${networking.domain}"
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.fqdnOrHostName

Either the fully qualified domain name (FQDN), or just the host name if it does not exist.

This is a convenience option for modules to read instead of ‘fqdn’ when a mere ‘hostName’ is also an acceptable value; this option does not throw an error when ‘domain’ or ‘fqdn’ is unset.

Type: string *(read only)*

Default:

```
if config.networking.domain != null || config.networking.fqdn is se \
t then config.networking.fqdn else config.networking.hostName
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.getaddrinfo.enable

Enables custom address sorting configuration for **getaddrinfo**(3) according to RFC 3484.

This option generates a */etc/gai.conf* file to override the default address sorting tables, as described in **gai.conf**(5).

This setting is only applicable when using the GNU C Library (glibc). It has no effect with other libc implementations.

Type: boolean

Default:

```
pkgs.stdenv.hostPlatform.libc == "glibc"
```

Declared by:
<nixpkgs/nixos/modules/config/getaddrinfo.nix>

networking.getaddrinfo.label
Adds entries to the label table, as described in section 2.1 of RFC 3484.

If any label entries are provided, the glibc's default label table is ignored.

Type: null or (attribute set of signed integer)

Default:

```
null
```

Example:

```
{
  "2001:0::/32" = 7;
  "2002::/16" = 2;
  "::/0" = 1;
  "::/96" = 3;
  "::ffff:0:0/96" = 4;
  "fc00::/7" = 6;
  "fec0::/10" = 5;
}
```

Declared by:
<nixpkgs/nixos/modules/config/getaddrinfo.nix>

networking.getaddrinfo.precedence
Similar to **networking.getaddrinfo.label**, but this option defines entries for the precedence table instead.

See sections 2.1 and 10.3 of RFC 3484 for details.

Providing any value will disable the glibc's default precedence table.

Type: null or (attribute set of signed integer)

Default:

```
null
```

Example:

```
{
  "2002::/16" = 30;
  "::/0" = 40;
  "::/96" = 20;
  "::1/128" = 50;
  "::ffff:0:0/96" = 10;
}
```

Declared by:
<nixpkgs/nixos/modules/config/getaddrinfo.nix>

networking.getaddrinfo.reload
Determines whether a process should detect changes to the configuration file since it was last read.

If enabled, the file is re−read automatically. This may cause issues in multithreaded applications and is generally discouraged.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/getaddrinfo.nix>

networking.getaddrinfo.scopev4
Adds custom rules to the IPv4 scope table.

By default, the scope IDs described in section 3.2 of RFC 6724 are used.

Modifying these values is rarely necessary.

Type: null or (attribute set of signed integer)

Default:

```
null
```

Example:

```
{
  "::ffff:0.0.0.0/96" = 14;
  "::ffff:127.0.0.0/104" = 2;
  "::ffff:169.254.0.0/112" = 2;
}
```

Declared by:
<nixpkgs/nixos/modules/config/getaddrinfo.nix>

networking.greTunnels
This option allows you to define Generic Routing Encapsulation (GRE) tunnels.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  greBridge = {
    remote = "10.0.0.1";
    local = "10.0.0.22";
    dev = "enp4s0f0";
    type = "tap";
    ttl = 255;
  };
  gre6Tunnel = {
    remote = "fd7a:5634::1";
    local = "fd7a:5634::2";
    dev = "enp4s0f0";
    type = "tun6";
    ttl = 255;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.greTunnels.<name>.dev

The underlying network device on which the tunnel resides.

Type: null or string

Default:

```
null
```

Example:

```
"enp4s0f0"
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.greTunnels.<name>.local

The address of the local endpoint which the remote side should send packets to.

Type: null or string

Default:

```
null
```

Example:

```
"10.0.0.22"
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.greTunnels.<name>.remote

The address of the remote endpoint to forward traffic over.

Type: null or string

Default:

```
null
```

Example:

```
"10.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.greTunnels.<name>.ttl

The time−to−live/hoplimit of the connection to the remote tunnel endpoint.

Type: null or signed integer

Default:

```
null
```

Example:

```
255
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.greTunnels.<name>.type

Whether the tunnel routes layer 2 (tap) or layer 3 (tun) traffic.

Type: one of “tun”, “tap”, “tun6”, “tap6”

Default:

```
"tap"
```

Example:

```
"tap"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.hostFiles
Files that should be concatenated together to form */etc/hosts*.

Type: list of absolute path

Default: Hosts from **networking.hosts** and **networking.extraHosts**

Example:

```
[ "${pkgs.my−blocklist−package}/share/my−blocklist/hosts" ]
```

Declared by:
<nixpkgs/nixos/modules/config/networking.nix>

networking.hostId
The 32−bit host ID of the machine, formatted as 8 hexadecimal characters.

You should try to make this ID unique among your machines. You can generate a random 32−bit ID using the following commands:

‘head −c 8 /etc/machine−id’

(this derives it from the machine−id that systemd generates) or

‘head −c4 /dev/urandom | od −A none −t x4’

The primary use case is to ensure when using ZFS that a pool isn’t imported accidentally on a wrong machine.

Type: null or string

Default:

```
null
```

Example:

```
"4e98920d"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.hostName
The name of the machine. Leave it empty if you want to obtain it from a DHCP server (if using DHCP). The hostname must be a valid DNS label (see RFC 1035 section 2.3.1: “Preferred name syntax”, RFC 1123 section 2.1: “Host Names and Numbers”) and as such must not contain the domain part. This means that the hostname must start with a letter or digit, end with a letter or digit, and have as interior characters only letters, digits, and hyphen. The maximum length is 63 characters. Additionally it is recommended to only use lower−case characters. If (e.g. for legacy reasons) a FQDN is required as the Linux kernel network node hostname (uname −−nodename) the option boot.kernel.sysctl.“kernel.hostname” can be used as a workaround (but the 64 character limit still applies).

WARNING: Do not use underscores (_) or you may run into unexpected issues.

Type: string matching the pattern ^$|^[[:alnum:]]([[:alnum:]_−]{0,61}[[:alnum:]])?$

Default:

```
config.system.nixos.distroId
```

Declared by:
<nixpkgs/nixos/modules/tasks/network-interfaces.nix>

networking.hosts
Locally defined maps of hostnames to IP addresses.

Type: attribute set of list of string

Default:

```
{ }
```

Example:

```
{
  "127.0.0.1" = [ "foo.bar.baz" ];
  "192.168.0.2" = [ "fileserver.local" "nameserver.local" ];
};
```

Declared by:
<nixpkgs/nixos/modules/config/networking.nix>

networking.ifstate.enable
Whether to enable networking using IfState.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ifstate.nix>

networking.ifstate.package
The ifstate package to use.

Type: package

Default:

```
pkgs.ifstate
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ifstate.nix>

networking.ifstate.settings
Content of IfState's configuration file. See **https://ifstate.net/2.2/schema/** for details.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ifstate.nix>

networking.interfaces
The configuration for each network interface.

Please note that **systemd.network.netdevs** has more features and is better maintained. When building new things, it is advised to use that instead.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  eth0 = {
    ipv4 = {
      addresses = [
        {
          address = "131.211.84.78";
          prefixLength = 25;
        }
      ];
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/tasks/network-interfaces.nix>

networking.interfaces.<name>.ipv4.addresses

List of IPv4 addresses that will be statically assigned to the interface.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    address = "10.0.0.1";
    prefixLength = 16;
  }
  {
    address = "192.168.1.1";
    prefixLength = 24;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/tasks/network-interfaces.nix>

networking.interfaces.<name>.ipv4.addresses.*.address

IPv4 address of the interface. Leave empty to configure the interface using DHCP.

Type: string

Declared by:

<nixpkgs/nixos/modules/tasks/network-interfaces.nix>

networking.interfaces.<name>.ipv4.addresses.*.prefixLength

Subnet mask of the interface, specified as the number of bits in the prefix (‘24’).

Type: integer between 0 and 32 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.ipv4.routes
List of extra IPv4 static routes that will be assigned to the interface.

Warning
If the route type is the default ‘unicast’, then the scope is set differently depending on the value of **networking.useNetworkd**: the script−based backend sets it to ‘link’, while networkd sets it to ‘global’.

If you want consistency between the two implementations, set the scope of the route manually with ‘networking.interfaces.eth0.ipv4.routes = [{ options.scope = "global"; }]’ for example.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    address = "10.0.0.0";
    prefixLength = 16;
  }
  {
    address = "192.168.2.0";
    prefixLength = 24;
    via = "192.168.1.1";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.ipv4.routes.*.address
IPv4 address of the network.

Type: string

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.ipv4.routes.*.options
Other route options. See the symbol ‘OPTIONS’ in the **ip−route**(8) manual page for the details. You may also specify ‘metric’, ‘src’, ‘protocol’, ‘scope’, ‘from’ and ‘table’, which are technically not route options, in the sense used in the manual.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  mtu = "1492";
  window = "524288";
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.ipv4.routes.*.prefixLength
Subnet mask of the network, specified as the number of bits in the prefix (‘24’).

Type: integer between 0 and 32 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.ipv4.routes.*.type
Type of the route. See the ‘Route types’ section in the **ip−route**(8) manual page for the details.

Note that ‘prohibit’, ‘blackhole’, ‘unreachable’, and ‘throw’ cannot be configured per device, so they are not available here. Similarly, ‘nat’ hasn’t been supported since kernel 2.6.

Type: null or one of “unicast”, “local”, “broadcast”, “multicast”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.ipv4.routes.*.via
IPv4 address of the next hop.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.ipv6.addresses
List of IPv6 addresses that will be statically assigned to the interface.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    address = "fdfd:b3f0:482::1";
    prefixLength = 48;
  }
  {
    address = "2001:1470:fffd:2098::e006";
    prefixLength = 64;
  }
]
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.ipv6.addresses.*.address

IPv6 address of the interface. Leave empty to configure the interface using DHCP.

Type: string

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.ipv6.addresses.*.prefixLength

Subnet mask of the interface, specified as the number of bits in the prefix (‘64’).

Type: integer between 0 and 128 (both inclusive)

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.ipv6.routes

List of extra IPv6 static routes that will be assigned to the interface.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    address = "fdfd:b3f0::";
    prefixLength = 48;
  }
  {
    address = "2001:1470:fffd:2098::";
    prefixLength = 64;
    via = "fdfd:b3f0::1";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.ipv6.routes.*.address

IPv6 address of the network.

Type: string

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.ipv6.routes.*.options

Other route options. See the symbol ‘OPTIONS’ in the **ip−route**(8) manual page for the details. You may also specify ‘metric’, ‘src’, ‘protocol’, ‘scope’, ‘from’ and ‘table’, which are technically not route options, in the sense used in the manual.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  mtu = "1492";
  window = "524288";
```

```
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.ipv6.routes.*.prefixLength
Subnet mask of the network, specified as the number of bits in the prefix (‘64’).

Type: integer between 0 and 128 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.ipv6.routes.*.type
Type of the route. See the ‘Route types’ section in the **ip−route**(8) manual page for the details.

Note that ‘prohibit’, ‘blackhole’, ‘unreachable’, and ‘throw’ cannot be configured per device, so they are not available here. Similarly, ‘nat’ hasn’t been supported since kernel 2.6.

Type: null or one of “unicast”, “local”, “broadcast”, “multicast”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.ipv6.routes.*.via
IPv6 address of the next hop.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.macAddress
MAC address of the interface. Leave empty to use the default.

Type: null or string

Default:

```
null
```

Example:

```
"00:11:22:33:44:55"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.mtu
MTU size for packets leaving the interface. Leave empty to use the default.

Type: null or signed integer

Default:

```
null
```

Example:

```
9000
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.name
Name of the interface.

Type: string

Example:

```
"eth0"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.proxyARP
Turn on proxy_arp for this device. This is mainly useful for creating pseudo−bridges between a real interface and a virtual network such as VPN or a virtual machine for interfaces that don't support real bridging (most wlan interfaces). As ARP proxying acts slightly above the link−layer, below−ip traffic isn't bridged, so things like DHCP won't work. The advantage above using NAT lies in the fact that no IP addresses are shared, so all hosts are reachable/routeable.

WARNING: turns on ip−routing, so if you have multiple interfaces, you should think of the consequence and setup firewall rules to limit this.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.tempAddress
When IPv6 is enabled with SLAAC, this option controls the use of temporary address (aka privacy extensions) on this interface. This is used to reduce tracking.

See also the global option **networking.tempAddresses**, which applies to all interfaces where this is not set.

Possible values are:

- '"default"' to generate IPv6 temporary addresses and use these as source addresses in routing;
- '"disabled"' to completely disable IPv6 temporary addresses;
- '"enabled"' to generate IPv6 temporary addresses but still use EUI−64 addresses as source addresses;

Type: one of "default", "disabled", "enabled"

Default:

```
config.networking.tempAddresses
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.useDHCP
Whether this interface should be configured with DHCP. Overrides the default set by **networking.useDHCP**. If 'null' (the default), DHCP is enabled if the interface has no IPv4 addresses configured with **networking.interfaces.<name>.ipv4.addresses**, and disabled otherwise.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.virtual
Whether this interface is virtual and should be created by tunctl. This is mainly useful for creating bridges between a host and a virtual network such as VPN or a virtual machine.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.virtualOwner
In case of a virtual device, the user who owns it. ‘null’ will not set owner, allowing access to any user.

Type: null or string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.virtualType
The type of interface to create. The default is TUN for an interface name starting with “tun”, otherwise TAP.

Type: one of “tun”, “tap”

Default:

```
if hasPrefix "tun" name then "tun" else "tap"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.wakeOnLan.enable
Whether to enable wol on this interface.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.interfaces.<name>.wakeOnLan.policy
The **Wake−on−LAN policy** to set for the device.

The options are

- ‘phy’: Wake on PHY activity
- ‘unicast’: Wake on unicast messages
- ‘multicast’: Wake on multicast messages
- ‘broadcast’: Wake on broadcast messages
- ‘arp’: Wake on ARP
- ‘magic’: Wake on receipt of a magic packet

Type: list of (one of “phy”, “unicast”, “multicast”, “broadcast”, “arp”, “magic”, “secureon”)

Default:

```
[
  "magic"
]
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.ipips
This option allows you to define interfaces encapsulating IP packets within IP packets; which should be automatically created.

For example, this allows you to create 4in6 (RFC 2473) or IP within IP (RFC 2003) tunnels.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  wan4in6 = {
    remote = "2001:db8::1";
    local = "2001:db8::3";
    dev = "wan6";
    encapsulation.type = "4in6";
    encapsulation.limit = 0;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.ipips.<name>.dev
The underlying network device on which the tunnel resides.

Type: null or string

Default:

```
null
```

Example:

```
"wan6"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.ipips.<name>.encapsulation.limit
For an IPv6−based tunnel, the maximum number of nested encapsulation to allow. 0 means no nesting, “none” unlimited.

Type: value “none” (singular enum) or (unsigned integer, meaning >=0)

Default:

```
4
```

Example:

```
"none"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.ipips.<name>.encapsulation.type
Select the encapsulation type:

- ‘ipip’ to create an IPv4 within IPv4 tunnel (RFC 2003).
- ‘4in6’ to create a 4in6 tunnel (RFC 2473);
- ‘ip6ip6’ to create an IPv6 within IPv6 tunnel (RFC 2473);

Note
For encapsulating IPv6 within IPv4 packets, see the ad−hoc **networking.sits** option.

Type: one of “ipip”, “4in6”, “ip6ip6”

Default:

```
"ipip"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.ipips.<name>.local
The address of the local endpoint which the remote side should send packets to.

Type: string

Example:

```
"2001:db8::3"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.ipips.<name>.remote
The address of the remote endpoint to forward traffic over.

Type: string

Example:

```
"2001:db8::1"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.ipips.<name>.ttl
The time−to−live of the connection to the remote tunnel endpoint.

Type: null or signed integer

Default:

```
null
```

Example:

```
255
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.iproute2.enable

Whether to enable copying IP route configuration files.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/iproute2.nix>

networking.iproute2.rttablesExtraConfig

Verbatim lines to add to /etc/iproute2/rt_tables

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/config/iproute2.nix>

networking.ipvlans

This option allows you to define ipvlan interfaces which should be automatically created.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  wan = {
    interface = "enp2s0";
    mode = "l2";
    flags = "vepa";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.ipvlans.<name>.flags

The flags of the ipvlan device.

Type: null or string

Default:

```
null
```

Example:

```
"vepa"
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.ipvlans.<name>.interface

The interface the ipvlan will transmit packets through.

Type: string

Example:

```
"enp4s0"
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.ipvlans.<name>.mode

The mode of the interface.

Type: one of “l2”, “l3”, “l3s”

Default:

```
"l2"
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.jool.enable

Whether to enable Jool, an Open Source implementation of IPv4/IPv6 translation on Linux.

Jool can perform stateless IP/ICMP translation (SIIT) or stateful NAT64, analogous to the IPv4 NAPT. Refer to the upstream **documentation** for the supported modes of translation and how to configure them.

Enabling this option will install the Jool kernel module and the command line tools for controlling it.

Type: boolean

Default:

```
false
```

Related packages:

- ‘pkgs.linuxPackages.jool’
- ‘pkgs.jool−cli’

Declared by:

<nixpkgs/nixos/modules/services/networking/jool.nix>

networking.jool.nat64

Definitions of NAT64 instances of Jool. See the **documentation** for the available options. Also check out the **tutorial** for an introduction to NAT64 and how to troubleshoot the setup.

The attribute name defines the name of the instance, with the main one being ‘default’: this can be accessed from the command line without specifying the name with ‘−i’.

Note
Instances created imperatively from the command line will not interfere with the NixOS instances, provided the respective ‘pool4’ addresses and port ranges are not overlapping.

Warning
Changes to an instance performed via ‘jool −i <name>’ are applied correctly but will be lost after restarting the respective ‘jool−nat64−<name>.service’.

Type: attribute set of (open submodule of (JSON value))

Default:

```
{ }
```

Example:

```
{
  default = {
    # custom NAT64 prefix
    global.pool6 = "2001:db8:64::/96";
    # Port forwarding
    bib = [
      { # SSH 192.0.2.16 → 2001:db8:a::1
        "protocol"     = "TCP";
        "ipv4 address" = "192.0.2.16#22";
        "ipv6 address" = "2001:db8:a::1#22";
      }
      { # DNS (TCP) 192.0.2.16 → 2001:db8:a::2
        "protocol"     = "TCP";
        "ipv4 address" = "192.0.2.16#53";
        "ipv6 address" = "2001:db8:a::2#53";
      }
      { # DNS (UDP) 192.0.2.16 → 2001:db8:a::2
        "protocol" = "UDP";
        "ipv4 address" = "192.0.2.16#53";
        "ipv6 address" = "2001:db8:a::2#53";
      }
    ];
    pool4 = [
      # Port ranges for dynamic translation
      { protocol =  "TCP";  prefix = "192.0.2.16/32"; "port range"  \
= "40001-65535"; }
      { protocol =  "UDP";  prefix = "192.0.2.16/32"; "port range"  \
= "40001-65535"; }
      { protocol = "ICMP";  prefix = "192.0.2.16/32"; "port range"  \
= "40001-65535"; }
      # Ports for static BIB entries
      { protocol =  "TCP";  prefix = "192.0.2.16/32"; "port range"  \
= "22"; }
      { protocol =  "UDP";  prefix = "192.0.2.16/32"; "port range"  \
= "53"; }
    ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jool.nix>

networking.jool.nat64.<name>.framework

The framework to use for attaching Jool's translation to the exist kernel packet processing rules. See the **documentation** for the differences between the two options.

Type: one of "netfilter", "iptables"

Default:

```
"netfilter"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jool.nix>

networking.jool.nat64.<name>.global.pool6

The prefix used for embedding IPv4 into IPv6 addresses. Defaults to the well−known NAT64 prefix, defined by **RFC 6052**.

Type: Network prefix in CIDR notation

Default:

```
"64:ff9b::/96"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jool.nix>

networking.jool.siit

Definitions of SIIT instances of Jool. See the **documentation** for the available options. Also check out the **tutorial** for an introduction to SIIT and how to troubleshoot the setup.

The attribute name defines the name of the instance, with the main one being 'default': this can be accessed from the command line without specifying the name with '−i'.

Note

Instances created imperatively from the command line will not interfere with the NixOS instances, provided the respective EAMT addresses and port ranges are not overlapping.

Warning

Changes to an instance performed via 'jool −i <name>' are applied correctly but will be lost after restarting the respective 'jool−siit−<name>.service'.

Type: attribute set of (open submodule of (JSON value))

Default:

```
{ }
```

Example:

```
{
  default = {
    # Maps any IPv4 address x.y.z.t to 2001:db8::x.y.z.t and v.v.
    global.pool6 = "2001:db8::/96";
    # Explicit address mappings
    eamt = [
      # 2001:db8:1:: ←→ 192.0.2.0
      { "ipv6 prefix" = "2001:db8:1::/128"; "ipv4 prefix" = "192.0. \
2.0"; }
      # 2001:db8:1::x ←→ 198.51.100.x
      { "ipv6 prefix" = "2001:db8:2::/120"; "ipv4 prefix" = "198.51 \
.100.0/24"; }
    ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jool.nix>

networking.jool.siit.<name>.framework

The framework to use for attaching Jool's translation to the exist kernel packet processing rules. See the **documentation** for the differences between the two options.

Type: one of "netfilter", "iptables"

Default:

```
"netfilter"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jool.nix>

networking.localCommands
Shell commands to be executed at the end of the ‘network−setup’ systemd service. Note that if you are using DHCP to obtain the network configuration, interfaces may not be fully configured yet.

Type: strings concatenated with “\n”

Default:
```
""
```

Example:
```
"text=anything; echo You can put $text here."
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.macvlans
This option allows you to define macvlan interfaces which should be automatically created.

Type: attribute set of (submodule)

Default:
```
{ }
```

Example:
```
{
  wan = {
    interface = "enp2s0";
    mode = "vepa";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.macvlans.<name>.interface
The interface the macvlan will transmit packets through.

Type: string

Example:
```
"enp4s0"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.macvlans.<name>.mode
The mode of the macvlan device.

Type: null or string

Default:
```
null
```

Example:
```
"vepa"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.modemmanager.enable
Whether to use ModemManager to manage modem devices. This is usually used by some higher layer manager such as NetworkManager but can be used standalone especially if using a modem for non−IP connectivity (e.g. GPS).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/modemmanager.nix>

networking.modemmanager.package
The modemmanager package to use.

Type: package

Default:

```
pkgs.modemmanager
```

Declared by:
<nixpkgs/nixos/modules/services/networking/modemmanager.nix>

networking.modemmanager.fccUnlockScripts
List of FCC unlock scripts to enable on the system, behaving as described in https://modemmanager.org/docs/modemmanager/fcc−unlock/#integration−with−third−party−fcc−unlock−tools.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[{ id = "03f0:4e1d"; path = "${pkgs.modemmanager}/share/ModemManage \
r/fcc−unlock.available.d/03f0:4e1d"; }]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/modemmanager.nix>

networking.modemmanager.fccUnlockScripts.*.id
vid:pid of either the PCI or USB vendor and product ID

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/modemmanager.nix>

networking.modemmanager.fccUnlockScripts.*.path
Path to the unlock script

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/networking/modemmanager.nix>

networking.nameservers

The list of nameservers. It can be left empty if it is auto−detected through DHCP.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "130.161.158.4"
  "130.161.33.17"
]
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.nat.enable

Whether to enable Network Address Translation (NAT). A properly configured firewall or a trusted L2 on all network interfaces is required to prevent unauthorized access to the internal network.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nat.nix>

networking.nat.enableIPv6

Whether to enable IPv6 NAT.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nat.nix>

networking.nat.dmzHost

The local IP address to which all traffic that does not match any forwarding rule is forwarded.

Type: null or string

Default:

```
null
```

Example:

```
"10.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nat.nix>

networking.nat.externalIP

The public IP address to which packets from the local network are to be rewritten. If this is left empty, the IP address associated with the external interface will be used. Only connections made to this IP address will be forwarded to the internal network when using forwardPorts.

Type: null or string

Default:

```
null
```

Example:

```
"203.0.113.123"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nat.nix>

networking.nat.externalIPv6
The public IPv6 address to which packets from the local network are to be rewritten. If this is left empty, the IP address associated with the external interface will be used. Only connections made to this IP address will be forwarded to the internal network when using forwardPorts.

Type: null or string

Default:

```
null
```

Example:

```
"2001:dc0:2001:11::175"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nat.nix>

networking.nat.externalInterface
The name of the external network interface.

Type: null or string

Default:

```
null
```

Example:

```
"eth1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nat.nix>

networking.nat.extraCommands
Additional shell commands executed as part of the nat initialisation script.

This option is incompatible with the nftables based nat module.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"iptables -A INPUT -p icmp -j ACCEPT"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nat-iptables.nix>

networking.nat.extraStopCommands
Additional shell commands executed as part of the nat teardown script.

This option is incompatible with the nftables based nat module.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"iptables -D INPUT -p icmp -j ACCEPT || true"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nat-iptables.nix>

networking.nat.forwardPorts

List of forwarded ports from the external interface to internal destinations by using DNAT. Destination can be IPv6 if IPv6 NAT is enabled.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    destination = "10.0.0.1:80";
    proto = "tcp";
    sourcePort = 8080;
  }
  {
    destination = "[fc00::2]:80";
    proto = "tcp";
    sourcePort = 8080;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nat.nix>

networking.nat.forwardPorts.*.destination

Forward connection to destination ip:port (or [ipv6]:port); to specify a port range, use ip:start-end

Type: string

Example:

```
"10.0.0.1:80"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nat.nix>

networking.nat.forwardPorts.*.loopbackIPs

Public IPs for NAT reflection; for connections to ‘loopbackip:sourcePort’ from the host itself and from other hosts behind NAT

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "55.1.2.3" ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nat.nix>

networking.nat.forwardPorts.*.proto

Protocol of forwarded connection

Type: string

Default:

```
"tcp"
```

Example:

```
"udp"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nat.nix>

networking.nat.forwardPorts.*.sourcePort

Source port of the external interface; to specify a port range, use a string with a colon (e.g. “60000:61000”)

Type: signed integer or string matching the pattern [[:digit:]]+:[[:digit:]]+

Example:

```
8080
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nat.nix>

networking.nat.internalIPs

The IP address ranges for which to perform NAT. Packets coming from these addresses (on any interface) and destined for the external interface will be rewritten.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "192.168.1.0/24"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nat.nix>

networking.nat.internalIPv6s

The IPv6 address ranges for which to perform NAT. Packets coming from these addresses (on any interface) and destined for the external interface will be rewritten.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "fc00::/64"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nat.nix>

networking.nat.internalInterfaces

The interfaces for which to perform NAT. Packets coming from these interface and destined for the external interface will be rewritten.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "eth0"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nat.nix>

networking.networkmanager.enable

Whether to use NetworkManager to obtain an IP address and other configuration for all network interfaces that are not manually configured. If enabled, a group 'networkmanager' will be created. Add all users that should have permission to change network settings to this group.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.package

The networkmanager package to use.

Type: package

Default:

```
pkgs.networkmanager
```

Declared by:

<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.appendNameservers

A list of name servers that should be appended to the ones configured in NetworkManager or received by DHCP.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.connectionConfig

Configuration for the [connection] section of NetworkManager.conf. Refer to **https://developer.gnome.org/NetworkManager/stable/NetworkManager.conf.html#id−1.2.3.11** or **NetworkManager.conf**(5) for more information.

Type: attribute set of (null or boolean or signed integer or string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.dhcp
Which program (or internal library) should be used for DHCP.

Type: one of “dhcpcd”, “internal”

Default:

```
"internal"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.dispatcherScripts
A list of scripts which will be executed in response to network events.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[ {
  source = pkgs.writeText "upHook" ''
    if [ "$2" != "up" ]; then
      logger "exit: event $2 != up"
      exit
    fi
    # coreutils and iproute are in PATH too
    logger "Device $DEVICE_IFACE coming up"
  '';
  type = "basic";
} ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.dispatcherScripts.*.source
Path to the hook script.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.dispatcherScripts.*.type
Dispatcher hook type. Look up the hooks described at **https://developer.gnome.org/NetworkManager/stable/NetworkManager.html** and choose the type depending on the output folder. You should then filter the event type (e.g., “up”/“down”) from within your script.

Type: one of “basic”, “pre−down”, “pre−up”

Default:

```
"basic"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.dns

Set the DNS (*resolv.conf*) processing mode.

A description of these modes can be found in the main section of **https://developer.gnome.org/NetworkManager/stable/NetworkManager.conf.html** or in **NetworkManager.conf**(5).

Type: one of “default”, “dnsmasq”, “systemd−resolved”, “none”

Default:

```
"default"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.ensureProfiles.environmentFiles

Files to load as environment file. Environment variables from this file will be substituted into the static configuration file using **envsubst**.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/run/secrets/network-manager.env"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.ensureProfiles.profiles

Declaratively define NetworkManager profiles. You can find information about the generated file format **here** and **here**. You current profiles which are most likely stored in ‘/etc/NetworkManager/system−connections’ and there is **a tool** to convert them to the needed nix code. If you add a new ad−hoc connection via a GUI or nmtui or anything similar it should just work together with the declarative ones. And if you edit a declarative profile NetworkManager will move it to the persistent storage and treat it like a ad−hoc one, but there will be two profiles as soon as the systemd unit from this option runs again which can be confusing since NetworkManager tools will start displaying two profiles with the same name and probably a bit different settings depending on what you edited. A profile won’t be deleted even if it’s removed from the config until the system reboots because that’s when NetworkManager clears it’s temp directory. If ‘networking.resolvconf.enable’ is true, attributes affecting the name resolution (such as ‘ignore−auto−dns’) may not end up changing ‘/etc/resolv.conf’ as expected when other name services (for example ‘networking.dhcpcd’) are enabled. Run ‘resolvconf −l’ in the terminal to see what each service produces.

Type: attribute set of (open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string)))

Default:

```
{ }
```

Example:

```
{
  home-wifi = {
    connection = {
      id = "home-wifi";
      permissions = "";
      type = "wifi";
```

```
      };
      ipv4 = {
        dns-search = "";
        method = "auto";
      };
      ipv6 = {
        addr-gen-mode = "stable-privacy";
        dns-search = "";
        method = "auto";
      };
      wifi = {
        mac-address-blacklist = "";
        mode = "infrastructure";
        ssid = "Home Wi-Fi";
      };
      wifi-security = {
        auth-alg = "open";
        key-mgmt = "wpa-psk";
        psk = "$HOME_WIFI_PASSWORD";
      };
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.ensureProfiles.profiles.<name>.connection.id
This is the name that will be displayed by NetworkManager and GUIs.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.ensureProfiles.profiles.<name>.connection.type
The connection type defines the connection kind, like vpn, wireguard, gsm, wifi and more.

Type: string

Example:

```
"vpn"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.ensureProfiles.secrets.package
The nm-file-secret-agent package to use.

Type: package

Default:

```
pkgs.nm-file-secret-agent
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nm-file-secret-agent.nix>

networking.networkmanager.ensureProfiles.secrets.entries

A list of secrets to provide to NetworkManager by reading their values from configured files.

Note that NetworkManager should be configured to read secrets from a secret agent. This can be done for example through the ‘networking.networkmanager.ensureProfiles.profiles’ options.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    file = "/root/wireguard_key";
    key = "private-key";
    matchId = "My WireGuard VPN";
    matchSetting = "wireguard";
    matchType = "wireguard";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nm-file-secret-agent.nix>

networking.networkmanager.ensureProfiles.secrets.entries.*.file

file from which the secret value is read

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/nm-file-secret-agent.nix>

networking.networkmanager.ensureProfiles.secrets.entries.*.key

key in the setting section for which this entry provides a value

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/nm-file-secret-agent.nix>

networking.networkmanager.ensureProfiles.secrets.entries.*.matchId

connection id used by NetworkManager. Often displayed as name in GUIs.

NetworkManager describes this as a human readable unique identifier for the connection, like “Work Wi-Fi” or “T-Mobile 3G”.

Type: null or string

Default:

```
null
```

Example:

```
"wifi1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nm-file-secret-agent.nix>

networking.networkmanager.ensureProfiles.secrets.entries.*.matchIface
interface name of the NetworkManager connection

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nm−file−secret−agent.nix>

networking.networkmanager.ensureProfiles.secrets.entries.*.matchSetting
name of the setting section for which secrets are requested

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nm−file−secret−agent.nix>

networking.networkmanager.ensureProfiles.secrets.entries.*.matchType
NetworkManager connection type

The NetworkManager configuration settings reference roughly corresponds to connection types. More might be available on your system depending on the installed plugins.

https://networkmanager.dev/docs/api/latest/ch01.html

Type: null or string

Default:

```
null
```

Example:

```
"wireguard"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nm−file−secret−agent.nix>

networking.networkmanager.ensureProfiles.secrets.entries.*.matchUuid
UUID of the connection profile

UUIDs are assigned once on connection creation and should never change as long as the connection still applies to the same network.

Type: null or string

Default:

```
null
```

Example:

```
"669ea4c9−4cb3−4901−ab52−f9606590976e"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nm−file−secret−agent.nix>

networking.networkmanager.ensureProfiles.secrets.entries.*.trim

whether leading and trailing whitespace should be stripped from the files content before being passed to NetworkManager

Type: null or boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nm-file-secret-agent.nix>

networking.networkmanager.ethernet.macAddress

Set the MAC address of the interface.

- ‘"XX:XX:XX:XX:XX:XX"’: MAC address of the interface
- ‘"permanent"’: Use the permanent MAC address of the device
- ‘"preserve"’: Don’t change the MAC address of the device upon activation
- ‘"random"’: Generate a randomized value upon each connect
- ‘"stable"’: Generate a stable, hashed MAC address

Type: string or one of “permanent”, “preserve”, “random”, “stable”

Default:

```
"preserve"
```

Example:

```
"00:11:22:33:44:55"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.insertNameservers

A list of name servers that should be inserted before the ones configured in NetworkManager or received by DHCP.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.logLevel

Set the default logging verbosity level.

Type: one of “OFF”, “ERR”, “WARN”, “INFO”, “DEBUG”, “TRACE”

Default:

```
"WARN"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.plugins

List of plugin packages to install.

See **https://search.nixos.org/packages?query=networkmanager-** for available plugin packages. and **https://networkmanager.dev/docs/vpn/** for an overview over builtin and external plugins and their support status.

Type: list of NetworkManager plugin package

Default:

```
[ ]
```

Example:

```
with pkgs; [
  networkmanager-fortisslvpn
  networkmanager-iodine
  networkmanager-l2tp
  networkmanager-openconnect
  networkmanager-openvpn
  networkmanager-sstp
  networkmanager-strongswan
  networkmanager-vpnc
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.settings
Configuration added to the generated NetworkManager.conf, note that you can overwrite settings with this. Refer to **https://developer.gnome.org/NetworkManager/stable/NetworkManager.conf.html** or **NetworkManager.conf**(5) for more information.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.unmanaged
List of interfaces that will not be managed by NetworkManager. Interface name can be specified here, but if you need more fidelity, refer to **https://developer.gnome.org/NetworkManager/stable/NetworkManager.conf.html#device-spec** or the "Device List Format" Appendix of **NetworkManager.conf**(5).

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.wifi.backend
Specify the Wi-Fi backend used for the device. Currently supported are **wpa_supplicant** or **iwd** (experimental).

Type: one of "wpa_supplicant", "iwd"

Default:

```
"wpa_supplicant"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.wifi.macAddress

Set the MAC address of the interface.

- ‘"XX:XX:XX:XX:XX:XX"’: MAC address of the interface
- ‘"permanent"’: Use the permanent MAC address of the device
- ‘"preserve"’: Don’t change the MAC address of the device upon activation
- ‘"random"’: Generate a randomized value upon each connect
- ‘"stable"’: Generate a stable, hashed MAC address
- ‘"stable−ssid"’: Generate a stable MAC addressed based on Wi−Fi network

Type: string or one of “permanent”, “preserve”, “random”, “stable”, “stable−ssid”

Default:

```
"preserve"
```

Example:

```
"00:11:22:33:44:55"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.wifi.powersave

Whether to enable Wi−Fi power saving.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.networkmanager.wifi.scanRandMacAddress

Whether to enable MAC address randomization of a Wi−Fi device during scanning.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/networkmanager.nix>

networking.nftables.enable

Whether to enable nftables and use nftables based firewall if enabled. nftables is a Linux−based packet filtering framework intended to replace frameworks like iptables.

Note that if you have Docker enabled you will not be able to use nftables without intervention. Docker uses iptables internally to setup NAT for containers. This module disables the ip_tables kernel module, however Docker automatically loads the module. Please see **https://github.com/NixOS/nixpkgs/issues/24318#issuecomment−289216273** for more information.

There are other programs that use iptables internally too, such as libvirt. For information on how the two firewalls interact, see **https://wiki.nftables.org/wiki−nftables/index.php/Troubleshooting#Question_4._How_do_nftables_and_iptables_interact_when_used_on_the_same_system.3F**.

Some network configurations may prevent VMs from having network access, see **https://wiki.nixos.org/wiki/Networking#Virtualization**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nftables.nix>

networking.nftables.checkRuleset

Run ‘nft check’ on the ruleset to spot syntax errors during build. Because this is executed in a sandbox, the check might fail if it requires access to any environmental factors or paths outside the Nix store. To circumvent this, the ruleset file can be edited using the preCheckRuleset option to work in the sandbox environment.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nftables.nix>

networking.nftables.checkRulesetRedirects

Set of paths that should be intercepted and rewritten while checking the ruleset using ‘pkgs.buildPackages.libredirect’.

Type: attribute set of absolute path

Default:

```
{
  "/etc/hosts" = config.environment.etc.hosts.source;
  "/etc/protocols" = config.environment.etc.protocols.source;
  "/etc/services" = config.environment.etc.services.source;
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nftables.nix>

networking.nftables.extraDeletions

Extra deletion commands to be run on every firewall start, reload and after stopping the firewall.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  # this makes deleting a non-existing table a no-op instead of a \
n error
  table inet some-table;

  delete table inet some-table;
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nftables.nix>

networking.nftables.flattenRulesetFile

Use ‘builtins.readFile’ rather than ‘include’ to handle **networking.nftables.rulesetFile**. It is useful when you want to apply **networking.nftables.preCheckRuleset** to **networking.nftables.rulesetFile**.

Note

It is expected that **networking.nftables.rulesetFile** can be accessed from the build sandbox.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nftables.nix>

networking.nftables.flushRuleset

Whether to enable flushing the entire ruleset on each reload.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nftables.nix>

networking.nftables.preCheckRuleset

This script gets run before the ruleset is checked. It can be used to create additional files needed for the ruleset check to work, or modify the ruleset for cases the build environment cannot cover.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
# replace users/groups that don't exist in the test
sed 's/skgid meadow/skgid root/g' -i ruleset.conf
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nftables.nix>

networking.nftables.ruleset

The ruleset to be used with nftables. Should be in a format that can be loaded using “/bin/nft −f”. The ruleset is updated atomically. Note that if the tables should be cleaned first, either:

- networking.nftables.flushRuleset = true; needs to be set (flushes all tables)
- networking.nftables.extraDeletions needs to be set
- or networking.nftables.tables can be used, which will clean up the table automatically

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
# Check out https://wiki.nftables.org/ for better documentation.
# Table for both IPv4 and IPv6.
table inet filter {
  # Block all incoming connections traffic except SSH and "ping".
  chain input {
    type filter hook input priority 0;

    # accept any localhost traffic
    iifname lo accept
```

```
      # accept traffic originated from us
      ct state {established, related} accept

      # ICMP
      # routers may also want: mld-listener-query, nd-router-so \
licit
      ip6 nexthdr icmpv6 icmpv6 type { destination-unreachable, pa \
cket-too-big, time-exceeded, parameter-problem, nd-router-adv \
ert, nd-neighbor-solicit, nd-neighbor-advert } accept
      ip protocol icmp icmp type { destination-unreachable, router \
-advertisement, time-exceeded, parameter-problem } accept

      # allow "ping"
      ip6 nexthdr icmpv6 icmpv6 type echo-request accept
      ip protocol icmp icmp type echo-request accept

      # accept SSH connections (required for a server)
      tcp dport 22 accept

      # count and drop any other traffic
      counter drop
    }

    # Allow all outgoing connections.
    chain output {
      type filter hook output priority 0;
      accept
    }

    chain forward {
      type filter hook forward priority 0;
      accept
    }
  }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nftables.nix>

networking.nftables.rulesetFile

The ruleset file to be used with nftables. Should be in a format that can be loaded using “nft -f”. The ruleset is updated atomically.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nftables.nix>

networking.nftables.tables

Tables to be added to ruleset. Tables will be added together with delete statements to clean up the table before every update.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  filter = {
    content = ''
      # Check out https://wiki.nftables.org/ for better documentati \
on.
      # Table for both IPv4 and IPv6.
      # Block all incoming connections traffic except SSH and "ping \
".
      chain input {
        type filter hook input priority 0;

        # accept any localhost traffic
        iifname lo accept

        # accept traffic originated from us
        ct state {established, related} accept

        # ICMP
        # routers may also want: mld-listener-query, nd-router- \
solicit
        ip6 nexthdr icmpv6 icmpv6 type { destination-unreachable,  \
packet-too-big, time-exceeded, parameter-problem, nd-router-a \
dvert, nd-neighbor-solicit, nd-neighbor-advert } accept
        ip protocol icmp icmp type { destination-unreachable, rout \
er-advertisement, time-exceeded, parameter-problem } accept

        # allow "ping"
        ip6 nexthdr icmpv6 icmpv6 type echo-request accept
        ip protocol icmp icmp type echo-request accept

        # accept SSH connections (required for a server)
        tcp dport 22 accept

        # count and drop any other traffic
        counter drop
      }

      # Allow all outgoing connections.
      chain output {
        type filter hook output priority 0;
        accept
      }

      chain forward {
        type filter hook forward priority 0;
        accept
      }
    '';
    family = "inet";
  };
```

```
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nftables.nix>

networking.nftables.tables.<name>.enable
Enable this table.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nftables.nix>

networking.nftables.tables.<name>.content
The table content.

Type: strings concatenated with “\n”

Declared by:
<nixpkgs/nixos/modules/services/networking/nftables.nix>

networking.nftables.tables.<name>.family
Table family.

Type: one of “ip”, “ip6”, “inet”, “arp”, “bridge”, “netdev”

Declared by:
<nixpkgs/nixos/modules/services/networking/nftables.nix>

networking.nftables.tables.<name>.name
Table name.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/nftables.nix>

networking.openconnect.package
The openconnect package to use.

Type: package

Default:

```
pkgs.openconnect
```

Declared by:
<nixpkgs/nixos/modules/services/networking/openconnect.nix>

networking.openconnect.interfaces
OpenConnect interfaces.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  openconnect0 = {
    gateway = "gateway.example.com";
    passwordFile = "/var/lib/secrets/openconnect-passwd";
    protocol = "anyconnect";
```

```
    user = "example-user";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/openconnect.nix>

networking.openconnect.interfaces.<name>.autoStart
Whether this VPN connection should be started automatically.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/openconnect.nix>

networking.openconnect.interfaces.<name>.certificate
Certificate to authenticate with.

Type: null or absolute path or PKCS#11 URI

Default:

```
null
```

Example:

```
"/var/lib/secrets/openconnect_certificate.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/openconnect.nix>

networking.openconnect.interfaces.<name>.extraOptions
Extra config to be appended to the interface config. It should contain long-format options as would be accepted on the command line by 'openconnect' (see **https://www.infradead.org/openconnect/manual.html**). Non-key-value options like 'deflate' can be used by declaring them as booleans, i. e. 'deflate = true;'.

Type: attribute set of (string or boolean)

Default:

```
{ }
```

Example:

```
{
  compression = "stateless";
  no-dtls = true;
  no-http-keepalive = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/openconnect.nix>

networking.openconnect.interfaces.<name>.gateway
Gateway server to connect to.

Type: string

Example:

```
"gateway.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/openconnect.nix>

networking.openconnect.interfaces.<name>.passwordFile
File containing the password to authenticate with. This is passed to 'openconnect' via the '−−passwd−on−stdin' option.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/secrets/openconnect−passwd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/openconnect.nix>

networking.openconnect.interfaces.<name>.privateKey
Private key to authenticate with.

Type: null or absolute path or PKCS#11 URI

Default:

```
null
```

Example:

```
"/var/lib/secrets/openconnect_private_key.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/openconnect.nix>

networking.openconnect.interfaces.<name>.protocol
Protocol to use.

Type: one of "anyconnect", "array", "nc", "pulse", "gp", "f5", "fortinet"

Example:

```
"anyconnect"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/openconnect.nix>

networking.openconnect.interfaces.<name>.user
Username to authenticate with.

Type: null or string

Default:

```
null
```

Example:

```
"example−user"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/openconnect.nix>

networking.proxy.allProxy

This option specifies the all_proxy environment variable.

Type: null or string

Default:

```
config.networking.proxy.default
```

Example:

```
"http://127.0.0.1:3128"
```

Declared by:
<nixpkgs/nixos/modules/config/networking.nix>

networking.proxy.default

This option specifies the default value for httpProxy, httpsProxy, ftpProxy and rsyncProxy.

Type: null or string

Default:

```
null
```

Example:

```
"http://127.0.0.1:3128"
```

Declared by:
<nixpkgs/nixos/modules/config/networking.nix>

networking.proxy.ftpProxy

This option specifies the ftp_proxy environment variable.

Type: null or string

Default:

```
config.networking.proxy.default
```

Example:

```
"http://127.0.0.1:3128"
```

Declared by:
<nixpkgs/nixos/modules/config/networking.nix>

networking.proxy.httpProxy

This option specifies the http_proxy environment variable.

Type: null or string

Default:

```
config.networking.proxy.default
```

Example:

```
"http://127.0.0.1:3128"
```

Declared by:
<nixpkgs/nixos/modules/config/networking.nix>

networking.proxy.httpsProxy

This option specifies the https_proxy environment variable.

Type: null or string

Default:

```
config.networking.proxy.default
```

Example:

```
"http://127.0.0.1:3128"
```

Declared by:
<nixpkgs/nixos/modules/config/networking.nix>

networking.proxy.noProxy
This option specifies the no_proxy environment variable. If a default proxy is used and noProxy is null, then noProxy will be set to 127.0.0.1,localhost.

Type: null or string

Default:

```
null
```

Example:

```
"127.0.0.1,localhost,.localdomain"
```

Declared by:
<nixpkgs/nixos/modules/config/networking.nix>

networking.proxy.rsyncProxy
This option specifies the rsync_proxy environment variable.

Type: null or string

Default:

```
config.networking.proxy.default
```

Example:

```
"http://127.0.0.1:3128"
```

Declared by:
<nixpkgs/nixos/modules/config/networking.nix>

networking.resolvconf.enable
Whether DNS configuration is managed by resolvconf.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/resolvconf.nix>

networking.resolvconf.package
The package that provides the system−wide resolvconf command. Defaults to ‘openresolv’ if this module is enabled. Otherwise, can be used by other modules (for example **services.resolved**) to provide a compatibility layer.

This option generally shouldn’t be set by the user.

Type: package

Default:

```
pkgs.openresolv
```

Declared by:
<nixpkgs/nixos/modules/config/resolvconf.nix>

networking.resolvconf.dnsExtensionMechanism

Enable the ‘edns0’ option in *resolv.conf*. With that option set, ‘glibc’ supports use of the extension mechanisms for DNS (EDNS) specified in RFC 2671. The most popular user of that feature is DNSSEC, which does not work without it.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/resolvconf.nix>

networking.resolvconf.dnsSingleRequest

Recent versions of glibc will issue both ipv4 (A) and ipv6 (AAAA) address queries at the same time, from the same port. Sometimes upstream routers will systemically drop the ipv4 queries. The symptom of this problem is that ‘getent hosts example.com’ only returns ipv6 (or perhaps only ipv4) addresses. The workaround for this is to specify the option ‘single−request’ in /etc/resolv.conf. This option enables that.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/config/resolvconf.nix>

networking.resolvconf.extraConfig

Extra configuration to append to *resolvconf.conf*.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"libc=NO"
```

Declared by:

<nixpkgs/nixos/modules/config/resolvconf.nix>

networking.resolvconf.extraOptions

Set the options in */etc/resolv.conf*.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "ndots:1"
  "rotate"
]
```

Declared by:

<nixpkgs/nixos/modules/config/resolvconf.nix>

networking.resolvconf.useLocalResolver

Use local DNS server for resolving.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/config/resolvconf.nix>

networking.rxe.enable

Whether to enable RDMA over converged ethernet.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/rxe.nix>

networking.rxe.interfaces

Enable RDMA on the listed interfaces. The corresponding virtual RDMA interfaces will be named rxe_<interface>. UDP port 4791 must be open on the respective ethernet interfaces.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "eth0"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/rxe.nix>

networking.search

The list of domain search paths that are considered for resolving hostnames with fewer dots than configured in the ‘ndots’ option, which defaults to 1 if unset.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "example.com"
  "home.arpa"
]
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.sits

This option allows you to define interfaces encapsulating IPv6 packets within IPv4 packets; which should be automatically created.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  hurricane = {
    remote = "10.0.0.1";
    local = "10.0.0.22";
    ttl = 255;
  };
  msipv6 = {
    remote = "192.168.0.1";
    dev = "enp3s0";
    ttl = 127;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.sits.<name>.dev

The underlying network device on which the tunnel resides.

Type: null or string

Default:

```
null
```

Example:

```
"enp4s0f0"
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.sits.<name>.encapsulation

Configures the type of encapsulation.

Type: null or (submodule)

Default:

```
{ }
```

Example:

```
{
  port = 9001;
  type = "fou";
}
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.sits.<name>.encapsulation.port

Destination port when using UDP encapsulation.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Example:

```
9001
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.sits.<name>.encapsulation.sourcePort

Source port when using UDP encapsulation. Will be chosen automatically by the kernel if unset.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Example:

```
9002
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.sits.<name>.encapsulation.type

Select the encapsulation type:

- ‘6in4’: the IPv6 packets are encapsulated using the 6in4 protocol (formerly known as SIT, RFC 4213);
- ‘gue’: the IPv6 packets are encapsulated in UDP packets using the Generic UDP Encapsulation (GUE) scheme;
- ‘foo’: the IPv6 packets are encapsulated in UDP packets using the Foo over UDP (FOU) scheme.

Type: one of “6in4”, “fou”, “gue”

Default:

```
"6in4"
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.sits.<name>.local

The address of the local endpoint which the remote side should send packets to.

Type: null or string

Default:

```
null
```

Example:

```
"10.0.0.22"
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.sits.<name>.remote

The address of the remote endpoint to forward traffic over.

Type: null or string

Default:

```
null
```

Example:

```
"10.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.sits.<name>.ttl

The time−to−live of the connection to the remote tunnel endpoint.

Type: null or signed integer

Default:

```
null
```

Example:

```
255
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.stevenblack.enable

Whether to enable the stevenblack hosts file blocklist.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/stevenblack.nix>

networking.stevenblack.package

The stevenblack−blocklist package to use.

Type: package

Default:

```
pkgs.stevenblack−blocklist
```

Declared by:

<nixpkgs/nixos/modules/config/stevenblack.nix>

networking.stevenblack.block

Additional blocklist extensions.

Type: list of (one of “fakenews”, “gambling”, “porn”, “social”)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/config/stevenblack.nix>

networking.stevenblack.whitelist
Domains to exclude from blocking.

Type: list of string matching the pattern ^[a−zA−Z0−9_−]+([.][a−zA−Z0−9_−]+)+$

Default:

```
[ ]
```

Example:

```
[
  "s.click.aliexpress.com"
]
```

Declared by:
<nixpkgs/nixos/modules/config/stevenblack.nix>

networking.supplicant
Interfaces for which to start **wpa_supplicant**. The supplicant is used to scan for and associate with wireless networks, or to authenticate with 802.1x capable network switches.

The value of this option is an attribute set. Each attribute configures a **wpa_supplicant** service, where the attribute name specifies the name of the interface that **wpa_supplicant** operates on. The attribute name can be a space separated list of interfaces. The attribute names ‘WLAN’, ‘LAN’ and ‘DBUS’ have a special meaning. ‘WLAN’ and ‘LAN’ are configurations for universal **wpa_supplicant** service that is started for each WLAN interface or for each LAN interface, respectively. ‘DBUS’ defines a device−unrelated **wpa_supplicant** service that can be accessed through ‘D−Bus’.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{ "wlan0 wlan1" = {
    configFile.path = "/etc/wpa_supplicant.conf";
    userControlled.group = "network";
    extraConf = ''
      ap_scan=1
      p2p_disabled=1
    '';
    extraCmdArgs = "−u −W";
    bridge = "br0";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/supplicant.nix>

networking.supplicant.<name>.bridge
Name of the bridge interface that wpa_supplicant should listen at.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/supplicant.nix>

networking.supplicant.<name>.configFile.path
External *wpa_supplicant.conf* configuration file. The configuration options defined declaratively within ‘networking.supplicant’ have precedence over options defined in ‘configFile’.

Type: null or absolute path

Default:

```
null
```

Example:

```
/etc/wpa_supplicant.conf
```

Declared by:
<nixpkgs/nixos/modules/services/networking/supplicant.nix>

networking.supplicant.<name>.configFile.writable
Whether the configuration file at ‘configFile.path’ should be written to by ‘wpa_supplicant’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/supplicant.nix>

networking.supplicant.<name>.driver
Force a specific wpa_supplicant driver.

Type: null or string

Default:

```
"nl80211,wext"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/supplicant.nix>

networking.supplicant.<name>.extraCmdArgs
Command line arguments to add when executing ‘wpa_supplicant’.

Type: string

Default:

```
""
```

Example:

```
"-e/run/wpa_supplicant/entropy.bin"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/supplicant.nix>

networking.supplicant.<name>.extraConf
Configuration options for *wpa_supplicant.conf*. Options defined here have precedence over options in ‘configFile’. NOTE: Do not write sensitive data into ‘extraConf’ as it will be world−readable in the ‘nix−store’. For sensitive information use the ‘configFile’ instead.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
ap_scan=1
device_name=My-NixOS-Device
device_type=1-0050F204-1
driver_param=use_p2p_group_interface=1
disable_scan_offload=1
p2p_listen_reg_class=81
p2p_listen_channel=1
p2p_oper_reg_class=81
p2p_oper_channel=1
manufacturer=NixOS
model_name=NixOS_Unstable
model_number=2015
```

Declared by:
<nixpkgs/nixos/modules/services/networking/supplicant.nix>

networking.supplicant.<name>.userControlled.enable
Allow normal users to control wpa_supplicant through wpa_gui or wpa_cli. This is useful for laptop users that switch networks a lot and don't want to depend on a large package such as NetworkManager just to pick nearby access points.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/supplicant.nix>

networking.supplicant.<name>.userControlled.group
Members of this group can control wpa_supplicant.

Type: string

Default:

```
"wheel"
```

Example:

```
"network"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/supplicant.nix>

networking.supplicant.<name>.userControlled.socketDir
Directory of sockets for controlling wpa_supplicant.

Type: string

Default:

```
"/run/wpa_supplicant"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/supplicant.nix>

networking.tcpcrypt.enable

Whether to enable opportunistic TCP encryption. If the other end speaks Tcpcrypt, then your traffic will be encrypted; otherwise it will be sent in clear text. Thus, Tcpcrypt alone provides no guarantees – it is best effort. If, however, a Tcpcrypt connection is successful and any attackers that exist are passive, then Tcpcrypt guarantees privacy.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/tcpcrypt.nix>

networking.tempAddresses

Whether to enable IPv6 Privacy Extensions for interfaces not configured explicitly in **networking.interfaces.<name>.tempAddress**.

This sets the ipv6.conf.*.use_tempaddr sysctl for all interfaces. Possible values are:

- ‘"default"’ to generate IPv6 temporary addresses and use these as source addresses in routing;
- ‘"disabled"’ to completely disable IPv6 temporary addresses;
- ‘"enabled"’ to generate IPv6 temporary addresses but still use EUI−64 addresses as source addresses;

Type: one of “default”, “disabled”, “enabled”

Default:

```
if ${config.networking.enableIPv6} then "default" else "disabled"
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.timeServers

The set of NTP servers from which to synchronise.

Type: list of string

Default:

```
[
  "0.nixos.pool.ntp.org"
  "1.nixos.pool.ntp.org"
  "2.nixos.pool.ntp.org"
  "3.nixos.pool.ntp.org"
]
```

Declared by:

<nixpkgs/nixos/modules/config/networking.nix>

networking.ucarp.enable

Whether to enable ucarp, userspace implementation of CARP.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.package
The ucarp package to use. Please note that the default package, pkgs.ucarp, has not received any upstream updates for a long time and can be considered as unmaintained.

Type: package

Default:

```
pkgs.ucarp
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.addr
Virtual shared IP address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.advBase
Advertisement frequency in seconds.

Type: unsigned integer, meaning >=0

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.advSkew
Advertisement skew in seconds.

Type: unsigned integer, meaning >=0

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.deadratio
Ratio to consider a host as dead.

Type: unsigned integer, meaning >=0

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.downscript
Command to run after become backup, the interface name, virtual address and optional extra parameters are passed as arguments.

Type: absolute path

Example:

```
pkgs.writeScript "downscript" ''
  #!/bin/sh
  ${pkgs.iproute2}/bin/ip addr del "$2"/24 dev "$1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.extraParam
Extra parameter to pass to the up/down scripts.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.ignoreIfState
Ignore interface state, e.g., down or no carrier.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.interface
Network interface to bind to.

Type: string

Example:

```
"eth0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.neutral
Do not run downscript at start if the host is the backup.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.noMcast
Use broadcast instead of multicast advertisements.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.passwordFile
File containing shared password between CARP hosts.

Type: string

Example:

```
"/run/keys/ucarp-password"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.preempt
Enable preemptive failover. Thus, this host becomes the CARP master as soon as possible.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.shutdown
Call downscript at exit.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.srcIp
Source (real) IP address of this host.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.upscript
Command to run after become master, the interface name, virtual address and optional extra parameters are passed as arguments.

Type: absolute path

Example:

```
pkgs.writeScript "upscript" ''
  #!/bin/sh
  ${pkgs.iproute2}/bin/ip addr add "$2"/24 dev "$1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.ucarp.vhId
Virtual IP identifier shared between CARP hosts.

Type: integer between 1 and 255 (both inclusive)

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ucarp.nix>

networking.useDHCP

Whether to use DHCP to obtain an IP address and other configuration for all network interfaces that do not have any manually configured IPv4 addresses.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.useHostResolvConf

In containers, whether to use the *resolv.conf* supplied by the host.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.useNetworkd

Whether we should use networkd as the network configuration backend or the legacy script based system. Note that this option is experimental, enable at your own risk.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.usePredictableInterfaceNames

Whether to assign **predictable names to network interfaces**. If enabled, interfaces are assigned names that contain topology information (e.g. ‘wlp3s0’) and thus should be stable across reboots. If disabled, names depend on the order in which interfaces are discovered by the kernel, which may change randomly across reboots; for instance, you may find ‘eth0’ and ‘eth1’ flipping unpredictably.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/udev.nix>

networking.vlans

This option allows you to define vlan devices that tag packets on top of a physical interface. The value of this option is an attribute set. Each attribute specifies a vlan, with the name specifying the name of the vlan interface.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  vlan0 = {
```

```
      id = 3;
      interface = "enp3s0";
    };
    vlan1 = {
      id = 1;
      interface = "wlan0";
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/tasks/network-interfaces.nix>

networking.vlans.<name>.id
The vlan identifier

Type: signed integer

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/tasks/network-interfaces.nix>

networking.vlans.<name>.interface
The interface the vlan will transmit packets through.

Type: string

Example:

```
"enp4s0"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network-interfaces.nix>

networking.vswitches
This option allows you to define Open vSwitches that connect physical networks together. The value of this option is an attribute set. Each attribute specifies a vswitch, with the attribute name specifying the name of the vswitch's network interface.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  vs0 = {
    interfaces = {
      eth0 = { };
      lo1 = {
        type = "internal";
      };
    };
  };
  vs1 = {
    interfaces = [
      {
        name = "eth2";
      }
```

```
          {
            name = "lo2";
            type = "internal";
          }
        ];
      };
    }
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.vswitches.<name>.controllers

Specify the controller targets. For the allowed options see ‘man 8 ovs−vsctl’.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "ptcp:6653:[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.vswitches.<name>.extraOvsctlCmds

Commands to manipulate the Open vSwitch database. Every line executed with ‘ovs−vsctl’. All commands are bundled together with the operations for adding the interfaces into one atomic operation.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
set−fail−mode <switch_name> secure
set Bridge <switch_name> stp_enable=true
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.vswitches.<name>.interfaces

The physical network interfaces connected by the vSwitch.

Type: attribute set of (submodule)

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.vswitches.<name>.interfaces.<name>.name

Name of the interface

Type: string

Example:

```
"eth0"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.vswitches.<name>.interfaces.<name>.type
Openvswitch type to assign to interface

Type: null or string

Default:

```
null
```

Example:

```
"internal"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.vswitches.<name>.interfaces.<name>.vlan
Vlan tag to apply to interface

Type: null or signed integer

Default:

```
null
```

Example:

```
10
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.vswitches.<name>.openFlowRules
OpenFlow rules to insert into the Open vSwitch. All ‘openFlowRules’ are loaded with ‘ovs−ofctl’ within one atomic operation.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  actions=normal
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.vswitches.<name>.openFlowVersion
Version of OpenFlow protocol to use when communicating with the switch internally (e.g. with ‘openFlowRules’).

Type: string

Default:

```
"OpenFlow13"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.vswitches.<name>.supportedOpenFlowVersions

Supported versions to enable on this switch.

Type: list of string

Default:

```
[
  "OpenFlow13"
]
```

Example:

```
[
  "OpenFlow10"
  "OpenFlow13"
  "OpenFlow14"
]
```

Declared by:

<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.wg−quick.interfaces

Wireguard interfaces.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  wg0 = {
    address = [
      "192.168.20.4/24"
    ];
    peers = [
      {
        allowedIPs = [
          "192.168.20.1/32"
        ];
        endpoint = "demo.wireguard.io:12913";
        publicKey = "xTIBA5rboUvnH4htodjb6e697QjLERt1NAB4mZqp8Dg=";
      }
    ];
    privateKey = "yAnz5TF+lXXJte14tji3zlMNq+hd2rYUIgJBgB3fBmk=";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.address

The IP addresses of the interface.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "192.168.2.1/24"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.autostart
Whether to bring up this interface automatically during boot.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.configFile
wg−quick .conf file, describing the interface. Using this option can be a useful means of configuring WireGuard if one has an existing .conf file. This overrides any other configuration interface configuration options. See wg−quick manpage for more details.

Type: null or string

Default:

```
null
```

Example:

```
"/secret/wg0.conf"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.dns
The IP addresses of DNS servers to configure.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "192.168.2.2"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.extraOptions
Extra options to append to the interface section. Can be used to define AmneziaWG−specific options.

Type: attribute set of (string or signed integer)

Default:

```
{ }
```

Example:

```
{
  H4 = 12345;
  Jc = 5;
  Jmax = 42;
  Jmin = 10;
  S1 = 60;
  S2 = 90;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.generatePrivateKeyFile
Automatically generate a private key with **wg genkey**, at the privateKeyFile location.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.listenPort
16−bit port for listening. Optional; if not specified, automatically generated based on interface name.

Type: null or signed integer

Default:

```
null
```

Example:

```
51820
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.mtu
If not specified, the MTU is automatically determined from the endpoint addresses or the system default route, which is usually a sane choice. However, to manually specify an MTU to override this automatic discovery, this value may be specified explicitly.

Type: null or signed integer

Default:

```
null
```

Example:

```
1248
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.peers
Peers linked to the interface.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.peers.*.allowedIPs
List of IP (v4 or v6) addresses with CIDR masks from which this peer is allowed to send incoming traffic and to which outgoing traffic for this peer is directed. The catch−all 0.0.0.0/0 may be specified for matching all IPv4 addresses, and ::/0 may be specified for matching all IPv6 addresses.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "10.192.122.3/32"
  "10.192.124.1/24"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.peers.*.endpoint
Endpoint IP or hostname of the peer, followed by a colon, and then a port number of the peer.

Type: null or string

Default:

```
null
```

Example:

```
"demo.wireguard.io:12913"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.peers.*.persistentKeepalive
This is optional and is by default off, because most users will not need it. It represents, in seconds, between 1 and 65535 inclusive, how often to send an authenticated empty packet to the peer, for the purpose of keeping a stateful firewall or NAT mapping valid persistently. For example, if the interface very rarely sends traffic, but it might at anytime receive traffic from a peer, and it is behind NAT, the interface might benefit from having a persistent keepalive interval of 25 seconds; however, most users will not need this.

Type: null or signed integer

Default:

```
null
```

Example:

```
25
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.peers.*.presharedKey

Base64 preshared key generated by **wg genpsk**. Optional, and may be omitted. This option adds an additional layer of symmetric−key cryptography to be mixed into the already existing public−key cryptography, for post−quantum resistance.

Warning: Consider using presharedKeyFile instead if you do not want to store the key in the world−readable Nix store.

Type: null or string

Default:

```
null
```

Example:

```
"rVXs/Ni9tu3oDBLS4hOyAUAa1qTWVA3loR8eL20os3I="
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.peers.*.presharedKeyFile

File pointing to preshared key as generated by **wg genpsk**. Optional, and may be omitted. This option adds an additional layer of symmetric−key cryptography to be mixed into the already existing public−key cryptography, for post−quantum resistance.

Type: null or string

Default:

```
null
```

Example:

```
"/private/wireguard_psk"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.peers.*.publicKey

The base64 public key to the peer.

Type: string

Example:

```
"xTIBA5rboUvnH4htodjb6e697QjLERt1NAB4mZqp8Dg="
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.postDown

Command called after the interface is taken down.

Type: strings concatenated with “\n” or (list of string) convertible to it

Default:

```
""
```

Example:

```
"${pkgs.iproute2}/bin/ip netns del foo"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.postUp
Commands called after the interface setup.

Type: strings concatenated with “\n” or (list of string) convertible to it

Default:

```
""
```

Example:

```
"${pkgs.iproute2}/bin/ip netns add foo"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.preDown
Command called before the interface is taken down.

Type: strings concatenated with “\n” or (list of string) convertible to it

Default:

```
""
```

Example:

```
"${pkgs.iproute2}/bin/ip netns del foo"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.preUp
Commands called at the start of the interface setup.

Type: strings concatenated with “\n” or (list of string) convertible to it

Default:

```
""
```

Example:

```
"${pkgs.iproute2}/bin/ip netns add foo"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.privateKey
Base64 private key generated by **wg genkey**.

Warning: Consider using privateKeyFile instead if you do not want to store the key in the world−readable Nix store.

Type: null or string

Default:

```
null
```

Example:

```
"yAnz5TF+lXXJte14tji3zlMNq+hd2rYUIgJBgB3fBmk="
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.privateKeyFile
Private key file as generated by **wg genkey**.

Type: null or string

Default:

```
null
```

Example:

```
"/private/wireguard_key"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.table
The kernel routing table to add this interface's associated routes to. Setting this is useful for e.g. policy routing ("ip rule") or virtual routing and forwarding ("ip vrf"). Both numeric table IDs and table names (/etc/rt_tables) can be used. Defaults to "main".

Type: null or string

Default:

```
null
```

Example:

```
"main"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wg−quick.interfaces.<name>.type
The type of the interface. Currently only "wireguard" and "amneziawg" are supported.

Type: one of "wireguard", "amneziawg"

Default:

```
"wireguard"
```

Example:

```
"amneziawg"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wg−quick.nix>

networking.wireguard.enable
Whether to enable WireGuard.

> **Note**
> By default, this module is powered by a script−based backend. You can enable the networkd backend with **networking.wireguard.useNetworkd**.

Type: boolean

Default:

```
config.networking.wireguard.interfaces != { }
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces
WireGuard interfaces.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  wg0 = {
    ips = [
      "192.168.20.4/24"
    ];
    peers = [
      {
        allowedIPs = [
          "192.168.20.1/32"
        ];
        endpoint = "demo.wireguard.io:12913";
        publicKey = "xTIBA5rboUvnH4htodjb6e697QjLERt1NAB4mZqp8Dg=";
      }
    ];
    privateKey = "yAnz5TF+lXXJte14tji3zlMNq+hd2rYUIgJBgB3fBmk=";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.allowedIPsAsRoutes
Determines whether to add allowed IPs as routes or not.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.dynamicEndpointRefreshSeconds
Periodically refresh the endpoint hostname or address for all peers. Allows WireGuard to notice DNS and IPv4/IPv6 connectivity changes. This option can be set or overridden for individual peers.

Setting this to ‘0’ disables periodic refresh.

Type: signed integer

Default:

Example:

```
300
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.extraOptions
Extra options to append to the interface section. Can be used to define AmneziaWG−specific options.

Type: attribute set of (string or signed integer)

Default:

```
{ }
```

Example:

```
{
  H4 = 12345;
  Jc = 5;
  Jmax = 42;
  Jmin = 10;
  S1 = 60;
  S2 = 90;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.fwMark
Mark all wireguard packets originating from this interface with the given firewall mark. The firewall mark can be used in firewalls or policy routing to filter the wireguard packets. This can be useful for setup where all traffic goes through the wireguard tunnel, because the wireguard packets need to be routed differently.

Type: null or string

Default:

```
null
```

Example:

```
"0x6e6978"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.generatePrivateKeyFile
Automatically generate a private key with **wg genkey**, at the privateKeyFile location.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.interfaceNamespace
The pre−existing network namespace the WireGuard interface is moved to. The special value ‘init’ means the init namespace. When ‘null’, the interface is not moved. See **documentation**.

Type: null or string

Default:

```
null
```

Example:

```
"init"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.ips

The IP addresses of the interface.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "192.168.2.1/24"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.listenPort

16−bit port for listening. Optional; if not specified, automatically generated based on interface name.

Type: null or signed integer

Default:

```
null
```

Example:

```
51820
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.metric

Set the metric of routes related to this Wireguard interface.

Type: null or signed integer

Default:

```
null
```

Example:

```
700
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.mtu

Set the maximum transmission unit in bytes for the wireguard interface. Beware that the wireguard packets have a header that may add up to 80 bytes to the mtu. By default, the MTU is (1500 − 80) = 1420. However, if the MTU of the upstream network is lower, the MTU of the wireguard network has to be adjusted as well.

Type: null or signed integer

Default:

```
null
```

Example:

```
1280
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.peers
Peers linked to the interface.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.peers.*.allowedIPs
List of IP (v4 or v6) addresses with CIDR masks from which this peer is allowed to send incoming traffic and to which outgoing traffic for this peer is directed. The catch−all 0.0.0.0/0 may be specified for matching all IPv4 addresses, and ::/0 may be specified for matching all IPv6 addresses.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "10.192.122.3/32"
  "10.192.124.1/24"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.peers.*.dynamicEndpointRefreshRestartSeconds
When the dynamic endpoint refresh that is configured via dynamicEndpointRefreshSeconds exits (likely due to a failure), restart that service after this many seconds.

If set to ‘null’ the value of **networking.wireguard.dynamicEndpointRefreshSeconds** will be used as the default.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Example:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.peers.*.dynamicEndpointRefreshSeconds
Periodically re−execute the ‘wg’ utility every this many seconds in order to let WireGuard notice DNS / hostname changes.

Setting this to ‘0’ disables periodic reexecution.

Note
This peer−level setting is not available when **networking.wireguard.useNetworkd** is enabled. The interface−level setting may be used instead.

Type: null or signed integer

Default:

```
config.networking.wireguard.interfaces.<name>.dynamicEndpointRefres \
hSeconds
```

Example:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.peers.*.endpoint
Endpoint IP or hostname of the peer, followed by a colon, and then a port number of the peer.

Warning for endpoints with changing IPs: The WireGuard kernel side cannot perform DNS resolution. Thus DNS resolution is done once by the 'wg' userspace utility, when setting up WireGuard. Consequently, if the IP address behind the name changes, WireGuard will not notice. This is especially common for dynamic−DNS setups, but also applies to any other DNS−based setup. If you do not use IP endpoints, you likely want to set **networking.wireguard.dynamicEndpointRefreshSeconds** to refresh the IPs periodically.

Type: null or string

Default:

```
null
```

Example:

```
"demo.wireguard.io:12913"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.peers.*.name
Name used to derive peer unit name.

Type: string

Default:

```
publicKey
```

Example:

```
"bernd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.peers.*.persistentKeepalive
This is optional and is by default off, because most users will not need it. It represents, in seconds, between 1 and 65535 inclusive, how often to send an authenticated empty packet to the peer, for the purpose of keeping a stateful firewall or NAT mapping valid persistently. For example, if the interface very rarely sends traffic, but it might at anytime receive traffic from a peer, and it is behind NAT, the interface might benefit from having a persistent keepalive interval of 25 seconds; however, most users will not need this.

Type: null or signed integer

Default:

```
null
```

Example:

```
25
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.peers.*.presharedKey
Base64 preshared key generated by **wg genpsk**. Optional, and may be omitted. This option adds an additional layer of symmetric−key cryptography to be mixed into the already existing public−key cryptography, for post−quantum resistance.

Warning: Consider using presharedKeyFile instead if you do not want to store the key in the world−readable Nix store.

Type: null or string

Default:

```
null
```

Example:

```
"rVXs/Ni9tu3oDBLS4hOyAUAa1qTWVA3loR8eL20os3I="
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.peers.*.presharedKeyFile
File pointing to preshared key as generated by **wg genpsk**. Optional, and may be omitted. This option adds an additional layer of symmetric−key cryptography to be mixed into the already existing public−key cryptography, for post−quantum resistance.

Type: null or string

Default:

```
null
```

Example:

```
"/private/wireguard_psk"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.peers.*.publicKey
The base64 public key of the peer.

Type: (optionally newline−terminated) single−line string

Example:

```
"xTIBA5rboUvnH4htodjb6e697QjLERt1NAB4mZqp8Dg="
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.postSetup
Commands called at the end of the interface setup.

Type: strings concatenated with “\n” or (list of string) convertible to it

Default:

```
""
```

Example:

```
''printf "nameserver 10.200.100.1" | ${pkgs.openresolv}/bin/resolvc \
onf −a wg0 −m 0''
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.postShutdown
Commands called after shutting down the interface.

Type: strings concatenated with “\n” or (list of string) convertible to it

Default:

```
""
```

Example:

```
"${pkgs.openresolv}/bin/resolvconf -d wg0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.preSetup
Commands called at the start of the interface setup.

Type: strings concatenated with “\n” or (list of string) convertible to it

Default:

```
""
```

Example:

```
"${pkgs.iproute2}/bin/ip netns add foo"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.preShutdown
Commands called before shutting down the interface.

Type: strings concatenated with “\n” or (list of string) convertible to it

Default:

```
""
```

Example:

```
"${pkgs.iproute2}/bin/ip netns del foo"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.privateKey
Base64 private key generated by **wg genkey**.

Warning: Consider using privateKeyFile instead if you do not want to store the key in the world−readable Nix store.

Type: null or string

Default:

```
null
```

Example:

```
"yAnz5TF+lXXJte14tji3zlMNq+hd2rYUIgJBgB3fBmk="
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.privateKeyFile
Private key file as generated by **wg genkey**.

Type: null or string

Default:

```
null
```

Example:

```
"/private/wireguard_key"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.socketNamespace
The pre−existing network namespace in which the WireGuard interface is created, and which retains the socket even if the interface is moved via **interfaceNamespace**. When ‘null’, the interface is created in the init namespace. See **documentation**.

Type: null or string

Default:

```
null
```

Example:

```
"container"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.table
The kernel routing table to add this interface’s associated routes to. Setting this is useful for e.g. policy routing (“ip rule”) or virtual routing and forwarding (“ip vrf”). Both numeric table IDs and table names (/etc/rt_tables) can be used. Defaults to “main”.

Type: string

Default:

```
"main"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.interfaces.<name>.type
The type of the interface. Currently only “wireguard” and “amneziawg” are supported.

Type: one of “wireguard”, “amneziawg”

Default:

```
"wireguard"
```

Example:

```
"amneziawg"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wireguard.nix>

networking.wireguard.useNetworkd

Whether to use networkd as the network configuration backend for Wireguard instead of the legacy script−based system.

> **Warning**
> Some options have slightly different behavior with the networkd and script−based backends. Check the documentation for each Wireguard option you use before enabling this option.

Type: boolean

Default:

```
config.networking.useNetworkd
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wireguard−networkd.nix>

networking.wireless.enable

Whether to enable wpa_supplicant.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.enableHardening

Whether to apply security hardening measures to wpa_supplicant. These include limiting access to the filesystem, devices and network capabilities.

> **Note**
> Disabling this will increase the potential attack surface if the wpa_supplicant daemon becomes compromised, but it may be necessary for more complex enterprise networks (for example requiring access to mutable files, smart cards or TPM devices).

Type: unspecified value

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.allowAuxiliaryImperativeNetworks

Whether to allow configuring networks “imperatively” (e.g. via ‘wpa_supplicant_gui’) and declaratively via **networking.wireless.networks**.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.athUserRegulatoryDomain
If enabled, sets the ATH_USER_REGD kernel config switch to true to disable the enforcement of EEPROM regulatory restrictions for ath drivers. Requires at least Linux 5.8.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/hardware/network/ath-user-regd.nix>

networking.wireless.autoDetectInterfaces
Whether to enable automatic detection of wireless interfaces.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.dbusControlled
Whether to enable the DBus control interface. This is only needed when using NetworkManager or connman.

Type: boolean

Default:

```
length config.networking.wireless.interfaces < 2
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.driver
Force a specific wpa_supplicant driver.

Type: string

Default:

```
"nl80211,wext"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.extraConfig
Extra lines appended to the configuration file. See **wpa_supplicant.conf**(5) for available options.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
p2p_disabled=1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.extraConfigFiles
Extra wpa_supplicant configuration files to load.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.fallbackToWPA2
Whether to fall back to WPA2 authentication protocols if WPA3 failed. This allows old wireless cards (that lack recent features required by WPA3) to connect to mixed WPA2/WPA3 access points.

To avoid possible downgrade attacks, disable this options.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.interfaces
The interfaces **wpa_supplicant** will use. If empty and **networking.wireless.autoDetectInterfaces** is true it will automatically use all wireless interfaces.

Note
A separate wpa_supplicant instance will be started for each interface.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "wlan0"
  "wlan1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.iwd.enable
Whether to enable iwd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iwd.nix>

networking.wireless.iwd.package
The iwd package to use.

Type: package

Default:

```
pkgs.iwd
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iwd.nix>

networking.wireless.iwd.settings
Options passed to iwd. See **iwd.config**(5) for supported options.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  Network = {
    EnableIPv6 = true;
    RoutePriorityOffset = 300;
  };
  Settings = {
    AutoConnect = true;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iwd.nix>

networking.wireless.networks
The network definitions to automatically connect to when **wpa_supplicant** is running. If this parameter is left empty wpa_supplicant will use /etc/wpa_supplicant.conf as the configuration file.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{ echelon = {                   # SSID with no spaces or special ch \
aracters
    psk = "abcdefgh";           # (password will be written to /nix \
/store!)
  };
  echelon = {                   # safe version of the above: read P \
SK from the
    pskRaw = "ext:psk_echelon"; # variable psk_echelon, defined in  \
secretsFile,
  };                            # this won't leak into /nix/store
  "echelon's AP" = {            # SSID with spaces and/or special c \
haracters
     psk = "ijklmnop";          # (password will be written to /nix \
```

```
/store!)
  };
  "free.wifi" = {};             # Public wireless network
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.networks.<name>.auth
Use this option to configure advanced authentication methods like EAP. See **wpa_supplicant.conf**(5) for example configurations.

Warning
Be aware that this will be written to the Nix store in plaintext! Use an external reference like 'ext:secretname' for secrets.

Note
Mutually exclusive with *psk* and *pskRaw*.

Type: null or string

Default:

```
null
```

Example:

```
eap=PEAP
identity="user@example.com"
password=ext:example_password
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.networks.<name>.authProtocols
The list of authentication protocols accepted by this network. This corresponds to the 'key_mgmt' option in wpa_supplicant.

Type: list of (one of "WPA−PSK", "WPA−EAP", "IEEE8021X", "NONE", "WPA−NONE", "FT−PSK", "FT−EAP", "FT−EAP−SHA384", "WPA−PSK−SHA256", "WPA−EAP−SHA256", "SAE", "FT−SAE", "WPA−EAP−SUITE−B", "WPA−EAP−SUITE−B−192", "OSEN", "FILS−SHA256", "FILS−SHA384", "FT−FILS−SHA256", "FT−FILS−SHA384", "OWE", "DPP")

Default:

```
[
  "WPA-PSK"
  "WPA-EAP"
  "SAE"
  "FT-PSK"
  "FT-EAP"
  "FT-SAE"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.networks.<name>.bssid
If set, this network block is used only when associating with the AP using the configured BSSID.

Type: null or string

Default:

```
null
```

Example:

```
"02:00:00:00:00:01"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.networks.<name>.extraConfig
Extra configuration lines appended to the network block. See **wpa_supplicant.conf**(5) for available options.

Type: string

Default:

```
""
```

Example:

```
  bssid_blacklist=02:11:22:33:44:55 02:22:aa:44:55:66
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.networks.<name>.hidden
Set this to ‘true’ if the SSID of the network is hidden.

Type: boolean

Default:

```
false
```

Example:

```
{ echelon = {
    hidden = true;
    psk = "abcdefgh";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.networks.<name>.priority
By default, all networks will get same priority group (0). If some of the networks are more desirable, this field can be used to change the order in which wpa_supplicant goes through the networks when selecting a BSS. The priority groups will be iterated in decreasing priority (i.e., the larger the priority value, the sooner the network is matched against the scan results). Within each priority group, networks will be selected based on security policy, signal strength, etc.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.networks.<name>.psk

The network's pre−shared key in plaintext defaulting to being a network without any authentication.

> **Warning**
> Be aware that this will be written to the Nix store in plaintext! Use *pskRaw* with an external reference to keep it safe.
>
> **Note**
> Mutually exclusive with *pskRaw*.

Type: null or string matching the pattern [[:print:]]{8,63}

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.networks.<name>.pskRaw

Either the raw pre−shared key in hexadecimal format or the name of the secret (as defined inside **networking.wireless.secretsFile** and prefixed with 'ext:') containing the network pre−shared key.

> **Warning**
> Be aware that this will be written to the Nix store in plaintext! Always use an external reference.
>
> **Note**
> The external secret can be either the plaintext passphrase or the raw pre−shared key.
>
> **Note**
> Mutually exclusive with *psk* and *auth*.

Type: null or string matching the pattern ([[:xdigit:]]{64})|(ext:[^=]+)

Default:

```
null
```

Example:

```
"ext:name_of_the_secret_here"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.networks.<name>.ssid

You could use this field to override the network's ssid. This can be useful to, for example, specify two networks that share the same SSID but not the same password. Specifying the BSSID of the network can make two entries of the same SSID show up as different ones in wpa_cli.

Type: string

Default:

```
"‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.scanOnLowSignal

Whether to periodically scan for (better) networks when the signal of the current one is low. This will make roaming between access points faster, but will consume more power.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.secretsFile
File consisting of lines of the form ‘varname=value’ to define variables for the wireless configuration.

Secrets (PSKs, passwords, etc.) can be provided without adding them to the world−readable Nix store by defining them in the secrets file and referring to them in option **networking.wireless.networks** with the syntax ‘ext:secretname’. Example:

```
# content of /run/secrets/wireless.conf
psk_home=mypassword
psk_other=6a381cea59c7a2d6b30736ba0e6f397f7564a044bcdb7a327a1d16a1e \
d91b327
pass_work=myworkpassword
# wireless−related configuration
networking.wireless.secretsFile = "/run/secrets/wireless.conf";
networking.wireless.networks = {
  home.pskRaw = "ext:psk_home";
  other.pskRaw = "ext:psk_other";
  work.auth = ''
    eap=PEAP
    identity="my−user@example.com"
    password=ext:pass_work
  '';
};
```

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/wireless.conf"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wireless.userControlled
Allow users of the ‘wpa_supplicant’ group to control wpa_supplicant through wpa_gui or wpa_cli. This is useful for laptop users that switch networks a lot and don’t want to depend on a large package such as NetworkManager just to pick nearby access points.

Note
When networks are configured declaratively, you cannot persist any settings via wpa_gui or wpa_cli, unless **allowAuxiliaryImperativeNetworks** is used.

Type: boolean or (attribute set) convertible to it

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/wpa_supplicant.nix>

networking.wlanInterfaces

Creating multiple WLAN interfaces on top of one physical WLAN device (NIC).

The name of the WLAN interface corresponds to the name of the attribute. A NIC is referenced by the persistent device name of the WLAN interface that ‘udev’ assigns to a NIC by default. If a NIC supports multiple WLAN interfaces, then the one NIC can be used as ‘device’ for multiple WLAN interfaces. If a NIC is used for creating WLAN interfaces, then the default WLAN interface with a persistent device name form ‘udev’ is not created. A WLAN interface with the persistent name assigned from ‘udev’ would have to be created explicitly.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  wlan-station0 = {
      device = "wlp6s0";
  };
  wlan-adhoc0 = {
      type = "ibss";
      device = "wlp6s0";
      mac = "02:00:00:00:00:01";
  };
  wlan-p2p0 = {
      device = "wlp6s0";
      mac = "02:00:00:00:00:02";
  };
  wlan-ap0 = {
      device = "wlp6s0";
      mac = "02:00:00:00:00:03";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/tasks/network-interfaces.nix>

networking.wlanInterfaces.<name>.device

The name of the underlying hardware WLAN device as assigned by ‘udev’.

Type: string

Example:

```
"wlp6s0"
```

Declared by:

<nixpkgs/nixos/modules/tasks/network-interfaces.nix>

networking.wlanInterfaces.<name>.flags

Flags for interface of type ‘monitor’.

Type: null or one of “none”, “fcsfail”, “control”, “otherbss”, “cook”, “active”

Default:

```
null
```

Example:

```
"control"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.wlanInterfaces.<name>.fourAddr
Whether to enable ‘4−address mode’ with type ‘managed’.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.wlanInterfaces.<name>.mac
MAC address to use for the device. If ‘null’, then the MAC of the underlying hardware WLAN device is used.

INFO: Locally administered MAC addresses are of the form:

- x2:xx:xx:xx:xx:xx
- x6:xx:xx:xx:xx:xx
- xA:xx:xx:xx:xx:xx
- xE:xx:xx:xx:xx:xx

Type: null or string

Default:

```
null
```

Example:

```
"02:00:00:00:00:01"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.wlanInterfaces.<name>.meshID
MeshID of interface with type ‘mesh’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

networking.wlanInterfaces.<name>.type
The type of the WLAN interface. The type has to be supported by the underlying hardware of the device.

Type: one of “managed”, “ibss”, “monitor”, “mesh”, “wds”

Default:

```
"managed"
```

Example:

```
"ibss"
```

Declared by:
<nixpkgs/nixos/modules/tasks/network−interfaces.nix>

nix.enable

Whether to enable Nix. Disabling Nix makes the system hard to modify and the Nix programs and configuration will not be made available by NixOS itself.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/system/nix−daemon.nix>

nix.package

This option specifies the Nix package instance to use throughout the system.

Type: package

Default:

```
pkgs.nix
```

Declared by:

<nixpkgs/nixos/modules/services/system/nix−daemon.nix>

nix.buildMachines

This option lists the machines to be used if distributed builds are enabled (see **nix.distributedBuilds**). Nix will perform derivations on those machines via SSH by copying the inputs to the Nix store on the remote machine, starting the build, then copying the output back to the local Nix store.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/config/nix−remote−build.nix>

nix.buildMachines.*.hostName

The hostname of the build machine.

Type: string

Example:

```
"nixbuilder.example.org"
```

Declared by:

<nixpkgs/nixos/modules/config/nix−remote−build.nix>

nix.buildMachines.*.mandatoryFeatures

A list of features mandatory for this builder. The builder will be ignored for derivations that don’t require all features in this list. All mandatory features are automatically included in *supportedFeatures*.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "big-parallel"
]
```

Declared by:
<nixpkgs/nixos/modules/config/nix−remote−build.nix>

nix.buildMachines.*.maxJobs
The number of concurrent jobs the build machine supports. The build machine will enforce its own limits, but this allows hydra to schedule better since there is no work−stealing between build machines.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/config/nix−remote−build.nix>

nix.buildMachines.*.protocol
The protocol used for communicating with the build machine. Use ‘ssh−ng’ if your remote builder and your local Nix version support that improved protocol.

Use ‘null’ when trying to change the special localhost builder without a protocol which is for example used by hydra.

Type: one of <null>, “ssh”, “ssh−ng”

Default:

```
"ssh"
```

Example:

```
"ssh-ng"
```

Declared by:
<nixpkgs/nixos/modules/config/nix−remote−build.nix>

nix.buildMachines.*.publicHostKey
The (base64−encoded) public host key of this builder. The field is calculated via **base64 −w0 /etc/ssh/ssh_host_type_key.pub**. If null, SSH will use its regular known−hosts file when connecting.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/config/nix−remote−build.nix>

nix.buildMachines.*.speedFactor
The relative speed of this builder. This is an arbitrary integer that indicates the speed of this builder, relative to other builders. Higher is faster.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/config/nix−remote−build.nix>

nix.buildMachines.*.sshKey

The path to the SSH private key with which to authenticate on the build machine. The private key must not have a passphrase. If null, the building user (root on NixOS machines) must have an appropriate ssh configuration to log in non−interactively.

Note that for security reasons, this path must point to a file in the local filesystem, *not* to the nix store.

Type: null or string

Default:

```
null
```

Example:

```
"/root/.ssh/id_buildhost_builduser"
```

Declared by:

<nixpkgs/nixos/modules/config/nix−remote−build.nix>

nix.buildMachines.*.sshUser

The username to log in as on the remote host. This user must be able to log in and run nix commands non−interactively. It must also be privileged to build derivations, so must be included in **nix.settings.trusted−users**.

Type: null or string

Default:

```
null
```

Example:

```
"builder"
```

Declared by:

<nixpkgs/nixos/modules/config/nix−remote−build.nix>

nix.buildMachines.*.supportedFeatures

A list of features supported by this builder. The builder will be ignored for derivations that require features not in this list.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "kvm"
  "big−parallel"
]
```

Declared by:

<nixpkgs/nixos/modules/config/nix−remote−build.nix>

nix.buildMachines.*.system

The system type the build machine can execute derivations on. Either this attribute or *systems* must be present, where *system* takes precedence if both are set.

Type: null or string

Default:

```
null
```

Example:

```
"x86_64-linux"
```

Declared by:
<nixpkgs/nixos/modules/config/nix-remote-build.nix>

nix.buildMachines.*.systems
The system types the build machine can execute derivations on. Either this attribute or *system* must be present, where *system* takes precedence if both are set.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "x86_64-linux"
  "aarch64-linux"
]
```

Declared by:
<nixpkgs/nixos/modules/config/nix-remote-build.nix>

nix.channel.enable
Whether the ‘nix-channel’ command and state files are made available on the machine.

The following files are initialized when enabled:

- ‘/nix/var/nix/profiles/per-user/root/channels’
- ‘/root/.nix-channels’
- ‘$HOME/.nix-defexpr/channels’ (on login)

Disabling this option will not remove the state files from the system.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/nix-channel.nix>

nix.checkAllErrors
If enabled, checks the nix.conf parsing for any kind of error. When disabled, checks only for unknown settings.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/nix.nix>

nix.checkConfig
If enabled, checks that Nix can parse the generated nix.conf.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/nix.nix>

nix.daemonCPUSchedPolicy

Nix daemon process CPU scheduling policy. This policy propagates to build processes. ‘other’ is the default scheduling policy for regular tasks. The ‘batch’ policy is similar to ‘other’, but optimised for non−interactive tasks. ‘idle’ is for extremely low−priority tasks that should only be run when no other task requires CPU time.

Please note that while using the ‘idle’ policy may greatly improve responsiveness of a system performing expensive builds, it may also slow down and potentially starve crucial configuration updates during load.

‘idle’ may therefore be a sensible policy for systems that experience only intermittent phases of high CPU load, such as desktop or portable computers used interactively. Other systems should use the ‘other’ or ‘batch’ policy instead.

For more fine−grained resource control, please refer to **systemd.resource−control**(5) and adjust **systemd.services.nix−daemon** directly.

Type: one of “other”, “batch”, “idle”

Default:

```
"other"
```

Example:

```
"batch"
```

Declared by:
<nixpkgs/nixos/modules/services/system/nix−daemon.nix>

nix.daemonGroup

Group to use to run the Nix daemon.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/system/nix−daemon.nix>

nix.daemonIOSchedClass

Nix daemon process I/O scheduling class. This class propagates to build processes. ‘best−effort’ is the default class for regular tasks. The ‘idle’ class is for extremely low−priority tasks that should only perform I/O when no other task does.

Please note that while using the ‘idle’ scheduling class can improve responsiveness of a system performing expensive builds, it might also slow down or starve crucial configuration updates during load.

‘idle’ may therefore be a sensible class for systems that experience only intermittent phases of high I/O load, such as desktop or portable computers used interactively. Other systems should use the ‘best−effort’ class.

Type: one of “best−effort”, “idle”

Default:

```
"best-effort"
```

Example:

```
"idle"
```

Declared by:
<nixpkgs/nixos/modules/services/system/nix−daemon.nix>

nix.daemonIOSchedPriority
Nix daemon process I/O scheduling priority. This priority propagates to build processes. The supported priorities depend on the scheduling policy: With idle, priorities are not used in scheduling decisions. best−effort supports values in the range 0 (high) to 7 (low).

Type: signed integer

Default:

```
4
```

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/system/nix−daemon.nix>

nix.daemonUser
User to use to run the Nix daemon. If this is not “root” then the Nix daemon will set several settings to preserve functionality. When setting this option, you must also set ‘nix.daemonGroup’.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/system/nix−daemon.nix>

nix.distributedBuilds
Whether to distribute builds to the machines listed in **nix.buildMachines**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/nix−remote−build.nix>

nix.extraOptions
Additional text appended to *nix.conf*.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
keep−outputs = true
keep−derivations = true
```

Declared by:
<nixpkgs/nixos/modules/config/nix.nix>

nix.firewall.enable

Whether to enable firewalling for outgoing traffic of the nix daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/system/nix−daemon−firewall.nix>

nix.firewall.allowLoopback

Whether to allow traffic on the loopback interface. Traffic is still subject to protocol/port rules

Type: unspecified value

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/system/nix−daemon−firewall.nix>

nix.firewall.allowNonTCPUDP

Whether to allow traffic that is neither TCP nor UDP

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/system/nix−daemon−firewall.nix>

nix.firewall.allowPrivateNetworks

Whether to allow traffic to local networks. Traffic is still subject to protocol/port rules. Note that this option may break DNS resolution when the DNS resolver is in a local network

Type: unspecified value

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/system/nix−daemon−firewall.nix>

nix.firewall.allowedTCPPorts

TCP ports to which traffic is allowed. Specifying no ports will allow all TCP traffic

Type: list of ((optionally newline−terminated) single−line string or 16 bit unsigned integer; between 0 and 65535 (both inclusive))

Default:

```
[ ]
```

Example:

```
[
  "http"
  443
  "30000−31000"
]
```

Declared by:

<nixpkgs/nixos/modules/services/system/nix−daemon−firewall.nix>

nix.firewall.allowedUDPPorts

UDP ports to which traffic is allowed. Specifying no ports will allow all UDP traffic

Type: list of ((optionally newline−terminated) single−line string or 16 bit unsigned integer; between 0 and 65535 (both inclusive))

Default:

```
[ ]
```

Example:

```
[
  53
]
```

Declared by:

<nixpkgs/nixos/modules/services/system/nix−daemon−firewall.nix>

nix.firewall.extraNftablesRules

Extra nftables rules to prepend to the generated ones

Type: list of (optionally newline−terminated) single−line string

Default:

```
[ ]
```

Example:

```
[
  "ip daddr 1.1.1.1 udp dport accept"
]
```

Declared by:

<nixpkgs/nixos/modules/services/system/nix−daemon−firewall.nix>

nix.gc.automatic

Automatically run the garbage collector at a specific time.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nix−gc.nix>

nix.gc.dates
How often or when garbage collection is performed. For most desktop and server systems a sufficient garbage collection is once a week.

This value must be a calendar event in the format specified by **systemd.time**(7).

Type: (optionally newline−terminated) single−line string or list of string

Default:

```
[
  "03:15"
]
```

Example:

```
"weekly"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nix−gc.nix>

nix.gc.options
Options given to ‘nix−collect−garbage’ when the garbage collector is run automatically.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Example:

```
"−−max−freed $((64 * 1024**3))"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nix−gc.nix>

nix.gc.persistent
Takes a boolean argument. If true, the time when the service unit was last triggered is stored on disk. When the timer is activated, the service unit is triggered immediately if it would have been triggered at least once during the time when the timer was inactive. Such triggering is nonetheless subject to the delay imposed by RandomizedDelaySec=. This is useful to catch up on missed runs of the service when the system was powered down.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nix−gc.nix>

nix.gc.randomizedDelaySec
Add a randomized delay before each garbage collection. The delay will be chosen between zero and this value. This value must be a time span in the format specified by **systemd.time**(7)

Type: (optionally newline−terminated) single−line string

Default:

```
"0"
```

Example:

```
"45min"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nix−gc.nix>

nix.nixPath
The default Nix expression search path, used by the Nix evaluator to look up paths enclosed in angle brackets (e.g. ‘<nixpkgs>’).

Type: list of string

Default:

```
if nix.channel.enable
then [
  "nixpkgs=/nix/var/nix/profiles/per−user/root/channels/nixos"
  "nixos−config=/etc/nixos/configuration.nix"
  "/nix/var/nix/profiles/per−user/root/channels"
]
else [];
```

Declared by:
<nixpkgs/nixos/modules/config/nix−channel.nix>

nix.nrBuildUsers
Number of ‘nixbld’ user accounts created to perform secure concurrent builds. If you receive an error message saying that “all build users are currently in use”, you should increase this value.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/services/system/nix−daemon.nix>

nix.optimise.automatic
Automatically run the nix store optimiser at a specific time.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nix−optimise.nix>

nix.optimise.dates
Specification (in the format described by **systemd.time**(7)) of the time at which the optimiser will run.

Type: (optionally newline−terminated) single−line string or list of string

Default:

```
[
  "03:45"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nix−optimise.nix>

nix.optimise.persistent

Takes a boolean argument. If true, the time when the service unit was last triggered is stored on disk. When the timer is activated, the service unit is triggered immediately if it would have been triggered at least once during the time when the timer was inactive. Such triggering is nonetheless subject to the delay imposed by RandomizedDelaySec=. This is useful to catch up on missed runs of the service when the system was powered down.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/nix−optimise.nix>

nix.optimise.randomizedDelaySec

Add a randomized delay before the optimizer will run. The delay will be chosen between zero and this value. This value must be a time span in the format specified by **systemd.time**(7)

Type: (optionally newline−terminated) single−line string

Default:

```
"1800"
```

Example:

```
"45min"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/nix−optimise.nix>

nix.registry

A system−wide flake registry.

See **nix3−registry**(1) for more information.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/config/nix−flakes.nix>

nix.registry.<name>.exact

Whether the **from** reference needs to match exactly. If set, a **from** reference like ‘nixpkgs’ does not match with a reference like ‘nixpkgs/nixos−20.03’.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/nix−flakes.nix>

nix.registry.<name>.flake

The flake input **from** is rewritten to.

Type: null or (attribute set)

Default:

```
null
```

Example:

```
nixpkgs
```

Declared by:

<nixpkgs/nixos/modules/config/nix−flakes.nix>

nix.registry.<name>.from

The flake reference to be rewritten.

The format of flake references is described in **nix3−flake**(1).

Type: attribute set of (string or signed integer or boolean or absolute path or package)

Default:

```
{ }
```

Example:

```
{
  id = "nixpkgs";
  type = "indirect";
}
```

Declared by:

<nixpkgs/nixos/modules/config/nix−flakes.nix>

nix.registry.<name>.to

The flake reference **from** is rewritten to.

The format of flake references is described in **nix3−flake**(1).

Type: attribute set of (string or signed integer or boolean or absolute path or package)

Default:

```
{ }
```

Example:

```
{
  owner = "my−org";
  repo = "my−nixpkgs";
  type = "github";
}
```

Declared by:

<nixpkgs/nixos/modules/config/nix−flakes.nix>

nix.settings

Configuration for Nix, see **https://nixos.org/manual/nix/stable/command−ref/conf−file.html** or **nix.conf**(5) for available options. The value declared here will be translated directly to the key−value pairs Nix expects.

You can use **nix−instantiate −−eval −−strict '<nixpkgs/nixos>' −A config.nix.settings** to view the current value. By default it is empty.

Nix configurations defined under **nix.*** will be translated and applied to this option. In addition,

configuration specified in **nix.extraOptions** will be appended verbatim to the resulting config file.

Type: open submodule of attribute set of (Nix config atom (null, bool, int, float, str, path or package) or list of (Nix config atom (null, bool, int, float, str, path or package)))

Default:

```
{ }
```

Example:

```
{
  use-sandbox = true;
  show-trace = true;
  sandbox-paths = [ "/bin/sh=${pkgs.busybox-sandbox-shell.out}/b \
in/busybox" ];
}
```

Declared by:
<nixpkgs/nixos/modules/config/nix.nix>

nix.settings.allowed-users

A list of names of users (separated by whitespace) that are allowed to connect to the Nix daemon. As with **nix.settings.trusted-users**, you can specify groups by prefixing them with '@'. Also, you can allow all users by specifying '*'. The default is '*'. Note that trusted users are always allowed to connect.

Type: list of string

Default:

```
[
  "*"
]
```

Example:

```
[
  "@wheel"
  "@builders"
  "alice"
  "bob"
]
```

Declared by:
<nixpkgs/nixos/modules/config/nix.nix>

nix.settings.auto-optimise-store

If set to true, Nix automatically detects files in the store that have identical contents, and replaces them with hard links to a single copy. This saves disk space. If set to false (the default), you can still run nix-store --optimise to get rid of duplicate files.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/nix.nix>

nix.settings.cores

This option defines the maximum number of concurrent tasks during one build. It affects, e.g., −j option for make. The special value 0 means that the builder should use all available CPU cores in the system. Some builds may become non−deterministic with this option; use with care! Packages will only be affected if enableParallelBuilding is set for them.

Type: signed integer

Default:

Example:

```
64
```

Declared by:

<nixpkgs/nixos/modules/config/nix.nix>

nix.settings.extra−sandbox−paths

Directories from the host filesystem to be included in the sandbox.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/dev"
  "/proc"
]
```

Declared by:

<nixpkgs/nixos/modules/config/nix.nix>

nix.settings.max−jobs

This option defines the maximum number of jobs that Nix will try to build in parallel. The default is auto, which means it will use all available logical cores. It is recommend to set it to the total number of logical cores in your system (e.g., 16 for two CPUs with 4 cores each and hyper−threading).

Type: signed integer or value “auto” (singular enum)

Default:

```
"auto"
```

Example:

```
64
```

Declared by:

<nixpkgs/nixos/modules/config/nix.nix>

nix.settings.require−sigs

If enabled (the default), Nix will only download binaries from binary caches if they are cryptographically signed with any of the keys listed in **nix.settings.trusted−public−keys**. If disabled, signatures are neither required nor checked, so it’s strongly recommended that you use only trustworthy caches and https to prevent man−in−the−middle attacks.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/nix.nix>

nix.settings.sandbox

If set, Nix will perform builds in a sandboxed environment that it will set up automatically for each build. This prevents impurities in builds by disallowing access to dependencies outside of the Nix store by using network and mount namespaces in a chroot environment.

This is enabled by default even though it has a possible performance impact due to the initial setup time of a sandbox for each build. It doesn't affect derivation hashes, so changing this option will not trigger a rebuild of packages.

When set to "relaxed", this option permits derivations that set '__noChroot = true;' to run outside of the sandboxed environment. Exercise caution when using this mode of operation! It is intended to be a quick hack when building with packages that are not easily setup to be built reproducibly.

Type: boolean or value "relaxed" (singular enum)

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/nix.nix>

nix.settings.substituters

List of binary cache URLs used to obtain pre−built binaries of Nix packages.

By default https://cache.nixos.org/ is added.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/config/nix.nix>

nix.settings.system−features

The set of features supported by the machine. Derivations can express dependencies on system features through the 'requiredSystemFeatures' attribute.

Type: list of string

Default:

```
[ "nixos−test" "benchmark" "big−parallel" "kvm" "gccarch−<arch>" \
 ]
```

Declared by:
<nixpkgs/nixos/modules/config/nix.nix>

nix.settings.trusted−public−keys

List of public keys used to sign binary caches. If **nix.settings.trusted−public−keys** is enabled, then Nix will use a binary from a binary cache if and only if it is signed by *any* of the keys listed here. By default, only the key for 'cache.nixos.org' is included.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
```

```
    "hydra.nixos.org-1:CNHJZBh9K4tP3EKF6FkkgeVYsS3ohTl+oS0Qa8bezVs="
  ]
```

Declared by:
<nixpkgs/nixos/modules/config/nix.nix>

nix.settings.trusted−substituters
List of binary cache URLs that non−root users can use (in addition to those specified using **nix.settings.substituters**) by passing '−−option binary−caches' to Nix commands.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "https://hydra.nixos.org/"
]
```

Declared by:
<nixpkgs/nixos/modules/config/nix.nix>

nix.settings.trusted−users
A list of names of users that have additional rights when connecting to the Nix daemon, such as the ability to specify additional binary caches, or to import unsigned NARs. You can also specify groups by prefixing them with '@'; for instance, '@wheel' means all users in the wheel group.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "root"
  "alice"
  "@wheel"
]
```

Declared by:
<nixpkgs/nixos/modules/config/nix.nix>

nix.sshServe.enable
Whether to enable serving the Nix store as a remote store via SSH.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nix−ssh−serve.nix>

nix.sshServe.keys
A list of SSH public keys allowed to access the binary cache via SSH.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "ssh-dss AAAAB3NzaC1k... alice@example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nix-ssh-serve.nix>

nix.sshServe.protocol
The specific Nix-over-SSH protocol to use.

Type: one of “ssh”, “ssh-ng”

Default:

```
"ssh"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nix-ssh-serve.nix>

nix.sshServe.trusted
Whether to add nix-ssh to the nix.settings.trusted-users

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nix-ssh-serve.nix>

nix.sshServe.write
Whether to enable writing to the Nix store as a remote store via SSH. Note: by default, the sshServe user is named nix-ssh and is not a trusted-user. nix-ssh should be added to the **nix.sshServe.trusted** option in most use cases, such as allowing remote building of derivations to anonymous people based on ssh key

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/nix-ssh-serve.nix>

nixops.enableDeprecatedAutoLuks
Whether to enable the deprecated NixOps AutoLuks module.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/misc/nixops-autoluks.nix>

nixpkgs.buildPlatform

Specifies the platform on which NixOS should be built. By default, NixOS is built on the system where it runs, but you can change where it's built. Setting this option will cause NixOS to be cross−compiled.

For instance, if you're doing distributed multi−platform deployment, or if you're building machines, you can set this to match your development system and/or build farm.

Ignored when 'nixpkgs.pkgs' is set.

Type: string or (attribute set)

Default:

```
config.nixpkgs.hostPlatform
```

Example:

```
{
  system = "x86_64−linux";
}
```

Declared by:

<nixpkgs/nixos/modules/misc/nixpkgs.nix>

nixpkgs.config

Global configuration for Nixpkgs. The complete list of **Nixpkgs configuration options** is in the **Nixpkgs manual section on global configuration**.

Ignored when **nixpkgs.pkgs** is set.

Type: nixpkgs config

Default:

```
{ }
```

Example:

```
{ allowBroken = true; allowUnfree = true; }
```

Declared by:

<nixpkgs/nixos/modules/misc/nixpkgs.nix>

nixpkgs.crossSystem

Systems with a recently generated 'hardware−configuration.nix' may instead specify *only* **nixpkgs.buildPlatform**, or fall back to removing the **nixpkgs.hostPlatform** line from the generated config.

Specifies the platform for which NixOS should be built. Specify this only if it is different from 'nixpkgs.localSystem', the platform *on* which NixOS should be built. In other words, specify this to cross−compile NixOS. Otherwise it should be set as null, the default. See its description in the Nixpkgs manual for more details.

Ignored when 'nixpkgs.pkgs' or 'hostPlatform' is set.

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  system = "aarch64−linux";
}
```

Declared by:
<nixpkgs/nixos/modules/misc/nixpkgs.nix>

nixpkgs.flake.setFlakeRegistry
Whether to pin nixpkgs in the system−wide flake registry (‘/etc/nix/registry.json’) to the store path of the sources of nixpkgs used to build the NixOS system.

This is on by default for NixOS configurations built with flakes.

This option makes **nix run nixpkgs#hello** reuse dependencies from the system, avoid refetching nixpkgs, and have a consistent result every time.

Note that this option makes the NixOS closure depend on the nixpkgs sources, which may add undesired closure size if the system will not have any nix commands run on it.

Type: boolean

Default:

```
"config.nixpkgs.flake.source != null"
```

Declared by:
<nixpkgs/nixos/modules/misc/nixpkgs−flake.nix>

nixpkgs.flake.setNixPath
Whether to set **NIX_PATH** to include ‘nixpkgs=flake:nixpkgs’ such that ‘<nixpkgs>’ lookups receive the version of nixpkgs that the system was built with, in concert with **nixpkgs.flake.setFlakeRegistry**.

This is on by default for NixOS configurations built with flakes.

This makes **nix−build '<nixpkgs>' −A hello** work out of the box on flake systems.

Note that this option makes the NixOS closure depend on the nixpkgs sources, which may add undesired closure size if the system will not have any nix commands run on it.

Type: boolean

Default:

```
"config.nixpkgs.flake.source != null"
```

Declared by:
<nixpkgs/nixos/modules/misc/nixpkgs−flake.nix>

nixpkgs.flake.source
The path to the nixpkgs sources used to build the system. This is automatically set up to be the store path of the nixpkgs flake used to build the system if using ‘nixpkgs.lib.nixosSystem’, and is otherwise null by default.

This can also be optionally set if the NixOS system is not built with a flake but still uses pinned sources: set this to the store path for the nixpkgs sources used to build the system, as may be obtained by ‘fetchTarball’, for example.

Note: the name of the store path must be “source” due to **https://github.com/NixOS/nix/issues/7075**.

Type: null or string or absolute path

Default:

```
"if (using nixpkgsFlake.lib.nixosSystem) then self.outPath else nul \
l"
```

Example:

```
"fetchTarball { name = \"source\"; sha256 = \"sha256−AAAAAAAAAA \
AAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA=\"; url = \"https://github.com/ \
nixos/nixpkgs/archive/somecommit.tar.gz\"; }"
```

Declared by:
<nixpkgs/nixos/modules/misc/nixpkgs−flake.nix>

nixpkgs.hostPlatform
Specifies the platform where the NixOS configuration will run.

To cross−compile, set also ‘nixpkgs.buildPlatform’.

Ignored when ‘nixpkgs.pkgs’ is set.

Type: string or (attribute set)

Example:

```
{
  system = "aarch64−linux";
}
```

Declared by:
<nixpkgs/nixos/modules/misc/nixpkgs.nix>

nixpkgs.localSystem
Systems with a recently generated ‘hardware−configuration.nix’ do not need to specify this option, unless cross−compiling, in which case you should set *only* **nixpkgs.buildPlatform**.

If this is somehow not feasible, you may fall back to removing the **nixpkgs.hostPlatform** line from the generated config and use the old options.

Specifies the platform on which NixOS should be built. When ‘nixpkgs.crossSystem’ is unset, it also specifies the platform *for* which NixOS should be built. If this option is unset, it defaults to the platform type of the machine where evaluation happens. Specifying this option is useful when doing distributed multi−platform deployment, or when building virtual machines. See its description in the Nixpkgs manual for more details.

Ignored when ‘nixpkgs.pkgs’ or ‘hostPlatform’ is set.

Type: attribute set

Default:

```
config.nixpkgs.system
```

Example:

```
{
  system = "aarch64−linux";
}
```

Declared by:
<nixpkgs/nixos/modules/misc/nixpkgs.nix>

nixpkgs.overlays
List of overlays to apply to Nixpkgs. This option allows modifying the Nixpkgs package set accessed through the ‘pkgs’ module argument.

For details, see the **Overlays chapter in the Nixpkgs manual**.

If the **nixpkgs.pkgs** option is set, overlays specified using ‘nixpkgs.overlays’ will be applied after the overlays that were already included in ‘nixpkgs.pkgs’.

Type: list of (nixpkgs overlay)

Default:

```
[ ]
```

Example:

```
[
  (self: super: {
    openssh = super.openssh.override {
      hpnSupport = true;
      kerberos = self.libkrb5;
    };
  })
]
```

Declared by:

<nixpkgs/nixos/modules/misc/nixpkgs.nix>

nixpkgs.pkgs

If set, the pkgs argument to all NixOS modules is the value of this option, extended with ‘nixpkgs.overlays’, if that is also set. Either ‘nixpkgs.crossSystem’ or ‘nixpkgs.localSystem’ will be used in an assertion to check that the NixOS and Nixpkgs architectures match. Any other options in ‘nixpkgs.*’, notably ‘config’, will be ignored.

If unset, the pkgs argument to all NixOS modules is determined as shown in the default value for this option.

The default value imports the Nixpkgs source files relative to the location of this NixOS module, because NixOS and Nixpkgs are distributed together for consistency, so the ‘nixos’ in the default value is in fact a relative path. The ‘config’, ‘overlays’, ‘localSystem’, and ‘crossSystem’ come from this option’s siblings.

This option can be used by applications like NixOps to increase the performance of evaluation, or to create packages that depend on a container that should be built with the exact same evaluation of Nixpkgs, for example. Applications like this should set their default value using ‘lib.mkDefault’, so user−provided configuration can override it without using ‘lib’.

Note that using a distinct version of Nixpkgs with NixOS may be an unexpected source of problems. Use this option with care.

Type: An evaluation of Nixpkgs; the top level attribute set of packages

Default:

```
import "${nixos}/.." {
  inherit (config.nixpkgs) config overlays localSystem crossSystem;
}
```

Example:

```
import <nixpkgs> {}
```

Declared by:

<nixpkgs/nixos/modules/misc/nixpkgs.nix>

nixpkgs.system

This option does not need to be specified for NixOS configurations with a recently generated ‘hardware−configuration.nix’.

Specifies the Nix platform type on which NixOS should be built. It is better to specify ‘nixpkgs.localSystem’ instead.

```
{
  nixpkgs.system = ..;
}
```

is the same as

```
{
```

```
  nixpkgs.localSystem.system = ..;
}
```

See ‘nixpkgs.localSystem’ for more information.

Ignored when ‘nixpkgs.pkgs’, ‘nixpkgs.localSystem’ or ‘nixpkgs.hostPlatform’ is set.

Type: string

Default: Traditionally builtins.currentSystem, but unset when invoking NixOS through lib.nixosSystem.

Example:

```
"i686-linux"
```

Declared by:
<nixpkgs/nixos/modules/misc/nixpkgs.nix>

openstack.zfs.datasets

Datasets to create under the ‘tank’ and ‘boot’ zpools.

NOTE: This option is used only at image creation time, and does not attempt to declaratively create or manage datasets on an existing system.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/openstack-options.nix>

openstack.zfs.datasets.<name>.mount

Where to mount this dataset.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/openstack-options.nix>

openstack.zfs.datasets.<name>.properties

Properties to set on this dataset.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/openstack-options.nix>

power.ups.enable

Whether to enable support for Power Devices, such as Uninterruptible Power Supplies, Power Distribution Units and Solar Controllers .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.package
The nut package to use.

Type: package

Default:

```
pkgs.nut
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.maxStartDelay
This can be set as a global variable above your first UPS definition and it can also be set in a UPS section. This value controls how long upsdrvctl will wait for the driver to finish starting. This keeps your system from getting stuck due to a broken driver or UPS.

Type: signed integer

Default:

```
45
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.mode
The MODE determines which part of the NUT is to be started, and which configuration files must be modified.

The values of MODE can be:

- none: NUT is not configured, or use the Integrated Power Management, or use some external system to startup NUT components. So nothing is to be started.
- standalone: This mode address a local only configuration, with 1 UPS protecting the local system. This implies to start the 3 NUT layers (driver, upsd and upsmon) and the matching configuration files. This mode can also address UPS redundancy.
- netserver: same as for the standalone configuration, but also need some more ACLs and possibly a specific LISTEN directive in upsd.conf. Since this MODE is opened to the network, a special care should be applied to security concerns.
- netclient: this mode only requires upsmon.

Type: one of “none”, “standalone”, “netserver”, “netclient”

Default:

```
"standalone"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.openFirewall
Open ports in the firewall for ‘upsd’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.schedulerRules
File which contains the rules to handle UPS events.

Type: string

Example:

```
"/etc/nixos/upssched.conf"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.ups
This is where you configure all the UPSes that this system will be monitoring directly. These are usually attached to serial ports, but USB devices are also supported.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.ups.<name>.description
Description of the UPS.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.ups.<name>.directives
List of configuration directives for this UPS.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.ups.<name>.driver
Specify the program to run to talk to this UPS. apcsmart, bestups, and sec are some examples.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.ups.<name>.maxStartDelay
This can be set as a global variable above your first UPS definition and it can also be set in a UPS section. This value controls how long upsdrvctl will wait for the driver to finish starting. This keeps your system from getting stuck due to a broken driver or UPS.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.ups.<name>.port
The serial port to which your UPS is connected. /dev/ttyS0 is usually the first port on Linux boxes, for example.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.ups.<name>.shutdownOrder
When you have multiple UPSes on your system, you usually need to turn them off in a certain order. upsdrvctl shuts down all the 0s, then the 1s, 2s, and so on. To exclude a UPS from the shutdown sequence, set this to −1.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.ups.<name>.summary
Lines which would be added inside ups.conf for handling this UPS.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsd
Options for the ‘upsd.conf’ configuration file.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsd.enable
Whether to enable ‘upsd’.

Type: boolean

Default: true if mode is one of standalone, netserver

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsd.extraConfig
Additional lines to add to ‘upsd.conf’.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsd.listen
Address of the interface for ‘upsd’ to listen on. See ‘man upsd’ for details`.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    address = "192.168.50.1";
  }
  {
    address = "::1";
    port = 5923;
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsd.listen.*.address
Address of the interface for ‘upsd’ to listen on. See ‘man upsd.conf’ for details.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsd.listen.*.port
TCP port for ‘upsd’ to listen on. See ‘man upsd.conf’ for details.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3493
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsmon
Options for the ‘upsmon.conf’ configuration file.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsmon.enable
Whether to enable ‘upsmon’.

Type: boolean

Default: true if mode is one of standalone, netserver, netclient

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsmon.group
Group for the default ‘nutmon’ user. If the default user is created and this is not specified, a default group will be created.

Type: string

Default:

```
"nutmon"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsmon.monitor
Set of UPS to monitor. See ‘man upsmon.conf’ for details.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsmon.monitor.<name>.passwordFile
The full path to a file containing the password from ‘upsd.users’ for accessing this UPS. The password file is read on service start. See ‘upsmon.conf’ for details.

Type: string

Default: power.ups.users.${user}.passwordFile

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsmon.monitor.<name>.powerValue
Number of power supplies that the UPS feeds on this system. See ‘upsmon.conf’ for details.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsmon.monitor.<name>.system
Identifier of the UPS to monitor, in this form: ‘<upsname>[@<hostname>[:<port>]]’ See ‘upsmon.conf’ for details.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsmon.monitor.<name>.type

The relationship with ‘upsd’. See ‘upsmon.conf’ for details.

Type: string

Default:

```
"master"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsmon.monitor.<name>.user

Username from ‘upsd.users’ for accessing this UPS. See ‘upsmon.conf’ for details.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsmon.settings

Additional settings to add to ‘upsmon.conf’.

Type: attribute set of (atom (null, bool, int, float or string) or list of non−empty (list of (atom (null, bool, int, float or string))))

Default: { MINSUPPLIES = 1; MONITOR = <generated from config.power.ups.upsmon.monitor> NOTIFYCMD = “${cfg.package}/bin/upssched”; POWERDOWNFLAG = “/run/killpower”; SHUTDOWNCMD = “${pkgs.systemd}/bin/shutdown now”; }

Example: { MINSUPPLIES = 2; NOTIFYFLAG = [[“ONLINE” “SYSLOG+EXEC”] [“ONBATT” “SYSLOG+EXEC”]]; }

Declared by:

<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.upsmon.user

User to run ‘upsmon’ as. ‘upsmon.conf’ will have its owner set to this user. If not specified, a default user will be created.

Type: string

Default:

```
"nutmon"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.users

Users that can access upsd. See ‘man upsd.users’.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.users.<name>.actions

Allow the user to do certain things with upsd. See ‘man upsd.users’ for details.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.users.<name>.instcmds
Let the user initiate specific instant commands. Use “ALL” to grant all commands automatically. For the full list of what your UPS supports, use “upscmd −l”. See ‘man upsd.users’ for details.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.users.<name>.passwordFile
The full path to a file that contains the user’s (clear text) password. The password file is read on service start.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

power.ups.users.<name>.upsmon
Add the necessary actions for a upsmon process to work. See ‘man upsd.users’ for details.

Type: null or one of “primary”, “secondary”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/ups.nix>

powerManagement.enable
Whether to enable power management. This includes support for suspend−to−RAM and powersave features on laptops.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/power−management.nix>

powerManagement.bootCommands
Commands executed only once after initial boot. These commands are executed before ‘powerUpCommands’.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"${pkgs.networkmanager}/bin/nmcli radio wifi on"
```

Declared by:
<nixpkgs/nixos/modules/config/power−management.nix>

powerManagement.cpuFreqGovernor

Configure the governor used to regulate the frequency of the available CPUs. By default, the kernel configures the performance governor, although this may be overwritten in your hardware−configuration.nix file.

Often used values: “ondemand”, “powersave”, “performance”

Type: null or string

Default:

```
null
```

Example:

```
"ondemand"
```

Declared by:

<nixpkgs/nixos/modules/tasks/cpu−freq.nix>

powerManagement.cpufreq.max

The maximum frequency the CPU will use. Defaults to the maximum possible.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Example:

```
2200000
```

Declared by:

<nixpkgs/nixos/modules/tasks/cpu−freq.nix>

powerManagement.cpufreq.min

The minimum frequency the CPU will use.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Example:

```
800000
```

Declared by:

<nixpkgs/nixos/modules/tasks/cpu−freq.nix>

powerManagement.powerDownCommands

Commands executed when the machine powers down. That is, they’re executed both when the system shuts down and when it goes to suspend or hibernation.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"${pkgs.hdparm}/sbin/hdparm −B 255 /dev/sda"
```

Declared by:

<nixpkgs/nixos/modules/config/power−management.nix>

powerManagement.powerUpCommands

Commands executed when the machine powers up. That is, they're executed both when the system first boots and when it resumes from suspend or hibernation.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
"${pkgs.powertop}/bin/powertop --auto-tune"
```

Declared by:

<nixpkgs/nixos/modules/config/power-management.nix>

powerManagement.powertop.enable

Whether to enable powertop auto tuning on startup.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/tasks/powertop.nix>

powerManagement.powertop.postStart

Shell commands executed after 'powertop' is started.

This can be used to workaround problematic configurations. For example, you can retrigger an 'udev' rule to disable power saving on unsupported USB devices:

```
services.udev.extraRules = '''
  # disable USB auto suspend for Logitech, Inc. G PRO Gaming Mouse
  ACTION=="bind", SUBSYSTEM=="usb", ATTR{idVendor}=="046d", ATTR{id \
Product}=="c08c", TEST=="power/control", ATTR{power/control}="on"
```

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
  ''${lib.getExe' config.systemd.package "udevadm"} trigger -c bin \
d -s usb -a idVendor=046d -a idProduct=c08c
```

Declared by:

<nixpkgs/nixos/modules/tasks/powertop.nix>

powerManagement.powertop.preStart

Shell commands executed before 'powertop' is started.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/tasks/powertop.nix>

powerManagement.resumeCommands
Commands executed after the system resumes from suspend−to−RAM.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"${pkgs.util-linux}/bin/rfkill unblock all"
```

Declared by:
<nixpkgs/nixos/modules/config/power−management.nix>

powerManagement.scsiLinkPolicy
SCSI link power management policy. The kernel default is “max_performance”.

“med_power_with_dipm” is supported by kernel versions 4.15 and newer.

Type: null or one of “min_power”, “max_performance”, “medium_power”, “med_power_with_dipm”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/tasks/scsi−link−power−management.nix>

programs._1password.enable
Whether to enable the 1Password CLI tool.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/_1password.nix>

programs._1password.package
The 1Password CLI package to use.

Type: package

Default:

```
pkgs._1password-cli
```

Declared by:
<nixpkgs/nixos/modules/programs/_1password.nix>

programs._1password−gui.enable
Whether to enable the 1Password GUI application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/_1password-gui.nix>

programs._1password-gui.package
The 1Password GUI package to use.

Type: package

Default:

```
pkgs._1password-gui
```

Declared by:
<nixpkgs/nixos/modules/programs/_1password-gui.nix>

programs._1password-gui.polkitPolicyOwners
A list of users who should be able to integrate 1Password with polkit-based authentication mechanisms.

Type: list of string

Default:

```
[ ]
```

Example:

```
["user1" "user2" "user3"]
```

Declared by:
<nixpkgs/nixos/modules/programs/_1password-gui.nix>

programs.alvr.enable
Whether to enable ALVR, the VR desktop streamer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/alvr.nix>

programs.alvr.package
The alvr package to use.

Type: package

Default:

```
pkgs.alvr
```

Declared by:
<nixpkgs/nixos/modules/programs/alvr.nix>

programs.alvr.openFirewall
Whether to open the default ports in the firewall for the ALVR server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/alvr.nix>

programs.amnezia−vpn.enable
Whether to enable The AmneziaVPN client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/amnezia−vpn.nix>

programs.amnezia−vpn.package
The amnezia−vpn package to use.

Type: package

Default:

```
pkgs.amnezia−vpn
```

Declared by:
<nixpkgs/nixos/modules/programs/amnezia−vpn.nix>

programs.appgate−sdp.enable
Whether to enable the AppGate SDP VPN client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/appgate−sdp.nix>

programs.appimage.enable
Whether to enable appimage−run wrapper script for executing appimages on NixOS.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/appimage.nix>

programs.appimage.package
The appimage−run package to use.

Type: package

Default:

```
pkgs.appimage−run
```

Example:

```
pkgs.appimage-run.override {
  extraPkgs = pkgs: [ pkgs.ffmpeg pkgs.imagemagick ];
}
```

Declared by:
<nixpkgs/nixos/modules/programs/appimage.nix>

programs.appimage.binfmt
Whether to enable binfmt registration to run appimages via appimage−run seamlessly.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/appimage.nix>

programs.arp−scan.enable
Whether to configure a setcap wrapper for arp−scan.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/arp−scan.nix>

programs.atop.enable
Whether to enable Atop, a tool for monitoring system resources.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/atop.nix>

programs.atop.package
The atop package to use.

Type: package

Default:

```
pkgs.atop
```

Declared by:
<nixpkgs/nixos/modules/programs/atop.nix>

programs.atop.atopRotateTimer.enable

Whether to enable the atop−rotate timer, which restarts the atop service daily to make sure the data files are rotate.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/atop.nix>

programs.atop.atopService.enable

Whether to enable the atop service responsible for storing statistics for long−term analysis.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/atop.nix>

programs.atop.atopacctService.enable

Whether to enable the atopacct service which manages process accounting. This allows Atop to gather data about processes that disappeared in between two refresh intervals.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/atop.nix>

programs.atop.atopgpu.enable

Whether to install and enable the atopgpud daemon to get information about NVIDIA gpus.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/atop.nix>

programs.atop.netatop.enable

Whether to install and enable the netatop kernel module. Note: this sets the kernel taint flag “O” for loading out−of−tree modules.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/atop.nix>

programs.atop.netatop.package
Which package to use for netatop.

Type: package

Default:

```
config.boot.kernelPackages.netatop
```

Declared by:
<nixpkgs/nixos/modules/programs/atop.nix>

programs.atop.settings
Parameters to be written to */etc/atoprc*.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  flags = "a1f";
  interval = 5;
}
```

Declared by:
<nixpkgs/nixos/modules/programs/atop.nix>

programs.atop.setuidWrapper.enable
Whether to install a setuid wrapper for Atop. This is required to use some of the features as non−root user (e.g.: ipc information, netatop, atopgpu). Atop tries to drop the root privileges shortly after starting.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/atop.nix>

programs.atuin.enable
Whether to enable atuin.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/atuin.nix>

programs.atuin.enableBashIntegration
Whether to enable Bash integration.

Type: boolean

Default:

```
config.programs.bash.enable
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/atuin.nix>

programs.atuin.enableFishIntegration
Whether to enable Fish integration.

Type: boolean

Default:

```
config.programs.fish.enable
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/atuin.nix>

programs.atuin.enableZshIntegration
Whether to enable Zsh integration.

Type: boolean

Default:

```
config.programs.zsh.enable
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/atuin.nix>

programs.atuin.package
The atuin package to use.

Type: package

Default:

```
pkgs.atuin
```

Declared by:
<nixpkgs/nixos/modules/programs/atuin.nix>

programs.atuin.daemon.enable
Whether to enable the Atuin daemon.

Type: boolean

Default:

```
pkgs.stdenv.hostPlatform.isLinux
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/atuin.nix>

programs.atuin.daemon.logLevel

Log level for the Atuin daemon.

Type: one of “trace”, “debug”, “info”, “warn”, “error”

Default:

```
"info"
```

Declared by:

<nixpkgs/nixos/modules/programs/atuin.nix>

programs.atuin.flags

Flags to append to the shell hook.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--disable-up-arrow"
  "--disable-ctrl-r"
]
```

Declared by:

<nixpkgs/nixos/modules/programs/atuin.nix>

programs.atuin.settings

Configuration written to */etc/atuin/config.toml*.

See **https://docs.atuin.sh/configuration/config/** for the full list of options.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  auto_sync = true;
  sync_frequency = "5m";
  sync_address = "https://api.atuin.sh";
  search_mode = "prefix";
}
```

Declared by:

<nixpkgs/nixos/modules/programs/atuin.nix>

programs.atuin.themes

Each theme is written to */etc/atuin/themes/theme-name.toml* where the name of each attribute is the theme-name

See **https://docs.atuin.sh/guide/theming/** for the full list of options.

Type: attribute set of (TOML value or absolute path or strings concatenated with “\n”)

Default:

```
{ }
```

Example:

```
{
```

```
  "my-theme" = {
    theme.name = "My Theme";
    colors = {
      Base = "#000000";
      Title = "#FFFFFF";
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/programs/atuin.nix>

programs.ausweisapp.enable
Whether to enable AusweisApp.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/ausweisapp.nix>

programs.ausweisapp.openFirewall
Whether to open the required firewall ports for the Smartphone as Card Reader (SaC) functionality of AusweisApp.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/ausweisapp.nix>

programs.autoenv.enable
Whether to enable autoenv.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/autoenv.nix>

programs.autoenv.package
The autoenv package to use.

Type: package

Default:

```
pkgs.autoenv
```

Declared by:
<nixpkgs/nixos/modules/programs/autoenv.nix>

programs.autojump.enable
Whether to enable autojump.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/autojump.nix>

programs.bandwhich.enable
Whether to add bandwhich to the global environment and configure a setcap wrapper for it.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/bandwhich.nix>

programs.bash.enable
Whenever to configure Bash as an interactive shell. Note that this tries to make Bash the default **users.defaultUserShell**, which in turn means that you might need to explicitly set this variable if you have another shell configured with NixOS.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/bash/bash.nix>

programs.bash.enableLsColors
Whether to enable extra colors in directory listings.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/bash/ls−colors.nix>

programs.bash.blesh.enable
Whether to enable blesh, a full−featured line editor written in pure Bash.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/bash/blesh.nix>

programs.bash.completion.enable
Whether to enable Bash completion for all interactive bash shells.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/bash/bash−completion.nix>

programs.bash.completion.package
The bash−completion package to use.

Type: package

Default:

```
pkgs.bash−completion
```

Declared by:
<nixpkgs/nixos/modules/programs/bash/bash−completion.nix>

programs.bash.interactiveShellInit
Shell script code called during interactive bash shell initialisation.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/bash/bash.nix>

programs.bash.loginShellInit
Shell script code called during login bash shell initialisation.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/bash/bash.nix>

programs.bash.logout
Shell script code called during login bash shell logout.

Type: strings concatenated with “\n”

Default:

```
printf '\e]0;\a'
```

Declared by:
<nixpkgs/nixos/modules/programs/bash/bash.nix>

programs.bash.lsColorsFile

Alternative colorscheme for ls colors

Type: null or absolute path

Default:

```
null
```

Example:

```
${pkgs.dircolors-solarized}/ansi-dark
```

Declared by:

<nixpkgs/nixos/modules/programs/bash/ls-colors.nix>

programs.bash.promptInit

Shell script code used to initialise the bash prompt.

Type: strings concatenated with “\n”

Default:

```
# Provide a nice prompt if the terminal supports it.
if [ "$TERM" != "dumb" ] || [ -n "$INSIDE_EMACS" ]; then
  PROMPT_COLOR="1;31m"
  ((UID)) && PROMPT_COLOR="1;32m"
  if [ -n "$INSIDE_EMACS" ]; then
    # Emacs term mode doesn't support xterm title escape sequence \
(\e]0;)
    PS1="\n\[\033[$PROMPT_COLOR\][\u@\h:\w]\\$\[\033[0 \
m\] "
  else
    PS1="\n\[\033[$PROMPT_COLOR\][\[\e]0;\u@\h: \w\a\] \
\u@\h:\w]\\$\[\033[0m\] "
  fi
  if test "$TERM" = "xterm"; then
    PS1="\[\033]2;\h:\u:\w\007\]$PS1"
  fi
fi
```

Declared by:

<nixpkgs/nixos/modules/programs/bash/bash.nix>

programs.bash.shellAliases

Set of aliases for bash shell, which overrides **environment.shellAliases**. See **environment.shellAliases** for an option format description.

Type: attribute set of (null or string or absolute path)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/programs/bash/bash.nix>

programs.bash.shellInit

Shell script code called during bash shell initialisation.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/bash/bash.nix>

programs.bash.undistractMe.enable
Whether to enable notifications when long−running terminal commands complete.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/bash/undistract−me.nix>

programs.bash.undistractMe.playSound
Whether to enable notification sounds when long−running terminal commands complete.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/bash/undistract−me.nix>

programs.bash.undistractMe.timeout
Number of seconds it would take for a command to be considered long−running.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/programs/bash/undistract−me.nix>

programs.bash.vteIntegration
Whether to enable Bash integration for VTE terminals. This allows it to preserve the current directory of the shell across terminals.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/config/vte.nix>

programs.bash−my−aws.enable
Whether to enable bash−my−aws.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/bash−my−aws.nix>

programs.bat.enable
Whether to enable ‘bat’, a **cat**(1) clone with wings.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/bat.nix>

programs.bat.package
The bat package to use.

Type: package

Default:

```
pkgs.bat
```

Declared by:
<nixpkgs/nixos/modules/programs/bat.nix>

programs.bat.extraPackages
Extra ‘bat’ scripts to be added to the system configuration.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs.bat−extras; [
  batdiff
  batman
  prettybat
];
```

Declared by:
<nixpkgs/nixos/modules/programs/bat.nix>

programs.bat.settings
Parameters to be written to the system−wide ‘bat’ configuration file.

Type: attribute set of (atom (null, bool, int, float or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Example:

```
{
  italic−text = "always";
  map−syntax = [
    "*.ino:C++"
    ".ignore:Git Ignore"
```

```
    ];
    pager = "less --RAW-CONTROL-CHARS --quit-if-one-screen  \
  --mouse";
    paging = "never";
    theme = "TwoDark";
  }
```

Declared by:
<nixpkgs/nixos/modules/programs/bat.nix>

programs.bazecor.enable
Whether to enable Bazecor, the graphical configurator for Dygma Products.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/bazecor.nix>

programs.bazecor.package
The bazecor package to use.

Type: package

Default:

```
pkgs.bazecor
```

Declared by:
<nixpkgs/nixos/modules/programs/bazecor.nix>

programs.bcc.enable
Whether to enable bcc, tools for BPF-based Linux IO analysis, networking, monitoring, and more.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/bcc.nix>

programs.benchexec.enable
Whether to enable BenchExec.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/benchexec.nix>

programs.benchexec.package
The benchexec package to use.

Type: package

Default:

```
pkgs.benchexec
```

Declared by:
<nixpkgs/nixos/modules/programs/benchexec.nix>

programs.benchexec.users
Users that intend to use BenchExec. Provide usernames of users that are configured via **users.users** as string, and UIDs of "mutable users" as integers. Control group delegation will be configured via systemd. For more information, see **https://github.com/sosy-lab/benchexec/blob/3.18/doc/INSTALL.md#setting-up-cgroups**.

Type: list of (string or signed integer)

Default:

```
[ ]
```

Example:

```
[
  "alice" # username of a user configured via users.users
  1007    # UID of a mutable user
]
```

Declared by:
<nixpkgs/nixos/modules/programs/benchexec.nix>

programs.browserpass.enable
Whether to enable Browserpass native messaging host.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/browserpass.nix>

programs.calls.enable
Whether to enable GNOME calls: a phone dialer and call handler .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/calls.nix>

programs.captive−browser.enable
Whether to enable captive browser, a dedicated Chrome instance to log into captive portals without messing with DNS settings.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/captive−browser.nix>

programs.captive−browser.package
The captive−browser package to use.

Type: package

Default:

```
pkgs.captive−browser
```

Declared by:
<nixpkgs/nixos/modules/programs/captive−browser.nix>

programs.captive−browser.bindInterface
Binds ‘captive−browser’ to the network interface declared in ‘cfg.interface’. This can be used to avoid collisions with private subnets.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/captive−browser.nix>

programs.captive−browser.browser
The shell (/bin/sh) command executed once the proxy starts. When browser exits, the proxy exits. An extra env var PROXY is available.

Here, we use a separate Chrome instance in Incognito mode, so that it can run (and be waited for) alongside the default one, and that it maintains no state across runs. To configure this browser open a normal window in it, settings will be preserved.

@volth: chromium is to open a plain HTTP (not HTTPS nor redirect to HTTPS!) website. upstream uses http://example.com but I have seen captive portals whose DNS server resolves “example.com” to 127.0.0.1

Type: string

Default:

```
env XDG_CONFIG_HOME="$PREV_CONFIG_HOME" ${pkgs.chromium}/bin/chromi \
um −−user−data−dir=${XDG_DATA_HOME:−$HOME/.local/share}/chromi \
um−captive −−proxy−server="socks5://$PROXY" −−host−resolver \
−rules="MAP * ~NOTFOUND , EXCLUDE localhost" −−no−first−run  \
−−new−window −−incognito −no−default−browser−check http:// \
cache.nixos.org/
```

Declared by:
<nixpkgs/nixos/modules/programs/captive−browser.nix>

programs.captive−browser.dhcp−dns
The shell (/bin/sh) command executed to obtain the DHCP DNS server address. The first match of an IPv4 regex is used. IPv4 only, because let's be real, it's a captive portal.

Type: string

Declared by:
<nixpkgs/nixos/modules/programs/captive−browser.nix>

programs.captive−browser.interface
your public network interface (wlp3s0, wlan0, eth0, …)

Type: string

Declared by:
<nixpkgs/nixos/modules/programs/captive−browser.nix>

programs.captive−browser.socks5−addr
the listen address for the SOCKS5 proxy server

Type: string

Default:

```
"localhost:1666"
```

Declared by:
<nixpkgs/nixos/modules/programs/captive−browser.nix>

programs.ccache.enable
Whether to enable CCache, a compiler cache for fast recompilation of C/C++ code.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/ccache.nix>

programs.ccache.packageNames
Nix top−level packages to be compiled using CCache

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "wxwidgets_3_2"
  "ffmpeg"
  "libav_all"
]
```

Declared by:
<nixpkgs/nixos/modules/programs/ccache.nix>

programs.ccache.cacheDir
CCache directory

Type: absolute path

Default:

```
"/var/cache/ccache"
```

Declared by:
<nixpkgs/nixos/modules/programs/ccache.nix>

programs.ccache.group
Group owner of CCache directory

Type: string

Default:

```
"nixbld"
```

Declared by:
<nixpkgs/nixos/modules/programs/ccache.nix>

programs.ccache.owner
Owner of CCache directory

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/programs/ccache.nix>

programs.ccache.trace
Trace ccache usage to see which derivations use ccache

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/ccache.nix>

programs.cdemu.enable
cdemu for members of **programs.cdemu.group**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/cdemu.nix>

programs.cdemu.group
Group that users must be in to use **cdemu**.

Type: string

Default:

```
"cdrom"
```

Declared by:
<nixpkgs/nixos/modules/programs/cdemu.nix>

programs.cdemu.gui
Whether to install the **cdemu** GUI (gCDEmu).

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/cdemu.nix>

programs.cdemu.image−analyzer
Whether to install the image analyzer.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/cdemu.nix>

programs.cfs−zen−tweaks.enable
Whether to enable CFS Zen Tweaks.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/cfs−zen−tweaks.nix>

programs.chromium.enable
Whether to enable policies for chromium based browsers like Chromium, Google Chrome or Brave.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/chromium.nix>

programs.chromium.enablePlasmaBrowserIntegration
Whether to enable Native Messaging Host for Plasma Browser Integration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/chromium.nix>

programs.chromium.defaultSearchProviderEnabled
Enable the default search provider.

Type: null or boolean

Default:

```
null
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/chromium.nix>

programs.chromium.defaultSearchProviderSearchURL
Chromium default search provider url.

Type: null or string

Default:

```
null
```

Example:

```
"https://encrypted.google.com/search?q={searchTerms}&{google:RLZ}{g \
oogle:originalQueryForSuggestion}{google:assistedQueryStats}{google \
:searchFieldtrialParameter}{google:searchClient}{google:sourceId}{g \
oogle:instantExtendedEnabledParameter}ie={inputEncoding}"
```

Declared by:
<nixpkgs/nixos/modules/programs/chromium.nix>

programs.chromium.defaultSearchProviderSuggestURL
Chromium default search provider url for suggestions.

Type: null or string

Default:

```
null
```

Example:

```
"https://encrypted.google.com/complete/search?output=chrome&q={sear \
chTerms}"
```

Declared by:
<nixpkgs/nixos/modules/programs/chromium.nix>

programs.chromium.extensions
List of chromium extensions to install. For list of plugins ids see id in url of extensions on **chrome web store** page. To install a chromium extension not included in the chrome web store, append to the extension id a semicolon ";" followed by a URL pointing to an Update Manifest XML file. See **ExtensionInstallForcelist** for additional details.

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "chlffgpmiacpedhhbkiomidkjlcfhogd" # pushbullet
  "mbniclmhobmnbdlbpiphghaielnnpgdp" # lightshot
  "gcbommkclmclpchllfjekcdonpmejbdp" # https everywhere
  "cjpalhdlnbpafiamejdnhcphjbkeiagm" # ublock origin
]
```

Declared by:

<nixpkgs/nixos/modules/programs/chromium.nix>

programs.chromium.extraOpts

Extra chromium policy options. A list of available policies can be found in the Chrome Enterprise documentation: **https://cloud.google.com/docs/chrome−enterprise/policies/** Make sure the selected policy is supported on Linux and your browser version.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  "BrowserSignin" = 0;
  "SyncDisabled" = true;
  "PasswordManagerEnabled" = false;
  "SpellcheckEnabled" = true;
  "SpellcheckLanguage" = [
    "de"
    "en−US"
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/programs/chromium.nix>

programs.chromium.homepageLocation

Chromium default homepage

Type: null or string

Default:

```
null
```

Example:

```
"https://nixos.org"
```

Declared by:

<nixpkgs/nixos/modules/programs/chromium.nix>

programs.chromium.initialPrefs

Initial preferences are used to configure the browser for the first run. Unlike **programs.chromium.extraOpts**, initialPrefs can be changed by users in the browser settings. More information can be found in the Chromium documentation: **https://www.chromium.org/administrators/configuring−other−preferences/**

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  "first_run_tabs" = [
    "https://nixos.org/"
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/programs/chromium.nix>

programs.chromium.plasmaBrowserIntegrationPackage
The plasma−browser−integration package to use.

Type: package

Default:

```
pkgs.kdePackages.plasma-browser-integration
```

Declared by:
<nixpkgs/nixos/modules/programs/chromium.nix>

programs.chrysalis.enable
Whether to enable Chrysalis.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/chrysalis.nix>

programs.chrysalis.package
The Chrysalis package to use.

Type: package

Default:

```
pkgs.chrysalis
```

Declared by:
<nixpkgs/nixos/modules/programs/chrysalis.nix>

programs.clash−verge.enable
Whether to enable Clash Verge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/clash−verge.nix>

programs.clash−verge.package
The clash−verge package to use. Available options are clash−verge−rev and clash−nyanpasu, both are forks of the original clash−verge project.

Type: package

Default:

```
pkgs.clash-verge-rev
```

Declared by:
<nixpkgs/nixos/modules/programs/clash−verge.nix>

programs.clash−verge.autoStart
Whether to enable Clash Verge auto launch.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/clash−verge.nix>

programs.clash−verge.group
The group to grant access to clash−verge−rev's service socket.

For better security, you should set a group that only contains users who need to access clash−verge−rev's service socket.

Type: string

Default:

```
"users"
```

Example:

```
"wheel"
```

Declared by:
<nixpkgs/nixos/modules/programs/clash−verge.nix>

programs.clash−verge.serviceMode
Whether to enable Service Mode.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/clash−verge.nix>

programs.clash−verge.tunMode

Whether to enable Setcap for TUN Mode. DNS settings won't work on this way.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/clash−verge.nix>

programs.cnping.enable

Whether to enable a setcap wrapper for cnping.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/cnping.nix>

programs.command−not−found.enable

Whether interactive shells should show which Nix package (if any) provides a missing command.

See also nix−index and nix−index−database as an alternative for flakes−based systems.

Additionally, having the env var NIX_AUTO_RUN set will automatically run the matching package, and with NIX_AUTO_RUN_INTERACTIVE it will confirm the package before running.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/command−not−found/command−not−found.nix>

programs.command−not−found.dbPath

Absolute path to 'programs.sqlite', which contains mappings from binary names to package names.

If a nixpkgs tarball from https://channels.nixos.org is used as the source of nixpkgs, this file will be provided and this option be set by default.

To use the stateful 'programs.sqlite' database, set this option to '/nix/var/nix/profiles/per−user/root/channels/nixos/programs.sqlite'. If you do so, you can update it with 'sudo nix−channels −−update'.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/programs/command−not−found/command−not−found.nix>

programs.coolercontrol.enable

Whether to enable CoolerControl GUI & its background services.

Type: boolean

Default:

`false`

Example:

`true`

Declared by:
<nixpkgs/nixos/modules/programs/coolercontrol.nix>

programs.corectrl.enable
Whether to enable CoreCtrl, a tool to overclock amd graphics cards and processors. Add your user to the corectrl group to run corectrl without needing to enter your password .

Type: boolean

Default:

`false`

Example:

`true`

Declared by:
<nixpkgs/nixos/modules/hardware/corectrl.nix>

programs.corectrl.package
The corectrl package to use. Useful for overriding the configuration options used for the package.

Type: package

Default:

`pkgs.corectrl`

Declared by:
<nixpkgs/nixos/modules/hardware/corectrl.nix>

programs.corefreq.enable
Whether to enable Whether to enable the corefreq daemon and kernel module.

Type: boolean

Default:

`false`

Example:

`true`

Declared by:
<nixpkgs/nixos/modules/programs/corefreq.nix>

programs.corefreq.package
The corefreq package to use.

Type: package

Default:

`config.boot.kernelPackages.corefreq`

Declared by:
<nixpkgs/nixos/modules/programs/corefreq.nix>

programs.cpu−energy−meter.enable
Whether to enable CPU Energy Meter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/cpu−energy−meter.nix>

programs.cpu−energy−meter.package
The cpu−energy−meter package to use.

Type: package

Default:

```
pkgs.cpu−energy−meter
```

Declared by:
<nixpkgs/nixos/modules/programs/cpu−energy−meter.nix>

programs.criu.enable
Install **criu** along with necessary kernel options.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/criu.nix>

programs.dconf.enable
Whether to enable dconf.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/dconf.nix>

programs.dconf.packages
A list of packages which provide dconf profiles and databases in */etc/dconf*.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/programs/dconf.nix>

programs.dconf.profiles

Attrset of dconf profiles. By default the ‘user’ profile is used which ends up in ‘/etc/dconf/profile/user’.

Type: attribute set of (absolute path or package or (submodule))

Default:

```
{ }
```

Example:

```
{
  # A "user" profile with a database
  user.databases = [
    {
      settings = { };
    }
  ];
  # A "bar" profile from a package
  bar = pkgs.bar-dconf-profile;
  # A "foo" profile from a path
  foo = ${./foo}
};
```

Declared by:

<nixpkgs/nixos/modules/programs/dconf.nix>

programs.digitalbitbox.enable

Installs the Digital Bitbox application and enables the complementary hardware module.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/digitalbitbox/default.nix>

programs.digitalbitbox.package

The digitalbitbox package to use. This can be used to install a package with udev rules that differ from the defaults.

Type: package

Default:

```
pkgs.digitalbitbox
```

Declared by:

<nixpkgs/nixos/modules/programs/digitalbitbox/default.nix>

programs.direnv.enable

Whether to enable direnv integration. Takes care of both installation and setting up the sourcing of the shell. Additionally enables nix−direnv integration. Note that you need to logout and login for this change to apply .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/direnv.nix>

programs.direnv.enableBashIntegration
Whether to enable Bash integration .

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/direnv.nix>

programs.direnv.enableFishIntegration
Whether to enable Fish integration .

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/direnv.nix>

programs.direnv.enableXonshIntegration
Whether to enable Xonsh integration .

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/direnv.nix>

programs.direnv.enableZshIntegration
Whether to enable Zsh integration .

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/direnv.nix>

programs.direnv.package

The direnv package to use.

Type: package

Default:

```
pkgs.direnv
```

Declared by:

<nixpkgs/nixos/modules/programs/direnv.nix>

programs.direnv.angrr.enable

Whether to enable angrr direnv integration.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/angrr.nix>

programs.direnv.angrr.autoUse

Whether to automatically use angrr before loading .envrc.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/angrr.nix>

programs.direnv.direnvrcExtra

Extra lines to append to the sourced direnvrc

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
export FOO="foo"
echo "loaded direnv!"
```

Declared by:

<nixpkgs/nixos/modules/programs/direnv.nix>

programs.direnv.loadInNixShell

Whether to enable loading direnv in ‘nix−shell’ ‘nix shell’ or ‘nix develop’ .

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/direnv.nix>

programs.direnv.nix−direnv.enable
Whether to enable a faster, persistent implementation of use_nix and use_flake, to replace the builtin one .

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/direnv.nix>

programs.direnv.nix−direnv.package
The nix−direnv package to use

Type: package

Default:

```
"pkgs.nix-direnv"
```

Declared by:
<nixpkgs/nixos/modules/programs/direnv.nix>

programs.direnv.settings
Direnv configuration. Refer to **direnv.toml**(1).

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  global = {
    log_format = "-";
    log_filter = "^$";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/programs/direnv.nix>

programs.direnv.silent
Whether to enable the hiding of direnv logging .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/direnv.nix>

programs.dmrconfig.enable
Whether to configure system to enable use of dmrconfig. This enables the required udev rules and installs the program.

Type: boolean

Default:

```
false
```

Related packages:

- 'pkgs.dmrconfig'

Declared by:
<nixpkgs/nixos/modules/programs/dmrconfig.nix>

programs.dmrconfig.package
The dmrconfig package to use.

Type: package

Default:

```
pkgs.dmrconfig
```

Declared by:
<nixpkgs/nixos/modules/programs/dmrconfig.nix>

programs.dms−shell.enable
Whether to enable DankMaterialShell, a complete desktop shell for Wayland compositors.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/dms−shell.nix>

programs.dms−shell.enableAudioWavelength
Whether to install dependencies required for audio wavelength visualization. This enables audio spectrum and waveform visualizer widgets.

Requires: cava

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/dms−shell.nix>

programs.dms−shell.enableCalendarEvents
Whether to install dependencies required for calendar events support. This enables calendar widgets that display events and reminders via khal.

Requires: khal

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/dms-shell.nix>

programs.dms-shell.enableClipboardPaste
Whether to install dependencies required for pasting directly from the clipboard history support. This enables pressing Shift+Return for pasting entries from the clipboard history.

Requires: wtype

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/dms-shell.nix>

programs.dms-shell.enableDynamicTheming
Whether to install dependencies required for dynamic theming support. This enables automatic theme generation based on wallpapers and other sources.

Requires: matugen

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/dms-shell.nix>

programs.dms-shell.enableSystemMonitoring
Whether to install dependencies required for system monitoring widgets. This includes process list viewers and system resource monitors.

Requires: dgop

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/dms-shell.nix>

programs.dms-shell.enableVPN
Whether to install dependencies required for VPN widgets. This enables VPN status monitoring and management through NetworkManager.

Requires: glib, networkmanager

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/dms-shell.nix>

programs.dms−shell.package

The dms−shell package to use.

Type: package

Default:

```
pkgs.dms-shell
```

Declared by:

<nixpkgs/nixos/modules/programs/wayland/dms−shell.nix>

programs.dms−shell.plugins

DMS Plugins to install and enable

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  DockerManager = {
    src = pkgs.fetchFromGitHub {
      owner = "LuckShiba";
      repo = "DmsDockerManager";
      rev = "v1.2.0";
      sha256 = "sha256-VoJCaygWnKpv0s0pqTOmzZnPM922qPDMHk4EPcgVnaU \
="";
    };
  };
  AnotherPlugin = {
    enable = true;
    src = pkgs.another-plugin;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/programs/wayland/dms−shell.nix>

programs.dms−shell.plugins.<name>.enable

Whether to enable this plugin

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/wayland/dms−shell.nix>

programs.dms−shell.plugins.<name>.src

Source of the plugin package or path

Type: package or absolute path

Declared by:

<nixpkgs/nixos/modules/programs/wayland/dms−shell.nix>

programs.dms−shell.quickshell.package
The quickshell package to use.

Type: package

Default:

```
pkgs.quickshell
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/dms−shell.nix>

programs.dms−shell.systemd.enable
Whether to enable DankMaterialShell systemd startup service.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/dms−shell.nix>

programs.dms−shell.systemd.restartIfChanged
Whether to restart the dms.service when the DankMaterialShell package or configuration changes. This ensures the latest version is always running after a system rebuild.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/dms−shell.nix>

programs.dms−shell.systemd.target
The systemd target that will automatically start the DankMaterialShell service.

Common targets include:

- ‘graphical−session.target’ for most desktop environments
- ‘wayland−session.target’ for Wayland−specific sessions

Type: string

Default:

```
"graphical-session.target"
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/dms−shell.nix>

programs.droidcam.enable
Whether to enable DroidCam client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/droidcam.nix>

programs.dsearch.enable
Whether to enable dsearch, a fast filesystem search service with fuzzy matching.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/dsearch.nix>

programs.dsearch.package
The dsearch package to use.

Type: package

Default:

```
pkgs.dsearch
```

Declared by:
<nixpkgs/nixos/modules/programs/dsearch.nix>

programs.dsearch.systemd.enable
Whether to enable systemd user service for dsearch.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/dsearch.nix>

programs.dsearch.systemd.target
The systemd target that will automatically start the dsearch service.

By default, dsearch starts with the user session (‘default.target’). You can change this to ‘graphical−session.target’ if you only want it to run in graphical sessions.

Type: string

Default:

```
"default.target"
```

Declared by:
<nixpkgs/nixos/modules/programs/dsearch.nix>

programs.dublin−traceroute.enable
Whether to enable dublin−traceroute (including setcap wrapper).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/dublin−traceroute.nix>

programs.dublin−traceroute.package
The dublin−traceroute package to use.

Type: package

Default:

```
pkgs.dublin−traceroute
```

Declared by:
<nixpkgs/nixos/modules/programs/dublin−traceroute.nix>

programs.dwl.enable
Whether to enable Dwl is a compact, hackable compositor for Wayland based on wlroots. You can manually launch Dwl by executing “exec dwl” on a TTY. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/dwl.nix>

programs.dwl.package
The dwl package to use.

Type: package

Default:

```
pkgs.dwl
```

Example:

```
# Lets apply bar patch from:
# https://codeberg.org/dwl/dwl−patches/src/branch/main/patches/bar
(pkgs.dwl.override {
  configH = ./dwl−config.h;
}).overrideAttrs (oldAttrs: {
  buildInputs =
    oldAttrs.buildInputs or []
    ++ [
      pkgs.libdrm
      pkgs.fcft
    ];
  patches = oldAttrs.patches or [] ++ [
    ./bar−0.7.patch
  ];
});
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/dwl.nix>

programs.dwl.extraSessionCommands
Shell commands executed just before dwl is started.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/dwl.nix>

programs.ente−auth.enable
Whether to enable Ente Auth.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/ente−auth.nix>

programs.ente−auth.package
The ente−auth package to use.

Type: package

Default:

```
pkgs.ente−auth
```

Declared by:
<nixpkgs/nixos/modules/programs/ente−auth.nix>

programs.envision.enable
Whether to enable envision.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/envision.nix>

programs.envision.package
The envision package to use.

Type: package

Default:

```
pkgs.envision
```

Declared by:
<nixpkgs/nixos/modules/programs/envision.nix>

programs.envision.openFirewall
Whether to enable the default ports in the firewall for the WiVRn server.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/envision.nix>

programs.evince.enable
Whether to enable Evince, the GNOME document viewer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/evince.nix>

programs.evince.package
The evince package to use.

Type: package

Default:

```
pkgs.evince
```

Declared by:
<nixpkgs/nixos/modules/programs/evince.nix>

programs.evolution.enable
Whether to enable Evolution, a Personal information management application that provides integrated mail, calendaring and address book functionality.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/evolution−data−server.nix>

programs.evolution.plugins
Plugins for Evolution.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.evolution-ews ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/evolution-data-server.nix>

programs.extra-container.enable
Whether to enable extra-container, a tool for running declarative NixOS containers without host system rebuilds .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/extra-container.nix>

programs.fcast-receiver.enable
Whether to enable FCast Receiver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/fcast-receiver.nix>

programs.fcast-receiver.package
The fcast-receiver package to use.

Type: package

Default:

```
pkgs.fcast-receiver
```

Declared by:
<nixpkgs/nixos/modules/programs/fcast-receiver.nix>

programs.fcast-receiver.openFirewall
Open ports needed for the functionality of the program.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/fcast−receiver.nix>

programs.feedbackd.enable
Whether to enable the feedbackd D−BUS service and udev rules.

Your user needs to be in the ‘feedbackd’ group to trigger effects .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/feedbackd.nix>

programs.feedbackd.package
The feedbackd package to use.

Type: package

Default:

```
pkgs.feedbackd
```

Declared by:
<nixpkgs/nixos/modules/programs/feedbackd.nix>

programs.feedbackd.theme−package
The feedbackd−device−themes package to use.

Type: null or package

Default:

```
pkgs.feedbackd-device-themes
```

Declared by:
<nixpkgs/nixos/modules/programs/feedbackd.nix>

programs.firefox.enable
Whether to enable the Firefox web browser.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/firefox.nix>

programs.firefox.package
Firefox package to use.

Type: package

Default:

```
pkgs.firefox
```

Related packages:

- ‘pkgs.firefox’
- ‘pkgs.firefox−bin’
- ‘pkgs.firefox−esr’

Declared by:

<nixpkgs/nixos/modules/programs/firefox.nix>

programs.firefox.autoConfig

AutoConfig files can be used to set and lock preferences that are not covered by the policies.json for Mac and Linux. This method can be used to automatically change user preferences or prevent the end user from modifying specific preferences by locking them. More info can be found in **https://support.mozilla.org/en−US/kb/customizing−firefox−using−autoconfig**.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/programs/firefox.nix>

programs.firefox.autoConfigFiles

AutoConfig files can be used to set and lock preferences that are not covered by the policies.json for Mac and Linux. This method can be used to automatically change user preferences or prevent the end user from modifying specific preferences by locking them. More info can be found in **https://support.mozilla.org/en−US/kb/customizing−firefox−using−autoconfig**.

Files are concatenated and autoConfig is appended.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/programs/firefox.nix>

programs.firefox.languagePacks

The language packs to install.

Type: list of (one of “ach”, “af”, “an”, “ar”, “ast”, “az”, “be”, “bg”, “bn”, “br”, “bs”, “ca−valencia”, “ca”, “cak”, “cs”, “cy”, “da”, “de”, “dsb”, “el”, “en−CA”, “en−GB”, “en−US”, “eo”, “es−AR”, “es−CL”, “es−ES”, “es−MX”, “et”, “eu”, “fa”, “ff”, “fi”, “fr”, “fur”, “fy−NL”, “ga−IE”, “gd”, “gl”, “gn”, “gu−IN”, “he”, “hi−IN”, “hr”, “hsb”, “hu”, “hy−AM”, “ia”, “id”, “is”, “it”, “ja”, “ka”, “kab”, “kk”, “km”, “kn”, “ko”, “lij”, “lt”, “lv”, “mk”, “mr”, “ms”, “my”, “nb−NO”, “ne−NP”, “nl”, “nn−NO”, “oc”, “pa−IN”, “pl”, “pt−BR”, “pt−PT”, “rm”, “ro”, “ru”, “sat”, “sc”, “sco”, “si”, “sk”, “skr”, “sl”, “son”, “sq”, “sr”, “sv−SE”, “szl”, “ta”, “te”, “tg”, “th”, “tl”, “tr”, “trs”, “uk”, “ur”, “uz”, “vi”, “xh”, “zh−CN”, “zh−TW”)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/programs/firefox.nix>

programs.firefox.nativeMessagingHosts.packages

Additional packages containing native messaging hosts that should be made available to Firefox extensions.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/programs/firefox.nix>

programs.firefox.policies
Group policies to install.

See **Mozilla's documentation** for a list of available options.

This can be used to install extensions declaratively! Check out the documentation of the 'ExtensionSettings' policy for details.

When this option is in use, Firefox will inform you that "your browser is managed by your organisation". That message appears because NixOS installs what you have declared here such that it cannot be overridden through the user interface. It does not mean that someone else has been given control of your browser, unless of course they also control your NixOS configuration.

Type: JSON value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/firefox.nix>

programs.firefox.preferences
Preferences to set from 'about:config'.

Some of these might be able to be configured more ergonomically using policies.

See **here** for allowed preferences.

When this option is in use, Firefox will inform you that "your browser is managed by your organisation". That message appears because NixOS installs what you have declared here such that it cannot be overridden through the user interface. It does not mean that someone else has been given control of your browser, unless of course they also control your NixOS configuration.

Type: attribute set of (boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  "browser.tabs.tabmanager.enabled" = false;
}
```

Declared by:
<nixpkgs/nixos/modules/programs/firefox.nix>

programs.firefox.preferencesStatus
The status of 'firefox.preferences'.

'status' can assume the following values:

- '"default"': Preferences appear as default.
- '"locked"': Preferences appear as default and can't be changed.
- '"user"': Preferences appear as changed.
- '"clear"': Value has no effect. Resets to factory defaults on each startup.

Type: one of "default", "locked", "user", "clear"

Default:

```
"locked"
```

Declared by:
<nixpkgs/nixos/modules/programs/firefox.nix>

programs.firefox.wrapperConfig
Arguments to pass to Firefox wrapper

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/firefox.nix>

programs.firejail.enable
Whether to enable firejail, a sandboxing tool for Linux.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/firejail.nix>

programs.firejail.wrappedBinaries
Wrap the binaries in firejail and place them in the global path.

Type: attribute set of (absolute path or (submodule))

Default:

```
{ }
```

Example:

```
{
  firefox = {
    executable = "${lib.getBin pkgs.firefox}/bin/firefox";
    profile = "${pkgs.firejail}/etc/firejail/firefox.profile";
  };
  mpv = {
    executable = "${lib.getBin pkgs.mpv}/bin/mpv";
    profile = "${pkgs.firejail}/etc/firejail/mpv.profile";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/programs/firejail.nix>

programs.fish.enable
Whether to configure fish as an interactive shell.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/fish.nix>

programs.fish.package
The fish package to use.

Type: package

Default:

```
pkgs.fish
```

Declared by:
<nixpkgs/nixos/modules/programs/fish.nix>

programs.fish.extraCompletionPackages
Additional packages to generate completions from, if **programs.fish.generateCompletions** is enabled.

Type: list of package

Default:

```
[ ]
```

Example:

```
config.users.users.alice.packages
```

Declared by:
<nixpkgs/nixos/modules/programs/fish.nix>

programs.fish.generateCompletions
Whether to enable generating completion files from man pages.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/fish.nix>

programs.fish.interactiveShellInit
Shell script code called during interactive fish shell initialisation.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/fish.nix>

programs.fish.loginShellInit
Shell script code called during fish login shell initialisation.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/fish.nix>

programs.fish.promptInit
Shell script code used to initialise fish prompt.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/fish.nix>

programs.fish.shellAbbrs
Set of fish abbreviations.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  gco = "git checkout";
  npu = "nix-prefetch-url";
}
```

Declared by:
<nixpkgs/nixos/modules/programs/fish.nix>

programs.fish.shellAliases
Set of aliases for fish shell, which overrides **environment.shellAliases**. See **environment.shellAliases** for an option format description.

Type: attribute set of (null or string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/fish.nix>

programs.fish.shellInit
Shell script code called during fish shell initialisation.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/fish.nix>

programs.fish.useBabelfish
If enabled, the configured environment will be translated to native fish using **babelfish**. Otherwise, **foreign-env** will be used.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/fish.nix>

programs.fish.vendor.completions.enable
Whether fish should use completion files provided by other packages.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/fish.nix>

programs.fish.vendor.config.enable
Whether fish should source configuration snippets provided by other packages.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/fish.nix>

programs.fish.vendor.functions.enable
Whether fish should autoload fish functions provided by other packages.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/fish.nix>

programs.flashprog.enable
Whether to enable configuring flashprog udev rules and installing flashprog as system package .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/flashprog.nix>

programs.flashprog.package
The flashprog package to use.

Type: package

Default:

```
pkgs.flashprog
```

Declared by:
<nixpkgs/nixos/modules/programs/flashprog.nix>

programs.flashrom.enable

Installs flashrom and configures udev rules for programmers used by flashrom. Grants access to users in the “flashrom” group.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/flashrom.nix>

programs.flashrom.package

The flashrom package to use.

Type: package

Default:

```
pkgs.flashrom
```

Declared by:

<nixpkgs/nixos/modules/programs/flashrom.nix>

programs.flexoptix−app.enable

Whether to enable FLEXOPTIX app + udev rules.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/flexoptix−app.nix>

programs.flexoptix−app.package

The flexoptix−app package to use.

Type: package

Default:

```
pkgs.flexoptix−app
```

Declared by:

<nixpkgs/nixos/modules/programs/flexoptix−app.nix>

programs.foot.enable

Whether to enable foot terminal emulator.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/foot>

programs.foot.enableBashIntegration
Whether to enable foot bash integration.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/foot>

programs.foot.enableFishIntegration
Whether to enable foot fish integration.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/foot>

programs.foot.enableZshIntegration
Whether to enable foot zsh integration.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/foot>

programs.foot.package
The foot package to use.

Type: package

Default:

```
pkgs.foot
```

Declared by:
<nixpkgs/nixos/modules/programs/foot>

programs.foot.settings
Configuration for foot terminal emulator. Further information can be found in **man 5 foot.ini**.

Global configuration has to be written under the [main] section.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Example:

```
{
  main = {
    font = "FreeMono:size=12";
  };
  scrollback = {
    lines = 100000;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/programs/foot>

programs.foot.theme
Theme name. Check **https://codeberg.org/dnkl/foot/src/branch/master/themes** for available themes.

Type: null or string

Default:

```
null
```

Example:

```
"aeroroot"
```

Declared by:
<nixpkgs/nixos/modules/programs/foot>

programs.foot.xdg.serverAutostart
Whether to enable starting the foot server via xdg−autostart.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/foot>

programs.fuse.enable
Whether to enable fuse.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/fuse.nix>

programs.fuse.mountMax

Set the maximum number of FUSE mounts allowed to non−root users.

Type: integer between 0 and 32767 (both inclusive)

Default:

```
1000
```

Declared by:

<nixpkgs/nixos/modules/programs/fuse.nix>

programs.fuse.userAllowOther

Allow non−root users to specify the allow_other or allow_root mount options, see mount.fuse3(8).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/fuse.nix>

programs.fzf.fuzzyCompletion

Whether to enable fuzzy completion with fzf.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/fzf.nix>

programs.fzf.keybindings

Whether to enable fzf keybindings.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/fzf.nix>

programs.gamemode.enable

Whether to enable GameMode to optimise system performance on demand.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/gamemode.nix>

programs.gamemode.enableRenice
Whether to enable CAP_SYS_NICE on gamemoded to support lowering process niceness.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/gamemode.nix>

programs.gamemode.settings
System−wide configuration for GameMode (/etc/gamemode.ini). See **gamemoded**(8) man page for available settings.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Example:

```
{
  general = {
    renice = 10;
  };
  # Warning: GPU optimisations have the potential to damage hardwar \
e
  gpu = {
    apply_gpu_optimisations = "accept−responsibility";
    gpu_device = 0;
    amd_performance_level = "high";
  };
  custom = {
    start = "${pkgs.libnotify}/bin/notify−send 'GameMode started'" \
;
    end = "${pkgs.libnotify}/bin/notify−send 'GameMode ended'";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/programs/gamemode.nix>

programs.gamescope.enable
Whether to enable gamescope, the SteamOS session compositing window manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/gamescope.nix>

programs.gamescope.package
The gamescope package to use.

Type: package

Default:

```
pkgs.gamescope
```

Declared by:
<nixpkgs/nixos/modules/programs/gamescope.nix>

programs.gamescope.args
Arguments passed to GameScope on startup.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--rt"
  "--prefer-vk-device 8086:9bc4"
]
```

Declared by:
<nixpkgs/nixos/modules/programs/gamescope.nix>

programs.gamescope.capSysNice
Add cap_sys_nice capability to the GameScope binary so that it may renice itself.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/gamescope.nix>

programs.gamescope.env
Default environment variables available to the GameScope process, overridable at runtime.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
# for Prime render offload on Nvidia laptops.
# Also requires ‘hardware.nvidia.prime.offload.enable‘.
{
  __NV_PRIME_RENDER_OFFLOAD = "1";
  __VK_LAYER_NV_optimus = "NVIDIA_only";
  __GLX_VENDOR_LIBRARY_NAME = "nvidia";
}
```

Declared by:
<nixpkgs/nixos/modules/programs/gamescope.nix>

programs.gdk−pixbuf.modulePackages
Packages providing GDK−Pixbuf modules, for cache generation.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/programs/gdk−pixbuf.nix>

programs.geary.enable
Whether to enable Geary, a Mail client for GNOME.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/geary.nix>

programs.ghidra.enable
Whether to enable Ghidra, a software reverse engineering (SRE) suite of tools.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/ghidra.nix>

programs.ghidra.package
The ghidra package to use.

Type: package

Default:

```
pkgs.ghidra
```

Example:

```
ghidra−bin
```

Declared by:
<nixpkgs/nixos/modules/programs/ghidra.nix>

programs.ghidra.gdb
Whether to add to gdbinit the python modules required to make Ghidra’s debugger work.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/ghidra.nix>

programs.git.enable
Whether to enable git, a distributed version control system.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/git.nix>

programs.git.package
The git package to use.

Type: package

Default:

```
pkgs.git
```

Example:

```
gitFull
```

Declared by:
<nixpkgs/nixos/modules/programs/git.nix>

programs.git.attributes
Assign git attributes to files (one pattern per line):

```
PATTERN1 ATTR1 ATTR2 ...
```

Blank lines and lines beginning with # are ignored. See **gitattributes**(5) for more information.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"*.pdf diff=pdf"
```

Declared by:
<nixpkgs/nixos/modules/programs/git.nix>

programs.git.config
Configuration to write to /etc/gitconfig. A list can also be specified to keep the configuration in order. For example, setting ‘config’ to ‘[{ foo.x = 42; } { bar.y = 42; }]’ will put the ‘foo’ section before the ‘bar’ section unlike the default alphabetical order, which can be helpful for sections such as ‘include’ and ‘includeIf’. See the CONFIGURATION FILE section of **git−config**(1) for more information.

Type: (attribute set of attribute set of anything) or list of attribute set of attribute set of anything

Default:

```
[ ]
```

Example:

```
{
```

```
    init = {
      defaultBranch = "main";
    };
    url = {
      "https://github.com/" = {
        insteadOf = [
          "gh:"
          "github:"
        ];
      };
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/programs/git.nix>

programs.git.lfs.enable
Whether to enable git−lfs (Large File Storage).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/git.nix>

programs.git.lfs.enablePureSSHTransfer
Whether to enable Enable pure SSH transfer in server side by adding git−lfs−transfer to environment.systemPackages.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/git.nix>

programs.git.lfs.package
The git−lfs package to use.

Type: package

Default:

```
pkgs.git-lfs
```

Declared by:
<nixpkgs/nixos/modules/programs/git.nix>

programs.git.prompt.enable

Whether to enable automatically sourcing git−prompt.sh. This does not change $PS1; it simply provides relevant utility functions.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/git.nix>

programs.git−worktree−switcher.enable

Whether to enable git−worktree−switcher, switch between git worktrees with speed…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/git−worktree−switcher.nix>

programs.git−worktree−switcher.package

The git−worktree−switcher package to use.

Type: package

Default:

```
pkgs.git-worktree-switcher
```

Declared by:

<nixpkgs/nixos/modules/programs/git−worktree−switcher.nix>

programs.gnome−disks.enable

Whether to enable GNOME Disks daemon, a program designed to be a UDisks2 graphical front−end.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/gnome−disks.nix>

programs.gnome−terminal.enable

Whether to enable GNOME Terminal.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/gnome−terminal.nix>

programs.gnupg.package
The gnupg package to use.

Type: package

Default:

```
pkgs.gnupg
```

Declared by:
<nixpkgs/nixos/modules/programs/gnupg.nix>

programs.gnupg.agent.enable
Enables GnuPG agent with socket−activation for every user session.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/gnupg.nix>

programs.gnupg.agent.enableBrowserSocket
Enable browser socket for GnuPG agent.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/gnupg.nix>

programs.gnupg.agent.enableExtraSocket
Enable extra socket for GnuPG agent.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/gnupg.nix>

programs.gnupg.agent.enableSSHSupport
Enable SSH agent support in GnuPG agent. Also sets SSH_AUTH_SOCK environment variable correctly. This will disable socket−activation and thus always start a GnuPG agent per user session.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/gnupg.nix>

programs.gnupg.agent.pinentryPackage

Which pinentry package to use. The path to the mainProgram as defined in the package's meta attributes will be set in /etc/gnupg/gpg−agent.conf. If not set by the user, it'll pick an appropriate flavor depending on the system configuration (qt flavor for lxqt and plasma, gtk2 for xfce, gnome3 on all other systems with X enabled, curses otherwise).

Type: null or package

Default: matching the configured desktop environment or pkgs.pinentry−curses

Example: pkgs.pinentry−gnome3

Declared by:
<nixpkgs/nixos/modules/programs/gnupg.nix>

programs.gnupg.agent.settings

Configuration for /etc/gnupg/gpg−agent.conf. See **gpg−agent**(1) for supported options.

Type: attribute set of (atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  default-cache-ttl = 600;
}
```

Declared by:
<nixpkgs/nixos/modules/programs/gnupg.nix>

programs.gnupg.dirmngr.enable

Enables GnuPG network certificate management daemon with socket−activation for every user session.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/gnupg.nix>

programs.gpaste.enable

Whether to enable GPaste, a clipboard manager.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/gpaste.nix>

programs.gphoto2.enable

Whether to configure system to use gphoto2. To grant digital camera access to a user, the user must be part of the camera group: 'users.users.alice.extraGroups = ["camera"];'

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/gphoto2.nix>

programs.gpu−screen−recorder.enable
Whether to install gpu−screen−recorder and generate setcap wrappers for promptless recording.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/gpu−screen−recorder.nix>

programs.gpu−screen−recorder.package
The gpu−screen−recorder package to use.

Type: package

Default:

```
pkgs.gpu−screen−recorder
```

Declared by:
<nixpkgs/nixos/modules/programs/gpu−screen−recorder.nix>

programs.gtklock.enable
Whether to enable gtklock, a GTK−based lockscreen for Wayland.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/gtklock.nix>

programs.gtklock.package
The gtklock package to use.

Type: package

Default:

```
pkgs.gtklock
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/gtklock.nix>

programs.gtklock.config
Configuration for gtklock. See ‘gtklock(1)’ man page for details.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a non−empty list of them)

Default:

```
{ }
```

Example:

```
{
  main = {
    idle−hide = true;
```

```
    idle-timeout = 10;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/gtklock.nix>

programs.gtklock.modules
gtklock modules to load.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [
  gtklock-playerctl-module
  gtklock-powerbar-module
  gtklock-userinfo-module
]
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/gtklock.nix>

programs.gtklock.style
CSS Stylesheet for gtklock. See **gtklock's wiki** for details.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/gtklock.nix>

programs.haguichi.enable
Whether to enable Haguichi, a Linux GUI frontend to the proprietary LogMeIn Hamachi.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/haguichi.nix>

programs.hamster.enable
Whether to enable hamster, a time tracking program.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/hamster.nix>

programs.htop.enable
Whether to enable htop process monitor.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/htop.nix>

programs.htop.package
The htop package to use.

Type: package

Default:

```
pkgs.htop
```

Declared by:
<nixpkgs/nixos/modules/programs/htop.nix>

programs.htop.settings
Extra global default configuration for htop which is read on first startup only. Htop subsequently uses ~/.config/htop/htoprc as configuration source.

Type: attribute set of (string or signed integer or boolean or list of (string or signed integer or boolean))

Default:

```
{ }
```

Example:

```
{
  hide_kernel_threads = true;
  hide_userland_threads = true;
}
```

Declared by:
<nixpkgs/nixos/modules/programs/htop.nix>

programs.hyprland.enable
Whether to enable Hyprland, the dynamic tiling Wayland compositor that doesn't sacrifice on its looks. You can manually launch Hyprland by executing **start−hyprland** on a TTY. A configuration file will be generated in *~/.config/hypr/hyprland.conf*. See **https://wiki.hyprland.org** for more information.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/hyprland.nix>

programs.hyprland.package
The hyprland package to use. If the package is not overridable with 'enableXWayland', then the module option **xwayland** will have no effect.

Type: package

Default:

```
pkgs.hyprland
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/hyprland.nix>

programs.hyprland.portalPackage
The xdg-desktop-portal-hyprland package to use. If the package is not overridable with 'hyprland', then the Hyprland package used by the portal may differ from the one set in the module option **package**.

Type: package

Default:

```
pkgs.xdg-desktop-portal-hyprland
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/hyprland.nix>

programs.hyprland.systemd.setPath.enable
Set environment path of systemd to include the current system's bin directory. This is needed in Hyprland setups, where opening links in applications do not work. Enabled by default for Hyprland versions older than 0.41.2.

Type: boolean

Default:

```
lib.versionOlder cfg.package.version "0.41.2"
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/hyprland.nix>

programs.hyprland.withUWSM
Launch Hyprland with the UWSM (Universal Wayland Session Manager) session manager. This has improved systemd support and is recommended for most users. This automatically starts appropriate targets like 'graphical-session.target', and 'wayland-session@Hyprland.target'.

> **Note**
> Some changes may need to be made to Hyprland configs depending on your setup, see **Hyprland wiki**.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/hyprland.nix>

programs.hyprland.xwayland.enable
Whether to enable XWayland.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/hyprland.nix>

programs.hyprlock.enable
Whether to enable hyprlock, Hyprland's GPU−accelerated screen locking utility.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/hyprlock.nix>

programs.hyprlock.package
The hyprlock package to use.

Type: package

Default:

```
pkgs.hyprlock
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/hyprlock.nix>

programs.i3lock.enable
Whether to enable i3lock.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/i3lock.nix>

programs.i3lock.package
The i3lock package to use. ::: {.note} The i3lock package must include a i3lock file or link in its out directory in order for the u2fSupport option to work correctly. :::

Type: package

Default:

```
pkgs.i3lock
```

Example:

```
i3lock-color
```

Declared by:
<nixpkgs/nixos/modules/programs/i3lock.nix>

programs.i3lock.u2fSupport
Whether to enable U2F support in the i3lock program. U2F enables authentication using a hardware device, such as a security key. When U2F support is enabled, the i3lock program will set the setuid bit on the i3lock binary and enable the pam u2f service,

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/i3lock.nix>

programs.iay.enable
Whether to enable iay, a minimalistic shell prompt.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/iay.nix>

programs.iay.package
The iay package to use.

Type: package

Default:

```
pkgs.iay
```

Declared by:
<nixpkgs/nixos/modules/programs/iay.nix>

programs.iay.minimalPrompt
Use minimal one−liner prompt.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/iay.nix>

programs.idescriptor.enable

Whether to enable iDescriptor, a cross−platform iDevice management tool.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/idescriptor.nix>

programs.idescriptor.package

The idescriptor package to use.

Type: package

Default:

```
pkgs.idescriptor
```

Declared by:

<nixpkgs/nixos/modules/programs/idescriptor.nix>

programs.idescriptor.users

Users to be added to the idevice group.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/programs/idescriptor.nix>

programs.iftop.enable

Whether to enable iftop and setcap wrapper for it.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/iftop.nix>

programs.iio−hyprland.enable

Whether to enable iio−hyprland and iio−sensor−proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/iio-hyprland.nix>

programs.iio-hyprland.package
The iio-hyprland package to use.

Type: package

Default:

```
pkgs.iio-hyprland
```

Declared by:
<nixpkgs/nixos/modules/programs/iio-hyprland.nix>

programs.immersed.enable
Whether to enable immersed.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/immersed.nix>

programs.immersed.package
The immersed package to use.

Type: package

Default:

```
pkgs.immersed
```

Declared by:
<nixpkgs/nixos/modules/programs/immersed.nix>

programs.iotop.enable
Whether to enable iotop + setcap wrapper.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/iotop.nix>

programs.iotop.package
The iotop package to use.

Type: package

Default:

```
pkgs.iotop
```

Example:

```
iotop-c
```

Declared by:
<nixpkgs/nixos/modules/programs/iotop.nix>

programs.java.enable
Install and setup the Java development kit.

Note
This adds JAVA_HOME to the global environment, by sourcing the jdk's setup−hook on shell init. It is equivalent to starting a shell through 'nix−shell −p jdk', or roughly the following system−wide configuration:

```
environment.variables.JAVA_HOME = ${pkgs.jdk.home}/lib/openjdk;
environment.systemPackages = [ pkgs.jdk ];
```

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/java.nix>

programs.java.package
The jdk package to use.

Type: package

Default:

```
pkgs.jdk
```

Example:

```
jre
```

Declared by:
<nixpkgs/nixos/modules/programs/java.nix>

programs.java.binfmt
Whether to enable binfmt to execute java jar's and classes.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/java.nix>

programs.joycond−cemuhook.enable
Whether to enable joycond−cemuhook, a program to enable support for cemuhook's UDP protocol for joycond devices.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/joycond−cemuhook.nix>

programs.k3b.enable
Whether to enable k3b, the KDE disk burning application.

Additionally to installing ‘k3b’ enabling this will add ‘setuid’ wrappers in ‘/run/wrappers/bin’ for both ‘cdrdao’ and ‘cdrecord’. On first run you must manually configure the path of ‘cdrdae’ and ‘cdrecord’ to correspond to the appropriate paths under ‘/run/wrappers/bin’ in the “Setup External Programs” menu.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/k3b.nix>

programs.k40−whisperer.enable
Whether to enable K40−Whisperer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/k40−whisperer.nix>

programs.k40−whisperer.package
The k40−whisperer package to use.

Type: package

Default:

```
pkgs.k40−whisperer
```

Declared by:
<nixpkgs/nixos/modules/programs/k40−whisperer.nix>

programs.k40−whisperer.group
Group assigned to the device when connected.

Type: string

Default:

```
"k40"
```

Declared by:
<nixpkgs/nixos/modules/programs/k40−whisperer.nix>

programs.kbdlight.enable
Whether to enable kbdlight.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/kbdlight.nix>

programs.kclock.enable
Whether to enable KClock.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/kclock.nix>

programs.kde−pim.enable
Whether to enable KDE PIM base packages.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/kde−pim.nix>

programs.kde−pim.kmail
Whether to enable KMail.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/kde−pim.nix>

programs.kde−pim.kontact
Whether to enable Kontact.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/kde−pim.nix>

programs.kde−pim.merkuro
Whether to enable Merkuro.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/kde−pim.nix>

programs.kdeconnect.enable
Whether to enable kdeconnect.

Note that it will open the TCP and UDP port from 1714 to 1764 as they are needed for it to function properly. You can use the **package** to use ‘gnomeExtensions.gsconnect’ as an alternative implementation if you use Gnome .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/kdeconnect.nix>

programs.kdeconnect.package
The kdeconnect−kde package to use.

Type: null or package

Default:

```
pkgs.kdePackages.kdeconnect−kde
```

Example:

```
gnomeExtensions.gsconnect
```

Declared by:
<nixpkgs/nixos/modules/programs/kdeconnect.nix>

programs.kubeswitch.enable
Whether to enable kubeswitch.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/kubeswitch.nix>

programs.kubeswitch.package
The kubeswitch package to use.

Type: package

Default:

```
pkgs.kubeswitch
```

Declared by:
<nixpkgs/nixos/modules/programs/kubeswitch.nix>

programs.kubeswitch.commandName
The name of the command to use

Type: string

Default:

```
"kswitch"
```

Declared by:
<nixpkgs/nixos/modules/programs/kubeswitch.nix>

programs.labwc.enable
Whether to enable labwc.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/labwc.nix>

programs.labwc.package
The labwc package to use.

Type: package

Default:

```
pkgs.labwc
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/labwc.nix>

programs.ladybird.enable
Whether to enable the Ladybird web browser.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/ladybird.nix>

programs.lazygit.enable
Whether to enable lazygit, a simple terminal UI for git commands.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/lazygit.nix>

programs.lazygit.package
The lazygit package to use.

Type: package

Default:

```
pkgs.lazygit
```

Declared by:
<nixpkgs/nixos/modules/programs/lazygit.nix>

programs.lazygit.settings
Lazygit configuration.

See **https://github.com/jesseduffield/lazygit/blob/master/docs/Config.md** for documentation.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/lazygit.nix>

programs.less.enable
Whether to enable less, a file pager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/less.nix>

programs.less.package
The less package to use.

Type: package

Default:

```
pkgs.less
```

Declared by:
<nixpkgs/nixos/modules/programs/less.nix>

programs.less.clearDefaultCommands
Clear all default commands. You should remember to set the quit key. Otherwise you will not be able to leave less without killing it.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/less.nix>

programs.less.commands
Defines new command keys.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  h = "noaction 5\\e(";
  l = "noaction 5\\e)";
}
```

Declared by:
<nixpkgs/nixos/modules/programs/less.nix>

programs.less.configFile
Path to lesskey configuration file.

configFile takes precedence over **commands**, **clearDefaultCommands**, **lineEditingKeys**, and **envVariables**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.my-configs}/lesskey"
```

Declared by:
<nixpkgs/nixos/modules/programs/less.nix>

programs.less.envVariables
Defines environment variables.

Type: attribute set of string

Default:

```
{
  LESS = "-R";
}
```

Example:

```
{
  LESS = "--quit-if-one-screen";
```

```
}
```

Declared by:
<nixpkgs/nixos/modules/programs/less.nix>

programs.less.lessclose
When less closes a file opened in such a way, it will call another program, called the input postprocessor, which may perform any desired clean−up action (such as deleting the replacement file created by LESSOPEN).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/programs/less.nix>

programs.less.lessopen
Before less opens a file, it first gives your input preprocessor a chance to modify the way the contents of the file are displayed.

Type: null or string

Default:

```
null
```

Example:

```
"|${pkgs.lesspipe}/bin/lesspipe.sh %s"
```

Declared by:
<nixpkgs/nixos/modules/programs/less.nix>

programs.less.lineEditingKeys
Defines new line−editing keys.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  e = "abort";
}
```

Declared by:
<nixpkgs/nixos/modules/programs/less.nix>

programs.liboping.enable
Whether to enable liboping.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/liboping.nix>

programs.librepods.enable
Whether to configure system to enable librepods. To grant access to a user, it must be part of librepods group: ‘users.users.alice.extraGroups = ["librepods"];’

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/librepods.nix>

programs.localsend.enable
Whether to enable localsend, an open source cross−platform alternative to AirDrop.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/localsend.nix>

programs.localsend.package
The localsend package to use.

Type: package

Default:

```
pkgs.localsend
```

Declared by:
<nixpkgs/nixos/modules/programs/localsend.nix>

programs.localsend.openFirewall
Whether to enable opening the firewall port 53317 for receiving files.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/localsend.nix>

programs.mangowc.enable
Whether to enable MangoWC, a Wayland compositor based on dwl and scenefx.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/mangowc.nix>

programs.mangowc.package
The mangowc package to use.

Type: package

Default:

```
pkgs.mangowc
```

Example:

```
pkgs.mangowc.override { enableXWayland = false; }
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/mangowc.nix>

programs.mdevctl.enable
Whether to enable Mediated Device Management.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/mdevctl.nix>

programs.mepo.enable
Whether to enable Mepo, a fast, simple and hackable OSM map viewer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/mepo.nix>

programs.mepo.locationBackends.geoclue
Whether to enable location detection via geoclue

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/mepo.nix>

programs.mepo.locationBackends.gpsd

Whether to enable location detection via gpsd. This may require additional configuration of gpsd, see **here**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/mepo.nix>

programs.mininet.enable

Whether to enable Mininet, an emulator for rapid prototyping of Software Defined Networks.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/mininet.nix>

programs.minipro.enable

Whether to enable minipro and its udev rules. Users of the 'plugdev' group can interact with connected MiniPRO chip programmers.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/minipro.nix>

programs.minipro.package

The minipro package to use.

Type: package

Default:

```
pkgs.minipro
```

Declared by:

<nixpkgs/nixos/modules/programs/minipro.nix>

programs.miriway.enable

Whether to enable Miriway, a Mir based Wayland compositor. You can manually launch Miriway by executing "exec miriway" on a TTY, or launch it from a display manager. Copy /etc/xdg/xdg−miriway/miriway−shell.config to ~/.config/miriway−shell.config to modify the system−wide configuration on a per−user basis. See **https://github.com/Miriway/Miriway**, and "miriway −−help" for more information.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/miriway.nix>

programs.miriway.config

Miriway's config. This will be installed system−wide. The default will install the miriway package's barebones example config.

Type: strings concatenated with "\n"

Default:

```
  x11-window-title=Miriway (Mir-on-X)
  idle-timeout=600
  ctrl-alt=t:miriway-terminal # Default "terminal emulator finder \
"

  shell-component=dbus-update-activation-environment --system \
d DISPLAY WAYLAND_DISPLAY

  meta=Left:@dock-left
  meta=Right:@dock-right
  meta=Space:@toggle-maximized
  meta=Home:@workspace-begin
  meta=End:@workspace-end
  meta=Page_Up:@workspace-up
  meta=Page_Down:@workspace-down
  ctrl-alt=BackSpace:@exit
```

Example:

```
  idle-timeout=300
  ctrl-alt=t:weston-terminal
  add-wayland-extensions=all

  shell-components=dbus-update-activation-environment --syste \
md DISPLAY WAYLAND_DISPLAY

  shell-component=waybar
  shell-component=wbg Pictures/wallpaper

  shell-meta=a:synapse

  meta=Left:@dock-left
  meta=Right:@dock-right
  meta=Space:@toggle-maximized
  meta=Home:@workspace-begin
  meta=End:@workspace-end
  meta=Page_Up:@workspace-up
  meta=Page_Down:@workspace-down
  ctrl-alt=BackSpace:@exit
```

Declared by:
<nixpkgs/nixos/modules/programs/miriway.nix>

programs.mosh.enable
Whether to enable mosh.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/mosh.nix>

programs.mosh.package
The mosh package to use.

Type: package

Default:

```
pkgs.mosh
```

Declared by:
<nixpkgs/nixos/modules/programs/mosh.nix>

programs.mosh.openFirewall
Whether to automatically open the necessary ports in the firewall.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/mosh.nix>

programs.mosh.withUtempter
Whether to enable libutempter for mosh.

This is required so that mosh can write to /var/run/utmp (which can be queried with ‘who’ to display currently connected user sessions). Note, this will add a guid wrapper for the group utmp!

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/mosh.nix>

programs.mouse−actions.enable

Whether to install and set up mouse−actions and it's udev rules.

Note that only users in the "uinput" group will be able to use the package

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/mouse−actions.nix>

programs.mouse−actions.package

The mouse−actions package to use.

Type: package

Default:

```
pkgs.mouse−actions
```

Example:

```
mouse−actions−gui
```

Declared by:

<nixpkgs/nixos/modules/programs/mouse−actions.nix>

programs.mouse−actions.autorun

Whether to start a user service to run mouse−actions on startup.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/mouse−actions.nix>

programs.msmtp.enable

Whether to enable msmtp − an SMTP client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/msmtp.nix>

programs.msmtp.package

The msmtp package to use.

Type: package

Default:

```
pkgs.msmtp
```

Declared by:
<nixpkgs/nixos/modules/programs/msmtp.nix>

programs.msmtp.accounts
Named accounts and their respective configurations. The special name “default” allows a default account to be defined. See **msmtp**(1) for the available options.

Use ‘programs.msmtp.extraConfig’ instead of this attribute set−based option if ordered account inheritance is needed.

It is advised to use the ‘passwordeval’ setting to read the password from a secret file to avoid having it written in the world−readable nix store. The password file must end with a newline (‘\n’).

Type: attribute set of (attribute set)

Default:

```
{ }
```

Example:

```
{
  default = {
    auth = true;
    host = "smtp.example";
    passwordeval = "cat /secrets/password.txt";
    user = "someone";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/programs/msmtp.nix>

programs.msmtp.defaults
Default values applied to all accounts. See **msmtp**(1) for the available options.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  aliases = "/etc/aliases";
  port = 587;
  tls = true;
}
```

Declared by:
<nixpkgs/nixos/modules/programs/msmtp.nix>

programs.msmtp.extraConfig
Extra lines to add to the msmtp configuration verbatim. See **msmtp**(1) for the syntax and available options.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/msmtp.nix>

programs.msmtp.setSendmail
Whether to set the system sendmail to msmtp's.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/msmtp.nix>

programs.mtr.enable
Whether to add mtr to the global environment and configure a setcap wrapper for it.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/mtr.nix>

programs.mtr.package
The mtr package to use.

Type: package

Default:

```
pkgs.mtr
```

Declared by:
<nixpkgs/nixos/modules/programs/mtr.nix>

programs.nano.enable
Whether to enable nano, a small user−friendly console text editor.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/nano.nix>

programs.nano.package
The nano package to use.

Type: package

Default:

```
pkgs.nano
```

Declared by:
<nixpkgs/nixos/modules/programs/nano.nix>

programs.nano.nanorc

The system−wide nano configuration. See **nanorc**(5).

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
set nowrap
set tabstospaces
set tabsize 2
```

Declared by:

<nixpkgs/nixos/modules/programs/nano.nix>

programs.nano.syntaxHighlight

Whether to enable syntax highlight for various languages.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/nano.nix>

programs.nautilus−open−any−terminal.enable

Whether to enable nautilus−open−any−terminal.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/nautilus−open−any−terminal.nix>

programs.nautilus−open−any−terminal.terminal

The terminal emulator to add to context−entry of nautilus. Supported terminal emulators are listed in **https://github.com/Stunkymonkey/nautilus−open−any−terminal#supported−terminal−emulators**.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/programs/nautilus−open−any−terminal.nix>

programs.nbd.enable

Whether to enable Network Block Device (nbd) support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/nbd.nix>

programs.neovim.enable
Whether to enable Neovim.

When enabled through this option, Neovim is wrapped to use a configuration managed by this module. The configuration file in the user's home directory at *~/.config/nvim/init.vim* is no longer loaded by default.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/neovim.nix>

programs.neovim.package
The neovim−unwrapped package to use.

Type: package

Default:

```
pkgs.neovim-unwrapped
```

Declared by:
<nixpkgs/nixos/modules/programs/neovim.nix>

programs.neovim.configure
Generate your init file from your list of plugins and custom commands. Neovim will then be wrapped to load **nvim −u /nix/store/«hash»−vimrc**

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  customRC = ''
    " here your custom VimScript configuration goes!
  '';
  customLuaRC = ''
    -- here your custom Lua configuration goes!
  '';
  packages.myVimPackage = with pkgs.vimPlugins; {
    # loaded on launch
    start = [ fugitive ];
    # manually loadable by calling ':packadd $plugin-name'
    opt = [ ];
  };
}
```

Declared by:
<nixpkgs/nixos/modules/programs/neovim.nix>

programs.neovim.defaultEditor
When enabled, installs neovim and configures neovim to be the default editor using the EDITOR environment variable.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/neovim.nix>

programs.neovim.runtime
Set of files that have to be linked in *runtime*.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{ "ftplugin/c.vim".text = "setlocal omnifunc=v:lua.vim.lsp.omnifunc \
"; }
```

Declared by:
<nixpkgs/nixos/modules/programs/neovim.nix>

programs.neovim.runtime.<name>.enable
Whether this runtime directory should be generated. This option allows specific runtime files to be disabled.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/neovim.nix>

programs.neovim.runtime.<name>.source
Path of the source file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/programs/neovim.nix>

programs.neovim.runtime.<name>.target
Name of symlink. Defaults to the attribute name.

Type: string

Declared by:
<nixpkgs/nixos/modules/programs/neovim.nix>

programs.neovim.runtime.<name>.text
Text of the file.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/programs/neovim.nix>

programs.neovim.viAlias
Symlink **vi** to **nvim** binary.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/neovim.nix>

programs.neovim.vimAlias
Symlink **vim** to **nvim** binary.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/neovim.nix>

programs.neovim.withNodeJs
Enable Node provider.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/neovim.nix>

programs.neovim.withPython3
Enable Python 3 provider.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/neovim.nix>

programs.neovim.withRuby
Enable Ruby provider.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/neovim.nix>

programs.nethoscope.enable
Whether to add nethoscope to the global environment and configure a setcap wrapper for it.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/nethoscope.nix>

programs.nexttrace.enable
Whether to enable Nexttrace to the global environment and configure a setcap wrapper for it.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/nexttrace.nix>

programs.nexttrace.package
The nexttrace package to use.

Type: package

Default:

```
pkgs.nexttrace
```

Declared by:
<nixpkgs/nixos/modules/programs/nexttrace.nix>

programs.nh.enable
Whether to enable nh, yet another Nix CLI helper.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/nh.nix>

programs.nh.package
The nh package to use.

Type: package

Default:

```
pkgs.nh
```

Declared by:
<nixpkgs/nixos/modules/programs/nh.nix>

programs.nh.clean.enable
Whether to enable periodic garbage collection with nh clean all.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/nh.nix>

programs.nh.clean.dates
How often cleanup is performed. Passed to systemd.time

The format is described in **systemd.time**(7).

Type: (optionally newline−terminated) single−line string

Default:

```
"weekly"
```

Declared by:
<nixpkgs/nixos/modules/programs/nh.nix>

programs.nh.clean.extraArgs
Options given to nh clean when the service is run automatically.

See ‘nh clean all −−help’ for more information.

Type: (optionally newline−terminated) single−line string

Default:

```
""
```

Example:

```
"−−keep 5 −−keep−since 3d"
```

Declared by:
<nixpkgs/nixos/modules/programs/nh.nix>

programs.nh.flake
The string that will be used for the ‘NH_FLAKE’ environment variable.

‘NH_FLAKE’ is used by nh as the default flake for performing actions, such as ‘nh os switch’. This behaviour can be overriden per−command with environment variables that will take priority.

- ‘NH_OS_FLAKE’: will take priority for ‘nh os’ commands.
- ‘NH_HOME_FLAKE’: will take priority for ‘nh home’ commands.
- ‘NH_DARWIN_FLAKE’: will take priority for ‘nh darwin’ commands.

The formerly valid ‘FLAKE’ is now deprecated by nh, and will cause hard errors in future releases if ‘NH_FLAKE’ is not set.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/programs/nh.nix>

programs.niri.enable
Whether to enable Niri, a scrollable−tiling Wayland compositor.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/niri.nix>

programs.niri.package
The niri package to use.

Type: package

Default:

```
pkgs.niri
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/niri.nix>

programs.niri.useNautilus
Whether to enable Nautilus as file−chooser for xdg−desktop−portal−gnome.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/niri.nix>

programs.nix−index.enable
Whether to enable nix−index, a file database for nixpkgs.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/nix−index.nix>

programs.nix−index.enableBashIntegration
Whether to enable Bash integration.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/nix−index.nix>

programs.nix−index.enableFishIntegration
Whether to enable Fish integration.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/nix−index.nix>

programs.nix−index.enableZshIntegration
Whether to enable Zsh integration.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/nix−index.nix>

programs.nix−index.package
The nix−index package to use.

Type: package

Default:

```
pkgs.nix−index
```

Declared by:
<nixpkgs/nixos/modules/programs/nix−index.nix>

programs.nix−ld.enable
Whether to enable nix−ld, Documentation: **https://github.com/nix−community/nix−ld**.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/nix−ld.nix>

programs.nix−ld.package

The nix−ld package to use.

Type: package

Default:

```
pkgs.nix-ld
```

Declared by:

<nixpkgs/nixos/modules/programs/nix−ld.nix>

programs.nix−ld.libraries

Libraries that automatically become available to all programs. The default set includes common libraries.

Type: list of package

Default:

```
baseLibraries derived from systemd and nix dependencies.
```

Declared by:

<nixpkgs/nixos/modules/programs/nix−ld.nix>

programs.nix−required−mounts.enable

Whether to enable Expose extra paths to the sandbox depending on derivations' requiredSystemFeatures.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/nix−required−mounts.nix>

programs.nix−required−mounts.allowedPatterns

The hook config, describing which paths to mount for which system features

Type: attribute set of (submodule)

Default:

```
{
  opengl.paths = config.hardware.graphics.extraPackages ++ [
    config.graphics.opengl.package
    pkgs.addDriverRunpath.driverLink
    "/dev/dri"
  ];
}
```

Example:

```
{
  require-ipfs = {
    onFeatures = [
      "ipfs"
    ];
    paths = [
      "/ipfs"
    ];
  };
```

```
}
```

Declared by:

<nixpkgs/nixos/modules/programs/nix−required−mounts.nix>

programs.nix−required−mounts.allowedPatterns.<name>.onFeatures

Which requiredSystemFeatures should trigger relaxation of the sandbox

Type: list of string

Default:

```
[
  "‹name›"
]
```

Declared by:

<nixpkgs/nixos/modules/programs/nix−required−mounts.nix>

programs.nix−required−mounts.allowedPatterns.<name>.paths

A list of glob patterns, indicating which paths to expose to the sandbox

Type: list of (absolute path or (submodule))

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/programs/nix−required−mounts.nix>

programs.nix−required−mounts.allowedPatterns.<name>.safePrefixes

A list of path prefixes that do not need and shall not be searched recursively for further symlink targets. Everything in the nix store does not need to be searched as the derivation already calculcated the full closure of all nix store paths for the drivers package.

Type: list of absolute path

Default:

```
[
  "/build/store"
]
```

Declared by:

<nixpkgs/nixos/modules/programs/nix−required−mounts.nix>

programs.nix−required−mounts.allowedPatterns.<name>.unsafeFollowSymlinks

Whether to enable Instructs the hook to mount the symlink targets as well, when any of the ‘paths’ contain symlinks. This may not work correctly with glob patterns. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/nix−required−mounts.nix>

programs.nix−required−mounts.extraWrapperArgs

List of extra arguments (such as '−−add−flags −v') to pass to the hook's wrapper

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/programs/nix−required−mounts.nix>

programs.nix−required−mounts.presets.nvidia−gpu.enable

Whether to enable Declare the support for derivations that require an Nvidia GPU to be available, e.g. derivations with 'requiredSystemFeatures = ["cuda"]'. This mounts the corresponding userspace drivers and device nodes in the sandbox, but only for derivations that request these special features.

You may extend or override the exposed paths via the 'programs.nix−required−mounts.allowedPatterns.nvidia−gpu.paths' option. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/nix−required−mounts.nix>

programs.nix−required−mounts.presets.zluda.enable

Whether to enable Same as 'programs.nix−required−mounts.presets.nvidia−gpu' but adds paths to the sandbox that are needed for running CUDA applications on top of the ZLUDA translation layer combined with AMD GPUs.

You may extend or override the exposed paths via the 'programs.nix−required−mounts.allowedPatterns.zluda.paths' option. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/nix−required−mounts.nix>

programs.nixbit.enable

Whether to enable Nixbit configuration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/nixbit.nix>

programs.nixbit.package
The nixbit package to use.

Type: package

Default:

```
pkgs.nixbit
```

Declared by:
<nixpkgs/nixos/modules/programs/nixbit.nix>

programs.nixbit.forceAutostart
Force creation of autostart desktop entry when application starts

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/nixbit.nix>

programs.nixbit.repository
Git repository URL for Nixbit

Type: string

Declared by:
<nixpkgs/nixos/modules/programs/nixbit.nix>

programs.nm−applet.enable
Whether to enable nm−applet, a NetworkManager control applet for GNOME.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/nm−applet.nix>

programs.nm−applet.package
The networkmanagerapplet package to use.

Type: package

Default:

```
pkgs.networkmanagerapplet
```

Declared by:
<nixpkgs/nixos/modules/programs/nm−applet.nix>

programs.nm−applet.indicator

Whether to use indicator instead of status icon. It is needed for Appindicator environments, like Enlightenment.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/nm−applet.nix>

programs.nncp.enable

Whether to enable NNCP (Node to Node copy) utilities and configuration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/nncp.nix>

programs.nncp.package

The nncp package to use.

Type: package

Default:

```
pkgs.nncp
```

Declared by:

<nixpkgs/nixos/modules/programs/nncp.nix>

programs.nncp.group

The group under which NNCP files shall be owned. Any member of this group may access the secret keys of this NNCP node.

Type: string

Default:

```
"uucp"
```

Declared by:

<nixpkgs/nixos/modules/programs/nncp.nix>

programs.nncp.secrets

A list of paths to NNCP configuration files that should not be in the Nix store. These files are layered on top of the values at **programs.nncp.settings**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/run/keys/nncp.hjson"
]
```

Declared by:
<nixpkgs/nixos/modules/programs/nncp.nix>

programs.nncp.settings
NNCP configuration, see **http://www.nncpgo.org/Configuration.html**. At runtime these settings will be overlayed by the contents of **programs.nncp.secrets** into the file '/run/nncp.hjson'. Node keypairs go in 'secrets', do not specify them in 'settings' as they will be leaked into '/nix/store'!

Type: JSON value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/nncp.nix>

programs.noisetorch.enable
Whether to enable noisetorch (+ setcap wrapper), a virtual microphone device with noise suppression.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/noisetorch.nix>

programs.noisetorch.package
The noisetorch package to use.

Type: package

Default:

```
pkgs.noisetorch
```

Declared by:
<nixpkgs/nixos/modules/programs/noisetorch.nix>

programs.npm.enable
Whether to enable **npm** global config.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/npm.nix>

programs.npm.package
The nodejs package to use.

Type: package

Default:

```
pkgs.nodejs
```

Declared by:
<nixpkgs/nixos/modules/programs/npm.nix>

programs.npm.npmrc
The system−wide npm configuration. See **https://docs.npmjs.com/misc/config**.

Type: strings concatenated with "\n"

Default:
```
prefix = ''${HOME}/.npm
```

Example:
```
prefix = ''${HOME}/.npm
https-proxy=proxy.example.com
init-license=MIT
init-author-url=https://www.npmjs.com/
color=true
```

Declared by:
<nixpkgs/nixos/modules/programs/npm.nix>

programs.ns−usbloader.enable
Whether to enable ns−usbloader application with udev rules applied.

Type: boolean

Default:
```
false
```

Example:
```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/ns−usbloader.nix>

programs.obs−studio.enable
Whether to enable Free and open source software for video recording and live streaming.

Type: boolean

Default:
```
false
```

Example:
```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/obs−studio.nix>

programs.obs−studio.enableVirtualCamera
Installs and sets up the v4l2loopback kernel module, necessary for OBS to start a virtual camera.

Type: boolean

Default:
```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/obs−studio.nix>

programs.obs−studio.package
The obs−studio package to use.

Type: null or package

Default:

```
pkgs.obs−studio
```

Example:

```
obs−studio
```

Declared by:
<nixpkgs/nixos/modules/programs/obs−studio.nix>

programs.obs−studio.plugins
Optional OBS plugins.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.obs−studio−plugins.wlrobs ]
```

Declared by:
<nixpkgs/nixos/modules/programs/obs−studio.nix>

programs.oddjobd.enable
Whether to enable oddjob, a D−Bus service which runs odd jobs on behalf of client applications.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/oddjobd.nix>

programs.oddjobd.package
The oddjob package to use.

Type: package

Default:

```
pkgs.oddjob
```

Declared by:
<nixpkgs/nixos/modules/programs/oddjobd.nix>

programs.opengamepadui.enable
Whether to enable opengamepadui.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/opengamepadui.nix>

programs.opengamepadui.package
The OpenGamepadUI package to use.

Type: package

Default:

```
pkgs.opengamepadui
```

Declared by:
<nixpkgs/nixos/modules/programs/opengamepadui.nix>

programs.opengamepadui.args
Arguments to be passed to OpenGamepadUI

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/programs/opengamepadui.nix>

programs.opengamepadui.extraPackages
Additional packages to add to the OpenGamepadUI environment.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [
  gamescope
]
```

Declared by:
<nixpkgs/nixos/modules/programs/opengamepadui.nix>

programs.opengamepadui.fontPackages
Font packages to use in OpenGamepadUI.

Defaults to system fonts, but could be overridden to use other fonts — useful for users who would like to customize CJK fonts used in opengamepadui. According to the **upstream issue**, opengamepadui only follows the per−user fontconfig configuration.

Type: list of package

Default:

```
builtins.filter lib.types.package.check config.fonts.packages
```

Example:

```
with pkgs; [ source−han−sans ]
```

Declared by:
<nixpkgs/nixos/modules/programs/opengamepadui.nix>

programs.opengamepadui.gamescopeSession

Run a GameScope driven OpenGamepadUI session from your display−manager

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/programs/opengamepadui.nix>

programs.opengamepadui.gamescopeSession.enable

Whether to enable GameScope Session.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/opengamepadui.nix>

programs.opengamepadui.gamescopeSession.args

Arguments to be passed to GameScope for the session.

Type: list of string

Default:

```
[
  "--prefer-output"
  "*,eDP-1"
  "--xwayland-count"
  "2"
  "--default-touch-mode"
  "4"
  "--hide-cursor-delay"
  "3000"
  "--fade-out-duration"
  "200"
  "--steam"
]
```

Declared by:

<nixpkgs/nixos/modules/programs/opengamepadui.nix>

programs.opengamepadui.gamescopeSession.env

Environmental variables to be passed to GameScope for the session.

Type: attribute set of string

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/programs/opengamepadui.nix>

programs.opengamepadui.inputplumber.enable

Whether to enable Run InputPlumber service for input management and gamepad configuration. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/opengamepadui.nix>

programs.opengamepadui.powerstation.enable

Whether to enable Run PowerStation service for TDP control and performance settings. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/opengamepadui.nix>

programs.openvpn3.enable

Whether to enable the openvpn3 client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/openvpn3.nix>

programs.openvpn3.package

The openvpn3 package to use.

Type: package

Default:

```
pkgs.openvpn3
```

Declared by:

<nixpkgs/nixos/modules/programs/openvpn3.nix>

programs.openvpn3.log−service

Log service configuration

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/openvpn3.nix>

programs.openvpn3.log−service.settings
Options stored in */etc/openvpn3/log−service.json* configuration file

Type: open submodule of attribute set of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/openvpn3.nix>

programs.openvpn3.log−service.settings.journald
Use systemd−journald

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/openvpn3.nix>

programs.openvpn3.log−service.settings.log_dbus_details
Add D−Bus details in log file/syslog

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/openvpn3.nix>

programs.openvpn3.log−service.settings.log_level
How verbose should the logging be

Type: integer between 0 and 7 (both inclusive)

Default:

```
3
```

Example:

```
6
```

Declared by:
<nixpkgs/nixos/modules/programs/openvpn3.nix>

programs.openvpn3.log−service.settings.timestamp
Add timestamp log file

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/openvpn3.nix>

programs.openvpn3.netcfg
Network configuration

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/openvpn3.nix>

programs.openvpn3.netcfg.settings
Options stored in */etc/openvpn3/netcfg.json* configuration file

Type: open submodule of attribute set of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/openvpn3.nix>

programs.openvpn3.netcfg.settings.systemd_resolved
Whether to use systemd−resolved integration

Type: boolean

Default:

```
config.services.resolved.enable
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/openvpn3.nix>

programs.partition−manager.enable
Whether to enable KDE Partition Manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/partition−manager.nix>

programs.partition−manager.package
The partitionmanager package to use.

Type: package

Default:

```
pkgs.kdePackages.partitionmanager
```

Declared by:
<nixpkgs/nixos/modules/programs/partition−manager.nix>

programs.pay−respects.enable
Whether to enable pay−respects, an app which corrects your previous console command.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/pay−respects.nix>

programs.pay−respects.package
The pay−respects package to use.

Type: package

Default:

```
pkgs.pay−respects
```

Declared by:
<nixpkgs/nixos/modules/programs/pay−respects.nix>

programs.pay−respects.aiIntegration
Whether to enable ‘pay−respects’’ LLM integration. When there is no rule for a given error, ‘pay−respects’ can query an OpenAI−compatible API endpoint for command corrections.

- If this is set to ‘false’, all LLM−related features are disabled.
- If this is set to ‘true’, the default OpenAI endpoint will be used, using upstream’s API key. This default API key may be rate−limited.
- You can also set a custom API endpoint, large language model and locale for command corrections. Simply access the ‘aiIntegration.url’, ‘aiIntegration.model’ and ‘aiIntegration.locale’ options, as described in the example.
  - Take a look at the **services.ollama** NixOS module if you wish to host a local large language model for ‘pay−respects’.

For all of these methods, you can set a custom secret API key by using the ‘_PR_AI_API_KEY’ environment variable.

Type: boolean or (submodule)

Default:

```
false
```

Example:

```
{
  locale = "nl−be";
  model = "llama3";
  url = "http://127.0.0.1:11434/v1/chat/completions";
}
```

Declared by:
<nixpkgs/nixos/modules/programs/pay−respects.nix>

programs.pay−respects.alias

‘pay−respects’ needs an alias to be configured. The default value is ‘f’, but you can use anything else as well.

Type: string

Default:

```
"f"
```

Declared by:

<nixpkgs/nixos/modules/programs/pay−respects.nix>

programs.pay−respects.runtimeRules

List of rules to be added to ‘/etc/xdg/pay−respects/rules’. ‘pay−respects’ will read the contents of these generated rules to recommend command corrections. Each rule module should start with the ‘command’ attribute that specifies the command name. See the **upstream documentation** for more information.

Type: list of (TOML value)

Default:

```
[ ]
```

Example:

```
[
  {
    command = "xl";
    match_err = [
      {
        pattern = [
          "Permission denied"
        ];
        suggest = [
          ''
            #[executable(sudo), !cmd_contains(sudo), err_contains(l \
ibxl: error:)]
            sudo {{command}}
          ''
        ];
      }
    ];
  }
];
```

Declared by:

<nixpkgs/nixos/modules/programs/pay−respects.nix>

programs.plotinus.enable

Whether to enable the Plotinus GTK 3 plugin. Plotinus provides a popup (triggered by Ctrl−Shift−P) to search the menus of a compatible application.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/plotinus.nix>

programs.pmount.enable

Whether to enable pmount, a tool that allows normal users to mount removable devices without requiring root privileges .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/pmount.nix>

programs.pmount.package

The pmount package to use.

Type: package

Default:

```
pkgs.pmount
```

Declared by:

<nixpkgs/nixos/modules/programs/pmount.nix>

programs.pqos-wrapper.enable

Whether to enable PQoS Wrapper for BenchExec.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/pqos-wrapper.nix>

programs.pqos-wrapper.package

The pqos-wrapper package to use.

Type: package

Default:

```
pkgs.pqos-wrapper
```

Declared by:

<nixpkgs/nixos/modules/programs/pqos-wrapper.nix>

programs.projecteur.enable

Whether to enable projecteur, an application for the Logitech Spotlight device (and similar).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/projecteur.nix>

programs.projecteur.package
The projecteur package to use.

Type: package

Default:

```
pkgs.projecteur
```

Declared by:
<nixpkgs/nixos/modules/programs/projecteur.nix>

programs.proxychains.enable
Whether to enable proxychains configuration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/proxychains.nix>

programs.proxychains.package
The proxychains package to use.

Type: package

Default:

```
pkgs.proxychains
```

Example:

```
proxychains-ng
```

Declared by:
<nixpkgs/nixos/modules/programs/proxychains.nix>

programs.proxychains.chain.length
Chain length for random chain.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/programs/proxychains.nix>

programs.proxychains.chain.type
‘dynamic’ − Each connection will be done via chained proxies all proxies chained in the order as they appear in the list at least one proxy must be online to play in chain (dead proxies are skipped) otherwise ‘EINTR’ is returned to the app.

‘strict’ − Each connection will be done via chained proxies all proxies chained in the order as they appear in the list all proxies must be online to play in chain otherwise ‘EINTR’ is returned to the app.

‘random’ − Each connection will be done via random proxy (or proxy chain, see **programs.proxychains.chain.length**) from the list.

Type: one of “dynamic”, “strict”, “random”

Default:

```
"strict"
```

Declared by:
<nixpkgs/nixos/modules/programs/proxychains.nix>

programs.proxychains.localnet
By default enable localnet for loopback address ranges.

Type: string

Default:

```
"127.0.0.0/255.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/programs/proxychains.nix>

programs.proxychains.proxies
Proxies to be used by proxychains.

Type: attribute set of (submodule)

Example:

```
{ myproxy =
  { type = "socks4";
    host = "127.0.0.1";
    port = 1337;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/programs/proxychains.nix>

programs.proxychains.proxies.<name>.enable
Whether to enable this proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/proxychains.nix>

programs.proxychains.proxies.<name>.host
Proxy host or IP address.

Type: string

Declared by:
<nixpkgs/nixos/modules/programs/proxychains.nix>

programs.proxychains.proxies.<name>.port
Proxy port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/programs/proxychains.nix>

programs.proxychains.proxies.<name>.type
Proxy type.

Type: one of “http”, “socks4”, “socks5”

Declared by:
<nixpkgs/nixos/modules/programs/proxychains.nix>

programs.proxychains.proxyDNS
Proxy DNS requests − no leak for DNS data.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/proxychains.nix>

programs.proxychains.quietMode
Whether to enable Quiet mode (no output from the library).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/proxychains.nix>

programs.proxychains.remoteDNSSubnet
Set the class A subnet number to use for the internal remote DNS mapping, uses the reserved 224.x.x.x range by default.

Type: one of 10, 127, 224

Default:

```
224
```

Declared by:
<nixpkgs/nixos/modules/programs/proxychains.nix>

programs.proxychains.tcpConnectTimeOut
Connection time−out in milliseconds.

Type: signed integer

Default:

```
8000
```

Declared by:
<nixpkgs/nixos/modules/programs/proxychains.nix>

programs.proxychains.tcpReadTimeOut
Connection read time−out in milliseconds.

Type: signed integer

Default:

```
15000
```

Declared by:
<nixpkgs/nixos/modules/programs/proxychains.nix>

programs.pulseview.enable
Whether to enable pulseview, a sigrok GUI.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/pulseview.nix>

programs.qdmr.enable
Whether to enable QDMR − a GUI application and command line tool for programming DMR radios.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/qdmr.nix>

programs.qdmr.package
The qdmr package to use.

Type: package

Default:

```
pkgs.qdmr
```

Declared by:
<nixpkgs/nixos/modules/programs/qdmr.nix>

programs.qgroundcontrol.enable
Whether to enable qgroundcontrol.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/qgroundcontrol.nix>

programs.qgroundcontrol.package
The qgroundcontrol package to use.

Type: package

Default:

```
pkgs.qgroundcontrol
```

Declared by:
<nixpkgs/nixos/modules/programs/qgroundcontrol.nix>

programs.qgroundcontrol.blacklistModemManagerFromTTYUSB
Disallow ModemManager from interfering with serial connections that QGroundControl might use.

Note that if you use a modem that's connected via USB, you might want to disable this option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/qgroundcontrol.nix>

programs.quark−goldleaf.enable
Whether to enable quark−goldleaf with udev rules applied.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/quark−goldleaf.nix>

programs.regreet.enable
Enable ReGreet, a clean and customizable greeter for greetd.

To use ReGreet, **services.greetd** has to be enabled and **services.greetd.settings.default_session** should contain the appropriate configuration to launch **config.programs.regreet.package**. For examples, see the **ReGreet Readme**.

A minimal configuration that launches ReGreet in **cage** is enabled by this module by default.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/regreet.nix>

programs.regreet.package

The regreet package to use.

Type: package

Default:

```
pkgs.regreet
```

Declared by:

<nixpkgs/nixos/modules/programs/regreet.nix>

programs.regreet.cageArgs

Additional arguments to be passed to **cage**.

Type: list of string

Default:

```
[
  "-s"
  "-d"
]
```

Example:

```
[ "-s" "-d" "-m" "last" ]
```

Declared by:

<nixpkgs/nixos/modules/programs/regreet.nix>

programs.regreet.cursorTheme.package

The package that provides the cursor theme given in the name option.

Type: package

Default:

```
pkgs.adwaita-icon-theme
```

Declared by:

<nixpkgs/nixos/modules/programs/regreet.nix>

programs.regreet.cursorTheme.name

Name of the cursor theme to use for regreet.

Type: string

Default:

```
"Adwaita"
```

Declared by:

<nixpkgs/nixos/modules/programs/regreet.nix>

programs.regreet.extraCss

Extra CSS rules to apply on top of the GTK theme. Refer to **GTK CSS Properties** for modifiable properties.

Type: absolute path or strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/programs/regreet.nix>

programs.regreet.font.package
The package that provides the font given in the name option.

Type: package

Default:

```
pkgs.cantarell-fonts
```

Declared by:
<nixpkgs/nixos/modules/programs/regreet.nix>

programs.regreet.font.name
Name of the font to use for regreet.

Type: string

Default:

```
"Cantarell"
```

Declared by:
<nixpkgs/nixos/modules/programs/regreet.nix>

programs.regreet.font.size
Size of the font to use for regreet.

Type: positive integer, meaning >0

Default:

```
16
```

Declared by:
<nixpkgs/nixos/modules/programs/regreet.nix>

programs.regreet.iconTheme.package
The package that provides the icon theme given in the name option.

Type: package

Default:

```
pkgs.adwaita-icon-theme
```

Declared by:
<nixpkgs/nixos/modules/programs/regreet.nix>

programs.regreet.iconTheme.name
Name of the icon theme to use for regreet.

Type: string

Default:

```
"Adwaita"
```

Declared by:
<nixpkgs/nixos/modules/programs/regreet.nix>

programs.regreet.settings
ReGreet configuration file. Refer **https://github.com/rharish101/ReGreet/blob/main/regreet.sample.toml** for options.

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/regreet.nix>

programs.regreet.theme.package
The package that provides the theme given in the name option.

Type: package

Default:

```
pkgs.gnome-themes-extra
```

Declared by:
<nixpkgs/nixos/modules/programs/regreet.nix>

programs.regreet.theme.name
Name of the theme to use for regreet.

Type: string

Default:

```
"Adwaita"
```

Declared by:
<nixpkgs/nixos/modules/programs/regreet.nix>

programs.river-classic.enable
Whether to enable river-classic, a dynamic tiling Wayland compositor.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/river.nix>

programs.river-classic.package
The river-classic package to use. If the package is not overridable with 'xwaylandSupport', then the module option **xwayland** will have no effect.

Set to 'null' to not add any River package to your path. This should be done if you want to use the Home Manager River module to install River.

Type: null or package

Default:

```
pkgs.river-classic
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/river.nix>

programs.river-classic.extraPackages
Extra packages to be installed system wide. See **Common X11 apps used on i3 with Wayland alternatives** for a list of useful software.

Type: list of package

Default:

```
with pkgs; [ swaylock foot dmenu ];
```

Example:

```
with pkgs; [ termite rofi light ]
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/river.nix>

programs.river−classic.xwayland.enable
Whether to enable XWayland.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/river.nix>

programs.rog−control−center.enable
Whether to enable the rog−control−center application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/rog−control−center.nix>

programs.rog−control−center.autoStart
Whether rog−control−center should be started automatically.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/rog−control−center.nix>

programs.rush.enable
Whether to enable Restricted User Shell…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/rush.nix>

programs.rush.package
The rush package to use.

Type: package

Default:

```
pkgs.rush
```

Declared by:
<nixpkgs/nixos/modules/programs/rush.nix>

programs.rush.global
The ‘global’ statement defines global settings.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/rush.nix>

programs.rush.rules
The rule statement configures a GNU Rush rule. This is a block statement, which means that all statements located between it and the next rule statement (or end of file, whichever occurs first) modify the definition of that rule.

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/rush.nix>

programs.rush.shell
The resolved shell path that users can inherit to set ‘rush’ as their login shell. This is a convenience option for use in user definitions. Example: ‘users.users.alice = { inherit (config.programs.rush) shell; ... };’

Type: package or absolute path *(read only)*

Declared by:
<nixpkgs/nixos/modules/programs/rush.nix>

programs.rush.wrap
Whether to wrap the ‘rush’ binary with a SUID−enabled wrapper. This is required if **security.enableWrappers** is enabled in your configuration.

Type: boolean

Default:

```
config.security.enableWrappers
```

Declared by:
<nixpkgs/nixos/modules/programs/rush.nix>

programs.rust−motd.enable
Whether to enable rust−motd, a Message Of The Day (MOTD) generator.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/rust−motd.nix>

programs.rust−motd.enableMotdInSSHD
Whether to let ‘openssh’ print the result when entering a new ‘ssh’−session. By default either nothing or a static file defined via **users.motd** is printed. Because of that, the latter option is incompatible with this module.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/rust−motd.nix>

programs.rust−motd.order
The order of the sections in **programs.rust-motd.settings**. By default they are ordered alphabetically.

Context: since attribute sets in Nix are always ordered alphabetically internally this means that

```
{
  uptime = { /* ... */ };
  banner = { /* ... */ };
}
```

will still have ‘banner’ displayed before ‘uptime’.

To work around that, this option can be used to define the order of all keys, i.e.

```
{
  order = [
    "uptime"
    "banner"
  ];
}
```

makes sure that ‘uptime’ is placed before ‘banner’ in the motd.

Type: list of string

Default:

```
attrNames cfg.settings
```

Declared by:
<nixpkgs/nixos/modules/programs/rust−motd.nix>

programs.rust−motd.refreshInterval
Interval in which the **motd**(5) file is refreshed. For possible formats, please refer to **systemd.time**(7).

Type: string

Default:

```
"*:0/5"
```

Declared by:
<nixpkgs/nixos/modules/programs/rust−motd.nix>

programs.rust−motd.settings

Settings on what to generate. Please read the **upstream documentation** for further information.

Type: attribute set of (TOML value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/programs/rust−motd.nix>

programs.ryzen−monitor−ng.enable

Whether to enable ryzen_monitor_ng, a userspace application for setting and getting Ryzen SMU (System Management Unit) parameters via the ryzen_smu kernel driver.

Monitor power information of Ryzen processors via the PM table of the SMU.

SMU Set and Get for many parameters and CO counts.

https://github.com/mann1x/ryzen_monitor_ng

WARNING: Damage cause by use of your AMD processor outside of official AMD specifications or outside of factory settings are not covered under any AMD product warranty and may not be covered by your board or system manufacturer's warranty .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/ryzen−monitor−ng.nix>

programs.ryzen−monitor−ng.package

The ryzen−monitor−ng package to use.

Type: package

Default:

```
pkgs.ryzen−monitor−ng
```

Declared by:

<nixpkgs/nixos/modules/programs/ryzen−monitor−ng.nix>

programs.schroot.enable

Whether to enable schroot, a lightweight virtualisation tool.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/schroot.nix>

programs.schroot.package

The schroot package to use.

Type: package

Default:

```
pkgs.schroot
```

Declared by:

<nixpkgs/nixos/modules/programs/schroot.nix>

programs.schroot.profiles

Custom configuration profiles for schroot.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/programs/schroot.nix>

programs.schroot.profiles.<name>.copyfiles

A list of files to copy into the chroot from the host system.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/etc/resolv.conf"
]
```

Declared by:

<nixpkgs/nixos/modules/programs/schroot.nix>

programs.schroot.profiles.<name>.fstab

A file in the format described in **fstab**(5), used to mount filesystems inside the chroot. The mount location is relative to the root of the chroot.

Type: absolute path

Example:

```
pkgs.writeText "my-schroot-fstab" ''
  /proc           /proc           none    rw,bind         0       0
  /sys            /sys            none    rw,bind         0       0
  /dev            /dev            none    rw,bind         0       0
  /dev/pts        /dev/pts        none    rw,bind         0       0
  /home           /home           none    rw,rbind        0       0
  /tmp            /tmp            none    rw,bind         0       0
  /dev/shm        /dev/shm        none    rw,bind         0       0
  /nix            /nix            none    ro,bind         0       0
  /run/current-system /run/current-system none rw,bind    0       \
 0
  /run/wrappers   /run/wrappers   none    rw,bind         0       0
```

Declared by:

<nixpkgs/nixos/modules/programs/schroot.nix>

programs.schroot.profiles.<name>.nssdatabases

System databases (as described in /etc/nsswitch.conf on GNU/Linux systems) to copy into the chroot from the host.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "passwd"
  "shadow"
  "group"
  "gshadow"
  "services"
  "protocols"
  "networks"
  "hosts"
]
```

Declared by:

<nixpkgs/nixos/modules/programs/schroot.nix>

programs.schroot.settings

Schroot configuration settings. For more details, see **schroot.conf**(5).

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  noble = {
    description = "Ubuntu 24.04 Noble";
    directory = "/srv/chroot/noble";
    personality = "linux";
    preserve-environment = false;
    profile = "my-profile";
    root-users = "my-user";
    shell = "/bin/bash";
    type = "directory";
    users = "my-user";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/programs/schroot.nix>

programs.screen.enable

Whether to enable screen, a basic terminal multiplexer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/screen.nix>

programs.screen.package

The screen package to use.

Type: package

Default:

```
pkgs.screen
```

Declared by:

<nixpkgs/nixos/modules/programs/screen.nix>

programs.screen.screenrc

The contents of */etc/screenrc* file

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
defscrollback 10000
startup_message off
```

Declared by:

<nixpkgs/nixos/modules/programs/screen.nix>

programs.seahorse.enable

Whether to enable Seahorse, a GNOME application for managing encryption keys and passwords in the GNOME Keyring.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/seahorse.nix>

programs.sedutil.enable

Whether to enable sedutil, to manage self encrypting drives that conform to the Trusted Computing Group OPAL 2.0 SSC specification.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/sedutil.nix>

programs.sharing.enable
Whether to enable sharing, a CLI tool for sharing files.

Note that it will opens the 7478 port for TCP in the firewall, which is needed for it to function properly .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/sharing.nix>

programs.singularity.enable
Whether to install Singularity/Apptainer with system−level overriding such as SUID support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/singularity.nix>

programs.singularity.enableExternalLocalStateDir
Whether to use top−level directories as LOCALSTATEDIR instead of the store path ones. This affects the SESSIONDIR of Apptainer/Singularity. If set to true, the SESSIONDIR will become '/var/lib/${projectName}/mnt/session'.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/singularity.nix>

programs.singularity.enableFakeroot
Whether to enable the '−−fakeroot' support of Singularity/Apptainer.

This option is deprecated and has no effect. '−−fakeroot' support is enabled automatically, as 'systemBinPaths = ["/run/wrappers/bin"]' is always specified.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/singularity.nix>

programs.singularity.enableSuid
Whether to enable the SUID support of Singularity/Apptainer.

Type: boolean

Default:

```
config.services.singularity.package.projectName != "apptainer"
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/singularity.nix>

programs.singularity.package
The singularity package to use.

Type: package

Default:

```
pkgs.singularity
```

Example:

```
apptainer
```

Declared by:
<nixpkgs/nixos/modules/programs/singularity.nix>

programs.singularity.packageOverriden
This option provides access to the overridden result of ‘programs.singularity.package’.

For example, the following configuration makes all the Nixpkgs packages use the overridden ‘singularity’:

```
{ config, lib, pkgs, ... }:
{
  nixpkgs.overlays = [
    (final: prev: {
      _singularity-orig = prev.singularity;
      singularity = config.programs.singularity.packageOverriden;
    })
  ];
  programs.singularity.enable = true;
  programs.singularity.package = pkgs._singularity-orig;
}
```

Use ‘lib.mkForce’ to forcefully specify the overridden package.

Type: null or package

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/programs/singularity.nix>

programs.singularity.systemBinPaths

(Extra) system−wide /**/bin paths for Apptainer/Singularity to find command−line utilities in.

‘"/run/wrappers/bin"’ is included by default to make utilities with SUID bit set available to Apptainer/Singularity. Use ‘lib.mkForce’ to shadow the default values.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/programs/singularity.nix>

programs.skim.enable

Whether to enable skim fuzzy finder.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/skim.nix>

programs.skim.package

The skim package to use.

Type: package

Default:

```
pkgs.skim
```

Declared by:

<nixpkgs/nixos/modules/programs/skim.nix>

programs.skim.keybindings

Whether to enable skim keybindings.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/skim.nix>

programs.slock.enable

Whether to install slock screen locker with setuid wrapper.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/slock.nix>

programs.slock.package
The slock package to use.

Type: package

Default:

```
pkgs.slock
```

Declared by:
<nixpkgs/nixos/modules/programs/slock.nix>

programs.sniffnet.enable
Whether to enable sniffnet, a network traffic monitor application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/sniffnet.nix>

programs.soundmodem.enable
Whether to add Soundmodem to the global environment and configure a wrapper for 'soundmodemconfig' for users in the 'soundmodem' group.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/soundmodem.nix>

programs.soundmodem.package
The soundmodem package to use.

Type: package

Default:

```
pkgs.soundmodem
```

Declared by:
<nixpkgs/nixos/modules/programs/soundmodem.nix>

programs.ssh.enableAskPassword
Whether to configure SSH_ASKPASS in the environment.

Type: boolean

Default:

```
config.services.xserver.enable
```

Declared by:
<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.package

The openssh package to use.

Type: package

Default:

```
pkgs.openssh
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.agentPKCS11Whitelist

A pattern−list of acceptable paths for PKCS#11 shared libraries that may be used with the −s option to ssh−add.

Type: null or string

Default:

```
null
```

Example:

```
"${pkgs.opensc}/lib/opensc−pkcs11.so"
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.agentTimeout

How long to keep the private keys in memory. Use null to keep them forever.

Type: null or string

Default:

```
null
```

Example:

```
"1h"
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.askPassword

Program used by SSH to ask for passwords.

Type: string

Default:

```
"${pkgs.x11_ssh_askpass}/libexec/x11−ssh−askpass"
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.ciphers

Specifies the ciphers allowed and their order of preference.

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "chacha20−poly1305@openssh.com"
```

```
  "aes256-gcm@openssh.com"
]
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.extraConfig

Extra configuration text prepended to *ssh_config*. Other generated options will be added after a 'Host *' pattern. See **ssh_config**(5) for help.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.forwardX11

Whether to request X11 forwarding on outgoing connections by default. If set to null, the option is not set at all. This is useful for running graphical programs on the remote machine and have them display to your local X11 server. Historically, this value has depended on the value used by the local sshd daemon, but there really isn't a relation between the two. Note: there are some security risks to forwarding an X11 connection. NixOS's X server is built with the SECURITY extension, which prevents some obvious attacks. To enable or disable forwarding on a per−connection basis, see the −X and −x options to ssh. The −Y option to ssh enables trusted forwarding, which bypasses the SECURITY extension.

Type: null or boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.hostKeyAlgorithms

Specifies the host key algorithms that the client wants to use in order of preference.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "ssh-ed25519"
  "ssh-rsa"
]
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.kexAlgorithms

Specifies the available KEX (Key Exchange) algorithms.

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "curve25519-sha256@libssh.org"
  "diffie-hellman-group-exchange-sha256"
]
```

Declared by:
<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.knownHosts
The set of system-wide known SSH hosts. To make simple setups more convenient the name of an attribute in this set is used as a host name for the entry. This behaviour can be disabled by setting 'hostNames' explicitly. You can use 'extraHostNames' to add additional host names without disabling this default.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  myhost = {
    extraHostNames = [ "myhost.mydomain.com" "10.10.1.4" ];
    publicKeyFile = ./pubkeys/myhost_ssh_host_dsa_key.pub;
  };
  "myhost2.net".publicKey = "ssh-ed25519 AAAAC3NzaC1lZDI1NTE5AAAAI \
LIRuJ8p1Fi+m6WkHV0KWnRfpM1WxoW8XAS+XvsSKsTK";
  "myhost2.net/dsa" = {
    hostNames = [ "myhost2.net" ];
    publicKeyFile = ./pubkeys/myhost2_ssh_host_dsa_key.pub;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.knownHosts.<name>.certAuthority
This public key is an SSH certificate authority, rather than an individual host's key.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.knownHosts.<name>.extraHostNames
A list of additional host names and/or IP numbers used for accessing the host's ssh service. This list is ignored if 'hostNames' is set explicitly.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.knownHosts.<name>.hostNames

A list of host names and/or IP numbers used for accessing the host's ssh service. This list includes the name of the containing 'knownHosts' attribute by default for convenience. If you wish to configure multiple host keys for the same host use multiple 'knownHosts' entries with different attribute names and the same 'hostNames' list.

Type: list of string

Default:

```
[ ‹name› ] ++ config.programs.ssh.knownHosts.<name>.extraHostNames
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.knownHosts.<name>.publicKey

The public key data for the host. You can fetch a public key from a running SSH server with the **ssh-keyscan** command. The public key should not include any host names, only the key type and the key itself.

Type: null or string

Default:

```
null
```

Example:

```
"ecdsa-sha2-nistp521 AAAAE2VjZHN...UEPg=="
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.knownHosts.<name>.publicKeyFile

The path to the public key file for the host. The public key file is read at build time and saved in the Nix store. You can fetch a public key file from a running SSH server with the **ssh-keyscan** command. The content of the file should follow the same format as described for the 'publicKey' option. Only a single key is supported. If a host has multiple keys, use **programs.ssh.knownHostsFiles** instead.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.knownHostsFiles

Files containing SSH host keys to set as global known hosts. '/etc/ssh/ssh_known_hosts' (which is generated by **programs.ssh.knownHosts**) is always included.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  ./known_hosts
  (writeText "github.keys" ''
    github.com ssh-rsa AAAAB3NzaC1yc2EAAAADAQABAAABgQCj7ndNxQowgcQ \
njshcLrqPEiiphnt+VTTvDP6mHBL9j1aNUkY4Ue1gvwnGLVlOhGeYrnZaMgRK6+PKCU \
XaDbC7qtbW8gIkhL7aGCsOr/C56SJMy/BCZfxd1nWzAOxSDPgVsmerOBYfNqltV9/hW \
```

```
CqBywINIR+5dIg6JTJ72pcEpEjcYgXkE2YEFXV1JHnsKgbLWNlhScqb2UmyRkQyytRL \
tL+38TGxkxCflmO+5Z8CSSNY7GidjMIZ7Q4zMjA2n1nGrlTDkzwDCsw+wqFPGQA179c \
nfGWOWRVruj16z6XyvxvjJwbz0wQZ75XK5tKSb7FNyeIEs4TT4jk+S4dhPeAUC5y+bD \
YirYgM4GC7uEnztnZyaVWQ7B381AK4Qdrwt51ZqExKbQpTUNn+EjqoTwvqNj4kqx5QU \
CI0ThS/YkOxJCXmPUWZbhjpCg56i+2aB6CmK2JGhn57K5mj0MNdBXA4/WnwH6XoPWJz \
K5Nyu2zB3nAZp+S5hpQs+p1vN1/wsjk=
    github.com ecdsa-sha2-nistp256 AAAAE2VjZHNhLXNoYTItbmlzdHAyNT \
YAAAAIbmlzdHAyNTYAAABBBEmKSENjQEezOmxkZMy7opKgwFB9nkt5YRrYMjNuG5N87 \
uRgg6CLrbo5wAdT/y6v0mKV0U2w0WZ2YB/++Tpockg=
    github.com ssh-ed25519 AAAAC3NzaC1lZDI1NTE5AAAAIOMqqnkVzrm0SdG \
6UOoqKLsabgH5C9okWi0dh2l9GKJl
  '')
]
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.macs

Specifies the MAC (message authentication code) algorithms in order of preference. The MAC algorithm is used for data integrity protection.

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "hmac-sha2-512-etm@openssh.com"
  "hmac-sha1"
]
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.pubkeyAcceptedKeyTypes

Specifies the key lib.types that will be used for public key authentication.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "ssh-ed25519"
  "ssh-rsa"
]
```

Declared by:

<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.setXAuthLocation

Whether to set the path to **xauth** for X11-forwarded connections. This causes a dependency on X11 packages.

Type: boolean

Declared by:
<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.startAgent
Whether to start the OpenSSH agent when you log in. The OpenSSH agent remembers private keys for you so that you don't have to type in passphrases every time you make an SSH connection. Use **ssh−add** to add a key to the agent.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/ssh.nix>

programs.ssh.systemd−ssh−proxy.enable
Whether to enable systemd's ssh proxy plugin. See **systemd−ssh−proxy**(1).

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/ssh.nix>

programs.starship.enable
Whether to enable the Starship shell prompt.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/starship.nix>

programs.starship.package
The starship package to use.

Type: package

Default:

```
pkgs.starship
```

Declared by:
<nixpkgs/nixos/modules/programs/starship.nix>

programs.starship.interactiveOnly
Whether to enable starship only when the shell is interactive. Some plugins require this to be set to false to function correctly .

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/starship.nix>

programs.starship.presets
Presets files to be merged with settings in order.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "nerd-font-symbols"
]
```

Declared by:
<nixpkgs/nixos/modules/programs/starship.nix>

programs.starship.settings
Configuration included in *starship.toml*.

See **https://starship.rs/config/#prompt** for documentation.

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/starship.nix>

programs.starship.transientPrompt.enable
Whether to enable Starship's **transient prompt** feature in 'fish' shells. After a command has been entered, Starship replaces the usual prompt with the terminal output of the commands defined in the 'programs.starship.transientPrompt.left' and 'programs.starship.transientPrompt.right' options.

This option only works with 'fish', as 'bash' requires a **custom configuration** involving **Ble.sh**, which can be enabled with 'programs.bash.blesh.enable', but not configured using NixOS .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/starship.nix>

programs.starship.transientPrompt.left
Fish code composing the body of the 'starship_transient_prompt_func' function. The output of this code will become the left side of the transient prompt.

Not setting this option (or setting it to 'null') will prevent the 'starship_transient_prompt_func' function from being generated. By default, the left prompt is a bold−green '❯' character.

Type: null or Fish shell code concatenated with "\n"

Default:

```
null
```

Example:

```
"starship module character"
```

Declared by:
<nixpkgs/nixos/modules/programs/starship.nix>

programs.starship.transientPrompt.right
Fish code composing the body of the ‘starship_transient_rprompt_func’ function. The output of this code will become the right side of the transient prompt.

Not setting this option (or setting it to ‘null’) will prevent the ‘starship_transient_rprompt_func’ function from being generated. By default, the right prompt is empty.

Type: null or Fish shell code concatenated with “\n”

Default:

```
null
```

Example:

```
"starship module time"
```

Declared by:
<nixpkgs/nixos/modules/programs/starship.nix>

programs.steam.enable
Whether to enable steam.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.steam.package
The Steam package to use. Additional libraries are added from the system configuration to ensure graphics work properly.

Use this option to customise the Steam package rather than adding your custom Steam to **environment.systemPackages** yourself.

Type: package

Default:

```
pkgs.steam
```

Example:

```
pkgs.steam.override {
  extraEnv = {
    MANGOHUD = true;
    OBS_VKCAPTURE = true;
    RADV_TEX_ANISO = 16;
  };
  extraLibraries = p: with p; [
    atk
  ];
```

```
}
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.steam.dedicatedServer.openFirewall
Open ports in the firewall for Source Dedicated Server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.steam.extest.enable
Whether to enable Load the extest library into Steam, to translate X11 input events to uinput events (e.g. for using Steam Input on Wayland) .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.steam.extraCompatPackages
Extra packages to be used as compatibility tools for Steam on Linux. Packages will be included in the 'STEAM_EXTRA_COMPAT_TOOLS_PATHS' environmental variable. For more information see https://github.com/ValveSoftware/steam−for−linux/issues/6310.

These packages must be Steam compatibility tools that have a 'steamcompattool' output.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [
  proton-ge-bin
]
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.steam.extraPackages
Additional packages to add to the Steam environment.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [
  gamescope
```

```
]
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.steam.fontPackages
Font packages to use in Steam.

Defaults to system fonts, but could be overridden to use other fonts — useful for users who would like to customize CJK fonts used in Steam. According to the **upstream issue**, Steam only follows the per−user fontconfig configuration.

Type: list of package

Default:

```
builtins.filter lib.types.package.check config.fonts.packages
```

Example:

```
with pkgs; [ source−han−sans ]
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.steam.gamescopeSession
Run a GameScope driven Steam session from your display−manager

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.steam.gamescopeSession.enable
Whether to enable GameScope Session.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.steam.gamescopeSession.args
Arguments to be passed to GameScope for the session.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.steam.gamescopeSession.env
Environmental variables to be passed to GameScope for the session.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.steam.gamescopeSession.steamArgs
Arguments to be passed to Steam for the session.

Type: list of string

Default:

```
[
  "-tenfoot"
  "-pipewire-dmabuf"
]
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.steam.localNetworkGameTransfers.openFirewall
Open ports in the firewall for Steam Local Network Game Transfers.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.steam.protontricks.enable
Whether to enable protontricks, a simple wrapper for running Winetricks commands for Proton−enabled games.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.steam.protontricks.package
The protontricks package to use.

Type: package

Default:

```
pkgs.protontricks
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.steam.remotePlay.openFirewall
Open ports in the firewall for Steam Remote Play.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/steam.nix>

programs.streamcontroller.enable
Whether to enable StreamController.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/streamcontroller.nix>

programs.streamcontroller.package
The StreamController package to use

Type: package

Default:

```
pkgs.streamcontroller
```

Declared by:
<nixpkgs/nixos/modules/programs/streamcontroller.nix>

programs.streamdeck−ui.enable
Whether to enable streamdeck−ui.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/streamdeck−ui.nix>

programs.streamdeck−ui.package
The streamdeck−ui package to use.

Type: package

Default:

```
pkgs.streamdeck−ui
```

Declared by:
<nixpkgs/nixos/modules/programs/streamdeck−ui.nix>

programs.streamdeck−ui.autoStart

Whether streamdeck−ui should be started automatically.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/streamdeck−ui.nix>

programs.sway.enable

Whether to enable Sway, the i3−compatible tiling Wayland compositor. You can manually launch Sway by executing “exec sway” on a TTY. Copy /etc/sway/config to ~/.config/sway/config to modify the default configuration. See **https://github.com/swaywm/sway/wiki** and “man 5 sway” for more information.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/wayland/sway.nix>

programs.sway.package

The sway package to use. If the package is not overridable with ‘extraSessionCommands’, ‘extraOptions’, ‘withBaseWrapper’, ‘withGtkWrapper’, ‘enableXWayland’ and ‘isNixOS’, then the module options **wrapperFeatures**, **extraSessionCommands**, **extraOptions** and **xwayland** will have no effect.

Set to ‘null’ to not add any Sway package to your path. This should be done if you want to use the Home Manager Sway module to install Sway.

Type: null or package

Default:

```
pkgs.sway
```

Declared by:

<nixpkgs/nixos/modules/programs/wayland/sway.nix>

programs.sway.extraOptions

Command line arguments passed to launch Sway. Please DO NOT report issues if you use an unsupported GPU (proprietary drivers).

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--verbose"
  "--debug"
  "--unsupported-gpu"
]
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/sway.nix>

programs.sway.extraPackages
Extra packages to be installed system wide. See **https://github.com/swaywm/sway/wiki/Useful−add−ons−for−sway** and **https://github.com/swaywm/sway/wiki/i3−Migration−Guide#common−x11−apps−used−on−i3−with−wayland−alternatives** for a list of useful software.

Type: list of package

Default:

```
with pkgs; [ brightnessctl foot grim pulseaudio swayidle swaylock w \
menu ];
```

Example:

```
with pkgs; [ i3status i3status−rust termite rofi light ]
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/sway.nix>

programs.sway.extraSessionCommands
Shell commands executed just before Sway is started. See **https://github.com/swaywm/sway/wiki/Running−programs−natively−under−wayland** and **https://github.com/swaywm/wlroots/blob/master/docs/env_vars.md** for some useful environment variables.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
# SDL:
export SDL_VIDEODRIVER=wayland
# QT (needs qt5.qtwayland in systemPackages):
export QT_QPA_PLATFORM=wayland−egl
export QT_WAYLAND_DISABLE_WINDOWDECORATION="1"
# Fix for some Java AWT applications (e.g. Android Studio),
# use this if they aren’t displayed properly:
export _JAVA_AWT_WM_NONREPARENTING=1
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/sway.nix>

programs.sway.wrapperFeatures.base
Whether to enable the base wrapper to execute extra session commands and prepend a dbus−run−session to the sway command.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/sway.nix>

programs.sway.wrapperFeatures.gtk

Whether to enable the wrapGAppsHook wrapper to execute sway with required environment variables for GTK applications.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/wayland/sway.nix>

programs.sway.xwayland.enable

Whether to enable XWayland.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/wayland/sway.nix>

programs.sysdig.enable

Whether to enable sysdig, a tracing tool.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/sysdig.nix>

programs.system−config−printer.enable

Whether to enable system−config−printer, a Graphical user interface for CUPS administration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/system−config−printer.nix>

programs.systemtap.enable

Install **systemtap** along with necessary kernel options.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/systemtap.nix>

programs.tcpdump.enable

Whether to configure a setcap wrapper for tcpdump. To use it, add your user to the ‘pcap’ group.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/tcpdump.nix>

programs.television.enable

Whether to enable Blazingly fast general purpose fuzzy finder TUI.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/television.nix>

programs.television.enableBashIntegration

Whether to enable Bash integration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/television.nix>

programs.television.enableFishIntegration

Whether to enable Fish integration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/television.nix>

programs.television.enableZshIntegration
Whether to enable Zsh integration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/television.nix>

programs.television.package
The television package to use.

Type: package

Default:

```
pkgs.television
```

Declared by:
<nixpkgs/nixos/modules/programs/television.nix>

programs.throne.enable
Whether to enable Throne, a GUI proxy configuration manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/throne.nix>

programs.throne.package
The throne package to use.

Type: package

Default:

```
pkgs.throne
```

Declared by:
<nixpkgs/nixos/modules/programs/throne.nix>

programs.throne.tunMode.enable
Whether to enable TUN mode of Throne.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/throne.nix>

programs.throne.tunMode.setuid
Whether to enable setting suid bit for throne−core to run as root, which is less secure than default setcap method but closer to upstream assumptions. Enable this if you find the default setcap method configured in this module doesn't work for you .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/throne.nix>

programs.thunar.enable
Whether to enable Thunar, the Xfce file manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/thunar.nix>

programs.thunar.plugins
List of thunar plugins to install.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [ thunar−archive−plugin thunar−volman ]
```

Declared by:
<nixpkgs/nixos/modules/programs/thunar.nix>

programs.thunderbird.enable
Whether to enable Thunderbird mail client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/thunderbird.nix>

programs.thunderbird.package

The thunderbird package to use.

Type: package

Default:

```
pkgs.thunderbird
```

Declared by:

<nixpkgs/nixos/modules/programs/thunderbird.nix>

programs.thunderbird.policies

Group policies to install.

See **Thunderbird's documentation** for a list of available options.

This can be used to install extensions declaratively! Check out the documentation of the 'ExtensionSettings' policy for details.

Type: JSON value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/programs/thunderbird.nix>

programs.thunderbird.preferences

Preferences to set from 'about:config'.

Some of these might be able to be configured more ergonomically using policies.

Type: attribute set of (boolean or signed integer or string)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/programs/thunderbird.nix>

programs.thunderbird.preferencesStatus

The status of 'thunderbird.preferences'.

'status' can assume the following values:

- '"default"': Preferences appear as default.
- '"locked"': Preferences appear as default and can't be changed.
- '"user"': Preferences appear as changed.
- '"clear"': Value has no effect. Resets to factory defaults on each startup.

Type: one of "default", "locked", "user", "clear"

Default:

```
"locked"
```

Declared by:

<nixpkgs/nixos/modules/programs/thunderbird.nix>

programs.tmux.enable

Whenever to configure **tmux** system−wide.

Type: boolean

Default:

```
false
```

Related packages:

- ‘pkgs.tmux’

Declared by:
<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.package
The tmux package to use.

Type: package

Default:

```
pkgs.tmux
```

Declared by:
<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.aggressiveResize
Resize the window to the size of the smallest session for which it is the current window.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.baseIndex
Base index for windows and panes.

Type: signed integer

Default:

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.clock24
Use 24 hour clock.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.customPaneNavigationAndResize
Override the hjkl and HJKL bindings for pane navigation and resizing in VI mode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.escapeTime

Time in milliseconds for which tmux waits after an escape is input.

Type: signed integer

Default:

```
500
```

Example:

Declared by:

<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.extraConfig

Additional contents of /etc/tmux.conf, to be run after sourcing plugins.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.extraConfigBeforePlugins

Additional contents of /etc/tmux.conf, to be run before sourcing plugins.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.historyLimit

Maximum number of lines held in window history.

Type: signed integer

Default:

```
2000
```

Example:

```
5000
```

Declared by:

<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.keyMode

VI or Emacs style shortcuts.

Type: one of “emacs”, “vi”

Default:

```
"emacs"
```

Example:

```
"vi"
```

Declared by:
<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.newSession
Automatically spawn a session if trying to attach and none are running.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.plugins
List of plugins to install.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.tmuxPlugins.nord ]
```

Declared by:
<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.resizeAmount
Number of lines/columns when resizing.

Type: signed integer

Default:

```
5
```

Example:

```
10
```

Declared by:
<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.reverseSplit
Reverse the window split shortcuts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.secureSocket
Store tmux socket under /run, which is more secure than /tmp, but as a downside it doesn’t survive user logout.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.shortcut
Ctrl following by this key is used as the main shortcut.

Type: string

Default:

```
"b"
```

Example:

```
"a"
```

Declared by:
<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.terminal
Set the $TERM variable. Use tmux−direct if italics or 24bit true color support is needed.

Type: string

Default:

```
"screen"
```

Example:

```
"screen-256color"
```

Declared by:
<nixpkgs/nixos/modules/programs/tmux.nix>

programs.tmux.withUtempter
Whether to enable libutempter for tmux. This is required so that tmux can write to /var/run/utmp (which can be queried with ‘who’ to display currently connected user sessions). Note, this will add a guid wrapper for the group utmp!

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/tmux.nix>

programs.traceroute.enable
Whether to configure a setcap wrapper for traceroute.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/traceroute.nix>

programs.trippy.enable
Whether to enable trippy, a network diagnostic tool.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/trippy.nix>

programs.tsmClient.enable
Whether to enable IBM Storage Protect (Tivoli Storage Manager, TSM) client command line applications with a client system−options file “dsm.sys” .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/tsm−client.nix>

programs.tsmClient.package
The tsm−client package to use. It will be used with ‘.override’ to add paths to the client system−options file.

Type: package

Default:

```
pkgs.tsm−client
```

Example:

```
tsm−client−withGui
```

Declared by:
<nixpkgs/nixos/modules/programs/tsm−client.nix>

programs.tsmClient.defaultServername
If multiple server stanzas are declared with **programs.tsmClient.servers**, this option may be used to name a default server stanza that IBM TSM uses in the absence of a user−defined *dsm.opt* file. This option translates to a ‘defaultserver’ configuration line.

Type: null or string matching the pattern [^[:space:]]{1,64}

Default:

```
null
```

Example:

```
"mainTsmServer"
```

Declared by:
<nixpkgs/nixos/modules/programs/tsm−client.nix>

programs.tsmClient.dsmSysText
This configuration key contains the effective text of the client system−options file “dsm.sys”. It should not be changed, but may be used to feed the configuration into other TSM−depending packages used on the system.

Type: strings concatenated with “\n” *(read only)*

Declared by:
<nixpkgs/nixos/modules/programs/tsm−client.nix>

programs.tsmClient.servers
Server definitions (“stanzas”) for the client system−options file. The name of each entry will be used for the internal ‘servername’ by default. Each attribute will be transformed into a line with a key−value pair within the server’s stanza. Integers as values will be canonically turned into strings. The boolean value ‘true’ will be turned into a line with just the attribute’s name. The value ‘null’ will not generate a line. A list as values generates an entry for each value, according to the rules above.

Type: attribute set of (open submodule of attribute set of (one of true, <null> or signed integer or absolute path or (optionally newline−terminated) single−line string or list of (one of true, <null> or signed integer or absolute path or (optionally newline−terminated) single−line string)))

Default:

```
{ }
```

Example:

```
{
  mainTsmServer = {
    compression = "yes";
    nodename = "MY−TSM−NODE";
    tcpserveraddress = "tsmserver.company.com";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/programs/tsm−client.nix>

programs.tsmClient.servers.<name>.genPasswd
Whether to enable automatic client password generation. This option does *not* cause a line in *dsm.sys* by itself, but generates a corresponding ‘passwordaccess’ directive. The password will be stored in the directory given by the option **passworddir**. *Caution*: If this option is enabled and the server forces to renew the password (e.g. on first connection), a random password will be generated and stored .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/tsm−client.nix>

programs.tsmClient.servers.<name>.inclexcl
Text lines with ‘include.*’ and ‘exclude.*’ directives to be used when sending files to the IBM TSM server, or an absolute path pointing to a file with such lines.

Type: (null or absolute path) or strings concatenated with “\n” convertible to it

Default:

```
null
```

Example:

```
  exclude.dir     /nix/store
  include.encrypt /home/.../*
```

Declared by:
<nixpkgs/nixos/modules/programs/tsm−client.nix>

programs.tsmClient.servers.<name>.nodename
Target node name on the IBM TSM server.

Type: non−empty string

Example:

```
"MY−TSM−NODE"
```

Declared by:
<nixpkgs/nixos/modules/programs/tsm−client.nix>

programs.tsmClient.servers.<name>.passworddir
Directory that holds the TSM node's password information.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/home/alice/tsm−password"
```

Declared by:
<nixpkgs/nixos/modules/programs/tsm−client.nix>

programs.tsmClient.servers.<name>.servername
Local name of the IBM TSM server, must not contain space or more than 64 chars.

Type: string matching the pattern [^[:space:]]{1,64}

Default:

```
"‹name›"
```

Example:

```
"mainTsmServer"
```

Declared by:
<nixpkgs/nixos/modules/programs/tsm−client.nix>

programs.tsmClient.servers.<name>.tcpport
TCP port of the IBM TSM server. TSM does not support ports above 32767.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1500
```

Declared by:
<nixpkgs/nixos/modules/programs/tsm−client.nix>

programs.tsmClient.servers.<name>.tcpserveraddress
Host/domain name or IP address of the IBM TSM server.

Type: non−empty string

Example:

```
"tsmserver.company.com"
```

Declared by:
<nixpkgs/nixos/modules/programs/tsm−client.nix>

programs.tsmClient.wrappedPackage
The tsm−client package to use. This option is to provide the effective derivation, wrapped with the path to the client system−options file “dsm.sys”. It should not be changed, but exists for other modules that want to call TSM executables.

Type: package *(read only)*

Declared by:
<nixpkgs/nixos/modules/programs/tsm−client.nix>

programs.turbovnc.ensureHeadlessSoftwareOpenGL
Whether to set up NixOS such that TurboVNC’s built−in software OpenGL implementation works.

This will enable **hardware.graphics.enable** so that OpenGL programs can find Mesa’s llvmpipe drivers.

Setting this option to ‘false’ does not mean that software OpenGL won’t work; it may still work depending on your system configuration.

This option is also intended to generate warnings if you are using some configuration that’s incompatible with using headless software OpenGL in TurboVNC.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/turbovnc.nix>

programs.tuxclocker.enable
Whether to enable TuxClocker, a hardware control and monitoring program .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tuxclocker.nix>

programs.tuxclocker.enabledNVIDIADevices
Enable NVIDIA GPU controls for a device by index. Sets the ‘Coolbits’ Xorg option to enable all TuxClocker controls.

Type: list of signed integer

Default:

```
[ ]
```

Example:

```
[
  0
  1
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tuxclocker.nix>

programs.tuxclocker.useUnfree
Whether to use components requiring unfree dependencies. Disabling this allows you to get everything from the binary cache.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/tuxclocker.nix>

programs.udevil.enable
Whether to enable udevil, to mount filesystems without password.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/udevil.nix>

programs.usbtop.enable
Whether to enable usbtop and required kernel module, to show estimated USB bandwidth.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/usbtop.nix>

programs.uwsm.enable
Whether to enable uwsm, which wraps standalone Wayland compositors with a set of Systemd units on the fly. This essentially binds the wayland compositor into ‘graphical−session−pre.target’, ‘graphical−session.target’, ‘xdg−desktop−autostart.target’.

This is useful for Wayland compositors like Hyprland, Sway, Wayfire, etc. that do not start these targets and services on their own.

Note
You must configure ‘waylandCompositors’ suboptions as well so that UWSM knows which compositors to manage.

Additionally, this by default uses ‘dbus−broker’ as the dbus implementation for better compatibility. If you dislike this behavior you can set ‘services.dbus.implementation = lib.mkForce "dbus"’ in your configuration.

If you are having trouble starting a service that depends on ‘graphical−session.target’, while using a WM,

enabling this option might help .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/uwsm.nix>

programs.uwsm.package
The uwsm package to use.

Type: package

Default:

```
pkgs.uwsm
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/uwsm.nix>

programs.uwsm.waylandCompositors
Configuration for UWSM−managed Wayland Compositors. This creates a desktop entry file which will be used by Display Managers like GDM, to allow starting the UWSM managed session.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
hyprland = {
  prettyName = "Hyprland";
  comment = "Hyprland compositor managed by UWSM";
  binPath = "/run/current−system/sw/bin/Hyprland";
};
sway = {
  prettyName = "Sway";
  comment = "Sway compositor managed by UWSM";
  binPath = "/run/current−system/sw/bin/sway";
};
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/uwsm.nix>

programs.uwsm.waylandCompositors.<name>.binPath
The wayland−compositor binary path that will be called by UWSM.

It is recommended to use the ‘/run/current−system/sw/bin/’ path instead of ‘lib.getExe pkgs.<compositor>’ to avoid version mismatch of the compositor used by UWSM and the one installed in the system.

Type: absolute path

Example:

```
"/run/current−system/sw/bin/ExampleCompositor"
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/uwsm.nix>

programs.uwsm.waylandCompositors.<name>.comment
The comment field of the desktop entry file.

Type: string

Default:

```
"An intelligent Wayland compositor managed by UWSM."
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/uwsm.nix>

programs.uwsm.waylandCompositors.<name>.extraArgs
Extra command−line arguments pass to to the compsitor.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/uwsm.nix>

programs.uwsm.waylandCompositors.<name>.prettyName
The full name of the desktop entry file.

Type: string

Example:

```
"ExampleWaylandCompositor"
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/uwsm.nix>

programs.vim.enable
Whether to enable Vi IMproved, an advanced text editor.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/vim.nix>

programs.vim.package
The vim package to use.

Type: package

Default:

```
pkgs.vim
```

Example:

```
pkgs.vim-full
```

Declared by:
<nixpkgs/nixos/modules/programs/vim.nix>

programs.vim.defaultEditor
Whether to enable vim as the default editor.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/vim.nix>

programs.virt−manager.enable
Whether to enable virt−manager, an UI for managing virtual machines in libvirt.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/virt−manager.nix>

programs.virt−manager.package
The virt−manager package to use.

Type: package

Default:

```
pkgs.virt−manager
```

Declared by:
<nixpkgs/nixos/modules/programs/virt−manager.nix>

programs.vivid.enable
Whether to configure LS_COLORS with vivid.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/vivid.nix>

programs.vivid.package
The vivid package to use.

Type: package

Default:

```
pkgs.vivid
```

Example:

```
vivid
```

Declared by:
<nixpkgs/nixos/modules/programs/vivid.nix>

programs.vivid.theme
Theme to be used (see ‘vivid themes’)

Type: string

Default:

```
"gruvbox-dark-soft"
```

Example:

```
"solarized-dark"
```

Declared by:
<nixpkgs/nixos/modules/programs/vivid.nix>

programs.vscode.enable
Whether to enable VSCode editor.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/vscode.nix>

programs.vscode.package
The vscode package to use. The final package will be customized with extensions from **programs.vscode.extensions**

Type: package

Default:

```
pkgs.vscode
```

Declared by:
<nixpkgs/nixos/modules/programs/vscode.nix>

programs.vscode.defaultEditor
When enabled, configures VSCode to be the default editor using the EDITOR environment variable.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/vscode.nix>

programs.vscode.extensions

List of extensions to install.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs.vscode-extensions; [
  bbenoist.nix
  golang.go
  twxs.cmake
]
```

Declared by:

<nixpkgs/nixos/modules/programs/vscode.nix>

programs.wavemon.enable

Whether to add wavemon to the global environment and configure a setcap wrapper for it.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/wavemon.nix>

programs.waybar.enable

Whether to enable waybar, a highly customizable Wayland bar for Sway and Wlroots based compositors.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/wayland/waybar.nix>

programs.waybar.package

The waybar package to use.

Type: package

Default:

```
pkgs.waybar
```

Declared by:

<nixpkgs/nixos/modules/programs/wayland/waybar.nix>

programs.waybar.systemd.target

The systemd target that will automatically start the Waybar service.

Type: string

Default:

```
"graphical-session.target"
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/waybar.nix>

programs.wayfire.enable
Whether to enable Wayfire, a wayland compositor based on wlroots.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/wayfire.nix>

programs.wayfire.package
The wayfire package to use.

Type: package

Default:

```
pkgs.wayfire
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/wayfire.nix>

programs.wayfire.plugins
Additional plugins to use with the wayfire window manager.

Type: list of package

Default:

```
with pkgs.wayfirePlugins; [ wcm wf-shell ]
```

Example:

```
with pkgs.wayfirePlugins; [
  wcm
  wf-shell
  wayfire-plugins-extra
];
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/wayfire.nix>

programs.wayfire.xwayland.enable
Whether to enable XWayland.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wayland/wayfire.nix>

programs.wayland.miracle−wm.enable

Whether to enable miracle−wm, a tiling Mir based Wayland compositor. You can manually launch miracle−wm by executing “exec miracle−wm” on a TTY, or launch it from a display manager. Consult the USERGUIDE.md at **https://github.com/mattkae/miracle−wm** for information on how to use & configure it .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/wayland/miracle−wm.nix>

programs.wayvnc.enable

Whether to enable wayvnc, VNC server for wlroots based Wayland compositors.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/wayland/wayvnc.nix>

programs.wayvnc.package

The wayvnc package to use.

Type: package

Default:

```
pkgs.wayvnc
```

Declared by:

<nixpkgs/nixos/modules/programs/wayland/wayvnc.nix>

programs.weylus.enable

Whether to enable weylus, which turns your smart phone into a graphic tablet/touch screen for your computer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/weylus.nix>

programs.weylus.package
The weylus package to use.

Type: package

Default:

```
pkgs.weylus
```

Declared by:
<nixpkgs/nixos/modules/programs/weylus.nix>

programs.weylus.openFirewall
Open ports needed for the functionality of the program.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/weylus.nix>

programs.weylus.users
To enable stylus and multi−touch support, the user you're going to use must be added to this list. These users can synthesize input events system−wide, even when another user is logged in − untrusted users should not be added.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/programs/weylus.nix>

programs.whois.enable
Whether to enable whois, an intelligent WHOIS client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/whois.nix>

programs.whois.package
The whois package to use.

Type: package

Default:

```
pkgs.whois
```

Declared by:
<nixpkgs/nixos/modules/programs/whois.nix>

programs.whois.settings

WHOIS configuration entries written to */etc/whois.conf*.

Entries are written in the declared order, which matters when multiple patterns may match the same query.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    pattern = "\\.dn42$";
    server = "whois.dn42";
  }
  {
    pattern = "\\-DN42$";
    server = "whois.dn42";
  }
  {
    pattern = "^as424242[0-9]{4}$";
    server = "whois.dn42";
  }
  {
    pattern = "^172\\.2[0-3]\\.[0-9]{1,3}\\.[0-9]{1,3}( \
/(1[56789]|2[0-9]|3[012]))?$";
    server = "whois.dn42";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/programs/whois.nix>

programs.whois.settings.*.pattern

Case−insensitive extended regular expression used to match the WHOIS object identifier.

Type: string

Example:

```
"\\.dn42$"
```

Declared by:

<nixpkgs/nixos/modules/programs/whois.nix>

programs.whois.settings.*.server

WHOIS server to use when **pattern** matches.

Type: string

Example:

```
"whois.dn42"
```

Declared by:

<nixpkgs/nixos/modules/programs/whois.nix>

programs.winbox.enable

Whether to enable MikroTik Winbox.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/winbox.nix>

programs.winbox.package

The winbox package to use.

Type: package

Default:

```
pkgs.winbox
```

Declared by:

<nixpkgs/nixos/modules/programs/winbox.nix>

programs.winbox.openFirewall

Whether to open ports for the MikroTik Neighbor Discovery protocol. Required for Winbox neighbor discovery.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/winbox.nix>

programs.wireshark.enable

Whether to add Wireshark to the global environment and create a ‘wireshark’ group. To configure what users can capture, set the ‘dumpcap.enable’ and ‘usbmon.enable’ options. By default, users in the ‘wireshark’ group are allowed to capture network traffic but not USB traffic.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/wireshark.nix>

programs.wireshark.package

The wireshark−cli package to use.

Type: package

Default:

```
pkgs.wireshark-cli
```

Example:

```
wireshark
```

Declared by:
<nixpkgs/nixos/modules/programs/wireshark.nix>

programs.wireshark.dumpcap.enable
Whether to allow users in the ‘wireshark’ group to capture network traffic. This configures a setcap wrapper for ‘dumpcap’ for users in the ‘wireshark’ group.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wireshark.nix>

programs.wireshark.usbmon.enable
Whether to allow users in the ‘wireshark’ group to capture USB traffic. This adds udev rules to give users in the ‘wireshark’ group read permissions to all devices in the usbmon subsystem.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/wireshark.nix>

programs.wshowkeys.enable
Whether to enable wshowkeys (displays keypresses on screen on supported Wayland compositors). It requires root permissions to read input events, but these permissions are dropped after startup.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/wshowkeys.nix>

programs.wshowkeys.package
The wshowkeys package to use.

Type: package

Default:

```
pkgs.wshowkeys
```

Declared by:
<nixpkgs/nixos/modules/programs/wshowkeys.nix>

programs.xastir.enable
Whether to enable Xastir Graphical APRS client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/xastir.nix>

programs.xfconf.enable
Whether to enable Xfconf, the Xfce configuration storage system.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/xfconf.nix>

programs.xfs_quota.projects
Setup of xfs_quota projects. Make sure the filesystem is mounted with the pquota option.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  projname = {
    id = 50;
    path = "/xfsprojects/projname";
    sizeHardLimit = "50g";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/programs/xfs_quota.nix>

programs.xfs_quota.projects.<name>.fileSystem
XFS filesystem hosting the xfs_quota project.

Type: string

Default:

```
"/"
```

Declared by:
<nixpkgs/nixos/modules/programs/xfs_quota.nix>

programs.xfs_quota.projects.<name>.id
Project ID.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/programs/xfs_quota.nix>

programs.xfs_quota.projects.<name>.path
Project directory.

Type: string

Declared by:
<nixpkgs/nixos/modules/programs/xfs_quota.nix>

programs.xfs_quota.projects.<name>.sizeHardLimit
Hard limit of the project size.

Type: null or string

Default:

```
null
```

Example:

```
"50g"
```

Declared by:
<nixpkgs/nixos/modules/programs/xfs_quota.nix>

programs.xfs_quota.projects.<name>.sizeSoftLimit
Soft limit of the project size

Type: null or string

Default:

```
null
```

Example:

```
"30g"
```

Declared by:
<nixpkgs/nixos/modules/programs/xfs_quota.nix>

programs.xonsh.enable
Whether to configure xonsh as an interactive shell.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/xonsh.nix>

programs.xonsh.package
The xonsh package to use. The argument ‘extraPackages’ of this package will be overridden by the option ‘programs.xonsh.extraPackages’.

Type: package

Default:

```
pkgs.xonsh
```

Declared by:
<nixpkgs/nixos/modules/programs/xonsh.nix>

programs.xonsh.bashCompletion.enable
Whether to enable bash completions for xonsh.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/xonsh.nix>

programs.xonsh.bashCompletion.package
The bash−completion package to use.

Type: package

Default:

```
pkgs.bash-completion
```

Declared by:
<nixpkgs/nixos/modules/programs/xonsh.nix>

programs.xonsh.config
Extra text added to the end of '/etc/xonsh/xonshrc', the system−wide control file for xonsh.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/xonsh.nix>

programs.xonsh.extraPackages
Xontribs and extra Python packages to be available in xonsh.

Type: (function that evaluates to a(n) list of package) or (list of package) convertible to it

Default:

```
ps: [ ]
```

Example:

```
ps: with ps; [ numpy xonsh.xontribs.xontrib-vox ]
```

Declared by:
<nixpkgs/nixos/modules/programs/xonsh.nix>

programs.xppen.enable
Whether to enable XPPen PenTablet application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/xppen.nix>

programs.xppen.package
The xppen_4 package to use. Use xppen_4 for newer and xppen_3 for older tablets. To check which version of the driver you need, go to https://www.xp−pen.com/download/ then select your tablet and look for the major version in the available files for Linux.

Type: package

Default:

```
pkgs.xppen_4
```

Example:

```
pkgs.xppen_3
```

Declared by:
<nixpkgs/nixos/modules/programs/xppen.nix>

programs.xscreensaver.enable
Whether to enable all of the xscreensaver programs.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/xscreensaver/xscreensaver.nix>

programs.xscreensaver.package
The xscreensaver package to use.

Type: package

Default:

```
pkgs.xscreensaver
```

Declared by:
<nixpkgs/nixos/modules/programs/xscreensaver/xscreensaver.nix>

programs.xscreensaver.sonar.enable
Whether to enable xscreensaver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/xscreensaver/sonar.nix>

programs.xss−lock.enable
Whether to enable xss−lock.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/xss−lock.nix>

programs.xss−lock.extraOptions

Additional command−line arguments to pass to **xss−lock**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−ignore−sleep"
]
```

Declared by:

<nixpkgs/nixos/modules/programs/xss−lock.nix>

programs.xss−lock.lockerCommand

Locker to be used with xsslock

Type: strings concatenated with " "

Default:

```
"${pkgs.i3lock}/bin/i3lock"
```

Example:

```
"${pkgs.i3lock−fancy}/bin/i3lock−fancy"
```

Declared by:

<nixpkgs/nixos/modules/programs/xss−lock.nix>

programs.xwayland.enable

Whether to enable Xwayland (an X server for interfacing X11 apps with the Wayland protocol).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/xwayland.nix>

programs.xwayland.package

The Xwayland package to use.

Type: absolute path

Default:

```
pkgs.xwayland.override (oldArgs: {
  inherit (config.programs.xwayland) defaultFontPath;
})
```

Declared by:

<nixpkgs/nixos/modules/programs/xwayland.nix>

programs.xwayland.defaultFontPath

Default font path. Setting this option causes Xwayland to be rebuilt.

Type: string

Default:

```
optionalString config.fonts.fontDir.enable "/run/current-system/sw \
/share/X11/fonts"
```

Declared by:

<nixpkgs/nixos/modules/programs/xwayland.nix>

programs.yazi.enable

Whether to enable yazi terminal file manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/yazi.nix>

programs.yazi.package

The yazi package to use.

Type: package

Default:

```
pkgs.yazi
```

Declared by:

<nixpkgs/nixos/modules/programs/yazi.nix>

programs.yazi.flavors

Pre−made themes.

See **https://yazi−rs.github.io/docs/flavors/overview/** for documentation.

Type: attribute set of (absolute path or package)

Default:

```
{ }
```

Example:

```
{
  foo = ./foo;
  inherit (pkgs.yaziPlugins) bar;
}
```

Declared by:

<nixpkgs/nixos/modules/programs/yazi.nix>

programs.yazi.initLua

The init.lua for Yazi itself.

Type: null or absolute path

Default:

```
null
```

Example:

```
./init.lua
```

Declared by:
<nixpkgs/nixos/modules/programs/yazi.nix>

programs.yazi.plugins
Lua plugins.

See **https://yazi-rs.github.io/docs/plugins/overview/** for documentation.

Type: attribute set of (absolute path or package)

Default:

```
{ }
```

Example:

```
{
  foo = ./foo;
  inherit (pkgs.yaziPlugins) bar;
}
```

Declared by:
<nixpkgs/nixos/modules/programs/yazi.nix>

programs.yazi.settings
Configuration included in '$YAZI_CONFIG_HOME'.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/yazi.nix>

programs.yazi.settings.keymap
Configuration included in 'keymap.toml'.

See **https://yazi-rs.github.io/docs/configuration/keymap/** for documentation.

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/yazi.nix>

programs.yazi.settings.theme
Configuration included in 'theme.toml'.

See **https://yazi-rs.github.io/docs/configuration/theme/** for documentation.

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/yazi.nix>

programs.yazi.settings.vfs
Configuration included in ‘vfs.toml’.

See **https://yazi−rs.github.io/docs/configuration/vfs/** for documentation.

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/yazi.nix>

programs.yazi.settings.yazi
Configuration included in ‘yazi.toml’.

See **https://yazi−rs.github.io/docs/configuration/yazi/** for documentation.

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/yazi.nix>

programs.ydotool.enable
Whether to enable ydotoold system service and **ydotool** for members of **programs.ydotool.group**. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/ydotool.nix>

programs.ydotool.group
Group which users must be in to use **ydotool**.

Type: string

Default:

```
"ydotool"
```

Declared by:
<nixpkgs/nixos/modules/programs/ydotool.nix>

programs.yubikey−manager.enable
Whether to enable yubikey−manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/yubikey−manager.nix>

programs.yubikey−manager.package
The yubikey−manager package to use.

Type: package

Default:

```
pkgs.yubikey−manager
```

Declared by:
<nixpkgs/nixos/modules/programs/yubikey−manager.nix>

programs.yubikey−touch−detector.enable
Whether to enable yubikey−touch−detector.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/yubikey−touch−detector.nix>

programs.yubikey−touch−detector.libnotify
If set to true, yubikey−touch−detctor will send notifications using libnotify

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/yubikey−touch−detector.nix>

programs.yubikey−touch−detector.unixSocket
If set to true, yubikey−touch−detector will send notifications to a unix socket

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/yubikey−touch−detector.nix>

programs.yubikey−touch−detector.verbose
Enables verbose logging

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/yubikey−touch−detector.nix>

programs.zmap.enable

Whether to enable ZMap, a network scanner designed for Internet−wide network surveys.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/zmap.nix>

programs.zoom−us.enable

Whether to enable zoom.us video conferencing application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/zoom−us.nix>

programs.zoom−us.package

The zoom−us package to use.

Type: package

Default:

```
pkgs.zoom−us
```

Declared by:

<nixpkgs/nixos/modules/programs/zoom−us.nix>

programs.zoxide.enable

Whether to enable zoxide, a smarter cd command that learns your habits.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/zoxide.nix>

programs.zoxide.enableBashIntegration

Whether to enable Bash integration.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/zoxide.nix>

programs.zoxide.enableFishIntegration
Whether to enable Fish integration.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/zoxide.nix>

programs.zoxide.enableXonshIntegration
Whether to enable Xonsh integration.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/zoxide.nix>

programs.zoxide.enableZshIntegration
Whether to enable Zsh integration.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/zoxide.nix>

programs.zoxide.package
The zoxide package to use.

Type: package

Default:

```
pkgs.zoxide
```

Declared by:
<nixpkgs/nixos/modules/programs/zoxide.nix>

programs.zoxide.flags
List of flags for zoxide init

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--no-cmd"
  "--cmd j"
]
```

Declared by:
<nixpkgs/nixos/modules/programs/zoxide.nix>

programs.zsh.enable
Whether to configure zsh as an interactive shell. To enable zsh for a particular user, use the **users.users.<name?>.shell** option for that user. To enable zsh system-wide use the **users.defaultUserShell** option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/zsh.nix>

programs.zsh.enableBashCompletion
Enable compatibility with bash's programmable completion system.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/zsh.nix>

programs.zsh.enableCompletion
Enable zsh completion for all interactive zsh shells.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/zsh.nix>

programs.zsh.enableGlobalCompInit
Enable execution of compinit call for all interactive zsh shells.

This option can be disabled if the user wants to extend its 'fpath' and a custom 'compinit' call in the local config is required.

Type: boolean

Default:

```
config.programs.zsh.enableCompletion
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/zsh.nix>

programs.zsh.enableLsColors

Enable extra colors in directory listings (used by ‘ls’ and ‘tree’).

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/zsh/zsh.nix>

programs.zsh.autosuggestions.enable

Whether to enable zsh−autosuggestions.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/zsh/zsh−autosuggestions.nix>

programs.zsh.autosuggestions.async

Whether to fetch suggestions asynchronously

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/programs/zsh/zsh−autosuggestions.nix>

programs.zsh.autosuggestions.extraConfig

Attribute set with additional configuration values

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "ZSH_AUTOSUGGEST_BUFFER_MAX_SIZE" = "20";
}
```

Declared by:

<nixpkgs/nixos/modules/programs/zsh/zsh−autosuggestions.nix>

programs.zsh.autosuggestions.highlightStyle

Highlight style for suggestions ({fore,back}ground color)

Type: string

Default:

```
"fg=8"
```

Example:

```
"fg=cyan"
```

Declared by:

<nixpkgs/nixos/modules/programs/zsh/zsh−autosuggestions.nix>

programs.zsh.autosuggestions.strategy

‘ZSH_AUTOSUGGEST_STRATEGY’ is an array that specifies how suggestions should be generated. The strategies in the array are tried successively until a suggestion is found. There are currently three built−in strategies to choose from:

- ‘history’: Chooses the most recent match from history.
- ‘completion’: Chooses a suggestion based on what tab−completion would suggest. (requires ‘zpty’ module)
- ‘match_prev_cmd’: Like ‘history’, but chooses the most recent match whose preceding history item matches the most recently executed command. Note that this strategy won’t work as expected with ZSH options that don’t preserve the history order such as ‘HIST_IGNORE_ALL_DUPS’ or ‘HIST_EXPIRE_DUPS_FIRST’.

Type: list of (one of “history”, “completion”, “match_prev_cmd”)

Default:

```
[
  "history"
]
```

Declared by:

<nixpkgs/nixos/modules/programs/zsh/zsh−autosuggestions.nix>

programs.zsh.histFile

Change history file.

Type: string

Default:

```
"$HOME/.zsh_history"
```

Declared by:

<nixpkgs/nixos/modules/programs/zsh/zsh.nix>

programs.zsh.histSize

Change history size.

Type: signed integer

Default:

```
2000
```

Declared by:

<nixpkgs/nixos/modules/programs/zsh/zsh.nix>

programs.zsh.interactiveShellInit

Shell script code called during interactive zsh shell initialisation.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/zsh.nix>

programs.zsh.loginShellInit
Shell script code called during zsh login shell initialisation.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/zsh.nix>

programs.zsh.ohMyZsh.enable
Enable oh−my−zsh.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/oh−my−zsh.nix>

programs.zsh.ohMyZsh.package
The oh−my−zsh package to use.

Type: package

Default:

```
pkgs.oh-my-zsh
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/oh−my−zsh.nix>

programs.zsh.ohMyZsh.cacheDir
Cache directory to be used by ‘oh−my−zsh’. Without this option it would default to the read−only nix store.

Type: string

Default:

```
"$HOME/.cache/oh-my-zsh"
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/oh−my−zsh.nix>

programs.zsh.ohMyZsh.custom
Path to a custom oh−my−zsh package to override config of oh−my−zsh. (Can’t be used along with ‘customPkgs’).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/oh−my−zsh.nix>

programs.zsh.ohMyZsh.customPkgs
List of custom packages that should be loaded into ‘oh−my−zsh’.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/oh−my−zsh.nix>

programs.zsh.ohMyZsh.plugins
List of oh−my−zsh plugins

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/oh−my−zsh.nix>

programs.zsh.ohMyZsh.preLoaded
Shell commands executed before the ‘oh−my−zsh’ is loaded. For example, to disable async git prompt write ‘zstyle ':omz:alpha:lib:git' async−prompt no’ (more information **https://github.com/ohmyzsh/ohmyzsh?tab=readme−ov−file#async−git−prompt**)

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/oh−my−zsh.nix>

programs.zsh.ohMyZsh.theme
Name of the theme to be used by oh−my−zsh.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/oh−my−zsh.nix>

programs.zsh.promptInit
Shell script code used to initialise the zsh prompt.

Type: strings concatenated with “\n”

Default:

```
  # Note that to manually override this in ~/.zshrc you should r \
un ‘prompt off‘
  # before setting your PS1 and etc. Otherwise this will likely to  \
interact with
  # your ~/.zshrc configuration in unexpected ways as the defaul \
t prompt sets
  # a lot of different prompt variables.
  autoload −U promptinit && promptinit && prompt suse && setopt pr \
ompt_sp
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/zsh.nix>

programs.zsh.setOptions
Configure zsh options. See **zshoptions**(1).

Type: list of string

Default:

```
[
  "HIST_IGNORE_DUPS"
  "SHARE_HISTORY"
  "HIST_FCNTL_LOCK"
]
```

Example:

```
[
  "EXTENDED_HISTORY"
  "RM_STAR_WAIT"
]
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/zsh.nix>

programs.zsh.shellAliases
Set of aliases for zsh shell, which overrides **environment.shellAliases**. See **environment.shellAliases** for an option format description.

Type: attribute set of (null or string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/zsh.nix>

programs.zsh.shellInit
Shell script code called during zsh shell initialisation.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/zsh.nix>

programs.zsh.syntaxHighlighting.enable
Whether to enable zsh−syntax−highlighting.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/zsh−syntax−highlighting.nix>

programs.zsh.syntaxHighlighting.highlighters
Specifies the highlighters to be used by zsh−syntax−highlighting.

The following defined options can be found here: https://github.com/zsh−users/zsh−syntax−highlighting/blob/master/docs/highlighters.md

Type: list of (one of “main”, “brackets”, “pattern”, “cursor”, “regexp”, “root”, “line”)

Default:

```
[
  "main"
]
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/zsh−syntax−highlighting.nix>

programs.zsh.syntaxHighlighting.patterns
Specifies custom patterns to be highlighted by zsh−syntax−highlighting.

Please refer to the docs for more information about the usage: https://github.com/zsh−users/zsh−syntax−highlighting/blob/master/docs/highlighters/pattern.md

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "rm −rf *" = "fg=white,bold,bg=red";
}
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/zsh−syntax−highlighting.nix>

programs.zsh.syntaxHighlighting.styles
Specifies custom styles to be highlighted by zsh−syntax−highlighting.

Please refer to the docs for more information about the usage: https://github.com/zsh−users/zsh−syntax−highlighting/blob/master/docs/highlighters/main.md

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "alias" = "fg=magenta,bold";
}
```

Declared by:
<nixpkgs/nixos/modules/programs/zsh/zsh−syntax−highlighting.nix>

programs.zsh.vteIntegration

Whether to enable Zsh integration for VTE terminals. This allows it to preserve the current directory of the shell across terminals.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/config/vte.nix>

programs.zsh.zsh−autoenv.enable

Whether to enable zsh−autoenv.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/programs/zsh/zsh−autoenv.nix>

programs.zsh.zsh−autoenv.package

The zsh−autoenv package to use.

Type: package

Default:

```
pkgs.zsh−autoenv
```

Declared by:

<nixpkgs/nixos/modules/programs/zsh/zsh−autoenv.nix>

qt.enable

Whether to enable Qt configuration, including theming.

Enabling this option is necessary for Qt plugins to work in the installed profiles (e.g.: ‘nix−env −i’ or ‘environment.systemPackages’).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/config/qt.nix>

qt.platformTheme

Selects the platform theme to use for Qt applications.

The options are

- ‘gnome’: Use GNOME theme with **qgnomeplatform**
- ‘gtk2’: Use GTK theme with **qtstyleplugins**
- ‘kde’: Use Qt settings from Plasma.
- ‘lxqt’: Use LXQt style set using the **lxqt−config−appearance** application.

- ‘qt5ct’: Use Qt style set using the **qt5ct** and **qt6ct** applications.

Type: null or one of “gnome”, “gtk2”, “kde”, “lxqt”, “qt5ct”

Default:

```
null
```

Example:

```
"gnome"
```

Related packages:

- ‘pkgs.qgnomeplatform’
- ‘pkgs.qgnomeplatform−qt6’
- ‘pkgs.libsForQt5.qt5ct’
- ‘pkgs.libsForQt5.qtstyleplugins’
- ‘pkgs.kdePackages.plasma−integration’
- ‘pkgs.kdePackages.systemsettings’
- ‘pkgs.lxqt.lxqt−config’
- ‘pkgs.lxqt.lxqt−qtplugin’
- ‘pkgs.qt6Packages.qt6ct’
- ‘pkgs.qt6Packages.qt6gtk2’

Declared by:
<nixpkgs/nixos/modules/config/qt.nix>

qt.style

Selects the style to use for Qt applications.

The options are

- ‘adwaita’, ‘adwaita−dark’, ‘adwaita−highcontrast’, ‘adawaita−highcontrastinverse’: Use Adwaita Qt style with **adwaita**
- ‘breeze’: Use the Breeze style from **breeze**
- ‘bb10bright’, ‘bb10dark’, ‘cleanlooks’, ‘gtk2’, ‘motif’, ‘plastique’: Use styles from **qtstyleplugins**
- ‘kvantum’: Use styles from **kvantum**

Type: null or one of “adwaita”, “adwaita−dark”, “adwaita−highcontrast”, “adwaita−highcontrastinverse”, “bb10bright”, “bb10dark”, “breeze”, “cde”, “cleanlooks”, “gtk2”, “kvantum”, “motif”, “plastique”

Default:

```
null
```

Example:

```
"adwaita"
```

Related packages:

- ‘pkgs.adwaita−qt’
- ‘pkgs.adwaita−qt6’
- ‘pkgs.libsForQt5.qtstyleplugin−kvantum’
- ‘pkgs.libsForQt5.qtstyleplugins’
- ‘pkgs.qt6Packages.qt6gtk2’
- ‘pkgs.qt6Packages.qtstyleplugin−kvantum’

Declared by:
<nixpkgs/nixos/modules/config/qt.nix>

security.enableWrappers

Whether to enable SUID/SGID wrappers.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/security/wrappers/default.nix>

security.acme.acceptTerms

Accept the CA's terms of service. The default provider is Let's Encrypt, you can find their ToS at **https://letsencrypt.org/repository/**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.certs

Attribute set of certificates to get signed and renewed. Creates 'acme−${cert}.{service,timer}' systemd units for each certificate defined here. Other services can add dependencies to those units if they rely on the certificates being present, or trigger restarts of the service if certificates get renewed.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "example.com" = {
    webroot = "/var/lib/acme/acme-challenge/";
    email = "foo@example.com";
    extraDomainNames = [ "www.example.com" "foo.example.com" ];
  };
  "bar.example.com" = {
    webroot = "/var/lib/acme/acme-challenge/";
    email = "bar@example.com";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.enableDebugLogs

Whether to enable debug logging for this certificate.

Type: boolean

Default:

```
config.security.acme.defaults.enableDebugLogs
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.credentialFiles
Environment variables suffixed by "_FILE" to set for the cert's service for your selected dnsProvider. To find out what values you need to set, consult the documentation at **https://go-acme.github.io/lego/dns/** for the corresponding dnsProvider. This allows to securely pass credential files to lego by leveraging systemd credentials.

Type: attribute set of absolute path

Default:

```
config.security.acme.defaults.credentialFiles
```

Example:

```
{
  "RFC2136_TSIG_SECRET_FILE" = "/run/secrets/tsig-secret-example. \
org";
}
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.csr
Path to a certificate signing request to apply when fetching the certificate.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.csrKey
Path to the private key to the matching certificate signing request.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.directory
Directory where certificate and other state is stored.

Type: string *(read only)*

Default:

```
"/var/lib/acme/‹name›"
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.dnsPropagationCheck

Toggles lego DNS propagation check, which is used alongside DNS−01 challenge to ensure the DNS entries required are available.

Type: boolean

Default:

```
config.security.acme.defaults.dnsPropagationCheck
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.dnsProvider

DNS Challenge provider. For a list of supported providers, see the “code” field of the DNS providers listed at **https://go−acme.github.io/lego/dns/**.

Type: null or string

Default:

```
config.security.acme.defaults.dnsProvider
```

Example:

```
"route53"
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.dnsResolver

Set the resolver to use for performing recursive DNS queries. Supported: host:port. The default is to use the system resolvers, or Google’s DNS resolvers if the system’s cannot be determined.

Type: null or string

Default:

```
config.security.acme.defaults.dnsResolver
```

Example:

```
"1.1.1.1:53"
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.domain

Domain to fetch certificate for (defaults to the entry name).

Type: string

Default:

```
"‹name›"
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.email

Email address for account creation and correspondence from the CA. It is recommended to use the same email for all certs to avoid account creation limits.

Type: null or string

Default:

```
config.security.acme.defaults.email
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.environmentFile
Path to an EnvironmentFile for the cert's service containing any required and optional environment variables for your selected dnsProvider. To find out what values you need to set, consult the documentation at **https://go-acme.github.io/lego/dns/** for the corresponding dnsProvider.

Type: null or absolute path

Default:

```
config.security.acme.defaults.environmentFile
```

Example:

```
"/var/src/secrets/example.org-route53-api-token"
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.extraDomainNames
A list of extra domain names, which are included in the one certificate to be issued.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "example.org"
  "mydomain.org"
]
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.extraLegoFlags
Additional global flags to pass to all lego commands.

Type: list of string

Default:

```
config.security.acme.defaults.extraLegoFlags
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.extraLegoRenewFlags
Additional flags to pass to lego renew.

Type: list of string

Default:

```
config.security.acme.defaults.extraLegoRenewFlags
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.extraLegoRunFlags

Additional flags to pass to lego run.

Type: list of string

Default:

```
config.security.acme.defaults.extraLegoRunFlags
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.group

Group running the ACME client.

Type: string

Default:

```
config.security.acme.defaults.group
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.inheritDefaults

Whether to inherit values set in ‘security.acme.defaults’ or not.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.keyType

Key type to use for private keys. For an up to date list of supported values check the −−key−type option at **https://go−acme.github.io/lego/usage/cli/options/**.

Type: string

Default:

```
config.security.acme.defaults.keyType
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.listenHTTP

Interface and port to listen on to solve HTTP challenges in the form ‘[INTERFACE]:PORT’. If you use a port other than 80, you must proxy port 80 to this port.

Type: null or string

Default:

```
config.security.acme.defaults.listenHTTP
```

Example:

```
":1360"
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.ocspMustStaple
Turns on the OCSP Must−Staple TLS extension. Make sure you know what you're doing! See:

- **https://blog.apnic.net/2019/01/15/is−the−web−ready−for−ocsp−must−staple/**
- **https://blog.hboeck.de/archives/886−The−Problem−with−OCSP−Stapling−and−Must−Staple−and−why−Certificate−Revocation−is−still−broken.html**

Type: boolean

Default:

```
config.security.acme.defaults.ocspMustStaple
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.postRun
Commands to run after new certificates go live. Note that these commands run as the root user.

Executed in the same directory with the new certificate.

Type: strings concatenated with "\n"

Default:

```
config.security.acme.defaults.postRun
```

Example:

```
"cp full.pem backup.pem"
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.profile
The certificate profile to choose if the CA offers multiple profiles.

Type: null or string

Default:

```
config.security.acme.defaults.profile
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.reloadServices
The list of systemd services to call 'systemctl try−reload−or−restart' on.

Type: list of string

Default:

```
config.security.acme.defaults.reloadServices
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.renewInterval
Systemd calendar expression when to check for renewal. See **systemd.time**(7).

If you reduce this from daily you might also want to adapt **security.acme.defaults.renewJitter**.

Type: string

Default:

```
config.security.acme.defaults.renewInterval
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.renewJitter
Maximum jitter applied to a timer to stretch its execution intervals to prevent multiple timers from firing simultaneously. See 'RandomizedDelaySecs=' in **systemd.timer**(5).

Type: string

Default:

```
config.security.acme.defaults.renewJitter
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.s3Bucket
S3 bucket name to use for HTTP−01 based challenges. Challenges will be written to the S3 bucket.

Type: null or string

Default:

```
null
```

Example:

```
"acme"
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.server
ACME Directory Resource URI. Defaults to Let's Encrypt's production endpoint. For testing Let's Encrypt's **staging endpoint** should be used to avoid the rather tight rate limit on the production endpoint.

Type: null or string

Default:

```
config.security.acme.defaults.server
```

Example:

```
"https://acme-staging-v02.api.letsencrypt.org/directory"
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.validMinDays
Minimum remaining validity before renewal in days.

If unset, the renewal time is calculated dynamically:

- for regular certificates, renewal occurs when less than one−third of the lifetime remains
- for short−lived certificates, renewal occurs when less than half of the lifetime remains

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.certs.<name>.webroot

Where the webroot of the HTTP vhost is located. *.well−known/acme−challenge/* directory will be created below the webroot if it doesn't exist. 'http://example.org/.well−known/acme−challenge/' must also be available (notice unencrypted HTTP).

Type: null or string

Default:

```
config.security.acme.defaults.webroot
```

Example:

```
"/var/lib/acme/acme−challenge"
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.defaults

Default values inheritable by all configured certs. You can use this to define options shared by all your certs. These defaults can also be ignored on a per−cert basis using the **security.acme.certs.${cert}.inheritDefaults** option.

Type: submodule

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.enableDebugLogs

Whether to enable debug logging for this certificate.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.credentialFiles

Environment variables suffixed by "_FILE" to set for the cert's service for your selected dnsProvider. To find out what values you need to set, consult the documentation at **https://go−acme.github.io/lego/dns/** for the corresponding dnsProvider. This allows to securely pass credential files to lego by leveraging systemd credentials.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  "RFC2136_TSIG_SECRET_FILE" = "/run/secrets/tsig−secret−example. \
org";
}
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.dnsPropagationCheck

Toggles lego DNS propagation check, which is used alongside DNS−01 challenge to ensure the DNS entries required are available.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.dnsProvider

DNS Challenge provider. For a list of supported providers, see the “code” field of the DNS providers listed at **https://go−acme.github.io/lego/dns/**.

Type: null or string

Default:

```
null
```

Example:

```
"route53"
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.dnsResolver

Set the resolver to use for performing recursive DNS queries. Supported: host:port. The default is to use the system resolvers, or Google’s DNS resolvers if the system’s cannot be determined.

Type: null or string

Default:

```
null
```

Example:

```
"1.1.1.1:53"
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.email

Email address for account creation and correspondence from the CA. It is recommended to use the same email for all certs to avoid account creation limits.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.environmentFile

Path to an EnvironmentFile for the cert’s service containing any required and optional environment variables for your selected dnsProvider. To find out what values you need to set, consult the documentation at **https://go−acme.github.io/lego/dns/** for the corresponding dnsProvider.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/src/secrets/example.org-route53-api-token"
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.extraLegoFlags
Additional global flags to pass to all lego commands.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.extraLegoRenewFlags
Additional flags to pass to lego renew.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.extraLegoRunFlags
Additional flags to pass to lego run.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.group
Group running the ACME client.

Type: string

Default:

```
"acme"
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.keyType
Key type to use for private keys. For an up to date list of supported values check the --key-type option at **https://go-acme.github.io/lego/usage/cli/options/**.

Type: string

Default:

```
"ec256"
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.listenHTTP
Interface and port to listen on to solve HTTP challenges in the form '[INTERFACE]:PORT'. If you use a port other than 80, you must proxy port 80 to this port.

Type: null or string

Default:

```
null
```

Example:

```
":1360"
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.ocspMustStaple
Turns on the OCSP Must−Staple TLS extension. Make sure you know what you're doing! See:

- **https://blog.apnic.net/2019/01/15/is−the−web−ready−for−ocsp−must−staple/**
- **https://blog.hboeck.de/archives/886−The−Problem−with−OCSP−Stapling−and−Must−Staple−and−why−Certificate−Revocation−is−still−broken.html**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.postRun
Commands to run after new certificates go live. Note that these commands run as the root user.

Executed in the same directory with the new certificate.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
"cp full.pem backup.pem"
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.profile
The certificate profile to choose if the CA offers multiple profiles.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.reloadServices

The list of systemd services to call ‘systemctl try−reload−or−restart’ on.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.renewInterval

Systemd calendar expression when to check for renewal. See **systemd.time**(7).

If you reduce this from daily you might also want to adapt **security.acme.defaults.renewJitter**.

Type: string

Default:

```
"daily"
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.renewJitter

Maximum jitter applied to a timer to stretch its execution intervals to prevent multiple timers from firing simultaneously. See ‘RandomizedDelaySecs=’ in **systemd.timer**(5).

Type: string

Default:

```
"24h"
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.server

ACME Directory Resource URI. Defaults to Let’s Encrypt’s production endpoint. For testing Let’s Encrypt’s **staging endpoint** should be used to avoid the rather tight rate limit on the production endpoint.

Type: null or string

Default:

```
"https://acme-v02.api.letsencrypt.org/directory"
```

Example:

```
"https://acme-staging-v02.api.letsencrypt.org/directory"
```

Declared by:

<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.validMinDays

Minimum remaining validity before renewal in days.

If unset, the renewal time is calculated dynamically:

- for regular certificates, renewal occurs when less than one−third of the lifetime remains
- for short−lived certificates, renewal occurs when less than half of the lifetime remains

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.defaults.webroot
Where the webroot of the HTTP vhost is located. *.well−known/acme−challenge/* directory will be created below the webroot if it doesn't exist. 'http://example.org/.well−known/acme−challenge/' must also be available (notice unencrypted HTTP).

Type: null or string

Default:

```
null
```

Example:

```
"/var/lib/acme/acme-challenge"
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.maxConcurrentRenewals
Maximum number of concurrent certificate generation or renewal jobs. All other jobs will queue and wait running jobs to finish. Reduces the system load of certificate generation.

Set to '0' to allow unlimited number of concurrent job runs."

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.acme.useRoot
Whether to use the root user when generating certs. This is not recommended for security + compatibility reasons. If a service requires root owned certificates consider following the guide on "Using ACME with services demanding root owned certificates" in the NixOS manual, and only using this as a fallback or for testing.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/acme>

security.agnos.enable
Whether to enable agnos.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.generateKeys.enable

Enable automatic generation of account keys.

When this is ‘true’, a key will be generated for each account where the file referred to by the ‘private_key’ path does not exist yet.

Currently, only RSA keys can be generated.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.generateKeys.keySize

Key size in bits to use when generating new keys.

Type: signed integer

Default:

```
4096
```

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.group

Group to run Agnos as. The acquired certificates will be owned by this group.

Type: string

Default:

```
"agnos"
```

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.persistent

When ‘true’, use a persistent systemd timer.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.server

ACME Directory Resource URI. Defaults to Let’s Encrypt’s production endpoint, ‘https://acme−v02.api.letsencrypt.org/directory’, if unset.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.serverCa

The root certificate (in PEM format) of the ACME server's HTTPS interface.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.settings

Settings

Type: open submodule of attribute set of (TOML value)

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.settings.accounts

A list of ACME accounts. Each account is associated with an email address and can be used to obtain an arbitrary amount of certificate (subject to provider's rate limits, see e.g. **Let's Encrypt Rate Limits**).

Type: list of (open submodule of attribute set of (TOML value))

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.settings.accounts.*.certificates

Certificates for agnos to issue or renew.

Type: list of (open submodule of attribute set of (TOML value))

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.settings.accounts.*.certificates.*.domains

Domains the certificate represents

Type: list of string

Default:

```
[ ]
```

Example:

```
["a.example.com", "b.example.com", "*b.example.com"]
```

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.settings.accounts.*.certificates.*.fullchain_output_file

Output path for the full chain including the acquired certificate. If a relative path is specified, the file will be created in '/var/lib/agnos'.

Type: string

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.settings.accounts.*.certificates.*.key_output_file

Output path for the certificate private key. If a relative path is specified, the file will be created in '/var/lib/agnos'.

Type: string

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.settings.accounts.*.email

Email associated with this account.

Type: string

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.settings.accounts.*.private_key_path

Path of the PEM−encoded private key for this account. Currently, only RSA keys are supported.

If this path does not exist, then the behavior depends on 'generateKeys.enable'. When this option is 'true', the key will be automatically generated and saved to this path. When it is 'false', agnos will fail.

If a relative path is specified, the key will be looked up (or generated and saved to) under '/var/lib/agnos'.

Type: string

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.settings.dns_listen_addr

Address for agnos to listen on. Note that this needs to be reachable by the outside world, and 53 is required in most situations since 'NS' records do not allow specifying the port.

Type: string

Default:

```
"0.0.0.0:53"
```

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.startAt

How often or when to run agnos.

The format is described in **systemd.time**(7).

Type: string or list of string

Default:

```
"daily"
```

Example:

```
"02:00"
```

Declared by:

<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.temporarilyOpenFirewall

When 'true', will open the port specified in 'settings.dns_listen_addr' before running the agnos service, and close it when agnos finishes running.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/agnos.nix>

security.agnos.user
User to run Agnos as. The acquired certificates will be owned by this user.

Type: string

Default:

```
"agnos"
```

Declared by:
<nixpkgs/nixos/modules/security/agnos.nix>

security.allowSimultaneousMultithreading
Whether to allow SMT/hyperthreading. Disabling SMT means that only physical CPU cores will be usable at runtime, potentially at significant performance cost.

The primary motivation for disabling SMT is to mitigate the risk of leaking data between threads running on the same CPU core (due to e.g., shared caches). This attack vector is unproven.

Disabling SMT is a supplement to the L1 data cache flushing mitigation (see **security.virtualisation.flushL1DataCache**) versus malicious VM guests (SMT could "bring back" previously flushed data).

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/misc.nix>

security.allowUserNamespaces
Whether to allow creation of user namespaces.

The motivation for disabling user namespaces is the potential presence of code paths where the kernel's permission checking logic fails to account for namespacing, instead permitting a namespaced process to act outside the namespace with the same privileges as it would have inside it. This is particularly damaging in the common case of running as root within the namespace.

When user namespace creation is disallowed, attempting to create a user namespace fails with "no space left on device" (ENOSPC). root may re−enable user namespace creation at runtime.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/misc.nix>

security.apparmor.enable
Whether to enable the AppArmor Mandatory Access Control system.

If you're enabling this module on a running system, note that a reboot will be required to activate AppArmor in the kernel.

Also, beware that enabling this module privileges stability over security by not trying to kill unconfined but newly confinable running processes by default, though it would be needed because AppArmor can only confine new or already confined processes of an executable. This killing would for instance be necessary when upgrading to a NixOS revision introducing for the first time an AppArmor profile for the

executable of a running process.

Enable **security.apparmor.killUnconfinedConfinables** if you want this service to do such killing by sending a ‘SIGTERM’ to those running processes.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/apparmor.nix>

security.apparmor.enableCache
Whether to enable caching of AppArmor policies in ‘/var/cache/apparmor/’.

Beware that AppArmor policies almost always contain Nix store paths, and thus produce at each change of these paths a new cached version accumulating in the cache.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/apparmor.nix>

security.apparmor.packages
List of packages to be added to AppArmor’s include path

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/apparmor.nix>

security.apparmor.includes
List of paths to be added to AppArmor’s searched paths when resolving ‘include’ directives.

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/security/apparmor.nix>

security.apparmor.killUnconfinedConfinables
Whether to enable killing of processes which have an AppArmor profile enabled (in **security.apparmor.policies**) but are not confined (because AppArmor can only confine new processes).

This is only sending a gracious ‘SIGTERM’ signal to the processes, not a ‘SIGKILL’.

Beware that due to a current limitation of AppArmor, only profiles with exact paths (and no name) can enable such kills.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/apparmor.nix>

security.apparmor.policies
AppArmor policies.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/security/apparmor.nix>

security.apparmor.policies.<name>.path
A path of a profile file to include. Incompatible with profile.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/apparmor.nix>

security.apparmor.policies.<name>.profile
The profile file contents. Incompatible with path.

Type: strings concatenated with “\n”

Declared by:
<nixpkgs/nixos/modules/security/apparmor.nix>

security.apparmor.policies.<name>.state
How strictly this policy should be enforced

Type: one of “disable”, “complain”, “enforce”

Default:

```
"enforce"
```

Declared by:
<nixpkgs/nixos/modules/security/apparmor.nix>

security.audit.enable
Whether to enable the Linux audit system. The special ‘lock’ value can be used to enable auditing and prevent disabling it until a restart. Be careful about locking this, as it will prevent you from changing your audit configuration until you restart. If possible, test your configuration using build−vm beforehand.

Type: one of false, true, “lock”

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/audit.nix>

security.audit.package
The audit package to use.

Type: package

Default:

```
pkgs.audit
```

Declared by:
<nixpkgs/nixos/modules/security/audit.nix>

security.audit.backlogLimit
The maximum number of outstanding audit buffers allowed; exceeding this is considered a failure and handled in a manner specified by failureMode.

Type: signed integer

Default:

```
1024
```

Declared by:
<nixpkgs/nixos/modules/security/audit.nix>

security.audit.failureMode
How to handle critical errors in the auditing system

Type: one of “silent”, “printk”, “panic”

Default:

```
"printk"
```

Declared by:
<nixpkgs/nixos/modules/security/audit.nix>

security.audit.rateLimit
The maximum messages per second permitted before triggering a failure as specified by failureMode. Setting it to zero disables the limit.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/security/audit.nix>

security.audit.rules
The ordered audit rules, with each string appearing as one line of the audit.rules file.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-a exit,always -F arch=b64 -S execve"
]
```

Declared by:
<nixpkgs/nixos/modules/security/audit.nix>

security.auditd.enable
Whether to enable the Linux Audit daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/auditd.nix>

security.auditd.package
The auditd package to use.

Type: package

Default:

```
pkgs.audit
```

Declared by:
<nixpkgs/nixos/modules/security/auditd.nix>

security.auditd.plugins
Plugin definitions to register with auditd

Type: attribute set of (submodule)

Default:

```
{
  af_unix = {
    path = lib.getExe' config.security.auditd.package "audisp-af_u \
nix";
    args = [
      "0640"
      "/var/run/audispd_events"
      "string"
    ];
    format = "binary";
  };
  remote = {
    path = lib.getExe' config.security.auditd.package "audisp-remo \
te";
    settings = { };
  };
  filter = {
    path = lib.getExe' config.security.auditd.package "audisp-filt \
er";
    args = [
      "allowlist"
      "/etc/audit/audisp-filter.conf"
      (lib.getExe' config.security.auditd.package "audisp-syslog")
      "LOG_USER"
      "LOG_INFO"
```

```
            "interpret"
          ];
          settings = { };
        };
        syslog = {
          path = lib.getExe' config.security.auditd.package "audisp-sysl \
      og";
          args = [ "LOG_INFO" ];
        };
      }
```

Declared by:
<nixpkgs/nixos/modules/security/auditd.nix>

security.auditd.plugins.<name>.active
Whether to enable Whether to enable this plugin.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/auditd.nix>

security.auditd.plugins.<name>.args
This allows you to pass arguments to the child program. Generally plugins do not take arguments and have their own config file that instructs them how they should be configured.

Type: null or (list of non-empty string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/auditd.nix>

security.auditd.plugins.<name>.direction
The option is dictated by the plugin. In or out are the only choices. You cannot make a plugin operate in a way it wasn't designed just by changing this option. This option is to give a clue to the event dispatcher about which direction events flow.

Note
Inbound events are not supported yet.

Type: one of "in", "out"

Default:

```
"out"
```

Declared by:
<nixpkgs/nixos/modules/security/auditd.nix>

security.auditd.plugins.<name>.format

Binary passes the data exactly as the audit event dispatcher gets it from the audit daemon. The string option tells the dispatcher to completely change the event into a string suitable for parsing with the audit parsing library.

Type: one of “binary”, “string”

Default:

```
"string"
```

Declared by:

<nixpkgs/nixos/modules/security/auditd.nix>

security.auditd.plugins.<name>.path

This is the absolute path to the plugin executable.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/security/auditd.nix>

security.auditd.plugins.<name>.settings

Plugin−specific config file to link to /etc/audit/<plugin>.conf

Type: null or (open submodule of attribute set of (null or boolean or non−empty string or absolute path or signed integer))

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/security/auditd.nix>

security.auditd.plugins.<name>.type

This tells the dispatcher how the plugin wants to be run. There is only one valid option, ‘always’, which means the plugin is external and should always be run. The default is ‘always’ since there are no more builtin plugins.

Type: value “always” (singular enum) *(read only)*

Default:

```
"always"
```

Declared by:

<nixpkgs/nixos/modules/security/auditd.nix>

security.auditd.settings

auditd configuration file contents. See {auditd.conf} for supported values.

Type: open submodule of attribute set of (null or boolean or non−empty string or absolute path or signed integer)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/security/auditd.nix>

security.auditd.settings.admin_space_left

This is a numeric value in mebibytes (MiB) that tells the audit daemon when to perform a configurable action because the system is running low on disk space. This should be considered the last chance to do something before running out of disk space. The numeric value for this parameter should be lower than the number for **space_left**. You may also append a percent sign (e.g. 1%) to the number to have the audit daemon calculate the number based on the disk partition size.

Type: signed integer or string matching the pattern [0−9]+%

Default:

```
50
```

Declared by:

<nixpkgs/nixos/modules/security/auditd.nix>

security.auditd.settings.space_left

If the free space in the filesystem containing log_file drops below this value, the audit daemon takes the action specified by **space_left_action**. If the value of **space_left** is specified as a whole number, it is interpreted as an absolute size in mebibytes (MiB). If the value is specified as a number between 1 and 99 followed by a percentage sign (e.g., 5%), the audit daemon calculates the absolute size in megabytes based on the size of the filesystem containing **log_file**. (E.g., if the filesystem containing **log_file** is 2 gibibytes in size, and **space_left** is set to 25%, then the audit daemon sets **space_left** to approximately 500 mebibytes.

Note

This calculation is performed when the audit daemon starts, so if you resize the filesystem containing **log_file** while the audit daemon is running, you should send the audit daemon SIGHUP to re−read the configuration file and recalculate the correct per- centage.

Type: signed integer or string matching the pattern [0−9]+%

Default:

```
75
```

Declared by:

<nixpkgs/nixos/modules/security/auditd.nix>

security.chromiumSuidSandbox.enable

Whether to install the Chromium SUID sandbox which is an executable that Chromium may use in order to achieve sandboxing.

If you get the error “The SUID sandbox helper binary was found, but is not configured correctly.”, turning this on might help.

Also, if the URL chrome://sandbox tells you that “You are not adequately sandboxed!”, turning this on might resolve the issue.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/chromium−suid−sandbox.nix>

security.dhparams.enable

Whether to generate new DH params and clean up old DH params.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/dhparams.nix>

security.dhparams.defaultBitSize
This allows to override the default bit size for all of the Diffie−Hellman parameters set in **security.dhparams.params**.

Type: integer of at least 16 bits

Default:

```
2048
```

Declared by:
<nixpkgs/nixos/modules/security/dhparams.nix>

security.dhparams.params
Diffie−Hellman parameters to generate.

The value is the size (in bits) of the DH params to generate. The generated DH params path can be found in ‘config.security.dhparams.params.«name».path’.

Note
The name of the DH params is taken as being the name of the service it serves and the params will be generated before the said service is started.

Warning
If you are removing all dhparams from this list, you have to leave **security.dhparams.enable** for at least one activation in order to have them be cleaned up. This also means if you rollback to a version without any dhparams the existing ones won’t be cleaned up. Of course this only applies if **security.dhparams.stateful** is ‘true’.

Note
For module implementers: It’s recommended to not set a specific bit size here, so that users can easily override this by setting **security.dhparams.defaultBitSize**.

Type: attribute set of ((submodule) or signed integer convertible to it)

Default:

```
{ }
```

Example:

```
{ nginx.bits = 3072; }
```

Declared by:
<nixpkgs/nixos/modules/security/dhparams.nix>

security.dhparams.params.<name>.bits
The bit size for the prime that is used during a Diffie−Hellman key exchange.

Type: integer of at least 16 bits

Default:

```
config.security.dhparams.defaultBitSize
```

Declared by:
<nixpkgs/nixos/modules/security/dhparams.nix>

security.dhparams.params.<name>.path

The resulting path of the generated Diffie−Hellman parameters file for other services to reference. This could be either a store path or a file inside the directory specified by **security.dhparams.path**.

Type: absolute path *(read only)*

Declared by:

<nixpkgs/nixos/modules/security/dhparams.nix>

security.dhparams.path

Path to the directory in which Diffie−Hellman parameters will be stored. This only is relevant if **security.dhparams.stateful** is ‘true’.

Type: string

Default:

```
"/var/lib/dhparams"
```

Declared by:

<nixpkgs/nixos/modules/security/dhparams.nix>

security.dhparams.stateful

Whether generation of Diffie−Hellman parameters should be stateful or not. If this is enabled, PEM−encoded files for Diffie−Hellman parameters are placed in the directory specified by **security.dhparams.path**. Otherwise the files are created within the Nix store.

Note

If this is ‘false’ the resulting store path will be non−deterministic and will be rebuilt every time the ‘openssl’ package changes.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/security/dhparams.nix>

security.doas.enable

Whether to enable the **doas** command, which allows non−root users to execute commands as root.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/doas.nix>

security.doas.package

The doas package to use.

Type: package

Default:

```
pkgs.doas
```

Declared by:

<nixpkgs/nixos/modules/security/doas.nix>

security.doas.extraConfig

Extra configuration text appended to *doas.conf*. Be aware that this option cannot be used to override the behaviour allowing passwordless operation for root.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/security/doas.nix>

security.doas.extraRules

Define specific rules to be set in the */etc/doas.conf* file. More specific rules should come after more general ones in order to yield the expected behavior. You can use ‘mkBefore’ and/or ‘mkAfter’ to ensure this is the case when configuration options are merged. Be aware that this option cannot be used to override the behaviour allowing passwordless operation for root.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  # Allow execution of any command by any user in group doas, requi \
ring
  # a password and keeping any previously-defined environment vari \
ables.
  { groups = [ "doas" ]; noPass = false; keepEnv = true; }
  # Allow execution of "/home/root/secret.sh" by user ‘backup‘ OR u \
ser
  # ‘database‘ OR any member of the group with GID ‘1006‘, without  \
a
  # password.
  { users = [ "backup" "database" ]; groups = [ 1006 ];
    cmd = "/home/root/secret.sh"; noPass = true; }
  # Allow any member of group ‘bar‘ to run ‘/home/baz/cmd1.sh‘ as u \
ser
  # ‘foo‘ with argument ‘hello-doas‘.
  { groups = [ "bar" ]; runAs = "foo";
    cmd = "/home/baz/cmd1.sh"; args = [ "hello-doas" ]; }
  # Allow any member of group ‘bar‘ to run ‘/home/baz/cmd2.sh‘ as u \
ser
  # ‘foo‘ with no arguments.
  { groups = [ "bar" ]; runAs = "foo";
    cmd = "/home/baz/cmd2.sh"; args = [ ]; }
  # Allow user ‘abusers‘ to execute "nano" and unset the value of
  # SSH_AUTH_SOCK, override the value of ALPHA to 1, and inherit th \
e
  # value of BETA from the current environment.
  { users = [ "abusers" ]; cmd = "nano";
    setEnv = [ "-SSH_AUTH_SOCK" "ALPHA=1" "BETA" ]; }
]
```

Declared by:
<nixpkgs/nixos/modules/security/doas.nix>

security.doas.extraRules.*.args
Arguments that must be provided to the command. When set to '[]', the command must be run without any arguments.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/doas.nix>

security.doas.extraRules.*.cmd
The command the user is allowed to run. When set to 'null' (the default), all commands are allowed.

NOTE: It is best practice to specify absolute paths. If a relative path is specified, only a restricted PATH will be searched.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/doas.nix>

security.doas.extraRules.*.groups
The groups / GIDs this rule should apply for.

Type: list of (string or signed integer)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/doas.nix>

security.doas.extraRules.*.keepEnv
If 'true', environment variables other than those listed in **doas**(1) are kept when creating the environment for the new process.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/doas.nix>

security.doas.extraRules.*.noLog
If 'true', successful executions will not be logged to **syslogd**(8).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/doas.nix>

security.doas.extraRules.*.noPass

If ‘true’, the user is not required to enter a password.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/doas.nix>

security.doas.extraRules.*.persist

If ‘true’, do not ask for a password again for some time after the user successfully authenticates.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/doas.nix>

security.doas.extraRules.*.runAs

Which user or group the specified command is allowed to run as. When set to ‘null’ (the default), all users are allowed.

A user can be specified using just the username: ‘"foo"’. It is also possible to only allow running as a specific group with ‘":bar"’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/security/doas.nix>

security.doas.extraRules.*.setEnv

Keep or set the specified variables. Variables may also be removed with a leading ‘−’ or set using ‘variable=value’. If the first character of ‘value’ is a ‘$’, the value to be set is taken from the existing environment variable of the indicated name. This option is processed after the default environment has been created.

NOTE: All rules have ‘setenv { SSH_AUTH_SOCK }’ by default. To prevent ‘SSH_AUTH_SOCK’ from being inherited, add ‘"−SSH_AUTH_SOCK"’ anywhere in this list.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/security/doas.nix>

security.doas.extraRules.*.users

The usernames / UIDs this rule should apply for.

Type: list of (string or signed integer)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/doas.nix>

security.doas.wheelNeedsPassword
Whether users of the 'wheel' group must provide a password to run commands as super user via **doas**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/doas.nix>

security.duosec.acceptEnvFactor
Look for factor selection or passcode in the '$DUO_PASSCODE' environment variable before prompting the user for input.

When $DUO_PASSCODE is non−empty, it will override autopush. The SSH client will need SendEnv DUO_PASSCODE in its configuration, and the SSH server will similarly need AcceptEnv DUO_PASSCODE.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/duosec.nix>

security.duosec.allowTcpForwarding
By default, when SSH forwarding, enabling Duo Security will disable TCP forwarding. By enabling this, you potentially undermine some of the SSH based login security. Note this is not needed if you use PAM.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/duosec.nix>

security.duosec.autopush
If 'true', Duo Unix will automatically send a push login request to the user's phone, falling back on a phone call if push is unavailable. If 'false', the user will be prompted to choose an authentication method. When configured with 'autopush = yes', we recommend setting 'prompts = 1'.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/duosec.nix>

security.duosec.failmode
On service or configuration errors that prevent Duo authentication, fail "safe" (allow access) or "secure" (deny access). The default is "safe".

Type: one of "safe", "secure"

Default:

```
"safe"
```

Declared by:
<nixpkgs/nixos/modules/security/duosec.nix>

security.duosec.fallbackLocalIP
Duo Unix reports the IP address of the authorizing user, for the purposes of authorization and whitelisting. If Duo Unix cannot detect the IP address of the client, setting 'fallbackLocalIP = yes' will cause Duo Unix to send the IP address of the server it is running on.

If you are using IP whitelisting, enabling this option could cause unauthorized logins if the local IP is listed in the whitelist.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/duosec.nix>

security.duosec.groups
If specified, Duo authentication is required only for users whose primary group or supplementary group list matches one of the space−separated pattern lists. Refer to **https://duo.com/docs/duounix** for details.

Type: string

Default:

```
""
```

Example:

```
"users,!wheel,!*admin guests"
```

Declared by:
<nixpkgs/nixos/modules/security/duosec.nix>

security.duosec.host
Duo API hostname.

Type: string

Declared by:
<nixpkgs/nixos/modules/security/duosec.nix>

security.duosec.integrationKey
Integration key.

Type: string

Declared by:
<nixpkgs/nixos/modules/security/duosec.nix>

security.duosec.motd
Print the contents of '/etc/motd' to screen after a successful login.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/duosec.nix>

security.duosec.pam.enable

If enabled, protect logins with Duo Security using PAM support.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/duosec.nix>

security.duosec.prompts

If a user fails to authenticate with a second factor, Duo Unix will prompt the user to authenticate again. This option sets the maximum number of prompts that Duo Unix will display before denying access. Must be 1, 2, or 3. Default is 3.

For example, when ‘prompts = 1’, the user will have to successfully authenticate on the first prompt, whereas if ‘prompts = 2’, if the user enters incorrect information at the initial prompt, he/she will be prompted to authenticate again.

When configured with ‘autopush = true’, we recommend setting ‘prompts = 1’.

Type: one of 1, 2, 3

Default:

```
3
```

Declared by:

<nixpkgs/nixos/modules/security/duosec.nix>

security.duosec.pushinfo

Include information such as the command to be executed in the Duo Push message.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/duosec.nix>

security.duosec.secretKeyFile

A file containing your secret key. The security of your Duo application is tied to the security of your secret key.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/duo-skey"
```

Declared by:

<nixpkgs/nixos/modules/security/duosec.nix>

security.duosec.ssh.enable

If enabled, protect SSH logins with Duo Security.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/duosec.nix>

security.forcePageTableIsolation
Whether to force−enable the Page Table Isolation (PTI) Linux kernel feature even on CPU models that claim to be safe from Meltdown.

This hardening feature is most beneficial to systems that run untrusted workloads that rely on address space isolation for security.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/misc.nix>

security.googleOsLogin.enable
Whether to enable Google OS Login.

The OS Login package enables the following components: AuthorizedKeysCommand to query valid SSH keys from the user's OS Login profile during ssh authentication phase. NSS Module to provide user and group information PAM Module for the sshd service, providing authorization and authentication support, allowing the system to use data stored in Google Cloud IAM permissions to control both, the ability to log into an instance, and to perform operations as root (sudo).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/google_oslogin.nix>

security.ipa.enable
Whether to enable FreeIPA domain integration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/ipa.nix>

security.ipa.basedn
Base DN to use when performing LDAP operations.

Type: string

Example:

```
"dc=example,dc=com"
```

Declared by:
<nixpkgs/nixos/modules/security/ipa.nix>

security.ipa.cacheCredentials
Whether to cache credentials.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/ipa.nix>

security.ipa.certificate
IPA server CA certificate.

Use ‘nix−prefetch−url http://$server/ipa/config/ca.crt’ to obtain the file and the hash.

Type: package

Example:

```
pkgs.fetchurl {
  url = "http://ipa.example.com/ipa/config/ca.crt";
  hash = lib.fakeHash;
};
```

Declared by:
<nixpkgs/nixos/modules/security/ipa.nix>

security.ipa.chromiumSupport
Whether to whitelist the FreeIPA domain in Chromium.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/ipa.nix>

security.ipa.domain
Domain of the IPA server.

Type: string

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/security/ipa.nix>

security.ipa.dyndns.enable
Whether to enable FreeIPA automatic hostname updates.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/ipa.nix>

security.ipa.dyndns.interface

Network interface to perform hostname updates through.

Type: string

Default:

```
"*"
```

Example:

```
"eth0"
```

Declared by:

<nixpkgs/nixos/modules/security/ipa.nix>

security.ipa.ifpAllowedUids

A list of users allowed to access the ifp dbus interface.

Type: list of string

Default:

```
[
  "root"
]
```

Declared by:

<nixpkgs/nixos/modules/security/ipa.nix>

security.ipa.ipaHostname

Fully−qualified hostname used to identify this host in the IPA domain.

Type: string

Default:

```
if config.networking.domain != null then config.networking.fqdn
else "${networking.hostName}.${security.ipa.domain}"
```

Example:

```
"myworkstation.example.com"
```

Declared by:

<nixpkgs/nixos/modules/security/ipa.nix>

security.ipa.offlinePasswords

Whether to store offline passwords when the server is down.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/security/ipa.nix>

security.ipa.realm

Kerberos realm.

Type: string

Example:

```
"EXAMPLE.COM"
```

Declared by:
<nixpkgs/nixos/modules/security/ipa.nix>

security.ipa.server
IPA Server hostname.

Type: string

Example:

```
"ipa.example.com"
```

Declared by:
<nixpkgs/nixos/modules/security/ipa.nix>

security.ipa.shells
List of shells which binaries should be installed to /bin/<name>.

FreeIPA typicly configures somesthing like /bin/bash into the users shell attribute.

Type: list of package

Default:

```
with pkgs; [ bash zsh ];
```

Declared by:
<nixpkgs/nixos/modules/security/ipa.nix>

security.ipa.useAsTimeserver
Whether to add the IPA server to the timeserver.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/ipa.nix>

security.isolate.enable
Whether to enable Sandbox for securely executing untrusted programs .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/isolate.nix>

security.isolate.package
The isolate−unwrapped package to use.

Type: package

Default:

```
pkgs.isolate-unwrapped
```

Declared by:
<nixpkgs/nixos/modules/security/isolate.nix>

security.isolate.boxRoot

All sandboxes are created under this directory. To avoid symlink attacks, this directory and all its ancestors must be writeable only by root.

Type: absolute path

Default:

```
"/var/lib/isolate/boxes"
```

Declared by:

<nixpkgs/nixos/modules/security/isolate.nix>

security.isolate.cgRoot

Control group which subgroups are placed under. Either an explicit path to a subdirectory in cgroupfs, or "auto:file" to read the path from "file", where it is put by 'isolate−cg−helper'.

Type: string

Default:

```
"auto:/run/isolate/cgroup"
```

Declared by:

<nixpkgs/nixos/modules/security/isolate.nix>

security.isolate.extraConfig

Extra configuration to append to the configuration file.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/security/isolate.nix>

security.isolate.firstGid

Start of block of GIDs reserved for sandboxes.

Type: integer or floating point number between 1000 and 65533 (both inclusive)

Default:

```
60000
```

Declared by:

<nixpkgs/nixos/modules/security/isolate.nix>

security.isolate.firstUid

Start of block of UIDs reserved for sandboxes.

Type: integer or floating point number between 1000 and 65533 (both inclusive)

Default:

```
60000
```

Declared by:

<nixpkgs/nixos/modules/security/isolate.nix>

security.isolate.lockRoot

Directory where lock files are created.

Type: absolute path

Default:

```
"/run/isolate/locks"
```

Declared by:
<nixpkgs/nixos/modules/security/isolate.nix>

security.isolate.numBoxes
Number of UIDs and GIDs to reserve, starting from **firstUid** and **firstGid**.

Type: integer or floating point number between 1000 and 65533 (both inclusive)

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/security/isolate.nix>

security.isolate.restrictedInit
If true, only root can create sandboxes.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/isolate.nix>

security.krb5.enable
Enable and configure Kerberos utilities

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/krb5>

security.krb5.package
The krb5 package to use.

Type: package

Default:

```
pkgs.krb5
```

Example:

```
heimdal
```

Declared by:
<nixpkgs/nixos/modules/security/krb5>

security.krb5.settings
Structured contents of the *krb5.conf* file. See **krb5.conf**(5) for details about configuration.

Type: open submodule of attribute set of attribute set of ((list of attribute set of ((list of (signed integer or string or boolean)) or signed integer or string or boolean)) or attribute set of ((list of (signed integer or string or boolean)) or signed integer or string or boolean) or (list of (signed integer or string or boolean)) or signed integer or string or boolean)

Default:

```
{ }
```

Example:

```
{
```

```
domain_realm = {
  "mit.edu" = "ATHENA.MIT.EDU";
};
include = [
  "/run/secrets/secret-krb5.conf"
];
includedir = [
  "/run/secrets/secret-krb5.conf.d"
];
libdefaults = {
  default_realm = "ATHENA.MIT.EDU";
};
logging = {
  admin_server = "SYSLOG:NOTICE";
  default = "SYSLOG:NOTICE";
  kdc = "SYSLOG:NOTICE";
};
realms = {
  "ATHENA.MIT.EDU" = {
    admin_server = "athena.mit.edu";
    kdc = [
      "athena01.mit.edu"
      "athena02.mit.edu"
    ];
  };
};
}
```

Declared by:
<nixpkgs/nixos/modules/security/krb5>

security.krb5.settings.include
Files to include in the Kerberos configuration.

Type: (list of absolute path) or absolute path convertible to it

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/krb5>

security.krb5.settings.includedir
Directories containing files to include in the Kerberos configuration.

Type: (list of absolute path) or absolute path convertible to it

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/krb5>

security.krb5.settings.module

Modules to obtain Kerberos configuration from.

Type: (list of absolute path) or absolute path convertible to it

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/security/krb5>

security.lockKernelModules

Disable kernel module loading once the system is fully initialised. Module loading is disabled until the next reboot. Problems caused by delayed module loading can be fixed by adding the module(s) in question to **boot.kernelModules**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/lock−kernel−modules.nix>

security.loginDefs.package

The shadow package to use.

Type: package

Default:

```
pkgs.shadow
```

Declared by:

<nixpkgs/nixos/modules/programs/shadow.nix>

security.loginDefs.chfnRestrict

Use chfn SUID to allow non−root users to change their account GECOS information.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/programs/shadow.nix>

security.loginDefs.settings

Config options for the /etc/login.defs file, that defines the site−specific configuration for the shadow password suite. See **login.defs**(5) man page for available options.

Type: open submodule of attribute set of (atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/programs/shadow.nix>

security.loginDefs.settings.DEFAULT_HOME

Indicate if login is allowed if we can't cd to the home directory.

Type: one of "yes", "no"

Default:

```
"yes"
```

Declared by:

<nixpkgs/nixos/modules/programs/shadow.nix>

security.loginDefs.settings.ENCRYPT_METHOD

This defines the system default encryption algorithm for encrypting passwords.

Type: one of "YESCRYPT", "SHA512", "SHA256", "MD5", "DES"

Default:

```
"YESCRYPT"
```

Declared by:

<nixpkgs/nixos/modules/programs/shadow.nix>

security.loginDefs.settings.GID_MAX

Range of group IDs used for the creation of regular groups by useradd, groupadd, or newusers.

Type: 32 bit unsigned integer; between 0 and 4294967295 (both inclusive)

Default:

```
29999
```

Declared by:

<nixpkgs/nixos/modules/programs/shadow.nix>

security.loginDefs.settings.GID_MIN

Range of group IDs used for the creation of regular groups by useradd, groupadd, or newusers.

Type: 32 bit unsigned integer; between 0 and 4294967295 (both inclusive)

Default:

```
1000
```

Declared by:

<nixpkgs/nixos/modules/programs/shadow.nix>

security.loginDefs.settings.SYS_GID_MAX

Range of group IDs used for the creation of system groups by useradd, groupadd, or newusers

Type: 32 bit unsigned integer; between 0 and 4294967295 (both inclusive)

Default:

```
999
```

Declared by:

<nixpkgs/nixos/modules/programs/shadow.nix>

security.loginDefs.settings.SYS_GID_MIN

Range of group IDs used for the creation of system groups by useradd, groupadd, or newusers

Type: 32 bit unsigned integer; between 0 and 4294967295 (both inclusive)

Default:

```
400
```

Declared by:
<nixpkgs/nixos/modules/programs/shadow.nix>

security.loginDefs.settings.SYS_UID_MAX
Range of user IDs used for the creation of system users by useradd or newusers.

Type: 32 bit unsigned integer; between 0 and 4294967295 (both inclusive)

Default:

```
999
```

Declared by:
<nixpkgs/nixos/modules/programs/shadow.nix>

security.loginDefs.settings.SYS_UID_MIN
Range of user IDs used for the creation of system users by useradd or newusers.

Type: 32 bit unsigned integer; between 0 and 4294967295 (both inclusive)

Default:

```
400
```

Declared by:
<nixpkgs/nixos/modules/programs/shadow.nix>

security.loginDefs.settings.TTYGROUP
The terminal permissions: the login tty will be owned by the TTYGROUP group, and the permissions will be set to TTYPERM

Type: string

Default:

```
"tty"
```

Declared by:
<nixpkgs/nixos/modules/programs/shadow.nix>

security.loginDefs.settings.TTYPERM
The terminal permissions: the login tty will be owned by the TTYGROUP group, and the permissions will be set to TTYPERM

Type: string

Default:

```
"0620"
```

Declared by:
<nixpkgs/nixos/modules/programs/shadow.nix>

security.loginDefs.settings.UID_MAX
Range of user IDs used for the creation of regular users by useradd or newusers.

Type: 32 bit unsigned integer; between 0 and 4294967295 (both inclusive)

Default:

```
29999
```

Declared by:
<nixpkgs/nixos/modules/programs/shadow.nix>

security.loginDefs.settings.UID_MIN

Range of user IDs used for the creation of regular users by useradd or newusers.

Type: 32 bit unsigned integer; between 0 and 4294967295 (both inclusive)

Default:

```
1000
```

Declared by:

<nixpkgs/nixos/modules/programs/shadow.nix>

security.loginDefs.settings.UMASK

The file mode creation mask is initialized to this value.

Type: string

Default:

```
"077"
```

Declared by:

<nixpkgs/nixos/modules/programs/shadow.nix>

security.lsm

A list of the LSMs to initialize in order.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/security/default.nix>

security.pam.enableFscrypt

Whether to enable fscrypt, to automatically unlock directories with the user's login password.

This also enables a service at security.pam.services.fscrypt which is used by fscrypt to verify the user's password when setting up a new protector. If you use something other than pam_unix to verify user passwords, please remember to adjust this PAM service .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.enableOTPW

Whether to enable the OTPW (one−time password) PAM module.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.enableUMask
Whether to enable the umask PAM module.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.package
The pam package to use.

Type: package

Default:

```
pkgs.pam
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.dp9ik.enable
Whether to enable the dp9ik pam module provided by tlsclient.

If set, users can be authenticated against the 9front authentication server given in **security.pam.dp9ik.authserver** .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.dp9ik.authserver
This controls the hostname for the 9front authentication server that users will be authenticated against.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.dp9ik.control
This option sets the pam “control” used for this module.

Type: string

Default:

```
"sufficient"
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.howdy.enable
Whether to enable the Howdy PAM module.

If set, users can be authenticated using Howdy, the Windows Hello™−style facial authentication service.

Type: boolean

Default:

```
config.services.howdy.enable
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.howdy.control
This option sets the PAM “control” used for this module.

Type: string

Default:

```
config.services.howdy.control
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.krb5.enable
Enables Kerberos PAM modules (‘pam−krb5’, ‘pam−ccreds’).

If set, users can authenticate with their Kerberos password. This requires a valid Kerberos configuration (‘security.krb5.enable’ should be set to ‘true’).

Note that the Kerberos PAM modules are not necessary when using SSS to handle Kerberos authentication.

Type: boolean

Default:

```
config.security.krb5.enable
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.loginLimits
Define resource limits that should apply to users or groups. Each item in the list should be an attribute set with a *domain*, *type*, *item*, and *value* attribute. The syntax and semantics of these attributes must be that described in **limits.conf**(5).

Note that these limits do not apply to systemd services, whose limits can be changed via **systemd.settings.Manager** instead.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    domain = "ftp";
    item = "nproc";
    type = "hard";
```

```
    value = "0";
  }
  {
    domain = "@student";
    item = "maxlogins";
    type = "-";
    value = "4";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.loginLimits.*.domain
Username, groupname, or wildcard this limit applies to

Type: string

Example:

```
"@wheel"
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.loginLimits.*.item
Item this limit applies to

Type: one of “core”, “data”, “fsize”, “memlock”, “nofile”, “rss”, “stack”, “cpu”, “nproc”, “as”, “maxlogins”, “maxsyslogins”, “priority”, “locks”, “sigpending”, “msgqueue”, “nice”, “rtprio”

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.loginLimits.*.type
Type of this limit

Type: one of “−”, “hard”, “soft”

Default:

```
"-"
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.loginLimits.*.value
Value of this limit

Type: string or signed integer

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.makeHomeDir.skelDirectory
Path to skeleton directory whose contents are copied to home directories newly created by ‘pam_mkhomedir’.

Type: string

Default:

```
"/var/empty"
```

Example:

```
"/etc/skel"
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.makeHomeDir.umask
The user file mode creation mask to use on home directories newly created by ‘pam_mkhomedir’.

Type: string

Default:

```
"0077"
```

Example:

```
"0022"
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.mount.enable
Enable PAM mount system to mount filesystems on user login.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam_mount.nix>

security.pam.mount.additionalSearchPaths
Additional programs to include in the search path of pam_mount. Useful for example if you want to use some FUSE filesystems like bindfs.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.bindfs ]
```

Declared by:
<nixpkgs/nixos/modules/security/pam_mount.nix>

security.pam.mount.createMountPoints
Create mountpoints for volumes if they do not exist.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/pam_mount.nix>

security.pam.mount.cryptMountOptions
Global mount options that apply to every crypt volume. You can define volume−specific options in the volume definitions.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "allow_discard" ]
```

Declared by:
<nixpkgs/nixos/modules/security/pam_mount.nix>

security.pam.mount.debugLevel
Sets the Debug−Level. 0 disables debugging, 1 enables pam_mount tracing, and 2 additionally enables tracing in mount.crypt. The default is 0. For more information, visit **https://pam−mount.sourceforge.net/pam_mount.conf.5.html**.

Type: signed integer

Default:

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/security/pam_mount.nix>

security.pam.mount.extraVolumes
List of volume definitions for pam_mount. For more information, visit **https://pam−mount.sourceforge.net/pam_mount.conf.5.html**.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/pam_mount.nix>

security.pam.mount.fuseMountOptions
Global mount options that apply to every FUSE volume. You can define volume−specific options in the volume definitions.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "nodev" "nosuid" "force−user=%(USER)" "gid=%(USERGID)" "perms=07 \
00" "chmod−deny" "chown−deny" "chgrp−deny" ]
```

Declared by:
<nixpkgs/nixos/modules/security/pam_mount.nix>

security.pam.mount.logoutHup
Kill remaining processes after logout by sending a SIGHUP.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam_mount.nix>

security.pam.mount.logoutKill

Kill remaining processes after logout by sending a SIGKILL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/pam_mount.nix>

security.pam.mount.logoutTerm

Kill remaining processes after logout by sending a SIGTERM.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/pam_mount.nix>

security.pam.mount.logoutWait

Amount of microseconds to wait until killing remaining processes after final logout. For more information, visit **https://pam−mount.sourceforge.net/pam_mount.conf.5.html**.

Type: signed integer

Default:

Declared by:

<nixpkgs/nixos/modules/security/pam_mount.nix>

security.pam.mount.removeCreatedMountPoints

Remove mountpoints created by pam_mount after logout. This only affects mountpoints that have been created by pam_mount in the same session.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/security/pam_mount.nix>

security.pam.oath.enable

Enable the OATH (one−time password) PAM module.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/oath.nix>

security.pam.oath.digits

Specify the lib.length of the one−time password in number of digits.

Type: one of 6, 7, 8

Default:

```
6
```

Declared by:
<nixpkgs/nixos/modules/security/oath.nix>

security.pam.oath.usersFile
Set the path to file where the user's credentials are stored. This file must not be world readable!

Type: absolute path

Default:

```
"/etc/users.oath"
```

Declared by:
<nixpkgs/nixos/modules/security/oath.nix>

security.pam.oath.window
Specify the number of one−time passwords to check in order to accommodate for situations where the system and the client are slightly out of sync (iteration for HOTP or time steps for TOTP).

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/security/oath.nix>

security.pam.p11.enable
Enables P11 PAM ('pam_p11') module.

If set, users can log in with SSH keys and PKCS#11 tokens.

More information can be found **here**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.p11.control
This option sets pam "control". If you want to have multi factor authentication, use "required". If you want to use the PKCS#11 device instead of the regular password, use "sufficient".

Read **pam.conf**(5) for better understanding of this option.

Type: one of "required", "requisite", "sufficient", "optional"

Default:

```
"sufficient"
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.rssh.enable
Whether to enable authenticating using a signature performed by the ssh−agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.rssh.settings

Options to pass to the pam_rssh module. Refer to **https://github.com/z4yx/pam_rssh/blob/main/README.md#optional−arguments** for supported values.

Boolean values render just the key if true, and nothing if false. Null values are ignored. All other values are rendered as key−value pairs.

Type: open submodule of attribute set of (null or boolean or string or signed integer or path in the Nix store)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.rssh.settings.auth_key_file

Path to file with trusted public keys in OpenSSH's 'authorized_keys' format. The following variables are expanded to the respective PAM items:

- 'service': 'PAM_SERVICE', the service name,
- 'user': 'PAM_USER', the username of the entity under whose identity service will be given,
- 'tty': 'PAM_TTY', the terminal name,
- 'rhost': 'PAM_RHOST', the requesting hostname, and
- 'ruser': 'PAM_RUSER', the requesting entity.

These PAM items are explained in **pam_get_item**(3).

Variables may be specified as '$var', '${var}' or '${var:defaultValue}'.

Note

Specifying user−writeable files here results in an insecure configuration: a malicious process can then edit such an 'authorized_keys' file and bypass the ssh−agent−based authentication.

This option is ignored if **security.pam.rssh.settings.authorized_keys_command** is set.

If both this option and **security.pam.rssh.settings.authorized_keys_command** are unset, the keys will be read from '${HOME}/.ssh/authorized_keys', which should be considered insecure.

Type: null or non−empty string

Default:

```
"/etc/ssh/authorized_keys.d/$ruser"
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services

This option defines the PAM services. A service typically corresponds to a program that uses PAM, e.g. **login** or **passwd**. Each attribute of this set defines a PAM service, with the attribute name defining the name of the service.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.enable
Whether to enable this PAM service.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.enableAppArmor
Enable support for attaching AppArmor profiles at the user/group level, e.g., as part of a role based access control scheme.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.enableGnomeKeyring
If enabled, pam_gnome_keyring will attempt to automatically unlock the user's default Gnome keyring upon login. If the user login password does not match their keyring password, Gnome Keyring will prompt separately after login.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.enableUMask
If enabled, the pam_umask module will be loaded.

Type: boolean

Default:

```
config.security.pam.enableUMask
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.allowNullPassword
Whether to allow logging into accounts that have no password set (i.e., have an empty password field in */etc/passwd* or */etc/group*). This does not enable logging into disabled accounts (i.e., that have the password field set to '!'). Note that regardless of what the pam_unix documentation says, accounts with hashed empty passwords are always allowed to log in.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.duoSecurity.enable
If set, use the Duo Security pam module ‘pam_duo’ for authentication. Requires configuration of **security.duosec** options.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.failDelay.enable
If enabled, this will replace the ‘FAIL_DELAY’ setting from ‘login.defs’. Change the delay on failure per−application.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.failDelay.delay
The delay time (in microseconds) on failure.

Type: signed integer

Default:

```
3000000
```

Example:

```
1000000
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.forwardXAuth
Whether X authentication keys should be passed from the calling user to the target user (e.g. for **su**)

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.fprintAuth
If set, fingerprint reader will be used (if exists and your fingerprints are enrolled).

Type: boolean

Default:

```
config.services.fprintd.enable
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.gnupg.enable
If enabled, pam_gnupg will attempt to automatically unlock the user's GPG keys with the login password via **gpg−agent**. The keygrips of all keys to be unlocked should be written to *~/.pam−gnupg*, and can be queried with **gpg −K −−with−keygrip**. Presetting passphrases must be enabled by adding 'allow−preset−passphrase' in *~/.gnupg/gpg−agent.conf*.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.gnupg.noAutostart
Don't start **gpg−agent** if it is not running. Useful in conjunction with starting **gpg−agent** as a systemd user service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.gnupg.storeOnly
Don't send the password immediately after login, but store for PAM 'session'.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.googleAuthenticator.enable
If set, users with enabled Google Authenticator (created *~/.google_authenticator*) will be required to provide Google Authenticator token to log in.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.googleAuthenticator.allowNullOTP
Whether to allow login for accounts that have no OTP set (i.e., accounts with no OTP configured or no existing *~/.google_authenticator*).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.googleAuthenticator.forwardPass
The authentication provides a single field requiring the user's password followed by the one−time password (OTP).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.googleOsLoginAccountVerification
If set, will use the Google OS Login PAM modules ('pam_oslogin_login', 'pam_oslogin_admin') to verify possible OS Login users and set sudoers configuration accordingly. This only makes sense to enable for the 'sshd' PAM service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.googleOsLoginAuthentication
If set, will use the 'pam_oslogin_login''s user authentication methods to authenticate users using 2FA. This only makes sense to enable for the 'sshd' PAM service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.howdy.enable
Whether to enable the Howdy PAM module.

If set, users can be authenticated using Howdy, the Windows Hello™−style facial authentication service.

Type: boolean

Default:

```
config.security.pam.howdy.enable
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.howdy.control
This option sets the PAM "control" used for this module.

Type: string

Default:

```
config.security.pam.howdy.control
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.kwallet.enable
If enabled, pam_wallet will attempt to automatically unlock the user's default KDE wallet upon login. If the user has no wallet named "kdewallet", or the login password does not match their wallet password, KDE will prompt separately after login.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.kwallet.package
The kwallet−pam package to use.

Type: package

Default:

```
pkgs.kdePackages.kwallet−pam
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.kwallet.forceRun
The 'force_run' option is used to tell the PAM module for KWallet to forcefully run even if no graphical session (such as a GUI display manager) is detected. This is useful for when you are starting an X Session or a Wayland Session from a TTY. If you intend to log−in from a TTY, it is recommended that you enable this option **and** ensure that 'plasma−kwallet−pam.service' is started by 'graphical−session.target'.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.limits
Attribute set describing resource limits. Defaults to the value of **security.pam.loginLimits**. The meaning of the values is explained in **limits.conf**(5).

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.limits.*.domain
Username, groupname, or wildcard this limit applies to

Type: string

Example:

```
"@wheel"
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.limits.*.item
Item this limit applies to

Type: one of “core”, “data”, “fsize”, “memlock”, “nofile”, “rss”, “stack”, “cpu”, “nproc”, “as”, “maxlogins”, “maxsyslogins”, “priority”, “locks”, “sigpending”, “msgqueue”, “nice”, “rtprio”

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.limits.*.type
Type of this limit

Type: one of “−”, “hard”, “soft”

Default:

```
"-"
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.limits.*.value
Value of this limit

Type: string or signed integer

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.logFailures
Whether to log authentication failures in */var/log/faillog*.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.makeHomeDir
Whether to try to create home directories for users with ‘$HOME’s pointing to nonexistent locations on session login.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.mysqlAuth
If set, the ‘pam_mysql’ module will be used to authenticate users against a MySQL/MariaDB database.

Type: boolean

Default:

```
config.users.mysql.enable
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.name
Name of the PAM service.

Type: string

Example:

```
"sshd"
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.nodelay
Whether the delay after typing a wrong password should be disabled.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.oathAuth
If set, the OATH Toolkit will be used.

Type: boolean

Default:

```
config.security.pam.oath.enable
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.otpwAuth
If set, the OTPW system will be used (if *~/.otpw* exists).

Type: boolean

Default:

```
config.security.pam.enableOTPW
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.p11Auth
If set, keys listed in *~/.ssh/authorized_keys* and *~/.eid/authorized_certificates* can be used to log in with the associated PKCS#11 tokens.

Type: boolean

Default:

```
config.security.pam.p11.enable
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.pamMount
Enable PAM mount (pam_mount) system to mount filesystems on user login.

Type: boolean

Default:

```
config.security.pam.mount.enable
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.requireWheel
Whether to permit root access only to members of group wheel.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.rootOK
If set, root doesn't need to authenticate (e.g. for the **useradd** service).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.rssh
If set, the calling user's SSH agent is used to authenticate against the configured keys. This module works in a manner similar to pam_ssh_agent_auth, but supports a wider range of SSH key types, including those protected by security keys (FIDO2).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.setEnvironment
Whether the service should set the environment variables listed in **environment.sessionVariables** using 'pam_env.so'.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.setLoginUid

Set the login uid of the process (*/proc/self/loginuid*) for auditing purposes. The login uid is only set by 'entry points' like **login** and **sshd**, not by commands like **sudo**.

Type: boolean

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.showMotd

Whether to show the message of the day.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.slurm.enable

If set, ONLY prevents users from logging into nodes if they have no jobs in the node. This module is a legacy implementation with functionality limited to login restrictions.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.slurm.adopt.enable

If set, it prevents users from logging into nodes if they have no jobs in the node. It also tracks any other spawned processes for accounting and ensures complete job cleanup when a job is completed for any successful connection. Spawned processes get "adopted" as external steps into the current job. As such, those steps get integrated with Slurm accounting and control group facilities.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.slurm.adopt.settings

Slurm Adopt Settings. More information is available at:

- https://slurm.schedmd.com/pam_slurm_adopt.html

Type: open submodule of attribute set of (null or boolean or string or signed integer or path in the Nix store)

Default:

```
{
  service = "‹name›";
}
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.slurm.adopt.settings.action_adopt_failure

What to do if the process is unable to be adopted into a job. ‘allow’ matches the upstream default which is only really suitable for testing; production systems will want ‘deny’ as a default.

Type: one of “allow”, “deny”

Default:

```
"deny"
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.slurm.adopt.settings.action_generic_failure

Catch all for failures related to kernel issues or slurmd access. Ignore falls through to the next PAM module, allowing the connection to go through without adoption.

Type: one of “ignore”, “allow”, “deny”

Default:

```
"ignore"
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.slurm.adopt.settings.action_no_jobs

What to do if no jobs from the user are found, deny or ignore (pass along to next PAM module).

Type: one of “ignore”, “deny”

Default:

```
"deny"
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.slurm.adopt.settings.action_unknown

If the user has jobs, attach them to the newest job. Allow the connection through without adoption.

Type: one of “newest”, “allow”, “deny”

Default:

```
"newest"
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.slurm.adopt.settings.disable_x11

Disable or enable x11 sessions. ‘0’ means the adopted connection has Slurm X11 forwarding with DISPLAY overwritten using X11 tunnel endpoint details.

Type: one of “0”, “1”

Default:

```
"0"
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.slurm.adopt.settings.join_container

Attach to a container created by job_container/tmpfs

Type: one of “true”, “false”

Default:

```
"true"
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.slurm.adopt.settings.nodename

Set this only when the Slurm ‘NodeName’ for this machine differs from ‘hostname −s’. If unset, ‘pam_slurm_adopt’ uses the host short name.

Type: null or non−empty string

Default:

```
null
```

Example:

```
"compute−a−01"
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.sshAgentAuth

If set, the calling user’s SSH agent is used to authenticate against the keys in the calling user’s *~/.ssh/authorized_keys*. This is useful for **sudo** on password−less remote systems.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.sssdStrictAccess

enforce sssd access control

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.startSession

If set, the service will register a new session with systemd’s login manager. For local sessions, this will give the user access to audio devices, CD−ROM drives. In the default PolicyKit configuration, it also allows the user to reboot the system.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.text
Contents of the PAM service file.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.ttyAudit.enable
Enable or disable TTY auditing for specified users

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.ttyAudit.enablePattern
For each user matching one of comma−separated glob patterns, enable TTY auditing

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.ttyAudit.disablePattern
For each user matching one of comma−separated glob patterns, disable TTY auditing

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.ttyAudit.openOnly
Set the TTY audit flag when opening the session, but do not restore it when closing the session. Using this option is necessary for some services that don't fork() to run the authenticated session, such as sudo.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.u2f.enable
If set, users listed in *$XDG_CONFIG_HOME/Yubico/u2f_keys* (or *$HOME/.config/Yubico/u2f_keys* if XDG variable is not set) are able to log in with the associated U2F key. Path can be changed using **security.pam.u2f.authFile** option.

Type: boolean

Default:

```
config.security.pam.u2f.enable
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.u2f.control
This option sets pam “control”. If you want to have multi factor authentication, use “required”. If you want to use U2F device instead of regular password, use “sufficient”.

Read **pam.conf**(5) for better understanding of this option.

Type: one of “required”, “requisite”, “sufficient”, “optional”

Default:

```
config.security.pam.u2f.control
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.unixAuth
Whether users can log in with passwords defined in */etc/shadow*.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.updateWtmp
Whether to update */var/log/wtmp*.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.usshAuth
If set, users with an SSH certificate containing an authorized principal in their SSH agent are able to log in. Specific options are controlled using the **security.pam.ussh** options.

Note that the **security.pam.ussh.enable** must also be set for this option to take effect.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.yubicoAuth
If set, users listed in *~/.yubico/authorized_yubikeys* are able to log in with the associated Yubikey tokens.

Type: boolean

Default:

```
config.security.pam.yubico.enable
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.services.<name>.zfs
Enable unlocking and mounting of encrypted ZFS home dataset at login.

Type: boolean

Default:

```
config.security.pam.zfs.enable
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.sshAgentAuth.enable
Whether to enable authenticating using a signature performed by the ssh−agent. This allows using SSH keys exclusively, instead of passwords, for instance on remote machines .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.sshAgentAuth.authorizedKeysFiles
A list of paths to files in OpenSSH's 'authorized_keys' format, containing the keys that will be trusted by the 'pam_ssh_agent_auth' module.

The following patterns are expanded when interpreting the path:

- '%f' and '%H' respectively expand to the fully−qualified and short hostname ;
- '%u' expands to the username ;
- '~' or '%h' expands to the user's home directory.

Note
Specifying user−writeable files here result in an insecure configuration: a malicious process can then edit such an authorized_keys file and bypass the ssh−agent−based authentication.

See **issue #31611**

Type: list of string

Default:

```
[
  "/etc/ssh/authorized_keys.d/%u"
]
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.u2f.enable
Enables U2F PAM ('pam−u2f') module.

If set, users listed in *$XDG_CONFIG_HOME/Yubico/u2f_keys* (or *$HOME/.config/Yubico/u2f_keys* if XDG variable is not set) are able to log in with the associated U2F key. The path can be changed using **security.pam.u2f.authFile** option.

File format is:

```
<username1>:<KeyHandle1>,<UserKey1>,<CoseType1>,<Options1>:<KeyHand \
le2>,<UserKey2>,<CoseType2>,<Options2>:...
<username2>:<KeyHandle1>,<UserKey1>,<CoseType1>,<Options1>:<KeyHand \
le2>,<UserKey2>,<CoseType2>,<Options2>:...
```

This file can be generated using **pamu2fcfg** command.

More information can be found **here**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.u2f.control

This option sets pam “control”. If you want to have multi factor authentication, use “required”. If you want to use U2F device instead of regular password, use “sufficient”.

Read **pam.conf**(5) for better understanding of this option.

Type: one of “required”, “requisite”, “sufficient”, “optional”

Default:

```
"sufficient"
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.u2f.settings

Options to pass to the PAM module.

Boolean values render just the key if true, and nothing if false. Null values are ignored. All other values are rendered as key−value pairs.

Type: open submodule of attribute set of (null or boolean or string or signed integer or path in the Nix store)

Default:

```
{ }
```

Example:

```
{
  authfile = "/etc/u2f_keys";
  authpending_file = "";
  pinverification = 1;
  userpresence = 0;
}
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.u2f.settings.appid

By default ‘pam−u2f’ module sets the application ID to ‘pam://$HOSTNAME’.

When using **pamu2fcfg**, you can specify your application ID with the ‘−i’ flag.

More information can be found **here**

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.u2f.settings.authfile
By default ‘pam−u2f’ module reads the keys from *$XDG_CONFIG_HOME/Yubico/u2f_keys* (or *$HOME/.config/Yubico/u2f_keys* if XDG variable is not set).

If you want to change auth file locations or centralize database (for example use */etc/u2f−mappings*) you can set this option.

File format is: ‘username:first_keyHandle,first_public_key: second_keyHandle,second_public_key’ This file can be generated using **pamu2fcfg** command.

More information can be found **here**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.u2f.settings.cue
By default ‘pam−u2f’ module does not inform user that he needs to use the u2f device, it just waits without a prompt.

If you set this option to ‘true’, ‘cue’ option is added to ‘pam−u2f’ module and reminder message will be displayed.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.u2f.settings.debug
Debug output to stderr.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.u2f.settings.interactive
Set to prompt a message and wait before testing the presence of a U2F device. Recommended if your device doesn’t have a tactile trigger.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.u2f.settings.origin

By default ‘pam−u2f’ module sets the origin to ‘pam://$HOSTNAME’. Setting origin to an host independent value will allow you to reuse credentials across machines

When using **pamu2fcfg**, you can specify your application ID with the ‘−o’ flag.

More information can be found **here**

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.ussh.enable

Enables Uber’s USSH PAM (‘pam−ussh’) module.

This is similar to ‘pam−ssh−agent’, except that the presence of a CA−signed SSH key with a valid principal is checked instead.

Note that this module must both be enabled using this option and on a per−PAM−service level as well (using ‘usshAuth’).

More information can be found **here**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.ussh.authorizedPrincipals

Comma−separated list of authorized principals to permit; if the user presents a certificate with one of these principals, then they will be authorized.

Note that ‘pam−ussh’ also requires that the certificate contain a principal matching the user’s username. The principals from this list are in addition to those principals.

Mutually exclusive with ‘authorizedPrincipalsFile’.

Type: null or strings concatenated with “,”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.ussh.authorizedPrincipalsFile

Path to a list of principals; if the user presents a certificate with one of these principals, then they will be authorized.

Note that ‘pam−ussh’ also requires that the certificate contain a principal matching the user’s username. The principals from this file are in addition to those principals.

Mutually exclusive with ‘authorizedPrincipals’.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.ussh.caFile
By default ‘pam−ussh’ reads the trusted user CA keys from */etc/ssh/trusted_user_ca*.

This should be set the same as your ‘TrustedUserCAKeys’ option for sshd.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.ussh.control
This option sets pam “control”. If you want to have multi factor authentication, use “required”. If you want to use the SSH certificate instead of the regular password, use “sufficient”.

Read **pam.conf**(5) for better understanding of this option.

Type: one of “required”, “requisite”, “sufficient”, “optional”

Default:

```
"sufficient"
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.ussh.group
If set, then the authenticating user must be a member of this group to use this module.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.yubico.enable
Enables Yubico PAM (‘yubico−pam’) module.

If set, users listed in *~/.yubico/authorized_yubikeys* are able to log in with the associated Yubikey tokens.

The file must have only one line: ‘username:yubikey_token_id1:yubikey_token_id2’ More information can be found **here**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.yubico.challengeResponsePath
If not null, set the path used by yubico pam module where the challenge expected response is stored.

More information can be found **here**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.yubico.control
This option sets pam “control”. If you want to have multi factor authentication, use “required”. If you want to use Yubikey instead of regular password, use “sufficient”.

Read **pam.conf**(5) for better understanding of this option.

Type: one of “required”, “requisite”, “sufficient”, “optional”

Default:

```
"sufficient"
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.yubico.debug
Debug output to stderr.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.yubico.id
client id

Type: string

Example:

```
"42"
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.yubico.mode
Mode of operation.

Use “client” for online validation with a YubiKey validation service such as the YubiCloud.

Use “challenge−response” for offline validation using YubiKeys with HMAC−SHA−1 Challenge−Response configurations. See the man−page **ykpamcfg**(1) for further details on how to configure offline Challenge−Response validation.

More information can be found **here**.

Type: one of “client”, “challenge−response”

Default:

```
"client"
```

Declared by:
<nixpkgs/nixos/modules/security/pam.nix>

security.pam.zfs.enable

Enable unlocking and mounting of encrypted ZFS home dataset at login.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.zfs.homes

Prefix of home datasets. This value will be concatenated with ‘"/" + <username>’ in order to determine the home dataset to unlock.

Type: string

Default:

```
"rpool/home"
```

Example:

```
"rpool/home"
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.zfs.mountRecursively

Mount child datasets of home dataset.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pam.zfs.noUnmount

Do not unmount home dataset on logout.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/pam.nix>

security.pki.caBundle

(Read−only) the path to the final bundle of certificate authorities as a single file.

Type: absolute path *(read only)*

Declared by:

<nixpkgs/nixos/modules/security/ca.nix>

security.pki.caCertificateBlacklist

A list of blacklisted CA certificate names that won’t be imported from the Mozilla Trust Store into */etc/ssl/certs/ca−certificates.crt*. Use the names from that file.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "WoSign"
  "WoSign China"
  "CA WoSign ECC Root"
  "Certification Authority of WoSign G2"
]
```

Declared by:
<nixpkgs/nixos/modules/security/ca.nix>

security.pki.certificateFiles
A list of files containing trusted root certificates in PEM format. These are concatenated to form */etc/ssl/certs/ca−certificates.crt*, which is used by many programs that use OpenSSL, such as **curl** and **git**.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[ "${pkgs.dn42−cacert}/etc/ssl/certs/dn42−ca.crt" ]
```

Declared by:
<nixpkgs/nixos/modules/security/ca.nix>

security.pki.certificates
A list of trusted root certificates in PEM format.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ ''
    NixOS.org
    =========
    −−−−−BEGIN CERTIFICATE−−−−−
    MIIGUDCCBTigAwIBAgIDD8KWMA0GCSqGSIb3DQEBBQUAMIGMMQswCQYDVQQGEwJ \
J
    TDEWMBQGA1UEChMNU3RhcnRDb20gTHRkLjErMCkGA1UECxMiU2VjdXJlIERpZ2l \
0
    ...
    −−−−−END CERTIFICATE−−−−−
  ''
]
```

Declared by:
<nixpkgs/nixos/modules/security/ca.nix>

security.pki.useCompatibleBundle
Whether to enable usage of a compatibility bundle.

Such a bundle consists exclusively of ‘BEGIN CERTIFICATE’ and no ‘BEGIN TRUSTED CERTIFICATE’, which is an OpenSSL specific PEM format.

It is known to be incompatible with certain software stacks.

Nevertheless, enabling this will strip all additional trust rules provided by the certificates themselves.

This can have security consequences depending on your usecases .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/ca.nix>

security.please.enable
Whether to enable please, a Sudo clone which allows a users to execute a command or edit a file as another user .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/please.nix>

security.please.package
The please package to use.

Type: package

Default:

```
pkgs.please
```

Declared by:
<nixpkgs/nixos/modules/security/please.nix>

security.please.settings
Please configuration. Refer to **https://github.com/edneville/please/blob/master/please.ini.md** for details.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  jim_edit_etc_hosts_as_root = {
    editmode = 644;
    name = "jim";
    require_pass = true;
    rule = "/etc/hosts";
    target = "root";
    type = "edit";
  };
  jim_run_any_as_root = {
    name = "jim";
```

```
      require_pass = false;
      rule = ".*";
      target = "root";
      type = "run";
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/security/please.nix>

security.please.wheelNeedsPassword
Whether users of the ‘wheel’ group must provide a password to run commands or edit files with **please** and **pleaseedit** respectively.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/please.nix>

security.polkit.enable
Whether to enable polkit.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/polkit.nix>

security.polkit.package
The polkit package to use.

Type: package

Default:

```
pkgs.polkit
```

Declared by:
<nixpkgs/nixos/modules/security/polkit.nix>

security.polkit.adminIdentities
Specifies which users are considered “administrators”, for those actions that require the user to authenticate as an administrator (i.e. have an ‘auth_admin’ value). By default, this is all users in the ‘wheel’ group.

Type: list of string

Default:

```
[
  "unix-group:wheel"
]
```

Example:

```
[
```

```
  "unix-user:alice"
  "unix-group:admin"
]
```

Declared by:
<nixpkgs/nixos/modules/security/polkit.nix>

security.polkit.debug
Whether to enable debug logs from polkit. This is required in order to see log messages from rule definitions.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/polkit.nix>

security.polkit.extraConfig
Any polkit rules to be added to config (in JavaScript ;−). See: **https://www.freedesktop.org/software/polkit/docs/latest/polkit.8.html#polkit−rules**

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  /* Log authorization checks. */
  polkit.addRule(function(action, subject) {
    // Make sure to set { security.polkit.debug = true; } in config \
uration.nix
    polkit.log("user " +  subject.user + " is attempting action " + \
 action.id + " from PID " + subject.pid);
  });

  /* Allow any local user to do anything (dangerous!). */
  polkit.addRule(function(action, subject) {
    if (subject.local) return "yes";
  });
```

Declared by:
<nixpkgs/nixos/modules/security/polkit.nix>

security.protectKernelImage
Whether to prevent replacing the running kernel image.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/misc.nix>

security.rtkit.enable

Whether to enable the RealtimeKit system service, which hands out realtime scheduling priority to user processes on demand. For example, PulseAudio and PipeWire use this to acquire realtime priority.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/rtkit.nix>

security.rtkit.package

The rtkit package to use.

Type: package

Default:

```
pkgs.rtkit
```

Declared by:

<nixpkgs/nixos/modules/security/rtkit.nix>

security.rtkit.args

Command−line options for ‘rtkit−daemon’.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--our-realtime-priority=29"
  "--max-realtime-priority=28"
]
```

Declared by:

<nixpkgs/nixos/modules/security/rtkit.nix>

security.run0.enableSudoAlias

Whether to enable make **sudo** an alias to **run0**…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/security/run0.nix>

security.run0.wheelNeedsPassword

Whether users of the ‘wheel’ group must provide a password to run commands as super user via **run0**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/run0.nix>

security.shadow.enable
Enable the shadow authentication suite, which provides critical programs such as su, login, passwd.

Note: This is currently experimental. Only disable this if you're confident that you can recover your system if it breaks.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/programs/shadow.nix>

security.shadow.su.package
The su package to use. This can be overridden by other modules (e.g. sudo−rs) to provide an alternative 'su' implementation.

Type: package

Default:

```
pkgs.shadow.su
```

Declared by:
<nixpkgs/nixos/modules/programs/shadow.nix>

security.soteria.enable
Whether to enable Soteria, a Polkit authentication agent for any desktop environment.

Note
You should only enable this if you are on a Desktop Environment that does not provide a graphical polkit authentication agent, or you are on a standalone window manager or Wayland compositor.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/soteria.nix>

security.soteria.package
The soteria package to use.

Type: package

Default:

```
pkgs.soteria
```

Declared by:
<nixpkgs/nixos/modules/security/soteria.nix>

security.sudo.enable

Whether to enable the **sudo** command, which allows non−root users to execute commands as root.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/security/sudo.nix>

security.sudo.package

The sudo package to use.

Type: package

Default:

```
pkgs.sudo
```

Declared by:

<nixpkgs/nixos/modules/security/sudo.nix>

security.sudo.configFile

This string contains the contents of the *sudoers* file.

Type: strings concatenated with “\n”

Declared by:

<nixpkgs/nixos/modules/security/sudo.nix>

security.sudo.defaultOptions

Options used for the default rules, granting ‘root’ and the ‘wheel’ group permission to run any command as any user.

Type: list of string

Default:

```
[
  "SETENV"
]
```

Declared by:

<nixpkgs/nixos/modules/security/sudo.nix>

security.sudo.execWheelOnly

Only allow members of the ‘wheel’ group to execute sudo by setting the executable’s permissions accordingly. This prevents users that are not members of ‘wheel’ from exploiting vulnerabilities in sudo such as CVE−2021−3156.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/sudo.nix>

security.sudo.extraConfig

Extra configuration text appended to *sudoers*.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/security/sudo.nix>

security.sudo.extraRules
Define specific rules to be in the *sudoers* file. More specific rules should come after more general ones in order to yield the expected behavior. You can use mkBefore/mkAfter to ensure this is the case when configuration options are merged.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  # Allow execution of any command by all users in group sudo,
  # requiring a password.
  { groups = [ "sudo" ]; commands = [ "ALL" ]; }
  # Allow execution of "/home/root/secret.sh" by user ‘backup‘, ‘da \
tabase‘
  # and the group with GID ‘1006‘ without a password.
  { users = [ "backup" "database" ]; groups = [ 1006 ];
    commands = [ { command = "/home/root/secret.sh"; options = [ "S \
ETENV" "NOPASSWD" ]; } ]; }
  # Allow all users of group ‘bar‘ to run two executables as user ‘ \
foo‘
  # with arguments being pre-set.
  { groups = [ "bar" ]; runAs = "foo";
    commands =
      [ "/home/baz/cmd1.sh hello-sudo"
          { command = ’’/home/baz/cmd2.sh ""’’; options = [ "SETENV \
" ]; } ]; }
]
```

Declared by:
<nixpkgs/nixos/modules/security/sudo.nix>

security.sudo.extraRules.*.commands
The commands for which the rule should apply.

Type: list of (string or (submodule))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/sudo.nix>

security.sudo.extraRules.*.groups
The groups / GIDs this rule should apply for.

Type: list of (string or signed integer)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/sudo.nix>

security.sudo.extraRules.*.host
For what host this rule should apply.

Type: string

Default:

```
"ALL"
```

Declared by:
<nixpkgs/nixos/modules/security/sudo.nix>

security.sudo.extraRules.*.runAs
Under which user/group the specified command is allowed to run.

A user can be specified using just the username: ‘"foo"’. It is also possible to specify a user/group combination using ‘"foo:bar"’ or to only allow running as a specific group with ‘":bar"’.

Type: string

Default:

```
"ALL:ALL"
```

Declared by:
<nixpkgs/nixos/modules/security/sudo.nix>

security.sudo.extraRules.*.users
The usernames / UIDs this rule should apply for.

Type: list of (string or signed integer)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/sudo.nix>

security.sudo.keepTerminfo
Whether to preserve the ‘TERMINFO’ and ‘TERMINFO_DIRS’ environment variables, for ‘root’ and the ‘wheel’ group.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/terminfo.nix>

security.sudo.wheelNeedsPassword
Whether users of the ‘wheel’ group must provide a password to run commands as super user via **sudo**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/sudo.nix>

security.sudo−rs.enable

Whether to enable a memory−safe implementation of the **sudo** command, which allows non−root users to execute commands as root .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/security/sudo−rs.nix>

security.sudo−rs.package

The sudo−rs package to use.

Type: package

Default:

```
pkgs.sudo-rs
```

Declared by:

<nixpkgs/nixos/modules/security/sudo−rs.nix>

security.sudo−rs.configFile

This string contains the contents of the *sudoers* file.

Type: strings concatenated with "\n"

Declared by:

<nixpkgs/nixos/modules/security/sudo−rs.nix>

security.sudo−rs.defaultOptions

Options used for the default rules, granting 'root' and the 'wheel' group permission to run any command as any user.

Type: list of string

Default:

```
[
  "SETENV"
]
```

Declared by:

<nixpkgs/nixos/modules/security/sudo−rs.nix>

security.sudo−rs.execWheelOnly

Only allow members of the 'wheel' group to execute sudo by setting the executable's permissions accordingly. This prevents users that are not members of 'wheel' from exploiting vulnerabilities in sudo such as CVE−2021−3156.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/security/sudo−rs.nix>

security.sudo−rs.extraConfig

Extra configuration text appended to *sudoers*.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/security/sudo−rs.nix>

security.sudo−rs.extraRules

Define specific rules to be in the *sudoers* file. More specific rules should come after more general ones in order to yield the expected behavior. You can use ‘lib.mkBefore’/‘lib.mkAfter’ to ensure this is the case when configuration options are merged.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  # Allow execution of any command by all users in group sudo,
  # requiring a password.
  { groups = [ "sudo" ]; commands = [ "ALL" ]; }
  # Allow execution of "/home/root/secret.sh" by user ‘backup‘, ‘da \
tabase‘
  # and the group with GID ‘1006‘ without a password.
  { users = [ "backup" "database" ]; groups = [ 1006 ];
    commands = [ { command = "/home/root/secret.sh"; options = [ "S \
ETENV" "NOPASSWD" ]; } ]; }
  # Allow all users of group ‘bar‘ to run two executables as user ‘ \
foo‘
  # with arguments being pre−set.
  { groups = [ "bar" ]; runAs = "foo";
    commands =
      [ "/home/baz/cmd1.sh hello−sudo"
          { command = ’’/home/baz/cmd2.sh ""’’; options = [ "SETENV \
" ]; } ]; }
]
```

Declared by:

<nixpkgs/nixos/modules/security/sudo−rs.nix>

security.sudo−rs.extraRules.*.commands

The commands for which the rule should apply.

Type: list of (string or (submodule))

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/security/sudo−rs.nix>

security.sudo-rs.extraRules.*.groups
The groups / GIDs this rule should apply for.

Type: list of (string or signed integer)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/sudo-rs.nix>

security.sudo-rs.extraRules.*.host
For what host this rule should apply.

Type: string

Default:

```
"ALL"
```

Declared by:
<nixpkgs/nixos/modules/security/sudo-rs.nix>

security.sudo-rs.extraRules.*.runAs
Under which user/group the specified command is allowed to run.

A user can be specified using just the username: ‘"foo"’. It is also possible to specify a user/group combination using ‘"foo:bar"’ or to only allow running as a specific group with ‘":bar"’.

Type: string

Default:

```
"ALL:ALL"
```

Declared by:
<nixpkgs/nixos/modules/security/sudo-rs.nix>

security.sudo-rs.extraRules.*.users
The usernames / UIDs this rule should apply for.

Type: list of (string or signed integer)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/security/sudo-rs.nix>

security.sudo-rs.wheelNeedsPassword
Whether users of the ‘wheel’ group must provide a password to run commands as super user via **sudo**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/sudo-rs.nix>

security.tpm2.enable
Whether to enable Trusted Platform Module 2 support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.abrmd.enable
Whether to enable Trusted Platform 2 userspace resource manager daemon .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.abrmd.package
The tpm2−abrmd package to use.

Type: package

Default:

```
pkgs.tpm2−abrmd
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.applyUdevRules
Whether to make the /dev/tpm[0−9] devices accessible by the tssUser, or the /dev/tpmrm[0−9] by tssGroup respectively

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.fapi.ekCertLess
A switch to disable Endorsement Key (EK) certificate verification.

A value of null indicates that the generated fapi config file does not contain a ek_cert_less key. The effect of not having that key at all is the same as setting its value to false.

A value of false means that the tss2 cli will not work if there is no EK Cert installed, or if the installed EK Cert can’t be validated.

A value of true means that the tss2 cli will work even if there’s no EK cert installed.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.fapi.ekFingerprint
The fingerprint of the endorsement key.

A value of null means that you have chosen not to specify the expected fingerprint of the EK. You can still have an endorsement key, it just won't get checked to see if it's fingerprint matches a particular value before being used.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.fapi.firmwareLogFile
The binary bios measurements.

Type: string

Default:

```
"/sys/kernel/security/tpm0/binary_bios_measurements"
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.fapi.imaLogFile
The binary IMA measurements (Integrity Measurement Architecture).

Type: string

Default:

```
"/sys/kernel/security/ima/binary_runtime_measurements"
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.fapi.logDir
The directory for the event log.

Type: string

Default:

```
"/var/log/tpm2-tss/eventlog/"
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.fapi.profileDir
Directory that contains all cryptographic profiles known to FAPI.

Type: string

Default:

```
${pkgs.tpm2-tss}/etc/fapi-profiles/
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.fapi.profileName

Name of the default cryptographic profile chosen from the profile_dir directory.

Type: string

Default:

```
"P_ECCP256SHA256"
```

Declared by:

<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.fapi.systemDir

The directory where system objects, policies, and imported objects are stored.

Type: string

Default:

```
"/var/lib/tpm2-tss/keystore"
```

Declared by:

<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.fapi.systemPcrs

The PCR registers which are used by the system.

Type: list of signed integer

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.fapi.tcti

The TCTI which will be used.

An empty string indicates no TCTI is specified by the FAPI config.

If not specified in the FAPI config it can be specified by environment variable (TPM2TOOLS_TCTI, TPM2_PKCS11_TCTI, etc) or a TCTI will be chosen by the FAPI library by searching for tabrmd, device, and mssim TCTIs in that order.

Type: string

Default:

```
""
```

Example:

```
"device:/dev/tpmrm0"
```

Declared by:

<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.fapi.userDir

The directory where user objects are stored.

Type: string

Default:

```
"~/.local/share/tpm2-tss/user/keystore/"
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.pkcs11.enable
Whether to enable TPM2 PKCS#11 tool and shared library in system path (‘/run/current−system/sw/lib/libtpm2_pkcs11.so’) .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.pkcs11.package
tpm2−pkcs11 package to use

Type: package

Default:

```
if config.security.tpm2.abrmd.enable then pkgs.tpm2−pkcs11.abrmd e \
lse pkgs.tpm2−pkcs11
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.tctiEnvironment.enable
Set common TCTI environment variables to the specified value. The variables are

- ‘TPM2TOOLS_TCTI’
- ‘TPM2_PKCS11_TCTI’

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.tctiEnvironment.deviceConf
Configuration part of the device TCTI, e.g. the path to the TPM device. Applies if interface is set to “device”. The format is specified in the **tpm2−tools repository**.

Type: string

Default:

```
"/dev/tpmrm0"
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.tctiEnvironment.interface
The name of the TPM command transmission interface (TCTI) library to use.

Type: one of “tabrmd”, “device”

Default:

```
"device"
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.tctiEnvironment.tabrmdConf
Configuration part of the tabrmd TCTI, like the D−Bus bus name. Applies if interface is set to “tabrmd”. The format is specified in the **tpm2−tools repository**.

Type: string

Default:

```
"bus_name=com.intel.tss2.Tabrmd"
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.tssGroup
Group of the tpm kernel resource manager (tpmrm) device−group, set if applyUdevRules is set.

Type: null or string

Default:

```
"tss"
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.tpm2.tssUser
Name of the tpm device−owner and service user, set if applyUdevRules is set.

Type: null or string

Default:

```
if config.security.tpm2.abrmd.enable then "tss" else "root"
```

Declared by:
<nixpkgs/nixos/modules/security/tpm2.nix>

security.unprivilegedUsernsClone
When disabled, unprivileged users will not be able to create new namespaces. By default unprivileged user namespaces are disabled. This option only works in a hardened profile.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/misc.nix>

security.virtualisation.flushL1DataCache
Whether the hypervisor should flush the L1 data cache before entering guests. See also **security.allowSimultaneousMultithreading**.

- ‘null’: uses the kernel default
- ‘"never"’: disables L1 data cache flushing entirely. May be appropriate if all guests are trusted.
- ‘"cond"’: flushes L1 data cache only for pre−determined code paths. May leak information about the host address space layout.
- ‘"always"’: flushes L1 data cache every time the hypervisor enters the guest. May incur significant performance cost.

Type: null or one of “never”, “cond”, “always”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/security/misc.nix>

security.wrapperDirSize

Size limit for the /run/wrappers tmpfs. Look at **mount**(8), tmpfs size option, for the accepted syntax. WARNING: don't set to less than 64MB.

Type: string

Default:

```
"50%"
```

Example:

```
"10G"
```

Declared by:

<nixpkgs/nixos/modules/security/wrappers/default.nix>

security.wrappers

This option effectively allows adding setuid/setgid bits, capabilities, changing file ownership and permissions of a program without directly modifying it. This works by creating a wrapper program in a directory (not configurable), which is then added to the shell 'PATH'.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  # a setuid root program
  doas =
    { setuid = true;
      owner = "root";
      group = "root";
      source = "${pkgs.doas}/bin/doas";
    };
  # a setgid program
  locate =
    { setgid = true;
      owner = "root";
      group = "mlocate";
      source = "${pkgs.locate}/bin/locate";
    };
  # a program with the CAP_NET_RAW capability
  ping =
    { owner = "root";
      group = "root";
      capabilities = "cap_net_raw+ep";
      source = "${pkgs.iputils.out}/bin/ping";
    };
}
```

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

security.wrappers.<name>.enable
Whether to enable the wrapper.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

security.wrappers.<name>.capabilities
A comma−separated list of capability clauses to be given to the wrapper program. The format for capability clauses is described in the “TEXTUAL REPRESENTATION” section of the **cap_from_text**(3) manual page. For a list of capabilities supported by the system, check the **capabilities**(7) manual page.

Note
‘cap_setpcap’, which is required for the wrapper program to be able to raise caps into the Ambient set is NOT raised to the Ambient set so that the real program cannot modify its own capabilities!! This may be too restrictive for cases in which the real program needs cap_setpcap but it at least leans on the side security paranoid vs. too relaxed.

Type: strings concatenated with “,”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

security.wrappers.<name>.group
The group of the wrapper program.

Type: string

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

security.wrappers.<name>.owner
The owner of the wrapper program.

Type: string

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

security.wrappers.<name>.permissions
The permissions of the wrapper program. The format is that of a symbolic or numeric file mode understood by **chmod**.

Type: file mode string

Default:

```
"u+rx,g+x,o+x"
```

Example:

```
"a+rx"
```

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

security.wrappers.<name>.program
The name of the wrapper program. Defaults to the attribute name.

Type: null or string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

security.wrappers.<name>.setgid
Whether to add the setgid bit the wrapper program.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

security.wrappers.<name>.setuid
Whether to add the setuid bit the wrapper program.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

security.wrappers.<name>.source
The absolute path to the program to be wrapped.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

services.packagekit.enable
Whether to enable PackageKit, a cross−platform D−Bus abstraction layer for installing software. Software utilizing PackageKit can install software regardless of the package manager .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/packagekit.nix>

services.packagekit.settings

Additional settings passed straight through to PackageKit.conf

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/misc/packagekit.nix>

services.packagekit.vendorSettings

Additional settings passed straight through to Vendor.conf

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/misc/packagekit.nix>

services.SystemdJournal2Gelf.enable

Whether to enable SystemdJournal2Gelf.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/logging/SystemdJournal2Gelf.nix>

services.SystemdJournal2Gelf.package

The systemd−journal2gelf package to use.

Type: package

Default:

```
pkgs.systemd-journal2gelf
```

Declared by:

<nixpkgs/nixos/modules/services/logging/SystemdJournal2Gelf.nix>

services.SystemdJournal2Gelf.extraOptions

Any extra flags to pass to SystemdJournal2Gelf. Note that these are basically ‘journalctl’ flags.

Type: strings concatenated with " "

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/logging/SystemdJournal2Gelf.nix>

services.SystemdJournal2Gelf.graylogServer

Host and port of your graylog2 input. This should be a GELF UDP input.

Type: string

Example:

```
"graylog2.example.com:11201"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/SystemdJournal2Gelf.nix>

services._3proxy.enable
Whether to enable 3proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.confFile
Ignore all other 3proxy options and load configuration from this file.

Type: absolute path

Example:

```
"/var/lib/3proxy/3proxy.conf"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.denyPrivate
Whether to deny access to private IP ranges including loopback.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.extraConfig
Extra configuration, appended to the 3proxy configuration file. Consult **documentation** for available options.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.privateRanges
What IP ranges to deny access when denyPrivate is set tu true.

Type: list of string

Default:

```
[
  "0.0.0.0/8"
  "127.0.0.0/8"
  "10.0.0.0/8"
  "100.64.0.0/10"
  "172.16.0.0/12"
```

```
  "192.168.0.0/16"
  "::"
  "::1"
  "fc00::/7"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.resolution
Use this option to configure name resolution and DNS caching.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.resolution.nscache
Set name cache size for IPv4.

Type: signed integer

Default:

```
65535
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.resolution.nscache6
Set name cache size for IPv6.

Type: signed integer

Default:

```
65535
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.resolution.nserver
List of nameservers to use.

Up to 5 nservers may be specified. If no nserver is configured, default system name resolution functions are used.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.53"
  "192.168.1.3:5353/tcp"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.resolution.nsrecord
Adds static nsrecords.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "files.local" = "192.168.1.12";
  "site.local" = "192.168.1.43";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.services
Use this option to define 3proxy services.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    type = "proxy";
    bindAddress = "192.168.1.24";
    bindPort = 3128;
    auth = [ "none" ];
  }
  {
    type = "proxy";
    bindAddress = "10.10.1.20";
    bindPort = 3128;
    auth = [ "iponly" ];
  }
  {
    type = "socks";
    bindAddress = "172.17.0.1";
    bindPort = 1080;
    auth = [ "strong" ];
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.services.*.acl

Use this option to limit user access to resources.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    rule = "allow";
    users = [ "user1" ];
  }
  {
    rule = "allow";
    sources = [ "192.168.1.0/24" ];
  }
  {
    rule = "deny";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.services.*.acl.*.rule

ACL rule. The following values are valid:

- ‘"allow"’: connections allowed.
- ‘"deny"’: connections not allowed.

Type: one of “allow”, “deny”

Example:

```
"allow"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.services.*.acl.*.sources

List of source IP range, use empty list for any.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "192.168.1.0/24"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.services.*.acl.*.targetPorts

List of target ports, use empty list for any.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[ ]
```

Example:

```
[
  80
  443
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.services.*.acl.*.targets

List of target IP ranges, use empty list for any. May also contain host names instead of addresses. It's possible to use wildmask in the beginning and in the the end of hostname, e.g. '*badsite.com' or '*bad-content*'. Hostname is only checked if hostname presents in request.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "192.168.1.0/24"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.services.*.acl.*.users

List of users, use empty list for any.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "user1"
  "user2"
  "user3"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.services.*.auth

Authentication type. The following values are valid:

- '"none"': disables both authentication and authorization. You can not use ACLs.
- '"iponly"': specifies no authentication. ACLs authorization is used.
- '"strong"': authentication by username/password. If user is not registered their access is denied

regardless of ACLs.

Double authentication is possible, e.g.

```
{
  auth = [ "iponly" "strong" ];
  acl = [
    {
      rule = "allow";
      targets = [ "192.168.0.0/16" ];
    }
    {
      rule = "allow"
      users = [ "user1" "user2" ];
    }
  ];
}
```

In this example strong username authentication is not required to access 192.168.0.0/16.

Type: list of (one of “none”, “iponly”, “strong”)

Default:

```
[ ]
```

Example:

```
[
  "iponly"
  "strong"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.services.*.bindAddress

Address used for service.

Type: string

Default:

```
"[::]"
```

Example:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.services.*.bindPort

Override default port used for service.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Example:

```
3128
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.services.*.extraArguments
Extra arguments for service. Consult “Options” section in **documentation** for available arguments.

Type: null or string

Default:

```
null
```

Example:

```
"-46"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.services.*.extraConfig
Extra configuration for service. Use this to configure things like bandwidth limiter or ACL-based redirection. Consult **documentation** for available options.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.services.*.maxConnections
Maximum number of simulationeous connections to this service.

Type: signed integer

Default:

```
100
```

Example:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.services.*.type
Service type. The following values are valid:

- ‘"proxy"’: HTTP/HTTPS proxy (default port 3128).
- ‘"socks"’: SOCKS 4/4.5/5 proxy (default port 1080).
- ‘"pop3p"’: POP3 proxy (default port 110).
- ‘"ftppr"’: FTP proxy (default port 21).
- ‘"admin"’: Web interface (default port 80).
- ‘"dnspr"’: Caching DNS proxy (default port 53).
- ‘"tcppm"’: TCP portmapper.
- ‘"udppm"’: UDP portmapper.
- ‘"auto"’: Proxy with protocol autoselection between proxy / socks / tlspr.

Type: one of “proxy”, “socks”, “pop3p”, “ftppr”, “admin”, “dnspr”, “tcppm”, “udppm”, “auto”

Example:

```
"proxy"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services._3proxy.usersFile
Load users and passwords from this file.

Example users file with plain−text passwords:

```
test1:CL:password1
test2:CL:password2
```

Example users file with md5−crypted passwords:

```
test1:CR:$1$tFkisVd2$1GA8JXkRmTXdLDytM/i3a1
test2:CR:$1$rkpibm5J$Aq1.9VtYAn0JrqZ8M.1ME.
```

You can generate md5−crypted passwords via **https://unix4lyfe.org/crypt/** Note that htpasswd tool generates incompatible md5−crypted passwords. Consult **documentation** for more information.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/3proxy/3proxy.passwd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/3proxy.nix>

services.a2boot.enable
Whether to enable the a2boot daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/a2boot.nix>

services.accounts−daemon.enable
Whether to enable AccountsService, a DBus service for accessing the list of user accounts and information attached to those accounts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/accountsservice.nix>

services.acme−dns.enable
Whether to enable acme−dns.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme-dns.nix>

services.acme-dns.package
The acme-dns package to use.

Type: package

Default:

```
pkgs.acme-dns
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme-dns.nix>

services.acme-dns.settings
Free-form settings written directly to the 'acme-dns.cfg' file. Refer to **https://github.com/joohoi/acme-dns/blob/master/README.md#configuration** for supported values.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme-dns.nix>

services.acme-dns.settings.api.disable_registration
Whether to disable the HTTP registration endpoint.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme-dns.nix>

services.acme-dns.settings.api.ip
IP to bind the HTTP API on.

Type: string

Default:

```
"[::]"
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme-dns.nix>

services.acme−dns.settings.api.port
Listen port for the HTTP API.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme−dns.nix>

services.acme−dns.settings.api.tls
TLS backend to use.

Type: one of “letsencrypt”, “letsencryptstaging”, “cert”, “none”

Default:

```
"none"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme−dns.nix>

services.acme−dns.settings.database.connection
Database connection string.

Type: string

Default:

```
"/var/lib/acme−dns/acme−dns.db"
```

Example:

```
"postgres://user:password@localhost/acmedns"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme−dns.nix>

services.acme−dns.settings.database.engine
Database engine to use.

Type: one of “sqlite”, “postgres”

Default:

```
"sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme−dns.nix>

services.acme−dns.settings.general.domain
Domain name to serve the requests off of.

Type: string

Example:

```
"acme−dns.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme−dns.nix>

services.acme−dns.settings.general.listen
IP+port combination to bind and serve the DNS server on.

Type: string

Default:

```
"[::]:53"
```

Example:

```
"127.0.0.1:53"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme−dns.nix>

services.acme−dns.settings.general.nsadmin
Zone admin email address for ‘SOA’.

Type: string

Example:

```
"admin.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme−dns.nix>

services.acme−dns.settings.general.nsname
Zone name server.

Type: string

Example:

```
"acme−dns.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme−dns.nix>

services.acme−dns.settings.general.protocol
Protocols to serve DNS responses on.

Type: one of “both”, “both4”, “both6”, “udp”, “udp4”, “udp6”, “tcp”, “tcp4”, “tcp6”

Default:

```
"both"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme−dns.nix>

services.acme−dns.settings.general.records
Predefined DNS records served in addition to the ‘_acme−challenge’ TXT records.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  # replace with your acme−dns server’s public IPv4
  "acme−dns.example.com. A 198.51.100.1"
  # replace with your acme−dns server’s public IPv6
  "acme−dns.example.com. AAAA 2001:db8::1"
  # acme−dns.example.com should resolve any *.acme−dns.example.co \
```

```
m records
  "acme-dns.example.com. NS acme-dns.example.com."
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme-dns.nix>

services.acme-dns.settings.logconfig.loglevel
Level to log on.

Type: one of “error”, “warning”, “info”, “debug”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/acme-dns.nix>

services.acpid.enable
Whether to enable the ACPI daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/acpid.nix>

services.acpid.acEventCommands
Shell commands to execute on an ac_adapter.* event.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/acpid.nix>

services.acpid.handlers
Event handlers.

Note
Handler can be a single command.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  ac-power = {
    action = ''
      vals=($1)  # space separated string to array of multiple valu \
es
      case ''${vals[3]} in
          00000000)
```

```
                    echo unplugged >> /tmp/acpi.log
                    ;;
                00000001)
                    echo plugged in >> /tmp/acpi.log
                    ;;
                *)
                    echo unknown >> /tmp/acpi.log
                    ;;
            esac
          '';
          event = "ac_adapter/*";
        };
      }
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/acpid.nix>

services.acpid.handlers.<name>.action
Shell commands to execute when the event is triggered.

Type: strings concatenated with “\n”

Declared by:
<nixpkgs/nixos/modules/services/hardware/acpid.nix>

services.acpid.handlers.<name>.event
Event type.

Type: string

Example:

```
"button/power.*" "button/lid.*" "ac_adapter.*" "button/mute.*" "but \
ton/volumedown.*" "cd/play.*" "cd/next.*"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/acpid.nix>

services.acpid.lidEventCommands
Shell commands to execute on a button/lid.* event.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/acpid.nix>

services.acpid.logEvents
Log all event activity.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/acpid.nix>

services.acpid.powerEventCommands

Shell commands to execute on a button/power.* event.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/acpid.nix>

services.activemq.enable

Enable the Apache ActiveMQ message broker service.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/amqp/activemq/default.nix>

services.activemq.baseDir

The base directory where ActiveMQ stores its persistent data and logs. This will be overridden if you set “activemq.base” and “activemq.data” in the ‘javaProperties’ option. You can also override this in activemq.xml.

Type: string

Default:

```
"/var/activemq"
```

Declared by:

<nixpkgs/nixos/modules/services/amqp/activemq/default.nix>

services.activemq.configurationDir

The base directory for ActiveMQ’s configuration. By default, this directory is searched for a file named activemq.xml, which should contain the configuration for the broker service.

Type: string

Default:

```
"${pkgs.activemq}/conf"
```

Declared by:

<nixpkgs/nixos/modules/services/amqp/activemq/default.nix>

services.activemq.configurationURI

The URI that is passed along to the BrokerFactory to set up the configuration of the ActiveMQ broker service. You should not need to change this. For custom configuration, set the ‘configurationDir’ instead, and create an activemq.xml configuration file in it.

Type: string

Default:

```
"xbean:activemq.xml"
```

Declared by:

<nixpkgs/nixos/modules/services/amqp/activemq/default.nix>

services.activemq.extraJavaOptions

Add extra options here that you want to be sent to the Java runtime when the broker service is started.

Type: strings concatenated with " "

Default:

```
""
```

Example:

```
"-Xmx2G -Xms2G -XX:MaxPermSize=512M"
```

Declared by:

<nixpkgs/nixos/modules/services/amqp/activemq/default.nix>

services.activemq.javaProperties

Specifies Java properties that are sent to the ActiveMQ broker service with the "−D" option. You can set properties here to change the behaviour and configuration of the broker. All essential properties that are not set here are automatically given reasonable defaults.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  "java.net.preferIPv4Stack" = "true";
}
```

Declared by:

<nixpkgs/nixos/modules/services/amqp/activemq/default.nix>

services.actkbd.enable

Whether to enable the **actkbd** key mapping daemon.

Turning this on will start an **actkbd** instance for every evdev input that has at least one key (which is okay even for systems with tiny memory footprint, since actkbd normally uses <100 bytes of memory per instance).

This allows binding keys globally without the need for e.g. X11.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/actkbd.nix>

services.actkbd.bindings

Key bindings for **actkbd**.

See **actkbd** *README* for documentation.

The example shows a piece of what **sound.mediaKeys.enable** does when enabled.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[ { keys = [ 113 ]; events = [ "key" ]; command = "${pkgs.alsa-uti \
```

```
ls}/bin/amixer -q set Master toggle"; }
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/actkbd.nix>

services.actkbd.bindings.*.attributes
List of attributes.

Type: list of string

Default:

```
[
  "exec"
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/actkbd.nix>

services.actkbd.bindings.*.command
What to run.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/actkbd.nix>

services.actkbd.bindings.*.events
List of events to match.

Type: list of (one of “key”, “rep”, “rel”)

Default:

```
[
  "key"
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/actkbd.nix>

services.actkbd.bindings.*.keys
List of keycodes to match.

Type: list of signed integer

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/actkbd.nix>

services.actkbd.extraConfig
Literal contents to append to the end of actkbd configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/actkbd.nix>

services.actual.enable
Whether to enable actual, a privacy focused app for managing your finances.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/actual.nix>

services.actual.package
The actual−server package to use.

Type: package

Default:

```
pkgs.actual−server
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/actual.nix>

services.actual.group
Group account under which Actual runs.

If null is specified (default), a temporary user will be created by systemd. Otherwise won't be automatically created by the service.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/actual.nix>

services.actual.openFirewall
Whether to open the firewall for the specified port.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/actual.nix>

services.actual.settings
Server settings, refer to **the documentation** for available options. You can specify secret values in this configuration by setting 'somevalue._secret = "/path/to/file"' instead of setting 'somevalue' directly.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/actual.nix>

services.actual.settings.dataDir
Directory under which Actual runs and saves its data.

Changing this after you already have a working instance may make Actual fail to start, even if you move all files in the data dir. If migration is needed, refer to **this comment** for a fix.

Type: string

Default:

```
"/var/lib/actual"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/actual.nix>

services.actual.settings.hostname
The address to listen on

Type: string

Default:

```
"::"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/actual.nix>

services.actual.settings.port
The port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/actual.nix>

services.actual.settings.serverFiles
The server will put an account.sqlite file in this directory, which will contain the (hashed) server password, a list of all the budget files the server knows about, and the active session token (along with anything else the server may want to store in the future).

Type: string

Default:

```
"\${cfg.settings.dataDir}/server−files"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/actual.nix>

services.actual.settings.userFiles
The server will put all the budget files in this directory as binary blobs.

Type: string

Default:

```
"\${cfg.settings.dataDir}/user−files"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/actual.nix>

services.actual.user

User account under which Actual runs.

If null is specified (default), a temporary user will be created by systemd. Otherwise won't be automatically created by the service.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/actual.nix>

services.adguardhome.enable

Whether to enable AdGuard Home network−wide ad blocker.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/adguardhome.nix>

services.adguardhome.package

The package that runs adguardhome.

Type: package

Default:

```
pkgs.adguardhome
```

Declared by:

<nixpkgs/nixos/modules/services/networking/adguardhome.nix>

services.adguardhome.allowDHCP

Allows AdGuard Home to open raw sockets ('CAP_NET_RAW'), which is required for the integrated DHCP server.

The default enables this conditionally if the declarative configuration enables the integrated DHCP server. Manually setting this option is only required for non−declarative setups.

Type: boolean

Default:

```
config.services.adguardhome.settings.dhcp.enabled or false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/adguardhome.nix>

services.adguardhome.extraArgs

Extra command line parameters to be passed to the adguardhome binary.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/adguardhome.nix>

services.adguardhome.host
Host address to bind HTTP server to.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/adguardhome.nix>

services.adguardhome.mutableSettings
Allow changes made on the AdGuard Home web interface to persist between service restarts.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/adguardhome.nix>

services.adguardhome.openFirewall
Open ports in the firewall for the AdGuard Home web interface. Does not open the port needed to access the DNS resolver.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/adguardhome.nix>

services.adguardhome.port
Port to serve HTTP pages on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/adguardhome.nix>

services.adguardhome.settings
AdGuard Home configuration. Refer to **https://github.com/AdguardTeam/AdGuardHome/wiki/Configuration#configuration-file** for details on supported values.

Note
On start and if **mutableSettings** is 'true', these options are merged into the configuration file on start, taking precedence over configuration changes made on the web interface.

Set this to 'null' (default) for a non-declarative configuration without any Nix-supplied values. Declarative configurations are supplied with a default 'schema_version', and 'http.address'.

Type: null or (open submodule of (YAML 1.1 value))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/adguardhome.nix>

services.adguardhome.settings.schema_version
Schema version for the configuration. Defaults to the ‘schema_version’ supplied by ‘cfg.package’.

Type: signed integer

Default:

```
cfg.package.schema_version
```

Declared by:
<nixpkgs/nixos/modules/services/networking/adguardhome.nix>

services.aerospike.enable
Whether to enable Aerospike server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/aerospike.nix>

services.aerospike.package
The aerospike package to use.

Type: package

Default:

```
pkgs.aerospike
```

Declared by:
<nixpkgs/nixos/modules/services/databases/aerospike.nix>

services.aerospike.extraConfig
Extra configuration

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
namespace test {
  replication-factor 2
  memory-size 4G
  default-ttl 30d
  storage-engine memory
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/aerospike.nix>

services.aerospike.networkConfig

network section of configuration file

Type: strings concatenated with “\n”

Default:

```
service {
  address any
  port 3000
}

heartbeat {
  address any
  mode mesh
  port 3002
  interval 150
  timeout 10
}

fabric {
  address any
  port 3001
}

info {
  address any
  port 3003
}
```

Declared by:

<nixpkgs/nixos/modules/services/databases/aerospike.nix>

services.aerospike.workDir

Location where Aerospike stores its files

Type: string

Default:

```
"/var/lib/aerospike"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/aerospike.nix>

services.aesmd.enable

Whether to enable Intel’s Architectural Enclave Service Manager (AESM) for Intel SGX.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/aesmd.nix>

services.aesmd.package

The sgx−psw package to use.

Type: package

Default:

```
pkgs.sgx-psw
```

Declared by:

<nixpkgs/nixos/modules/services/security/aesmd.nix>

services.aesmd.environment

Additional environment variables to pass to the AESM service.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  AZDCAP_COLLATERAL_VERSION = "v2";
  AZDCAP_DEBUG_LOG_LEVEL = "INFO";
}
```

Declared by:

<nixpkgs/nixos/modules/services/security/aesmd.nix>

services.aesmd.quoteProviderLibrary

Custom quote provider library to use.

Type: null or absolute path

Default:

```
null
```

Example:

```
pkgs.sgx-azure-dcap-client
```

Declared by:

<nixpkgs/nixos/modules/services/security/aesmd.nix>

services.aesmd.settings

AESM configuration

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/security/aesmd.nix>

services.aesmd.settings.defaultQuotingType

Attestation quote type.

Type: null or one of “ecdsa_256”, “epid_linkable”, “epid_unlinkable”

Default:

```
null
```

Example:

```
"ecdsa_256"
```

Declared by:
<nixpkgs/nixos/modules/services/security/aesmd.nix>

services.aesmd.settings.proxy
HTTP network proxy.

Type: null or string

Default:

```
null
```

Example:

```
"http://proxy_url:1234"
```

Declared by:
<nixpkgs/nixos/modules/services/security/aesmd.nix>

services.aesmd.settings.proxyType
Type of proxy to use. The ‘default’ uses the system’s default proxy. If ‘direct’ is given, uses no proxy. A value of ‘manual’ uses the proxy from **services.aesmd.settings.proxy**.

Type: null or one of “default”, “direct”, “manual”

Default:

```
if (config.services.aesmd.settings.proxy != null) then "manual" els \
e null
```

Example:

```
"default"
```

Declared by:
<nixpkgs/nixos/modules/services/security/aesmd.nix>

services.aesmd.settings.whitelistUrl
URL to retrieve authorized Intel SGX enclave signers.

Type: null or string

Default:

```
null
```

Example:

```
"http://whitelist.trustedservices.intel.com/SGX/LCWL/Linux/sgx_whit \
e_list_cert.bin"
```

Declared by:
<nixpkgs/nixos/modules/services/security/aesmd.nix>

services.agate.enable
Whether to enable Agate Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/agate.nix>

services.agate.package
The agate package to use.

Type: package

Default:

```
pkgs.agate
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/agate.nix>

services.agate.addresses
Addresses to listen on, IP:PORT, if you haven't disabled forwarding only set IPv4.

Type: list of string

Default:

```
[
  "0.0.0.0:1965"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/agate.nix>

services.agate.certificatesDir
Root of the certificate directory.

Type: absolute path

Default:

```
"/var/lib/agate/certificates"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/agate.nix>

services.agate.contentDir
Root of the content directory.

Type: absolute path

Default:

```
"/var/lib/agate/content"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/agate.nix>

services.agate.extraArgs
Extra arguments to use running agate.

Type: list of string

Default:

```
[
  ""
]
```

Example:

```
[
  "--log-ip"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/agate.nix>

services.agate.hostnames
Domain name of this Gemini server, enables checking hostname and port in requests. (multiple occurrences means basic vhosts)

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/agate.nix>

services.agate.language
RFC 4646 Language code for text/gemini documents.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/agate.nix>

services.agate.onlyTls_1_3
Only use TLSv1.3 (default also allows TLSv1.2).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/agate.nix>

services.agorakit.enable
Whether to enable agorakit.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.appKeyFile
A file containing the Laravel APP_KEY − a 32 character long, base64 encoded key used for encryption where needed. Can be generated with <code>head −c 32 /dev/urandom | base64</code>.

Type: absolute path

Example:

```
"/run/keys/agorakit−appkey"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.appURL

The root URL that you want to host agorakit on. All URLs in agorakit will be generated using this value. If you change this in the future you may need to run a command to update stored URLs in the database. Command example: <code>php artisan agorakit:update−url https://old.example.com https://new.example.com</code>

Type: string

Default:

```
"http\${lib.optionalString tlsEnabled \"s\"}://\${cfg.hostName} \
"
```

Example:

```
"https://example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.config

Agorakit configuration options to set in the <filename>.env</filename> file.

Refer to <link xlink:href="https://github.com/agorakit/agorakit"/> for details on supported values.

Settings containing secret data should be set to an attribute set containing the attribute <literal>_secret</literal> − a string pointing to a file containing the value the option should be set to. See the example to get a better picture of this: in the resulting <filename>.env</filename> file, the <literal>OIDC_CLIENT_SECRET</literal> key will be set to the contents of the <filename>/run/keys/oidc_secret</filename> file.

Type: attribute set of (null or boolean or signed integer or 16 bit unsigned integer; between 0 and 65535 (both inclusive) or absolute path or string or (submodule))

Default:

```
{ }
```

Example:

```
{
  ALLOWED_IFRAME_HOSTS = "https://example.com";
  AUTH_METHOD = "oidc";
  OIDC_NAME = "MyLogin";
  OIDC_DISPLAY_NAME_CLAIMS = "name";
  OIDC_CLIENT_ID = "agorakit";
  OIDC_CLIENT_SECRET = {_secret = "/run/keys/oidc_secret"};
  OIDC_ISSUER = "https://keycloak.example.com/auth/realms/My%20Re \
alm";
  OIDC_ISSUER_DISCOVER = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.dataDir
agorakit data directory

Type: absolute path

Default:

```
"/var/lib/agorakit"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.database.host
Database host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.database.name
Database name.

Type: string

Default:

```
"agorakit"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.database.passwordFile
A file containing the password corresponding to <option>database.user</option>.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/agorakit−dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.database.user
Database username.

Type: string

Default:

```
user
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.group
Group agorakit runs as.

Type: string

Default:

```
"agorakit"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.hostName
The hostname to serve agorakit on.

Type: string

Default:

```
config.networking.fqdn
```

Example:

```
"agorakit.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.mail.driver
Mail driver to use.

Type: one of “smtp”, “sendmail”

Default:

```
"smtp"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.mail.encryption
SMTP encryption mechanism to use.

Type: null or value “tls” (singular enum)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.mail.from
Mail “from” email.

Type: string

Default:

```
"mail@agorakit.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.mail.fromName
Mail “from” name.

Type: string

Default:

```
"agorakit"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.mail.host
Mail host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.mail.passwordFile
A file containing the password corresponding to <option>mail.user</option>.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/agorakit−mailpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.mail.port

Mail host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1025
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.mail.user

Mail username.

Type: null or string

Default:

```
null
```

Example:

```
"agorakit"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.maxUploadSize

The maximum size for uploads (e.g. images).

Type: string

Default:

```
"18M"
```

Example:

```
"1G"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx

With this option, you can customize the nginx virtualHost settings.

Type: submodule

Default:

```
{ }
```

Example:

```
  {
    serverAliases = [
      "agorakit.''${config.networking.domain}"
    ];
    # To enable encryption and let let's encrypt take care of certi \
ficate
    forceSSL = true;
    enableACME = true;
  }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with ‘redirectCode’) to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.http2

Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.http3

Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.http3_hq

Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.listen
Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides ‘addSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.listen.*.port

Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.listen.*.proxyProtocol

Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.listen.*.ssl

Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
```

```
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations.<name>.alias
Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations.<name>.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won't unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with 'lib.mkOrder'. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.locations.<name>.uwsgiPass

Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.onlySSL

Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.quic

Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.redirectCode

HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.rejectSSL

Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.root

The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.serverName

Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

2. see the **security.acme.certs** option

services.agorakit.phpPackage
The php82 package to use.

Type: package

Default:

```
pkgs.php82
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.poolConfig
Options for the agorakit PHP pool. See the documentation on <literal>php−fpm.conf</literal> for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.agorakit.user
User agorakit runs as.

Type: string

Default:

```
"agorakit"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/agorakit.nix>

services.airsonic.enable
Whether to enable Airsonic, the Free and Open Source media streaming server (fork of Subsonic and Libresonic).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/airsonic.nix>

services.airsonic.contextPath

The context path, i.e., the last part of the Airsonic URL. Typically '/' or '/airsonic'. Default '/'

Type: absolute path

Default:

```
"/"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/airsonic.nix>

services.airsonic.home

The directory where Airsonic will create files. Make sure it is writable.

Type: absolute path

Default:

```
"/var/lib/airsonic"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/airsonic.nix>

services.airsonic.jre

The jre8 package to use. ::: {.note} Airsonic only supports Java 8, airsonic−advanced requires at least Java 11. :::

Type: package

Default:

```
pkgs.jre8
```

Declared by:

<nixpkgs/nixos/modules/services/misc/airsonic.nix>

services.airsonic.jvmOptions

Extra command line options for the JVM running AirSonic. Useful for sending jukebox output to non−default alsa devices.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-Djavax.sound.sampled.Clip='#CODEC [plughw:1,0]'"
  "-Djavax.sound.sampled.Port='#Port CODEC [hw:1]'"
  "-Djavax.sound.sampled.SourceDataLine='#CODEC [plughw:1,0]'"
  "-Djavax.sound.sampled.TargetDataLine='#CODEC [plughw:1,0]'"
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/airsonic.nix>

services.airsonic.listenAddress

The host name or IP address on which to bind Airsonic. The default value is appropriate for first launch, when the default credentials are easy to guess. It is also appropriate if you intend to use the virtualhost option in the service module. In other cases, you may want to change this to a specific IP or 0.0.0.0 to listen on all interfaces.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/airsonic.nix>

services.airsonic.maxMemory

The memory limit (max Java heap size) in megabytes. Default: 100

Type: signed integer

Default:

```
100
```

Declared by:

<nixpkgs/nixos/modules/services/misc/airsonic.nix>

services.airsonic.port

The port on which Airsonic will listen for incoming HTTP traffic. Set to 0 to disable.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4040
```

Declared by:

<nixpkgs/nixos/modules/services/misc/airsonic.nix>

services.airsonic.transcoders

List of paths to transcoder executables that should be accessible from Airsonic. Symlinks will be created to each executable inside ${config.services.airsonic.home}/transcoders.

Type: list of absolute path

Default:

```
[ "${pkgs.ffmpeg.bin}/bin/ffmpeg" ]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/airsonic.nix>

services.airsonic.user

User account under which airsonic runs.

Type: string

Default:

```
"airsonic"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/airsonic.nix>

services.airsonic.virtualHost

Name of the nginx virtualhost to use and setup. If null, do not setup any virtualhost.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/misc/airsonic.nix>

services.airsonic.war
Airsonic war file to use.

Type: absolute path

Default:

```
"${pkgs.airsonic}/webapps/airsonic.war"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/airsonic.nix>

services.akkoma.enable
Whether to enable Akkoma.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.package
The akkoma package to use.

Type: package

Default:

```
pkgs.akkoma
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config
Configuration for Akkoma. The attributes are serialised to Elixir DSL.

Refer to **https://docs.akkoma.dev/stable/configuration/cheatsheet/** for configuration options.

Settings containing secret data should be set to an attribute set containing the attribute '_secret' − a string pointing to a file containing the value the option should be set to.

Type: open submodule of attribute set of attribute set of (Elixir value)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":joken"."default_signer"
JWT signing secret.

The attribute '_secret' should point to a file containing the secret.

This secret can be generated as follows:

```
$ tr −dc 'A−Za−z0−9−._~' </dev/urandom | head −c 64
```

Type: secret value

Default:

```
{
  _secret = "/var/lib/secrets/akkoma/jwt−signer";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":logger"."ex_syslogger".level
Log level.

Refer to **https://hexdocs.pm/logger/Logger.html#module−levels** for options.

Type: non−empty string

Default:

```
":info"
```

Example:

```
":warning"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma"."frontends"
Frontend configuration.

Users should rely on the default value and prefer to configure frontends through **config.services.akkoma.frontends**.

Type: Elixir value

Default:

```
lib.mapAttrs (key: val:
  (pkgs.formats.elixirConf { }).lib.mkMap { name = val.name; ref =  \
val.ref; })
  config.services.akkoma.frontends;
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma"."instance".description
Instance description.

Type: non−empty string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma"."instance".email
Instance administrator email.

Type: non−empty string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma"."instance".name
Instance name.

Type: non−empty string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma"."Pleroma.Repo"
Database configuration.

Refer to **https://hexdocs.pm/ecto_sql/Ecto.Adapters.Postgres.html#module−connection−options** for options.

Type: Elixir value

Default:

```
{
  adapter = (pkgs.formats.elixirConf { }).lib.mkRaw "Ecto.Adapters. \
```

services.akkoma.config.":pleroma"."Pleroma.Upload".base_url
Base path for the media uploads. Whilst this can just be set to a subdirectory of the main domain, it is now recommended to use a different subdomain.

Type: null or non−empty string

Default:

```
if lib.versionOlder config.system.stateVersion "24.05"
then "$\{httpConf.scheme}://$\{httpConf.host}:$\{toString httpCo \
nf.port}"
else null;
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma"."Pleroma.Upload".base_url
Base path for the media uploads. Whilst this can just be set to a subdirectory of the main domain, it is now recommended to use a different subdomain.

Type: null or non−empty string

Default:

```
if lib.versionOlder config.system.stateVersion "24.05"
then "$\{httpConf.scheme}://$\{httpConf.host}:$\{toString httpCo \
nf.port}"
else null;
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma"."Pleroma.Upload".uploader
Module name for the media uploader.

Type: Elixir value

Default:

```
"Pleroma.Uploaders.Local"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma"."Pleroma.Upload".uploads
Directory where Akkoma will put uploaded files.

Type: absolute path

Default:

```
"/var/lib/akkoma/uploads"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma".":instance".static_dir
Directory of static files.

This directory can be built using a derivation, or it can be managed as mutable state by setting the option to an absolute path.

Type: absolute path

Default: Derivation gathering the following paths into a directory:

- **services.akkoma.frontends**
- **services.akkoma.extraStatic**

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma".":instance".upload_dir
Directory where Akkoma will put uploaded files.

Type: absolute path

Default:

```
"/var/lib/akkoma/uploads"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma".":media_proxy".enabled
Whether to enable proxying of remote media through the instance's proxy.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma".":media_proxy".base_url
Base path for the media proxy. Whilst this can just be set to a subdirectory of the main domain, it is now recommended to use a different subdomain.

Type: null or non−empty string

Default:

```
if lib.versionOlder config.system.stateVersion "24.05"
then "$\{httpConf.scheme}://$\{httpConf.host}:$\{toString httpCo \
nf.port}"
else null;
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma"."Pleroma.Repo"
Database configuration.

Refer to **https://hexdocs.pm/ecto_sql/Ecto.Adapters.Postgres.html#module−connection−options** for options.

Type: Elixir value

Default:

```
{
  adapter = (pkgs.formats.elixirConf { }).lib.mkRaw "Ecto.Adapters. \
```

```
Postgres";
  socket_dir = "/run/postgresql";
  username = config.services.akkoma.user;
  database = "akkoma";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma"."Pleroma.Upload".base_url

Base path which uploads will be stored at. Whilst this can just be set to a subdirectory of the main domain, it is now recommended to use a different subdomain.

Type: non−empty string

Default:

```
if lib.versionOlder config.system.stateVersion "24.05"
then "$\{httpConf.scheme}://$\{httpConf.host}:$\{toString httpCo \
nf.port}/media/"
else null;
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma"."Pleroma.Web.Endpoint".http.ip

Listener IP address or Unix socket path.

The value is automatically converted to Elixir's internal address representation during serialisation.

Type: absolute path or IPv4 or IPv6 address

Default:

```
"/run/akkoma/socket"
```

Example:

```
"::1"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma"."Pleroma.Web.Endpoint".http.port

Listener port number.

Must be 0 if using a Unix socket.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
if isAbsolutePath config.services.akkoma.config.:pleroma"."Pleroma. \
Web.Endpoint".http.ip
  then 0
  else 4000;
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma"."Pleroma.Web.Endpoint".live_view.signing_salt

LiveView signing salt.

The attribute '_secret' should point to a file containing the secret.

This salt can be generated as follows:

```
$ tr -dc 'A-Za-z0-9-._~' </dev/urandom | head -c 8
```

Type: secret value

Default:

```
{
  _secret = "/var/lib/secrets/akkoma/liveview-salt";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/akkoma.nix>

services.akkoma.config.":pleroma"."Pleroma.Web.Endpoint".secret_key_base
Secret key used as a base to generate further secrets for encrypting and signing data.

The attribute '_secret' should point to a file containing the secret.

This key can generated can be generated as follows:

```
$ tr -dc 'A-Za-z-._~' </dev/urandom | head -c 64
```

Type: secret value

Default:

```
{
  _secret = "/var/lib/secrets/akkoma/key-base";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/akkoma.nix>

services.akkoma.config.":pleroma"."Pleroma.Web.Endpoint".signing_salt
Signing salt.

The attribute '_secret' should point to a file containing the secret.

This salt can be generated as follows:

```
$ tr -dc 'A-Za-z0-9-._~' </dev/urandom | head -c 8
```

Type: secret value

Default:

```
{
  _secret = "/var/lib/secrets/akkoma/signing-salt";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/akkoma.nix>

services.akkoma.config.":pleroma"."Pleroma.Web.Endpoint".url.host
Domain name of the instance.

Type: non-empty string

Default:

```
config.networking.fqdn
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/akkoma.nix>

services.akkoma.config.":pleroma"."Pleroma.Web.Endpoint".url.port
External port number.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
443
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":pleroma"."Pleroma.Web.Endpoint".url.scheme
URL scheme.

Type: non−empty string

Default:

```
"https"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":web_push_encryption"
Web Push Notifications configuration.

The necessary key pair can be generated as follows:

```
$ nix−shell −p nodejs −−run 'npx web−push generate−vapid−key \
s'
```

Type: open submodule of (Elixir value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":web_push_encryption".":vapid_details".private_key
base64−encoded private ECDH key.

The attribute '_secret' should point to a file containing the secret.

Type: secret value

Default:

```
{
  _secret = "/var/lib/secrets/akkoma/vapid−private";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":web_push_encryption".":vapid_details".public_key
base64−encoded public ECDH key.

Type: non−empty string or secret value

Default:

```
{
  _secret = "/var/lib/secrets/akkoma/vapid−public";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.config.":web_push_encryption"."vapid_details".subject
mailto URI for administrative contact.

Type: non−empty string

Default:

```
"mailto:${config.services.akkoma.config.":pleroma".":instance".emai \
l}"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.dist.address
Listen address for Erlang distribution protocol and Port Mapper Daemon (epmd).

Type: IPv4 or IPv6 address

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.dist.cookie
Erlang release cookie.

If set to ‘null’, a temporary random cookie will be generated.

Type: null or secret value

Default:

```
null
```

Example:

```
{
  _secret = "/var/lib/secrets/akkoma/releaseCookie";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.dist.epmdPort
TCP port to bind Erlang Port Mapper Daemon to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4369
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.dist.extraFlags
Extra flags to pass to Erlang

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "+sbwt"
  "none"
  "+sbwtdcpu"
  "none"
  "+sbwtdio"
  "none"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.dist.portMax
Upper bound for Erlang distribution protocol TCP port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
65535
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.dist.portMin
Lower bound for Erlang distribution protocol TCP port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
49152
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.extraPackages
List of extra packages to include in the executable search path of the service unit. These are needed by various configurable components such as:

- ExifTool for the ‘Pleroma.Upload.Filter.Exiftool’ upload filter,
- ImageMagick for still image previews in the media proxy as well as for the ‘Pleroma.Upload.Filters.Mogrify’ upload filter, and
- ffmpeg for video previews in the media proxy.

Type: list of package

Default:

```
with pkgs; [ exiftool ffmpeg−headless imagemagick ]
```

Example:

```
with pkgs; [ exiftool ffmpeg−full imagemagick ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.extraStatic
Attribute set of extra paths to add to the static files directory.

Do not add frontends here. These should be configured through **services.akkoma.frontends**.

Type: null or (attribute set of path in the Nix store)

Default:

```
null
```

Example:

```
{
  "emoji/blobs.gg" = pkgs.blobs_gg;
  "static/terms-of-service.html" = pkgs.writeText "terms-of-ser \
vice.html" ''
    …
  '';
  "favicon.png" = let
    rev = "697a8211b0f427a921e7935a35d14bb3e32d0a2c";
  in pkgs.stdenvNoCC.mkDerivation {
    name = "favicon.png";
    src = pkgs.fetchurl {
      url = "https://raw.githubusercontent.com/TilCreator/NixOwO/${ \
rev}/NixOwO_plain.svg";
      hash = "sha256-tWhHMfJ3Od58N9H5yOKPMfM56hYWSOnr/TGCBi8bo9E=" \
;
    };
    nativeBuildInputs = with pkgs; [ librsvg ];
    dontUnpack = true;
    installPhase = ''
      rsvg-convert -o $out -w 96 -h 96 $src
    '';
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/akkoma.nix>

services.akkoma.frontends

Akkoma frontends.

Type: attribute set of (submodule)

Default:

```
{
  primary = {
    package = pkgs.akkoma-fe;
    name = "akkoma-fe";
    ref = "stable";
  };
  admin = {
    package = pkgs.akkoma-admin-fe;
    name = "admin-fe";
    ref = "stable";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/akkoma.nix>

services.akkoma.frontends.<name>.package
Akkoma frontend package.

Type: package

Example:

```
pkgs.akkoma-fe
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/akkoma.nix>

services.akkoma.frontends.<name>.name
Akkoma frontend name.

Type: non-empty string

Example:

```
"akkoma-fe"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/akkoma.nix>

services.akkoma.frontends.<name>.ref
Akkoma frontend reference.

Type: non-empty string

Example:

```
"stable"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/akkoma.nix>

services.akkoma.group
Group account under which Akkoma runs.

Type: non-empty string

Default:

```
"akkoma"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/akkoma.nix>

services.akkoma.initDb.enable
Whether to automatically initialise the database on startup. This will create a database role and database if they do not already exist, and (re)set the role password and the ownership of the database.

This setting can be used safely even if the database already exists and contains data.

If disabled, the database has to be set up manually:

```
CREATE ROLE akkoma LOGIN;
CREATE DATABASE akkoma
  OWNER akkoma
  TEMPLATE template0
  ENCODING 'utf8'
  LOCALE 'C';
\connect akkoma
CREATE EXTENSION IF NOT EXISTS citext;
CREATE EXTENSION IF NOT EXISTS pg_trgm;
CREATE EXTENSION IF NOT EXISTS "uuid-ossp";
```

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.initDb.password
Password of the database user to initialise the database with.

If set to ‘null’, no password will be used.

The attribute ‘_secret’ should point to a file containing the secret.

Type: null or secret value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.initDb.username
Name of the database user to initialise the database with.

This user is required to have the ‘CREATEROLE’ and ‘CREATEDB’ capabilities.

Type: non−empty string

Default:

```
config.services.postgresql.superUser
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.initSecrets
Whether to initialise non-existent secrets with random values.

If enabled, appropriate secrets for the following options will be created automatically if the files referenced in the ‘_secrets’ attribute do not exist during startup.

- **config.":pleroma"."Pleroma.Web.Endpoint".secret_key_base**
- **config.":pleroma"."Pleroma.Web.Endpoint".signing_salt**
- **config.":pleroma"."Pleroma.Web.Endpoint".live_view.signing_salt**
- **config.":web_push_encryption".":vapid_details".private_key**
- **config.":web_push_encryption".":vapid_details".public_key**
- **config.":joken".":default_signer"**

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.installWrapper
Whether to install a wrapper around ‘pleroma_ctl’ to simplify administration of the Akkoma instance.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx
Extra configuration for the nginx virtual host of Akkoma.

If set to 'null', no virtual host will be added to the nginx configuration.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with 'redirectCode') to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.http2
Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.http3
Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.http3_hq
Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.kTLS
Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.listen
Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides ‘addSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.listen.*.ssl
Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations
Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations.<name>.alias
Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations.<name>.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.rejectSSL
Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.reuseport
Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.root
The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.serverName
Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.akkoma.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

2. see the **security.acme.certs** option

services.akkoma.user
User account under which Akkoma runs.

Type: non−empty string

Default:

```
"akkoma"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/akkoma.nix>

services.alerta.enable
Whether to enable alerta.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/alerta.nix>

services.alerta.authenticationRequired
Whether users must authenticate when using the web UI or command−line tool

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/alerta.nix>

services.alerta.bind
Address to bind to. The default is to bind to all addresses

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/alerta.nix>

services.alerta.corsOrigins
List of URLs that can access the API for Cross−Origin Resource Sharing (CORS)

Type: list of string

Default:

```
[
  "http://localhost"
  "http://localhost:5000"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/alerta.nix>

services.alerta.databaseName
Name of the database instance to connect to

Type: string

Default:

```
"monitoring"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/alerta.nix>

services.alerta.databaseUrl
URL of the MongoDB or PostgreSQL database to connect to

Type: string

Default:

```
"mongodb://localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/alerta.nix>

services.alerta.extraConfig
These lines go into alertad.conf verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/alerta.nix>

services.alerta.logDir
Location where the logfiles are stored

Type: absolute path

Default:

```
"/var/log/alerta"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/alerta.nix>

services.alerta.port
Port of Alerta

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5000
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/alerta.nix>

services.alerta.signupEnabled
Whether to prevent sign−up of new users via the web UI

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/alerta.nix>

services.alice−lg.enable
Whether to enable Alice Looking Glass.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/alice−lg.nix>

services.alice−lg.package
The alice−lg package to use.

Type: package

Default:

```
pkgs.alice−lg
```

Declared by:
<nixpkgs/nixos/modules/services/networking/alice−lg.nix>

services.alice−lg.settings
alice−lg configuration, for configuration options see the example on **github**

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  server = {
    # configures the built−in webserver and provides global applic \
ation settings
    listen_http = "127.0.0.1:7340";
    enable_prefix_lookup = true;
    asn = 9033;
    store_backend = postgres;
    routes_store_refresh_parallelism = 5;
    neighbors_store_refresh_parallelism = 10000;
    routes_store_refresh_interval = 5;
    neighbors_store_refresh_interval = 5;
  };
  postgres = {
    url = "postgres://postgres:postgres@localhost:5432/alice";
    min_connections = 2;
    max_connections = 128;
  };
  pagination = {
    routes_filtered_page_size = 250;
```

```
      routes_accepted_page_size = 250;
      routes_not_exported_page_size = 250;
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/alice-lg.nix>

services.alloy.enable
Whether to enable Grafana Alloy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/alloy.nix>

services.alloy.package
The grafana-alloy package to use.

Type: package

Default:

```
pkgs.grafana-alloy
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/alloy.nix>

services.alloy.configPath
Alloy configuration file/directory path.

We default to '/etc/alloy' here, and expect the user to configure a configuration file via 'environment.etc."alloy/config.alloy"'.

This allows config reload, contrary to specifying a store path.

All '.alloy' files in the same directory (ignoring subdirs) are also honored and are added to 'systemd.services.alloy.reloadTriggers' to enable config reload during nixos-rebuild switch.

This can also point to another directory containing '*.alloy' files, or a single Alloy file in the Nix store (at the cost of reload).

Component names must be unique across all Alloy configuration files, and configuration blocks must not be repeated.

Alloy will continue to run if subsequent reloads of the configuration file fail, potentially marking components as unhealthy depending on the nature of the failure. When this happens, Alloy will continue functioning in the last valid state.

Type: absolute path

Default:

```
"/etc/alloy"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/alloy.nix>

services.alloy.environmentFile

EnvironmentFile as defined in **systemd.exec**(5).

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/alloy.env"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/alloy.nix>

services.alloy.extraFlags

Extra command−line flags passed to **alloy run**.

See **https://grafana.com/docs/alloy/latest/reference/cli/run/**

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−server.http.listen−addr=127.0.0.1:12346"
  "−−disable−reporting"
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/alloy.nix>

services.alps.enable

Whether to enable alps.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/alps.nix>

services.alps.bindIP

The IP the service should listen on.

Type: string

Default:

```
"[::]"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/alps.nix>

services.alps.imaps.host
The IMAPS server address.

Type: string

Default:

```
"[::1]"
```

Example:

```
"mail.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/alps.nix>

services.alps.imaps.port
The IMAPS server port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
993
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/alps.nix>

services.alps.port
TCP port the service should listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1323
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/alps.nix>

services.alps.smtps.host
The SMTPS server address.

Type: string

Default:

```
"services.alps.imaps.host"
```

Example:

```
"mail.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/alps.nix>

services.alps.smtps.port
The SMTPS server port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
465
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/alps.nix>

services.alps.theme

The frontend's theme to use.

Type: one of "alps", "sourcehut"

Default:

```
"sourcehut"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/alps.nix>

services.amazon−cloudwatch−agent.enable

Whether to enable Amazon CloudWatch Agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/amazon−cloudwatch−agent.nix>

services.amazon−cloudwatch−agent.package

The amazon−cloudwatch−agent package to use.

Type: package

Default:

```
pkgs.amazon−cloudwatch−agent
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/amazon−cloudwatch−agent.nix>

services.amazon−cloudwatch−agent.commonConfiguration

See **commonConfigurationFile**.

commonConfigurationFile takes precedence over **commonConfiguration**.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  credentials = {
    shared_credential_file = "/path/to/credentials";
    shared_credential_profile = "profile_name";
  };
  proxy = {
    http_proxy = "http_url";
    https_proxy = "https_url";
    no_proxy = "domain";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/amazon−cloudwatch−agent.nix>

services.amazon−cloudwatch−agent.commonConfigurationFile
Amazon CloudWatch Agent common configuration. See **https://docs.aws.amazon.com/AmazonCloudWatch/latest/monitoring/install−CloudWatch−Agent−commandline−fleet.html#CloudWatch−Agent−profile−instance−first** for supported values.

commonConfigurationFile takes precedence over **commonConfiguration**.

Note: Restricted evaluation blocks access to paths outside the Nix store. This means detecting content changes for mutable paths (i.e. not input or content−addressed) can't be done. As a result, 'nixos−rebuild' won't reload/restart the systemd unit when mutable path contents change. 'systemctl restart amazon−cloudwatch−agent.service' must be used instead.

Type: absolute path

Default:

```
tomlFormat.generate "common−config.toml" cfg.commonConfiguration
```

Example:

```
"/etc/amazon−cloudwatch−agent/amazon−cloudwatch−agent.json"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/amazon−cloudwatch−agent.nix>

services.amazon−cloudwatch−agent.configuration
See **configurationFile**.

configurationFile takes precedence over **configuration**.

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  agent = {
    logfile = "/var/log/amazon−cloudwatch−agent/amazon−cloudwatc \
h−agent.log";
    metrics_collection_interval = 10;
  };
  logs = {
    force_flush_interval = 15;
    log_stream_name = "log_stream_name";
    logs_collected = {
      files = {
        collect_list = [
          {
            file_path = "/var/log/amazon−cloudwatch−agent/amazon \
−cloudwatch−agent.log";
            log_group_name = "amazon−cloudwatch−agent.log";
            log_stream_name = "{instance_id}";
            timezone = "UTC";
          }
        ];
      };
    };
```

```
      };
      metrics = {
        metrics_collected = {
          cpu = {
            append_dimensions = {
              customized_dimension_key_1 = "customized_dimension_value_ \
    1";
              customized_dimension_key_2 = "customized_dimension_value_ \
    2";
            };
            measurement = [
              {
                name = "cpu_usage_idle";
                rename = "CPU_USAGE_IDLE";
                unit = "Percent";
              }
              {
                name = "cpu_usage_nice";
                unit = "Percent";
              }
              "cpu_usage_guest"
            ];
            metrics_collection_interval = 10;
            resource = [
              "*"
            ];
            totalcpu = false;
          };
        };
        namespace = "MyCustomNamespace";
      };
      traces = {
        traces_collected = {
          oltp = { };
          xray = { };
        };
      };
    }
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/amazon−cloudwatch−agent.nix>

services.amazon−cloudwatch−agent.configurationFile

Amazon CloudWatch Agent configuration file. See **https://docs.aws.amazon.com/AmazonCloud-Watch/latest/monitoring/CloudWatch−Agent−Configuration−File−Details.html** for supported values.

The following options aren't supported:

- 'agent.run_as_user'
  - Use **user** instead.

configurationFile takes precedence over **configuration**.

Note: Restricted evaluation blocks access to paths outside the Nix store. This means detecting content changes for mutable paths (i.e. not input or content−addressed) can't be done. As a result,

‘nixos−rebuild’ won’t reload/restart the systemd unit when mutable path contents change. ‘systemctl restart amazon−cloudwatch−agent.service’ must be used instead.

Type: absolute path

Default:

```
jsonFormat.generate "amazon−cloudwatch−agent.json" cfg.configurat \
ion
```

Example:

```
"/etc/amazon−cloudwatch−agent/amazon−cloudwatch−agent.json"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/amazon−cloudwatch−agent.nix>

services.amazon−cloudwatch−agent.mode
Amazon CloudWatch Agent mode. Indicates whether the agent is running in EC2 (“ec2”), on−premises (“onPremise”), or if it should guess based on metadata endpoints like IMDS or the ECS task metadata endpoint (“auto”).

Type: string

Default:

```
"auto"
```

Example:

```
"onPremise"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/amazon−cloudwatch−agent.nix>

services.amazon−cloudwatch−agent.user
The user that runs the Amazon CloudWatch Agent.

Type: string

Default:

```
"root"
```

Example:

```
"amazon−cloudwatch−agent"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/amazon−cloudwatch−agent.nix>

services.amazon−ssm−agent.enable
Whether to enable Amazon SSM agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/amazon−ssm−agent.nix>

services.amazon−ssm−agent.package

The amazon−ssm−agent package to use.

Type: package

Default:

```
pkgs.amazon−ssm−agent
```

Declared by:

<nixpkgs/nixos/modules/services/misc/amazon−ssm−agent.nix>

services.amule.enable

Whether to enable aMule daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.package

The amule−daemon package to use.

Type: package

Default:

```
pkgs.amule−daemon
```

Declared by:

<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.ExternalConnectPasswordFile

File containing the password for connecting with amule−gui, set this only if you didn't set 'settings.ExternalConnect.ECPassword'

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.WebServerPasswordFile

File containing the password for connecting to the web server, set this only if you didn't set 'settings.ExternalConnect.ECPassword'

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.amuleWebPackage
The amule−web package to use.

Type: package

Default:

```
pkgs.amule−web
```

Declared by:
<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.dataDir
Directory holding configuration and by default also incoming and temporary files

Type: absolute path

Default:

```
"/var/lib/amuled"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.extraArgs
Additional passed arguments

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.group
Group under which amule runs

Type: string

Default:

```
"amule"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.openExternalConnectPort
Whether to enable open the external connect port.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.openPeerPorts

Whether to enable open the peer port(s) in the firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.openWebServerPort

Whether to enable open the web server port.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.settings

Free form attribute set for aMule settings. The final configuration file is generated merging the default settings with these options.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  eMule = {
    IncomingDir = "/mnt/hd/amule/Incoming";
    TempDir = "/mnt/hd/amule/Temp";
  };
  WebServer.Enabled = 1;
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.settings.ExternalConnect.ECPassword

MD5 hash of the password, obtainaible with ‘echo "<password>" | md5sum | cut −d ' ' −f 1’

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.settings.ExternalConnect.ECPort
TCP port for external connections, like remote control via amule−gui

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4712
```

Declared by:
<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.settings.WebServer.Enabled
Set to 1 to enable the web server

Type: one of 0, 1

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.settings.WebServer.Password
MD5 hash of the password, obtainaible with ‘echo "<password>" | md5sum | cut −d ' ' −f 1’

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.settings.WebServer.Port
Web server port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4711
```

Declared by:
<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.settings.eMule.IncomingDir
Directory where aMule moves completed downloads. Files in this directory are automatically shared. Ensure the aMule service has write permissions

Type: absolute path

Default:

```
${config.services.amule.dataDir}/Incoming
```

Declared by:
<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.settings.eMule.Port
TCP port for eD2k connections. Required for connecting to servers and achieving a High ID.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4662
```

Declared by:
<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.settings.eMule.TempDir
Directory where aMule stores incomplete downloads (.part/.part.met files).

Type: absolute path

Default:

```
${config.services.amule.dataDir}/Temp
```

Declared by:
<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.settings.eMule.UDPPort
UDP port for eD2k traffic (searches, source exchange) and all Kad network communication. Essential for a High ID on both networks and proper Kad functioning.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4672
```

Declared by:
<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.amule.user
The user the aMule daemon should run as

Type: string

Default:

```
"amule"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/amuled.nix>

services.ananicy.enable
Whether to enable Ananicy, an auto nice daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ananicy.nix>

services.ananicy.package
The ananicy package to use.

Type: package

Default:

```
pkgs.ananicy
```

Example:

```
ananicy-cpp
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ananicy.nix>

services.ananicy.extraCgroups
Cgroups to write in 'nixCgroups.cgroups'. See: **https://gitlab.com/ananicy-cpp/ananicy-cpp/#cgroups**

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    CPUQuota = 80;
    cgroup = "cpu80";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ananicy.nix>

services.ananicy.extraRules
Rules to write in 'nixRules.rules'. See: **https://github.com/Nefelim4ag/Ananicy#configuration**

https://gitlab.com/ananicy-cpp/ananicy-cpp/#global-configuration

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    name = "eog";
    type = "Image-Viewer";
  }
  {
    name = "fdupes";
    type = "BG_CPUIO";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ananicy.nix>

services.ananicy.extraTypes
Types to write in 'nixTypes.types'. See: **https://gitlab.com/ananicy-cpp/ananicy-cpp/#types**

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
```

```
    nice = 19;
    other_parameter = "value";
    type = "my_type";
  }
  {
    ioclass = "idle";
    nice = 19;
    sched = "batch";
    type = "compiler";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ananicy.nix>

services.ananicy.rulesProvider
Which package to copy default rules,types,cgroups from.

Type: package

Default:

```
pkgs.ananicy
```

Example:

```
ananicy-cpp
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ananicy.nix>

services.ananicy.settings
See **https://github.com/Nefelim4ag/Ananicy/blob/master/ananicy.d/ananicy.conf**

Type: attribute set of (signed integer or boolean or string)

Default:

```
{ }
```

Example:

```
{
  apply_nice = false;
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ananicy.nix>

services.angrr.enable
Whether to enable angrr.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.enableNixGcIntegration
Whether to enable nix−gc.service integration.

Type: boolean

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.package
The angrr package to use.

Type: package

Default:

```
pkgs.angrr
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.configFile
Path to the angrr configuration file in TOML format.

If not set, the configuration generated from **services.angrr.settings** will be used. If specified, **services.angrr.settings** will be ignored.

Type: null or absolute path

Default:

```
"TOML file generated from {option}‘services.angrr.settings‘"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.extraArgs
Extra command−line arguments pass to angrr.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.logLevel
Set the log level of angrr.

Type: one of “off”, “error”, “warn”, “info”, “debug”, “trace”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings
Global configuration for angrr in TOML format.

Type: open submodule of (TOML value)

Example:

```
{
  profile-policies = {
    system = {
```

```
            keep-booted-system = true;
            keep-current-system = true;
            keep-latest-n = 5;
            keep-since = "14d";
            profile-paths = [
              "/nix/var/nix/profiles/system"
            ];
          };
          user = {
            enable = false;
            keep-booted-system = false;
            keep-current-system = false;
            keep-latest-n = 1;
            keep-since = "1d";
            profile-paths = [
              "~/.local/state/nix/profiles/profile"
              "/nix/var/nix/profiles/per-user/root/profile"
            ];
          };
        };
        temporary-root-policies = {
          direnv = {
            path-regex = "/\\.direnv/";
            period = "14d";
          };
          result = {
            path-regex = "/result[^/]*$";
            period = "3d";
          };
        };
      }
```

Declared by:

<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.owned-only

Only monitors owned symbolic link target of GC roots.

- “auto”: behaves like true for normal users, false for root.
- “true”: only monitor GC roots owned by the current user.
- “false”: monitor all GC roots.

Type: one of “auto”, “true”, “false”

Default:

```
"auto"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.profile-policies

Profile GC root policies.

Type: attribute set of (open submodule of (TOML value))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.profile-policies.<name>.enable
Whether to enable this angrr policy.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.profile-policies.<name>.keep-booted-system
Whether to keep the last booted system generation. Only useful for system profiles.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.profile-policies.<name>.keep-current-system
Whether to keep the current system generation. Only useful for system profiles.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.profile-policies.<name>.keep-latest-n
Keep the latest N GC roots in this profile.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.profile-policies.<name>.keep-since
Retention period for the GC roots in this profile.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.profile−policies.<name>.profile−paths

Paths to the Nix profile.

When angrr runs in owned−only mode, and the option begins with '~', it will be expanded to the home directory of the current user.

When angrr does not run in owned−only mode, and the option begins with '~', it will be expanded to the home of all users discovered respectively.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.temporary−root−policies

Policies for temporary GC roots(e.g. result and direnv).

Type: attribute set of (open submodule of (TOML value))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.temporary−root−policies.<name>.enable

Whether to enable this angrr policy.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.temporary−root−policies.<name>.filter

External filter program to further filter GC roots matched by this policy.

Type: null or (open submodule of (TOML value))

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.temporary−root−policies.<name>.filter.arguments

Extra command−line arguments pass to the external filter program.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.temporary−root−policies.<name>.filter.program
Path to the external filter program.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.temporary−root−policies.<name>.ignore−prefixes
List of path prefixes to ignore.

If null is specified, angrr builtin settings will be used.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.temporary−root−policies.<name>.ignore−prefixes−in−home
Path prefixes to ignore under home directory.

If null is specified, angrr builtin settings will be used.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.temporary−root−policies.<name>.path−regex
Regex pattern to match the GC root path.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.temporary−root−policies.<name>.period
Retention period for the GC roots matched by this policy.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.temporary−root−policies.<name>.priority
Priority of this policy.

Lower number means higher priority, if multiple policies monitor the same path, the one with higher priority will be applied.

Type: signed integer

Default:

```
100
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.settings.touch.project−globs
List of glob patterns to include or exclude files when touching GC roots.

Only applied when ‘angrr touch’ is invoked with the ‘−−project’ flag. Patterns use an inverted gitignore−style semantics. See **https://docs.rs/ignore/latest/ignore/overrides/struct.OverrideBuilder.html#method.add**.

Type: list of string

Default:

```
[
  "!.git"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.timer.enable
Whether to enable angrr timer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.angrr.timer.dates
How often or when the retention policy is performed.

Type: string

Default:

```
"03:00"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/angrr.nix>

services.anki−sync−server.enable
Whether to enable anki−sync−server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/anki−sync−server.nix>

services.anki-sync-server.package
The anki-sync-server package to use.

Type: package

Default:

```
pkgs.anki-sync-server
```

Declared by:
<nixpkgs/nixos/modules/services/misc/anki-sync-server.nix>

services.anki-sync-server.address
IP address anki-sync-server listens to. Note host names are not resolved.

Type: string

Default:

```
"::1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/anki-sync-server.nix>

services.anki-sync-server.baseDirectory
Base directory where user(s) synchronized data will be stored.

Type: string

Default:

```
"%S/%N"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/anki-sync-server.nix>

services.anki-sync-server.openFirewall
Whether to open the firewall for the specified port.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/anki-sync-server.nix>

services.anki-sync-server.port
Port number anki-sync-server listens to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
27701
```

Declared by:
<nixpkgs/nixos/modules/services/misc/anki-sync-server.nix>

services.anki-sync-server.users
List of user-password pairs to provide to the sync server.

Type: list of (submodule)

Declared by:
<nixpkgs/nixos/modules/services/misc/anki-sync-server.nix>

services.anki−sync−server.users.*.password
Password accepted by anki−sync−server for the associated username. **WARNING**: This option is **not secure**. This password will be stored in *plaintext* and will be visible to *all users*. See **services.anki−sync−server.users.passwordFile** for a more secure option.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/anki−sync−server.nix>

services.anki−sync−server.users.*.passwordFile
File containing the password accepted by anki−sync−server for the associated username. Make sure to make readable only by root.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/anki−sync−server.nix>

services.anki−sync−server.users.*.username
User name accepted by anki−sync−server.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/anki−sync−server.nix>

services.anubis.package
The anubis package to use.

Type: package

Default:

```
pkgs.anubis
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions
Default options for all instances of Anubis.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.enable
Whether to enable this instance of Anubis.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.extraFlags

A list of extra flags to be passed to Anubis.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-metrics-bind \"\""
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.group

The group under which Anubis is run.

This module utilizes systemd's DynamicUser feature. See the corresponding section in **systemd.exec**(5) for more details.

Type: string

Default:

```
"anubis"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.policy

Anubis policy configuration.

See **the documentation** for details.

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.policy.extraBots

Additional bot rules appended to the policy.

When **useDefaultBotRules** is 'true', these rules are added after Anubis's default rules. When 'false', only these rules are used.

Type: list of (JSON value)

Default:

```
[ ]
```

Example:

```
[
  {
    name = "my-bot";
```

```
      user_agent_regex = "MyBot/.*";
      action = "ALLOW";
    }
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.policy.settings
Additional policy settings merged into the policy file.

Common settings include ‘dnsbl’, ‘store’, ‘logging’, ‘thresholds’, ‘impressum’, ‘openGraph’, and ‘statusCodes’.

See **the documentation** for available options.

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  dnsbl = false;
  store = {
    backend = "bbolt";
    parameters.path = "/var/lib/anubis/data.bdb";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.policy.useDefaultBotRules
Whether to include Anubis’s default bot detection rules via the ‘(data)/meta/default−config.yaml’ import.

Set to ‘false’ to define your own bot rules from scratch using **extraBots**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.settings
Freeform configuration via environment variables for Anubis.

See **the documentation** for a complete list of available environment variables.

Type: open submodule of attribute set of (null or string or signed integer or boolean)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.settings.BIND_NETWORK

The network family that Anubis should bind to.

Accepts anything supported by Go's 'net.Listen'.

Common values are 'tcp' and 'unix'.

Type: string

Default:

```
"unix"
```

Example:

```
"tcp"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.settings.DIFFICULTY

The difficulty required for clients to solve the challenge.

Currently, this means the amount of leading zeros in a successful response.

Type: signed integer

Default:

```
4
```

Example:

```
5
```

Declared by:

<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.settings.METRICS_BIND_NETWORK

The network family that the metrics server should bind to.

Accepts anything supported by Go's 'net.Listen'.

Common values are 'tcp' and 'unix'.

Type: string

Default:

```
"unix"
```

Example:

```
"tcp"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.settings.OG_PASSTHROUGH

Whether to enable Open Graph tag passthrough.

This enables social previews of resources protected by Anubis without having to exempt each scraper individually.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.settings.POLICY_FNAME
The policy file to use. Leave this as 'null' to use the policy generated from **services.anubis.instances.<name>.policy**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.settings.SERVE_ROBOTS_TXT
Whether to serve a default robots.txt that denies access to common AI bots by name and all other bots by wildcard.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.settings.WEBMASTER_EMAIL
If set, shows a contact email address when rendering error pages.

This email address will be how users can get in contact with administrators.

Type: null or string

Default:

```
null
```

Example:

```
"alice@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.defaultOptions.user
The user under which Anubis is run.

This module utilizes systemd's DynamicUser feature. See the corresponding section in **systemd.exec**(5) for more details.

Type: string

Default:

```
"anubis"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances
An attribute set of Anubis instances.

The attribute name may be an empty string, in which case the '−<name>' suffix is not added to the service name and socket paths.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.enable

Whether to enable this instance of Anubis.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.extraFlags

A list of extra flags to be passed to Anubis.

Type: list of string

Default:

```
config.services.anubis.defaultOptions.extraFlags
```

Example:

```
[
  "-metrics-bind \"\""
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.group

The group under which Anubis is run.

This module utilizes systemd's DynamicUser feature. See the corresponding section in **systemd.exec**(5) for more details.

Type: string

Default:

```
config.services.anubis.defaultOptions.group
```

Declared by:

<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.policy

Anubis policy configuration.

See **the documentation** for details.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.policy.extraBots
Additional bot rules appended to the policy.

When **useDefaultBotRules** is ‘true’, these rules are added after Anubis’s default rules. When ‘false’, only these rules are used.

Type: list of (JSON value)

Default:

```
config.services.anubis.defaultOptions.policy.extraBots
```

Example:

```
[
  {
    name = "my-bot";
    user_agent_regex = "MyBot/.*";
    action = "ALLOW";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.policy.settings
Additional policy settings merged into the policy file.

Common settings include ‘dnsbl’, ‘store’, ‘logging’, ‘thresholds’, ‘impressum’, ‘openGraph’, and ‘statusCodes’.

See **the documentation** for available options.

Type: JSON value

Default:

```
config.services.anubis.defaultOptions.policy.settings
```

Example:

```
{
  dnsbl = false;
  store = {
    backend = "bbolt";
    parameters.path = "/var/lib/anubis/data.bdb";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.policy.useDefaultBotRules
Whether to include Anubis’s default bot detection rules via the ‘(data)/meta/default-config.yaml’ import.

Set to ‘false’ to define your own bot rules from scratch using **extraBots**.

Type: boolean

Default:

```
config.services.anubis.defaultOptions.policy.useDefaultBotRules
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.settings
Freeform configuration via environment variables for Anubis.

See **the documentation** for a complete list of available environment variables.

Type: open submodule of attribute set of (null or string or signed integer or boolean)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.settings.BIND
The address that Anubis listens to. See Go's 'net.Listen' for syntax. When using unix sockets:

- use the prefix "/run/anubis/anubis/" if the instance name is the empty string,
- "/run/anubis/anubis−<name>/" otherwise.

Defaults to Unix domain sockets. To use TCP sockets, set this to a TCP address and 'BIND_NETWORK' to '"tcp"'.

Type: string

Default:

```
"/run/anubis/anubis−‹name›/anubis.sock"
```

Example:

```
":8080"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.settings.BIND_NETWORK
The network family that Anubis should bind to.

Accepts anything supported by Go's 'net.Listen'.

Common values are 'tcp' and 'unix'.

Type: string

Default:

```
config.services.anubis.defaultOptions.settings.BIND_NETWORK
```

Example:

```
"tcp"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.settings.DIFFICULTY
The difficulty required for clients to solve the challenge.

Currently, this means the amount of leading zeros in a successful response.

Type: signed integer

Default:

```
config.services.anubis.defaultOptions.settings.DIFFICULTY
```

Example:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.settings.METRICS_BIND
The address Anubis' metrics server listens to. See Go's 'net.Listen' for syntax. When using unix sockets:

- use the prefix "/run/anubis/anubis/" if the instance name is the empty string,
- "/run/anubis/anubis−<name>/" otherwise.

The metrics server is enabled by default and may be disabled. However, due to implementation details, this is only possible by setting a command line flag. See **services.anubis.defaultOptions.extraFlags** for an example.

Defaults to Unix domain sockets. To use TCP sockets, set this to a TCP address and 'METRICS_BIND_NETWORK' to '"tcp"'.

Type: string

Default:

```
"/run/anubis/anubis−‹name›/anubis−metrics.sock"
```

Example:

```
"127.0.0.1:8081"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.settings.METRICS_BIND_NETWORK
The network family that the metrics server should bind to.

Accepts anything supported by Go's 'net.Listen'.

Common values are 'tcp' and 'unix'.

Type: string

Default:

```
config.services.anubis.defaultOptions.settings.METRICS_BIND_NETWORK
```

Example:

```
"tcp"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.settings.OG_PASSTHROUGH
Whether to enable Open Graph tag passthrough.

This enables social previews of resources protected by Anubis without having to exempt each scraper individually.

Type: boolean

Default:

```
config.services.anubis.defaultOptions.settings.OG_PASSTHROUGH
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.settings.POLICY_FNAME

The policy file to use. Leave this as 'null' to use the policy generated from **services.anubis.instances.<name>.policy**.

Type: null or absolute path

Default:

```
config.services.anubis.defaultOptions.settings.POLICY_FNAME
```

Declared by:

<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.settings.SERVE_ROBOTS_TXT

Whether to serve a default robots.txt that denies access to common AI bots by name and all other bots by wildcard.

Type: boolean

Default:

```
config.services.anubis.defaultOptions.settings.SERVE_ROBOTS_TXT
```

Declared by:

<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.settings.TARGET

The reverse proxy target that Anubis is protecting. This is a required option.

The usage of Unix domain sockets is supported by the following syntax: 'unix:///path/to/socket.sock'.

Type: string

Example:

```
"http://127.0.0.1:8000"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.settings.WEBMASTER_EMAIL

If set, shows a contact email address when rendering error pages.

This email address will be how users can get in contact with administrators.

Type: null or string

Default:

```
config.services.anubis.defaultOptions.settings.WEBMASTER_EMAIL
```

Example:

```
"alice@example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anubis.instances.<name>.user

The user under which Anubis is run.

This module utilizes systemd's DynamicUser feature. See the corresponding section in **systemd.exec**(5) for more details.

Type: string

Default:

```
config.services.anubis.defaultOptions.user
```

Declared by:
<nixpkgs/nixos/modules/services/networking/anubis.nix>

services.anuko−time−tracker.enable
Whether to enable Anuko Time Tracker.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.package
The anuko−time−tracker package to use.

Type: package

Default:

```
pkgs.anuko−time−tracker
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.dataDir
Default data folder for Anuko Time Tracker.

Type: string

Default:

```
"/var/lib/anuko−time−tracker"
```

Example:

```
"/mnt/anuko−time−tracker"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.database.host
Database host.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.database.name
Database name.

Type: string

Default:

```
"anuko_time_tracker"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.database.passwordFile
Database user password file.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.database.user
Database username.

Type: string

Default:

```
"anuko_time_tracker"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.hostname
The hostname to serve Anuko Time Tracker on.

Type: string

Default:

```
config.networking.fqdn
```

Example:

```
"anuko.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx
With this option, you can customize the Nginx virtualHost settings.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  serverAliases = [
    "anuko.${config.networking.domain}"
  ];
```

```
  # To enable encryption and let let's encrypt take care of certifi \
cate
  forceSSL = true;
  enableACME = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.default

Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.extraConfig

These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.forceSSL

Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with 'redirectCode') to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.http2
Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.http3
Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.http3_hq
Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides ‘addSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.listen.*.addr

Listen address.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.listen.*.extraParameters

Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
```

```
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.listen.*.ssl
Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations.<name>.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations.<name>.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.rejectSSL
Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.reuseport
Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.root
The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.serverName
Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

2. see the **security.acme.certs** option

services.anuko−time−tracker.poolConfig
Options for Anuko Time Tracker's PHP−FPM pool.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.defaultCurrency
Defines a default currency symbol for new groups. Use €, £, a more specific dollar like US$, CAD, etc.

Type: string

Default:

```
"$"
```

Example:

```
"€"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.defaultLanguage
Defines Anuko Time Tracker default language. It is used on Time Tracker login page. After login, a language set for user group is used. Empty string means the language is defined by user browser.

Type: string

Default:

```
""
```

Example:

```
"nl"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.email.mode
Mail sending mode. Can be 'mail' or 'smtp'.

Type: string

Default:

```
"smtp"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.email.sender
Default sender for mail.

Type: string

Default:

```
"Anuko Time Tracker <bounces@example.com>"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.email.smtpAuth
MTA requires authentication.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.email.smtpDebug
Debug mail sending.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.email.smtpHost
MTA hostname.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.email.smtpPasswordFile
Path to file containing the MTA authentication password.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/anuko−time−tracker/secrets/smtp−password"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.email.smtpPort
MTA port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
25
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.email.smtpUser
MTA authentication username.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.emailRequired
Defines whether an email is required for new registrations.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.exportDecimalDuration
Defines whether time duration values are decimal in CSV and XML data exports (1.25 vs 1:15).

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.forumLink
Forum link from the main menu.

Type: string

Default:

```
"https://www.anuko.com/forum/viewforum.php?f=4"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.helpLink
Help link from the main menu.

Type: string

Default:

```
"https://www.anuko.com/time−tracker/user−guide/index.htm"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.multiorgMode
Defines whether users see the Register option in the menu of Time Tracker that allows them to self−register and create new organizations (top groups).

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.reportFooter
Defines whether to use a footer on reports.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.settings.weekendStartDay
This option defines which days are highlighted with weekend color. 6 means Saturday. For Saudi Arabia, etc. set it to 4 for Thursday and Friday to be weekend days.

Type: signed integer

Default:

```
6
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.anuko−time−tracker.user
User under which Anuko Time Tracker runs.

Type: string

Default:

```
"anuko_time_tracker"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/anuko−time−tracker.nix>

services.apache−kafka.enable
Whether to enable Apache Kafka event streaming broker.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/apache−kafka.nix>

services.apache−kafka.package
The apacheKafka package to use.

Type: package

Default:

```
pkgs.apacheKafka
```

Declared by:
<nixpkgs/nixos/modules/services/misc/apache−kafka.nix>

services.apache−kafka.clusterId
KRaft mode ClusterId used for formatting log directories. Can be generated with ‘kafka−storage.sh random−uuid’

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/apache−kafka.nix>

services.apache−kafka.configFiles.log4jProperties
Kafka log4j property configuration file path

Type: absolute path

Default:

```
"pkgs.writeText \"log4j.properties\" cfg.log4jProperties"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/apache−kafka.nix>

services.apache−kafka.configFiles.serverProperties
Kafka server.properties configuration file path. Defaults to the rendered ‘settings’.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/misc/apache−kafka.nix>

services.apache−kafka.formatLogDirs
Whether to format log dirs in KRaft mode if all log dirs are unformatted, ie. they contain no meta.properties.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/apache−kafka.nix>

services.apache−kafka.formatLogDirsIgnoreFormatted
Whether to ignore already formatted log dirs when formatting log dirs, instead of failing. Useful when replacing or adding disks.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/apache−kafka.nix>

services.apache−kafka.jre
The JRE with which to run Kafka

Type: package

Default:

```
pkgs.apacheKafka.passthru.jre
```

Declared by:
<nixpkgs/nixos/modules/services/misc/apache−kafka.nix>

services.apache−kafka.jvmOptions
Extra command line options for the JVM running Kafka.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−Djava.net.preferIPv4Stack=true"
  "−Dcom.sun.management.jmxremote"
  "−Dcom.sun.management.jmxremote.local.only=true"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/apache−kafka.nix>

services.apache−kafka.log4jProperties
Kafka log4j property configuration.

Type: strings concatenated with “\n”

Default:

```
log4j.rootLogger=INFO, stdout

log4j.appender.stdout=org.apache.log4j.ConsoleAppender
log4j.appender.stdout.layout=org.apache.log4j.PatternLayout
log4j.appender.stdout.layout.ConversionPattern=[%d] %p %m (%c)%n
```

Declared by:
<nixpkgs/nixos/modules/services/misc/apache−kafka.nix>

services.apache−kafka.settings

Kafka broker configuration *server.properties*.

Note that .properties files contain mappings from string to string. Keys with dots are NOT represented by nested attrs in these settings, but instead as quoted strings (ie. ‘settings."broker.id"’, NOT ‘settings.broker.id’).

Type: open submodule of lazy attribute set of (null or boolean or signed integer or string or list of (boolean or signed integer or string))

Declared by:
<nixpkgs/nixos/modules/services/misc/apache−kafka.nix>

services.apache−kafka.settings."broker.id"
Broker ID. −1 or null to auto−allocate in zookeeper mode.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/apache−kafka.nix>

services.apache−kafka.settings.listeners
Kafka Listener List. See **listeners**.

Type: list of string

Default:

```
[
  "PLAINTEXT://localhost:9092"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/apache−kafka.nix>

services.apache−kafka.settings."log.dirs"
Log file directories.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/apache−kafka.nix>

services.apcupsd.enable
Whether to enable the APC UPS daemon. apcupsd monitors your UPS and permits orderly shutdown of your computer in the event of a power failure. User manual: http://www.apcupsd.com/manual/manual.html. Note that apcupsd runs as root (to allow shutdown of computer). You can check the status of your UPS with the “apcaccess” command.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/apcupsd.nix>

services.apcupsd.configText
Contents of the runtime configuration file, apcupsd.conf. The default settings makes apcupsd autodetect USB UPSes, limit network access to localhost and shutdown the system when the battery level is below 50 percent, or when the UPS has calculated that it has 5 minutes or less of remaining power−on time. See man apcupsd.conf for details.

Type: strings concatenated with “\n”

Default:

```
UPSTYPE usb
```

```
NISIP 127.0.0.1
BATTERYLEVEL 50
MINUTES 5
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/apcupsd.nix>

services.apcupsd.hooks
Each attribute in this option names an apcupsd event and the string value it contains will be executed in a shell, in response to that event (prior to the default action). See “man apccontrol” for the list of events and what they represent.

A hook script can stop apccontrol from doing its default action by exiting with value 99. Do not do this unless you know what you’re doing.

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Example:

```
{
  doshutdown = "# shell commands to notify that the computer is shu \
tting down";
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/apcupsd.nix>

services.arbtt.enable
Whether to enable Arbtt statistics capture service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/arbtt.nix>

services.arbtt.package
The arbtt package to use.

Type: package

Default:

```
pkgs.haskellPackages.arbtt
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/arbtt.nix>

services.arbtt.logFile
The log file for captured samples.

Type: string

Default:

```
"%h/.arbtt/capture.log"
```

Example:

```
"/home/username/.arbtt-capture.log"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/arbtt.nix>

services.arbtt.sampleRate
The sampling interval in seconds.

Type: signed integer

Default:

```
60
```

Example:

```
120
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/arbtt.nix>

services.archisteamfarm.enable
If enabled, starts the ArchisSteamFarm service. For configuring the SteamGuard token you will need to use the web-ui, which is enabled by default over on 127.0.0.1:1242. You cannot configure ASF in any way outside of nix, since all the config files get wiped on restart and replaced with the programnatically set ones by nix.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/archisteamfarm.nix>

services.archisteamfarm.package
The archisteamfarm package to use. ::: {.warning} Should always be the latest version, for security reasons, since this module uses very new features and to not get out of sync with the Steam API. :::

Type: package

Default:

```
pkgs.archisteamfarm
```

Declared by:
<nixpkgs/nixos/modules/services/games/archisteamfarm.nix>

services.archisteamfarm.bots
Bots name and configuration.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  exampleBot = {
    passwordFile = "/var/lib/archisteamfarm/secrets/password";
    settings = {
      SteamParentalCode = "1234";
    };
    username = "alice";
```

```
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/games/archisteamfarm.nix>

services.archisteamfarm.bots.<name>.enabled
Whether to enable the bot on startup.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/archisteamfarm.nix>

services.archisteamfarm.bots.<name>.passwordFile
Path to a file containing the password. The file must be readable by the ‘archisteamfarm’ user/group. Omit or set to null to provide the password a different way, such as through the web−ui.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/games/archisteamfarm.nix>

services.archisteamfarm.bots.<name>.settings
Additional settings that are documented **here**.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/games/archisteamfarm.nix>

services.archisteamfarm.bots.<name>.username
Name of the user to log in. Default is attribute name.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/games/archisteamfarm.nix>

services.archisteamfarm.dataDir
The ASF home directory used to store all data. If left as the default value this directory will automatically be created before the ASF server starts, otherwise the sysadmin is responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: absolute path

Default:

```
"/var/lib/archisteamfarm"
```

Declared by:
<nixpkgs/nixos/modules/services/games/archisteamfarm.nix>

services.archisteamfarm.ipcPasswordFile
Path to a file containing the password. The file must be readable by the ‘archisteamfarm’ user/group.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/games/archisteamfarm.nix>

services.archisteamfarm.ipcSettings
Settings to write to IPC.config. All options can be found **here**.

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  Kestrel = {
    Endpoints = {
      HTTP = {
        Url = "http://*:1242";
      };
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/games/archisteamfarm.nix>

services.archisteamfarm.settings
The ASF.json file, all the options are documented **here**. Do note that ‘AutoRestart’ and ‘UpdateChannel’ is always to ‘false’ respectively ‘0’ because NixOS takes care of updating everything. ‘Headless’ is also always set to ‘true’ because there is no way to provide inputs via a systemd service. You should try to keep ASF up to date since upstream does not provide support for anything but the latest version and you’re exposing yourself to all kinds of issues − as is outlined **here**.

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  Statistics = false;
}
```

Declared by:
<nixpkgs/nixos/modules/services/games/archisteamfarm.nix>

services.archisteamfarm.web−ui

The Web−UI hosted on 127.0.0.1:1242.

Type: submodule

Default:

```
{
  enable = true;
}
```

Example:

```
{
  enable = false;
}
```

Declared by:

<nixpkgs/nixos/modules/services/games/archisteamfarm.nix>

services.archisteamfarm.web−ui.enable

Whether to start the web−ui. This is the preferred way of configuring things such as the steam guard token.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/games/archisteamfarm.nix>

services.archisteamfarm.web−ui.package

The ui package to use. ::: {.note} Contents must be in lib/dist :::

Type: package

Default:

```
pkgs.archisteamfarm.ui
```

Declared by:

<nixpkgs/nixos/modules/services/games/archisteamfarm.nix>

services.aria2.enable

Whether or not to enable the headless Aria2 daemon service.

Aria2 daemon can be controlled via the RPC interface using one of many WebUIs (http://localhost:6800/ by default).

Targets are downloaded to ‘/var/lib/aria2/Downloads’ by default and are accessible to users in the ‘aria2’ group.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/aria2.nix>

services.aria2.downloadDirPermission

The permission for ‘settings.dir’.

The default is 0770, which denies access for users not in the ‘aria2’ group.

You may want to adjust ‘serviceUMask’ as well, which further restricts the file permission for newly created files (i.e. the downloads).

Type: string

Default:

```
"0770"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/aria2.nix>

services.aria2.openPorts

Open listen and RPC ports found in ‘settings.listen−port’ and ‘settings.rpc−listen−port’ options in the firewall.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/aria2.nix>

services.aria2.rpcSecretFile

A file containing the RPC secret authorization token. Read **https://aria2.github.io/manual/en/html/aria2c.html#rpc−auth** to know how this option value is used.

Type: absolute path

Example:

```
"/run/secrets/aria2−rpc−token.txt"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/aria2.nix>

services.aria2.serviceUMask

The file mode creation mask for Aria2 service.

The default is 0022 for compatibility reason, as this is the default used by systemd. However, this results in file permission 0644 for new files, and denies ‘aria2’ group member from modifying the file.

You may want to set this value to ‘0002’ so you can manage the file more easily.

Type: string

Default:

```
"0022"
```

Example:

```
"0002"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/aria2.nix>

services.aria2.settings

Generates the *aria2.conf* file. Refer to **the documentation** for all possible settings.

Type: open submodule of attribute set of (boolean or signed integer or floating point number or (optionally newline−terminated) single−line string)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/aria2.nix>

services.aria2.settings.enable−rpc

Enable JSON−RPC/XML−RPC server.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/aria2.nix>

services.aria2.settings.conf−path

Configuration file path.

Type: (optionally newline−terminated) single−line string

Default:

```
"/var/lib/aria2/aria2.conf"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/aria2.nix>

services.aria2.settings.dir

Directory to store downloaded files.

Type: (optionally newline−terminated) single−line string

Default:

```
"/var/lib/aria2/Downloads"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/aria2.nix>

services.aria2.settings.listen−port

Set UDP listening port range used by DHT(IPv4, IPv6) and UDP tracker.

Type: list of attribute set of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[
  {
    from = 6881;
    to = 6999;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/aria2.nix>

services.aria2.settings.rpc−listen−port

Specify a port number for JSON−RPC/XML−RPC server to listen to. Possible Values: 1024−65535

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6800
```

Declared by:

<nixpkgs/nixos/modules/services/networking/aria2.nix>

services.aria2.settings.save−session

Save error/unfinished downloads to FILE on exit.

Type: (optionally newline−terminated) single−line string

Default:

```
"/var/lib/aria2/aria2.session"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/aria2.nix>

services.armagetronad.servers

Armagetron server definitions.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/games/armagetronad.nix>

services.armagetronad.servers.<name>.enable

Whether to enable armagetronad.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/games/armagetronad.nix>

services.armagetronad.servers.<name>.package

The armagetronad−dedicated package to use. Ensure that you use a derivation which contains the path ‘bin/armagetronad−dedicated’.

Type: package

Default:

```
pkgs.armagetronad−dedicated
```

Example:

```
pkgs.armagetronad."0.2.9−sty+ct+ap".dedicated
```

Declared by:

<nixpkgs/nixos/modules/services/games/armagetronad.nix>

services.armagetronad.servers.<name>.dns
DNS address to use for this server. Optional.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/games/armagetronad.nix>

services.armagetronad.servers.<name>.host
Host to listen on. Used for SERVER_IP.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/games/armagetronad.nix>

services.armagetronad.servers.<name>.name
The name of this server.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/games/armagetronad.nix>

services.armagetronad.servers.<name>.openFirewall
Set to true to open the configured UDP port for Armagetron Advanced.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/armagetronad.nix>

services.armagetronad.servers.<name>.port
Port to listen on. Used for SERVER_PORT.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4534
```

Declared by:
<nixpkgs/nixos/modules/services/games/armagetronad.nix>

services.armagetronad.servers.<name>.roundSettings
Armagetron Advanced server per−round configuration. Refer to: **https://wiki.armagetronad.org/index.php?title=Console_Commands** or ‘armagetronad−dedicated −−doc’ for a list.

This attrset is used to populate ‘everytime.cfg’; see: **https://wiki.armagetronad.org/index.php/Configuration_Files**

Type: attribute set of (atom (null, bool, int, float or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Example:

```
{
  SAY = [
    "Hosted on NixOS"
    "https://nixos.org"
    "iD Tech High Rubber rul3z!! Happy New Year 2008!!1"
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/games/armagetronad.nix>

services.armagetronad.servers.<name>.settings
Armagetron Advanced server rules configuration. Refer to: **https://wiki.armagetronad.org/index.php?title=Console_Commands** or ‘armagetronad−dedicated −−doc’ for a list.

This attrset is used to populate ‘settings_custom.cfg’; see: **https://wiki.armagetronad.org/index.php/Configuration_Files**

Type: attribute set of (atom (null, bool, int, float or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Example:

```
{
  CYCLE_RUBBER = 40;
}
```

Declared by:
<nixpkgs/nixos/modules/services/games/armagetronad.nix>

services.arsenik.enable
Whether to enable A 33−key layout that works with all keyboards…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/arsenik.nix>

services.arsenik.package
The arsenik package to use.

Type: package

Default:

```
pkgs.arsenik
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/arsenik.nix>

services.arsenik.anglemod
Choose here if you want to add an angle mod: ZXCVB are shifted to the left. See https://colemak-mods.github.io/ergonomic−mods/angle.html for more details.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/arsenik.nix>

services.arsenik.hold_timeout
The key must be held XX ms to become a layer shift.

Type: signed integer

Default:

```
200
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/arsenik.nix>

services.arsenik.hrm
Enable homerow.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/arsenik.nix>

services.arsenik.lafayette
Add AltGr programmation layer like Ergo-L

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/arsenik.nix>

services.arsenik.layout
Your keyboard layout. Possible values are: ergol qwerty−lafayette qwerty azerty qwertz bepo optimot

Type: string

Default:

```
"ergol"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/arsenik.nix>

services.arsenik.long_hold_timeout
Slightly higher value for typing keys, to prevent unexpected hold effect.

Type: signed integer

Default:

```
300
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/arsenik.nix>

services.arsenik.lt
Enable layer−taps.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/arsenik.nix>

services.arsenik.mac
Original key arrangement on your keyboard: Mac or PC.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/arsenik.nix>

services.arsenik.num
Add NumRow layer

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/arsenik.nix>

services.arsenik.run
The keyboard shortcut of your application launcher.

Type: string

Default:

```
"M−p"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/arsenik.nix>

services.arsenik.tap_timeout
The key must be pressed twice in XX ms to enable repetitions.

Type: signed integer

Default:

```
200
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/arsenik.nix>

services.arsenik.vim
Navigation layer: ESDF or HJKL?

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/arsenik.nix>

services.arsenik.wide
The right hand is moved one key to the right.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/arsenik.nix>

services.artalk.enable
Whether to enable artalk, a comment system.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/artalk.nix>

services.artalk.package
The artalk package to use.

Type: package

Default:

```
pkgs.artalk
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/artalk.nix>

services.artalk.allowModify
allow Artalk store the settings to config file persistently

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/artalk.nix>

services.artalk.configFile
Artalk config file path. If it is not exist, Artalk will generate one.

Type: string

Default:

```
"/etc/artalk/config.yml"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/artalk.nix>

services.artalk.group

Artalk group name.

Type: string

Default:

```
"artalk"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/artalk.nix>

services.artalk.settings

The artalk configuration.

If you set allowModify to true, Artalk will be able to store the settings in the config file persistently. This section's content will update in the config file after the service restarts.

Options containing secret data should be set to an attribute set containing the attribute '_secret' − a string pointing to a file containing the value the option should be set to.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/artalk.nix>

services.artalk.settings.host

Artalk server listen host

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/artalk.nix>

services.artalk.settings.port

Artalk server listen port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
23366
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/artalk.nix>

services.artalk.user

Artalk user name.

Type: string

Default:

```
"artalk"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/artalk.nix>

services.artalk.workdir

Artalk working directory

Type: string

Default:

```
"/var/lib/artalk"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/artalk.nix>

services.asterisk.enable

Whether to enable the Asterisk PBX server.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/asterisk.nix>

services.asterisk.package

The asterisk package to use.

Type: package

Default:

```
pkgs.asterisk
```

Declared by:

<nixpkgs/nixos/modules/services/networking/asterisk.nix>

services.asterisk.confFiles

Sets the content of config files (typically ending with ‘.conf’) in the Asterisk configuration directory.

Note that if you want to change *asterisk.conf*, it is preferable to use the **services.asterisk.extraConfig** option over this option. If ‘"asterisk.conf"’ is specified with the **confFiles** option (not recommended), you must be prepared to set your own ‘astetcdir’ path.

See **https://www.asterisk.org/community/documentation/** for more examples of what is possible here.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "extensions.conf" = ''
    [tests]
    ; Dial 100 for "hello, world"
    exten => 100,1,Answer()
    same  =>     n,Wait(1)
    same  =>     n,Playback(hello-world)
    same  =>     n,Hangup()
    [softphones]
    include => tests
    [unauthorized]
  '';
  "sip.conf" = ''
```

```
      [general]
      allowguest=no                ; Require authentication
      context=unauthorized         ; Send unauthorized users to /dev/nu \
ll
      srvlookup=no                 ; Don't do DNS lookup
      udpbindaddr=0.0.0.0          ; Listen on all interfaces
      nat=force_rport,comedia      ; Assume device is behind NAT
      [softphone](!)
      type=friend                  ; Match on username first, IP second
      context=softphones           ; Send to softphones context in
                                   ; extensions.conf file
      host=dynamic                 ; Device will register with asterisk
      disallow=all                 ; Manually specify codecs to allow
      allow=g722
      allow=ulaw
      allow=alaw
      [myphone](softphone)
      secret=GhoshevFew            ; Change this password!
    '';
    "logger.conf" = ''
      [general]
      [logfiles]
      ; Add debug output to log
      syslog.local0 => notice,warning,error,debug
    '';
  }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/asterisk.nix>

services.asterisk.extraArguments

Additional command line arguments to pass to Asterisk.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-vvvddd"
  "-e"
  "1024"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/asterisk.nix>

services.asterisk.extraConfig

Extra configuration options appended to the default *asterisk.conf* file.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
[options]
verbose=3
debug=3
```

Declared by:

<nixpkgs/nixos/modules/services/networking/asterisk.nix>

services.asterisk.useTheseDefaultConfFiles

Sets these config files to the default content. The default value for this option contains all necesscary files to avoid errors at startup. This does not override settings via **services.asterisk.confFiles**.

Type: list of string

Default:

```
[
  "ari.conf"
  "acl.conf"
  "agents.conf"
  "amd.conf"
  "calendar.conf"
  "cdr.conf"
  "cdr_syslog.conf"
  "cdr_custom.conf"
  "cel.conf"
  "cel_custom.conf"
  "cli_aliases.conf"
  "confbridge.conf"
  "dundi.conf"
  "features.conf"
  "hep.conf"
  "iax.conf"
  "pjsip.conf"
  "pjsip_wizard.conf"
  "phone.conf"
  "phoneprov.conf"
  "queues.conf"
  "res_config_sqlite3.conf"
  "res_parking.conf"
  "statsd.conf"
  "udptl.conf"
  "unistim.conf"
]
```

Example:

```
[
  "sip.conf"
  "dundi.conf"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/asterisk.nix>

services.asusd.enable

Whether to enable the asusd service for ASUS ROG laptops.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.package

The asusctl package to use.

Type: package

Default:

```
pkgs.asusctl
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.animeConfig

The content of /etc/asusd/anime.ron. See **https://asus-linux.org/manual/asusctl-manual/#anime-control**.

Type: null or (submodule)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.animeConfig.source

Path of the source file.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.animeConfig.text

Text of the file.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.asusdConfig
The content of /etc/asusd/asusd.ron. See **https://asus-linux.org/manual/asusctl-manual/**.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.asusdConfig.source
Path of the source file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.asusdConfig.text
Text of the file.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.auraConfigs
The content of /etc/asusd/aura_<name>.ron. See **https://asus-linux.org/manual/asusctl-manual/#led-keyboard-control**.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.auraConfigs.<name>.source
Path of the source file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.auraConfigs.<name>.text
Text of the file.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.fanCurvesConfig
The content of /etc/asusd/fan_curves.ron. See **https://asus-linux.org/manual/asusctl-manual/#fan-curves**.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.fanCurvesConfig.source
Path of the source file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.fanCurvesConfig.text
Text of the file.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.profileConfig
The content of /etc/asusd/profile.ron. See **https://asus-linux.org/manual/asusctl-manual/#profiles**.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.profileConfig.source
Path of the source file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.profileConfig.text
Text of the file.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.userLedModesConfig
The content of /etc/asusd/asusd−user−ledmodes.ron. See **https://asus−linux.org/manual/asusctl−manual/#led−keyboard−control**.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.userLedModesConfig.source
Path of the source file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.asusd.userLedModesConfig.text
Text of the file.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/asusd.nix>

services.atalkd.enable
Whether to enable the AppleTalk daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/atalkd.nix>

services.atalkd.configFile

Optional path to a custom *atalkd.conf* file. When set, this overrides the generated configuration from 'services.atalkd.interfaces'.

Type: null or absolute path

Default:

```
"/nix/store/xxx-atalkd.conf"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/atalkd.nix>

services.atalkd.interfaces

Per−interface configuration for atalkd.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/atalkd.nix>

services.atalkd.interfaces.<name>.config

Optional configuration string for this interface.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/atalkd.nix>

services.atd.enable

Whether to enable the **at** daemon, a command scheduler.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/scheduling/atd.nix>

services.atd.allowEveryone

Whether to make */var/spool/at{jobs,spool}* writeable by everyone (and sticky). This is normally not needed since the **at** commands are setuid/setgid 'atd'.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/scheduling/atd.nix>

services.atftpd.enable

Whether to enable the atftpd TFTP server. By default, the server binds to address 0.0.0.0.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/atftpd.nix>

services.atftpd.extraOptions
Extra command line arguments to pass to atftp.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "--bind-address 192.168.9.1"
  "--verbose=7"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/atftpd.nix>

services.atftpd.root
Document root directory for the atftpd.

Type: absolute path

Default:

```
"/srv/tftp"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/atftpd.nix>

services.athens.enable
Whether to enable Go module datastore and proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.enablePprof
Enable pprof endpoints.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.package
Which athens derivation to use

Type: package

Default:

```
pkgs.athens
```

Example:

```
"pkgs.athens"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.basicAuthPass
Password for basic auth. Warning: this is stored in plain text in the config file.

Type: null or string

Default:

```
null
```

Example:

```
"swordfish"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.basicAuthUser
Username for basic auth.

Type: null or string

Default:

```
null
```

Example:

```
"user"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.cloudRuntime
Specifies the Cloud Provider on which the Proxy/registry is running.

Type: one of “GCP”, “none”

Default:

```
"none"
```

Example:

```
"GCP"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.downloadMode
Defines how Athens behaves when a module@version is not found in storage. There are 7 options:

1. “sync”: download the module synchronously and return the results to the client.
2. “async”: return 404, but asynchronously store the module in the storage backend.
3. “redirect”: return a 301 redirect status to the client with the base URL as the DownloadRedirectURL from below.
4. “async_redirect”: same as option number 3 but it will asynchronously store the module to the backend.
5. “none”: return 404 if a module is not found and do nothing.
6. “file:<path>”: will point to an HCL file that specifies any of the 5 options above based on different import paths.
7. “custom:<base64−encoded−hcl>” is the same as option 6 but the file is fully encoded in the option. This is useful for using an environment variable in serverless deployments.

Type: one of “sync”, “async”, “redirect”, “async_redirect”, “none” or string matching the pattern ^file:.*$|^custom:.*$

Default:

```
"async_redirect"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.downloadURL
URL used if DownloadMode is set to redirect.

Type: string

Default:

```
"https://proxy.golang.org"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.extraConfig
Extra configuration options for the athens config file.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.filterFile
Filename for the include exclude filter.

Type: null or absolute path

Default:

```
null
```

Example:

```
pkgs.writeText "filterFile" ''
  - github.com/azure
  + github.com/azure/azure-sdk-for-go
  D golang.org/x/tools
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.forceSSL
Force SSL redirects for incoming requests.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.githubToken

Creates .netrc file with the given token to be used for GitHub. Warning: this is stored in plain text in the config file.

Type: null or string

Default:

```
null
```

Example:

```
"ghp_1234567890"
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.globalEndpoint

Endpoint for a package registry in case of a proxy cache miss.

Type: string

Default:

```
""
```

Example:

```
"http://upstream-athens.example.com:3000"
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.goBinary

The Go package used by Athens at runtime.

Athens primarily runs two Go commands:

1. 'go mod download -json <module>@<version>'
2. 'go list -m -json <module>@latest'

Type: package

Default:

```
pkgs.go
```

Example:

```
"pkgs.go_1_23"
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.goBinaryEnvVars

Environment variables to pass to the Go binary.

Type: attribute set

Default:

```
{ }
```

Example:

```
{ "GOPROXY" = "direct", "GODEBUG" = "true" }
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.goEnv
Specifies the type of environment to run. One of ‘development’ or ‘production’.

Type: one of “development”, “production”

Default:

```
"development"
```

Example:

```
"production"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.goGetDir
Temporary directory that Athens will use to fetch modules from VCS prior to persisting them to a storage backend.

If the value is empty, Athens will use the default OS temp directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/tmp/athens"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.goGetWorkers
Number of workers concurrently downloading modules.

Type: signed integer

Default:

```
10
```

Example:

```
32
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.hgrcPath
Path to the .hgrc file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/home/user/.hgrc"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.index.mysql.database
Database name for the MySQL database.

Type: string

Default:

```
"athens"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.index.mysql.host
Host for the MySQL database.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.index.mysql.params.parseTime
Parse time for the MySQL database.

Type: null or string

Default:

```
"true"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.index.mysql.params.timeout
Timeout for the MySQL database.

Type: null or string

Default:

```
"30s"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.index.mysql.password
Password for the MySQL database. Warning: this is stored in plain text in the config file.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.index.mysql.port
Port for the MySQL database.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.index.mysql.protocol
Protocol for the MySQL database.

Type: string

Default:

```
"tcp"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.index.mysql.user
User for the MySQL database.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.index.postgres.database
Database name for the Postgres database.

Type: string

Default:

```
"athens"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.index.postgres.host
Host for the Postgres database.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.index.postgres.params.connect_timeout
Connect timeout for the Postgres database.

Type: null or string

Default:

```
"30s"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.index.postgres.params.sslmode
SSL mode for the Postgres database.

Type: null or string

Default:

```
"disable"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.index.postgres.password
Password for the Postgres database. Warning: this is stored in plain text in the config file.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.index.postgres.port
Port for the Postgres database.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5432
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.index.postgres.user
User for the Postgres database.

Type: string

Default:

```
"postgres"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.indexType
Type of index backend Athens will use.

Type: one of “none”, “memory”, “mysql”, “postgres”

Default:

```
"none"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.logLevel
Log level for Athens. Supports all logrus log levels (https://github.com/Sirupsen/logrus#level−logging)".

Type: null or one of “panic”, “fatal”, “error”, “warning”, “info”, “debug”, “trace”

Default:

```
"warning"
```

Example:

```
"debug"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.netrcPath
Path to the .netrc file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/home/user/.netrc"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.networkMode
Configures how Athens will return the results of the /list endpoint as it can be assembled from both its own storage and the upstream VCS.

Note, that for better error messaging, this would also affect how other endpoints behave.

Modes:

1. strict: merge VCS versions with storage versions, but fail if either of them fails.
2. offline: only get storage versions, never reach out to VCS.
3. fallback: only return storage versions, if VCS fails. Note this means that you may see inconsistent results since fallback mode does a best effort of giving you what's available at the time of requesting versions.

Type: one of "strict", "offline", "fallback"

Default:

```
"strict"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.noSumPatterns
List of patterns that Athens sum db proxy will return a 403 for.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "github.com/mycompany/*"
]
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.pathPrefix

Sets basepath for all routes.

Type: null or string

Default:

```
null
```

Example:

```
"/athens"
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.port

Port number Athens listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Example:

```
443
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.pprofPort

Port number for pprof endpoints.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3301
```

Example:

```
443
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.protocolWorkers

Number of workers concurrently serving protocol paths.

Type: signed integer

Default:

```
30
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.robotsFile

Provides /robots.txt for net crawlers.

Type: null or absolute path

Default:

```
null
```

Example:

```
pkgs.writeText "robots.txt" "# my custom robots.txt ..."
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.shutdownTimeout
Number of seconds to wait for the server to shutdown gracefully.

Type: signed integer

Default:

```
60
```

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.singleFlight.etcd.endpoints
URLs that determine all distributed etcd servers.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "localhost:2379"
]
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.singleFlight.redis.endpoint
URL of the redis server.

Type: string

Default:

```
""
```

Example:

```
"localhost:6379"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.singleFlight.redis.lockConfig.maxRetries
Maximum number of retries for the lock.

Type: signed integer

Default:

```
10
```

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.singleFlight.redis.lockConfig.timeout
Timeout for the lock in seconds.

Type: signed integer

Default:

```
15
```

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.singleFlight.redis.lockConfig.ttl
TTL for the lock in seconds.

Type: signed integer

Default:

```
900
```

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.singleFlight.redis.password
Password for the redis server. Warning: this is stored in plain text in the config file.

Type: string

Default:

```
""
```

Example:

```
"swordfish"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.singleFlight.redisSentinel.endpoints
URLs that determine all distributed redis servers.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "localhost:26379"
]
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.singleFlight.redisSentinel.lockConfig.maxRetries
Maximum number of retries for the lock.

Type: signed integer

Default:

```
10
```

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.singleFlight.redisSentinel.lockConfig.timeout
Timeout for the lock in seconds.

Type: signed integer

Default:

```
15
```

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.singleFlight.redisSentinel.lockConfig.ttl
TTL for the lock in seconds.

Type: signed integer

Default:

```
900
```

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.singleFlight.redisSentinel.masterName
Name of the sentinel master server.

Type: string

Default:

```
""
```

Example:

```
"redis-1"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.singleFlight.redisSentinel.sentinelPassword
Password for the sentinel server. Warning: this is stored in plain text in the config file.

Type: string

Default:

```
""
```

Example:

```
"swordfish"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.singleFlightType
Determines what mechanism Athens uses to manage concurrency flowing into the Athens backend.

Type: one of “memory”, “etcd”, “redis”, “redis−sentinel”, “gcp”, “azureblob”

Default:

```
"memory"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.statsExporter
Stats exporter to use.

Type: null or value “prometheus” (singular enum)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.azureblob.accountKey
Account key for the Azure Blob storage backend. Warning: this is stored in plain text in the config file.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.azureblob.accountName
Account name for the Azure Blob storage backend.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.azureblob.containerName
Container name for the Azure Blob storage backend.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.cdn.endpoint
hostname of the CDN server.

Type: null or string

Default:

```
null
```

Example:

```
"cdn.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.disk.rootPath
Athens disk root folder.

Type: null or absolute path

Default:

```
"/var/lib/athens"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.external.url
URL of the backend storage layer.

Type: null or string

Default:

```
null
```

Example:

```
"https://athens.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.gcp.bucket
GCP backend storage bucket.

Type: null or string

Default:

```
null
```

Example:

```
"my-bucket"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.gcp.jsonKey
Base64 encoded GCP service account key. Warning: this is stored in plain text in the config file.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.gcp.projectID
GCP project ID.

Type: null or string

Default:

```
null
```

Example:

```
"my-project"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.mongo.certPath
Path to the certificate file for the mongo database.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/ssl/mongo.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.mongo.defaultDBName
Name of the mongo database.

Type: null or string

Default:

```
null
```

Example:

```
"athens"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.mongo.insecure
Allow insecure connections to the mongo database.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.mongo.url
URL of the mongo database.

Type: null or string

Default:

```
null
```

Example:

```
"mongodb://localhost:27017"
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.s3.awsContainerCredentialsRelativeURI

Container relative url (used by fargate).

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.s3.bucket

Bucket name for the S3 storage backend.

Type: null or string

Default:

```
null
```

Example:

```
"gomods"
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.s3.credentialsEndpoint

Credentials endpoint for the S3 storage backend.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.s3.endpoint

Endpoint for the S3 storage backend.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.s3.forcePathStyle

Force path style for the S3 storage backend.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.s3.key
Access key id for the S3 storage backend.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.s3.region
Region of the S3 storage backend.

Type: null or string

Default:

```
null
```

Example:

```
"eu-west-3"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.s3.secret
Secret key for the S3 storage backend. Warning: this is stored in plain text in the config file.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.s3.token
Token for the S3 storage backend. Warning: this is stored in plain text in the config file.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storage.s3.useDefaultConfiguration
Use default configuration for the S3 storage backend.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.storageType

Specifies the type of storage backend to use.

Type: one of “memory”, “disk”, “mongo”, “gcp”, “s3”, “azureblob”, “external”

Default:

```
"disk"
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.sumDBs

List of fully qualified URLs that Athens will proxy that the go command can use a checksum verifier.

Type: list of string

Default:

```
[
  "https://sum.golang.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.timeout

Timeout for external network calls in seconds.

Type: signed integer

Default:

```
300
```

Example:

```
3
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.tlsCertFile

Path to the TLS certificate file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/ssl/certs/athens.crt"
```

Declared by:

<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.tlsKeyFile

Path to the TLS key file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/ssl/certs/athens.key"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.traceExporter
Trace exporter to use.

Type: null or one of “jaeger”, “datadog”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.traceExporterURL
URL endpoint that traces will be sent to.

Type: null or string

Default:

```
null
```

Example:

```
"http://localhost:14268"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.unixSocket
Path to the unix socket file. If set, Athens will listen on the unix socket instead of TCP socket.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/athens.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.athens.validatorHook
Endpoint to validate modules against.

Not used if empty.

Type: null or string

Default:

```
null
```

Example:

```
"https://validation.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/development/athens.nix>

services.atticd.enable

Whether to enable the atticd, the Nix Binary Cache server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/atticd.nix>

services.atticd.package

The attic−server package to use.

Type: package

Default:

```
pkgs.attic-server
```

Declared by:
<nixpkgs/nixos/modules/services/networking/atticd.nix>

services.atticd.environmentFile

Path to an EnvironmentFile containing required environment variables:

- ATTIC_SERVER_TOKEN_RS256_SECRET_BASE64: The base64−encoded RSA PEM PKCS1 of the RS256 JWT secret. Generate it with ‘openssl genrsa −traditional 4096 | base64 −w0’.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/atticd.nix>

services.atticd.group

The group under which attic runs.

Type: string

Default:

```
"atticd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/atticd.nix>

services.atticd.mode

Mode in which to run the server.

‘monolithic’ runs all components, and is suitable for single−node deployments.

‘api−server’ runs only the API server, and is suitable for clustering.

‘garbage−collector’ only runs the garbage collector periodically.

A simple NixOS−based Attic deployment will typically have one ‘monolithic’ and any number of ‘api−server’ nodes.

There are several other supported modes that perform one−off operations, but these are the only ones that make sense to run via the NixOS module.

Type: one of “monolithic”, “api−server”, “garbage−collector”

Default:

```
"monolithic"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/atticd.nix>

services.atticd.settings
Structured configurations of atticd. See **https://github.com/zhaofengli/attic/blob/main/server/src/config−template.toml**

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/atticd.nix>

services.atticd.user
The user under which attic runs.

Type: string

Default:

```
"atticd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/atticd.nix>

services.atuin.enable
Whether to enable Atuin server for shell history sync.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/atuin.nix>

services.atuin.package
The atuin package to use.

Type: package

Default:

```
pkgs.atuin
```

Declared by:
<nixpkgs/nixos/modules/services/misc/atuin.nix>

services.atuin.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/atuin.nix>

services.atuin.database.uri
URI to the database. Can be set to null in which case ATUIN_DB_URI should be set through an EnvironmentFile

Type: null or string

Default:

```
"postgresql:///atuin?host=/run/postgresql"
```

Example:

```
"postgresql://atuin@localhost:5432/atuin"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/atuin.nix>

services.atuin.environmentFile
Environment file, used to set any secret ATUIN_* environment variables, such as ATUIN_DB_URI containing a password. See https://docs.atuin.sh/cli/self−hosting/server−setup/#configuration for available environment variables.

Type: null or absolute path not in the Nix store

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/atuin.nix>

services.atuin.host
The host address the atuin server should listen on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/atuin.nix>

services.atuin.maxHistoryLength
The max length of each history item the atuin server should store.

Type: signed integer

Default:

```
8192
```

Declared by:
<nixpkgs/nixos/modules/services/misc/atuin.nix>

services.atuin.openFirewall
Open ports in the firewall for the atuin server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/atuin.nix>

services.atuin.openRegistration
Allow new user registrations with the atuin server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/atuin.nix>

services.atuin.path
A path to prepend to all the routes of the server.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/atuin.nix>

services.atuin.port
The port the atuin server should listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8888
```

Declared by:
<nixpkgs/nixos/modules/services/misc/atuin.nix>

services.audiobookshelf.enable
Whether to enable Audiobookshelf, self−hosted audiobook and podcast server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/audiobookshelf.nix>

services.audiobookshelf.package
The audiobookshelf package to use.

Type: package

Default:

```
pkgs.audiobookshelf
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/audiobookshelf.nix>

services.audiobookshelf.dataDir

Path to Audiobookshelf config and metadata inside of /var/lib.

Type: string

Default:

```
"audiobookshelf"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/audiobookshelf.nix>

services.audiobookshelf.group

Group under which Audiobookshelf runs.

Type: string

Default:

```
"audiobookshelf"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/audiobookshelf.nix>

services.audiobookshelf.host

The host Audiobookshelf binds to.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/audiobookshelf.nix>

services.audiobookshelf.openFirewall

Open ports in the firewall for the Audiobookshelf web interface.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/audiobookshelf.nix>

services.audiobookshelf.port

The TCP port Audiobookshelf will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/audiobookshelf.nix>

services.audiobookshelf.user

User account under which Audiobookshelf runs.

Type: string

Default:

```
"audiobookshelf"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/audiobookshelf.nix>

services.authelia.instances

Multi−domain protection currently requires multiple instances of Authelia. If you don’t require multiple instances of Authelia you can define just the one.

https://www.authelia.com/roadmap/active/multi−domain−protection/

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
  {
    main = {
      enable = true;
      secrets.storageEncryptionKeyFile = "/etc/authelia/storageEncr \
yptionKeyFile";
      secrets.jwtSecretFile = "/etc/authelia/jwtSecretFile";
      settings = {
        theme = "light";
        default_2fa_method = "totp";
        log.level = "debug";
        server.disable_healthcheck = true;
      };
    };
    preprod = {
      enable = false;
      secrets.storageEncryptionKeyFile = "/mnt/pre−prod/authelia/s \
torageEncryptionKeyFile";
      secrets.jwtSecretFile = "/mnt/pre−prod/jwtSecretFile";
      settings = {
        theme = "dark";
        default_2fa_method = "webauthn";
        server.host = "0.0.0.0";
      };
    };
    test.enable = true;
    test.secrets.manual = true;
    test.settings.theme = "grey";
    test.settings.server.disable_healthcheck = true;
    test.settingsFiles = [ "/mnt/test/authelia" "/mnt/test−autheli \
a.conf" ];
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.enable
Whether to enable Authelia instance.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.package
The authelia package to use.

Type: package

Default:

```
pkgs.authelia
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.environmentVariables
Additional environment variables to provide to authelia. If you are providing secrets please consider the options under **services.authelia.<instance>.secrets** or make sure you use the '_FILE' suffix. If you provide the raw secret rather than the location of a secret file that secret will be preserved in the nix store. For more details: **https://www.authelia.com/configuration/methods/secrets/**

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.group
The name of the group for this authelia instance.

Type: string

Default:

```
if name == "" then "authelia" else "authelia-${name}"
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.name
Name is used as a suffix for the service name, user, and group. By default it takes the value you use for '<instance>' in: **services.authelia.instances.<instance>**

When set to the empty string '""', the service name, user, and group will be just 'authelia' without a suffix.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.secrets
It is recommended you keep your secrets separate from the configuration. It's especially important to keep the raw secrets out of your nix configuration, as the values will be preserved in your nix store. This attribute allows you to configure the location of secret files to be loaded at runtime.

https://www.authelia.com/configuration/methods/secrets/

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.secrets.jwtSecretFile
Path to your JWT secret used during identity verificaton.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.secrets.manual
Configuring authelia's secret files via the secrets attribute set is intended to be convenient and help catch cases where values are required to run at all. If a user wants to set these values themselves and bypass the validation they can set this value to true.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.secrets.oidcHmacSecretFile
Path to your HMAC secret used to sign OIDC JWTs.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.secrets.oidcIssuerPrivateKeyFile
Path to your private key file used to encrypt OIDC JWTs.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.secrets.sessionSecretFile
Path to your session secret. Only used when redis is used as session storage.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.secrets.storageEncryptionKeyFile
Path to your storage encryption key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.settings
Your Authelia config.yml as a Nix attribute set. There are several values that are defined and documented in nix such as ‘default_2fa_method’, but additional items can also be included.

https://github.com/authelia/authelia/blob/master/config.template.yml

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
{
  theme = "light";
  default_2fa_method = "totp";
  log.level = "debug";
  server.disable_healthcheck = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.settings.default_2fa_method
Default 2FA method for new users and fallback for preferred but disabled methods.

Type: one of “”, “totp”, “webauthn”, “mobile_push”

Default:

```
""
```

Example:

```
"webauthn"
```

Declared by:

<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.settings.log.file_path

File path where the logs will be written. If not set logs are written to stdout.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/log/authelia/authelia.log"
```

Declared by:

<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.settings.log.format

Format the logs are written as.

Type: one of “json”, “text”

Default:

```
"json"
```

Example:

```
"text"
```

Declared by:

<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.settings.log.keep_stdout

Whether to also log to stdout when a ‘file_path’ is defined.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.settings.log.level

Level of verbosity for logs.

Type: one of “trace”, “debug”, “info”, “warn”, “error”

Default:

```
"debug"
```

Example:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.settings.server.address
The address to listen on.

Type: string

Default:

```
"tcp://:9091/"
```

Example:

```
"unix:///var/run/authelia.sock?path=authelia&umask=0117"
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.settings.telemetry.metrics.enabled
Enable Metrics.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.settings.telemetry.metrics.address
The address to listen on for metrics. This should be on a different port to the main ‘server.port’ value.

Type: string

Default:

```
"tcp://127.0.0.1:9959"
```

Example:

```
"tcp://0.0.0.0:8888"
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.settings.theme
The theme to display.

Type: one of “light”, “dark”, “grey”, “auto”

Default:

```
"light"
```

Example:

```
"dark"
```

Declared by:
<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.settingsFiles

Here you can provide authelia with configuration files or directories. It is possible to give authelia multiple files and use the nix generated configuration file set via **services.authelia.<instance>.settings**.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/etc/authelia/config.yml"
  "/etc/authelia/access-control.yml"
  "/etc/authelia/config/"
]
```

Declared by:

<nixpkgs/nixos/modules/services/security/authelia.nix>

services.authelia.instances.<name>.user

The name of the user for this authelia instance.

Type: string

Default:

```
if name == "" then "authelia" else "authelia-${name}"
```

Declared by:

<nixpkgs/nixos/modules/services/security/authelia.nix>

services.auto-cpufreq.enable

Whether to enable auto-cpufreq daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/auto-cpufreq.nix>

services.auto-cpufreq.settings

Configuration for ‘auto-cpufreq’.

The available options can be found in **the example configuration file**.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  battery = {
    governor = "powersave";
    turbo = "never";
  };
```

```
    charger = {
      governor = "performance";
      turbo = "auto";
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/auto-cpufreq.nix>

services.auto-epp.enable
Whether to enable auto-epp for amd active pstate.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/auto-epp.nix>

services.auto-epp.package
The auto-epp package to use.

Type: package

Default:

```
pkgs.auto-epp
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/auto-epp.nix>

services.auto-epp.settings
Settings for the auto-epp application. See upstream example: **https://github.com/jothi-prasath/auto-epp/blob/master/sample-auto-epp.conf**

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/auto-epp.nix>

services.auto-epp.settings.Settings.epp_state_for_AC
energy_performance_preference when on plugged in

Note
See available epp states by running: **cat /sys/devices/system/cpu/cpu0/cpufreq/energy_performance_available_preferences**

Type: string

Default:

```
"balance_performance"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/auto−epp.nix>

services.auto−epp.settings.Settings.epp_state_for_BAT
'energy_performance_preference' when on battery

Note
See available epp states by running: **cat /sys/devices/system/cpu/cpu0/cpufreq/energy_performance_available_preferences**

Type: string

Default:

```
"power"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/auto−epp.nix>

services.autobrr.enable
Whether to enable Autobrr.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autobrr.nix>

services.autobrr.package
The autobrr package to use.

Type: package

Default:

```
pkgs.autobrr
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autobrr.nix>

services.autobrr.openFirewall
Open ports in the firewall for the Autobrr web interface.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autobrr.nix>

services.autobrr.secretFile
File containing the session secret for the Autobrr web interface.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/misc/autobrr.nix>

services.autobrr.settings

Autobrr configuration options.

Refer to **https://autobrr.com/configuration/autobrr** for a full list.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Example:

```
{
  logLevel = "DEBUG";
  port = 7654;
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/autobrr.nix>

services.autobrr.settings.checkForUpdates

Whether autobrr needs to check for updates.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/autobrr.nix>

services.autobrr.settings.host

The host address autobrr listens on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/autobrr.nix>

services.autobrr.settings.port

The port autobrr listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7474
```

Declared by:

<nixpkgs/nixos/modules/services/misc/autobrr.nix>

services.autofs.enable

Mount filesystems on demand. Unmount them automatically. You may also be interested in afuse.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autofs.nix>

services.autofs.autoMaster
Contents of '/etc/auto.master' file. See **auto.master**(5) and **autofs**(5).

Type: string

Example:

```
let
  mapConf = pkgs.writeText "auto" ''
   kernel    -ro,soft,intr       ftp.kernel.org:/pub/linux
   boot      -fstype=ext2        :/dev/hda1
   windoze   -fstype=smbfs       ://windoze/c
   removable -fstype=ext2        :/dev/hdd
   cd        -fstype=iso9660,ro  :/dev/hdc
   floppy    -fstype=auto        :/dev/fd0
   server    -rw,hard,intr       / -ro myserver.me.org:/ \
                                 /usr myserver.me.org:/usr \
                                 /home myserver.me.org:/home

  '';
in ''
  /auto file:${mapConf}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autofs.nix>

services.autofs.debug
Pass −d and −7 to automount and write log to the system journal.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autofs.nix>

services.autofs.timeout
Set the global minimum timeout, in seconds, until directories are unmounted

Type: signed integer

Default:

```
600
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autofs.nix>

services.automatic−timezoned.enable
Enable 'automatic−timezoned', simple daemon for keeping the system timezone up−to−date based on the current location. It uses geoclue2 to determine the current location and systemd−timedated to actually set the timezone.

To avoid silent overriding by the service, if you have explicitly set a timezone, either remove it or ensure that it is set with a lower priority than the default value using 'lib.mkDefault' or 'lib.mkOverride'. This is to make the choice deliberate. An error will be presented otherwise.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/system/automatic−timezoned.nix>

services.automatic−timezoned.package
The automatic−timezoned package to use.

Type: package

Default:

```
pkgs.automatic−timezoned
```

Declared by:
<nixpkgs/nixos/modules/services/system/automatic−timezoned.nix>

services.automx2.enable
Whether to enable automx2.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/automx2.nix>

services.automx2.package
The automx2 package to use.

Type: package

Default:

```
pkgs.python3Packages.automx2
```

Declared by:
<nixpkgs/nixos/modules/services/mail/automx2.nix>

services.automx2.domain
E−Mail−Domain for which mail client autoconfig/autoconfigure should be set up. The ‘autoconfig’ and ‘autodiscover’ subdomains are automatically prepended and set up with ACME. The names of those domains are hardcoded in the mail clients and are not configurable.

Type: string

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/automx2.nix>

services.automx2.port
Port used by automx2.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4243
```

Declared by:
<nixpkgs/nixos/modules/services/mail/automx2.nix>

services.automx2.settings
Bootstrap json to populate database. See **docs** for details.

Type: JSON value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/automx2.nix>

services.automysqlbackup.enable
Whether to enable AutoMySQLBackup.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/automysqlbackup.nix>

services.automysqlbackup.calendar
Configured when to run the backup service systemd unit (DayOfWeek Year−Month−Day Hour:Minute:Second).

Type: string

Default:

```
"01:15:00"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/automysqlbackup.nix>

services.automysqlbackup.settings
automysqlbackup configuration. Refer to *${pkgs.automysqlbackup}/etc/automysqlbackup.conf* for details on supported values.

Type: attribute set of (string or signed integer or boolean or list of string)

Default:

```
{ }
```

Example:

```
{
  db_names = [ "nextcloud" "matomo" ];
  table_exclude = [ "nextcloud.oc_users" "nextcloud.oc_whats_new" ] \
;
  mailcontent = "log";
  mail_address = "admin@example.org";
}
```

Declared by:
<nixpkgs/nixos/modules/services/backup/automysqlbackup.nix>

services.autorandr.enable
Whether to enable handling of hotplug and sleep events by autorandr.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.defaultTarget
Fallback if no monitor layout can be detected. See the docs (https://github.com/phillipberndt/autorandr/blob/v1.0/README.md#how−to−use) for further reference.

Type: string

Default:

```
"default"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.hooks
Global hook scripts

Type: submodule

Default:

```
{ }
```

Example:

```
{
  postswitch = {
    "notify−i3" = "${pkgs.i3}/bin/i3−msg restart";
    "change−background" = readFile ./change−background.sh;
    "change−dpi" = ''
      case "$AUTORANDR_CURRENT_PROFILE" in
        default)
          DPI=120
          ;;
        home)
          DPI=192
          ;;
        work)
          DPI=144
          ;;
        *)
          echo "Unknown profle: $AUTORANDR_CURRENT_PROFILE"
          exit 1
      esac
      echo "Xft.dpi: $DPI" | ${pkgs.xrdb}/bin/xrdb −merge
    '';
```

```
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.hooks.postswitch
Postswitch hook executed after mode switch.

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.hooks.predetect
Predetect hook executed before autorandr attempts to run xrandr.

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.hooks.preswitch
Preswitch hook executed before mode switch.

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.ignoreLid
Treat outputs as connected even if their lids are closed

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.matchEdid
Match displays based on edid instead of name

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles

Autorandr profiles specification.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "work" = {
    fingerprint = {
      eDP1 = "<EDID>";
      DP1 = "<EDID>";
    };
    config = {
      eDP1.enable = false;
      DP1 = {
        enable = true;
        crtc = 0;
        primary = true;
        position = "0x0";
        mode = "3840x2160";
        gamma = "1.0:0.909:0.833";
        rate = "60.00";
        rotate = "left";
      };
    };
    hooks.postswitch = readFile ./work-postswitch.sh;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.config

Per output profile configuration.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.config.<name>.enable

Whether to enable the output.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.config.<name>.crtc
Output video display controller.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Example:

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.config.<name>.dpi
Output DPI configuration.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Example:

```
96
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.config.<name>.gamma
Output gamma configuration.

Type: string

Default:

```
""
```

Example:

```
"1.0:0.909:0.833"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.config.<name>.mode
Output resolution.

Type: string

Default:

```
""
```

Example:

```
"3840x2160"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.config.<name>.position
Output position

Type: string

Default:

```
""
```

Example:

```
"5760x0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.config.<name>.primary
Whether output should be marked as primary

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.config.<name>.rate
Output framerate.

Type: string

Default:

```
""
```

Example:

```
"60.00"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.config.<name>.rotate
Output rotate configuration.

Type: null or one of “normal”, “left”, “right”, “inverted”

Default:

```
null
```

Example:

```
"left"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.config.<name>.scale
Output scale configuration.

Either configure by pixels or a scaling factor. When using pixel method the **xrandr**(1) option ‘−−scale−from’ will be used; when using factor method the option ‘−−scale’ will be used.

This option is a shortcut version of the transform option and they are mutually exclusive.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  x = 1.25;
  y = 1.25;
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.config.<name>.scale.method
Output scaling method.

Type: one of “factor”, “pixel”

Default:

```
"factor"
```

Example:

```
"pixel"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.config.<name>.scale.x
Horizontal scaling factor/pixels.

Type: floating point number or (positive integer, meaning >0)

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.config.<name>.scale.y
Vertical scaling factor/pixels.

Type: floating point number or (positive integer, meaning >0)

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.config.<name>.transform
Refer to **xrandr**(1) for the documentation of the transform matrix.

Type: null or (3×3 matrix of floating point numbers)

Default:

```
null
```

Example:

```
[
  [ 0.6 0.0 0.0 ]
  [ 0.0 0.6 0.0 ]
  [ 0.0 0.0 1.0 ]
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.fingerprint
Output name to EDID mapping. Use ‘autorandr −−fingerprint’ to get current setup values.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.hooks
Profile hook scripts.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.hooks.postswitch
Postswitch hook executed after mode switch.

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.hooks.predetect
Predetect hook executed before autorandr attempts to run xrandr.

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autorandr.profiles.<name>.hooks.preswitch
Preswitch hook executed before mode switch.

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autorandr.nix>

services.autossh.sessions
List of AutoSSH sessions to start as systemd services. Each service is named ‘autossh−{session.name}’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    extraArguments = "−N −D4343 billremote@socks.host.net";
    monitoringPort = 20000;
    name = "socks−peer";
    user = "bill";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/autossh.nix>

services.autossh.sessions.*.extraArguments
Arguments to be passed to AutoSSH and retransmitted to SSH process. Some meaningful options include −N (don't run remote command), −D (open SOCKS proxy on local port), −R (forward remote port), −L (forward local port), −v (Enable debug). Check ssh manual for the complete list.

Type: strings concatenated with " "

Example:

```
"-N -D4343 bill@socks.example.net"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/autossh.nix>

services.autossh.sessions.*.monitoringPort
Port to be used by AutoSSH for peer monitoring. Note, that AutoSSH also uses mport+1. Value of 0 disables the keep−alive style monitoring

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

Example:

```
20000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/autossh.nix>

services.autossh.sessions.*.name
Name of the local AutoSSH session

Type: string

Example:

```
"socks-peer"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/autossh.nix>

services.autossh.sessions.*.user
Name of the user the AutoSSH session should run as

Type: string

Example:

```
"bill"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/autossh.nix>

services.autossh-ng.sessions
Set of SSH sessions to start as systemd services. Each service is named 'autossh−ng−{session.name}'.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  socket-peer = {
```

```
        destination = "billremote@socks.host.net";
        extraArguments = "-L2222:localhost:22 -i \${config.age.secre \
    ts.privatekey.path}";
        user = "bill";
      };
    }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/autossh-ng.nix>

services.autossh-ng.sessions.<name>.destination
Destination to connect to

Type: string

Example:

```
"billremote@socks.host.net"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/autossh-ng.nix>

services.autossh-ng.sessions.<name>.extraArguments
Arguments to be passed to the ssh process process. Some meaningful options include -D (open SOCKS proxy on local port), -R (forward remote port), -L (forward local port), -v (Enable debug), -i (identity file to use). Check ssh manual for the complete list.

Type: strings concatenated with " "

Example:

```
"-L2222:localhost:22 -i \${config.age.secrets.privatekey.path}"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/autossh-ng.nix>

services.autossh-ng.sessions.<name>.hostKeyChecking
Whether to enable host key checking. The advantage of enabling host key checking is that it protects against AitM attacks, on the other hand disabling host key checking makes the autossh connection resilient against host key rotations of the destination machine.

Type: boolean

Declared by:
<nixpkgs/nixos/modules/services/networking/autossh-ng.nix>

services.autossh-ng.sessions.<name>.knownHostsFile
If you enabled host key checking, use this file to verify destination host keys against.

Type: absolute path

Example:

```
"/home/bill/.ssh/known_hosts"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/autossh-ng.nix>

services.autossh-ng.sessions.<name>.user
Name of the user the local session should run as

Type: string

Example:

```
"bill"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/autossh−ng.nix>

services.autosuspend.enable
Whether to enable the autosuspend daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autosuspend.nix>

services.autosuspend.package
The autosuspend package to use.

Type: package

Default:

```
pkgs.autosuspend
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autosuspend.nix>

services.autosuspend.checks
Checks for activity. For more information, see:

- **https://autosuspend.readthedocs.io/en/latest/configuration_file.html#activity−check−configuration**
- **https://autosuspend.readthedocs.io/en/latest/available_checks.html**

Type: attribute set of (open submodule of section of an INI file (attrs of INI atom (null, bool, int, float or string)))

Default:

```
{ }
```

Example:

```
{
  # Basic activity check configuration.
  # The check class name is derived from the section header (Ping i \
n this case).
  # Remember to enable desired checks. They are disabled by default \
.
  Ping = {
    hosts = "192.168.0.7";
  };
  # This check is disabled.
  Smb.enabled = false;
  # Example for a custom check name.
  # This will use the Users check with the custom name RemoteUsers.
  # Custom names are necessary in case a check class is used multip \
le times.
  # Custom names can also be used for clarification.
  RemoteUsers = {
```

```
      class = "Users";
      name = ".*";
      terminal = ".*";
      host = "[0-9].*";
    };
    # Here the Users activity check is used again with different sett \
  ings and a different name
    LocalUsers = {
      class = "Users";
      name = ".*";
      terminal = ".*";
      host = "localhost";
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autosuspend.nix>

services.autosuspend.checks.<name>.enabled
Whether to enable this activity check.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autosuspend.nix>

services.autosuspend.checks.<name>.class
Name of the class implementing the check. If this option is not specified, the check's name must represent a valid internal check class.

Type: null or one of "ActiveCalendarEvent", "ActiveConnection", "ExternalCommand", "JsonPath", "Kodi", "KodiIdleTime", "LastLogActivity", "Load", "LogindSessionsIdle", "Mpd", "NetworkBandwidth", "Ping", "Processes", "Smb", "Users", "XIdleTime", "XPath"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autosuspend.nix>

services.autosuspend.settings
Configuration for autosuspend, see **https://autosuspend.readthedocs.io/en/latest/configuration_file.html#general-configuration** for supported values.

Type: open submodule of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  enable = true;
  interval = 30;
```

```
  idle_time = 120;
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autosuspend.nix>

services.autosuspend.settings.suspend_cmd
The command to execute in case the host shall be suspended. This line can contain additional command line arguments to the command to execute.

Type: string

Default:

```
"systemctl suspend"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autosuspend.nix>

services.autosuspend.settings.wakeup_cmd
The command to execute for scheduling a wake up of the system. The given string is processed using Python's 'str.format()' and a format argument called 'timestamp' encodes the UTC timestamp of the planned wake up time (float). Additionally 'iso' can be used to acquire the timestamp in ISO 8601 format.

Type: string

Default:

```
"sh -c 'echo 0 > /sys/class/rtc/rtc0/wakealarm && echo {timestamp: \
.0f} > /sys/class/rtc/rtc0/wakealarm' "
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autosuspend.nix>

services.autosuspend.wakeups
Checks for wake up. For more information, see:

- **https://autosuspend.readthedocs.io/en/latest/configuration_file.html#wake-up-check-configuration**
- **https://autosuspend.readthedocs.io/en/latest/available_wakeups.html**

Type: attribute set of (open submodule of section of an INI file (attrs of INI atom (null, bool, int, float or string)))

Default:

```
{ }
```

Example:

```
{
  # Wake up checks reuse the same configuration mechanism as activi \
ty checks.
  Calendar = {
    url = "http://example.org/test.ics";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/autosuspend.nix>

services.autosuspend.wakeups.<name>.enabled

Whether to enable this wake−up check.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/autosuspend.nix>

services.autosuspend.wakeups.<name>.class

Name of the class implementing the check. If this option is not specified, the check's name must represent a valid internal check class.

Type: null or one of "Calendar", "Command", "File", "Periodic", "SystemdTimer", "XPath", "XPathDelta"

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/misc/autosuspend.nix>

services.autotierfs.enable

Whether to enable the autotier passthrough tiering filesystem.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/autotierfs.nix>

services.autotierfs.package

The autotier package to use.

Type: package

Default:

```
pkgs.autotier
```

Declared by:

<nixpkgs/nixos/modules/services/autotierfs.nix>

services.autotierfs.settings

The contents of the configuration file for autotier. See the **autotier repo** for supported values.

Type: open submodule of attribute set of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  "/mnt/autotier" = {
    Global = {
      "Log Level" = 1;
      "Tier Period" = 1000;
      "Copy Buffer Size" = "1 MiB";
    };
    "Tier 1" = {
      Path = "/mnt/tier1";
      Quota = "30GiB";
    };
    "Tier 2" = {
      Path = "/mnt/tier2";
      Quota = "200GiB";
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/autotierfs.nix>

services.avahi.enable
Whether to run the Avahi daemon, which allows Avahi clients to use Avahi's service discovery facilities and also allows the local machine to advertise its presence and services (through the mDNS responder implemented by 'avahi−daemon').

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.package
The avahi package to use.

Type: package

Default:

```
pkgs.avahi
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.allowInterfaces
List of network interfaces that should be used by the **avahi−daemon**. Other interfaces will be ignored. If 'null', all local interfaces except loopback and point−to−point will be used.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.allowPointToPoint

Whether to use POINTTOPOINT interfaces. Might make mDNS unreliable due to usually large latencies with such links and opens a potential security hole by allowing mDNS access from Internet connections.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.browseDomains

List of non−local DNS domains to be browsed.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "0pointer.de"
  "zeroconf.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.cacheEntriesMax

Number of resource records to be cached per interface. Use 0 to disable caching. Avahi daemon defaults to 4096 if not set.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.debug

Whether to enable debug logging.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.denyInterfaces

List of network interfaces that should be ignored by the **avahi−daemon**. Other unspecified interfaces will be used, unless **allowInterfaces** is set. This option takes precedence over **allowInterfaces**.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.domainName
Domain name for all advertisements.

Type: string

Default:

```
"local"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.extraConfig
Extra config to append to avahi−daemon.conf.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.extraServiceFiles
Specify custom service definitions which are placed in the avahi service directory. See the **avahi.service**(5) manpage for detailed information.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Example:

```
{
  ssh = "${pkgs.avahi}/etc/avahi/services/ssh.service";
  smb = ''
    <?xml version="1.0" standalone='no'?><!--*-nxml-*-->
    <!DOCTYPE service-group SYSTEM "avahi-service.dtd">
    <service-group>
      <name replace-wildcards="yes">%h</name>
      <service>
        <type>_smb._tcp</type>
        <port>445</port>
      </service>
    </service-group>
  '';
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.hostName

Host name advertised on the LAN. If not set, avahi will use the value of **config.networking.hostName**.

Type: string

Default:

```
config.networking.hostName
```

Declared by:

<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.ipv4

Whether to use IPv4.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.ipv6

Whether to use IPv6.

Type: boolean

Default:

```
config.networking.enableIPv6
```

Declared by:

<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.nssmdns4

Whether to enable the mDNS NSS (Name Service Switch) plug−in for IPv4. Enabling it allows applications to resolve names in the ‘.local’ domain by transparently querying the Avahi daemon.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.nssmdns6

Whether to enable the mDNS NSS (Name Service Switch) plug−in for IPv6. Enabling it allows applications to resolve names in the ‘.local’ domain by transparently querying the Avahi daemon.

Note

Due to the fact that most mDNS responders only register local IPv4 addresses, most user want to leave this option disabled to avoid long timeouts when applications first resolve the none existing IPv6 address.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.openFirewall
Whether to open the firewall for UDP port 5353. Disabling this setting also disables discovering of network devices.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.publish.enable
Whether to allow publishing in general.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.publish.addresses
Whether to register mDNS address records for all local IP addresses.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.publish.domain
Whether to announce the locally used domain name for browsing by other hosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.publish.hinfo
Whether to register a mDNS HINFO record which contains information about the local operating system and CPU.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.publish.userServices
Whether to publish user services. Will set ‘addresses=true’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.publish.workstation
Whether to register a service of type "_workstation._tcp" on the local LAN.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.reflector
Reflect incoming mDNS requests to all allowed network interfaces.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.avahi.wideArea
Whether to enable wide−area service discovery.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/avahi−daemon.nix>

services.awstats.enable
Whether to enable awstats, a real−time logfile analyzer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/logging/awstats.nix>

services.awstats.configs
Attribute set of domains to collect stats for.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "mysite" = {
    domain = "example.com";
    logFile = "/var/log/nginx/access.log";
```

```
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/logging/awstats.nix>

services.awstats.configs.<name>.domain
The domain name to collect stats for.

Type: string

Default:

```
"‹name›"
```

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/awstats.nix>

services.awstats.configs.<name>.extraConfig
Extra configuration to be appended to awstats.${name}.conf.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "ValidHTTPCodes" = "404";
}
```

Declared by:
<nixpkgs/nixos/modules/services/logging/awstats.nix>

services.awstats.configs.<name>.hostAliases
List of aliases the site has.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/logging/awstats.nix>

services.awstats.configs.<name>.logFile
The log file to be scanned.

For mail, set this to

```
journalctl $OLD_CURSOR -u postfix.service | ${pkgs.perl}/bin/perl  \
${pkgs.awstats.out}/share/awstats/tools/maillogconvert.pl standard  \
|
```

Type: string

Example:

```
"/var/log/nginx/access.log"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/awstats.nix>

services.awstats.configs.<name>.logFormat
The log format being used.

For mail, set this to

```
%time2 %email %email_r %host %host_r %method %url %code %bytesd
```

Type: string

Default:

```
"1"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/awstats.nix>

services.awstats.configs.<name>.type
The type of log being collected.

Type: one of “mail”, “web”

Default:

```
"web"
```

Example:

```
"mail"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/awstats.nix>

services.awstats.configs.<name>.webService.enable
Whether to enable awstats web service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/logging/awstats.nix>

services.awstats.configs.<name>.webService.hostname
The hostname the web service appears under.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/awstats.nix>

services.awstats.configs.<name>.webService.urlPrefix
The URL prefix under which the awstats pages appear.

Type: string

Default:

```
"/awstats"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/awstats.nix>

services.awstats.dataDir
The directory where awstats data will be stored.

Type: absolute path

Default:

```
"/var/lib/awstats"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/awstats.nix>

services.awstats.updateAt
Specification of the time at which awstats will get updated. (in the format described by **systemd.time**(7))

Type: null or string

Default:

```
null
```

Example:

```
"hourly"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/awstats.nix>

services.ax25.axlisten.enable
Whether to enable AX.25 axlisten daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ax25/axlisten.nix>

services.ax25.axlisten.package
The ax25−apps package to use.

Type: package

Default:

```
pkgs.ax25-apps
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ax25/axlisten.nix>

services.ax25.axlisten.config

Options that will be passed to the axlisten daemon.

Type: string

Default:

```
"-art"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ax25/axlisten.nix>

services.ax25.axports

Specification of one or more AX.25 ports.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ax25/axports.nix>

services.ax25.axports.<name>.enable

Whether to enable Enables the axport interface.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ax25/axports.nix>

services.ax25.axports.<name>.package

The ax25-tools package to use.

Type: package

Default:

```
pkgs.ax25-tools
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ax25/axports.nix>

services.ax25.axports.<name>.baud

The serial port speed of this interface.

Type: signed integer

Example:

```
57600
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ax25/axports.nix>

services.ax25.axports.<name>.callsign
The callsign of the physical interface to bind to.

Type: string

Example:

```
"WB6WLV-7"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ax25/axports.nix>

services.ax25.axports.<name>.description
Free format description of this interface.

Type: string

Default:

```
"NixOS managed tnc"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ax25/axports.nix>

services.ax25.axports.<name>.kissParams
Kissattach parameters for this interface.

Type: null or string

Default:

```
null
```

Example:

```
"-t 300 -l 10 -s 12 -r 80 -f n"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ax25/axports.nix>

services.ax25.axports.<name>.paclen
Default maximum packet size for this interface.

Type: signed integer

Default:

```
255
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ax25/axports.nix>

services.ax25.axports.<name>.tty
Location of hardware kiss tnc for this interface.

Type: string

Example:

```
"/dev/ttyACM0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ax25/axports.nix>

services.ax25.axports.<name>.window

Default window size for this interface.

Type: signed integer

Default:

```
7
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ax25/axports.nix>

services.ayatana−indicators.enable

Whether to enable Ayatana Indicators, a continuation of Canonical's Application Indicators .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/ayatana−indicators.nix>

services.ayatana−indicators.packages

List of packages containing Ayatana Indicator services that should be brought up by a SystemD "ayatana−indicators" user target.

Packages specified here must have passthru.ayatana−indicators set correctly.

If, how, and where these indicators are displayed will depend on your DE. Which target they will be brought up by depends on the packages' passthru.ayatana−indicators.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [ ayatana−indicator−messages ]
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/ayatana−indicators.nix>

services.babeld.enable

Whether to enable the babeld network routing daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/babeld.nix>

services.babeld.extraConfig

Options that will be copied to babeld.conf. See **babeld**(8) for details.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/babeld.nix>

services.babeld.interfaceDefaults

A set describing default parameters for babeld interfaces. See **babeld**(8) for options.

Type: null or (attribute set of unspecified value)

Default:

```
null
```

Example:

```
{
  split-horizon = true;
  type = "tunnel";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/babeld.nix>

services.babeld.interfaces

A set describing babeld interfaces. See **babeld**(8) for options.

Type: attribute set of attribute set of unspecified value

Default:

```
{ }
```

Example:

```
{
  enp0s2 = {
    hello-interval = 5;
    split-horizon = "auto";
    type = "wired";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/babeld.nix>

services.bacula-dir.enable

Whether to enable Bacula Director Daemon.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula-dir.extraConfig

Extra configuration for Bacula Director Daemon.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
TODO
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula-dir.extraDirectorConfig

Extra configuration to be passed in Director directive.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
Maximum Concurrent Jobs = 20;
Heartbeat Interval = 30;
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula-dir.extraMessagesConfig

Extra configuration to be passed in Messages directive.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
console = all
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula-dir.name

The director name used by the system administrator. This directive is required.

Type: string

Default:

```
"${config.networking.hostName}-dir"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula-dir.password

Specifies the password that must be supplied for a Director.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−dir.port

Specify the port (a positive integer) on which the Director daemon will listen for Bacula Console connections. This same port number must be specified in the Director resource of the Console configuration file. The default is 9101, so normally this directive need not be specified. This directive should not be used if you specify DirAddresses (N.B plural) directive.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9101
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−dir.tls

TLS Options for the Director. Important notice: The backup won't be encrypted.

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−dir.tls.enable

Specifies if TLS should be enabled. If this set to 'false' TLS will be completely disabled, even if **services.bacula−dir.tls.require** is true.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−dir.tls.allowedCN

Common name attribute of allowed peer certificates. This directive is valid for a server and in a client context. If this directive is specified, the peer certificate will be verified against this list. In the case this directive is configured on a server side, the allowed CN list will not be checked if **services.bacula−dir.tls.verifyPeer** is false.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−dir.tls.caCertificateFile

The path specifying a PEM encoded TLS CA certificate(s). Multiple certificates are permitted in the file. One of TLS CA Certificate File or TLS CA Certificate Dir are required in a server context, unless **services.bacula−dir.tls.verifyPeer** is false, and are always required in a client context.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−dir.tls.certificate
The full path to the PEM encoded TLS certificate. It will be used as either a client or server certificate, depending on the connection direction. This directive is required in a server context, but it may not be specified in a client context if **services.bacula−dir.tls.verifyPeer** is 'false' in the corresponding server context.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−dir.tls.key
The path of a PEM encoded TLS private key. It must correspond to the TLS certificate.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−dir.tls.require
Require TLS or TLS−PSK encryption. This directive is ignored unless one of **services.bacula−dir.tls.enable** is true or TLS PSK Enable is set to 'yes'. If TLS is not required while TLS or TLS−PSK are enabled, then the Bacula component will connect with other components either with or without TLS or TLS−PSK

If **services.bacula−dir.tls.enable** or TLS−PSK is enabled and TLS is required, then the Bacula component will refuse any connection request that does not use TLS.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−dir.tls.verifyPeer
Verify peer certificate. Instructs server to request and verify the client's X.509 certificate. Any client certificate signed by a known−CA will be accepted. Additionally, the client's X509 certificate Common Name must meet the value of the Address directive. If **services.bacula−dir.tls.allowedCN** is used, the client's x509 certificate Common Name must also correspond to one of the CN specified in the **services.bacula−dir.tls.allowedCN** directive. This directive is valid only for a server and not in client context.

Standard from Bacula is 'true'.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.enable

Whether to enable the Bacula File Daemon.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.director

This option defines director resources in Bacula File Daemon.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.director.<name>.monitor

If Monitor is set to ‘no’, this director will have full access to this Storage daemon. If Monitor is set to ‘yes’, this director will only be able to fetch the current status of this Storage daemon.

Please note that if this director is being used by a Monitor, we highly recommend to set this directive to yes to avoid serious security problems.

Type: one of “no”, “yes”

Default:

```
"no"
```

Example:

```
"yes"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.director.<name>.password

Specifies the password that must be supplied for the default Bacula Console to be authorized. The same password must appear in the Director resource of the Console configuration file. For added security, the password is never passed across the network but instead a challenge response hash code created with the password. This directive is required. If you have either /dev/random or bc on your machine, Bacula will generate a random password during the configuration process, otherwise it will be left blank and you must manually supply it.

The password is plain text. It is not generated through any special process but as noted above, it is better to use random text for security reasons.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.director.<name>.tls

TLS Options for the Director in this Configuration.

Type: submodule

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.director.<name>.tls.enable
Specifies if TLS should be enabled. If this set to ‘false’ TLS will be completely disabled, even if **services.bacula−fd.director.<name>.tls.require** is true.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.director.<name>.tls.allowedCN
Common name attribute of allowed peer certificates. This directive is valid for a server and in a client context. If this directive is specified, the peer certificate will be verified against this list. In the case this directive is configured on a server side, the allowed CN list will not be checked if **services.bacula−fd.director.<name>.tls.verifyPeer** is false.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.director.<name>.tls.caCertificateFile
The path specifying a PEM encoded TLS CA certificate(s). Multiple certificates are permitted in the file. One of TLS CA Certificate File or TLS CA Certificate Dir are required in a server context, unless **services.bacula−fd.director.<name>.tls.verifyPeer** is false, and are always required in a client context.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.director.<name>.tls.certificate
The full path to the PEM encoded TLS certificate. It will be used as either a client or server certificate, depending on the connection direction. This directive is required in a server context, but it may not be specified in a client context if **services.bacula−fd.director.<name>.tls.verifyPeer** is ‘false’ in the corresponding server context.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.director.<name>.tls.key
The path of a PEM encoded TLS private key. It must correspond to the TLS certificate.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.director.<name>.tls.require
Require TLS or TLS−PSK encryption. This directive is ignored unless one of **services.bacula−fd.director.<name>.tls.enable** is true or TLS PSK Enable is set to 'yes'. If TLS is not required while TLS or TLS−PSK are enabled, then the Bacula component will connect with other components either with or without TLS or TLS−PSK

If **services.bacula−fd.director.<name>.tls.enable** or TLS−PSK is enabled and TLS is required, then the Bacula component will refuse any connection request that does not use TLS.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.director.<name>.tls.verifyPeer
Verify peer certificate. Instructs server to request and verify the client's X.509 certificate. Any client certificate signed by a known−CA will be accepted. Additionally, the client's X509 certificate Common Name must meet the value of the Address directive. If **services.bacula−fd.director.<name>.tls.allowedCN** is used, the client's x509 certificate Common Name must also correspond to one of the CN specified in the **services.bacula−fd.director.<name>.tls.allowedCN** directive. This directive is valid only for a server and not in client context.

Standard from Bacula is 'true'.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.extraClientConfig
Extra configuration to be passed in Client directive.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
Maximum Concurrent Jobs = 20;
Heartbeat Interval = 30;
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.extraMessagesConfig
Extra configuration to be passed in Messages directive.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
console = all
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.name
The client name that must be used by the Director when connecting. Generally, it is a good idea to use a name related to the machine so that error messages can be easily identified if you have multiple Clients. This directive is required.

Type: string

Default:

```
"${config.networking.hostName}−fd"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.port
This specifies the port number on which the Client listens for Director connections. It must agree with the FDPort specified in the Client resource of the Director's configuration file.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9102
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.tls
TLS Options for the File Daemon. Important notice: The backup won't be encrypted.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.tls.enable
Specifies if TLS should be enabled. If this set to 'false' TLS will be completely disabled, even if **services.bacula−fd.tls.require** is true.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.tls.allowedCN
Common name attribute of allowed peer certificates. This directive is valid for a server and in a client context. If this directive is specified, the peer certificate will be verified against this list. In the case this directive is configured on a server side, the allowed CN list will not be checked if **services.bacula−fd.tls.verifyPeer** is false.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.tls.caCertificateFile
The path specifying a PEM encoded TLS CA certificate(s). Multiple certificates are permitted in the file. One of TLS CA Certificate File or TLS CA Certificate Dir are required in a server context, unless **services.bacula−fd.tls.verifyPeer** is false, and are always required in a client context.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.tls.certificate
The full path to the PEM encoded TLS certificate. It will be used as either a client or server certificate, depending on the connection direction. This directive is required in a server context, but it may not be specified in a client context if **services.bacula−fd.tls.verifyPeer** is 'false' in the corresponding server context.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.tls.key
The path of a PEM encoded TLS private key. It must correspond to the TLS certificate.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.tls.require
Require TLS or TLS−PSK encryption. This directive is ignored unless one of **services.bacula−fd.tls.enable** is true or TLS PSK Enable is set to 'yes'. If TLS is not required while TLS or TLS−PSK are enabled, then the Bacula component will connect with other components either with or without TLS or TLS−PSK

If **services.bacula−fd.tls.enable** or TLS−PSK is enabled and TLS is required, then the Bacula component will refuse any connection request that does not use TLS.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−fd.tls.verifyPeer
Verify peer certificate. Instructs server to request and verify the client's X.509 certificate. Any client certificate signed by a known−CA will be accepted. Additionally, the client's X509 certificate Common Name must meet the value of the Address directive. If **services.bacula−fd.tls.allowedCN** is used, the client's x509 certificate Common Name must also correspond to one of the CN specified in the **services.bacula−fd.tls.allowedCN** directive. This directive is valid only for a server and not in client context.

Standard from Bacula is ‘true’.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.enable
Whether to enable Bacula Storage Daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.autochanger
This option defines Autochanger resources in Bacula Storage Daemon.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.autochanger.<name>.changerCommand
The name−string specifies an external program to be called that will automatically change volumes as required by Bacula. Normally, this directive will be specified only in the AutoChanger resource, which is then used for all devices. However, you may also specify the different Changer Command in each Device resource. Most frequently, you will specify the Bacula supplied mtx−changer script as follows:

‘"/path/mtx−changer %c %o %S %a %d"’

and you will install the mtx on your system (found in the depkgs release). An example of this command is in the default bacula−sd.conf file. For more details on the substitution characters that may be specified to configure your autochanger please see the AutochangersAutochangersChapter chapter of this manual. For FreeBSD users, you might want to see one of the several chio scripts in examples/autochangers.

Type: string

Default:

```
"/etc/bacula/mtx−changer %c %o %S %a %d"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.autochanger.<name>.changerDevice
The specified name−string must be the generic SCSI device name of the autochanger that corresponds to the normal read/write Archive Device specified in the Device resource. This generic SCSI device name should be specified if you have an autochanger or if you have a standard tape drive and want to use the Alert Command (see below). For example, on Linux systems, for an Archive Device name of ‘/dev/nst0’, you would specify ‘/dev/sg0’ for the Changer Device name. Depending on your exact configuration, and the number of autochangers or the type of autochanger, what you specify here can vary. This directive is optional. See the Using AutochangersAutochangersChapter chapter of this manual for more details of using this and the following autochanger directives.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.autochanger.<name>.devices
Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.autochanger.<name>.extraAutochangerConfig
Extra configuration to be passed in Autochanger directive.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.device
This option defines Device resources in Bacula Storage Daemon.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.device.<name>.archiveDevice
The specified name−string gives the system file name of the storage device managed by this storage daemon. This will usually be the device file name of a removable storage device (tape drive), for example ‘/dev/nst0’ or ‘/dev/rmt/0mbn’. For a DVD−writer, it will be for example ‘/dev/hdc’. It may also be a directory name if you are archiving to disk storage. In this case, you must supply the full absolute path to the directory. When specifying a tape device, it is preferable that the “non−rewind” variant of the device file name be given.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.device.<name>.extraDeviceConfig
Extra configuration to be passed in Device directive.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
LabelMedia = yes
Random Access = no
AutomaticMount = no
```

```
RemovableMedia = no
MaximumOpenWait = 60
AlwaysOpen = no
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.device.<name>.mediaType

The specified name−string names the type of media supported by this device, for example, ‘DLT7000’. Media type names are arbitrary in that you set them to anything you want, but they must be known to the volume database to keep track of which storage daemons can read which volumes. In general, each different storage type should have a unique Media Type associated with it. The same name−string must appear in the appropriate Storage resource definition in the Director’s configuration file.

Even though the names you assign are arbitrary (i.e. you choose the name you want), you should take care in specifying them because the Media Type is used to determine which storage device Bacula will select during restore. Thus you should probably use the same Media Type specification for all drives where the Media can be freely interchanged. This is not generally an issue if you have a single Storage daemon, but it is with multiple Storage daemons, especially if they have incompatible media.

For example, if you specify a Media Type of ‘DDS−4’ then during the restore, Bacula will be able to choose any Storage Daemon that handles ‘DDS−4’. If you have an autochanger, you might want to name the Media Type in a way that is unique to the autochanger, unless you wish to possibly use the Volumes in other drives. You should also ensure to have unique Media Type names if the Media is not compatible between drives. This specification is required for all devices.

In addition, if you are using disk storage, each Device resource will generally have a different mount point or directory. In order for Bacula to select the correct Device resource, each one must have a unique Media Type.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.director

This option defines Director resources in Bacula Storage Daemon.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.director.<name>.monitor

If Monitor is set to ‘no’, this director will have full access to this Storage daemon. If Monitor is set to ‘yes’, this director will only be able to fetch the current status of this Storage daemon.

Please note that if this director is being used by a Monitor, we highly recommend to set this directive to yes to avoid serious security problems.

Type: one of “no”, “yes”

Default:

```
"no"
```

Example:

```
"yes"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.director.<name>.password
Specifies the password that must be supplied for the default Bacula Console to be authorized. The same password must appear in the Director resource of the Console configuration file. For added security, the password is never passed across the network but instead a challenge response hash code created with the password. This directive is required. If you have either /dev/random or bc on your machine, Bacula will generate a random password during the configuration process, otherwise it will be left blank and you must manually supply it.

The password is plain text. It is not generated through any special process but as noted above, it is better to use random text for security reasons.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.director.<name>.tls
TLS Options for the Director in this Configuration.

Type: submodule

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.director.<name>.tls.enable
Specifies if TLS should be enabled. If this set to ‘false’ TLS will be completely disabled, even if **services.bacula−sd.director.<name>.tls.require** is true.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.director.<name>.tls.allowedCN
Common name attribute of allowed peer certificates. This directive is valid for a server and in a client context. If this directive is specified, the peer certificate will be verified against this list. In the case this directive is configured on a server side, the allowed CN list will not be checked if **services.bacula−sd.director.<name>.tls.verifyPeer** is false.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.director.<name>.tls.caCertificateFile
The path specifying a PEM encoded TLS CA certificate(s). Multiple certificates are permitted in the file. One of TLS CA Certificate File or TLS CA Certificate Dir are required in a server context, unless **services.bacula−sd.director.<name>.tls.verifyPeer** is false, and are always required in a client context.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.director.<name>.tls.certificate
The full path to the PEM encoded TLS certificate. It will be used as either a client or server certificate, depending on the connection direction. This directive is required in a server context, but it may not be specified in a client context if **services.bacula−sd.director.<name>.tls.verifyPeer** is 'false' in the corresponding server context.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.director.<name>.tls.key
The path of a PEM encoded TLS private key. It must correspond to the TLS certificate.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.director.<name>.tls.require
Require TLS or TLS−PSK encryption. This directive is ignored unless one of **services.bacula−sd.director.<name>.tls.enable** is true or TLS PSK Enable is set to 'yes'. If TLS is not required while TLS or TLS−PSK are enabled, then the Bacula component will connect with other components either with or without TLS or TLS−PSK

If **services.bacula−sd.director.<name>.tls.enable** or TLS−PSK is enabled and TLS is required, then the Bacula component will refuse any connection request that does not use TLS.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.director.<name>.tls.verifyPeer
Verify peer certificate. Instructs server to request and verify the client's X.509 certificate. Any client certificate signed by a known−CA will be accepted. Additionally, the client's X509 certificate Common Name must meet the value of the Address directive. If **services.bacula−sd.director.<name>.tls.allowedCN** is used, the client's x509 certificate Common Name must also correspond to one of the CN specified in the **services.bacula−sd.director.<name>.tls.allowedCN** directive. This directive is valid only for a server and not in client context.

Standard from Bacula is 'true'.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula-sd.extraMessagesConfig

Extra configuration to be passed in Messages directive.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
console = all
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula-sd.extraStorageConfig

Extra configuration to be passed in Storage directive.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
Maximum Concurrent Jobs = 20;
Heartbeat Interval = 30;
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula-sd.name

Specifies the Name of the Storage daemon.

Type: string

Default:

```
"${config.networking.hostName}-sd"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula-sd.port

Specifies port number on which the Storage daemon listens for Director connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9103
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula-sd.tls

TLS Options for the Storage Daemon. Important notice: The backup won’t be encrypted.

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.tls.enable

Specifies if TLS should be enabled. If this set to ‘false’ TLS will be completely disabled, even if **services.bacula−sd.tls.require** is true.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.tls.allowedCN

Common name attribute of allowed peer certificates. This directive is valid for a server and in a client context. If this directive is specified, the peer certificate will be verified against this list. In the case this directive is configured on a server side, the allowed CN list will not be checked if **services.bacula−sd.tls.verifyPeer** is false.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.tls.caCertificateFile

The path specifying a PEM encoded TLS CA certificate(s). Multiple certificates are permitted in the file. One of TLS CA Certificate File or TLS CA Certificate Dir are required in a server context, unless **services.bacula−sd.tls.verifyPeer** is false, and are always required in a client context.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.tls.certificate

The full path to the PEM encoded TLS certificate. It will be used as either a client or server certificate, depending on the connection direction. This directive is required in a server context, but it may not be specified in a client context if **services.bacula−sd.tls.verifyPeer** is ‘false’ in the corresponding server context.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.tls.key

The path of a PEM encoded TLS private key. It must correspond to the TLS certificate.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.tls.require

Require TLS or TLS−PSK encryption. This directive is ignored unless one of **services.bacula−sd.tls.enable** is true or TLS PSK Enable is set to ‘yes’. If TLS is not required while TLS or TLS−PSK are enabled, then the Bacula component will connect with other components either with or without TLS or TLS−PSK

If **services.bacula−sd.tls.enable** or TLS−PSK is enabled and TLS is required, then the Bacula component will refuse any connection request that does not use TLS.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.bacula−sd.tls.verifyPeer

Verify peer certificate. Instructs server to request and verify the client’s X.509 certificate. Any client certificate signed by a known−CA will be accepted. Additionally, the client’s X509 certificate Common Name must meet the value of the Address directive. If **services.bacula−sd.tls.allowedCN** is used, the client’s x509 certificate Common Name must also correspond to one of the CN specified in the **services.bacula−sd.tls.allowedCN** directive. This directive is valid only for a server and not in client context.

Standard from Bacula is ‘true’.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/backup/bacula.nix>

services.baikal.enable

Whether to enable baikal.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/baikal.nix>

services.baikal.package

The baikal package to use.

Type: package

Default:

```
pkgs.baikal
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/baikal.nix>

services.baikal.group
Group account under which the web−application run.

Type: string

Default:

```
"baikal"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/baikal.nix>

services.baikal.phpPackage
The php package to use.

Type: package

Default:

```
pkgs.php
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/baikal.nix>

services.baikal.pool
Name of existing phpfpm pool that is used to run web−application. If not specified a pool will be created automatically with default values.

Type: string

Default:

```
"baikal"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/baikal.nix>

services.baikal.user
User account under which the web−application run.

Type: string

Default:

```
"baikal"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/baikal.nix>

services.baikal.virtualHost
Name of the nginx virtualhost to use and setup. If null, do not setup any virtualhost.

Type: null or string

Default:

```
"baikal"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/baikal.nix>

services.bamf.enable
Whether to enable bamf.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/bamf.nix>

services.bazarr.enable
Whether to enable bazarr, a subtitle manager for Sonarr and Radarr.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bazarr.nix>

services.bazarr.package
The bazarr package to use.

Type: package

Default:

```
pkgs.bazarr
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bazarr.nix>

services.bazarr.dataDir
The directory where Bazarr stores its data files.

Type: string

Default:

```
"/var/lib/bazarr"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bazarr.nix>

services.bazarr.group
Group under which bazarr runs.

Type: string

Default:

```
"bazarr"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bazarr.nix>

services.bazarr.listenPort
Port on which the bazarr web interface should listen

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6767
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bazarr.nix>

services.bazarr.openFirewall
Open ports in the firewall for the bazarr web interface.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bazarr.nix>

services.bazarr.user
User account under which bazarr runs.

Type: string

Default:

```
"bazarr"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bazarr.nix>

services.bcachefs.autoScrub.enable
Whether to enable regular bcachefs scrub.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/bcachefs.nix>

services.bcachefs.autoScrub.fileSystems
List of paths to bcachefs filesystems to regularly call **bcachefs scrub** on. Defaults to all mount points with bcachefs filesystems.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/"
]
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/bcachefs.nix>

services.bcachefs.autoScrub.interval
Systemd calendar expression for when to scrub bcachefs filesystems. The recommended period is a month but could be less. See **systemd.time**(7) for more information on the syntax.

Type: string

Default:

```
"monthly"
```

Example:

```
"weekly"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/bcachefs.nix>

services.bcg.enable
Whether to enable BigClown gateway.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.package
The bcg package to use.

Type: package

Default:

```
pkgs.python3Packages.bcg
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.automaticRemoveKitFromNames
Automatically remove kits.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.automaticRenameGenericNodes
Automatically rename generic nodes.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.automaticRenameKitNodes
Automatically rename kit’s nodes.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.automaticRenameNodes
Automatically rename all nodes.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.baseTopicPrefix
Topic prefix added to all MQTT messages.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.device
Device name to configure gateway to use.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.environmentFiles
File to load as environment file. Environment variables from this file will be interpolated into the config file using envsubst with this syntax: '$ENVIRONMENT' or '${VARIABLE}'. This is useful to avoid putting secrets into the nix store.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/run/keys/bcg.env"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.mqtt.cafile
Certificate Authority file for MQTT server access.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.mqtt.certfile
Certificate file for MQTT server access.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.mqtt.host
Host where MQTT server is running.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.mqtt.keyfile
Key file for MQTT server access.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.mqtt.password
MQTT server access password.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.mqtt.port
Port of MQTT server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1883
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.mqtt.username
MQTT server access username.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.name
Name for the device.

Supported variables:

- ‘{ip}’ IP address
- ‘{id}’ The ID of the connected usb−dongle or core−module

‘null’ can be used for automatic detection from gateway firmware.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.qosNodeMessages
Set the guarantee of MQTT message delivery.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.rename
Rename nodes to different name.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.retainNodeMessages
Specify that node messages should be retaied in MQTT broker.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.bcg.verbose
Verbosity level.

Type: one of “CRITICAL”, “ERROR”, “WARNING”, “INFO”, “DEBUG”

Default:

```
"WARNING"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bcg.nix>

services.beanstalkd.enable
Whether to enable the Beanstalk work queue.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/beanstalkd.nix>

services.beanstalkd.listen.address
IP address to listen on.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/beanstalkd.nix>

services.beanstalkd.listen.port
TCP port that will be used to accept client connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
11300
```

Declared by:
<nixpkgs/nixos/modules/services/misc/beanstalkd.nix>

services.beanstalkd.openFirewall
Whether to open ports in the firewall for the server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/beanstalkd.nix>

services.bee.enable
Whether to enable Ethereum Swarm Bee.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bee.nix>

services.bee.package
The bee package to use.

Type: package

Default:

```
pkgs.bee
```

Example:

```
bee-unstable
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bee.nix>

services.bee.daemonNiceLevel
Daemon process priority for bee. 0 is the default Unix process priority, 19 is the lowest.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/bee.nix>

services.bee.group
Group the bee binary should execute under.

Type: string

Default:

```
"bee"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bee.nix>

services.bee.settings
Ethereum Swarm Bee configuration. Refer to **https://gateway.ethswarm.org/bzz/docs.swarm.eth/docs/installation/configuration/** for details on supported values.

Type: YAML 1.1 value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bee.nix>

services.bee.user
User the bee binary should execute under.

Type: string

Default:

```
"bee"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bee.nix>

services.beesd.filesystems

BTRFS filesystems to run block−level deduplication on.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "−" = {
    spec = "LABEL=root";
    hashTableSizeMB = 2048;
    verbosity = "crit";
    extraOptions = [ "−−loadavg−target" "5.0" ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/bees.nix>

services.beesd.filesystems.<name>.extraOptions

Extra command−line options passed to the daemon. See upstream bees documentation.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "−−thread−count" "4" ]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/bees.nix>

services.beesd.filesystems.<name>.hashTableSizeMB

Hash table size in MB; must be a multiple of 16.

A larger ratio of index size to storage size means smaller blocks of duplicate content are recognized.

If you have 1TB of data, a 4GB hash table (which is to say, a value of 4096) will permit 4KB extents (the smallest possible size) to be recognized, whereas a value of 1024 – creating a 1GB hash table – will recognize only aligned duplicate blocks of 16KB.

Type: signed integer

Default:

```
1024
```

Declared by:

<nixpkgs/nixos/modules/services/misc/bees.nix>

services.beesd.filesystems.<name>.spec

Description of how to identify the filesystem to be duplicated by this instance of bees. Note that deduplication crosses subvolumes; one must not configure multiple instances for subvolumes of the same filesystem (or block devices which are part of the same filesystem), but only for completely independent btrfs filesystems.

This must be in a format usable by findmnt; that could be a key=value pair, or a bare path to a mount point. Using bare paths will allow systemd to start the beesd service only after mounting the associated path.

Type: string

Example:

```
"LABEL=MyBulkDataDrive"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bees.nix>

services.beesd.filesystems.<name>.verbosity
Log verbosity (syslog keyword/level).

Type: one of “alert”, “crit”, “debug”, “emerg”, “err”, “info”, “notice”, “warning”, 1, 2, 7, 0, 3, 6, 5, 4

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bees.nix>

services.beesd.filesystems.<name>.workDir
Name (relative to the root of the filesystem) of the subvolume where the hash table will be stored.

Type: string

Default:

```
".beeshome"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bees.nix>

services.below.enable
Whether to enable ‘below’ resource monitor.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/below.nix>

services.below.cgroupFilterOut
A regexp matching the full paths of cgroups whose data shouldn’t be collected

Type: null or string

Default:

```
null
```

Example:

```
"user.slice.*"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/below.nix>

services.below.collect.diskStats
Whether to enable dist_stat collection.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/below.nix>

services.below.collect.exitStats
Whether to enable eBPF−based exitstats.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/below.nix>

services.below.collect.ioStats
Whether to enable io.stat collection for cgroups.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/below.nix>

services.below.compression.enable
Whether to enable data compression.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/below.nix>

services.below.dirs.log
Where to store below's logs

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/below.nix>

services.below.dirs.store

Where to store below's data

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/below"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/below.nix>

services.below.retention.size

Size limit for below's data, in bytes. Data is deleted oldest−first, in 24h 'shards'.

Note

The size limit may be exceeded by at most the size of the active shard, as:

- the active shard cannot be deleted;
- the size limit is only enforced when a new shard is created.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/below.nix>

services.below.retention.time

Retention time, in seconds.

Note

As data is stored in 24 hour shards which are discarded as a whole, only data expired by 24h (or more) is guaranteed to be discarded.

Note

If 'retention.size' is set, data may be discarded earlier than the specified time.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/below.nix>

services.bentopdf.enable

Whether to enable bentopdf Privacy First PDF Toolkit.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.package
The bentopdf package to use. To use the “normal mode” variant of bentopdf, which includes all socials, marketing and explanatory texts, set this option to ‘pkgs.bentopdf.override { simpleMode = false; }’.

Type: package

Default:

```
pkgs.bentopdf
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.caddy.enable
Whether to enable a virtualhost to serve bentopdf through caddy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.caddy.virtualHost
Extra configuration for the caddy virtual host of bentopdf.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  serverAliases = [ "bentopdf.${config.networking.domain}" ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.caddy.virtualHost.extraConfig
Additional lines of configuration appended to this virtual host in the automatically generated ‘Caddyfile’.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.caddy.virtualHost.hostName
Canonical hostname for the server.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.caddy.virtualHost.listenAddresses
A list of host interfaces to bind to for this virtual host.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "::1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.caddy.virtualHost.logFormat
Configuration for HTTP request logging (also known as access logs). See **https://caddyserver.com/docs/caddyfile/directives/log#log** for details.

Type: null or strings concatenated with "\n"

Default:

```
  output file ''${config.services.caddy.logDir}/access−''${hostNam \
e}.log
```

Example:

```
mkForce ''
  output discard
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.caddy.virtualHost.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.caddy.virtualHost.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is mostly useful if you use DNS challenges but Caddy does not currently support your provider.

Note that this option does not create any certificates, nor does it add subdomains to existing ones – you will need to create them manually using **security.acme.certs**[1].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

1. see the **security.acme.certs** option

services.bentopdf.domain
Domain to use for the virtual host.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.enable
Whether to enable a virtualhost to serve bentopdf through nginx.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost
Extra configuration for the nginx virtual host of bentopdf.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  serverAliases = [ "bentopdf.${config.networking.domain}" ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.enableACME
Whether to ask Let’s Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.acmeFallbackHost

Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.acmeRoot

Directory for the ACME challenge, which is **public**. Don’t put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.addSSL

Whether to enable HTTPS in addition to plain HTTP. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.default

Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.extraConfig

These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.forceSSL

Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.globalRedirect

If set, all requests for this host are redirected (defaults to 301, configurable with ‘redirectCode’) to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.http2

Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.http3

Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.http3_hq

Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides 'addSSL' and 'onlySSL'.

If you only want to set the addresses manually and not the ports, take a look at 'listenAddresses'.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.listen.*.proxyProtocol

Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.listen.*.ssl

Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations.<name>.alias
Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations.<name>.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with 'lib.mkOrder'. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.rejectSSL

Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.root

The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.serverName

Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca-bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bentopdf.nix>

services.bentopdf.nginx.virtualHost.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bentopdf.nix>

2. see the **security.acme.certs** option

services.bepasty.enable

Whether to enable bepasty, a binary pastebin server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/bepasty.nix>

services.bepasty.servers

configure a number of bepasty servers which will be started with gunicorn.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/misc/bepasty.nix>

services.bepasty.servers.<name>.bind

Bind address to be used for this server.

Type: string

Default:

```
"127.0.0.1:8000"
```

Example:

```
"0.0.0.0:8000"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/bepasty.nix>

services.bepasty.servers.<name>.dataDir

Path to the directory where the pastes will be saved to

Type: string

Default:

```
"/var/lib/bepasty/data"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/bepasty.nix>

services.bepasty.servers.<name>.defaultPermissions

default permissions for all unauthenticated accesses.

Type: string

Default:

```
"read"
```

Example:

```
"read,create,delete"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bepasty.nix>

services.bepasty.servers.<name>.extraConfig
Extra configuration for bepasty server to be appended on the configuration. see **https://bepasty-server.readthedocs.org/en/latest/quickstart.html#configuring-bepasty** for all options.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
PERMISSIONS = {
  'myadminsecret': 'admin,list,create,read,delete',
}
MAX_ALLOWED_FILE_SIZE = 5 * 1000 * 1000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bepasty.nix>

services.bepasty.servers.<name>.secretKey
server secret for safe session cookies, must be set.

Warning: this secret is stored in the WORLD-READABLE Nix store!

It's recommended to use **secretKeyFile** which takes precedence over **secretKey**.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bepasty.nix>

services.bepasty.servers.<name>.secretKeyFile
A file that contains the server secret for safe session cookies, must be set.

secretKeyFile takes precedence over **secretKey**.

Warning: when **secretKey** is non-empty **secretKeyFile** defaults to a file in the WORLD-READABLE Nix store containing that secret.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bepasty.nix>

services.bepasty.servers.<name>.workDir
Path to the working directory (used for config and pidfile). Defaults to the users home directory.

Type: string

Default:

```
"/var/lib/bepasty"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/bepasty.nix>

services.beszel.agent.enable
Whether to enable beszel agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−agent.nix>

services.beszel.agent.package
The beszel package to use.

Type: package

Default:

```
pkgs.beszel
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−agent.nix>

services.beszel.agent.environment
Environment variables for configuring the beszel−agent service. This field will end up public in /nix/store, for secret values (such as 'KEY') use 'environmentFile'.

See **https://www.beszel.dev/guide/environment−variables#agent** for available options.

Type: open submodule of attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−agent.nix>

services.beszel.agent.environment.SKIP_SYSTEMD
Whether to disable systemd service monitoring. Enabling this option will skip systemd tracking and its setup in NixOS.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−agent.nix>

services.beszel.agent.environmentFile
File path containing environment variables for configuring the beszel−agent service in the format of an EnvironmentFile. See **systemd.exec**(5).

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−agent.nix>

services.beszel.agent.extraPath
Extra packages to add to beszel path (such as nvidia−smi or rocm−smi).

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−agent.nix>

services.beszel.agent.openFirewall
Whether to open the firewall port (default 45876).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−agent.nix>

services.beszel.agent.smartmon.enable
Include services.beszel.agent.smartmon.package in the Beszel agent path for disk monitoring and add the agent to the disk group.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−agent.nix>

services.beszel.agent.smartmon.package
The smartmontools package to use.

Type: package

Default:

```
pkgs.smartmontools
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−agent.nix>

services.beszel.agent.smartmon.deviceAllow
List of device paths to allow access to for SMART monitoring. This is only needed if the ambient capabilities are not sufficient. Devices will be granted read−only access.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/dev/sda"
  "/dev/sdb"
  "/dev/nvme0"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−agent.nix>

services.beszel.hub.enable
Whether to enable beszel hub.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−hub.nix>

services.beszel.hub.package
The beszel package to use.

Type: package

Default:

```
pkgs.beszel
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−hub.nix>

services.beszel.hub.dataDir
Data directory of beszel−hub.

Type: absolute path

Default:

```
"/var/lib/beszel−hub"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−hub.nix>

services.beszel.hub.environment
Environment variables passed to the systemd service. See **https://www.beszel.dev/guide/environment−variables#hub** for available options.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  DISABLE_PASSWORD_AUTH = "true";
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−hub.nix>

services.beszel.hub.environmentFile
Environment file to be passed to the systemd service. Useful for passing secrets to the service to prevent them from being world−readable in the Nix store. See **systemd.exec**(5).

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−hub.nix>

services.beszel.hub.host
Host or address this beszel hub listens on.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−hub.nix>

services.beszel.hub.port
Port for this beszel hub to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8090
```

Example:

```
3002
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/beszel−hub.nix>

services.biboumi.enable
Whether to enable the Biboumi XMPP gateway to IRC.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.package
The biboumi package to use.

Type: package

Default:

```
pkgs.biboumi
```

Declared by:
<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.credentialsFile
Path to a configuration file to be merged with the settings. Beware not to surround "=" with spaces when setting biboumi's options in this file. Useful to merge a file which is better kept out of the Nix store because it contains sensible data like **password**.

Type: absolute path

Default:

```
"/dev/null"
```

Example:

```
"/run/keys/biboumi.cfg"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.openFirewall
Whether to enable opening of the identd port in the firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.settings
See **biboumi 9.0**

for documentation.

Type: open submodule of settings option

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.settings.admin
The bare JID of the gateway administrator. This JID will have more privileges than other standard users, for example some administration ad−hoc commands will only be available to that JID.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "admin@example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.settings.ca_file
Specifies which file should be used as the list of trusted CA when negotiating a TLS session.

Type: absolute path

Default:

```
config.security.pki.caBundle
```

Declared by:
<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.settings.db_name
The name of the database to use.

Set it to null and use **credentialsFile** if you do not want this connection string to go into the Nix store.

Type: null or absolute path or string

Default:

```
"/var/lib/biboumi/biboumi.sqlite"
```

Example:

```
"postgresql://user:secret@localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.settings.hostname
The hostname served by the XMPP gateway. This domain must be configured in the XMPP server as an external component.

Type: string

Example:

```
"biboumi.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.settings.identd_port
The TCP port on which to listen for identd queries.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
113
```

Example:

Declared by:
<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.settings.log_level

Indicate what type of log messages to write in the logs. 0 is debug, 1 is info, 2 is warning, 3 is error.

Type: integer between 0 and 3 (both inclusive)

Default:

```
1
```

Declared by:

<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.settings.password

The password used to authenticate the XMPP component to your XMPP server. This password must be configured in the XMPP server, associated with the external component on **hostname**.

Set it to null and use **credentialsFile** if you do not want this password to go into the Nix store.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.settings.persistent_by_default

Whether all rooms will be persistent by default: the value of the “persistent” option in the global configuration of each user will be “true”, but the value of each individual room will still default to false. This means that a user just needs to change the global “persistent” configuration option to false in order to override this.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.settings.policy_directory

A directory that should contain the policy files, used to customize Botan’s behaviour when negotiating the TLS connections with the IRC servers.

Type: absolute path

Default:

```
"${pkgs.biboumi}/etc/biboumi"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.settings.port

The TCP port to use to connect to the local XMPP component.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5347
```

Declared by:

<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.settings.realname_customization

Whether the users will be able to use the ad−hoc commands that lets them configure their realname and username.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.settings.realname_from_jid

Whether the realname and username of each biboumi user will be extracted from their JID. Otherwise they will be set to the nick they used to connect to the IRC server.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.biboumi.settings.xmpp_server_ip

The IP address to connect to the XMPP server on. The connection to the XMPP server is unencrypted, so the biboumi instance and the server should normally be on the same host.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/biboumi.nix>

services.bind.enable

Whether to enable BIND domain name server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.package

The bind package to use.

Type: package

Default:

```
pkgs.bind
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.blockedNetworks

What networks are just blocked.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.cacheNetworks

What networks are allowed to use us as a resolver. Note that this is for recursive queries – all networks are allowed to query zones configured with the ‘zones’ option by default (although this may be overridden within each zone’s configuration, via the ‘allowQuery’ option). It is recommended that you limit cacheNetworks to avoid your server being used for DNS amplification attacks.

Type: list of string

Default:

```
[
  "127.0.0.0/24"
  "::1/128"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.checkConfig

Check configuration.

The configuration will not be checked if you override the config file with ‘configFile’.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.configFile

Overridable config file to use for named. By default, that generated by nixos. If overriden, it will not be checked by named−checkconf.

Type: absolute path

Default:

```
confFile
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.directory

Working directory of BIND.

Type: string

Default:

```
"/run/named"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.extraArgs
Additional command−line arguments to pass to named.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-n"
  "4"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.extraConfig
Extra lines to be added verbatim to the generated named configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.extraOptions
Extra lines to be added verbatim to the options section of the generated named configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.forward
Whether to forward ‘first’ (try forwarding but lookup directly if forwarding fails) or ‘only’.

Type: one of “first”, “only”

Default:

```
"first"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.forwarders
List of servers we should forward requests to.

Type: list of string

Default:

```
config.networking.nameservers
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.ipv4Only
Only use ipv4, even if the host supports ipv6.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.listenOn
Interfaces to listen on.

Type: list of string

Default:

```
[
  "any"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.listenOnIpv6
Ipv6 interfaces to listen on.

Type: list of string

Default:

```
[
  "any"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.listenOnIpv6Port
Ipv6 port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
53
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.listenOnPort
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
53
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.zones

List of zones we claim authority over.

Type: (attribute set of (submodule)) or (list of (attribute set)) convertible to it

Default:

```
[ ]
```

Example:

```
{
  "example.com" = {
    extraConfig = "";
    file = "/var/dns/example.com";
    master = false;
    masters = [
      "192.168.0.1"
    ];
    slaves = [ ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.zones.<name>.allowQuery

List of address ranges allowed to query this zone. Instead of the address(es), this may instead contain the single string “any”.

Type: list of string

Default:

```
[
  "any"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.zones.<name>.extraConfig

Extra zone config to be appended at the end of the zone section.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.zones.<name>.file

Zone file resource records contain columns of data, separated by whitespace, that define the record.

Type: string or absolute path

Declared by:

<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.zones.<name>.master
Master=false means slave server

Type: boolean

Declared by:
<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.zones.<name>.masters
List of servers for inclusion in stub and secondary zones.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.zones.<name>.name
Name of the zone.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bind.zones.<name>.slaves
Addresses who may request zone transfers.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bind.nix>

services.bird.enable
Whether to enable BIRD Internet Routing Daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird.nix>

services.bird.package
The bird3 package to use.

Type: package

Default:

```
pkgs.bird3
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird.nix>

services.bird.autoReload
Whether bird should be automatically reloaded when the configuration changes.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird.nix>

services.bird.checkConfig
Whether the config should be checked at build time. When the config can't be checked during build time, for example when it includes other files, either disable this option or use 'preCheckConfig' to create the included files before checking.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird.nix>

services.bird.config
BIRD Internet Routing Daemon configuration file. **http://bird.network.cz/**

Type: strings concatenated with "\n"

Declared by:
<nixpkgs/nixos/modules/services/networking/bird.nix>

services.bird.preCheckConfig
Commands to execute before the config file check. The file to be checked will be available as *bird.conf* in the current directory.

Files created with this option will not be available at service runtime, only during build time checking.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
echo "cost 100;" > include.conf
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird.nix>

services.bird-lg.package
The bird-lg package to use.

Type: package

Default:

```
pkgs.bird-lg
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird−lg.frontend.enable
Whether to enable Bird Looking Glass Frontend Webserver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird−lg.nix>

services.bird−lg.frontend.bgpMapInfo
Information displayed in bgpmap.

Type: list of string

Default:

```
[
  "asn"
  "as−name"
  "ASName"
  "descr"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird−lg.nix>

services.bird−lg.frontend.dnsInterface
DNS zone to query ASN information.

Type: string

Default:

```
"asn.cymru.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird−lg.nix>

services.bird−lg.frontend.domain
Server name domain suffixes.

Type: string

Example:

```
"dn42.lantian.pub"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird−lg.nix>

services.bird−lg.frontend.extraArgs
Extra parameters documented **here**.

Note
Passing lines (plain strings) is deprecated in favour of passing lists of strings.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.frontend.listenAddresses
Address to listen on.

Type: string or list of string

Default:

```
"127.0.0.1:5000"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.frontend.nameFilter
Protocol names to hide in summary tables (RE2 syntax),

Type: string

Default:

```
""
```

Example:

```
"^ospf"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.frontend.navbar.allServers
Text of ‘All server’ button in the navigation bar.

Type: string

Default:

```
"ALL Servers"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.frontend.navbar.allServersURL
URL of ‘All servers’ button.

Type: string

Default:

```
"all"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.frontend.navbar.brand
Brand to show in the navigation bar .

Type: string

Default:

```
"Bird-lg Go"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird−lg.frontend.navbar.brandURL
URL of the brand to show in the navigation bar.

Type: string

Default:

```
"/"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird−lg.nix>

services.bird−lg.frontend.netSpecificMode
Apply network−specific changes for some networks.

Type: string

Default:

```
""
```

Example:

```
"dn42"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird−lg.nix>

services.bird−lg.frontend.protocolFilter
Information displayed in bgpmap.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "ospf"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird−lg.nix>

services.bird−lg.frontend.proxyPort
Port bird−lg−proxy is running on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird−lg.nix>

services.bird−lg.frontend.servers
Server name prefixes.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
```

```
  "gigsgigscloud"
  "hostdare"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.frontend.timeout
Time before request timed out, in seconds.

Type: signed integer

Default:

```
120
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.frontend.titleBrand
Prefix of page titles in browser tabs.

Type: string

Default:

```
"Bird-lg Go"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.frontend.whois
Whois server for queries.

Type: string

Default:

```
"whois.verisign-grs.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.group
Group to run the service.

Type: string

Default:

```
"bird-lg"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.proxy.enable
Whether to enable Bird Looking Glass Proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.proxy.allowedIPs
List of IPs or networks to allow (default all allowed).

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "192.168.25.52"
  "192.168.25.53"
  "192.168.0.0/24"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.proxy.birdSocket
Bird control socket path.

Type: string

Default:

```
"/var/run/bird/bird.ctl"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.proxy.extraArgs
Extra parameters documented **here**.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.proxy.listenAddresses
Address to listen on.

Type: string or list of string

Default:

```
"127.0.0.1:8000"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.proxy.traceroute.binary
Traceroute’s binary path.

Type: string

Default:

```
"${pkgs.traceroute}/bin/traceroute"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.proxy.traceroute.flags
Flags for traceroute process

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.proxy.traceroute.rawOutput
Display traceroute output in raw format.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.bird-lg.user
User to run the service.

Type: string

Default:

```
"bird-lg"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bird-lg.nix>

services.birdwatcher.enable
Whether to enable Birdwatcher.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/birdwatcher.nix>

services.birdwatcher.package
The birdwatcher package to use.

Type: package

Default:

```
pkgs.birdwatcher
```

Declared by:
<nixpkgs/nixos/modules/services/networking/birdwatcher.nix>

services.birdwatcher.flags

Flags to append to the program call

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-worker-pool-size 16"
  "-6"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/birdwatcher.nix>

services.birdwatcher.settings

birdwatcher configuration, for configuration options see the example on **github**

Type: strings concatenated with "\n"

Default:

```
{ }
```

Example:

```
[server]
allow_from = []
allow_uncached = false
modules_enabled = ["status",
                   "protocols",
                   "protocols_bgp",
                   "protocols_short",
                   "routes_protocol",
                   "routes_peer",
                   "routes_table",
                   "routes_table_filtered",
                   "routes_table_peer",
                   "routes_filtered",
                   "routes_prefixed",
                   "routes_noexport",
                   "routes_pipe_filtered_count",
                   "routes_pipe_filtered"
                  ]
[status]
reconfig_timestamp_source = "bird"
reconfig_timestamp_match = "# created: (.*)"
filter_fields = []
[bird]
listen = "0.0.0.0:29184"
config = "/etc/bird/bird.conf"
birdc  = "${pkgs.bird2}/bin/birdc"
ttl = 5 # time to live (in minutes) for caching of cli output
[parser]
filter_fields = []
[cache]
```

```
use_redis = false # if not using redis cache, activate housekeeping \
 to save memory!
[housekeeping]
interval = 5
force_release_memory = true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/birdwatcher.nix>

services.bitbox−bridge.enable
Whether to enable Bitbox bridge daemon, for use with Bitbox hardware wallets…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/bitbox−bridge.nix>

services.bitbox−bridge.package
The bitbox−bridge package to use.

Type: package

Default:

```
pkgs.bitbox−bridge
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/bitbox−bridge.nix>

services.bitbox−bridge.port
Listening port for the bitbox−bridge.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8178
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/bitbox−bridge.nix>

services.bitbox−bridge.runOnMount
Run bitbox−bridge.service only when hardware wallet is plugged, also registers the systemd device unit. This option is enabled by default to save power, when false, bitbox−bridge service runs all the time instead.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/bitbox−bridge.nix>

services.bitcoind

Specification of one or more bitcoind instances.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.enable

Whether to enable Bitcoin daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.package

The bitcoind package to use.

Type: package

Default:

```
pkgs.bitcoind
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.configFile

The configuration file path to supply bitcoind.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/‹name›/bitcoin.conf"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.dataDir

The data directory for bitcoind.

Type: absolute path

Default:

```
"/var/lib/bitcoind-‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.dbCache

Override the default database cache size in MiB.

Type: null or integer between 4 and 16384 (both inclusive)

Default:

```
null
```

Example:

```
4000
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.extraCmdlineOptions

Extra command line options to pass to bitcoind. Run bitcoind −−help to list all available options.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.extraConfig

Additional configurations to be appended to *bitcoin.conf*.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
par=16
rpcthreads=16
logips=1
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.group

The group as which to run bitcoind.

Type: string

Default:

```
"bitcoind-‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.pidFile

Location of bitcoind pid file.

Type: absolute path

Default:

```
"/var/lib/bitcoind-‹name›/bitcoind.pid"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.port
Override the default port on which to listen for connections.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.prune
Reduce storage requirements by enabling pruning (deleting) of old blocks. This allows the pruneblockchain RPC to be called to delete specific blocks, and enables automatic pruning of old blocks if a target size in MiB is provided. This mode is incompatible with −txindex and −rescan. Warning: Reverting this setting requires re−downloading the entire blockchain. (“disable” = disable pruning blocks, “manual” = allow manual pruning via RPC, >=550 = automatically prune block files to stay under the specified target size in MiB).

Type: null or ((unsigned integer, meaning >=0) or (one of “disable”, “manual”) convertible to it)

Default:

```
null
```

Example:

```
10000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.rpc.port
Override the default port on which to listen for JSON−RPC connections.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.rpc.users
RPC user information for JSON−RPC connections.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  alice.passwordHMAC = "f7efda5c189b999524f151318c0c86$d5b51b3beffb \
c02b724e5d095828e0bc8b2456e9ac8757ae3211a5d9b16a22ae";
  bob.passwordHMAC = "b2dd077cb54591a2f3139e69a897ac$4e71f08d48b434 \
7cf8eff3815c0e25ae2e9a4340474079f55705f40574f4ec99";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.rpc.users.<name>.name
Username for JSON−RPC connections.

Type: string

Example:

```
"alice"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.rpc.users.<name>.passwordHMAC
Password HMAC−SHA−256 for JSON−RPC connections. Must be a string of the format <SALT−HEX>$<HMAC−HEX>.

Tool (Python script) for HMAC generation is available here: **https://github.com/bitcoin/bitcoin/blob/master/share/rpcauth/rpcauth.py**

Type: string matching the pattern [0−9a−f]+\$[0−9a−f]{64}

Example:

```
"f7efda5c189b999524f151318c0c86$d5b51b3beffbc02b724e5d095828e0bc8b2 \
456e9ac8757ae3211a5d9b16a22ae"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.testnet
Whether to use the testnet instead of mainnet.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitcoind.<name>.user
The user as which to run bitcoind.

Type: string

Default:

```
"bitcoind−‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitcoind.nix>

services.bitlbee.enable
Whether to run the BitlBee IRC to other chat network gateway. Running it allows you to access the MSN, Jabber, Yahoo! and ICQ chat networks via an IRC client.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitlbee.nix>

services.bitlbee.authBackend
How users are authenticated storage – save passwords internally pam – Linux PAM authentication

Type: one of “storage”, “pam”

Default:

```
"storage"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitlbee.nix>

services.bitlbee.authMode
The following authentication modes are available: Open – Accept connections from anyone, use NickServ for user authentication. Closed – Require authorization (using the PASS command during login) before allowing the user to connect at all. Registered – Only allow registered users to use this server; this disables the register− and the account command until the user identifies himself.

Type: one of “Open”, “Closed”, “Registered”

Default:

```
"Open"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitlbee.nix>

services.bitlbee.configDir
Specify an alternative directory to store all the per−user configuration files.

Type: absolute path

Default:

```
"/var/lib/bitlbee"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitlbee.nix>

services.bitlbee.extraDefaults
Will be inserted in the Default section of the config file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitlbee.nix>

services.bitlbee.extraSettings
Will be inserted in the Settings section of the config file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitlbee.nix>

services.bitlbee.hostName

Normally, BitlBee gets a hostname using getsockname(). If you have a nicer alias for your BitlBee daemon, you can set it here and BitlBee will identify itself with that name instead.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bitlbee.nix>

services.bitlbee.interface

The interface the BitlBee daemon will be listening to. If '127.0.0.1', only clients on the local host can connect to it; if '0.0.0.0', clients can access it from any network interface.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bitlbee.nix>

services.bitlbee.libpurple_plugins

The list of libpurple plugins to install.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.purple-discord ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bitlbee.nix>

services.bitlbee.plugins

The list of bitlbee plugins to install.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.bitlbee-facebook ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/bitlbee.nix>

services.bitlbee.portNumber

Number of the port BitlBee will be listening to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6667
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitlbee.nix>

services.bitlbee.protocols
This option allows to remove the support of protocol, even if compiled in. If nothing is given, there are no restrictions.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/bitlbee.nix>

services.bitmagnet.enable
Whether to enable Bitmagnet service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitmagnet.package
The bitmagnet package to use.

Type: package

Default:

```
pkgs.bitmagnet
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitmagnet.group
Group of user running bitmagnet

Type: string

Default:

```
"bitmagnet"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitmagnet.openFirewall
Open DHT ports in firewall

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitmagnet.settings

Bitmagnet configuration (https://bitmagnet.io/setup/configuration.html).

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitmagnet.settings.dht_server

DHT server settings

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitmagnet.settings.dht_server.port

DHT listen port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3334
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitmagnet.settings.http_server

HTTP server settings

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitmagnet.settings.http_server.port

HTTP server listen port

Type: string

Default:

```
":3333"
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitmagnet.settings.postgres

PostgreSQL database configuration

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitmagnet.settings.postgres.host
Address, hostname or Unix socket path of the database server

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitmagnet.settings.postgres.name
Database name to connect to

Type: string

Default:

```
"bitmagnet"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitmagnet.settings.postgres.password
Password for database user

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitmagnet.settings.postgres.user
User to connect as

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitmagnet.useLocalPostgresDB
Use a local postgresql database, create user and database

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitmagnet.user
User running bitmagnet

Type: string

Default:

```
"bitmagnet"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/bitmagnet.nix>

services.bitwarden−directory−connector−cli.enable
Whether to enable Bitwarden Directory Connector.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.package
The bitwarden−directory−connector−cli package to use.

Type: package

Default:

```
pkgs.bitwarden−directory−connector−cli
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.domain
The domain the Bitwarden/Vaultwarden is accessible on.

Type: string

Example:

```
"https://vaultwarden.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.interval
The interval when to run the connector. This uses systemd's OnCalendar syntax.

Type: string

Default:

```
"*:0,15,30,45"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.ldap
Options to configure the LDAP connection. If you used the desktop application to test the configuration you can find the settings by searching for 'ldap' in '~/.config/Bitwarden\ Directory\ Connector/data.json'.

Type: open submodule of attribute set of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.ldap.ad
Whether the LDAP Server is an Active Directory.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.ldap.hostname
The host the LDAP is accessible on.

Type: string

Example:

```
"ldap.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.ldap.pagedSearch
Whether the LDAP server paginates search results.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.ldap.port
Port LDAP is accessible on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
389
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.ldap.rootPath
Root path for LDAP.

Type: string

Example:

```
"dc=example,dc=com"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.ldap.ssl
Whether to use TLS.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.ldap.startTls
Whether to use STARTTLS.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.ldap.username
The user to authenticate as.

Type: string

Example:

```
"cn=admin,dc=example,dc=com"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.secrets.bitwarden.client_path_id
Path to file that contains Client ID.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.secrets.bitwarden.client_path_secret
Path to file that contains Client Secret.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.secrets.ldap
Path to file that contains LDAP password for user in {option}`ldap.username

Type: string

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.sync
Options to configure what gets synced. If you used the desktop application to test the configuration you can find the settings by searching for ‘sync’ in ‘~/.config/Bitwarden\ Directory\ Connector/data.json’.

Type: open submodule of attribute set of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden−directory−connector−cli.sync.creationDateAttribute
Attribute that lists a user's creation date.

Type: string

Example:

```
"whenCreated"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.sync.emailPrefixAttribute
The attribute that contains the users username.

Type: string

Example:

```
"accountName"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.sync.emailSuffix
Suffix for the email, normally @example.com.

Type: string

Example:

```
"@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.sync.groupFilter
LDAP filter for groups.

Type: string

Default:

```
""
```

Example:

```
"(cn=sales)"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.sync.groupNameAttribute
Attribute for a name of group.

Type: string

Default:

```
"cn"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.sync.groupObjectClass
A class that groups will have.

Type: string

Default:

```
"groupOfNames"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.sync.groupPath
Group directory, relative to root.

Type: string

Default:

```
"ou=groups"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.sync.groups
Whether to sync ldap groups into BitWarden.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.sync.largeImport
Enable if you are syncing more than 2000 users/groups.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.sync.memberAttribute
Attribute that lists members in a LDAP group.

Type: string

Example:

```
"uniqueMember"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.sync.overwriteExisting
Remove and re−add users/groups, See **https://bitwarden.com/help/user−group−filters/#overwriting−syncs** for more details.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.sync.removeDisabled
Remove users from bitwarden groups if no longer in the ldap group.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.sync.useEmailPrefixSuffix
If a user has no email address, combine a username prefix with a suffix value to form an email.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.sync.userEmailAttribute
Attribute for a users email.

Type: string

Default:

```
"mail"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.sync.userFilter
LDAP filter for users.

Type: string

Default:

```
""
```

Example:

```
"(memberOf=cn=sales,ou=groups,dc=example,dc=com)"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden-directory-connector-cli.sync.userObjectClass
Class that users must have.

Type: string

Default:

```
"inetOrgPerson"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden-directory-connector-cli.nix>

services.bitwarden−directory−connector−cli.sync.userPath
User directory, relative to root.

Type: string

Default:

```
"ou=users"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.sync.users
Sync users.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.bitwarden−directory−connector−cli.user
User to run the program.

Type: string

Default:

```
"bwdc"
```

Declared by:
<nixpkgs/nixos/modules/services/security/bitwarden−directory−connector−cli.nix>

services.blackfire−agent.enable
Whether to enable Blackfire profiler agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/blackfire.nix>

services.blackfire−agent.settings
See **https://blackfire.io/docs/up−and−running/configuration/agent**

Type: open submodule of attribute set of string

Declared by:
<nixpkgs/nixos/modules/services/development/blackfire.nix>

services.blackfire−agent.settings.server−id
Sets the server id used to authenticate with Blackfire

You can find your personal server−id at **https://blackfire.io/my/settings/credentials**

Type: string

Declared by:
<nixpkgs/nixos/modules/services/development/blackfire.nix>

services.blackfire−agent.settings.server−token
Sets the server token used to authenticate with Blackfire

You can find your personal server−token at **https://blackfire.io/my/settings/credentials**

Type: string

Declared by:
<nixpkgs/nixos/modules/services/development/blackfire.nix>

services.blendfarm.enable
Whether to enable Blendfarm, a render farm management software for Blender.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/blenderfarm.nix>

services.blendfarm.package
The blendfarm package to use.

Type: package

Default:

```
pkgs.blendfarm
```

Declared by:
<nixpkgs/nixos/modules/services/misc/blenderfarm.nix>

services.blendfarm.basicSecurityPasswordFile
Path to the password file the client needs to connect to the server. The password must not contain a forward slash.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/blenderfarm.nix>

services.blendfarm.blenderPackage
The blender package to use.

Type: package

Default:

```
pkgs.blender
```

Declared by:
<nixpkgs/nixos/modules/services/misc/blenderfarm.nix>

services.blendfarm.group

Group under which blendfarm runs.

Type: string

Default:

```
"blendfarm"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/blenderfarm.nix>

services.blendfarm.openFirewall

Whether to enable allowing blendfarm network access through the firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/blenderfarm.nix>

services.blendfarm.serverConfig

Server configuration

Type: open submodule of attribute set of anything

Default:

```
{
  BasicSecurityPassword = null;
  BroadcastPort = 16342;
  BypassScriptUpdate = false;
  Port = 15000;
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/blenderfarm.nix>

services.blendfarm.serverConfig.BroadcastPort

Default port blendfarm server advertises itself on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
16342
```

Declared by:

<nixpkgs/nixos/modules/services/misc/blenderfarm.nix>

services.blendfarm.serverConfig.BypassScriptUpdate

Prevents blendfarm from replacing the .py self−generated scripts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/blenderfarm.nix>

services.blendfarm.serverConfig.Port
Default port blendfarm server listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
15000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/blenderfarm.nix>

services.blendfarm.user
User under which blendfarm runs.

Type: string

Default:

```
"blendfarm"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/blenderfarm.nix>

services.blockbook−frontend
Specification of one or more blockbook−frontend instances.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.enable
Whether to enable blockbook−frontend application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.package
The blockbook package to use.

Type: package

Default:

```
pkgs.blockbook
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.certFile
To enable SSL, specify path to the name of certificate files without extension. Expecting *certFile.crt* and *certFile.key*.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/secrets/blockbook−frontend−‹name›/certFile"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.coinName
See **https://github.com/trezor/blockbook/blob/master/bchain/coins/blockchain.go#L61** for current of coins supported in master (Note: may differ from release).

Type: string

Default:

```
"Bitcoin"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.configFile
Location of the blockbook configuration file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/blockbook−frontend−‹name›/config.json"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.cssDir
Location of the dir with *main.css* CSS file. By default, the one shipped with the package is used.

Type: absolute path

Default:

```
"${package}/share/css/"
```

Example:

```
"${dataDir}/static/css/"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.dataDir
Location of blockbook−frontend−‹name› data directory.

Type: absolute path

Default:

```
"/var/lib/blockbook−frontend−‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.debug
Debug mode, return more verbose errors, reload templates on each request.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.extraCmdLineOptions
Extra command line options to pass to Blockbook. Run blockbook −−help to list all available options.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−workers=1"
  "−dbcache=0"
  "−logtosderr"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.extraConfig
Additional configurations to be appended to *coin.conf*. Overrides any already defined configuration options. See **https://github.com/trezor/blockbook/tree/master/configs/coins** for current configuration options supported in master (Note: may differ from release).

Type: attribute set

Default:

```
{ }
```

Example:

```
{
        "alternative_estimate_fee" = "whatthefee−disabled";
        "alternative_estimate_fee_params" = "{\"url\": \"https: \
//whatthefee.io/data.json\", \"periodSeconds\": 60}";
        "fiat_rates" = "coingecko";
        "fiat_rates_params" = "{\"url\": \"https://api.coingeck \
o.com/api/v3\", \"coin\": \"bitcoin\", \"periodSeconds\": 60 \
}";
        "coin_shortcut" = "BTC";
        "coin_label" = "Bitcoin";
        "parse" = true;
        "subversion" = "";
        "address_format" = "";
        "xpub_magic" = 76067358;
        "xpub_magic_segwit_p2sh" = 77429938;
        "xpub_magic_segwit_native" = 78792518;
```

```
    "mempool_workers" = 8;
    "mempool_sub_workers" = 2;
    "block_addresses_to_keep" = 300;
  }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook-frontend.nix>

services.blockbook-frontend.<name>.group
The group as which to run blockbook-frontend-‹name›.

Type: string

Default:

```
"blockbook-frontend-‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook-frontend.nix>

services.blockbook-frontend.<name>.internal
Internal http server binding '[address]:port'.

Type: null or string

Default:

```
":9030"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook-frontend.nix>

services.blockbook-frontend.<name>.messageQueueBinding
Message Queue Binding 'address:port'.

Type: string

Default:

```
"tcp://127.0.0.1:38330"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook-frontend.nix>

services.blockbook-frontend.<name>.public
Public http server binding '[address]:port'.

Type: null or string

Default:

```
":9130"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook-frontend.nix>

services.blockbook-frontend.<name>.rpc.password
RPC password for JSON-RPC connections. Warning: this is stored in cleartext in the Nix store!!! Use 'configFile' or 'passwordFile' if needed.

Type: string

Default:

```
"rpc"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.rpc.passwordFile
File containing password of the RPC user. Note: This options is ignored when ‘configFile’ is used.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.rpc.port
Port for JSON−RPC connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8030
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.rpc.url
URL for JSON−RPC connections.

Type: string

Default:

```
"http://127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.rpc.user
Username for JSON−RPC connections.

Type: string

Default:

```
"rpc"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.sync
Synchronizes until tip, if together with zeromq, keeps index synchronized.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook−frontend.nix>

services.blockbook−frontend.<name>.templateDir
Location of the HTML templates. By default, ones shipped with the package are used.

Type: absolute path

Default:

```
"${package}/share/templates/"
```

Example:

```
"${dataDir}/templates/static/"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook-frontend.nix>

services.blockbook-frontend.<name>.user
The user as which to run blockbook-frontend-‹name›.

Type: string

Default:

```
"blockbook-frontend-‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blockbook-frontend.nix>

services.blocky.enable
Whether to enable blocky, a fast and lightweight DNS proxy as ad-blocker for local network with many features.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blocky.nix>

services.blocky.enableConfigCheck
Whether to enable checking the config during build time.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blocky.nix>

services.blocky.package
The blocky package to use.

Type: package

Default:

```
pkgs.blocky
```

Declared by:
<nixpkgs/nixos/modules/services/networking/blocky.nix>

services.blocky.settings

Blocky configuration. Refer to **https://0xerr0r.github.io/blocky/configuration/** for details on supported values.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/blocky.nix>

services.bloop.extraOptions

Specifies additional command line argument to pass to bloop java process.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-J-Xmx2G"
  "-J-XX:MaxInlineLevel=20"
  "-J-XX:+UseParallelGC"
]
```

Declared by:

<nixpkgs/nixos/modules/services/development/bloop.nix>

services.bloop.install

Whether to install a user service for the Bloop server.

The service must be manually started for each user with “systemctl --user start bloop”.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/development/bloop.nix>

services.blueman.enable

Whether to enable blueman, a bluetooth manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/blueman.nix>

services.blueman.withApplet
Whether to spawn the Blueman tray applet.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/blueman.nix>

services.bluemap.enable
Whether to enable bluemap.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluemap.nix>

services.bluemap.enableNginx
Enable configuring a virtualHost for serving the bluemap webapp

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluemap.nix>

services.bluemap.enableRender
Enable rendering

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluemap.nix>

services.bluemap.coreSettings
Settings for the core.conf file, **see upstream docs**.

Type: open submodule of (HOCON value)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluemap.nix>

services.bluemap.coreSettings.data
Folder for where bluemap stores its data

Type: absolute path

Default:

```
"/var/lib/bluemap"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluemap.nix>

services.bluemap.coreSettings.metrics
Whether to enable Sending usage metrics containing the version of bluemap in use.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluemap.nix>

services.bluemap.defaultWorld
The world used by the default map ruleset. If you configure your own maps you do not need to set this.

Type: absolute path

Example:

```
${config.services.minecraft.dataDir}/world
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluemap.nix>

services.bluemap.eula
By changing this option to true you confirm that you own a copy of minecraft Java Edition, and that you agree to minecrafts EULA.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluemap.nix>

services.bluemap.host
Domain on which nginx will serve the bluemap webapp

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluemap.nix>

services.bluemap.maps
Settings for files in ‘maps/’. If you define anything here you must define everything yourself. See the default for an example with good options for the different world types. For valid values **consult upstream docs**.

Type: attribute set of (open submodule of (HOCON value))

Default:

```
{
  "overworld" = {
    world = "${cfg.defaultWorld}";
    ambient−light = 0.1;
    cave−detection−ocean−floor = −5;
  };
```

```
    "nether" = {
      world = "${cfg.defaultWorld}/DIM-1";
      sorting = 100;
      sky-color = "#290000";
      void-color = "#150000";
      ambient-light = 0.6;
      world-sky-light = 0;
      remove-caves-below-y = -10000;
      cave-detection-ocean-floor = -5;
      cave-detection-uses-block-light = true;
      max-y = 90;
    };
    "end" = {
      world = "${cfg.defaultWorld}/DIM1";
      sorting = 200;
      sky-color = "#080010";
      void-color = "#080010";
      ambient-light = 0.6;
      world-sky-light = 0;
      remove-caves-below-y = -10000;
      cave-detection-ocean-floor = -5;
    };
  };
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bluemap.nix>

services.bluemap.maps.<name>.world
Path to world folder containing the dimension to render

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bluemap.nix>

services.bluemap.onCalendar
How often to trigger rendering the map, in the format of a systemd timer onCalendar configuration. See **systemd.timer**(5).

Type: string

Default:

```
"*-*-* 03:10:00"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bluemap.nix>

services.bluemap.packs
A set of resourcepacks, datapacks, and mods to extract resources from, loaded in alphabetical order.

Type: attribute set of path in the Nix store

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bluemap.nix>

services.bluemap.storage

Where the rendered map will be stored. Unless you are doing something advanced you should probably leave this alone and configure webRoot instead. **See upstream docs**

Type: attribute set of (open submodule of (HOCON value))

Default:

```
{
  "file" = {
    root = "${config.services.bluemap.webRoot}/maps";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bluemap.nix>

services.bluemap.storage.<name>.storage−type

Type of storage config

Type: one of “FILE”, “SQL”

Default:

```
"FILE"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bluemap.nix>

services.bluemap.webRoot

The directory for saving and serving the webapp and the maps

Type: absolute path

Default:

```
"/var/lib/bluemap/web"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bluemap.nix>

services.bluemap.webappSettings

Settings for the webapp.conf file, see **upstream docs**.

Type: open submodule of (HOCON value)

Default:

```
{
  enabled = true;
  webroot = config.services.bluemap.webRoot;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bluemap.nix>

services.bluemap.webserverSettings

Settings for the webserver.conf file, usually not required. **See upstream docs**.

Type: open submodule of (HOCON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluemap.nix>

services.bluemap.webserverSettings.enabled
Enable bluemap's built−in webserver. Disabled by default in nixos for use of nginx directly.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluemap.nix>

services.bluesky−pds.enable
Whether to enable pds.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluesky−pds.nix>

services.bluesky−pds.package
The bluesky−pds package to use.

Type: package

Default:

```
pkgs.bluesky−pds
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluesky−pds.nix>

services.bluesky−pds.environmentFiles
File to load environment variables from. Loaded variables override values set in **environment**.

Use it to set values of 'PDS_JWT_SECRET', 'PDS_ADMIN_PASSWORD', and 'PDS_PLC_ROTATION_KEY_K256_PRIVATE_KEY_HEX' secrets. 'PDS_JWT_SECRET' and 'PDS_ADMIN_PASSWORD' can be generated with

```
openssl rand −−hex 16
```

'PDS_PLC_ROTATION_KEY_K256_PRIVATE_KEY_HEX' can be generated with

```
openssl ecparam −−name secp256k1 −−genkey −−noout −−outform \
 DER | tail −−bytes=+8 | head −−bytes=32 | xxd −−plain −−co \
ls 32
```

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluesky−pds.nix>

services.bluesky-pds.goat.enable
Add goat to PATH

Type: boolean

Default:

```
config.services.bluesky-pds.enable
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bluesky-pds.nix>

services.bluesky-pds.pdsadmin.enable
Add pdsadmin script to PATH

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bluesky-pds.nix>

services.bluesky-pds.settings
Environment variables to set for the service. Secrets should be specified using **environmentFile**.

Refer to **https://github.com/bluesky-social/atproto/blob/main/packages/pds/src/config/env.ts** for available environment variables.

Type: open submodule of attribute set of (null or string or 16 bit unsigned integer; between 0 and 65535 (both inclusive))

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bluesky-pds.nix>

services.bluesky-pds.settings.LOG_ENABLED
Enable logging

Type: null or string

Default:

```
"true"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bluesky-pds.nix>

services.bluesky-pds.settings.PDS_BLOBSTORE_DISK_LOCATION
Store blobs at this location, set to null to use e.g. S3

Type: null or string

Default:

```
"/var/lib/pds/blocks"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bluesky-pds.nix>

services.bluesky-pds.settings.PDS_BLOB_UPLOAD_LIMIT
Size limit of uploaded blobs in bytes

Type: string

Default:

```
"104857600"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bluesky-pds.nix>

services.bluesky-pds.settings.PDS_BSKY_APP_VIEW_DID
DID of bsky frontend

Type: string

Default:

```
"did:web:api.bsky.app"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bluesky-pds.nix>

services.bluesky-pds.settings.PDS_BSKY_APP_VIEW_URL
URL of bsky frontend

Type: string

Default:

```
"https://api.bsky.app"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bluesky-pds.nix>

services.bluesky-pds.settings.PDS_CRAWLERS
URL of crawlers

Type: string

Default:

```
"https://bsky.network"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bluesky-pds.nix>

services.bluesky-pds.settings.PDS_DATA_DIRECTORY
Directory to store state

Type: string

Default:

```
"/var/lib/pds"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bluesky-pds.nix>

services.bluesky-pds.settings.PDS_DID_PLC_URL
URL of DID PLC directory

Type: string

Default:

```
"https://plc.directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/bluesky-pds.nix>

services.bluesky-pds.settings.PDS_HOSTNAME
Instance hostname (base domain name)

Type: string

Example:

```
"pds.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluesky−pds.nix>

services.bluesky−pds.settings.PDS_INVITE_REQUIRED
Require invite code for registration

Type: null or string

Default:

```
"true"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluesky−pds.nix>

services.bluesky−pds.settings.PDS_PORT
Port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluesky−pds.nix>

services.bluesky−pds.settings.PDS_RATE_LIMITS_ENABLED
Enable rate limiting

Type: null or string

Default:

```
"true"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluesky−pds.nix>

services.bluesky−pds.settings.PDS_REPORT_SERVICE_DID
DID of mod service

Type: string

Default:

```
"did:plc:ar7c4by46qjdydhdevvrndac"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluesky−pds.nix>

services.bluesky−pds.settings.PDS_REPORT_SERVICE_URL
URL of mod service

Type: string

Default:

```
"https://mod.bsky.app"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bluesky−pds.nix>

services.boinc.enable

Whether to enable the BOINC distributed computing client. If this option is set to true, the boinc_client daemon will be run as a background service. The boinccmd command can be used to control the daemon.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/computing/boinc/client.nix>

services.boinc.package

The boinc package to use.

Type: package

Default:

```
pkgs.boinc
```

Example:

```
boinc-headless
```

Declared by:

<nixpkgs/nixos/modules/services/computing/boinc/client.nix>

services.boinc.allowRemoteGuiRpc

If set to true, any remote host can connect to and control this BOINC client (subject to password authentication). If instead set to false, only the hosts listed in *dataDir*/remote_hosts.cfg will be allowed to connect.

See also: **https://boinc.berkeley.edu/wiki/Controlling_BOINC_remotely#Remote_access**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/computing/boinc/client.nix>

services.boinc.dataDir

The directory in which to store BOINC's configuration and data files.

Type: absolute path

Default:

```
"/var/lib/boinc"
```

Declared by:

<nixpkgs/nixos/modules/services/computing/boinc/client.nix>

services.boinc.extraEnvPackages

Additional packages to make available in the environment in which BOINC will run. Common choices are:

- *pkgs.virtualbox*: The VirtualBox virtual machine framework. Required by some BOINC projects, such as ATLAS@home.
- *pkgs.ocl-icd*: OpenCL infrastructure library. Required by BOINC projects that use OpenCL, in addition to a device-specific OpenCL driver.
- *pkgs.linuxPackages.nvidia_x11*: Provides CUDA libraries. Required by BOINC projects that use CUDA. Note that this requires an NVIDIA graphics device to be present on the system.

Also provides OpenCL drivers for NVIDIA GPUs; *pkgs.ocl−icd* is also needed in this case.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.virtualbox ]
```

Declared by:
<nixpkgs/nixos/modules/services/computing/boinc/client.nix>

services.bonsaid.enable
Whether to enable bonsaid.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/bonsaid.nix>

services.bonsaid.package
The bonsai package to use.

Type: package

Default:

```
pkgs.bonsai
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/bonsaid.nix>

services.bonsaid.configFile
Path to a .json file specifying the state transitions. You don’t need to set this unless you prefer to provide the json file yourself instead of using the ‘settings’ option.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/desktops/bonsaid.nix>

services.bonsaid.extraFlags
Extra flags to pass to ‘bonsaid’, such as ‘["−v"]’ to enable verbose logging.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/bonsaid.nix>

services.bonsaid.settings

State transition definitions. See the upstream **README** for extended documentation and a more complete example.

Type: list of (open submodule of (JSON value))

Example:

```
[
  {
    event_name = "power_button_pressed";
    transitions = [
      {
        delay_duration = 600000000;
        transitions = [
          {
            command = [
              "swaymsg"
              "--"
              "output"
              "*"
              "power"
              "off"
            ];
            transitions = [ ];
            type = "exec";
          }
        ];
        type = "delay";
      }
      {
        event_name = "power_button_released";
        transitions = [ ];
        type = "event";
      }
    ];
    type = "event";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/bonsaid.nix>

services.bonsaid.settings.*.command

Command to run when this transition is taken. This is executed inline by ‘bonsaid’ and blocks handling of any other events until completion. To perform the command asynchronously, specify it like ‘["setsid" "−f" "my−command"]’.

Only effects transitions with ‘type = "exec"’.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/bonsaid.nix>

services.bonsaid.settings.*.delay_duration
Nanoseconds to wait after the previous state change before performing this transition. This can be placed at the same level as a ‘type = "event"’ transition to achieve a timeout mechanism.

Only effects transitions with ‘type = "delay"’.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/bonsaid.nix>

services.bonsaid.settings.*.event_name
Name of the event which should trigger this transition when received by ‘bonsaid’. Events are sent to ‘bonsaid’ by running ‘bonsaictl −e <event_name>’.

Only effects transitions with ‘type = "event"’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/bonsaid.nix>

services.bonsaid.settings.*.transitions
List of transitions out of this state. If left empty, then this state is considered a terminal state and entering it will trigger an immediate transition back to the root state (after processing side effects).

Type: list of (open submodule of (JSON value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/bonsaid.nix>

services.bonsaid.settings.*.type
Type of transition. Determines how bonsaid interprets the other options in this transition.

Type: one of “delay”, “event”, “exec”

Declared by:
<nixpkgs/nixos/modules/services/desktops/bonsaid.nix>

services.bookstack.enable
Whether to enable BookStack: A platform to create documentation/wiki content built with PHP & Laravel.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.package
The bookstack package to use.

Type: package

Default:

```
pkgs.bookstack
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.dataDir
BookStack data directory

Type: absolute path

Default:

```
"/var/lib/bookstack"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.group
Group bookstack runs as

Type: string

Default:

```
"If ‘services.bookstack.nginx‘ has any attributes then ‘nginx‘ else \
 bookstack"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.hostname
The hostname to serve BookStack on.

Type: string

Default:

```
config.networking.fqdnOrHostName
```

Example:

```
"bookstack.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.maxUploadSize
The maximum size for uploads (e.g. images).

Type: string

Default:

```
"18M"
```

Example:

```
"1G"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx
With this option, you can customize the nginx virtualHost settings.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  serverAliases = [
    "bookstack.${config.networking.domain}"
  ];
  # To enable encryption and let let's encrypt take care of certifi \
cate
  forceSSL = true;
  enableACME = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with 'redirectCode') all plain HTTP traffic to HTTPS. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with 'redirectCode') to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.http2
Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.http3
Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.http3_hq

Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides 'addSSL' and 'onlySSL'.

If you only want to set the addresses manually and not the ports, take a look at 'listenAddresses'.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.listen.*.ssl
Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations.<name>.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations.<name>.priority

Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations.<name>.proxyPass

Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations.<name>.proxyWebsockets

Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations.<name>.recommendedProxySettings

Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations.<name>.recommendedUwsgiSettings

Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.onlySSL

Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for ‘listen’ to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.quic

Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.redirectCode

HTTP status used by ‘globalRedirect’ and ‘forceSSL’. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.rejectSSL

Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the ‘ssl_reject_handshake’ directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.root
The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.serverName
Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.sslCertificateKey

Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.sslTrustedCertificate

Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.nginx.useACMEHost

A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

2. see the **security.acme.certs** option

services.bookstack.poolConfig

Options for the Bookstack PHP pool. See the documentation on 'php−fpm.conf' for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  "pm" = "dynamic";
  "pm.max_children" = 32;
  "pm.start_servers" = 2;
  "pm.min_spare_servers" = 2;
  "pm.max_spare_servers" = 4;
  "pm.max_requests" = 500;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.settings

Options for Bookstack configuration. Refer to **https://github.com/BookStackApp/BookStack/blob/development/.env.example** for details on supported values. For passing secrets, append "_FILE" to the setting name. For example, you may create a file '/var/secrets/db_pass.txt' and set 'services.bookstack.settings.DB_PASSWORD_FILE' to '/var/secrets/db_pass.txt' instead of providing a plaintext password using 'services.bookstack.settings.DB_PASSWORD'.

Type: open submodule of attribute set of (string or signed integer or boolean)

Default:

```
{ }
```

Example:

```
{
  APP_ENV = "production";
  APP_KEY_FILE = "/var/secrets/bookstack-app-key.txt";
  DB_HOST = "db";
  DB_PORT = 3306;
  DB_DATABASE = "bookstack";
  DB_USERNAME = "bookstack";
  DB_PASSWORD_FILE = "/var/secrets/bookstack-mysql-password.txt";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/bookstack.nix>

services.bookstack.settings.APP_KEY_FILE

The path to your appkey. The file should contain a 32 character random app key. This may be set using 'echo "base64:$(head -c 32 /dev/urandom | base64)" > /path/to/key-file'.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/web-apps/bookstack.nix>

services.bookstack.settings.APP_URL

The root URL that you want to host BookStack on. All URLs in BookStack will be generated using this value. It is used to validate specific requests and to generate URLs in emails.

Type: string

Default:

```
"http(s)://\${config.services.bookstack.hostname}"
```

Example:

```
"https://example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/bookstack.nix>

services.bookstack.settings.DB_HOST

The IP or hostname which hosts your database.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.settings.DB_PASSWORD_FILE
The file containing your mysql/mariadb database password.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/secrets/bookstack−mysql−pass.txt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.settings.DB_PORT
The port your database is listening at.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.bookstack.user
User bookstack runs as

Type: string

Default:

```
"bookstack"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/bookstack.nix>

services.borgbackup.package
The borgbackup package to use.

Type: package

Default:

```
pkgs.borgbackup
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs
Deduplicating backups using BorgBackup. Adding a job will cause a borg−job−NAME wrapper to be added to your system path, so that you can perform maintenance easily. See also the chapter about Borg-Backup in the NixOS manual.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{ # for a local backup
  rootBackup = {
```

```
          paths = "/";
          exclude = [ "/nix" ];
          repo = "/path/to/local/repo";
          encryption = {
            mode = "repokey";
            passphrase = "secret";
          };
          compression = "auto,lzma";
          startAt = "weekly";
        };
      }
      { # Root backing each day up to a remote backup server. We assume \
     that you have
        #   * created a password less key: ssh-keygen -N "" -t ed255 \
    19 -f /path/to/ssh_key
        #     best practices are: use -t ed25519, /path/to = /run/keys
        #   * the passphrase is in the file /run/keys/borgbackup_passph \
    rase
        #   * you have initialized the repository manually
        paths = [ "/etc" "/home" ];
        exclude = [ "/nix" "'**/.cache'" ];
        doInit = false;
        repo =  "user3@arep.repo.borgbase.com:repo";
        encryption = {
          mode = "repokey-blake2";
          passCommand = "cat /path/to/passphrase";
        };
        environment = { BORG_RSH = "ssh -i /path/to/ssh_key"; };
        compression = "auto,lzma";
        startAt = "daily";
    };
```

Declared by:

<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.appendFailedSuffix

Append a '.failed' suffix to the archive name, which is only removed if **borg create** has a zero exit status.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.archiveBaseName

How to name the created archives. A timestamp, whose format is determined by **dateFormat**, will be appended. The full name can be modified at runtime ('$archiveName'). Placeholders like '{hostname}' must not be used. Use 'null' for no base name.

Type: null or string matching the pattern [^/{}]+

Default:

```
"${config.networking.hostName}-<name>"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.compression
Compression method to use. Refer to **borg help compression** for all available options.

Type: string matching the pattern none|(auto,)?(lz4|zstd|zlib|lzma)(,[[:digit:]]{1,2})?

Default:

```
"lz4"
```

Example:

```
"auto,lzma"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.createCommand
Borg command to use for archive creation. The default ('create') creates a regular Borg archive.

Use 'import−tar' to instead read a tar archive stream from **dumpCommand** output and import its contents into the repository.

'import−tar' can not be used together with **exclude** or **patterns**.

Type: one of "create", "import−tar"

Default:

```
"create"
```

Example:

```
"import-tar"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.dateFormat
Arguments passed to **date** to create a timestamp suffix for the archive name.

Type: string

Default:

```
"+%Y-%m-%dT%H:%M:%S"
```

Example:

```
"-u +%s"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.doInit
Run **borg init** if the specified **repo** does not exist. You should set this to 'false' if the repository is located on an external drive that might not always be mounted.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.dumpCommand

Backup the stdout of this program instead of filesystem paths. Mutually exclusive with **paths**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/createZFSsend.sh"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.encryption.mode

Encryption mode to use. Setting a mode other than ‘"none"’ requires you to specify a **passCommand** or a **passphrase**.

Type: one of “repokey”, “keyfile”, “repokey−blake2”, “keyfile−blake2”, “authenticated”, “authenticated−blake2”, “none”

Example:

```
"repokey-blake2"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.encryption.passCommand

A command which prints the passphrase to stdout. Mutually exclusive with **passphrase**.

Type: null or string

Default:

```
null
```

Example:

```
"cat /path/to/passphrase_file"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.encryption.passphrase

The passphrase the backups are encrypted with. Mutually exclusive with **passCommand**. If you do not want the passphrase to be stored in the world−readable Nix store, use **passCommand**.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.environment

Environment variables passed to the backup script. You can for example specify which SSH key to use.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  BORG_RSH = "ssh -i /path/to/key";
}
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.exclude
Exclude paths matching any of the given patterns. See **borg help patterns** for pattern syntax.

Can not be set when **createCommand** is set to 'import-tar'.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/home/*/.cache"
  "/nix"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.extraArgs
Additional arguments for all **borg** calls the service has. Handle with care.

These extra arguments also get included in the wrapper script for this job.

Type: string or (list of string) convertible to it

Default:

```
[ ]
```

Example:

```
[
  "--remote-path=/path/to/borg"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.extraCompactArgs
Additional arguments for **borg compact**. Can also be set at runtime using '$extraCompactArgs'.

Type: string or (list of string) convertible to it

Default:

```
[ ]
```

Example:

```
[
  "--cleanup-commits"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.extraCreateArgs

Additional arguments for **borg create**. Can also be set at runtime using '$extraCreateArgs'.

Type: string or (list of string) convertible to it

Default:

```
[ ]
```

Example:

```
[
  "--stats"
  "--checkpoint-interval 600"
]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.extraInitArgs

Additional arguments for **borg init**. Can also be set at runtime using '$extraInitArgs'.

Type: string or (list of string) convertible to it

Default:

```
[ ]
```

Example:

```
[
  "--append-only"
]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.extraPruneArgs

Additional arguments for **borg prune**. Can also be set at runtime using '$extraPruneArgs'.

Type: string or (list of string) convertible to it

Default:

```
[ ]
```

Example:

```
[
  "--save-space"
]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.failOnWarnings

Fail the whole backup job if any borg command returns a warning (exit code 1), for example because a file changed during backup.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.group
The group borg is run as. User or group needs read permission for the specified **paths**.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.inhibitsSleep
Prevents the system from sleeping while backing up.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.paths
Path(s) to back up. Mutually exclusive with **dumpCommand**.

Type: null or ((list of string) or string convertible to it)

Default:

```
null
```

Example:

```
"/home/user"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.patterns
Include/exclude paths matching the given patterns. The first matching patterns is used, so if an include pattern (prefix '+') matches before an exclude pattern (prefix '−'), the file is backed up. See **borg help patterns** for pattern syntax.

Can not be set when **createCommand** is set to 'import−tar'.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "+ /home/susan"
  "- /home/*"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.persistentTimer
Set the 'Persistent' option for the **systemd.timer**(5) which triggers the backup immediately if the last trigger was missed (e.g. if the system was powered down).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.postCreate
Shell commands to run after **borg create**. The name of the created archive is stored in '$archiveName'.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.postHook
Shell commands to run just before exit. They are executed even if a previous command exits with a non−zero exit code. The latter is available as '$exitStatus'.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.postInit
Shell commands to run after **borg init**.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.postPrune
Shell commands to run after **borg prune**.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.preHook
Shell commands to run before the backup. This can for example be used to mount file systems.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
# To add excluded paths at runtime
extraCreateArgs+=("--exclude" "/some/path")
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.privateTmp
Set the ‘PrivateTmp’ option for the systemd−service. Set to false if you need sockets or other files from global /tmp.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.prune.keep
Prune a repository by deleting all archives not matching any of the specified retention options. See **borg help prune** for the available options.

Type: attribute set of (signed integer or string matching the pattern [[:digit:]]+[Hdwmy])

Default:

```
{ }
```

Example:

```
{
  within = "1d"; # Keep all archives from the last day
  daily = 7;
  weekly = 4;
  monthly = -1;  # Keep at least one archive for each month
}
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.prune.prefix
Only consider archive names starting with this prefix for pruning. By default, only archives created by this job are considered. Use ‘""’ or ‘null’ to consider all archives.

Type: null or string

Default:

```
archiveBaseName
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.readWritePaths
By default, borg cannot write anywhere on the system but '$HOME/.config/borg' and '$HOME/.cache/borg'. If, for example, your preHook script needs to dump files somewhere, put those directories here.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/var/backup/mysqldump"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.removableDevice
Whether the repo (which must be local) is a removable device.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.repo
Remote or local repository to back up to.

Type: string

Example:

```
"user@machine:/path/to/repo"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.startAt
When or how often the backup should run. Must be in the format described in **systemd.time**(7). If you do not want the backup to start automatically, use '[ ]'. It will generate a systemd service borgbackup−job−NAME. You may trigger it manually via systemctl restart borgbackup−job−NAME.

Type: string or list of string

Default:

```
"daily"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.user
The user **borg** is run as. User or group need read permission for the specified **paths**.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.jobs.<name>.wrapper
Name of the wrapper that is installed into **PATH**. Set to ‘null’ or ‘""’ to disable it altogether.

Type: null or string

Default:

```
"borg-job-<name>"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.repos
Serve BorgBackup repositories to given public SSH keys, restricting their access to the repository only. See also the chapter about BorgBackup in the NixOS manual. Also, clients do not need to specify the absolute path when accessing the repository, i.e. ‘user@machine:.’ is enough. (Note colon and dot.)

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.repos.<name>.allowSubRepos
Allow clients to create repositories in subdirectories of the specified **path**. These can be accessed using ‘user@machine:path/to/subrepo’. Note that a **quota** applies to repositories independently. Therefore, if this is enabled, clients can create multiple repositories and upload an arbitrary amount of data.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.repos.<name>.authorizedKeys
Public SSH keys that are given full write access to this repository. You should use a different SSH key for each repository you write to, because the specified keys are restricted to running **borg serve** and can only access this single repository.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.repos.<name>.authorizedKeysAppendOnly
Public SSH keys that can only be used to append new data (archives) to the repository. Note that archives can still be marked as deleted and are subsequently removed from disk upon accessing the repo with full write access, e.g. when pruning.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.repos.<name>.group
The group **borg serve** is run as. User or group needs write permission for the specified **path**.

Type: string

Default:

```
"borg"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.repos.<name>.path
Where to store the backups. Note that the directory is created automatically, with correct permissions.

Type: absolute path

Default:

```
"/var/lib/borgbackup"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.repos.<name>.quota
Storage quota for the repository. This quota is ensured for all sub−repositories if **allowSubRepos** is enabled but not for the overall storage space used.

Type: null or string matching the pattern [[:digit:].]+[KMGTP]?

Default:

```
null
```

Example:

```
"100G"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgbackup.repos.<name>.user
The user **borg serve** is run as. User or group needs write permission for the specified **path**.

Type: string

Default:

```
"borg"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgbackup.nix>

services.borgmatic.enable
Whether to enable borgmatic.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgmatic.nix>

services.borgmatic.enableConfigCheck
Whether to enable checking all configurations during build time.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgmatic.nix>

services.borgmatic.configurations
Set of borgmatic configurations, see **https://torsion.org/borgmatic/docs/reference/configuration/**

Type: attribute set of (open submodule of (YAML 1.1 value))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgmatic.nix>

services.borgmatic.configurations.<name>.repositories
A required list of local or remote repositories with paths and optional labels (which can be used with the −−repository flag to select a repository). Tildes are expanded. Multiple repositories are backed up to in sequence. Borg placeholders can be used. See the output of “borg help placeholders” for details. See ssh_command for SSH options like identity file or port. If systemd service is used, then add local repository paths in the systemd service file to the ReadWritePaths list.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    label = "backupserver";
    path = "ssh://user@backupserver/./sourcehostname.borg";
  }
  {
    label = "local";
    path = "/mnt/backup";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgmatic.nix>

services.borgmatic.configurations.<name>.repositories.*.label
Label to the repository

Type: string

Declared by:
<nixpkgs/nixos/modules/services/backup/borgmatic.nix>

services.borgmatic.configurations.<name>.repositories.*.path
Path to the repository

Type: string

Declared by:
<nixpkgs/nixos/modules/services/backup/borgmatic.nix>

services.borgmatic.configurations.<name>.source_directories
List of source directories and files to backup. Globs and tildes are expanded. Do not backslash spaces in path names.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/home"
  "/etc"
  "/var/log/syslog*"
  "/home/user/path with spaces"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgmatic.nix>

services.borgmatic.settings
See **https://torsion.org/borgmatic/docs/reference/configuration/**

Type: null or (open submodule of (YAML 1.1 value))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgmatic.nix>

services.borgmatic.settings.repositories
A required list of local or remote repositories with paths and optional labels (which can be used with the −−repository flag to select a repository). Tildes are expanded. Multiple repositories are backed up to in sequence. Borg placeholders can be used. See the output of “borg help placeholders” for details. See ssh_command for SSH options like identity file or port. If systemd service is used, then add local repository paths in the systemd service file to the ReadWritePaths list.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
```

```
    label = "backupserver";
    path = "ssh://user@backupserver/./sourcehostname.borg";
  }
  {
    label = "local";
    path = "/mnt/backup";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgmatic.nix>

services.borgmatic.settings.repositories.*.label
Label to the repository

Type: string

Declared by:
<nixpkgs/nixos/modules/services/backup/borgmatic.nix>

services.borgmatic.settings.repositories.*.path
Path to the repository

Type: string

Declared by:
<nixpkgs/nixos/modules/services/backup/borgmatic.nix>

services.borgmatic.settings.source_directories
List of source directories and files to backup. Globs and tildes are expanded. Do not backslash spaces in path names.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/home"
  "/etc"
  "/var/log/syslog*"
  "/home/user/path with spaces"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/borgmatic.nix>

services.bosun.enable
Whether to enable bosun.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/bosun.nix>

services.bosun.package
The bosun package to use.

Type: package

Default:

```
pkgs.bosun
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/bosun.nix>

services.bosun.checkFrequency
Bosun's check frequency

Type: string

Default:

```
"5m"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/bosun.nix>

services.bosun.extraConfig
Extra configuration options for Bosun. You should describe your desired templates, alerts, macros, etc through this configuration option.

A detailed description of the supported syntax can be found at−spi2−atk **https://bosun.org/configuration.html**

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/bosun.nix>

services.bosun.group
Group account under which bosun runs.

Type: string

Default:

```
"bosun"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/bosun.nix>

services.bosun.influxHost
Host and port of the influxdb database.

Type: null or string

Default:

```
null
```

Example:

```
"localhost:8086"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/bosun.nix>

services.bosun.ledisDir
Path to bosun's ledis data dir

Type: absolute path

Default:

```
"/var/lib/bosun/ledis_data"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/bosun.nix>

services.bosun.listenAddress
The host address and port that bosun's web interface will listen on.

Type: string

Default:

```
":8070"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/bosun.nix>

services.bosun.opentsdbHost
Host and port of the OpenTSDB database that stores bosun data. To disable opentsdb you can pass null as parameter.

Type: null or string

Default:

```
"localhost:4242"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/bosun.nix>

services.bosun.stateFile
Path to bosun's state file.

Type: absolute path

Default:

```
"/var/lib/bosun/bosun.state"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/bosun.nix>

services.bosun.user
User account under which bosun runs.

Type: string

Default:

```
"bosun"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/bosun.nix>

services.botamusique.enable

Whether to enable botamusique, a bot to play audio streams on mumble.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/audio/botamusique.nix>

services.botamusique.package

The botamusique package to use.

Type: package

Default:

```
pkgs.botamusique
```

Declared by:

<nixpkgs/nixos/modules/services/audio/botamusique.nix>

services.botamusique.settings

Your *configuration.ini* as a Nix attribute set. Look up possible options in the **configuration.example.ini**.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/audio/botamusique.nix>

services.botamusique.settings.bot.comment

Comment displayed for the bot.

Type: string

Default:

```
"Hi, I'm here to play radio, local music or youtube/soundcloud musi \
c. Have fun!"
```

Declared by:

<nixpkgs/nixos/modules/services/audio/botamusique.nix>

services.botamusique.settings.bot.username

Name the bot should appear with.

Type: string

Default:

```
"botamusique"
```

Declared by:

<nixpkgs/nixos/modules/services/audio/botamusique.nix>

services.botamusique.settings.server.host
Hostname of the mumble server to connect to.

Type: string

Default:

```
"localhost"
```

Example:

```
"mumble.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/botamusique.nix>

services.botamusique.settings.server.port
Port of the mumble server to connect to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
64738
```

Declared by:
<nixpkgs/nixos/modules/services/audio/botamusique.nix>

services.bpftune.enable
Whether to enable bpftune BPF driven auto−tuning.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/bpftune.nix>

services.bpftune.package
The bpftune package to use.

Type: package

Default:

```
pkgs.bpftune
```

Declared by:
<nixpkgs/nixos/modules/services/system/bpftune.nix>

services.brltty.enable
Whether to enable the BRLTTY daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/brltty.nix>

services.broadcast−box.enable

Whether to enable Broadcast Box.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/video/broadcast−box.nix>

services.broadcast−box.package

The broadcast−box package to use.

Type: package

Default:

```
pkgs.broadcast−box
```

Declared by:

<nixpkgs/nixos/modules/services/video/broadcast−box.nix>

services.broadcast−box.openFirewall

Whether to enable opening WebRTC traffic ports in the firewall. Randomly selected ports will not be opened. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/video/broadcast−box.nix>

services.broadcast−box.settings

Attribute set of environment variables.

https://github.com/Glimesh/broadcast−box#environment−variables

Warning
The status API exposes stream keys so **DISABLE_STATUS** is enabled by default.

Type: open submodule of attribute set of (null or boolean or signed integer or string)

Default:

```
{
  DISABLE_STATUS = true;
}
```

Example:

```
{
  DISABLE_STATUS = true;
  INCLUDE_PUBLIC_IP_IN_NAT_1_TO_1_IP = true;
  UDP_MUX_PORT = 3000;
}
```

Declared by:
<nixpkgs/nixos/modules/services/video/broadcast−box.nix>

services.broadcast−box.web.host
Host address the HTTP server listens on. By default the server listens on all interfaces.

Type: string

Default:

```
""
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/video/broadcast−box.nix>

services.broadcast−box.web.openFirewall
Whether to enable opening the HTTP server port and, if enabled, the HTTPS redirect server port in the firewall. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/video/broadcast−box.nix>

services.broadcast−box.web.port
Port the HTTP server listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/video/broadcast−box.nix>

services.btrbk.extraPackages
Extra packages for btrbk, like compression utilities for ‘stream_compress’.

Note: This option will get deprecated in future releases. Required compression programs will get automatically provided to btrbk depending on configured compression method in ‘services.btrbk.instances.<name>.settings’ option.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.xz ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/btrbk.nix>

services.btrbk.instances

Set of btrbk instances. The instance named ‘btrbk’ is the default one.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/backup/btrbk.nix>

services.btrbk.instances.<name>.onCalendar

How often this btrbk instance is started. See **systemd.time**(7) for more information about the format. Setting it to null disables the timer, thus this instance can only be started manually.

Type: null or string

Default:

```
"daily"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/btrbk.nix>

services.btrbk.instances.<name>.settings

configuration options for btrbk. Nested attrsets translate to subsections.

Type: open submodule of attribute set of (string or instances of this type recursively)

Default:

```
{ }
```

Example:

```
{
  snapshot_preserve = "14d";
  snapshot_preserve_min = "2d";
  volume = {
    "/mnt/btr_pool" = {
      subvolume = {
        home = {
          snapshot_create = "always";
        };
        rootfs = { };
      };
      target = "/mnt/btr_backup/mylaptop";
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/backup/btrbk.nix>

services.btrbk.instances.<name>.settings.stream_compress

Compress the btrfs send stream before transferring it from/to remote locations using a compression command.

Type: one of “gzip”, “pigz”, “bzip2”, “pbzip2”, “bzip3”, “xz”, “lzo”, “lz4”, “zstd”, “no”

Default:

```
"no"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/btrbk.nix>

services.btrbk.instances.<name>.snapshotOnly
Whether to run in snapshot only mode. This skips backup creation and deletion steps. Useful when you want to manually backup to an external drive that might not always be connected. Use 'btrbk −c /path/to/conf resume' to trigger manual backups. More examples **here**. See also 'snapshot' subcommand in **btrbk**(1).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/btrbk.nix>

services.btrbk.ioSchedulingClass
IO scheduling class for btrbk (see **ionice**(1) for a quick description). Applies to local instances, and remote ones connecting by ssh if set to idle.

Type: one of "idle", "best−effort", "realtime"

Default:

```
"best-effort"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/btrbk.nix>

services.btrbk.niceness
Niceness for local instances of btrbk. Also applies to remote ones connecting via ssh when positive.

Type: integer between −20 and 19 (both inclusive)

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/backup/btrbk.nix>

services.btrbk.sshAccess
SSH keys that should be able to make or push snapshots on this system remotely with btrbk

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/btrbk.nix>

services.btrbk.sshAccess.*.key
SSH public key allowed to login as user 'btrbk' to run remote backups.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/backup/btrbk.nix>

services.btrbk.sshAccess.*.roles

What actions can be performed with this SSH key. See ssh_filter_btrbk(1) for details

Type: list of (one of “info”, “source”, “target”, “delete”, “snapshot”, “send”, “receive”)

Default:

```
[ ]
```

Example:

```
[
  "source"
  "info"
  "send"
]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/btrbk.nix>

services.btrfs.autoScrub.enable

Whether to enable regular btrfs scrub.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/tasks/filesystems/btrfs.nix>

services.btrfs.autoScrub.fileSystems

List of paths to btrfs filesystems to regularly call **btrfs scrub** on. Defaults to all mount points with btrfs filesystems. Note that if you have filesystems that span multiple devices (e.g. RAID), you should take care to use the same device for any given mount point and let btrfs take care of automatically mounting the rest, in order to avoid scrubbing the same data multiple times.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/"
]
```

Declared by:

<nixpkgs/nixos/modules/tasks/filesystems/btrfs.nix>

services.btrfs.autoScrub.interval

Systemd calendar expression for when to scrub btrfs filesystems. The recommended period is a month but could be less (**btrfs−scrub**(8)). See **systemd.time**(7) for more information on the syntax.

Type: string

Default:

```
"monthly"
```

Example:

```
"weekly"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/btrfs.nix>

services.btrfs.autoScrub.limit
The scrub throughput limit applied on all scrubbed filesystems. The value is bytes per second, and accepts the usual KMGT prefixes.

Type: null or string matching the pattern [0−9]+[KMGT]?

Default:

```
null
```

Example:

```
"100M"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/btrfs.nix>

services.buffyboard.enable
Whether to enable buffyboard framebuffer keyboard (on−screen keyboard).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/buffyboard.nix>

services.buffyboard.package
The buffybox package to use.

Type: package

Default:

```
pkgs.buffybox
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/buffyboard.nix>

services.buffyboard.configFile
Path to an INI format configuration file to provide Buffyboard. By default, this is generated from whatever you've set in 'settings'. If specified manually, then 'settings' is ignored.

For an example config file see **here**

Type: absolute path

Default:

```
ini.generate "buffyboard.conf" cfg.settings
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/buffyboard.nix>

services.buffyboard.extraFlags

Extra CLI arguments to pass to buffyboard.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--geometry=1920x1080@640,0"
  "--dpi=192"
  "--rotate=2"
  "--verbose"
]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/buffyboard.nix>

services.buffyboard.settings

Settings to include in /etc/buffyboard.conf. Every option here is strictly optional: Buffyboard will use its own baked−in defaults for those options left unset.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/buffyboard.nix>

services.buffyboard.settings.input.pointer

Enable or disable the use of a hardware mouse or other pointing device.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/buffyboard.nix>

services.buffyboard.settings.input.touchscreen

Enable or disable the use of the touchscreen.

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/buffyboard.nix>

services.buffyboard.settings.keyboard.haptic_feedback

Enable or disable vibrations when pressing keys.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/buffyboard.nix>

services.buffyboard.settings.keyboard.sticky_shift
Changes shift key behavior. When true, the keyboard remains in uppercase mode until the shift key is pressed again (sticky). When false, the keyboard switches back to lowercase mode and the shift key deactivates after a non−modifier key is pressed.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/buffyboard.nix>

services.buffyboard.settings.quirks.fbdev_force_refresh
If true and using the framebuffer backend, this triggers a display refresh after every draw operation. This has a negative performance impact.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/buffyboard.nix>

services.buffyboard.settings.quirks.ignore_unused_terminals
If true, buffyboard won't automatically update the layout of a new terminal and draw the keyboard, if the terminal is not opened by any process. In this case SIGUSR1 should be sent to buffyboard to update the layout. This quirk was introduced to resolve a race between buffyboard and systemd−logind according to the following scenario:

- A user switches to a new virtual terminal
- Buffyboard opens the terminal and changes the number of rows
- systemd−logind sees that the terminal is opened by some other process and don't start getty@.service

The race is resolved by enabling this option and installing a drop−in file for getty@.service that sends SIGUSR1 to buffyboard.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/buffyboard.nix>

services.buffyboard.settings.theme.default
Selects the default theme on boot. Can be changed at runtime to the alternative theme.

Type: string or one of <null>, "adwaita−dark", "breezy−dark", "breezy−light", "nord−dark", "nord−light", "pmos−dark", "pmos−light"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/buffyboard.nix>

services.buildbot−master.enable
Whether to enable the Buildbot continuous integration server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.package
The buildbot−full package to use.

Type: package

Default:

```
pkgs.buildbot−full
```

Example:

```
buildbot
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.packages
Packages to add to PATH for the buildbot process.

Type: list of package

Default:

```
[ pkgs.git ]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.buildbotDir
Specifies the Buildbot directory.

Type: absolute path

Default:

```
"${config.services.buildbot−master.home}/master"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.buildbotUrl
Specifies the Buildbot URL.

Type: string

Default:

```
"http://localhost:8010/"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.builders
List of Builders.

Type: list of string

Default:

```
[
  "util.BuilderConfig(name='runtests',workernames=['example−worker \
'],factory=factory)"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.changeSource
List of Change Sources.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "changes.GitPoller('https://github.com/buildbot/pyflakes.git', wo \
rkdir='gitpoller−workdir', branch='master', pollinterval=300)"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.configurators
Configurator Steps, see **https://docs.buildbot.net/latest/manual/configuration/configurators.html**

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "util.JanitorConfigurator(logHorizon=timedelta(weeks=4), hour=12, \
 dayOfWeek=6)"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.dbUrl
Specifies the database connection string.

Type: string

Default:

```
"sqlite:///state.sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.extraConfig

Extra configuration to append to master.cfg

Type: strings concatenated with “\n”

Default:

```
"c['buildbotNetUsageData'] = None"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.extraGroups

List of extra groups that the buildbot user should be a part of.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.extraImports

Extra python imports to prepend to master.cfg

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"from buildbot.process.project import Project"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.factorySteps

Factory Steps

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "steps.Git(repourl='https://github.com/buildbot/pyflakes.git', mo \
de='incremental')"
  "steps.ShellCommand(command=['trial', 'pyflakes'])"
]
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.group

Primary group of buildbot user.

Type: string

Default:

```
"buildbot"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.home
Buildbot home directory.

Type: absolute path

Default:

```
"/home/buildbot"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.listenAddress
Specifies the bind address on which the buildbot HTTP interface listens.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.masterCfg
Optionally pass master.cfg path. Other options in this configuration will be ignored.

Type: absolute path

Default: generated configuration file

Example:

```
"/etc/nixos/buildbot/master.cfg"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.pbPort
The buildmaster will listen on a TCP port of your choosing for connections from workers. It can also use this port for connections from remote Change Sources, status clients, and debug tools. This port should be visible to the outside world, and you'll need to tell your worker admins about your choice. If put in (single) quotes, this can also be used as a connection string, as defined in the **ConnectionStrings guide**.

Type: string or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9989
```

Example:

```
"'tcp:9990:interface=127.0.0.1'"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.port
Specifies port number on which the buildbot HTTP interface listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8010
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.pythonPackages
Packages to add the to the PYTHONPATH of the buildbot process.

Type: function that evaluates to a(n) list of package

Default:

```
pythonPackages: with pythonPackages; [ ]
```

Example:

```
pythonPackages: with pythonPackages; [ requests ]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.reporters
List of reporter objects used to present build status to various users.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.schedulers
List of Schedulers.

Type: list of string

Default:

```
[
  "schedulers.SingleBranchScheduler(name='all', change_filter=util. \
ChangeFilter(branch='master'), treeStableTimer=None, builderNames=[ \
'runtests'])"
  "schedulers.ForceScheduler(name='force',builderNames=['runtests'] \
)"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.title
Specifies the Buildbot Title.

Type: string

Default:

```
"Buildbot"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/master.nix>

services.buildbot−master.titleUrl
Specifies the Buildbot TitleURL.

Type: string

Default:

```
"Buildbot"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/buildbot/master.nix>

services.buildbot-master.user
User the buildbot server should execute under.

Type: string

Default:

```
"buildbot"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/buildbot/master.nix>

services.buildbot-master.workers
List of Workers.

Type: list of string

Default:

```
[
  "worker.Worker('example-worker', 'pass')"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/buildbot/master.nix>

services.buildbot-worker.enable
Whether to enable the Buildbot Worker.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/buildbot/worker.nix>

services.buildbot-worker.package
The buildbot-worker package to use.

Type: package

Default:

```
pkgs.buildbot-worker
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/buildbot/worker.nix>

services.buildbot-worker.packages
Packages to add to PATH for the buildbot process.

Type: list of package

Default:

```
[ pkgs.git ]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/buildbot/worker.nix>

services.buildbot−worker.adminMessage
Name of the administrator of this worker

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/worker.nix>

services.buildbot−worker.buildbotDir
Specifies the Buildbot directory.

Type: absolute path

Default:

```
"${config.services.buildbot−worker.home}/worker"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/worker.nix>

services.buildbot−worker.extraGroups
List of extra groups that the Buildbot Worker user should be a part of.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/worker.nix>

services.buildbot−worker.group
Primary group of buildbot Worker user.

Type: string

Default:

```
"bbworker"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/worker.nix>

services.buildbot−worker.home
Buildbot home directory.

Type: absolute path

Default:

```
"/home/bbworker"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/worker.nix>

services.buildbot−worker.hostMessage
Description of this worker

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/worker.nix>

services.buildbot−worker.keepalive
This is a number that indicates how frequently keepalive messages should be sent from the worker to the buildmaster, expressed in seconds.

Type: signed integer

Default:

```
600
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/worker.nix>

services.buildbot−worker.masterUrl
Specifies the Buildbot Worker connection string.

Type: string

Default:

```
"localhost:9989"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/worker.nix>

services.buildbot−worker.user
User the buildbot Worker should execute under.

Type: string

Default:

```
"bbworker"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/worker.nix>

services.buildbot−worker.workerPass
Specifies the Buildbot Worker password.

Type: string

Default:

```
"pass"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/worker.nix>

services.buildbot−worker.workerPassFile
File used to store the Buildbot Worker password

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/worker.nix>

services.buildbot−worker.workerUser
Specifies the Buildbot Worker user.

Type: string

Default:

```
"example−worker"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildbot/worker.nix>

services.buildkite−agents
Attribute set of buildkite agents. The attribute key is combined with the hostname and a unique integer to create the final agent name. This can be overridden by setting the ‘name’ attribute.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildkite−agents.nix>

services.buildkite−agents.<name>.enable
Whether to enable this buildkite agent

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildkite−agents.nix>

services.buildkite−agents.<name>.package
The buildkite−agent package to use.

Type: package

Default:

```
pkgs.buildkite−agent
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildkite−agents.nix>

services.buildkite−agents.<name>.dataDir
The workdir for the agent

Type: string

Default:

```
"/var/lib/buildkite−agent−‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildkite−agents.nix>

services.buildkite−agents.<name>.extraConfig
Extra lines to be added verbatim to the configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"debug=true"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildkite−agents.nix>

services.buildkite−agents.<name>.extraGroups
Groups the user for this buildkite agent should belong to

Type: list of string

Default:

```
[
  "keys"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildkite−agents.nix>

services.buildkite−agents.<name>.hooks
“Agent” hooks to install. See **https://buildkite.com/docs/agent/v3/hooks** for possible options.

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Example:

```
{
  environment = ''
    export SECRET_VAR=‘head −1 /run/keys/secret‘
  '';
}
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildkite−agents.nix>

services.buildkite−agents.<name>.hooksPath
Path to the directory storing the hooks. Consider using **services.buildkite−agents.<name>.hooks.<name>** instead.

Type: absolute path

Default: generated from **services.buildkite−agents.<name>.hooks**

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildkite−agents.nix>

services.buildkite−agents.<name>.name
The name of the agent as seen in the buildkite dashboard.

Type: string

Default:

```
"%hostname−‹name›−%n"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildkite−agents.nix>

services.buildkite−agents.<name>.privateSshKeyPath
OpenSSH private key

A run−time path to the key file, which is supposed to be provisioned outside of Nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildkite−agents.nix>

services.buildkite−agents.<name>.runtimePackages
Add programs to the buildkite−agent environment

Type: list of package

Default:

```
[ pkgs.bash pkgs.gnutar pkgs.gzip pkgs.git pkgs.nix ]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildkite−agents.nix>

services.buildkite−agents.<name>.shell
Command that buildkite−agent 3 will execute when it spawns a shell.

Type: string

Default:

```
"${pkgs.bash}/bin/bash −e −c"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildkite−agents.nix>

services.buildkite−agents.<name>.tags
Tags for the agent.

Type: attribute set of (string or list of string)

Default:

```
{ }
```

Example:

```
{
  docker = "true";
  queue = "default";
  ruby2 = "true";
}
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildkite−agents.nix>

services.buildkite−agents.<name>.tokenPath
The token from your Buildkite “Agents” page.

A run−time path to the token file, which is supposed to be provisioned outside of Nix store.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/buildkite−agents.nix>

services.byedpi.enable
Whether to enable the ByeDPI service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/byedpi.nix>

services.byedpi.package
The byedpi package to use.

Type: package

Default:

```
pkgs.byedpi
```

Declared by:
<nixpkgs/nixos/modules/services/networking/byedpi.nix>

services.byedpi.extraArgs
Extra command line arguments.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--split"
  "1"
  "--disorder"
  "3+s"
  "--mod-http=h,d"
  "--auto=torst"
  "--tlsrec"
  "1+s"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/byedpi.nix>

services.c2fmzq-server.enable
Whether to enable c2fmzq-server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/c2fmzq-server.nix>

services.c2fmzq-server.package
The c2fmzq package to use.

Type: package

Default:

```
pkgs.c2fmzq
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/c2fmzq−server.nix>

services.c2fmzq−server.bindIP
The local address to use.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/c2fmzq−server.nix>

services.c2fmzq−server.passphraseFile
Path to file containing the database passphrase

Type: string

Example:

```
"/run/secrets/c2fmzq/pwfile"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/c2fmzq−server.nix>

services.c2fmzq−server.port
The local port to use.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/c2fmzq−server.nix>

services.c2fmzq−server.settings
Configuration for c2FmZQ−server passed as CLI arguments. Run **c2FmZQ−server help** for supported values.

Type: open submodule of attribute set of (null or boolean or signed integer or string)

Example:

```
{
  allow−new−accounts = true;
  auto−approve−new−accounts = true;
  enable−webapp = true;
  encrypt−metadata = true;
  verbose = 3;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/c2fmzq−server.nix>

services.c2fmzq−server.settings.database
Path of the database

Type: string

Default:

```
"%S/c2fmzq−server/data"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/c2fmzq−server.nix>

services.c2fmzq−server.settings.verbose
The level of logging verbosity: 1:Error 2:Info 3:Debug

Type: integer between 1 and 3 (both inclusive)

Default:

```
2
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/c2fmzq−server.nix>

services.cachefilesd.enable
Whether to enable cachefilesd network filesystems caching daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/cachefilesd.nix>

services.cachefilesd.cacheDir
Directory to contain filesystem cache.

Type: string

Default:

```
"/var/cache/fscache"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/cachefilesd.nix>

services.cachefilesd.extraConfig
Additional configuration file entries. See **cachefilesd.conf**(5) for more information.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"brun 10%"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/cachefilesd.nix>

services.cachix−agent.enable
Whether to enable Cachix Deploy Agent: **https://docs.cachix.org/deploy/**.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/cachix−agent/default.nix>

services.cachix−agent.package
The cachix package to use.

Type: package

Default:

```
pkgs.cachix
```

Declared by:
<nixpkgs/nixos/modules/services/system/cachix−agent/default.nix>

services.cachix−agent.credentialsFile
Required file that needs to contain CACHIX_AGENT_TOKEN=…

Type: absolute path

Default:

```
"/etc/cachix−agent.token"
```

Declared by:
<nixpkgs/nixos/modules/services/system/cachix−agent/default.nix>

services.cachix−agent.host
Cachix uri to use.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/system/cachix−agent/default.nix>

services.cachix−agent.name
Agent name, usually same as the hostname

Type: string

Default:

```
"config.networking.hostName"
```

Declared by:
<nixpkgs/nixos/modules/services/system/cachix−agent/default.nix>

services.cachix−agent.profile
Profile name, defaults to ‘system’ (NixOS).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/system/cachix−agent/default.nix>

services.cachix−agent.verbose
Enable verbose output

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/system/cachix-agent/default.nix>

services.cachix-watch-store.enable
Whether to enable Cachix Watch Store: **https://docs.cachix.org**.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/cachix-watch-store.nix>

services.cachix-watch-store.package
The cachix package to use.

Type: package

Default:

```
pkgs.cachix
```

Declared by:
<nixpkgs/nixos/modules/services/system/cachix-watch-store.nix>

services.cachix-watch-store.cacheName
Cachix binary cache name

Type: string

Declared by:
<nixpkgs/nixos/modules/services/system/cachix-watch-store.nix>

services.cachix-watch-store.cachixTokenFile
Required file that needs to contain the cachix auth token.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/system/cachix-watch-store.nix>

services.cachix-watch-store.compressionLevel
The compression level for ZSTD compression (between 0 and 16)

Type: null or integer between 0 and 16 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/system/cachix-watch-store.nix>

services.cachix-watch-store.host
Cachix host to connect to

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/system/cachix−watch−store.nix>

services.cachix−watch−store.jobs
Number of threads used for pushing store paths

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/system/cachix−watch−store.nix>

services.cachix−watch−store.signingKeyFile
Optional file containing a self−managed signing key to sign uploaded store paths.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/system/cachix−watch−store.nix>

services.cachix−watch−store.verbose
Enable verbose output

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/system/cachix−watch−store.nix>

services.caddy.enable
Whether to enable Caddy web server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.enableReload
Reload Caddy instead of restarting it when configuration file changes.

Note that enabling this option requires the **admin API** to not be turned off.

If you enable this option, consider setting ‘grace_period’ to a non−infinite value in **services.caddy.globalConfig** to prevent Caddy waiting for active connections to finish, which could delay the reload essentially indefinitely.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.package
The caddy package to use.

Type: package

Default:

```
pkgs.caddy
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.acmeCA

Note
Sets the ‘acme_ca’ **option** in the global options block of the resulting Caddyfile.

The URL to the ACME CA’s directory. It is strongly recommended to set this to ‘https://acme−staging−v02.api.letsencrypt.org/directory’ for Let’s Encrypt’s **staging endpoint** while testing or in development.

Value ‘null’ should be prefered for production setups, as it omits the ‘acme_ca’ option to enable **automatic issuer fallback**.

Type: null or string

Default:

```
null
```

Example:

```
"https://acme−v02.api.letsencrypt.org/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.adapter
Name of the config adapter to use. See **https://caddyserver.com/docs/config−adapters** for the full list.

If ‘null’ is specified, the ‘−−adapter’ argument is omitted when starting or restarting Caddy. Notably, this allows specification of a configuration file in Caddy’s native JSON format, as long as the filename does not start with ‘Caddyfile’ (in which case the ‘caddyfile’ adapter is implicitly enabled). See **https://caddyserver.com/docs/command−line#caddy−run** for details.

Note
Any value other than ‘null’ or ‘caddyfile’ is only valid when providing your own ‘configFile’.

Type: null or string

Default:

```
if ((cfg.configFile != configFile) || (baseNameOf cfg.configFile) = \
= "Caddyfile") then "caddyfile" else null
```

Example:

```
nginx
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.configFile

Override the configuration file used by Caddy. By default, NixOS generates one automatically.

The configuration file is exposed at */etc/caddy/caddy_config*.

Type: absolute path

Default:

```
"A Caddyfile automatically generated by values from services.caddy. \
*"
```

Example:

```
pkgs.writeText "Caddyfile" ''
  example.com
  root * /var/www/wordpress
  php_fastcgi unix//run/php/php-version-fpm.sock
  file_server
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/caddy/default.nix>

services.caddy.dataDir

The data directory for caddy.

Note

If left as the default value this directory will automatically be created before the Caddy server starts, otherwise you are responsible for ensuring the directory exists with appropriate ownership and permissions.

Caddy v2 replaced 'CADDYPATH' with XDG directories. See **https://caddyserver.com/docs/conventions#file-locations**.

Type: absolute path

Default:

```
"/var/lib/caddy"
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/caddy/default.nix>

services.caddy.email

Your email address. Mainly used when creating an ACME account with your CA, and is highly recommended in case there are problems with your certificates.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/caddy/default.nix>

services.caddy.environmentFile

Environment file as defined in **systemd.exec**(5).

You can use environment variables to pass secrets to the service without adding them to the world-readable nix store.

```
# in configuration.nix
services.caddy.environmentFile = "/run/secrets/caddy.env";
services.caddy.globalConfig = ''
  {
```

```
      acme_ca https://acme.zerossl.com/v2/DV90
      acme_eab {
        key_id {$EAB_KEY_ID}
        mac_key {$EAB_MAC_KEY}
      }
    }
# in /run/secrets/caddy.env
EAB_KEY_ID=secret
EAB_MAC_KEY=secret
```

Find more examples **here**

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/caddy.env"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.extraConfig

Additional lines of configuration appended to the automatically generated ‘Caddyfile’.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
example.com {
  encode gzip
  log
  root /srv/http
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.globalConfig

Additional lines of configuration appended to the global config section of the ‘Caddyfile’.

Refer to **https://caddyserver.com/docs/caddyfile/options#global−options** for details on supported values.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
debug
servers {
  protocol {
    experimental_http3
  }
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.group
Group under which caddy runs.

Note
If left as the default value this group will automatically be created on system activation, otherwise you are responsible for ensuring the group exists before the Caddy service starts.

Type: string

Default:

```
"caddy"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.httpPort
The default port to listen on for HTTP traffic.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
80
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.httpsPort
The default port to listen on for HTTPS traffic. Will also be used for HTTP/3.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
443
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.logDir
Directory for storing Caddy access logs.

Note
If left as the default value this directory will automatically be created before the Caddy server starts, otherwise the sysadmin is responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: absolute path

Default:

```
"/var/log/caddy"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.logFormat
Configuration for the default logger. See **https://caddyserver.com/docs/caddyfile/options#log** for details.

Type: strings concatenated with “\n”

Default:

```
level ERROR
```

Example:

```
mkForce "level INFO";
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.openFirewall

Whether to enable opening the specified http(s) ports in the firewall. Any port set to ‘null’ will not be opened.

Note

If you use other ports for your virtual hosts, you need to open them manually.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.resume

Use saved config, if any (and prefer over any specified configuration passed with ‘−−config’).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.settings

Structured configuration for Caddy to generate a Caddy JSON configuration file. See **https://caddyserver.com/docs/json/** for available options.

Warning

Using a **Caddyfile** instead of a JSON config is highly recommended by upstream. There are only very few exception to this.

Please use a Caddyfile via **services.caddy.configFile**, **services.caddy.virtualHosts** or **services.caddy.extraConfig** with **services.caddy.globalConfig** instead.

Note

Takes presence over most ‘services.caddy.*’ options, such as **services.caddy.configFile** and **services.caddy.virtualHosts**, if specified.

Type: JSON value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.user

User account under which caddy runs.

Note
If left as the default value this user will automatically be created on system activation, otherwise you are responsible for ensuring the user exists before the Caddy service starts.

Type: string

Default:

```
"caddy"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/caddy/default.nix>

services.caddy.virtualHosts

Declarative specification of virtual hosts served by Caddy.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "hydra.example.com" = {
    serverAliases = [ "www.hydra.example.com" ];
    extraConfig = ''
      encode gzip
      root * /srv/http
    '';
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/caddy/default.nix>

services.caddy.virtualHosts.<name>.extraConfig

Additional lines of configuration appended to this virtual host in the automatically generated ‘Caddyfile’.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/caddy/default.nix>

services.caddy.virtualHosts.<name>.hostName

Canonical hostname for the server.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/caddy/default.nix>

services.caddy.virtualHosts.<name>.listenAddresses

A list of host interfaces to bind to for this virtual host.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "::1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.virtualHosts.<name>.logFormat

Configuration for HTTP request logging (also known as access logs). See **https://caddyserver.com/docs/caddyfile/directives/log#log** for details.

Type: null or strings concatenated with "\n"

Default:

```
  output file ''${config.services.caddy.logDir}/access−''${hostNam \
e}.log
```

Example:

```
mkForce ''
  output discard
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.virtualHosts.<name>.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

services.caddy.virtualHosts.<name>.useACMEHost

A host of an existing Let's Encrypt certificate to use. This is mostly useful if you use DNS challenges but Caddy does not currently support your provider.

Note that this option does not create any certificates, nor does it add subdomains to existing ones – you will need to create them manually using **security.acme.certs**[1].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/caddy/default.nix>

1. see the **security.acme.certs** option

services.cadvisor.enable
Whether to enable Cadvisor service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cadvisor.nix>

services.cadvisor.extraOptions
Additional cadvisor options.

See **https://github.com/google/cadvisor/blob/master/docs/runtime_options.md** for available options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cadvisor.nix>

services.cadvisor.listenAddress
Cadvisor listening host

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cadvisor.nix>

services.cadvisor.port
Cadvisor listening port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cadvisor.nix>

services.cadvisor.storageDriver
Cadvisor storage driver.

Type: null or string

Default:

```
null
```

Example:

```
"influxdb"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cadvisor.nix>

services.cadvisor.storageDriverDb
Cadvisord storage driver database name.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cadvisor.nix>

services.cadvisor.storageDriverHost
Cadvisor storage driver host.

Type: string

Default:

```
"localhost:8086"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cadvisor.nix>

services.cadvisor.storageDriverPassword
Cadvisor storage driver password.

Warning: this password is stored in the world−readable Nix store. It's recommended to use the **storageDriverPasswordFile** option since that gives you control over the security of the password. **storageDriverPasswordFile** also takes precedence over **storageDriverPassword**.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cadvisor.nix>

services.cadvisor.storageDriverPasswordFile
File that contains the cadvisor storage driver password.

storageDriverPasswordFile takes precedence over **storageDriverPassword**

Warning: when **storageDriverPassword** is non−empty this defaults to a file in the world−readable Nix store that contains the value of **storageDriverPassword**.

It's recommended to override this with a path not in the Nix store. Tip: use **nixops key management**

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cadvisor.nix>

services.cadvisor.storageDriverSecure
Cadvisor storage driver, enable secure communication.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cadvisor.nix>

services.cadvisor.storageDriverUser
Cadvisor storage driver username.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cadvisor.nix>

services.cage.enable
Whether to enable cage kiosk service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/wayland/cage.nix>

services.cage.package
The cage package to use.

Type: package

Default:

```
pkgs.cage
```

Declared by:
<nixpkgs/nixos/modules/services/wayland/cage.nix>

services.cage.environment
Additional environment variables to pass to Cage.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  WLR_LIBINPUT_NO_DEVICES = "1";
}
```

Declared by:
<nixpkgs/nixos/modules/services/wayland/cage.nix>

services.cage.extraArguments
Additional command line arguments to pass to Cage.

Type: list of string

Default:

```
[]
```

Example:

```
[
  "-d"
]
```

Declared by:
<nixpkgs/nixos/modules/services/wayland/cage.nix>

services.cage.program
Program to run in cage.

Type: absolute path

Default:

```
"${pkgs.xterm}/bin/xterm"
```

Declared by:
<nixpkgs/nixos/modules/services/wayland/cage.nix>

services.cage.user
User to log−in as.

Type: string

Default:

```
"demo"
```

Declared by:
<nixpkgs/nixos/modules/services/wayland/cage.nix>

services.calibre−server.enable
Whether to enable calibre−server (e−book software).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/calibre−server.nix>

services.calibre−server.package
The calibre package to use.

Type: package

Default:

```
pkgs.calibre
```

Declared by:
<nixpkgs/nixos/modules/services/misc/calibre−server.nix>

services.calibre−server.auth.enable
Password based authentication to access the server. See the **calibre−server documentation** for details.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/calibre-server.nix>

services.calibre-server.auth.mode
Choose the type of authentication used. Set the HTTP authentication mode used by the server. See the **calibre-server documentation** for details.

Type: one of “auto”, “basic”, “digest”

Default:

```
"auto"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/calibre-server.nix>

services.calibre-server.auth.userDb
Choose users database file to use for authentication. Make sure users database file is initialized before service startup. See the **calibre-server documentation** for details.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/calibre-server.nix>

services.calibre-server.extraFlags
Extra flags to pass to the calibre-server command. See the **calibre-server documentation** for details.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/calibre-server.nix>

services.calibre-server.group
The group under which calibre-server runs.

Type: string

Default:

```
"calibre-server"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/calibre-server.nix>

services.calibre-server.host
The interface on which to listen for connections. See the **calibre-server documentation** for details.

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"::1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/calibre−server.nix>

services.calibre−server.libraries
Make sure each library path is initialized before service startup. The directories of the libraries to serve. They must be readable for the user under which the server runs. See the **calibredb documentation** for details.

Type: list of absolute path

Default:

```
[
  "/var/lib/calibre-server"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/calibre−server.nix>

services.calibre−server.openFirewall
Open ports in the firewall for the Calibre Server web interface.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/calibre−server.nix>

services.calibre−server.port
The port on which to listen for connections. See the **calibre−server documentation** for details.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/misc/calibre−server.nix>

services.calibre−server.user
The user under which calibre−server runs.

Type: string

Default:

```
"calibre-server"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/calibre−server.nix>

services.calibre−web.enable
Whether to enable Calibre−Web.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/calibre−web.nix>

services.calibre−web.package
The calibre−web package to use.

Type: package

Default:

```
pkgs.calibre−web
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/calibre−web.nix>

services.calibre−web.calibrePackage
The calibre package to use.

Type: package

Default:

```
pkgs.calibre
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/calibre−web.nix>

services.calibre−web.dataDir
Where Calibre−Web stores its data. Either an absolute path, or the directory name below */var/lib*.

Type: string

Default:

```
"calibre−web"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/calibre−web.nix>

services.calibre−web.group
Group account under which Calibre−Web runs.

Type: string

Default:

```
"calibre−web"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/calibre−web.nix>

services.calibre−web.listen.ip
IP address that Calibre−Web should listen on.

Type: string

Default:

```
"::1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/calibre−web.nix>

services.calibre−web.listen.port
Listen port for Calibre−Web.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8083
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/calibre−web.nix>

services.calibre−web.openFirewall
Open ports in the firewall for the server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/calibre−web.nix>

services.calibre−web.options.enableBookConversion
Configure path to the Calibre's ebook−convert in the DB.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/calibre−web.nix>

services.calibre−web.options.enableBookUploading
Allow books to be uploaded via Calibre−Web UI.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/calibre−web.nix>

services.calibre−web.options.enableKepubify
Whether to enable kepub conversion support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/calibre−web.nix>

services.calibre−web.options.calibreLibrary
Path to Calibre library.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/calibre−web.nix>

services.calibre−web.options.reverseProxyAuth.enable
Enable authorization using auth proxy.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/calibre−web.nix>

services.calibre−web.options.reverseProxyAuth.header
Auth proxy header name.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/calibre−web.nix>

services.calibre−web.user
User account under which Calibre−Web runs.

Type: string

Default:

```
"calibre-web"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/calibre−web.nix>

services.canaille.enable
Whether to enable Canaille.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.package
The canaille package to use.

Type: package

Default:

```
pkgs.canaille
```

Declared by:
<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.jwtPrivateKeyFile

File containing the JWT private key. Make sure it has appropriate permissions.

You can generate one using

```
openssl genrsa -out private.pem 4096
openssl rsa -in private.pem -pubout -outform PEM -out public.pe \
m
```

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.ldapBindPasswordFile

File containing the LDAP bind password.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.secretKeyFile

File containing the Flask secret key. Its content is going to be provided to Canaille as 'SECRET_KEY'. Make sure it has appropriate permissions. For example, copy the output of this to the specified file:

```
python3 -c 'import secrets; print(secrets.token_hex())'
```

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.settings

Settings for Canaille. See **the documentation** for details.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.settings.CANAILLE.ACL

Access Control Lists.

See also **the documentation**.

Type: null or (open submodule of (TOML value))

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.settings.CANAILLE.SMTP

SMTP configuration. By default, sending emails is not enabled.

Set to an empty attrs to send emails from localhost without authentication.

See also **the documentation**.

Type: null or (open submodule of (TOML value))

Default:

```
null
```

Example:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.settings.CANAILLE.SMTP.PASSWORD

SMTP Password. Can't be set and has to be provided using 'services.canaille.smtpPasswordFile'.

Type: null or string *(read only)*

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.settings.CANAILLE_LDAP

Configuration for the LDAP backend. This storage backend is not yet supported by the module, so use at your own risk!

Type: null or (open submodule of (TOML value))

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.settings.CANAILLE_LDAP.BIND_PW

The LDAP bind password. Can't be set and has to be provided using 'services.canaille.ldapBindPasswordFile'.

Type: null or string *(read only)*

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.settings.CANAILLE_OIDC

OpenID Connect settings. See **the documentation**.

Type: null or (open submodule of (TOML value))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.settings.CANAILLE_OIDC.JWT.PRIVATE_KEY
JWT private key. Can't be set and has to be provided using 'services.canaille.jwtPrivateKeyFile'.

Type: null or string *(read only)*

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.settings.CANAILLE_SQL.DATABASE_URI
The SQL server URI. Will configure a local PostgreSQL db if left to default. Please note that the NixOS module only really supports PostgreSQL for now. Change at your own risk!

Type: string

Default:

```
"postgresql://localhost/canaille?host=/run/postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.settings.PREFERRED_URL_SCHEME
The url scheme by which canaille will be served.

Type: one of "http", "https"

Default:

```
"https"
```

Declared by:
<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.settings.SECRET_KEY
Flask Secret Key. Can't be set and must be provided through 'services.canaille.settings.secretKeyFile'.

Type: null or string *(read only)*

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.settings.SERVER_NAME
The domain name on which canaille will be served.

Type: string

Example:

```
"auth.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canaille.smtpPasswordFile

File containing the SMTP password. Make sure it has appropriate permissions.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/security/canaille.nix>

services.canto−daemon.enable

Whether to enable the canto RSS daemon.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/canto−daemon.nix>

services.cassandra.enable

Whether to enable Apache Cassandra – Scalable and highly available database .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.package

The cassandra package to use.

Type: package

Default:

```
pkgs.cassandra
```

Example:

```
cassandra_4
```

Declared by:

<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.allowClients

Enables or disables the native transport server (CQL binary protocol). This server uses the same address as the **rpcAddress**, but the port it uses is not ‘rpc_port’ but ‘native_transport_port’. See the official Cassandra docs for more information on these variables and set them using **extraConfig**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.clusterName
The name of the cluster. This setting prevents nodes in one logical cluster from joining another. All nodes in a cluster must have the same value.

Type: string

Default:

```
"Test Cluster"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.extraConfig
Extra options to be merged into *cassandra.yaml* as nix attribute set.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  commitlog_sync_batch_window_in_ms = 3;
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.extraEnvSh
Extra shell lines to be appended onto *cassandra-env.sh*.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
"CLASSPATH=$CLASSPATH:${extraJar}"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.fullRepairInterval
Set the interval how often full repairs are run, i.e. **nodetool repair --full** is executed. See **https://cassandra.apache.org/doc/latest/operating/repair.html** for more information.

Set to 'null' to disable full repairs.

Type: null or string

Default:

```
"3w"
```

Example:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.fullRepairOptions
Options passed through to the full repair command.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--partitioner-range"
]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.group
Run Apache Cassandra under this group.

Type: string

Default:

```
"cassandra"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.heapNewSize
Must be left blank or set together with **heapNewSize**. If left blank a sensible value for the available amount of RAM and CPU cores is calculated.

Override to set the amount of memory to allocate to the JVM at start−up. For production use you may wish to adjust this for your environment. ‘HEAP_NEWSIZE’ refers to the size of the young generation.

The main trade−off for the young generation is that the larger it is, the longer GC pause times will be. The shorter it is, the more expensive GC will be (usually).

The example ‘HEAP_NEWSIZE’ assumes a modern 8−core+ machine for decent pause times. If in doubt, and if you do not particularly want to tweak, go with 100 MB per physical CPU core.

Type: null or string

Default:

```
null
```

Example:

```
"800M"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.homeDir
Home directory for Apache Cassandra.

Type: absolute path

Default:

```
"/var/lib/cassandra"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.incrementalRepairInterval
Set the interval how often incremental repairs are run, i.e. **nodetool repair** is executed. See **https://cassandra.apache.org/doc/latest/operating/repair.html** for more information.

Set to 'null' to disable incremental repairs.

Type: null or string

Default:

```
"3d"
```

Example:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.incrementalRepairOptions
Options passed through to the incremental repair command.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--partitioner-range"
]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.jmxPort
Specifies the default port over which Cassandra will be available for JMX connections. For security reasons, you should not expose this port to the internet. Firewall it if needed.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7199
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.jmxRoles
Roles that are allowed to access the JMX (e.g. **nodetool**) BEWARE: The passwords will be stored world readable in the nix store. It's recommended to use your own protected file using **jmxRolesFile**

Doesn't work in versions older than 3.11 because they don't like that it's world readable.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.jmxRoles.*.password
Password for JMX

Type: string

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.jmxRoles.*.username
Username for JMX

Type: string

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.jmxRolesFile
Specify your own jmx roles file.

Type: null or absolute path

Default:

```
"generated configuration file"
```

Example:

```
"/var/lib/cassandra/jmx.password"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.jvmOpts
Populate the 'JVM_OPT' environment variable.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.listenAddress
Address or interface to bind to and tell other Cassandra nodes to connect to. You *must* change this if you want multiple nodes to be able to communicate!

Set **listenAddress** OR **listenInterface**, not both.

Leaving it blank leaves it up to 'InetAddress.getLocalHost()'. This will always do the "Right Thing" *if* the node is properly configured (hostname, name resolution, etc), and the Right Thing is to use the address associated with the hostname (it might not be).

Setting **listenAddress** to '0.0.0.0' is always wrong.

Type: null or string

Default:

```
"127.0.0.1"
```

Example:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.listenInterface
Set ‘listenAddress’ OR ‘listenInterface’, not both. Interfaces must correspond to a single address, IP aliasing is not supported.

Type: null or string

Default:

```
null
```

Example:

```
"eth1"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.logbackConfig
XML logback configuration for cassandra

Type: strings concatenated with “\n”

Default:

```
  <configuration scan="false">
    <appender name="STDOUT" class="ch.qos.logback.core.ConsoleAppen \
der">
      <encoder>
        <pattern>%-5level %date{HH:mm:ss,SSS} %msg%n</pattern>
      </encoder>
    </appender>

    <root level="INFO">
      <appender-ref ref="STDOUT" />
    </root>

    <logger name="com.thinkaurelius.thrift" level="ERROR"/>
  </configuration>
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.mallocArenaMax
Set this to control the amount of arenas per-thread in glibc.

Type: null or signed integer

Default:

```
null
```

Example:

```
4
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.maxHeapSize

Must be left blank or set together with **heapNewSize**. If left blank a sensible value for the available amount of RAM and CPU cores is calculated.

Override to set the amount of memory to allocate to the JVM at start−up. For production use you may wish to adjust this for your environment. ‘MAX_HEAP_SIZE’ is the total amount of memory dedicated to the Java heap. ‘HEAP_NEWSIZE’ refers to the size of the young generation.

The main trade−off for the young generation is that the larger it is, the longer GC pause times will be. The shorter it is, the more expensive GC will be (usually).

Type: null or string

Default:

```
null
```

Example:

```
"4G"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.remoteJmx

Cassandra ships with JMX accessible *only* from localhost. To enable remote JMX connections set to true.

Be sure to also enable authentication and/or TLS. See: **https://wiki.apache.org/cassandra/JmxSecurity**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.rpcAddress

The address or interface to bind the native transport server to.

Set **rpcAddress** OR **rpcInterface**, not both.

Leaving **rpcAddress** blank has the same effect as on **listenAddress** (i.e. it will be based on the configured hostname of the node).

Note that unlike **listenAddress**, you can specify ‘"0.0.0.0"’, but you must also set ‘extraConfig.broadcast_rpc_address’ to a value other than ‘"0.0.0.0"’.

For security reasons, you should not expose this port to the internet. Firewall it if needed.

Type: null or string

Default:

```
"127.0.0.1"
```

Example:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.rpcInterface

Set **rpcAddress** OR **rpcInterface**, not both. Interfaces must correspond to a single address, IP aliasing is not supported.

Type: null or string

Default:

```
null
```

Example:

```
"eth1"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.seedAddresses

The addresses of hosts designated as contact points in the cluster. A joining node contacts one of the nodes in the seeds list to learn the topology of the ring. Set to '["127.0.0.1"]' for a single node cluster.

Type: list of string

Default:

```
[
  "127.0.0.1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.cassandra.user

Run Apache Cassandra under this user.

Type: string

Default:

```
"cassandra"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/cassandra.nix>

services.castopod.enable

Whether to enable Castopod, a hosting platform for podcasters.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/castopod.nix>

services.castopod.package

The castopod package to use.

Type: package

Default:

```
pkgs.castopod
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/castopod.nix>

services.castopod.configureNginx
Configure nginx as a reverse proxy for CastoPod.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/castopod.nix>

services.castopod.dataDir
The path where castopod stores all data. This path must be in sync with the castopod package (where it is hardcoded during the build in accordance with its own ‘dataDir’ argument).

Type: absolute path

Default:

```
"/var/lib/castopod"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/castopod.nix>

services.castopod.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/castopod.nix>

services.castopod.database.hostname
Database hostname.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/castopod.nix>

services.castopod.database.name
Database name.

Type: string

Default:

```
"castopod"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/castopod.nix>

services.castopod.database.passwordFile

A file containing the password corresponding to **services.castopod.database.user**.

This file is loaded using systemd LoadCredentials.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/castopod-dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/castopod.nix>

services.castopod.database.user

Database user.

Type: string

Default:

```
"castopod"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/castopod.nix>

services.castopod.environmentFile

Environment file to inject e.g. secrets into the configuration. See [1] for available environment variables.

This file is loaded using systemd LoadCredentials.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/castopod-env"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/castopod.nix>

1. https://code.castopod.org/adaures/castopod/-/blob/main/.env.example

services.castopod.localDomain

The domain serving your CastoPod instance.

Type: string

Example:

```
"castopod.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/castopod.nix>

services.castopod.maxUploadSize

Maximum supported size for a file upload in. Maximum HTTP body size is set to this value for nginx and PHP (because castopod doesn't support chunked uploads yet: https://code.castopod.org/adaures/castopod/-/issues/330).

Note, that practical upload size limit is smaller. For example, with 512 MiB setting - around 500 MiB is possible.

Type: string

Default:

```
"512M"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/castopod.nix>

services.castopod.poolSettings
Options for Castopod's PHP pool. See the documentation on 'php−fpm.conf' for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = "32";
  "pm.max_requests" = "500";
  "pm.max_spare_servers" = "4";
  "pm.min_spare_servers" = "2";
  "pm.start_servers" = "2";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/castopod.nix>

services.castopod.settings
Environment variables used for Castopod. See [1] for available environment variables.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{ }
```

Example:

```
{
  "email.SMTPHost" = "localhost";
  "email.SMTPUser" = "myuser";
  "email.fromEmail" = "castopod@example.com";
  "email.protocol" = "smtp";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/castopod.nix>

1. https://code.castopod.org/adaures/castopod/−/blob/main/.env.example

services.cato−client.enable
Whether to enable cato−client service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cato−client.nix>

services.cato−client.package
The cato−client package to use.

Type: package

Default:

```
pkgs.cato−client
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cato−client.nix>

services.centrifugo.enable
Whether to enable Centrifugo messaging server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/centrifugo.nix>

services.centrifugo.package
The centrifugo package to use.

Type: package

Default:

```
pkgs.centrifugo
```

Declared by:
<nixpkgs/nixos/modules/services/networking/centrifugo.nix>

services.centrifugo.credentials
Environment variables with absolute paths to credentials files to load on service startup.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  CENTRIFUGO_UNI_GRPC_TLS_KEY = "/run/keys/centrifugo−uni−grpc−t \
ls.key";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/centrifugo.nix>

services.centrifugo.environmentFiles
Files to load environment variables from. Options set via environment variables take precedence over **settings**.

See the **Centrifugo documentation** for the environment variable name format.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/centrifugo.nix>

services.centrifugo.extraGroups

Additional groups for the systemd service.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "redis-centrifugo"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/centrifugo.nix>

services.centrifugo.settings

Declarative Centrifugo configuration. See the **Centrifugo documentation** for a list of options.

Type: JSON value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/centrifugo.nix>

services.ceph.enable

Whether to enable Ceph global configuration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network-filesystems/ceph.nix>

services.ceph.client.enable

Whether to enable Ceph client configuration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network-filesystems/ceph.nix>

services.ceph.client.extraConfig

Extra configuration to add to the client section. Configuration for rados gateways would be added here, with their own sections, see example.

Type: attribute set of attribute set of string

Default:

```
{ }
```

Example:

```
{
  # This would create a section for a radosgw daemon named node0 an \
d related
  # configuration for it
  "client.radosgw.node0" = { "some config option" = "true"; };
};
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.extraConfig

Extra configuration to add to the global section. Use for setting values that are common for all daemons in the cluster.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "ms bind ipv6" = "true";
}
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.global.authClientRequired

Enables requiring the cluster to authenticate itself to the client.

Type: one of “cephx”, “none”

Default:

```
"cephx"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.global.authClusterRequired

Enables requiring daemons to authenticate with eachother in the cluster.

Type: one of “cephx”, “none”

Default:

```
"cephx"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.global.authServiceRequired

Enables requiring clients to authenticate with the cluster to access services in the cluster (e.g. radosgw, mds or osd).

Type: one of “cephx”, “none”

Default:

```
"cephx"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.global.clusterName

Name of cluster

Type: string

Default:

```
"ceph"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.global.clusterNetwork

A comma−separated list of subnets that will be used as cluster networks in the cluster.

Type: null or strings concatenated with “,”

Default:

```
null
```

Example:

```
10.10.0.0/24, 192.168.0.0/24
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.global.fsid

Filesystem ID, a generated uuid, its must be generated and set before attempting to start a cluster

Type: string

Example:

```
433a2193−4f8a−47a0−95d2−209d7ca2cca5
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.global.maxOpenFiles

Max open files for each OSD daemon.

Type: signed integer

Default:

```
131072
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.global.mgrModulePath
Path at which to find ceph−mgr modules.

Type: absolute path

Default:

```
"${pkgs.ceph.lib}/lib/ceph/mgr"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.global.monHost
List of hostname shortnames/IP addresses of the initial monitors.

Type: null or strings concatenated with “,”

Default:

```
null
```

Example:

```
10.10.0.1, 10.10.0.2, 10.10.0.3
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.global.monInitialMembers
List of hosts that will be used as monitors at startup.

Type: null or strings concatenated with “,”

Default:

```
null
```

Example:

```
node0, node1, node2
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.global.publicNetwork
A comma−separated list of subnets that will be used as public networks in the cluster.

Type: null or strings concatenated with “,”

Default:

```
null
```

Example:

```
10.20.0.0/24, 192.168.1.0/24
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.global.rgwMimeTypesFile
Path to mime types used by radosgw.

Type: null or absolute path

Default:

```
"${pkgs.mailcap}/etc/mime.types"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.mds.enable
Whether to enable Ceph MDS daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.mds.package
The ceph package to use.

Type: package

Default:

```
pkgs.ceph
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.mds.daemons
A list of metadata service daemons that should have a service created. The names correspond to the id part in ceph i.e. [“name1”] would result in mds.name1

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "name1"
  "name2"
]
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.mds.extraConfig
Extra configuration to add to the MDS section.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.mgr.enable

Whether to enable Ceph MGR daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.mgr.package

The ceph package to use.

Type: package

Default:

```
pkgs.ceph
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.mgr.daemons

A list of names for manager daemons that should have a service created. The names correspond to the id part in ceph i.e. [“name1”] would result in mgr.name1

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "name1"
  "name2"
]
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.mgr.extraConfig

Extra configuration to add to the global section for manager daemons.

Type: attribute set of string

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.mon.enable

Whether to enable Ceph MON daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.mon.package
The ceph package to use.

Type: package

Default:

```
pkgs.ceph
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.mon.daemons
A list of monitor daemons that should have a service created. The names correspond to the id part in ceph i.e. [“name1”] would result in mon.name1

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "name1"
  "name2"
]
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.mon.extraConfig
Extra configuration to add to the monitor section.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.osd.enable
Whether to enable Ceph OSD daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.osd.package

The ceph package to use.

Type: package

Default:

```
pkgs.ceph
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.osd.daemons

A list of OSD daemons that should have a service created. The names correspond to the id part in ceph i.e. [“name1”] would result in osd.name1

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "name1"
  "name2"
]
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.osd.extraConfig

Extra configuration to add to the OSD section.

Type: attribute set of string

Default:

```
{
  "osd crush chooseleaf type" = "1";
  "osd journal size" = "10000";
  "osd pool default min size" = "2";
  "osd pool default pg num" = "200";
  "osd pool default pgp num" = "200";
  "osd pool default size" = "3";
}
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.rgw.enable

Whether to enable Ceph RadosGW daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.rgw.package
The ceph package to use.

Type: package

Default:

```
pkgs.ceph
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.ceph.rgw.daemons
A list of rados gateway daemons that should have a service created. The names correspond to the id part in ceph i.e. [“name1”] would result in client.name1, radosgw daemons aren’t daemons to cluster in the sense that OSD, MGR or MON daemons are. They are simply daemons, from ceph, that uses the cluster as a backend.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "name1"
  "name2"
]
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ceph.nix>

services.certmgr.enable
Whether to enable certmgr.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/certmgr.nix>

services.certmgr.package
The certmgr package to use.

Type: package

Default:

```
pkgs.certmgr
```

Declared by:
<nixpkgs/nixos/modules/services/security/certmgr.nix>

services.certmgr.defaultRemote

The default CA host:port to use.

Type: string

Default:

```
"127.0.0.1:8888"
```

Declared by:

<nixpkgs/nixos/modules/services/security/certmgr.nix>

services.certmgr.metricsAddress

The address for the Prometheus HTTP endpoint.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/security/certmgr.nix>

services.certmgr.metricsPort

The port for the Prometheus HTTP endpoint.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9488
```

Declared by:

<nixpkgs/nixos/modules/services/security/certmgr.nix>

services.certmgr.renewInterval

How often to check certificate expirations and how often to update the cert_next_expires metric.

Type: string

Default:

```
"30m"
```

Declared by:

<nixpkgs/nixos/modules/services/security/certmgr.nix>

services.certmgr.specs

Certificate specs as described by: **https://github.com/cloudflare/certmgr#certificate−specs** These will be added to the Nix store, so they will be world readable.

Type: attribute set of (absolute path or (submodule))

Default:

```
{ }
```

Example:

```
{
  exampleCert =
  let
    domain = "example.com";
    secret = name: "/var/lib/secrets/${name}.pem";
  in {
    service = "nginx";
    action = "reload";
```

```
      authority = {
        file.path = secret "ca";
      };
      certificate = {
        path = secret domain;
      };
      private_key = {
        owner = "root";
        group = "root";
        mode = "0600";
        path = secret "${domain}-key";
      };
      request = {
        CN = domain;
        hosts = [ "mail.${domain}" "www.${domain}" ];
        key = {
          algo = "rsa";
          size = 2048;
        };
        names = {
          O = "Example Organization";
          C = "USA";
        };
      };
    };
    otherCert = "/var/certmgr/specs/other-cert.json";
  }
```

Declared by:

<nixpkgs/nixos/modules/services/security/certmgr.nix>

services.certmgr.svcManager

This specifies the service manager to use for restarting or reloading services. See: **https://github.com/cloudflare/certmgr#certmgryaml**. For how to use the "command" service manager in particular, see: **https://github.com/cloudflare/certmgr#command-svcmgr-and-how-to-use-it**.

Type: one of "circus", "command", "dummy", "openrc", "systemd", "sysv"

Default:

```
"systemd"
```

Declared by:

<nixpkgs/nixos/modules/services/security/certmgr.nix>

services.certmgr.validMin

The interval before a certificate expires to start attempting to renew it.

Type: string

Default:

```
"72h"
```

Declared by:

<nixpkgs/nixos/modules/services/security/certmgr.nix>

services.certspotter.enable

Whether to enable Cert Spotter, a Certificate Transparency log monitor.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/certspotter.nix>

services.certspotter.package

The certspotter package to use.

Type: package

Default:

```
pkgs.certspotter
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/certspotter.nix>

services.certspotter.emailRecipients

A list of email addresses to send certificate updates to.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/certspotter.nix>

services.certspotter.extraFlags

Extra command−line arguments to pass to Cert Spotter

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-no_save"
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/certspotter.nix>

services.certspotter.hooks

Scripts to run upon the detection of a new certificate. See ‘man 8 certspotter−script’ or **the GitHub page** for more info.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  (pkgs.writeShellScript "certspotter-hook" ''
    echo "Event summary: $SUMMARY."
  '')
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/certspotter.nix>

services.certspotter.sendmailPath
Path to the 'sendmail' binary. By default, the local sendmail wrapper is used (see **services.mail.sendmailSetuidWrapper**}).

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.system-sendmail}/bin/sendmail"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/certspotter.nix>

services.certspotter.startAtEnd
Whether to skip certificates issued before the first launch of Cert Spotter. Setting this to 'false' will cause Cert Spotter to download tens of terabytes of data.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/certspotter.nix>

services.certspotter.watchlist
Domain names to watch. To monitor a domain with all subdomains, prefix its name with '.' (e.g. '.example.org').

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  ".example.org"
  "another.example.com"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/certspotter.nix>

services.cfdyndns.enable
Whether to enable Cloudflare Dynamic DNS Client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/cfdyndns.nix>

services.cfdyndns.apiTokenFile
The path to a file containing the API Token used to authenticate with CloudFlare.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/cfdyndns.nix>

services.cfdyndns.apikeyFile
The path to a file containing the API Key used to authenticate with CloudFlare.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/cfdyndns.nix>

services.cfdyndns.email
The email address to use to authenticate to CloudFlare.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/cfdyndns.nix>

services.cfdyndns.records
The records to update in CloudFlare.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "host.tld"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/cfdyndns.nix>

services.cfssl.enable
Whether to enable the CFSSL CA api−server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.address
Address to bind.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.ca
CA used to sign the new certificate – accepts '[file:]fname' or 'env:varname'.

Type: string

Default:

```
"${cfg.dataDir}/ca.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.caBundle
Path to root certificate store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.caKey
CA private key – accepts '[file:]fname' or 'env:varname'.

Type: string

Default:

```
"file:${cfg.dataDir}/ca-key.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.configFile
Path to configuration file. Do not put this in nix−store as it might contain secrets.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.dataDir
The work directory for CFSSL.

Note
If left as the default value this directory will automatically be created before the CFSSL server starts, otherwise you are responsible for ensuring the directory exists with appropriate ownership

and permissions.

Type: absolute path

Default:

```
"/var/lib/cfssl"
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.dbConfig
Certificate db configuration file. Path must be writeable.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.disable
Endpoints to disable (comma−separated list)

Type: null or strings concatenated with “,”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.intBundle
Path to intermediate certificate store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.intDir
Intermediates directory.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.logLevel
Log level (0 = DEBUG, 5 = FATAL).

Type: integer between 0 and 5 (both inclusive)

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.metadata
Metadata file for root certificate presence. The content of the file is a json dictionary (k,v): each key k is a SHA−1 digest of a root certificate while value v is a list of key store filenames.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.mutualTlsCa
Mutual TLS − require clients be signed by this CA.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.mutualTlsClientCert
Mutual TLS − client certificate to call remote instance requiring client certs.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.mutualTlsClientKey
Mutual TLS − client key to call remote instance requiring client certs. Do not put this in nix−store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.mutualTlsCn
Mutual TLS − regex for whitelist of allowed client CNs.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.port
Port to bind.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8888
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.remote
Remote CFSSL server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.responder
Certificate for OCSP responder.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.responderKey
Private key for OCSP responder certificate. Do not put this in nix−store.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.tlsCert
Other endpoint’s CA to set up TLS protocol.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.tlsKey
Other endpoint’s CA private key. Do not put this in nix−store.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cfssl.tlsRemoteCa
CAs to trust for remote TLS requests.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/cfssl.nix>

services.cgit
Configure cgit instances.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cgit.nix>

services.cgit.<name>.enable
Whether to enable cgit.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cgit.nix>

services.cgit.<name>.package
The cgit package to use.

Type: package

Default:

```
pkgs.cgit
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cgit.nix>

services.cgit.<name>.extraConfig
These lines go to the end of cgitrc verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cgit.nix>

services.cgit.<name>.gitHttpBackend.enable

Whether to bypass cgit and use git−http−backend for HTTP clones. While this enables HTTP clones to use the more efficient smart protocol, it does not support access control via cgit's settings (e.g. the 'ignore' repository setting).

If you want to disallow access to some repositories with this backend, enable 'checkExportOkFiles' and set 'strict−export = "git−daemon−export−ok"' in 'settings'.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cgit.nix>

services.cgit.<name>.gitHttpBackend.checkExportOkFiles

Whether git−http−backend should only export repositories that contain a 'git−daemon−export−ok' file.

When the backend is enabled and the check is disabled all repositories can be cloned irrespective of cgit's settings (e.g. the 'ignore' repository setting).

When enabled you must also configure 'strict−export = "git−daemon−export−ok"' in 'settings' to make cgit check for the same files.

Type: boolean

Declared by:

<nixpkgs/nixos/modules/services/networking/cgit.nix>

services.cgit.<name>.group

Group to run the cgit service as.

Type: string

Default:

```
"cgit"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cgit.nix>

services.cgit.<name>.nginx.location

Location to serve cgit under.

Type: string

Default:

```
"/"
```

Example:

```
"/git/"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cgit.nix>

services.cgit.<name>.nginx.virtualHost

VirtualHost to serve cgit on, defaults to the attribute name.

Type: string

Default:

```
"‹name›"
```

Example:

```
"git.example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cgit.nix>

services.cgit.<name>.repos

cgit repository settings, see **cgitrc**(5)

Type: attribute set of attribute set of (boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  blah = {
    desc = "An example repository";
    path = "/var/lib/git/example";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cgit.nix>

services.cgit.<name>.scanPath

A path which will be scanned for repositories.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/git"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cgit.nix>

services.cgit.<name>.settings

cgit configuration, see **cgitrc**(5)

Type: attribute set of (boolean or signed integer or string or list of (boolean or signed integer or string))

Default:

```
{ }
```

Example:

```
{
  enable-follow-links = true;
  source-filter = "${pkgs.cgit}/lib/cgit/filters/syntax-highlight \
ing.py";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cgit.nix>

services.cgit.<name>.user

User to run the cgit service as.

Type: string

Default:

```
"cgit"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cgit.nix>

services.cgminer.enable

Whether to enable cgminer, an ASIC/FPGA/GPU miner for bitcoin and litecoin.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/cgminer.nix>

services.cgminer.package

The cgminer package to use.

Type: package

Default:

```
pkgs.cgminer
```

Declared by:

<nixpkgs/nixos/modules/services/misc/cgminer.nix>

services.cgminer.config

Additional config

Type: attribute set of (boolean or signed integer)

Default:

```
{ }
```

Example:

```
{
  auto-fan = true;
  auto-gpu = true;
  expiry = 120;
  failover-only = true;
  gpu-threads = 2;
  log = 5;
  queue = 1;
  scan-time = 60;
  temp-histeresys = 3;
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/cgminer.nix>

services.cgminer.hardware

List of config options for every GPU

Type: list of attribute set of (string or signed integer)

Default:

```
[ ]
```

Example:

```
[
  {
    gpu-engine = "0-985";
    gpu-fan = "0-85";
    gpu-memclock = 860;
    gpu-powertune = 20;
    intensity = 9;
    temp-cutoff = 95;
    temp-overheat = 85;
    temp-target = 75;
  }
  {
    gpu-engine = "0-950";
    gpu-fan = "0-85";
    gpu-memclock = 825;
    gpu-powertune = 20;
    intensity = 9;
    temp-cutoff = 95;
    temp-overheat = 85;
    temp-target = 75;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/cgminer.nix>

services.cgminer.pools

List of pools where to mine

Type: list of attribute set of string

Default:

```
[ ]
```

Example:

```
[
  {
    password = "X";
    url = "http://p2pool.org:9332";
    username = "17EUZxTvs9uRmPsjPZSYUU3zCz9iwstudk";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/cgminer.nix>

services.cgminer.user
User account under which cgminer runs

Type: string

Default:

```
"cgminer"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/cgminer.nix>

services.changedetection−io.enable
Whether to enable changedetection−io.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/changedetection−io.nix>

services.changedetection−io.package
The changedetection−io package to use.

Type: package

Default:

```
pkgs.changedetection−io
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/changedetection−io.nix>

services.changedetection−io.baseURL
The base url used in notifications and ‘{base_url}’ token.

Type: null or string

Default:

```
null
```

Example:

```
"https://changedetection−io.example"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/changedetection−io.nix>

services.changedetection−io.behindProxy
Enable this option when changedetection−io runs behind a reverse proxy, so that it trusts X−* headers. It is recommend to run changedetection−io behind a TLS reverse proxy.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/changedetection−io.nix>

services.changedetection−io.chromePort

A free port on which webDriverSupport or playwrightSupport listen on localhost.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4444
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/changedetection−io.nix>

services.changedetection−io.datastorePath

The directory used to store all data for changedetection−io.

Type: string

Default:

```
"/var/lib/changedetection−io"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/changedetection−io.nix>

services.changedetection−io.environmentFile

Securely pass environment variables to changedetection−io.

This can be used to set for example a frontend password reproducible via 'SALTED_PASS' which convinetly also deactivates nags about the hosted version. 'SALTED_PASS' should be 64 characters long while the first 32 are the salt and the second the frontend password. It can easily be retrieved from the settings file when first set via the frontend with the following command: 'jq −r .settings.application.password /var/lib/changedetection−io/url−watches.json'

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/changedetection−io.env"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/changedetection−io.nix>

services.changedetection−io.group

Group account under which changedetection−io runs.

Type: string

Default:

```
"changedetection−io"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/changedetection−io.nix>

services.changedetection−io.listenAddress

Address the server will listen on.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/changedetection−io.nix>

services.changedetection−io.playwrightSupport
Enable support for fetching web pages using playwright and Chromium. This starts a headless Chromium controlled by puppeteer in an oci container.

Note
Playwright can currently leak memory. See **https://github.com/dgtlmoon/changedetection.io/wiki/Playwright−content−fetcher#playwright−memory−leak**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/changedetection−io.nix>

services.changedetection−io.port
Port the server will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/changedetection−io.nix>

services.changedetection−io.user
User account under which changedetection−io runs.

Type: string

Default:

```
"changedetection-io"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/changedetection−io.nix>

services.changedetection−io.webDriverSupport
Enable support for fetching web pages using WebDriver and Chromium. This starts a headless chromium controlled by puppeteer in an oci container.

Note
Playwright can currently leak memory. See **https://github.com/dgtlmoon/changedetection.io/wiki/Playwright−content−fetcher#playwright−memory−leak**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/changedetection−io.nix>

services.chhoto−url.enable
Whether to enable Chhoto URL.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/chhoto−url.nix>

services.chhoto−url.package
The chhoto−url package to use.

Type: package

Default:

```
pkgs.chhoto−url
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/chhoto−url.nix>

services.chhoto−url.environmentFiles
Files to load environment variables from in addition to **services.chhoto-url.settings**. This is useful to avoid putting secrets into the nix store. See **https://github.com/SinTan1729/chhoto−url/blob/main/compose.yaml** for a list of options.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/run/secrets/chhoto−url.env"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/chhoto−url.nix>

services.chhoto−url.settings
Configuration of Chhoto URL. See **https://github.com/SinTan1729/chhoto−url/blob/main/compose.yaml** for a list of options.

Type: open submodule of attribute set of (string or signed integer or boolean)

Example:

```
{
  port = 4567;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/chhoto−url.nix>

services.chhoto−url.settings.allow_capital_letters
Whether to allow capital letters in slugs.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/chhoto−url.nix>

services.chhoto-url.settings.cache_control_header
The Cache-Control header to send.

Type: null or string

Default:

```
null
```

Example:

```
"no-cache, private"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/chhoto-url.nix>

services.chhoto-url.settings.custom_landing_directory
The path of a directory which contains a custom landing page.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/chhoto-url.nix>

services.chhoto-url.settings.db_url
The path of the sqlite database.

Type: absolute path

Default:

```
"/var/lib/chhoto-url/urls.sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/chhoto-url.nix>

services.chhoto-url.settings.disable_frontend
Whether to disable the frontend.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/chhoto-url.nix>

services.chhoto-url.settings.hash_algorithm
The hash algorithm to use for passwords and API keys. Set to ‘null’ if you want to provide these secrets as plaintext.

Type: null or value “Argon2” (singular enum)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/chhoto-url.nix>

services.chhoto-url.settings.port

The port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Example:

```
4567
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/chhoto-url.nix>

services.chhoto-url.settings.public_mode

Whether to enable public mode.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/chhoto-url.nix>

services.chhoto-url.settings.public_mode_expiry_delay

The maximum expiry delay in seconds to force in public mode.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Example:

```
3600
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/chhoto-url.nix>

services.chhoto-url.settings.redirect_method

The redirect method to use.

Type: one of “TEMPORARY”, “PERMANENT”

Default:

```
"PERMANENT"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/chhoto-url.nix>

services.chhoto-url.settings.site_url

The URL under which Chhoto URL is externally reachable.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/chhoto-url.nix>

services.chhoto-url.settings.slug_length
The length of auto-generated slugs.

Type: signed integer

Default:

```
8
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/chhoto-url.nix>

services.chhoto-url.settings.slug_style
The slug style to use for auto-generated URLs.

Type: one of “Pair”, “UID”

Default:

```
"Pair"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/chhoto-url.nix>

services.chhoto-url.settings.try_longer_slugs
Whether to try a longer UID upon collision.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/chhoto-url.nix>

services.chisel-server.enable
Whether to enable Chisel Tunnel Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/chisel-server.nix>

services.chisel-server.authfile
Path to auth.json file

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/chisel-server.nix>

services.chisel−server.backend
HTTP server to proxy normal requests to

Type: null or string

Default:

```
null
```

Example:

```
"http://127.0.0.1:8888"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/chisel−server.nix>

services.chisel−server.host
Address to listen on, falls back to 0.0.0.0

Type: null or string

Default:

```
null
```

Example:

```
"[::1]"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/chisel−server.nix>

services.chisel−server.keepalive
Keepalive interval, falls back to 25s

Type: null or string

Default:

```
null
```

Example:

```
"5s"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/chisel−server.nix>

services.chisel−server.port
Port to listen on, falls back to 8080

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/chisel−server.nix>

services.chisel−server.reverse
Allow clients reverse port forwarding

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/chisel−server.nix>

services.chisel−server.socks5
Allow clients access to internal SOCKS5 proxy

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/chisel−server.nix>

services.chromadb.enable
Whether to enable ChromaDB, an open−source AI application database…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/chromadb.nix>

services.chromadb.package
The chromadb package to use.

Type: package

Default:

```
pkgs.python3Packages.chromadb
```

Declared by:
<nixpkgs/nixos/modules/services/databases/chromadb.nix>

services.chromadb.dbpath
Location where ChromaDB stores its files

Type: string

Default:

```
"/var/lib/chromadb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/chromadb.nix>

services.chromadb.host
Defines the IP address by which ChromaDB will be accessible.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/chromadb.nix>

services.chromadb.openFirewall

Whether to automatically open the specified TCP port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/databases/chromadb.nix>

services.chromadb.port

Defined the port number to listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8000
```

Declared by:

<nixpkgs/nixos/modules/services/databases/chromadb.nix>

services.chrony.enable

Whether to synchronise your machine's time using chrony. Make sure you disable NTP if you enable this service.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.enableMemoryLocking

Whether to add the '−m' flag to lock memory.

Type: boolean

Default:

```
config.environment.memoryAllocator.provider != "graphene−hardened" \
 && config.environment.memoryAllocator.provider != "graphene−harde \
ned−light"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.enableNTS

Whether to enable Network Time Security authentication. Make sure it is supported by your selected NTP server(s).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.enableRTCTrimming

Enable tracking of the RTC offset to the system clock and automatic trimming. See also **services.chrony.autotrimThreshold**

> **Note**
> This is not compatible with the 'rtcsync' directive, which naively syncs the RTC time every 11 minutes.
>
> Tracking the RTC drift will allow more precise timekeeping, especially on intermittently running devices, where the RTC is very relevant.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.package

The chrony package to use.

Type: package

Default:

```
pkgs.chrony
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.autotrimThreshold

Maximum estimated error threshold for the 'rtcautotrim' command. When reached, the RTC will be trimmed. Only used when **services.chrony.enableRTCTrimming** is enabled.

Type: positive integer, meaning >0

Default:

```
30
```

Example:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.directory

Directory where chrony state is stored.

Type: string

Default:

```
"/var/lib/chrony"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.dispatcherScript

Whether to install the chrony NetworkManager dispatcher script to handle connectivity changes.

Type: boolean

Default:

```
config.networking.networkmanager.enable
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.extraConfig
Extra configuration directives that should be added to *chrony.conf*

Type: strings concatenated with “\n”

Default:
```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.extraFlags
Extra flags passed to the chronyd command.

Type: list of string

Default:
```
[ ]
```

Example:
```
[
  "-s"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.initstepslew.enabled
DEPRECATED. Consider using ‘services.chrony.makestep’ instead. Allow chronyd to make a rapid measurement of the system clock error at boot time, and to correct the system clock by stepping before normal operation begins.

Type: boolean

Default:
```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.initstepslew.threshold
The threshold of system clock error (in seconds) above which the clock will be stepped. If the correction required is less than the threshold, a slew is used instead.

Type: floating point number or signed integer

Default:
```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.makestep.enable
Allow chronyd to step the system clock if the error is larger than the specified threshold.

Type: boolean

Default:
```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.makestep.limit
The maximum number of times the system clock will be stepped.

Type: positive integer, meaning >0

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.makestep.threshold
The threshold of system clock error (in seconds) above which the clock will be stepped. If the correction required is less than the threshold, a slew is used instead.

Type: floating point number or signed integer

Default:

```
0.1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.serverOption
Set option for server directives.

Use “iburst” to rapidly poll on startup. Recommended if your machine is consistently online.

Use “offline” to prevent polling on startup. Recommended if your machine boots offline or is otherwise frequently offline.

Type: one of “iburst”, “offline”

Default:

```
"iburst"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.chrony.servers
The set of NTP servers from which to synchronise.

Type: list of string

Default:

```
config.networking.timeServers
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ntp/chrony.nix>

services.cinnamon.apps.enable
Whether to enable Cinnamon default applications.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/desktop−managers/cinnamon.nix>

services.cjdns.enable
Whether to enable the cjdns network encryption and routing engine. A file at /etc/cjdns.keys will be created if it does not exist to contain a random secret key that your IPv6 address will be derived from.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.ETHInterface.beacon
Auto−connect to other cjdns nodes on the same network. Options: 0: Disabled. 1: Accept beacons, this will cause cjdns to accept incoming beacon messages and try connecting to the sender. 2: Accept and send beacons, this will cause cjdns to broadcast messages on the local network which contain a randomly generated per−session password, other nodes which have this set to 1 or 2 will hear the beacon messages and connect automatically.

Type: signed integer

Default:

```
2
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.ETHInterface.bind
Bind to this device for native ethernet operation. ‘all’ is a pseudo−name which will try to connect to all devices.

Type: string

Default:

```
""
```

Example:

```
"eth0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.ETHInterface.connectTo
Credentials for connecting look similar to UDP credientials except they begin with the mac address.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "01:02:03:04:05:06" = {
    hostname = "homer.hype";
    password = "5kG15EfpdcKNX3f2GSQ0H1HC7yIfxoCoImnO5FHM";
    publicKey = "371zpkgs8ss387tmr81q04mp0hg1skb51hw34vk1cq644mjqhu \
p0.k";
  };
```

```
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.ETHInterface.connectTo.<name>.hostname
Optional hostname to add to /etc/hosts; prevents reverse lookup failures.

Type: string

Default:

```
""
```

Example:

```
"foobar.hype"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.ETHInterface.connectTo.<name>.login
(optional) name your peer has for you

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.ETHInterface.connectTo.<name>.password
Authorized password to the opposite end of the tunnel.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.ETHInterface.connectTo.<name>.peerName
(optional) human−readable name for peer

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.ETHInterface.connectTo.<name>.publicKey
Public key at the opposite end of the tunnel.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.UDPInterface.bind
Address and port to bind UDP tunnels to.

Type: string

Default:

```
""
```

Example:

```
"192.168.1.32:43211"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.UDPInterface.connectTo

Credentials for making UDP tunnels.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "192.168.1.1:27313" = {
    hostname = "homer.hype";
    password = "5kG15EfpdcKNX3f2GSQ0H1HC7yIfxoCoImnO5FHM";
    publicKey = "371zpkgs8ss387tmr81q04mp0hg1skb51hw34vk1cq644mjqhu \
p0.k";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.UDPInterface.connectTo.<name>.hostname

Optional hostname to add to /etc/hosts; prevents reverse lookup failures.

Type: string

Default:

```
""
```

Example:

```
"foobar.hype"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.UDPInterface.connectTo.<name>.login

(optional) name your peer has for you

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.UDPInterface.connectTo.<name>.password

Authorized password to the opposite end of the tunnel.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.UDPInterface.connectTo.<name>.peerName
(optional) human−readable name for peer

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.UDPInterface.connectTo.<name>.publicKey
Public key at the opposite end of the tunnel.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.addExtraHosts
Whether to add cjdns peers with an associated hostname to */etc/hosts*. Beware that enabling this incurs heavy eval−time costs.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.admin.bind
Bind the administration port to this address and port.

Type: string

Default:

```
"127.0.0.1:11234"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.authorizedPasswords
Any remote cjdns nodes that offer these passwords on connection will be allowed to route through this node.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "snyrfgkqsc98qh1y4s5hbu0j57xw5s0"
  "z9md3t4p45mfrjzdjurxn4wuj0d8swv"
  "49275fut6tmzu354pq70sr5b95qq0vj"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.confFile

Ignore all other cjdns options and load configuration from this file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/cjdroute.conf"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.cjdns.extraConfig

Extra configuration, given as attrs, that will be merged recursively with the rest of the JSON generated by this module, at the root node.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  router = {
    interface = {
      tunDevice = "tun10";
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cjdns.nix>

services.clamav.package

The clamav package to use.

Type: package

Default:

```
pkgs.clamav
```

Declared by:

<nixpkgs/nixos/modules/services/security/clamav.nix>

services.clamav.clamonacc.enable

Whether to enable ClamAV on−access scanner.

The settings for ClamAV's on−access scanner is configured in 'clamd.conf' via 'services.clamav.daemon.settings'. Refer to **https://docs.clamav.net/manual/OnAccess.html** on how to configure it.

Example to scan '/home/foo/Downloads' (and block access until scanning is completed) would be:

```
services.clamav = {
  daemon.enable = true;
  clamonacc.enable = true;
  daemon.settings = {
    OnAccessPrevention = true;
    OnAccessIncludePath = "/home/foo/Downloads";
  };
```

```
};
```

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/clamav.nix>

services.clamav.daemon.enable
Whether to enable ClamAV clamd daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/clamav.nix>

services.clamav.daemon.settings
ClamAV configuration. Refer to **https://linux.die.net/man/5/clamd.conf**, for details on supported values.

Type: attribute set of (boolean or signed integer or string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/clamav.nix>

services.clamav.fangfrisch.enable
Whether to enable ClamAV fangfrisch updater.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/clamav.nix>

services.clamav.fangfrisch.interval
How often freshclam is invoked. See **systemd.time**(7) for more information about the format.

Type: string

Default:

```
"hourly"
```

Declared by:
<nixpkgs/nixos/modules/services/security/clamav.nix>

services.clamav.fangfrisch.settings
fangfrisch configuration. Refer to **https://rseichter.github.io/fangfrisch/#_configuration**, for details on supported values. Note that by default urlhaus and sanesecurity are enabled.

Type: open submodule of attribute set of attribute set of (string or signed integer or boolean)

Default:

```
{ }
```

Example:

```
{
  securiteinfo = {
    customer_id = "your customer_id";
    enabled = "yes";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/security/clamav.nix>

services.clamav.scanner.enable
Whether to enable ClamAV scanner.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/clamav.nix>

services.clamav.scanner.interval
How often clamdscan is invoked. See **systemd.time**(7) for more information about the format. By default this runs using 10 cores at most, be sure to run it at a time of low traffic.

Type: string

Default:

```
"*-*-* 04:00:00"
```

Declared by:
<nixpkgs/nixos/modules/services/security/clamav.nix>

services.clamav.scanner.scanDirectories
List of directories to scan. The default includes everything I could think of that is valid for nixos. Feel free to contribute a PR to add to the default if you see something missing.

Type: list of string

Default:

```
[
  "/home"
  "/var/lib"
  "/tmp"
  "/etc"
```

```
  "/var/tmp"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/clamav.nix>

services.clamav.updater.enable
Whether to enable ClamAV freshclam updater.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/clamav.nix>

services.clamav.updater.frequency
Number of database checks per day.

Type: signed integer

Default:

```
12
```

Declared by:
<nixpkgs/nixos/modules/services/security/clamav.nix>

services.clamav.updater.interval
How often freshclam is invoked. See **systemd.time**(7) for more information about the format.

Type: string

Default:

```
"hourly"
```

Declared by:
<nixpkgs/nixos/modules/services/security/clamav.nix>

services.clamav.updater.settings
freshclam configuration. Refer to **https://linux.die.net/man/5/freshclam.conf**, for details on supported values.

Type: attribute set of (boolean or signed integer or string or list of string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/clamav.nix>

services.clatd.enable
Whether to enable clatd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/clatd.nix>

services.clatd.enableNetworkManagerIntegration
Whether to enable NetworkManager integration.

Type: boolean

Default:

```
"config.networking.networkmanager.enable"
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/clatd.nix>

services.clatd.package
The clatd package to use.

Type: package

Default:

```
pkgs.clatd
```

Declared by:
<nixpkgs/nixos/modules/services/networking/clatd.nix>

services.clatd.settings
Configuration of clatd. See **clatd Documentation**.

Type: open submodule of attribute set of (atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  plat-prefix = "64:ff9b::/96";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/clatd.nix>

services.clickhouse.enable
Whether to enable ClickHouse database server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/clickhouse.nix>

services.clickhouse.package

The clickhouse package to use.

Type: package

Default:

```
pkgs.clickhouse
```

Example:

```
pkgs.clickhouse-lts
```

Declared by:

<nixpkgs/nixos/modules/services/databases/clickhouse.nix>

services.clickhouse.extraServerConfig

Additional raw XML configuration for ClickHouse server.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
<clickhouse>
  <max_connections>500</max_connections>
  <keep_alive_timeout>3</keep_alive_timeout>
</clickhouse>
```

Declared by:

<nixpkgs/nixos/modules/services/databases/clickhouse.nix>

services.clickhouse.extraUsersConfig

Additional raw XML configuration for ClickHouse server.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
<clickhouse>
  <users>
    <readonly>
      <profile>readonly</profile>
    </readonly>
  </users>
</clickhouse>
```

Declared by:

<nixpkgs/nixos/modules/services/databases/clickhouse.nix>

services.clickhouse.serverConfig

Your *config.yaml* as a Nix attribute set. Check the **documentation** for possible options.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
```

```
    http_port = 8123;
    tcp_port = 9000;
    remote_servers = {
      default = {
        shard = {
          replica = [
            { host = "::"; port = "9000"; }
            { host = "::"; port = "9001"; }
            { host = "::"; port = "9002"; }
          ];
        };
      };
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/databases/clickhouse.nix>

services.clickhouse.usersConfig
Your *users.yaml* as a Nix attribute set. Check the **documentation** for possible options.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  profiles = {};
  users = {
    default = {
      profile = "default";
      password_sha256_hex = "36dd292533174299fb0c34665df468bb881756 \
ca9eaf9757d0cfde38f9ededa1";  # ‘echo −n verysecret | sha256sum‘
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/clickhouse.nix>

services.clight.enable
Whether to enable clight.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/clight.nix>

services.clight.settings

Additional configuration to extend clight.conf. See **https://github.com/FedeDP/Clight/blob/master/Extra/clight.conf** for a sample configuration file.

Type: attribute set of (null or signed integer or string or boolean or floating point number or list of (signed integer or string or boolean or floating point number) or attribute set of (signed integer or string or boolean or floating point number or list of (signed integer or string or boolean or floating point number)))

Default:

```
{ }
```

Example:

```
{
  ac_capture_timeouts = [
    120
    300
    60
  ];
  captures = 20;
  gamma_long_transition = true;
}
```

Declared by:

<nixpkgs/nixos/modules/services/x11/clight.nix>

services.clight.temperature.day

Colour temperature to use during the day, between ‘1000’ and ‘25000’ K.

Type: signed integer

Default:

```
5500
```

Declared by:

<nixpkgs/nixos/modules/services/x11/clight.nix>

services.clight.temperature.night

Colour temperature to use at night, between ‘1000’ and ‘25000’ K.

Type: signed integer

Default:

```
3700
```

Declared by:

<nixpkgs/nixos/modules/services/x11/clight.nix>

services.clipcat.enable

Whether to enable Clipcat clipboard daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/clipcat.nix>

services.clipcat.package
The clipcat package to use.

Type: package

Default:

```
pkgs.clipcat
```

Declared by:
<nixpkgs/nixos/modules/services/misc/clipcat.nix>

services.clipmenu.enable
Whether to enable clipmenu, the clipboard management daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/clipmenu.nix>

services.clipmenu.package
The clipmenu package to use.

Type: package

Default:

```
pkgs.clipmenu
```

Declared by:
<nixpkgs/nixos/modules/services/misc/clipmenu.nix>

services.cloud−init.enable
Enable the cloud−init service. This services reads configuration metadata in a cloud environment and configures the machine according to this metadata.

This configuration is not completely compatible with the NixOS way of doing configuration, as configuration done by cloud−init might be overridden by a subsequent nixos−rebuild call. However, some parts of cloud−init fall outside of NixOS's responsibility, like filesystem resizing and ssh public key provisioning, and cloud−init is useful for that parts. Thus, be wary that using cloud−init in NixOS might come as some cost.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/system/cloud−init.nix>

services.cloud−init.btrfs.enable
Allow the cloud−init service to operate ‘btrfs’ filesystem.

Type: boolean

Default:

```
hasFs "btrfs"
```

Declared by:
<nixpkgs/nixos/modules/services/system/cloud−init.nix>

services.cloud−init.config
raw cloud−init configuration.

Takes precedence over the ‘settings’ option if set.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/system/cloud−init.nix>

services.cloud−init.ext4.enable
Allow the cloud−init service to operate ‘ext4’ filesystem.

Type: boolean

Default:

```
hasFs "ext4"
```

Declared by:
<nixpkgs/nixos/modules/services/system/cloud−init.nix>

services.cloud−init.extraPackages
List of additional packages to be available within cloud−init jobs.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/system/cloud−init.nix>

services.cloud−init.network.enable
Allow the cloud−init service to configure network interfaces through systemd−networkd.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/system/cloud−init.nix>

services.cloud−init.settings
Structured cloud−init configuration.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/system/cloud−init.nix>

services.cloud−init.xfs.enable
Allow the cloud−init service to operate ‘xfs’ filesystem.

Type: boolean

Default:

```
hasFs "xfs"
```

Declared by:
<nixpkgs/nixos/modules/services/system/cloud−init.nix>

services.cloudflare−ddns.enable
Whether to enable Cloudflare Dynamic DNS service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.package
The cloudflare−ddns package to use.

Type: package

Default:

```
pkgs.cloudflare−ddns
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.cacheExpiration
Duration for which API responses (like Zone ID, Record IDs) are cached. Uses Go’s duration format (e.g., “6h”, “1h30m”).

Type: string

Default:

```
"6h"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.credentialsFile
Path to a file containing the Cloudflare API authentication token. The file content should be in the format ‘CLOUDFLARE_API_TOKEN=YOUR_SECRET_TOKEN’. The service user needs read access to this file. Ensure permissions are secure (e.g., ‘0400’ or ‘0440’) and ownership is appropriate Using ‘CLOUDFLARE_API_TOKEN’ is preferred over the deprecated ‘CF_API_TOKEN’.

Type: absolute path

Example:

```
"/run/secrets/cloudflare−ddns−token"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.deleteOnStop
Whether to delete the managed DNS records and clear WAF lists when the service is stopped gracefully. Warning: Setting this to true with ‘updateCron = "@once"’ will cause immediate deletion.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.detectionTimeout
Timeout for detecting the public IP address.

Type: string

Default:

```
"5s"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.domains
List of domain names (FQDNs) to manage. Wildcards like ‘*.example.com’ are supported. These domains will be managed for both IPv4 and IPv6 unless overridden by ‘ip4Domains’ or ‘ip6Domains’, or if the respective providers are disabled. This corresponds to the ‘DOMAINS’ environment variable.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "home.example.com"
  "*.dynamic.example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.group
Group under which the service runs.

Type: string

Default:

```
"cloudflare-ddns"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.healthchecks
URL for Healthchecks.io monitoring endpoint (optional).

Type: null or string

Default:

```
null
```

Example:

```
"https://hc-ping.com/your-uuid"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare-ddns.nix>

services.cloudflare-ddns.ip4Domains
Explicit list of domains to manage only for IPv4. If set, overrides 'domains' for IPv4. Corresponds to the 'IP4_DOMAINS' environment variable.

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "ipv4.example.com"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare-ddns.nix>

services.cloudflare-ddns.ip6Domains
Explicit list of domains to manage only for IPv6. If set, overrides 'domains' for IPv6. Corresponds to the 'IP6_DOMAINS' environment variable.

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "ipv6.example.com"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare-ddns.nix>

services.cloudflare-ddns.provider.ipv4
IP detection provider for IPv4. Common values: 'cloudflare.trace', 'cloudflare.doh', 'local', 'url:URL', 'none'. Use 'none' to disable IPv4 updates. See cloudflare-ddns documentation for all options.

Type: string

Default:

```
"cloudflare.trace"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare-ddns.nix>

services.cloudflare-ddns.provider.ipv6
IP detection provider for IPv6. Common values: 'cloudflare.trace', 'cloudflare.doh', 'local', 'url:URL', 'none'. Use 'none' to disable IPv6 updates. See cloudflare-ddns documentation for all options.

Type: string

Default:

```
"cloudflare.trace"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.proxied
Whether the managed DNS records should be proxied through Cloudflare (‘orange cloud’). Accepts boolean values (‘true’, ‘false’) or a domain expression. See cloudflare−ddns documentation for expression syntax (e.g., “is(a.com) || sub(b.org)”).

Type: string

Default:

```
"false"
```

Example:

```
"true"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.recordComment
Comment to add to managed DNS records.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.shoutrrr
List of Shoutrrr notification service URLs (optional).

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "discord://token@id"
  "gotify://host/token"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.ttl
Time To Live (TTL) for the DNS records in seconds. Must be 1 (for automatic) or between 30 and 86400.

Type: positive integer, meaning >0

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.updateCron
Cron expression for how often to check and update IPs. Use “@once” to run only once and then exit.

Type: string

Default:

```
"@every 5m"
```

Example:

```
"@hourly"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.updateOnStart
Whether to perform an update check immediately on service start.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.updateTimeout
Timeout for updating records via the Cloudflare API.

Type: string

Default:

```
"30s"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.uptimeKuma
URL for Uptime Kuma push monitor endpoint (optional).

Type: null or string

Default:

```
null
```

Example:

```
"https://status.example.com/api/push/tag?status=up&msg=OK&ping="
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.user
User account under which the service runs.

Type: string

Default:

```
"cloudflare-ddns"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.wafListDescription

Description for managed WAF lists (used when creating or verifying lists).

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−ddns.wafLists

List of WAF IP Lists to manage, in the format ‘account−id/list−name’. (Experimental feature as of cloudflare−ddns 1.14.0).

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "YOUR_ACCOUNT_ID/allowed_dynamic_ips"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cloudflare−ddns.nix>

services.cloudflare−dyndns.enable

Whether to enable Cloudflare Dynamic DNS Client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cloudflare−dyndns.nix>

services.cloudflare−dyndns.package

The cloudflare−dyndns package to use.

Type: package

Default:

```
pkgs.cloudflare−dyndns
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cloudflare−dyndns.nix>

services.cloudflare−dyndns.apiTokenFile

The path to a file containing the CloudFlare API token.

Type: absolute path not in the Nix store

Declared by:

<nixpkgs/nixos/modules/services/networking/cloudflare−dyndns.nix>

services.cloudflare−dyndns.deleteMissing
Whether to delete the record when no IP address is found.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−dyndns.nix>

services.cloudflare−dyndns.domains
List of domain names to update records for.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−dyndns.nix>

services.cloudflare−dyndns.frequency
Run cloudflare−dyndns with the given frequency (see **systemd.time**(7) for the format). If null, do not run automatically.

Type: null or string

Default:

```
"*:0/5"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−dyndns.nix>

services.cloudflare−dyndns.ipv4
Whether to enable setting IPv4 A records.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−dyndns.nix>

services.cloudflare−dyndns.ipv6
Whether to enable setting IPv6 AAAA records.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−dyndns.nix>

services.cloudflare−dyndns.proxied
Whether this is a DNS−only record, or also being proxied through CloudFlare.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−dyndns.nix>

services.cloudflare−warp.enable
Whether to enable Cloudflare Zero Trust client daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−warp.nix>

services.cloudflare−warp.package
The cloudflare−warp package to use.

Type: package

Default:

```
pkgs.cloudflare−warp
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−warp.nix>

services.cloudflare−warp.openFirewall
Whether to enable opening UDP ports in the firewall.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−warp.nix>

services.cloudflare−warp.rootDir
Working directory for the warp−svc daemon.

Type: string

Default:

```
"/var/lib/cloudflare−warp"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−warp.nix>

services.cloudflare−warp.udpPort
The UDP port to open in the firewall. Warp uses port 2408 by default, but fallback ports can be used if that conflicts with another service. See the **firewall documentation** for the pre−configured available fallback ports.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2408
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflare−warp.nix>

services.cloudflared.enable
Whether to enable Cloudflare Tunnel client daemon (formerly Argo Tunnel).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.package
The cloudflared package to use.

Type: package

Default:

```
pkgs.cloudflared
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.certificateFile
Account certificate file, necessary to create, delete and manage tunnels. It can be obtained by running 'cloudflared login'.

Note that this is **necessary** for a fully declarative set up, as routes can not otherwise be created outside of the Cloudflare interface.

See **Cert.pem** for information about the file, and **Tunnel permissions** for a comparison between the account certificate and the tunnel credentials file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels
Cloudflare tunnels.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "00000000-0000-0000-0000-000000000000" = {
    credentialsFile = "/tmp/test";
    default = "http_status:404";
    ingress = {
      "*.domain1.com" = {
        service = "http://localhost:80";
```

```
        };
      };
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.certificateFile
Account certificate file, necessary to create, delete and manage tunnels. It can be obtained by running 'cloudflared login'.

Note that this is **necessary** for a fully declarative set up, as routes can not otherwise be created outside of the Cloudflare interface.

See **Cert.pem** for information about the file, and **Tunnel permissions** for a comparison between the account certificate and the tunnel credentials file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.credentialsFile
Credential file.

See **Credentials file**.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.default
Catch−all service if no ingress matches.

See 'service'.

Type: string

Example:

```
"http_status:404"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.edgeIPVersion
Specifies the IP address version (IPv4 or IPv6) used to establish a connection between 'cloudflared' and the Cloudflare global network.

The value 'auto' relies on the host operating system to determine which IP version to select. The first IP version returned from the DNS resolution of the region lookup will be used as the primary set. In dual IPv6 and IPv4 network setups, 'cloudflared' will separate the IP versions into two address sets that will be used to fallback in connectivity failure scenarios.

See **Tunnel run parameters**.

Type: one of "auto", "4", "6"

Default:

```
"4"
```

Example:

```
"auto"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.ingress
Ingress rules.

See **Ingress rules**.

Type: attribute set of (string or (submodule))

Default:

```
{ }
```

Example:

```
{
  "*.anotherone.com" = "http://localhost:80";
  "*.domain.com" = "http://localhost:80";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.originRequest.caPool
Path to the certificate authority (CA) for the certificate of your origin. This option should be used only if your certificate is not signed by Cloudflare.

Type: null or string or absolute path

Default:

```
null
```

Example:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.originRequest.connectTimeout
Timeout for establishing a new TCP connection to your origin server. This excludes the time taken to establish TLS, which is controlled by **tlsTimeout**.

Type: null or string

Default:

```
null
```

Example:

```
"30s"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.originRequest.disableChunkedEncoding
Disables chunked transfer encoding. Useful if you are running a WSGI server.

Type: null or boolean

Default:

```
null
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.originRequest.httpHostHeader
Sets the HTTP ‘Host’ header on requests sent to the local service.

Type: null or string

Default:

```
null
```

Example:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.originRequest.keepAliveConnections
Maximum number of idle keepalive connections between Tunnel and your origin. This does not restrict the total number of concurrent connections.

Type: null or signed integer

Default:

```
null
```

Example:

```
100
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.originRequest.keepAliveTimeout
Timeout after which an idle keepalive connection can be discarded.

Type: null or string

Default:

```
null
```

Example:

```
"1m30s"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.originRequest.noHappyEyeballs
Disable the “happy eyeballs” algorithm for IPv4/IPv6 fallback if your local network has misconfigured one of the protocols.

Type: null or boolean

Default:

```
null
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.originRequest.noTLSVerify
Disables TLS verification of the certificate presented by your origin. Will allow any certificate from the origin to be accepted.

Type: null or boolean

Default:

```
null
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.originRequest.originServerName
Hostname that 'cloudflared' should expect from your origin server certificate.

Type: null or string

Default:

```
null
```

Example:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.originRequest.proxyAddress
'cloudflared' starts a proxy server to translate HTTP traffic into TCP when proxying, for example, SSH or RDP. This configures the listen address for that proxy.

Type: null or string

Default:

```
null
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.originRequest.proxyPort
'cloudflared' starts a proxy server to translate HTTP traffic into TCP when proxying, for example, SSH or RDP. This configures the listen port for that proxy. If set to zero, an unused port will randomly be chosen.

Type: null or signed integer

Default:

```
null
```

Example:

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.originRequest.proxyType
‘cloudflared’ starts a proxy server to translate HTTP traffic into TCP when proxying, for example, SSH or RDP. This configures what type of proxy will be started. Valid options are:

- ‘""’ for the regular proxy
- ‘"socks"’ for a SOCKS5 proxy. Refer to the **tutorial on connecting through Cloudflare Access using kubectl** for more information.

Type: null or one of “”, “socks”

Default:

```
null
```

Example:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.originRequest.tcpKeepAlive
The timeout after which a TCP keepalive packet is sent on a connection between Tunnel and the origin server.

Type: null or string

Default:

```
null
```

Example:

```
"30s"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.originRequest.tlsTimeout
Timeout for completing a TLS handshake to your origin server, if you have chosen to connect Tunnel to an HTTPS server.

Type: null or string

Default:

```
null
```

Example:

```
"10s"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudflared.tunnels.<name>.warp−routing.enabled
Enable warp routing.

See **Connect from WARP to a private network on Cloudflare using Cloudflare Tunnel**.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cloudflared.nix>

services.cloudlog.enable
Whether to enable Cloudlog.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.baseUrl
Cloudlog base URL

Type: string

Default:

```
"http://localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.dataDir
Cloudlog data directory.

Type: string

Default:

```
"/var/lib/cloudlog"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.database.host
MySQL database host

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.database.name
MySQL database name.

Type: string

Default:

```
"cloudlog"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.database.passwordFile
MySQL user password file.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.database.user
MySQL user name.

Type: string

Default:

```
"cloudlog"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.extraConfig
Any additional text to be appended to the config.php configuration file. This is a PHP script. For configuration settings, see **https://github.com/magicbug/Cloudlog/wiki/Cloudlog.php−Configuration−File**.

Type: string

Default:

```
""
```

Example:

```
$config['show_time'] = TRUE;
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.poolConfig
Options for Cloudlog's PHP−FPM pool.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.update−clublog−scp.enable
Whether to periodically update the Clublog SCP database. If enabled, a systemd timer will run the update task as specified by the interval option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.update−clublog−scp.interval
Specification (in the format described by **systemd.time**(7)) of the time at which the Clublog SCP update will occur.

Type: string

Default:

```
"monthly"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.update−dok.enable
Whether to periodically update the DOK resource file. If enabled, a systemd timer will run the update task as specified by the interval option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.update−dok.interval
Specification (in the format described by **systemd.time**(7)) of the time at which the DOK update will occur.

Type: string

Default:

```
"monthly"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.update−lotw−users.enable
Whether to periodically update the list of LoTW users. If enabled, a systemd timer will run the update task as specified by the interval option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.update−lotw−users.interval
Specification (in the format described by **systemd.time**(7)) of the time at which the LoTW user update will occur.

Type: string

Default:

```
"weekly"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.update−sota.enable
Whether to periodically update the SOTA database. If enabled, a systemd timer will run the update task as specified by the interval option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.update−sota.interval
Specification (in the format described by **systemd.time**(7)) of the time at which the SOTA update will occur.

Type: string

Default:

```
"monthly"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.update−wwff.enable
Whether to periodically update the WWFF database. If enabled, a systemd timer will run the update task as specified by the interval option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.update−wwff.interval
Specification (in the format described by **systemd.time**(7)) of the time at which the WWFF update will occur.

Type: string

Default:

```
"monthly"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.upload−clublog.enable
Whether to periodically upload logs to Clublog. If enabled, a systemd timer will run the log upload task as specified by the interval option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.upload−clublog.interval
Specification (in the format described by **systemd.time**(7)) of the time at which the Clublog upload will occur.

Type: string

Default:

```
"daily"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.upload−lotw.enable
Whether to periodically upload logs to LoTW. If enabled, a systemd timer will run the log upload task as specified by the interval option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.upload−lotw.interval
Specification (in the format described by **systemd.time**(7)) of the time at which the LoTW upload will occur.

Type: string

Default:

```
"daily"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.upload−qrz.enable
Whether to periodically upload logs to QRZ. If enabled, a systemd timer will run the update task as specified by the interval option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.upload−qrz.interval
Specification (in the format described by **systemd.time**(7)) of the time at which the QRZ upload will occur.

Type: string

Default:

```
"daily"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.user
User account under which Cloudlog runs.

Type: string

Default:

```
"cloudlog"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cloudlog.virtualHost
Name of the nginx virtualhost to use and setup. If null, do not setup any virtualhost.

Type: null or string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cloudlog.nix>

services.cntlm.enable
Whether to enable cntlm, which starts a local proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cntlm.nix>

services.cntlm.configText
Verbatim contents of *cntlm.conf*.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/cntlm.nix>

services.cntlm.domain

Proxy account domain/workgroup name.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/cntlm.nix>

services.cntlm.extraConfig

Additional config appended to the end of the generated *cntlm.conf*.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cntlm.nix>

services.cntlm.netbios_hostname

The hostname of your machine.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cntlm.nix>

services.cntlm.noproxy

A list of domains where the proxy is skipped.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "*.example.com"
  "example.com"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cntlm.nix>

services.cntlm.password

Proxy account password. Note: use chmod 0600 on /etc/cntlm.password for security.

Type: string

Default:

```
"/etc/cntlm.password"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cntlm.nix>

services.cntlm.port

Specifies on which ports the cntlm daemon listens.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[
  3128
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cntlm.nix>

services.cntlm.proxy

A list of NTLM/NTLMv2 authenticating HTTP proxies.

Parent proxy, which requires authentication. The same as proxy on the command−line, can be used more than once to specify unlimited number of proxies. Should one proxy fail, cntlm automatically moves on to the next one. The connect request fails only if the whole list of proxies is scanned and (for each request) and found to be invalid. Command−line takes precedence over the configuration file.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "proxy.example.com:81"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/cntlm.nix>

services.cntlm.username

Proxy account name, without the possibility to include domain name (‘at’ sign is interpreted literally).

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/cntlm.nix>

services.cockpit.enable

Whether to enable Cockpit.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/cockpit.nix>

services.cockpit.package

The Cockpit package to use.

Type: package

Default:

```
pkgs.cockpit
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cockpit.nix>

services.cockpit.allowed−origins
List of allowed origins.

Maps to the WebService.Origins setting and allows merging from multiple modules.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cockpit.nix>

services.cockpit.openFirewall
Open port for cockpit.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cockpit.nix>

services.cockpit.plugins
List of cockpit plugins.

This add the passthru.cockpitPath of the packages to the systemd cockpit service.

Type: list of package

Default:

```
[ ]
```

Example:

```
[
  pkgs.cockpit-zfs
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cockpit.nix>

services.cockpit.port
Port where cockpit will listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9090
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cockpit.nix>

services.cockpit.settings
Settings for cockpit that will be saved in /etc/cockpit/cockpit.conf.

See the **documentation**, that is also available with ‘man cockpit.conf.5’ for details.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cockpit.nix>

services.cockpit.showBanner
Whether to add the Cockpit banner to the issue and motd files.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/cockpit.nix>

services.cockroachdb.enable
Whether to enable CockroachDB Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cockroachdb.package
The cockroachdb package to use. This would primarily be useful to enable Enterprise Edition features in your own custom CockroachDB build (Nixpkgs CockroachDB binaries only contain open source features and open source code).

Type: package

Default:

```
pkgs.cockroachdb
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cockroachdb.cache
The total size for caches.

This can be a percentage, expressed with a fraction sign or as a decimal−point number, or any bytes−based unit. For example, ‘"25%"’, ‘"0.25"’ both represent 25% of the available system memory. The values ‘"1000000000"’ and ‘"1GB"’ both represent 1 gigabyte of memory.

Type: string

Default:

```
"25%"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cockroachdb.certsDir
The path to the certificate directory.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cockroachdb.extraArgs
Extra CLI arguments passed to **cockroach start**. For the full list of supported arguments, check **https://www.cockroachlabs.com/docs/stable/cockroach-start.html#flags**

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--advertise-addr"
  "[fe80::f6f2:::]"
]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cockroachdb.group
User account under which CockroachDB runs

Type: string

Default:

```
"cockroachdb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cockroachdb.http.address
Address to bind to for http-based Admin UI

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cockroachdb.http.port
Port to bind to for http-based Admin UI

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cockroachdb.insecure

Run in insecure mode.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cockroachdb.join

The addresses for connecting the node to a cluster.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cockroachdb.listen.address

Address to bind to for intra−cluster communication

Type: string

Default:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cockroachdb.listen.port

Port to bind to for intra−cluster communication

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
26257
```

Declared by:

<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cockroachdb.locality

An ordered, comma−separated list of key−value pairs that describe the topography of the machine. Topography might include country, datacenter or rack designations. Data is automatically replicated to maximize diversities of each tier. The order of tiers is used to determine the priority of the diversity, so the more inclusive localities like country should come before less inclusive localities like datacenter. The tiers and order must be the same on all nodes. Including more tiers is better than including fewer. For example:

```
country=us,region=us−west,datacenter=us−west−1b,rack=12
country=ca,region=ca−east,datacenter=ca−east−2,rack=4
planet=earth,province=manitoba,colo=secondary,power=3
```

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cockroachdb.maxSqlMemory
The maximum in−memory storage capacity available to store temporary data for SQL queries.

This can be a percentage, expressed with a fraction sign or as a decimal−point number, or any bytes−based unit. For example, ‘"25%"’, ‘"0.25"’ both represent 25% of the available system memory. The values ‘"1000000000"’ and ‘"1GB"’ both represent 1 gigabyte of memory.

Type: string

Default:

```
"25%"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cockroachdb.openPorts
Open firewall ports for cluster communication by default

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cockroachdb.user
User account under which CockroachDB runs

Type: string

Default:

```
"cockroachdb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/cockroachdb.nix>

services.cocoon.enable
Whether to enable cocoon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cocoon.nix>

services.cocoon.package
The cocoon package to use.

Type: package

Default:

```
pkgs.cocoon
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cocoon.nix>

services.cocoon.environmentFiles
File to load environment variables from. Loaded variables override values set in **environment**.

Use it to set values of ‘COCOON_ADMIN_PASSWORD’ and ‘COCOON_SESSION_SECRE’.

Generate ‘COCOON_ADMIN_PASSWORD’ with

```
openssl rand −hex 16
```

Generate ‘COCOON_SESSION_SECRET’ with

```
openssl rand −hex 32
```

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cocoon.nix>

services.cocoon.settings
Environment variables to set for the service. Secrets should be specified using **environmentFile**.

Refer to **https://github.com/haileyok/cocoon/blob/main/.env.example** and **https://github.com/haileyok/cocoon/blob/main/README.md** for available environment variables.

Type: open submodule of attribute set of (null or string or absolute path)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cocoon.nix>

services.cocoon.settings.COCOON_ADDR
Address to bind the Cocoon instance to

Type: string

Default:

```
":8080"
```

Example:

```
":3000"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cocoon.nix>

services.cocoon.settings.COCOON_CONTACT_EMAIL
Contact email for the Cocoon instance

Type: string

Example:

```
"me@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cocoon.nix>

services.cocoon.settings.COCOON_DATABASE_URL
Database connection URL

Type: null or string

Default:

```
null
```

Example:

```
"postgres://cocoon:password@localhost:5432/cocoon?sslmode=disable"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cocoon.nix>

services.cocoon.settings.COCOON_DB_NAME
Name of the SQLite database file (if using sqlite)

Type: string

Default:

```
"/var/lib/cocoon/cocoon.db"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cocoon.nix>

services.cocoon.settings.COCOON_DB_TYPE
Type of database to use (sqlite or postgres)

Type: string

Default:

```
"sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cocoon.nix>

services.cocoon.settings.COCOON_DID
DID web address for the Cocoon instance

Type: null or string

Default:

```
null
```

Example:

```
"did:web:cocoon.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cocoon.nix>

services.cocoon.settings.COCOON_HOSTNAME
Hostname for the Cocoon instance

Type: null or string

Default:

```
null
```

Example:

```
"cocoon.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cocoon.nix>

services.cocoon.settings.COCOON_JWK_PATH
Path to the JWK key file

Generate it with:

```
cocoon create−private−jwk −−out /var/lib/cocoon/jwk.key
```

Type: absolute path or string

Default:

```
"/var/lib/cocoon/jwk.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cocoon.nix>

services.cocoon.settings.COCOON_RELAYS
Comma−separated list of Nostr relays to connect to

Type: string

Default:

```
"https://bsky.network"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cocoon.nix>

services.cocoon.settings.COCOON_ROTATION_KEY_PATH
Path to the rotation key file.

Generate it with:

```
cocoon create−rotation−key −−out /var/lib/cocoon/rotation.key
```

Type: absolute path or string

Default:

```
"/var/lib/cocoon/rotation.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cocoon.nix>

services.cocoon.settings.COCOON_SESSION_COOKIE_KEY
Name of the session cookie

Type: string

Default:

```
"session"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cocoon.nix>

services.code−server.enable
Whether to enable code−server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.package
The code−server package to use.

Type: package

Default:

```
pkgs.code−server
```

Example:

```
pkgs.vscode−with−extensions.override {
  vscode = pkgs.code−server;
  vscodeExtensions = with pkgs.vscode−extensions; [
    bbenoist.nix
    dracula−theme.theme−dracula
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.auth
The type of authentication to use.

Type: one of “none”, “password”

Default:

```
"password"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.disableFileDownloads
Disable file downloads from Code.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.disableGettingStartedOverride
Disable the coder/coder override in the Help: Getting Started page.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.disableTelemetry
Disable telemetry.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.disableUpdateCheck
Disable update check. Without this flag, code−server checks every 6 hours against the latest github release and then notifies you once every week that a new release is available.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.disableWorkspaceTrust
Disable Workspace Trust feature.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.extensionsDir
Path to the extensions directory.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.extraArguments

Additional arguments to pass to code−server.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "−−log=info" ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.extraEnvironment

Additional environment variables to pass to code−server.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  PKG_CONFIG_PATH = "/run/current−system/sw/lib/pkgconfig";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.extraGroups

An array of additional groups for the ‘code−server’ user.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "docker"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.extraPackages

Additional packages to add to the code−server **PATH**.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.go ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.group

The group to run code−server under. By default, a group named ‘code−server’ will be created.

Type: string

Default:

```
"code-server"
```

Example:

```
"yourGroup"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.hashedPassword

Create the password with: **echo −n 'thisismypassword' | nix run nixpkgs#libargon2 −− "$(head −c 20 /dev/random | base64)" −e**

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.host

The host name or IP address the server should listen to.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.port

The port the server should listen to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4444
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.proxyDomain

Domain used for proxying ports.

Type: null or string

Default:

```
null
```

Example:

```
"code-server.lan"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.socket
Path to a socket (bind−addr will be ignored).

Type: null or string

Default:

```
null
```

Example:

```
"/run/code−server/socket"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.socketMode
File mode of the socket.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.user
The user to run code−server as. By default, a user named ‘code−server’ will be created.

Type: string

Default:

```
"code−server"
```

Example:

```
"yourUser"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.code−server.userDataDir
Path to the user data directory.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/code−server.nix>

services.coder.enable
Whether to enable Coder service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.package
The coder package to use.

Type: package

Default:

```
pkgs.coder
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.accessUrl
Access URL should be a external IP address or domain with DNS records pointing to Coder.

Type: null or string

Default:

```
null
```

Example:

```
"https://coder.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.database.database
Name of database.

Type: string

Default:

```
"coder"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.database.host
Hostname hosting the database.

Type: string

Default:

```
"/run/postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.database.password
Password for accessing the database.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.database.sslmode
Password for accessing the database.

Type: null or string

Default:

```
"disable"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.database.username
Username for accessing the database.

Type: string

Default:

```
"coder"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.environment.extra
Extra environment variables to pass run Coder's server with. See Coder documentation.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  CODER_OAUTH2_GITHUB_ALLOWED_ORGS = "your−org";
  CODER_OAUTH2_GITHUB_ALLOW_SIGNUPS = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.environment.file
Systemd environment file to add to Coder.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.group
Group under which the coder service runs.

> **Note**
> If left as the default value this group will automatically be created on system activation, otherwise it needs to be configured manually.

Type: string

Default:

```
"coder"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.homeDir
Home directory for coder user.

Type: string

Default:

```
"/var/lib/coder"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.listenAddress
Listen address.

Type: string

Default:

```
"127.0.0.1:3000"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.tlsCert
The path to the TLS certificate.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.tlsKey
The path to the TLS key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/coder.nix>

services.coder.user

User under which the coder service runs.

> **Note**
> If left as the default value this user will automatically be created on system activation, otherwise it needs to be configured manually.

Type: string

Default:

```
"coder"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/coder.nix>

services.coder.wildcardAccessUrl

If you are providing TLS certificates directly to the Coder server, you must use a single certificate for the root and wildcard domains.

Type: null or string

Default:

```
null
```

Example:

```
"*.coder.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/coder.nix>

services.collabora-online.enable

Whether to enable collabora-online.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/collabora-online.nix>

services.collabora-online.package

The Collabora Online package to use.

Type: package

Default:

```
pkgs.collabora-online
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/collabora-online.nix>

services.collabora-online.aliasGroups

Alias groups to use.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/collabora-online.nix>

services.collabora-online.aliasGroups.*.aliases
A list of regex pattern of aliasname.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "scheme://aliasname1:port"
  "scheme://aliasname2:port"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/collabora-online.nix>

services.collabora-online.aliasGroups.*.host
Hostname to allow or deny.

Type: string

Example:

```
"scheme://hostname:port"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/collabora-online.nix>

services.collabora-online.extraArgs
Extra arguments to pass to the service.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/collabora-online.nix>

services.collabora-online.port
Listening port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9980
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/collabora-online.nix>

services.collabora-online.settings
Configuration for Collabora Online WebSocket Daemon, see **https://sdk.collaboraonline.com/docs/installation/Configuration.html**, or **https://github.com/CollaboraOnline/online/blob/master/coolwsd.xml.in** for the default configuration.

Type: `coolwsd.xml` configuration type, used to override values in the default configuration.

Attribute names correspond to XML tags unless prefixed with `@`. Nested attribute sets correspond to nested XML tags. Attribute prefixed with `@` correspond to XML attributes. E.g., `{ storage.wopi.“@allow” = true; }` in Nix corresponds to `<storage><wopi allow=“true”/></storage>` in `coolwsd.xml`, or

`–o:storage.wopi[@allow]=true` in the command line.

Arrays correspond to multiple elements with the same tag name. E.g. `{ host = [ ‘‘127\.0\.0\.1’’ “::1” ]; }` in Nix corresponds to ```xml <net><post_allow> <host>127\.0\.0\.1</host> <host>::1</host> </post_allow></net> ``` in `coolwsd.xml`, or `–o:net.post_allow.host[0]='127\.0\.0\.1 −−o:net.post_allow.host[1]=::1` in the command line.

Null values could be used to remove an element from the default configuration.

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/collabora−online.nix>

services.collectd.enable

Whether to enable collectd agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/collectd.nix>

services.collectd.package

The collectd package to use.

Type: package

Default:

```
pkgs.collectd
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/collectd.nix>

services.collectd.autoLoadPlugin

Enable plugin autoloading.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/collectd.nix>

services.collectd.buildMinimalPackage

Build a minimal collectd package with only the configured ‘services.collectd.plugins’

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/collectd.nix>

services.collectd.dataDir

Data directory for collectd agent.

Type: absolute path

Default:

```
"/var/lib/collectd"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/collectd.nix>

services.collectd.extraConfig

Extra configuration for collectd. Use mkBefore to add lines before the default config, and mkAfter to add them below.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/collectd.nix>

services.collectd.finalPackage

The final package being used after applying plugins and minimalPackage.

Type: unspecified value *(read only)*

Default:

```
if config.services.collectd.buildMinimalPackage then
  cfg.package.override {
    enabledPlugins = [ "syslog" ] ++ builtins.attrNames cfg.plugins \
;
  }
else
  cfg.package
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/collectd.nix>

services.collectd.include

Additional paths to load config from.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/collectd.nix>

services.collectd.plugins

Attribute set of plugin names to plugin config segments

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Example:

```
{
  cpu = "";
```

```
  memory = "";
  network = "Server 192.168.1.1 25826";
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/collectd.nix>

services.collectd.user
User under which to run collectd.

Type: null or string

Default:

```
"collectd"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/collectd.nix>

services.collectd.validateConfig
Validate the syntax of collectd configuration file at build time. Disable this if you use the Include directive on files unavailable in the build sandbox, or when cross−compiling.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/collectd.nix>

services.colord.enable
Whether to enable colord, the color management daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/x11/colord.nix>

services.commafeed.enable
Whether to enable CommaFeed.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/commafeed.nix>

services.commafeed.package

The commafeed package to use.

Type: package

Default:

```
pkgs.commafeed
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/commafeed.nix>

services.commafeed.environment

Extra environment variables passed to CommaFeed, refer to **https://github.com/Athou/commafeed/blob/master/commafeed-server/config.yml.example** for supported values. The default user is 'admin' and the default password is 'admin'. Correct configuration for H2 database is already provided.

Type: attribute set of (boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  CF_SERVER_APPLICATIONCONNECTORS_0_PORT = 9090;
  CF_SERVER_APPLICATIONCONNECTORS_0_TYPE = "http";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/commafeed.nix>

services.commafeed.environmentFile

Environment file as defined in **systemd.exec**(5).

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/commafeed/commafeed.env"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/commafeed.nix>

services.commafeed.group

Group under which CommaFeed runs.

Type: string

Default:

```
"commafeed"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/commafeed.nix>

services.commafeed.stateDir

Directory holding all state for CommaFeed to run.

Type: absolute path

Default:

```
"/var/lib/commafeed"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/commafeed.nix>

services.commafeed.user
User under which CommaFeed runs.

Type: string

Default:

```
"commafeed"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/commafeed.nix>

services.compton
Alias of **services.picom**.

Type: submodule

Declared by:
<nixpkgs/nixos/modules/services/x11/picom.nix>

services.confd.enable
Whether to enable confd, a service to manage local application configuration files using templates and data from etcd/consul/redis/zookeeper.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/confd.nix>

services.confd.package
The confd package to use.

Type: package

Default:

```
pkgs.confd
```

Declared by:
<nixpkgs/nixos/modules/services/misc/confd.nix>

services.confd.backend
Confd config storage backend to use.

Type: one of “etcd”, “consul”, “redis”, “zookeeper”

Default:

```
"etcd"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/confd.nix>

services.confd.confDir
The path to the confd configs.

Type: absolute path

Default:

```
"/etc/confd"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/confd.nix>

services.confd.interval
Confd check interval.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/misc/confd.nix>

services.confd.logLevel
Confd log level.

Type: one of “info”, “debug”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/confd.nix>

services.confd.nodes
Confd list of nodes to connect to.

Type: list of string

Default:

```
[
  "http://127.0.0.1:2379"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/confd.nix>

services.confd.prefix
The string to prefix to keys.

Type: absolute path

Default:

```
"/"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/confd.nix>

services.confd.watch
Confd, whether to watch etcd config for changes.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/confd.nix>

services.conman.enable
Whether to enable Enable the conman Console manager.

Either ‘configFile’ or ‘config’ must be specified. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/conman.nix>

services.conman.package
The conman package to use.

Type: package

Default:

```
pkgs.conman
```

Declared by:
<nixpkgs/nixos/modules/services/misc/conman.nix>

services.conman.config
The configuration object.

Either ‘configFile’ or ‘config’ must be specified.

See **https://github.com/dun/conman/wiki/Man-5-conman.conf#files**.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
server coredump=off
server keepalive=on
server loopback=off
server timestamp=1h

# global config
global log="/var/log/conman/%N.log"
global seropts="9600,8n1"
global ipmiopts="U:<user>,P:<password>"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/conman.nix>

services.conman.configFile
The absolute path to the configuration file.

Either ‘configFile’ or ‘config’ must be specified.

See **https://github.com/dun/conman/wiki/Man-5-conman.conf#files**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/conman.conf"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/conman.nix>

services.connman.enable
Whether to use ConnMan for managing your network connections.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/connman.nix>

services.connman.enableVPN
Whether to enable ConnMan VPN service.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/connman.nix>

services.connman.package
The connman package / build flavor

Type: package

Default:

```
pkgs.connman
```

Example:

```
pkgs.connmanFull
```

Declared by:
<nixpkgs/nixos/modules/services/networking/connman.nix>

services.connman.extraConfig
Configuration lines appended to the generated connman configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/connman.nix>

services.connman.extraFlags
Extra flags to pass to connmand

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--nodnsproxy"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/connman.nix>

services.connman.networkInterfaceBlacklist
Default blacklisted interfaces, this includes NixOS containers interfaces (ve).

Type: list of string

Default:

```
[
  "vmnet"
  "vboxnet"
  "virbr"
  "ifb"
  "ve"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/connman.nix>

services.connman.wifi.backend
Specify the Wi−Fi backend used. Currently supported are **wpa_supplicant** or **iwd**.

Type: one of “wpa_supplicant”, “iwd”

Default:

```
"wpa_supplicant"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/connman.nix>

services.consul.enable
Enables the consul daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.package
The consul package to use.

Type: package

Default:

```
pkgs.consul
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.alerts.enable
Whether to enable consul−alerts.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.alerts.package
The consul−alerts package to use.

Type: package

Default:

```
pkgs.consul-alerts
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.alerts.consulAddr
Consul api listening address

Type: string

Default:

```
"localhost:8500"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.alerts.listenAddr
Api listening address.

Type: string

Default:

```
"localhost:9000"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.alerts.watchChecks
Whether to enable check watcher.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.alerts.watchEvents
Whether to enable event watcher.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.dropPrivileges
Whether the consul agent should be run as a non−root consul user.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.extraConfig
Extra configuration options which are serialized to json and added to the config.json file.

Type: attribute set of anything

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.extraConfigFiles
Additional configuration files to pass to consul NOTE: These will not trigger the service to be restarted when altered.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.forceAddrFamily
Whether to bind ipv4/ipv6 or both kind of addresses.

Type: one of “any”, “ipv4”, “ipv6”

Default:

```
"any"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.forceIpv4
Deprecated: Use consul.forceAddrFamily instead. Whether we should force the interfaces to only pull ipv4 addresses.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.interface.advertise
The name of the interface to pull the advertise_addr from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.interface.bind
The name of the interface to pull the bind_addr from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.leaveOnStop
If enabled, causes a leave action to be sent when closing consul. This allows a clean termination of the node, but permanently removes it from the cluster. You probably don't want this option unless you are running a node which going offline in a permanent / semi−permanent fashion.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul.webUi
Enables the web interface on the consul http port.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/consul.nix>

services.consul−template.instances
Attribute set of consul−template instances. Creates independent 'consul−template−${name}.service' systemd units for each instance defined here.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault−agent.nix>

services.consul−template.instances.<name>.enable
Whether to enable this consul−template instance.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault−agent.nix>

services.consul−template.instances.<name>.package
The consul−template package to use.

Type: package

Default:

```
pkgs.consul−template
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault−agent.nix>

services.consul−template.instances.<name>.group
Group under which this instance runs.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault−agent.nix>

services.consul−template.instances.<name>.settings
Free−form settings written directly to the *config.json* file. Refer to **https://github.com/hashicorp/consul−template/blob/main/docs/configuration.md#configuration−file** for supported values.

Note
Resulting format is JSON not HCL. Refer to **https://www.hcl2json.com/** if you are unsure how to convert HCL options to JSON.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault−agent.nix>

services.consul−template.instances.<name>.settings.pid_file
Path to use for the pid file.

Type: string

Default:

```
"/run/consul−template/‹name›.pid"
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault−agent.nix>

services.consul−template.instances.<name>.user
User under which this instance runs.

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/security/vault−agent.nix>

services.convos.enable
Whether to enable Convos.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/convos.nix>

services.convos.listenAddress
Address or host the web interface should listen on

Type: string

Default:

```
"*"
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/convos.nix>

services.convos.listenPort
Port the web interface should listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Example:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/convos.nix>

services.convos.reverseProxy
Enables reverse proxy support. This will allow Convos to automatically pick up the ‘X−Forwarded−For’ and ‘X−Request−Base’ HTTP headers set in your reverse proxy web server. Note that enabling this option without a reverse proxy in front will be a security issue.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/convos.nix>

services.cook−cli.enable
Whether to enable cook−cli.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cook−cli.nix>

services.cook−cli.package
The cook−cli package to use.

Type: package

Default:

```
pkgs.cook−cli
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cook−cli.nix>

services.cook−cli.autoStart
Whether to start cook−cli server automatically.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cook−cli.nix>

services.cook−cli.basePath
Path to the directory cook−cli will look for recipes.

Type: string

Default:

```
"/var/lib/cook−cli"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cook−cli.nix>

services.cook−cli.openFirewall
Whether to open the cook−cli server port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cook−cli.nix>

services.cook−cli.port
Which port cook−cli server will use.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cook−cli.nix>

services.coredns.enable
Whether to enable Coredns dns server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coredns.nix>

services.coredns.package
The coredns package to use.

Type: package

Default:

```
pkgs.coredns
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coredns.nix>

services.coredns.config
Verbatim Corefile to use. See **https://coredns.io/manual/toc/#configuration** for details.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
. {
  whoami
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coredns.nix>

services.coredns.extraArgs
Extra arguments to pass to coredns.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-dns.port=53"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coredns.nix>

services.corerad.enable
Whether to enable CoreRAD IPv6 NDP RA daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/corerad.nix>

services.corerad.package
The corerad package to use.

Type: package

Default:

```
pkgs.corerad
```

Declared by:
<nixpkgs/nixos/modules/services/networking/corerad.nix>

services.corerad.configFile
Path to CoreRAD TOML configuration file.

Type: absolute path

Example:

```
"${pkgs.corerad}/etc/corerad/corerad.toml"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/corerad.nix>

services.corerad.settings
Configuration for CoreRAD, see **https://github.com/mdlayher/corerad/blob/main/internal/config/reference.toml** for supported values. Ignored if configFile is set.

Type: TOML value

Example:

```
{
  interfaces = [
    # eth0 is an upstream interface monitoring for IPv6 router adve \
rtisements.
    {
      name = "eth0";
      monitor = true;
    }
    # eth1 is a downstream interface advertising IPv6 prefixes for  \
SLAAC.
```

```
        {
          name = "eth1";
          advertise = true;
          prefix = [{ prefix = "::/64"; }];
        }
      ];
      # Optionally enable Prometheus metrics.
      debug = {
        address = "localhost:9430";
        prometheus = true;
      };
    }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/corerad.nix>

services.corosync.enable
Whether to enable corosync.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/corosync/default.nix>

services.corosync.package
The corosync package to use.

Type: package

Default:

```
pkgs.corosync
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/corosync/default.nix>

services.corosync.clusterName
Name of the corosync cluster.

Type: string

Default:

```
"nixcluster"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/corosync/default.nix>

services.corosync.extraOptions
Additional options with which to start corosync.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/corosync/default.nix>

services.corosync.nodelist
Corosync nodelist: all cluster members.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/corosync/default.nix>

services.corosync.nodelist.*.name
Node name

Type: string

Declared by:
<nixpkgs/nixos/modules/services/cluster/corosync/default.nix>

services.corosync.nodelist.*.nodeid
Node ID number

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/services/cluster/corosync/default.nix>

services.corosync.nodelist.*.ring_addrs
List of addresses, one for each ring.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/corosync/default.nix>

services.corteza.enable
Whether to enable Corteza, a low−code platform.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/corteza.nix>

services.corteza.package
The corteza package to use.

Type: package

Default:

```
pkgs.corteza
```

Declared by:
<nixpkgs/nixos/modules/services/development/corteza.nix>

services.corteza.address
IP for the HTTP server.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/development/corteza.nix>

services.corteza.group
The group to run Corteza under.

Type: string

Default:

```
"corteza"
```

Declared by:
<nixpkgs/nixos/modules/services/development/corteza.nix>

services.corteza.openFirewall
Whether to open ports in the firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/corteza.nix>

services.corteza.port
Port for the HTTP server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
80
```

Declared by:
<nixpkgs/nixos/modules/services/development/corteza.nix>

services.corteza.settings
Configuration for Corteza, will be passed as environment variables. See **https://docs.cortezaproject.org/corteza-docs/2024.9/devops-guide/references/configuration/server.html**.

Type: open submodule of attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/development/corteza.nix>

services.corteza.settings.HTTP_WEBAPP_ENABLED
Whether to enable webapps.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/corteza.nix>

services.corteza.user
The user to run Corteza under.

Type: string

Default:

```
"corteza"
```

Declared by:
<nixpkgs/nixos/modules/services/development/corteza.nix>

services.coturn.enable
Whether to enable coturn TURN server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.alt−listening−port
Alternative listening port for UDP and TCP listeners; default (or zero) value means “listening port plus one”. This is needed for RFC 5780 support (STUN extension specs, NAT behavior discovery). The TURN Server supports RFC 5780 only if it is started with more than one listening IP address of the same family (IPv4 or IPv6). RFC 5780 is supported only by UDP protocol, other protocols are listening to that endpoint only for “symmetry”.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
listening−port + 1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.alt−tls−listening−port
Alternative listening port for TLS and DTLS protocols.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
tls−listening−port + 1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.cert
Certificate file in PEM format.

Type: null or string

Default:

```
null
```

Example:

```
"/var/lib/acme/example.com/fullchain.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.cli−ip
Local system IP address to be used for CLI server endpoint.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.cli−password
CLI access password. For the security reasons, it is recommended to use the encrypted for of the password (see the −P command in the turnadmin utility).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.cli−port
CLI server port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5766
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.dh−file
Use custom DH TLS key, stored in PEM format in the file.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.extraConfig

Additional configuration options

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.listening−ips

Listener IP addresses of relay server. If no IP(s) specified in the config file or in the command line options, then all IPv4 and IPv6 system IPs will be used for listening.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "203.0.113.42"
  "2001:DB8::42"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.listening−port

TURN listener port for UDP and TCP. Note: actually, TLS and DTLS sessions can connect to the “plain” TCP and UDP port(s), too − if allowed by configuration.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3478
```

Declared by:

<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.lt−cred−mech

Use long−term credential mechanism.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.max−port

Upper bound of UDP relay endpoints

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
65535
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.min−port
Lower bound of UDP relay endpoints

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
49152
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.no−auth
This option is opposite to lt−cred−mech. (TURN Server with no−auth option allows anonymous access). If neither option is defined, and no users are defined, then no−auth is default. If at least one user is defined, in this file or in command line or in usersdb file, then lt−cred−mech is default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.no−cli
Turn OFF the CLI support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.no−dtls
Disable DTLS client listener

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.no−tcp
Disable TCP client listener

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.no−tcp−relay
Disable TCP relay endpoints

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.no−tls
Disable TLS client listener

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.no−udp
Disable UDP client listener

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.no−udp−relay
Disable UDP relay endpoints

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.pkey
Private key file in PEM format.

Type: null or string

Default:

```
null
```

Example:

```
"/var/lib/acme/example.com/key.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.realm

The default realm to be used for the users when no explicit origin/realm relationship was found in the database, or if the TURN server is not using any database (just the commands−line settings and the userdb file). Must be used with long−term credentials mechanism or with TURN REST API.

Type: string

Default:

```
config.networking.hostName
```

Example:

```
"example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.relay−ips

Relay address (the local IP address that will be used to relay the packets to the peer). Multiple relay addresses may be used. The same IP(s) can be used as both listening IP(s) and relay IP(s).

If no relay IP(s) specified, then the turnserver will apply the default policy: it will decide itself which relay addresses to be used, and it will always be using the client socket IP address as the relay IP address of the TURN session (if the requested relay address family is the same as the family of the client socket).

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "203.0.113.42"
  "2001:DB8::42"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.secure−stun

Require authentication of the STUN Binding request. By default, the clients are allowed anonymous access to the STUN Binding functionality.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.static−auth−secret

‘Static’ authentication secret value (a string) for TURN REST API only. If not set, then the turn server will try to use the ‘dynamic’ value in turn_secret table in user database (if present). The database−stored value can be changed on−the−fly by a separate program, so this is why that other mode is ‘dynamic’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.static−auth−secret−file
Path to the file containing the static authentication secret.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.tls−listening−port
TURN listener port for TLS. Note: actually, “plain” TCP and UDP sessions can connect to the TLS and DTLS port(s), too − if allowed by configuration. The TURN server “automatically” recognizes the type of traffic. Actually, two listening endpoints (the “plain” one and the “tls” one) are equivalent in terms of functionality; but we keep both endpoints to satisfy the RFC 5766 specs. For secure TCP connections, we currently support SSL version 3 and TLS version 1.0, 1.1 and 1.2. For secure UDP connections, we support DTLS version 1.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5349
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.coturn.use−auth−secret
TURN REST API flag. Flag that sets a special authorization option that is based upon authentication secret. This feature can be used with the long−term authentication mechanism, only. This feature purpose is to support “TURN Server REST API”, see “TURN REST API” link in the project’s page **https://github.com/coturn/coturn/**

This option is used with timestamp:

usercombo −> “timestamp:userid” turn user −> usercombo turn password −> base64(hmac(secret key, usercombo))

This allows TURN credentials to be accounted for a specific user id. If you don’t have a suitable id, the timestamp alone can be used. This option is just turning on secret−based authentication. The actual value of the secret is defined either by option static−auth−secret, or can be found in the turn_secret table in the database.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/coturn.nix>

services.couchdb.enable
Whether to enable CouchDB Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.couchdb.package
The couchdb3 package to use.

Type: package

Default:

```
pkgs.couchdb3
```

Declared by:
<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.couchdb.adminPass
Couchdb (i.e. fauxton) account with permission for all dbs and tasks.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.couchdb.adminUser
Couchdb (i.e. fauxton) account with permission for all dbs and tasks.

Type: string

Default:

```
"admin"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.couchdb.argsFile
vm.args configuration. Overrides Couchdb's Erlang VM parameters file.

Type: absolute path

Default:

```
"config.services.couchdb.package/etc/vm.args"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.couchdb.bindAddress
Defines the IP address by which CouchDB will be accessible.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.couchdb.configFile

Configuration file for persisting runtime changes. File needs to be readable and writable from couchdb user/group.

Type: absolute path

Default:

```
"/var/lib/couchdb/local.ini"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.couchdb.databaseDir

Specifies location of CouchDB database files (*.couch named). This location should be writable and readable for the user the CouchDB service runs as (couchdb by default).

Type: absolute path

Default:

```
"/var/lib/couchdb"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.couchdb.extraConfig

Extra configuration options for CouchDB

Type: attribute set

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.couchdb.extraConfigFiles

Extra configuration files. Overrides any other configuration. You can use this to setup the Admin user without putting the password in your nix store.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.couchdb.group

Group account under which couchdb runs.

Type: string

Default:

```
"couchdb"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.couchdb.logFile

Specifies the location of file for logging output.

Type: absolute path

Default:

```
"/var/log/couchdb.log"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.couchdb.port

Defined the port number to listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5984
```

Declared by:

<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.couchdb.uriFile

This file contains the full URI that can be used to access this instance of CouchDB. It is used to help discover the port CouchDB is running on (if it was set to 0 (e.g. automatically assigned any free one). This file should be writable and readable for the user that runs the CouchDB service (couchdb by default).

Type: absolute path

Default:

```
"/run/couchdb/couchdb.uri"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.couchdb.user

User account under which couchdb runs.

Type: string

Default:

```
"couchdb"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.couchdb.viewIndexDir

Specifies location of CouchDB view index files. This location should be writable and readable for the user that runs the CouchDB service (couchdb by default).

Type: absolute path

Default:

```
"/var/lib/couchdb"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/couchdb.nix>

services.cpuminer−cryptonight.enable
Whether to enable the cpuminer cryptonight miner.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/cpuminer−cryptonight.nix>

services.cpuminer−cryptonight.pass
Password for mining server

Type: string

Default:

```
"x"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/cpuminer−cryptonight.nix>

services.cpuminer−cryptonight.threads
Number of miner threads, defaults to available processors

Type: unsigned integer, meaning >=0

Default:

Declared by:
<nixpkgs/nixos/modules/services/misc/cpuminer−cryptonight.nix>

services.cpuminer−cryptonight.url
URL of mining server

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/cpuminer−cryptonight.nix>

services.cpuminer−cryptonight.user
Username for mining server

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/cpuminer−cryptonight.nix>

services.cpupower−gui.enable
Enables dbus/systemd service needed by cpupower−gui. These services are responsible for retrieving and modifying cpu power saving settings.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/cpupower−gui.nix>

services.crab−hole.enable

Whether to enable Crab−hole Service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/crab−hole.nix>

services.crab−hole.package

The crab−hole package to use.

Type: package

Default:

```
pkgs.crab−hole
```

Declared by:

<nixpkgs/nixos/modules/services/networking/crab−hole.nix>

services.crab−hole.configFile

The config file of crab−hole.

If files are added via url, make sure the service has access to them. Setting this option will override any configuration applied by the settings option.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/networking/crab−hole.nix>

services.crab−hole.settings

Crab−holes config. See big example **https://github.com/LuckyTurtleDev/crab−hole/blob/main/example−config.toml**

Type: open submodule of (TOML value)

Example:

```
{
  api = {
    admin_key = "1234";
    listen = "127.0.0.1";
    port = 8080;
    show_doc = true;
  };
  blocklist = {
    allow_list = [
      "file:///allowed.txt"
    ];
    include_subdomains = true;
    lists = [
      "https://raw.githubusercontent.com/StevenBlack/hosts/master/a \
lternates/fakenews−gambling−porn/hosts"
      "https://s3.amazonaws.com/lists.disconnect.me/simple_tracking \
.txt"
```

```
        "file:///blocked.txt"
      ];
    };
    downstream = [
      {
        listen = "localhost";
        port = 8080;
        protocol = "udp";
      }
      {
        certificate = "dns.example.com.crt";
        dns_hostname = "dns.example.com";
        key = "dns.example.com.key";
        listen = "[::]";
        port = 8055;
        protocol = "https";
        timeout_ms = 3000;
      }
    ];
    upstream = {
      name_servers = [
        {
          protocol = "tls";
          socket_addr = "[2606:4700:4700::1111]:853";
          tls_dns_name = "1dot1dot1dot1.cloudflare-dns.com";
          trust_nx_responses = false;
        }
        {
          protocol = "tls";
          socket_addr = "1.1.1.1:853";
          tls_dns_name = "1dot1dot1dot1.cloudflare-dns.com";
          trust_nx_responses = false;
        }
      ];
      options = {
        validate = false;
      };
    };
  }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/crab-hole.nix>

services.crab-hole.settings.blocklist.allow_list

List of allowlists. If files are added via url, make sure the service has access to them!

Type: list of (string or absolute path)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/crab-hole.nix>

services.crab−hole.settings.blocklist.include_subdomains

Whether to enable Include subdomains.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/crab−hole.nix>

services.crab−hole.settings.blocklist.lists

List of blocklists. If files are added via url, make sure the service has access to them!

Type: list of (string or absolute path)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/crab−hole.nix>

services.crab−hole.supplementaryGroups

Adds additional groups to the crab−hole service. Can be useful to prevent permission issues.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "acme"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/crab−hole.nix>

services.create_ap.enable

Whether to enable setting up wifi hotspots using create_ap.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/create_ap.nix>

services.create_ap.settings

Configuration for ‘create_ap’. See **upstream example configuration** for supported values.

Type: attribute set of (signed integer or boolean or string)

Default:

```
{ }
```

Example:

```
{
  INTERNET_IFACE = "eth0";
  PASSPHRASE = "12345678";
  SSID = "My Wifi Hotspot";
  WIFI_IFACE = "wlan0";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/create_ap.nix>

services.croc.enable

Whether to enable croc relay.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/croc.nix>

services.croc.debug

Whether to enable debug logs.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/croc.nix>

services.croc.openFirewall

Whether to enable opening of the peer port(s) in the firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/croc.nix>

services.croc.pass

Password or passwordfile for the relay.

Type: absolute path or string

Default:

```
"pass123"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/croc.nix>

services.croc.ports
Ports of the relay.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[
  9009
  9010
  9011
  9012
  9013
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/croc.nix>

services.cron.enable
Whether to enable the Vixie cron daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/cron.nix>

services.cron.cronFiles
A list of extra crontab files that will be read and appended to the main crontab file when the cron service starts.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/cron.nix>

services.cron.mailto
Email address to which job output will be mailed.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/cron.nix>

services.cron.systemCronJobs
A list of Cron jobs to be appended to the system−wide crontab. See the manual page for crontab for the expected format. If you want to get the results mailed you must setuid sendmail. See **security.wrappers**

If neither /var/cron/cron.deny nor /var/cron/cron.allow exist only root is allowed to have its own crontab file. The /var/cron/cron.deny file is created automatically for you, so every user can use a crontab.

Many nixos modules set systemCronJobs, so if you decide to disable vixie cron and enable another cron daemon, you may want it to get its system crontab based on systemCronJobs.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "* * * * *  test   ls -l / > /tmp/cronout 2>&1"
  "* * * * *  eelco  echo Hello World > /home/eelco/cronout"
]
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/cron.nix>

services.cross-seed.enable
Whether to enable cross-seed.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/cross-seed.nix>

services.cross-seed.package
The cross-seed package to use.

Type: package

Default:

```
pkgs.cross-seed
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/cross-seed.nix>

services.cross-seed.configDir
Cross-seed config directory

Type: absolute path

Default:

```
"/var/lib/cross-seed"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/cross-seed.nix>

services.cross-seed.group
Group to run cross-seed as.

Type: string

Default:

```
"cross-seed"
```

Example:

```
"torrents"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/cross−seed.nix>

services.cross−seed.settings
Configuration options for cross−seed.

Secrets should not be set in this option, as they will be available in the Nix store. For secrets, please use settingsFile.

For more details, see **the cross−seed documentation**.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/cross−seed.nix>

services.cross−seed.settings.dataDirs
Paths to be searched for matching data.

If you use Injection, cross−seed will use the specified linkType to create a link to the original file in the linkDirs.

If linkType is hardlink, these must be on the same volume as the data.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/cross−seed.nix>

services.cross−seed.settings.linkDirs
List of directories where cross−seed will create links.

If linkType is hardlink, these must be on the same volume as the data.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/cross−seed.nix>

services.cross−seed.settings.outputDir
Directory where cross−seed will place torrent files it finds.

Type: null or absolute path

Default:

```
"\${cfg.configDir}/output"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/cross−seed.nix>

services.cross−seed.settings.port
Port the cross−seed daemon listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2468
```

Example:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/cross-seed.nix>

services.cross-seed.settings.torrentDir
Directory containing torrent files, or if you're using a torrent client integration and injection − your torrent client's .torrent file store/cache.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/cross-seed.nix>

services.cross-seed.settingsFile
Path to a JSON file containing settings that will be merged with the settings option. This is suitable for storing secrets, as they will not be exposed on the Nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/cross-seed.nix>

services.cross-seed.useGenConfigDefaults
Whether to use the option defaults from the configuration generated by **cross-seed gen-config**.

Those are the settings recommended by the project, and can be inspected from their **template file**.

Settings set in **services.cross-seed.settings** and **services.cross-seed.settingsFile** will override the ones from this option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/cross-seed.nix>

services.cross-seed.user
User to run cross-seed as.

Type: string

Default:

```
"cross-seed"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/cross-seed.nix>

services.crossfire−server.enable

If enabled, the Crossfire game server will be started at boot.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/games/crossfire−server.nix>

services.crossfire−server.package

The crossfire−server package to use. ::: {.note} This will also be used for map/arch data, if you don’t change **dataDir** :::

Type: package

Default:

```
pkgs.crossfire−server
```

Declared by:

<nixpkgs/nixos/modules/services/games/crossfire−server.nix>

services.crossfire−server.configFiles

Text to append to the corresponding configuration files. Note that the files given in the example are *not* the complete set of files available to customize; look in /etc/crossfire after enabling the server to see the available files, and read the comments in each file for detailed documentation on the format and what settings are available.

Note that the motd, rules, and news files, if configured here, will overwrite the example files that come with the server, rather than being appended to them as the other configuration files are.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  dm_file = ''
    admin:secret_password:localhost
    alice:xyzzy:*
  '';
  ban_file = ''
    # Bob is a jerk
    bob@*
    # So is everyone on 192.168.86.255/24
    *@192.168.86.
  '';
  metaserver2 = ''
    metaserver2_notification on
    localhostname crossfire.example.net
  '';
  motd = "Welcome to CrossFire!";
  news = "No news yet.";
  rules = "Don't be a jerk.";
  settings = ''
    # be nicer to newbies and harsher to experienced players
    balanced_stat_loss true
```

```
        # don't let players pick up and use admin-created items
        real_wiz false
      '';
    }
```

Declared by:
<nixpkgs/nixos/modules/services/games/crossfire-server.nix>

services.crossfire-server.dataDir
Where to load readonly data from – maps, archetypes, treasure tables, and the like. If you plan to edit the data on the live server (rather than overlaying the crossfire-maps and crossfire-arch packages and nixos-rebuilding), point this somewhere read-write and copy the data there before starting the server.

Type: string

Default:

```
"${config.services.crossfire.package}/share/crossfire"
```

Declared by:
<nixpkgs/nixos/modules/services/games/crossfire-server.nix>

services.crossfire-server.openFirewall
Whether to open ports in the firewall for the server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/crossfire-server.nix>

services.crossfire-server.stateDir
Where to store runtime data (save files, persistent items, etc).

If left at the default, this will be automatically created on server startup if it does not already exist. If changed, it is the admin's responsibility to make sure that the directory exists and is writeable by the 'crossfire' user.

Type: string

Default:

```
"/var/lib/crossfire"
```

Declared by:
<nixpkgs/nixos/modules/services/games/crossfire-server.nix>

services.crossmacro.enable
Whether to enable CrossMacro, a cross-platform mouse and keyboard macro application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/crossmacro.nix>

services.crossmacro.package

The crossmacro package to use.

Type: package

Default:

```
pkgs.crossmacro
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/crossmacro.nix>

services.crossmacro.daemonPackage

The crossmacro−daemon package to use.

Type: package

Default:

```
pkgs.crossmacro-daemon
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/crossmacro.nix>

services.crossmacro.users

List of users granted permission to use CrossMacro.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "alice"
  "bob"
]
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/crossmacro.nix>

services.crowdsec.enable

Whether to enable CrowdSec Security Engine.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.package

The crowdsec package to use.

Type: package

Default:

```
pkgs.crowdsec
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.autoUpdateService
Whether to enable if 'true' 'cscli hub update' will be executed daily. See 'https://docs.crowdsec.net/docs/cscli/cscli_hub_update/' for more information.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.group
The group to run crowdsec as

Type: string

Default:

```
"crowdsec"
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.hub
Hub collections, parsers, AppSec rules, etc.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.hub.appSecConfigs
List of hub appsec configurations to install

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "crowdsecurity/appsec-default"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.hub.appSecRules
List of hub appsec rules to install

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "crowdsecurity/base-config"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.hub.branch
The git branch on which cscli is going to fetch configurations.

See 'https://docs.crowdsec.net/docs/configuration/crowdsec_configuration/#hub_branch' for more information.

Type: string

Default:

```
"master"
```

Example:

```
[
  "master"
  "v1.4.3"
  "v1.4.2"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.hub.collections
List of hub collections to install

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "crowdsecurity/linux"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.hub.parsers
List of hub parsers to install

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "crowdsecurity/sshd-logs"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.hub.postOverflows
List of hub postoverflows to install

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "crowdsecurity/auditd-nix-wrappers-whitelist-process"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.hub.scenarios
List of hub scenarios to install

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "crowdsecurity/ssh-bf"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.localConfig
The configuration for a crowdsec security engine.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.localConfig.acquisitions
A list of acquisition specifications, which define the data sources you want to be parsed.

See **https://docs.crowdsec.net/docs/data_sources/intro** for details.

Type: list of (YAML 1.1 value)

Default:

```
[ ]
```

Example:

```
[
  {
    journalctl_filter = [
      "_SYSTEMD_UNIT=sshd.service"
    ];
```

```
      labels = {
        type = "syslog";
      };
      source = "journalctl";
    }
  ]
```

Declared by:

<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.localConfig.contexts

A list of additional contexts to specify.

See **https://docs.crowdsec.net/docs/next/log_processor/alert_context/intro** for details.

Type: list of (YAML 1.1 value)

Default:

```
[ ]
```

Example:

```
[
  {
    context = {
      method = [
        "evt.Meta.http_verb"
      ];
      status = [
        "evt.Meta.http_status"
      ];
      target_uri = [
        "evt.Meta.http_path"
      ];
      user_agent = [
        "evt.Meta.http_user_agent"
      ];
    };
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.localConfig.notifications

A list of notifications to enable and use in your profiles. Note that for now, only the plugins shipped by default with CrowdSec are supported.

See **https://docs.crowdsec.net/docs/notification_plugins/intro** for details.

Type: list of (YAML 1.1 value)

Default:

```
[ ]
```

Example:

```
[
  {
    format = ''
      {{.|toJson}}
```

```
        '';
        log_level = "info";
        method = "POST";
        name = "default_http_notification";
        type = "http";
        url = "https://example.com/hook";
      }
    ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.localConfig.parsers
The set of parser specifications.

See **https://docs.crowdsec.net/docs/parsers/intro** for details.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.localConfig.parsers.s00Raw
A list of stage s00−raw specifications. Most of the time, those are already included in the hub, but are presented here anyway.

See **https://docs.crowdsec.net/docs/parsers/intro** for details.

Type: list of (YAML 1.1 value)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.localConfig.parsers.s01Parse
A list of stage s01−parse specifications.

See **https://docs.crowdsec.net/docs/parsers/intro** for details.

Type: list of (YAML 1.1 value)

Default:

```
[ ]
```

Example:

```
[
  {
    debug = true;
    description = "Parsing custom service logs";
    filter = "1=1";
    grok = {
      apply_on = "message";
      pattern = "^%{DATA:some_data}$";
    };
    name = "example/custom-service-logs";
    onsuccess = "next_stage";
```

```
      statics = [
        {
          parsed = "is_my_custom_service";
          value = "yes";
        }
      ];
    }
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.localConfig.parsers.s02Enrich
A list of stage s02−enrich specifications. Inside this list, you can specify Parser Whitelists.

See **https://docs.crowdsec.net/docs/whitelist/intro** for details.

Type: list of (YAML 1.1 value)

Default:

```
[ ]
```

Example:

```
[
  {
    description = "Whitelist parse events from my IPs";
    name = "myips/whitelist";
    whitelist = {
      cidr = [
        "1.2.3.0/24"
      ];
      ip = [
        "1.2.3.4"
      ];
      reason = "My IP ranges";
    };
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.localConfig.patterns
A list of files containing custom grok patterns.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ (pkgs.writeTextDir "custom_service_logs" (builtins.readFile ./cus \
tom_service_logs)) ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.localConfig.postOverflows

The set of Postoverflows specifications.

See **https://docs.crowdsec.net/docs/next/log_processor/parsers/intro#postoverflows** for details.

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.localConfig.postOverflows.s01Whitelist

A list of stage s01−whitelist specifications. Inside this list, you can specify Postoverflows Whitelists.

See **https://docs.crowdsec.net/docs/whitelist/intro** for details.

Type: list of (YAML 1.1 value)

Default:

```
[ ]
```

Example:

```
[
  {
    description = "Whitelist my reverse DNS";
    name = "postoverflows/whitelist_my_dns_domain";
    whitelist = {
      expression = [
        "evt.Enriched.reverse_dns endsWith '.local.'"
      ];
      reason = "Don't ban me";
    };
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.localConfig.profiles

A list of profiles to enable.

See **https://docs.crowdsec.net/docs/profiles/intro** for more details.

Type: list of (YAML 1.1 value)

Default:

```
[
  {
    decisions = [
      {
        duration = "4h";
        type = "ban";
      }
    ];
    filters = [
      "Alert.Remediation == true && Alert.GetScope() == 'Ip'"
    ];
    name = "default_ip_remediation";
```

```
      on_success = "break";
    }
    {
      decisions = [
        {
          duration = "4h";
          type = "ban";
        }
      ];
      filters = [
        "Alert.Remediation == true && Alert.GetScope() == 'Range'"
      ];
      name = "default_range_remediation";
      on_success = "break";
    }
  ]
```

Example:

```
  [
    {
      decisions = [
        {
          duration = "4h";
          type = "ban";
        }
      ];
      filters = [
        "Alert.Remediation == true && Alert.GetScope() == 'Ip'"
      ];
      name = "default_ip_remediation";
      on_success = "break";
    }
    {
      decisions = [
        {
          duration = "4h";
          type = "ban";
        }
      ];
      filters = [
        "Alert.Remediation == true && Alert.GetScope() == 'Range'"
      ];
      name = "default_range_remediation";
      on_success = "break";
    }
  ]
```

Declared by:

<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.localConfig.scenarios

A list of scenarios specifications.

See **https://docs.crowdsec.net/docs/scenarios/intro** for details.

Type: list of (YAML 1.1 value)

Default:

```
[ ]
```

Example:

```
[
  {
    capacity = 5;
    description = "Detect myservice bruteforce";
    filter = "evt.Meta.log_type == 'myservice_failed_auth'";
    groupby = "evt.Meta.source_ip";
    leakspeed = "10s";
    name = "crowdsecurity/myservice-bf";
    type = "leaky";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.name

Name of the machine when registering it at the central or local api.

Type: string

Default:

```
config.networking.hostName
```

Declared by:

<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.openFirewall

Whether to automatically open firewall ports for ‘crowdsec’.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.settings

Set of various configuration attributes

Type: submodule

Declared by:

<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.settings.capi
CAPI Configuration attributes

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.settings.capi.credentialsFile
The CAPI credential file to use.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/crowdsec/capi.yaml"
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.settings.console
Console Configuration attributes

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.settings.console.configuration
Attributes inside the console.yaml file.

Type: YAML 1.1 value

Default:

```
{
  share_context = false;
  share_custom = false;
  share_manual_decisions = false;
  share_tainted = false;
}
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.settings.console.tokenFile
The Console Token file to use.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/crowdsec/console_token.yaml"
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.settings.general
Settings for the main CrowdSec configuration file.

Refer to the defaults at **https://github.com/crowdsecurity/crowdsec/blob/master/config/config.yaml**.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.settings.lapi
LAPI Configuration attributes

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.settings.lapi.credentialsFile
The LAPI credential file to use.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/crowdsec/lapi.yaml"
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.settings.simulation
Attributes inside the simulation.yaml file.

Type: YAML 1.1 value

Default:

```
{
  simulation = false;
}
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec.user
The user to run crowdsec as

Type: string

Default:

```
"crowdsec"
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec.nix>

services.crowdsec−firewall−bouncer.enable
Whether to enable CrowdSec Firewall Bouncer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec−firewall−bouncer.nix>

services.crowdsec−firewall−bouncer.package
The crowdsec−firewall−bouncer package to use.

Type: package

Default:

```
pkgs.crowdsec−firewall−bouncer
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec−firewall−bouncer.nix>

services.crowdsec−firewall−bouncer.createRulesets
Whether to have the module create the appropriate firewall configuration based on the bouncer settings. You may disable this option to manually configure it.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec−firewall−bouncer.nix>

services.crowdsec−firewall−bouncer.registerBouncer.enable
Whether to automatically register the bouncer to the locally running ‘crowdsec’ service.

When authenticating to an external CrowdSec API, you may use the **services.crowdsec-firewall-bouncer.secrets.apiKeyPath** option instead.

Type: boolean

Default:

```
config.services.crowdsec.enable
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec−firewall−bouncer.nix>

services.crowdsec−firewall−bouncer.registerBouncer.bouncerName
Name to register the bouncer as to the CrowdSec API

Type: non−empty string

Default:

```
"crowdsec−firewall−bouncer"
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec−firewall−bouncer.nix>

services.crowdsec−firewall−bouncer.secrets.apiKeyPath
Path to the API key to authenticate with a local CrowdSec API.

You need to call ‘cscli bouncers add <bouncer−name>’ to register the bouncer and get this API key.

When authenticating to the locally running ‘crowdsec’ service, you may use the **services.crowdsec-firewall-bouncer.registerBouncer.enable** option instead.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec−firewall−bouncer.nix>

services.crowdsec−firewall−bouncer.settings
Settings for the main CrowdSec Firewall Bouncer.

Refer to the defaults at **https://github.com/crowdsecurity/cs−firewall−bouncer/blob/main/config/crowdsec−firewall−bouncer.yaml**.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec−firewall−bouncer.nix>

services.crowdsec−firewall−bouncer.settings.api_key
API key to authenticate with a local crowdsec API.

You need to call ‘cscli bouncers add <bouncer−name>’ to register the bouncer and get this API key.

Setting this option will store this secret in the Nix store. Instead, you should set the ‘services.crowdsec−firewall−bouncer.secrets.apiKeyPath’ option, which will read the value at runtime.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec−firewall−bouncer.nix>

services.crowdsec−firewall−bouncer.settings.api_url
URL of the local API.

Type: string

Default:

```
http://$\{config.services.crowdsec.settings.general.api.server.lis \
ten_uri}
```

Example:

```
"http://127.0.0.1:8080"
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec−firewall−bouncer.nix>

services.crowdsec−firewall−bouncer.settings.mode
Firewall mode to use.

Type: string

Default:

```
if config.networking.nftables.enable then "nftables" else "iptables \
"
```

Declared by:
<nixpkgs/nixos/modules/services/security/crowdsec−firewall−bouncer.nix>

services.cryptpad.enable
Whether to enable cryptpad.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cryptpad.nix>

services.cryptpad.package
The cryptpad package to use.

Type: package

Default:

```
pkgs.cryptpad
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cryptpad.nix>

services.cryptpad.configureNginx
Configure Nginx as a reverse proxy for Cryptpad. Note that this makes some assumptions on your setup, and sets settings that will affect other virtualHosts running on your Nginx instance, if any. Alternatively you can configure a reverse−proxy of your choice.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cryptpad.nix>

services.cryptpad.settings
Cryptpad configuration settings. See **https://github.com/cryptpad/cryptpad/blob/main/config/config.example.js** for a more extensive reference documentation. Test your deployed instance through ‘https://<domain>/checkup/’.

Type: open submodule of (JSON value)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cryptpad.nix>

services.cryptpad.settings.adminKeys
List of public signing keys of users that can access the admin panel

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "[cryptpad−user1@my.awesome.website/YZgXQxKR0Rcb6r6CmxHPdAGLVlud \
rAF2lEnkbx1vVOo=]"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cryptpad.nix>

services.cryptpad.settings.blockDailyCheck
Disable telemetry. This setting is only effective if the 'Disable server telemetry' setting in the admin menu has been untouched, and will be ignored by cryptpad once that option is set either way. Note that due to the service confinement, just enabling the option in the admin menu will not be able to resolve DNS and fail; this setting must be set as well.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cryptpad.nix>

services.cryptpad.settings.httpAddress
Address on which the Node.js server should listen

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cryptpad.nix>

services.cryptpad.settings.httpPort
Port on which the Node.js server should listen

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cryptpad.nix>

services.cryptpad.settings.httpSafeOrigin
Cryptpad sandbox URL

Type: null or string

Default:

```
null
```

Example:

```
"https://cryptpad-ui.example.com. Apparently optional but recommen \
ded."
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/cryptpad.nix>

services.cryptpad.settings.httpUnsafeOrigin
This is the URL that users will enter to load your instance

Type: string

Default:

```
""
```

Example:

```
"https://cryptpad.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/cryptpad.nix>

services.cryptpad.settings.installMethod
Install method is listed in telemetry if you agree to it through the consentToContact setting in the admin panel.

Type: string

Default:

```
"nixos"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/cryptpad.nix>

services.cryptpad.settings.logLevel
Controls log level

Type: string

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/cryptpad.nix>

services.cryptpad.settings.logToStdout
Controls whether log output should go to stdout of the systemd service

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/cryptpad.nix>

services.cryptpad.settings.maxWorkers
Number of child processes, defaults to number of cores available

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cryptpad.nix>

services.cryptpad.settings.websocketPort
Port for the websocket that needs to be separate

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3003
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/cryptpad.nix>

services.cyrus−imap.enable
Whether to enable Cyrus IMAP, an email, contacts and calendar server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/cyrus−imap.nix>

services.cyrus−imap.cyrusConfigFile
Path to the configuration file used for Cyrus.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/cyrus−imap.nix>

services.cyrus−imap.cyrusSettings
Cyrus configuration settings. See **cyrus.conf(5)**

Type: open submodule of attribute set of attribute set of (boolean or signed integer or list of string)

Declared by:
<nixpkgs/nixos/modules/services/mail/cyrus−imap.nix>

services.cyrus−imap.cyrusSettings.DAEMON
This section lists long running daemons to start before any SERVICES are spawned. **master**(8) will ensure that these processes are running, restarting any process which dies or forks. All listed processes will be shutdown when **master**(8) is exiting.

Type: unspecified value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/cyrus−imap.nix>

services.cyrus−imap.cyrusSettings.EVENTS

This section lists processes that should be run at specific intervals, similar to cron jobs. This section is typically used to perform scheduled cleanup/maintenance.

Type: unspecified value

Default:

```
{
  checkpoint = {
    cmd = [
      "ctl_cyrusdb"
      "−c"
    ];
    period = 30;
  };
  deleteprune = {
    at = 430;
    cmd = [
      "cyr_expire"
      "−E"
      "4"
      "−D"
      "28"
    ];
  };
  delprune = {
    at = 400;
    cmd = [
      "cyr_expire"
      "−E"
      "3"
    ];
  };
  expungeprune = {
    at = 445;
    cmd = [
      "cyr_expire"
      "−E"
      "4"
      "−X"
      "28"
    ];
  };
  tlsprune = {
    at = 400;
    cmd = [
      "tls_prune"
    ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/mail/cyrus-imap.nix>

services.cyrus-imap.cyrusSettings.SERVICES

This section is the heart of the cyrus.conf file. It lists the processes that should be spawned to handle client connections made on certain Internet/UNIX sockets.

Type: unspecified value

Default:

```
{
  imap = {
    cmd = [
      "imapd"
    ];
    listen = "imap";
    prefork = 0;
  };
  lmtpunix = {
    cmd = [
      "lmtpd"
    ];
    listen = "/run/cyrus/lmtp";
    prefork = 0;
  };
  notify = {
    cmd = [
      "notifyd"
    ];
    listen = "/run/cyrus/notify";
    prefork = 0;
    proto = "udp";
  };
  pop3 = {
    cmd = [
      "pop3d"
    ];
    listen = "pop3";
    prefork = 0;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/mail/cyrus-imap.nix>

services.cyrus-imap.cyrusSettings.START

This section lists the processes to run before any SERVICES are spawned. This section is typically used to initialize databases. Master itself will not startup until all tasks in START have completed, so put no blocking commands here.

Type: unspecified value

Default:

```
{
  recover = {
    cmd = [
```

```
        "ctl_cyrusdb"
        "-r"
      ];
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/cyrus-imap.nix>

services.cyrus-imap.debug
Whether to enable debugging messages for the Cyrus master process.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/cyrus-imap.nix>

services.cyrus-imap.group
Cyrus IMAP group name. If this is not set, a group named ‘cyrus’ will be created.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/cyrus-imap.nix>

services.cyrus-imap.imapdConfigFile
Path to the configuration file used for cyrus-imap.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/cyrus-imap.nix>

services.cyrus-imap.imapdSettings
IMAP configuration settings. See **imapd.conf(5)**

Type: open submodule of attribute set of (string or signed integer or boolean or list of string)

Default:

```
{
  admins = [
    "cyrus"
  ];
  allowplaintext = true;
  defaultdomain = "localhost";
  defaultpartition = "default";
  duplicate_db_path = "/run/cyrus/db/deliver.db";
  hashimapspool = true;
  httpmodules = [
```

```
    "carddav"
    "caldav"
  ];
  mboxname_lockpath = "/run/cyrus/lock";
  partition-default = "/var/lib/cyrus/storage";
  popminpoll = 1;
  proc_path = "/run/cyrus/proc";
  ptscache_db_path = "/run/cyrus/db/ptscache.db";
  sasl_auto_transition = true;
  sasl_pwcheck_method = [
    "saslauthd"
  ];
  sievedir = "/var/lib/cyrus/sieve";
  statuscache_db_path = "/run/cyrus/db/statuscache.db";
  syslog_prefix = "cyrus";
  tls_client_ca_dir = "/etc/ssl/certs";
  tls_session_timeout = 1440;
  tls_sessions_db_path = "/run/cyrus/db/tls_sessions.db";
  virtdomains = "on";
}
```

Declared by:
<nixpkgs/nixos/modules/services/mail/cyrus-imap.nix>

services.cyrus-imap.imapdSettings.configdirectory
The pathname of the IMAP configuration directory.

Type: absolute path

Default:

```
"/var/lib/cyrus"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/cyrus-imap.nix>

services.cyrus-imap.imapdSettings.idlesocket
Unix socket that idled listens on.

Type: absolute path

Default:

```
"/run/cyrus/idle"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/cyrus-imap.nix>

services.cyrus-imap.imapdSettings.lmtpsocket
Unix socket that lmtpd listens on, used by **deliver**(8). This should match the path specified in **cyrus.conf**(5).

Type: absolute path

Default:

```
"/run/cyrus/lmtp"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/cyrus-imap.nix>

services.cyrus−imap.imapdSettings.notifysocket

Unix domain socket that the mail notification daemon listens on.

Type: absolute path

Default:

```
"/run/cyrus/notify"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/cyrus−imap.nix>

services.cyrus−imap.listenQueue

Socket listen queue backlog size. See **listen**(2) for more information about a backlog. Default is 32, which may be increased if you have a very high connection rate.

Type: signed integer

Default:

```
32
```

Declared by:

<nixpkgs/nixos/modules/services/mail/cyrus−imap.nix>

services.cyrus−imap.tmpDBDir

Location where DB files are stored. Databases in this directory are recreated upon startup, so ideally they should live in ephemeral storage for best performance.

Type: absolute path

Default:

```
"/run/cyrus/db"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/cyrus−imap.nix>

services.cyrus−imap.user

Cyrus IMAP user name. If this is not set, a user named ‘cyrus’ will be created.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/mail/cyrus−imap.nix>

services.dae.enable

Whether to enable dae, a Linux high−performance transparent proxy solution based on eBPF.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dae.nix>

services.dae.package

The dae package to use.

Type: package

Default:

```
pkgs.dae
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dae.nix>

services.dae.assets

Assets required to run dae.

Type: list of absolute path

Default:

```
with pkgs; [ v2ray-geoip v2ray-domain-list-community ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dae.nix>

services.dae.assetsPath

The path which contains geolocation database. This option will override ‘assets’.

Type: string

Default:

```
(symlinkJoin {
    name = "dae-assets";
    paths = assets;
})/share/v2ray
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dae.nix>

services.dae.config

WARNING: This option will expose store your config unencrypted world−readable in the nix store. Config text for dae.

See **https://github.com/daeuniverse/dae/blob/main/example.dae**.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dae.nix>

services.dae.configFile

The path of dae config file, end with ‘.dae’.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/your/config.dae"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dae.nix>

services.dae.disableTxChecksumIpGeneric
See **https://github.com/daeuniverse/dae/issues/43**

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dae.nix>

services.dae.openFirewall
Open the firewall port.

Type: submodule

Default:

```
{
  enable = true;
  port = 12345;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dae.nix>

services.dae.openFirewall.enable
Whether to enable opening **port** in the firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dae.nix>

services.dae.openFirewall.port
Port to be opened. Consist with field ‘tproxy_port’ in config file.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/networking/dae.nix>

services.dante.enable
Whether to enable Dante SOCKS proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dante.nix>

services.dante.config
Contents of Dante's configuration file. NOTE: user.privileged, user.unprivileged and logoutput are set by the service.

Type: strings concatenated with "\n"

Declared by:
<nixpkgs/nixos/modules/services/networking/dante.nix>

services.darkhttpd.enable
Whether to enable DarkHTTPd web server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/darkhttpd.nix>

services.darkhttpd.address
Address to listen on. Pass 'all' to listen on all interfaces.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/darkhttpd.nix>

services.darkhttpd.extraArgs
Additional configuration passed to the executable.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/darkhttpd.nix>

services.darkhttpd.hideServerId
Don't identify the server type in headers or directory listings.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/darkhttpd.nix>

services.darkhttpd.port

Port to listen on. Pass 0 to let the system choose any free port for you.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
80
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/darkhttpd.nix>

services.darkhttpd.rootDir

Path from which to serve files.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/web−servers/darkhttpd.nix>

services.das_watchdog.enable

Whether to enable realtime watchdog.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/das_watchdog.nix>

services.dashy.enable

Whether to enable Dashy, a highly customizable, easy to use, privacy−respecting dashboard app.

Note that this builds a static web app as opposed to running a full node server, unlike the default docker image.

Writing config changes to disk through the UI, triggering a rebuild through the UI and application status checks are unavailable without the node server; Everything else will work fine.

See the deployment docs for **building from source**,

hosting with a CDN and **CDN cloud deploy** for more information. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dashy.nix>

services.dashy.package

The dashy−ui package to use.

Type: package

Default:

```
pkgs.dashy-ui
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dashy.nix>

services.dashy.finalDrv
Final derivation containing the fully built static files

Type: package *(read only)*

Default:

```
if cfg.settings != {}
then cfg.package.override {inherit (cfg) settings;}
else cfg.package;
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dashy.nix>

services.dashy.settings
Settings serialized into ‘user−data/conf.yml’ before build. If left empty, the default configuration shipped with the package will be used instead.

Note that the full configuration will be written to the nix store as world readable, which may include secrets such as **password hashes**.

To add files such as icons or backgrounds, you can reference them in line such as

```
icon = "$\{./icon.png}";
```

This will add the file to the nix store upon build, referencing it by file path as expected by Dashy.

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  appConfig = {
    cssThemes = [
      "example−theme−1"
      "example−theme−2"
    ];
    enableFontAwesome = true;
    fontAwesomeKey = "e9076c7025";
    theme = "thebe";
  };
  pageInfo = {
    description = "My Awesome Dashboard";
    navLinks = [
      {
        path = "/";
        title = "Home";
      }
      {
        path = "https://example.com";
        title = "Example 1";
      }
      {
        path = "https://example.com";
        title = "Example 2";
```

```
            }
          ];
          title = "Dashy";
        };
        sections = [
          {
            displayData = {
              collapsed = true;
              cols = 2;
              customStyles = "border: 2px dashed red;";
              itemSize = "large";
            };
            items = [
              {
                backgroundColor = "#0079ff";
                color = "#00ffc9";
                description = "Source code and documentation on GitHub" \
;
                icon = "fab fa-github";
                target = "sametab";
                title = "Source";
                url = "https://github.com/Lissy93/dashy";
              }
              {
                description = "View currently open issues, or raise a n \
ew one";
                icon = "fas fa-bug";
                title = "Issues";
                url = "https://github.com/Lissy93/dashy/issues";
              }
              {
                description = "Live Demo #1";
                icon = "fas fa-rocket";
                target = "iframe";
                title = "Demo 1";
                url = "https://dashy-demo-1.as93.net";
              }
              {
                description = "Live Demo #2";
                icon = "favicon";
                target = "newtab";
                title = "Demo 2";
                url = "https://dashy-demo-2.as93.net";
              }
            ];
            name = "Getting Started";
          }
        ];
      }
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/dashy.nix>

services.dashy.virtualHost.enableNginx
Whether to enable a virtualhost to serve dashy through nginx.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dashy.nix>

services.dashy.virtualHost.domain
Domain to use for the virtual host.

This can be used to change nginx options like

```
services.nginx.virtualHosts."$\{config.services.dashy.virtualHost. \
domain}".listen = [ ... ]
```

or

```
services.nginx.virtualHosts."example.com".listen = [ ... ]
```

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dashy.nix>

services.datadog−agent.enable
Whether to enable Datadog−agent v7 monitoring service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog−agent.nix>

services.datadog−agent.enableLiveProcessCollection
Whether to enable the live process collection agent.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog−agent.nix>

services.datadog−agent.enableTraceAgent
Whether to enable the trace agent.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog−agent.nix>

services.datadog−agent.package
The datadog−agent package to use. ::: {.note} The provided package is expected to have an overridable ‘pythonPackages’−attribute which configures the Python environment with the Datadog checks. :::

Type: package

Default:

```
pkgs.datadog−agent
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog−agent.nix>

services.datadog−agent.apiKeyFile
Path to a file containing the Datadog API key to associate the agent with your account.

Type: absolute path

Example:

```
"/run/keys/datadog_api_key"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog−agent.nix>

services.datadog−agent.checks
Configuration for all Datadog checks. Keys of this attribute set will be used as the name of the check to create the appropriate configuration in ‘conf.d/$check.d/conf.yaml’.

The configuration is converted into JSON from the plain Nix language configuration, meaning that you should write configuration adhering to Datadog’s documentation − but in Nix language.

Refer to the implementation of this module (specifically the definition of ‘defaultChecks’) for an example.

Note: The ‘disk’ and ‘network’ check are configured in separate options because they exist by default. Attempting to override their configuration here will have no effect.

Type: attribute set of (attribute set)

Default:

```
{ }
```

Example:

```
{
  http_check = {
    init_config = null;
    instances = [
      {
        name = "some−service";
        tags = [
          "some−service"
        ];
        url = "http://localhost:1337/healthz";
      }
    ];
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog−agent.nix>

services.datadog−agent.ddUrl
Custom dd_url to configure the agent with. Useful if traffic to datadog needs to go through a proxy. Don't use this to point to another datadog site (EU) − use site instead.

Type: null or string

Default:

```
null
```

Example:

```
"http://haproxy.example.com:3834"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog−agent.nix>

services.datadog−agent.diskCheck
Disk check config

Type: attribute set

Default:

```
{
  init_config = { };
  instances = [
    {
      use_mount = "false";
    }
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog−agent.nix>

services.datadog−agent.extraConfig
Extra configuration options that will be merged into the main config file *datadog.yaml*.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog−agent.nix>

services.datadog−agent.extraIntegrations
Extra integrations from the Datadog core−integrations repository that should be built and included.

By default the included integrations are disk, mongo, network, nginx and postgres.

To include additional integrations the name of the derivation and a function to filter its dependencies from the Python package set must be provided.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
```

```
    ntp = pythonPackages: [ pythonPackages.ntplib ];
  }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog-agent.nix>

services.datadog-agent.hostname
The hostname to show in the Datadog dashboard (optional)

Type: null or string

Default:

```
null
```

Example:

```
"mymachine.mydomain"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog-agent.nix>

services.datadog-agent.logLevel
Logging verbosity.

Type: null or one of “DEBUG”, “INFO”, “WARN”, “ERROR”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog-agent.nix>

services.datadog-agent.networkCheck
Network check config

Type: attribute set

Default:

```
{
  init_config = { };
  instances = [
    {
      collect_connection_state = false;
      excluded_interfaces = [
        "lo"
        "lo0"
      ];
    }
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog-agent.nix>

services.datadog-agent.processAgentPackage
Which DataDog v7 agent package to use. Note that the provided package is expected to have an overridable ‘pythonPackages’-attribute which configures the Python environment with the Datadog checks.

Type: package

Default:

```
pkgs.datadog-process-agent
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog−agent.nix>

services.datadog−agent.site
The datadog site to point the agent towards. Set to datadoghq.eu to point it to their EU site.

Type: null or string

Default:

```
null
```

Example:

```
"datadoghq.eu"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog−agent.nix>

services.datadog−agent.tags
The tags to mark this Datadog agent

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "test"
  "service"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/datadog−agent.nix>

services.davfs2.enable
Whether to enable davfs2.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/davfs2.nix>

services.davfs2.davGroup
The group of the running mount.davfs daemon. Ordinary users must be member of this group in order to mount a davfs2 file system. Value must be given as name, not as numerical id.

Type: string

Default:

```
"davfs2"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/davfs2.nix>

services.davfs2.davUser

When invoked by root the mount.davfs daemon will run as this user. Value must be given as name, not as numerical id.

Type: string

Default:

```
"davfs2"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/davfs2.nix>

services.davfs2.settings

Extra settings appended to the configuration of davfs2. See **davfs2.conf**(5) for available settings.

Type: open submodule of attribute set of attribute set of (boolean or signed integer or string or attribute set of (boolean or signed integer or string))

Default:

```
{ }
```

Example:

```
{
  globalSection = {
    proxy = "foo.bar:8080";
    use_locks = false;
  };
  sections = {
    "/media/dav" = {
      use_locks = true;
    };
    "/home/otto/mywebspace" = {
      gui_optimize = true;
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/davfs2.nix>

services.davis.enable

Whether to enable Davis is a caldav and carddav server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.package

The davis package to use.

Type: package

Default:

```
pkgs.davis
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.adminLogin

Username for the admin account.

Type: string

Default:

```
"root"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.adminPasswordFile

The full path to a file that contains the admin’s password. Must be readable by the user.

Type: absolute path

Example:

```
"/run/secrets/davis−admin−pass"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.appSecretFile

A file containing the Symfony APP_SECRET − Its value should be a series of characters, numbers and symbols chosen randomly and the recommended length is around 32 characters. Can be generated with <code>cat /dev/urandom | tr −dc a−zA−Z0−9 | fold −w 48 | head −n 1</code>.

Type: absolute path

Example:

```
"/run/secrets/davis−appsecret"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.config

Type: attribute set of (null or boolean or signed integer or 16 bit unsigned integer; between 0 and 65535 (both inclusive) or absolute path or string or (submodule))

Default:

```
{ }
```

Example:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.dataDir

Davis data directory.

Type: absolute path

Default:

```
"/var/lib/davis"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.database.createLocally

Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.database.driver

Database type, required in all circumstances.

Type: one of “sqlite”, “postgresql”, “mysql”

Default:

```
"sqlite"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.database.name

Database name, only used when the databse is created locally.

Type: null or string

Default:

```
"davis"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.database.urlFile

A file containing the database connection url. If set then it overrides all other database settings (except driver). This is mandatory if you want to use an external database, that is when ‘services.davis.database.createLocally’ is ‘false’.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/davis−db−url"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.group

Group davis runs as.

Type: string

Default:

```
"davis"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.hostname

Domain of the host to serve davis under. You may want to change it if you run Davis on a different URL than davis.yourdomain.

Type: string

Example:

```
"davis.yourdomain.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.mail.dsn

Mail DSN for sending emails. Mutually exclusive with ‘services.davis.mail.dsnFile’.

Type: null or string

Default:

```
null
```

Example:

```
"smtp://username:password@example.com:25"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.mail.dsnFile

A file containing the mail DSN for sending emails. Mutually exclusive with ‘servies.davis.mail.dsn’.

Type: null or string

Default:

```
null
```

Example:

```
"/run/secrets/davis−mail−dsn"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.mail.inviteFromAddress

Email address to send invitations from.

Type: null or string

Default:

```
null
```

Example:

```
"no−reply@dav.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx
Use this option to customize an nginx virtual host. To disable the nginx set this to null.

Type: null or (submodule)

Default:

```
{ }
```

Example:

```
  {
    serverAliases = [
      "dav.''${config.networking.domain}"
    ];
    # To enable encryption and let let's encrypt take care of certi \
ficate
    forceSSL = true;
    enableACME = true;
  }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with 'redirectCode') all plain HTTP traffic to HTTPS. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with 'redirectCode') to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.http2
Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.http3
Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.http3_hq

Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides 'addSSL' and 'onlySSL'.

If you only want to set the addresses manually and not the ports, take a look at 'listenAddresses'.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.listen.*.ssl
Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations.<name>.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations.<name>.priority

Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations.<name>.proxyPass

Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations.<name>.proxyWebsockets

Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations.<name>.recommendedProxySettings

Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations.<name>.recommendedUwsgiSettings

Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.onlySSL

Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for ‘listen’ to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.quic

Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.redirectCode

HTTP status used by ‘globalRedirect’ and ‘forceSSL’. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.rejectSSL

Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the ‘ssl_reject_handshake’ directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.root
The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.serverName
Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

2. see the **security.acme.certs** option

services.davis.poolConfig
Options for the davis PHP pool. See the documentation on <literal>php−fpm.conf</literal> for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davis.user

User davis runs as.

Type: string

Default:

```
"davis"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/davis.nix>

services.davmail.enable

Whether to enable davmail, an MS Exchange gateway.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/davmail.nix>

services.davmail.config

Davmail configuration. Refer to **http://davmail.sourceforge.net/serversetup.html** and **http://davmail.sourceforge.net/advanced.html** for details on supported values.

Type: davmail config type (str, int, bool or attribute set thereof)

Default:

```
{ }
```

Example:

```
{
  davmail.allowRemote = true;
  davmail.imapPort = 55555;
  davmail.bindAddress = "10.0.1.2";
  davmail.smtpSaveInSent = true;
  davmail.folderSizeLimit = 10;
  davmail.caldavAutoSchedule = false;
  log4j.logger.rootLogger = "DEBUG";
}
```

Declared by:

<nixpkgs/nixos/modules/services/mail/davmail.nix>

services.davmail.url

Outlook Web Access URL to access the exchange server, i.e. the base webmail URL.

Type: string

Example:

```
"https://outlook.office365.com/EWS/Exchange.asmx"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/davmail.nix>

services.dawarich.enable

Whether to enable Dawarich, a self−hostable alternative to Google Location History.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.package

The dawarich package to use.

Type: package

Default:

```
pkgs.dawarich
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.automaticMigrations

Whether to perform database migrations automatically

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.configureNginx

Configure nginx as a reverse proxy for dawarich. Alternatively you can configure a reverse−proxy of your choice to serve these paths:

‘/ −> ${pkgs.dawarich}/public’

‘/ −> 127.0.0.1:{{ webPort }} ’(If there was no file in the directory above.)

Make sure that websockets are forwarded properly. You might want to set up caching of some requests. Take a look at dawarich’s provided reverse proxy configurations at ‘https://dawarich.app/docs/tutorials/reverse−proxy’.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.database.createLocally

Whether to configure a local PostgreSQL server and database for Dawarich. The connection is performed via Unix sockets.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.database.host
Hostname or address of the postgresql server. If an absolute path is given here, it will be interpreted as a unix socket path.

Type: string

Default:

```
"/run/postgresql"
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.database.name
The name of the dawarich database.

Type: string

Default:

```
"dawarich"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.database.passwordFile
A file containing the password corresponding to **services.dawarich.database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/dawarich−db−password"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.database.port
Port of the postgresql server.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5432
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.database.user
The database user for dawarich.

Type: string

Default:

```
"dawarich"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.environment
Extra environment variables to pass to all dawarich services.

Type: attribute set of (null or string or absolute path or package)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.extraEnvFiles
Extra environment files to pass to all Dawarich services. Useful for passing down environment secrets.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/etc/dawarich/secret.env"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.group
Group under which dawarich runs.

Type: string

Default:

```
"dawarich"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.localDomain
The domain serving your Dawarich instance.

Type: string

Example:

```
"dawarich.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.redis.createLocally
Whether to configure a local Redis server for Dawarich. The connection is performed via Unix sockets by default, but that can be changed by configuring **services.dawarich.redis.host** and **services.dawarich.redis.port**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.redis.host
The redis host Dawarich will connect to.

Type: string

Default:

```
config.services.redis.servers.dawarich.unixSocket
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.redis.port
The port of the redis server Dawarich will connect to. Set to zero to disable TCP and use Unix sockets instead.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.secretKeyBaseFile
Path to file containing the secret key base. A new secret key base can be generated by running:

‘nix build −f '<nixpkgs>' dawarich; cd result; bin/bundle exec rails secret’

This file is loaded using systemd credentials, and therefore does not need to be owned by the dawarich user.

If this option is null, it will be created at /var/lib/dawarich/secrets/secret−key−base with a new secret key base.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.sidekiqProcesses
How many Sidekiq processes should be used to handle background jobs, and which job classes they handle. Can be used to **speed up** the import process.

Type: attribute set of (submodule)

Default:

```
{
  all = {
    jobClasses = [ ];
    threads = null;
  };
}
```

Example:

```
{
  all = {
    jobClasses = [ ];
    threads = null;
```

```
    };
    geocoding = {
      jobClasses = [
        "reverse_geocoding"
      ];
      threads = 10;
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.sidekiqProcesses.<name>.jobClasses
If not empty, which job classes should be executed by this process. *If left empty, all job classes will be executed by this process.*

Type: list of (one of “app_version_checking”, “archival”, “cache”, “data_migrations”, “default”, “digests”, “exports”, “families”, “imports”, “mailers”, “places”, “points”, “reverse_geocoding”, “stats”, “tracks”, “trips”, “visit_suggesting”)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.sidekiqProcesses.<name>.threads
Number of threads this process should use for executing jobs. If null, the configured ‘sidekiqThreads’ are used.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.sidekiqThreads
Worker threads used by the dawarich−sidekiq−all service. If ‘sidekiqProcesses’ is configured and any processes specify null ‘threads’, this value is used.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.smtp.fromAddress
“From” address used when sending emails to users.

Type: null or string

Default:

```
null
```

Example:

```
"dawarich@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.smtp.host
SMTP host used when sending emails to users.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.smtp.passwordFile
Path to file containing the SMTP password.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/dawarich−smtp−password"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.smtp.port
SMTP port used when sending emails to users.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
25
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.smtp.user
SMTP login name.

Type: null or string

Default:

```
null
```

Example:

```
"dawarich@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.user
User under which dawarich runs. If it is set to “dawarich”, that user will be created, otherwise it should be set to the name of a user created elsewhere.

Type: string

Default:

```
"dawarich"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.dawarich.webPort
TCP port used by the dawarich web service.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dawarich.nix>

services.db−rest.enable
Whether to enable db−rest service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/db−rest.nix>

services.db−rest.package
The db−rest package to use.

Type: package

Default:

```
pkgs.db−rest
```

Declared by:
<nixpkgs/nixos/modules/services/misc/db−rest.nix>

services.db−rest.group
Group under which db−rest runs.

Type: string

Default:

```
"db−rest"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/db−rest.nix>

services.db−rest.host
The host address the db−rest server should listen on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/db−rest.nix>

services.db−rest.port

The port the db−rest server should listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:

<nixpkgs/nixos/modules/services/misc/db−rest.nix>

services.db−rest.redis.enable

Enable caching with redis for db−rest.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/db−rest.nix>

services.db−rest.redis.createLocally

Configure a local redis server for db−rest.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/db−rest.nix>

services.db−rest.redis.host

Redis host.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/misc/db−rest.nix>

services.db−rest.redis.passwordFile

Path to a file containing the redis password.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/db−rest/pasword−redis−db"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/db−rest.nix>

services.db−rest.redis.port
Redis port.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/db−rest.nix>

services.db−rest.redis.useSSL
Use SSL if using a redis network connection.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/db−rest.nix>

services.db−rest.redis.user
Optional username used for authentication with redis.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/db−rest.nix>

services.db−rest.user
User account under which db−rest runs.

Type: string

Default:

```
"db−rest"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/db−rest.nix>

services.dbus.packages
Packages whose D−Bus configuration files should be included in the configuration of the D−Bus system−wide or session−wide message bus. Specifically, files in the following directories will be included into their respective DBus configuration paths: *«pkg»/etc/dbus−1/system.d «pkg»/share/dbus−1/system.d «pkg»/share/dbus−1/system−services «pkg»/etc/dbus−1/session.d «pkg»/share/dbus−1/session.d «pkg»/share/dbus−1/services*

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/system/dbus.nix>

services.dbus.apparmor

AppArmor mode for dbus.

'enabled' enables mediation when it's supported in the kernel, 'disabled' always disables AppArmor even with kernel support, and 'required' fails when AppArmor was not found in the kernel.

Type: one of "enabled", "disabled", "required"

Default:

```
"disabled"
```

Declared by:

<nixpkgs/nixos/modules/services/system/dbus.nix>

services.dbus.brokerPackage

The dbus−broker package to use.

Type: package

Default:

```
pkgs.dbus-broker
```

Declared by:

<nixpkgs/nixos/modules/services/system/dbus.nix>

services.dbus.dbusPackage

The dbus package to use.

Type: package

Default:

```
pkgs.dbus
```

Declared by:

<nixpkgs/nixos/modules/services/system/dbus.nix>

services.dbus.implementation

The implementation to use for the message bus defined by the D−Bus specification. Can be either the classic dbus daemon or dbus−broker, which aims to provide high performance and reliability, while keeping compatibility to the D−Bus reference implementation.

Type: one of "dbus", "broker"

Default:

```
"broker"
```

Declared by:

<nixpkgs/nixos/modules/services/system/dbus.nix>

services.ddccontrol.enable

Whether to enable ddccontrol for controlling displays.

This **enables** 'hardware.i2c', so note to add yourself to 'hardware.i2c.group'. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/ddccontrol.nix>

services.ddccontrol.package
The package with which to control brightness; added also to **services.dbus.packages**. package to use.

Type: package

Default:

```
pkgs.ddccontrol
```

Example:

```
pkgs.ddcutil-service
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/ddccontrol.nix>

services.ddclient.enable
Whether to synchronise your machine's IP address with a dynamic DNS provider (e.g. dyndns.org).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.package
The ddclient executable package run by the service.

Type: package

Default:

```
pkgs.ddclient
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.configFile
Path to configuration file. When set this overrides the generated configuration from module options.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/root/nixos/secrets/ddclient.conf"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.domains
Domain name(s) to synchronize.

Type: list of string

Default:

```
[
  ""
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.extraConfig
Extra configuration. Contents will be added verbatim to the configuration file.

Note
'daemon' should not be added here because it does not work great with the systemd−timer approach the service uses.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.interval
The interval at which to run the check and update. See **man 7 systemd.time** for the format.

Type: string

Default:

```
"10min"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.passwordFile
A file containing the password or a TSIG key in named format when using the nsupdate protocol.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.protocol
Protocol to use with dynamic DNS provider (see **https://ddclient.net/protocols.html**).

Type: string

Default:

```
"dyndns2"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.quiet
Print no messages for unnecessary updates.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.script
script as required by some providers.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.secretsFile
A file containing the secrets for the dynamic DNS provider. This file should contain lines of valid secrets in the format specified by the ddclient documentation. If this option is set, it overrides the 'passwordFile' option.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.server
Server address.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.ssl
Whether to use SSL/TLS to connect to dynamic DNS provider.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.use
Method to determine the IP address to send to the dynamic DNS provider.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.username
User name.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.usev4
Method to determine the IPv4 address to send to the dynamic DNS provider. Only used if ‘use’ is not set.

Type: string

Default:

```
"webv4, webv4=ipify-ipv4"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.usev6
Method to determine the IPv6 address to send to the dynamic DNS provider. Only used if ‘use’ is not set.

Type: string

Default:

```
"webv6, webv6=ipify-ipv6"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.verbose
Print verbose information.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddclient.zone
zone as required by some providers.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddclient.nix>

services.ddns-updater.enable
Whether to enable Container to update DNS records periodically with WebUI for many DNS providers.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddns-updater.nix>

services.ddns−updater.package
The ddns−updater package to use.

Type: package

Default:

```
pkgs.ddns−updater
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddns−updater.nix>

services.ddns−updater.environment
Environment variables to be set for the ddns−updater service. DATADIR is ignored to enable using systemd DynamicUser. For full list see **https://github.com/qdm12/ddns−updater**

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ddns−updater.nix>

services.deconz.enable
Whether to enable deCONZ, a Zigbee gateway for use with ConBee/RaspBee hardware (https://phoscon.de/).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/deconz.nix>

services.deconz.package
The deconz package to use.

Type: package

Default:

```
pkgs.deconz
```

Declared by:
<nixpkgs/nixos/modules/services/networking/deconz.nix>

services.deconz.allowRebootSystem
Whether to enable rebooting the system.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/deconz.nix>

services.deconz.allowRestartService
Whether to enable killing/restarting processes.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/deconz.nix>

services.deconz.allowSetSystemTime
Whether to enable setting the system time.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/deconz.nix>

services.deconz.device
Force deCONZ to use a specific USB device (e.g. /dev/ttyACM0). By default it does a search.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/deconz.nix>

services.deconz.extraArgs
Extra command line arguments for deCONZ, see **https://github.com/dresden-elektronik/deconz-rest-plugin/wiki/deCONZ-command-line-parameters**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--dbg-info=1"
  "--dbg-err=2"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/deconz.nix>

services.deconz.httpPort

TCP port for the web server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
80
```

Declared by:

<nixpkgs/nixos/modules/services/networking/deconz.nix>

services.deconz.listenAddress

Pin deCONZ to the network interface specified through the provided IP address. This applies for the webserver as well as the websocket notifications.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/deconz.nix>

services.deconz.openFirewall

Whether to enable opening up the service ports in the firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/deconz.nix>

services.deconz.wsPort

TCP port for the WebSocket.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
443
```

Declared by:

<nixpkgs/nixos/modules/services/networking/deconz.nix>

services.deluge.enable

Whether to enable Deluge daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/deluge.nix>

services.deluge.package

The deluge−2_x package to use.

Type: package

Default:

```
pkgs.deluge-2_x
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/deluge.nix>

services.deluge.authFile

The file managing the authentication for deluge, the format of this file is straightforward, each line contains a username:password:level tuple in plaintext. It only has an effect when **services.deluge.declarative** is set to 'true'. See **https://dev.deluge−torrent.org/wiki/UserGuide/Authentication** for more information.

Type: absolute path

Example:

```
"/run/keys/deluge-auth"
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/deluge.nix>

services.deluge.config

Deluge core configuration for the core.conf file. Only has an effect when **services.deluge.declarative** is set to 'true'. String values must be quoted, integer and boolean values must not. See **https://git.deluge−torrent.org/deluge/tree/deluge/core/preferencesmanager.py#n41** for the available options.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  download_location = "/srv/torrents/";
  max_upload_speed = "1000.0";
  share_ratio_limit = "2.0";
  allow_remote = true;
  daemon_port = 58846;
  listen_ports = [ 6881 6889 ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/deluge.nix>

services.deluge.dataDir

The directory where deluge will create files.

Type: absolute path

Default:

```
"/var/lib/deluge"
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/deluge.nix>

services.deluge.declarative

Whether to use a declarative deluge configuration. Only if set to ‘true’, the options **services.deluge.config**, **services.deluge.openFirewall** and **services.deluge.authFile** will be applied.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/deluge.nix>

services.deluge.extraPackages

Extra packages available at runtime to enable Deluge’s plugins. For example, extraction utilities are required for the built−in “Extractor” plugin. This always contains unzip, gnutar, xz and bzip2.

Type: list of package

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/deluge.nix>

services.deluge.group

Group under which deluge runs.

Type: string

Default:

```
"deluge"
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/deluge.nix>

services.deluge.openFilesLimit

Number of files to allow deluged to open.

Type: signed integer or string

Default:

```
4096
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/deluge.nix>

services.deluge.openFirewall

Whether to open the firewall for the ports in **services.deluge.config.listen_ports**. It only takes effet if **services.deluge.declarative** is set to ‘true’.

It does NOT apply to the daemon port nor the web UI port. To access those ports securely check the documentation **https://dev.deluge−torrent.org/wiki/UserGuide/ThinClient#CreateSSHTunnel** or use a VPN or configure certificates for deluge.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/deluge.nix>

services.deluge.user

User account under which deluge runs.

Type: string

Default:

```
"deluge"
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/deluge.nix>

services.deluge.web.enable

Whether to enable Deluge Web daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/deluge.nix>

services.deluge.web.openFirewall

Open ports in the firewall for deluge web daemon

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/deluge.nix>

services.deluge.web.port

Deluge web UI port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8112
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/deluge.nix>

services.dendrite.enable

Whether to enable matrix.org dendrite.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.environmentFile

Environment file as defined in **systemd.exec**(5). Secrets may be passed to the service without adding them to the world−readable Nix store, by specifying placeholder variables as the option value in Nix and setting these variables accordingly in the environment file. Currently only used for the registration secret to allow secure registration when client_api.registration_disabled is true.

```
  # snippet of dendrite-related config
  services.dendrite.settings.client_api.registration_shared_secret  \
= "$REGISTRATION_SHARED_SECRET";

  # content of the environment file
  REGISTRATION_SHARED_SECRET=verysecretpassword
```

Note that this file needs to be available on the host on which ‘dendrite’ is running.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/dendrite/registration_secret"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.httpPort

The port to listen for HTTP requests on.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8008
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.httpsPort

The port to listen for HTTPS requests on.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.loadCredential

This can be used to pass secrets to the systemd service without adding them to the nix store. To use the example setting, see the example of **services.dendrite.settings.global.private_key**. See the LoadCredential section of systemd.exec manual for more information.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "private_key:/path/to/my_private_key"
]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.openRegistration
Allow open registration without secondary verification (reCAPTCHA).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings
Configuration for dendrite, see: **https://github.com/matrix-org/dendrite/blob/main/dendrite-sample.yaml** for available options with which to populate settings.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.app_service_api.database.connection_string
Database for the Appservice API.

Type: string

Default:

```
"file:federationapi.db"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.client_api.registration_disabled
Whether to disable user registration to the server without the shared secret.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.federation_api.database.connection_string
Database for the Federation API.

Type: string

Default:

```
"file:federationapi.db"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.global.private_key

The path to the signing private key file, used to sign requests and events.

```
  nix-shell -p dendrite --command "generate-keys --private- \
key matrix_key.pem"
```

Type: absolute path or string matching the pattern ^\$CREDENTIALS_DIRECTORY/.+

Example:

```
"$CREDENTIALS_DIRECTORY/private_key"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.global.server_name

The domain name of the server, with optional explicit port. This is used by remote servers to connect to this server. This is also the last part of your UserID.

Type: string

Example:

```
"example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.global.trusted_third_party_id_servers

Lists of domains that the server will trust as identity servers to verify third party identifiers such as phone numbers and email addresses

Type: list of string

Default:

```
[
  "matrix.org"
  "vector.im"
]
```

Example:

```
[
  "matrix.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.key_server.database.connection_string

Database for the Key Server (for end-to-end encryption).

Type: string

Default:

```
"file:keyserver.db"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.media_api.base_path
Storage path for uploaded media.

Type: string

Default:

```
"/var/lib/dendrite/media_store"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.media_api.database.connection_string
Database for the Media API.

Type: string

Default:

```
"file:mediaapi.db"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.mscs.database.connection_string
Database for exerimental MSC's.

Type: string

Default:

```
"file:mscs.db"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.relay_api.database.connection_string
Database for the Relay Server.

Type: string

Default:

```
"file:relayapi.db"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.room_server.database.connection_string
Database for the Room Server.

Type: string

Default:

```
"file:roomserver.db"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.sync_api.database.connection_string
Database for the Sync API.

Type: string

Default:

```
"file:syncserver.db"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.sync_api.search.enabled
Whether to enable Dendrite's full−text search engine.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.sync_api.search.index_path
The path the search index will be created in.

Type: string

Default:

```
"/var/lib/dendrite/searchindex"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.sync_api.search.language
The language most likely to be used on the server − used when indexing, to ensure the returned results match expectations. A full list of possible languages can be found at **https://github.com/blevesearch/bleve/tree/master/analysis/lang**

Type: string

Default:

```
"en"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.user_api.account_database.connection_string
Database for the User API, accounts.

Type: string

Default:

```
"file:userapi_accounts.db"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.settings.user_api.device_database.connection_string
Database for the User API, devices.

Type: string

Default:

```
"file:userapi_devices.db"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.tlsCert
The path to the TLS certificate.

```
nix-shell -p dendrite --command "generate-keys --tls-cert \
server.crt --tls-key server.key"
```

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/dendrite/server.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dendrite.tlsKey
The path to the TLS key.

```
nix-shell -p dendrite --command "generate-keys --tls-cert \
server.crt --tls-key server.key"
```

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/dendrite/server.key"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/dendrite.nix>

services.dependency-track.enable
Whether to enable dependency-track.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/dependency-track.nix>

services.dependency-track.package
The dependency-track package to use.

Type: package

Default:

```
pkgs.dependency-track
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/dependency-track.nix>

services.dependency−track.database.createLocally

Whether a database should be automatically created on the local host. Set this to false if you plan on provisioning a local database yourself.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.database.databaseName

Database name to use when connecting to an external or manually provisioned database; has no effect when a local database is automatically provisioned.

To use this with a local database, set **services.dependency−track.database.createLocally** to ‘false’ and create the database and user.

Type: string

Default:

```
"dependency−track"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.database.passwordFile

The path to a file containing the database password.

Type: absolute path

Example:

```
"/run/keys/db_password"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.database.type

‘h2’ database is not recommended for a production setup. ‘postgresql’ this settings it recommended for production setups. ‘manual’ the module doesn’t handle database settings.

Type: one of “h2”, “postgresql”, “manual”

Default:

```
"postgresql"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.database.username

Username to use when connecting to an external or manually provisioned database; has no effect when a local database is automatically provisioned.

To use this with a local database, set **services.dependency−track.database.createLocally** to ‘false’ and create the database and user.

Type: string

Default:

```
"dependency−track"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.frontend.baseUrl
The base URL of the API server.

NOTE:

- This URL must be reachable by the browsers of your users.
- The frontend container itself does NOT communicate with the API server directly, it just serves static files.
- When deploying to dedicated servers, please use the external IP or domain of the API server.

Type: string

Default:

```
lib.optionalString config.services.dependency−track.nginx.enable " \
${
  if sslEnabled then "https" else "http"
}://${config.services.dependency−track.nginx.domain}";
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.javaArgs
Java options passed to JVM. Configuring this is usually not necessary, but for small systems it can be useful to tweak the JVM heap size.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "−Xmx16G" ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.ldap.bindPasswordFile
The path to a file containing the LDAP bind password.

Type: absolute path

Example:

```
"/run/keys/ldap_bind_password"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.logLevel
Log level for dependency−track

Type: one of “INFO”, “WARN”, “ERROR”, “DEBUG”, “TRACE”

Default:

```
"INFO"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.nginx.enable
Whether to set up an nginx virtual host.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.nginx.domain
The domain name under which to set up the virtual host.

Type: string

Example:

```
"dtrack.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.oidc.enable
Whether to enable oidc support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.oidc.clientId
Defines the client ID for OpenID Connect.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.oidc.flow
Specifies the OpenID Connect flow to use. Values other than “implicit” will result in the Code+PKCE flow to be used. Usage of the implicit flow is strongly discouraged, but may be necessary when the IdP of choice does not support the Code+PKCE flow. See also:

- **https://oauth.net/2/grant−types/implicit/**
- **https://oauth.net/2/pkce/**

Type: one of “code”, “implicit”

Default:

```
"code"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.oidc.issuer
Defines the issuer URL to be used for OpenID Connect. See alpine.oidc.issuer property of the API server.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.oidc.loginButtonText
Defines the scopes to request for OpenID Connect. See also: **https://openid.net/specs/openid−connect−basic−1_0.html#Scopes**

Type: string

Default:

```
"Login with OpenID Connect"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.oidc.scope
Defines the scopes to request for OpenID Connect. See also: **https://openid.net/specs/openid−connect−basic−1_0.html#Scopes**

Type: string

Default:

```
"openid profile email"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.oidc.teamSynchronization
This option will ensure that team memberships for OpenID Connect users are dynamic and synchronized with membership of OpenID Connect groups or assigned roles. When a team is mapped to an OpenID Connect group, all local OpenID Connect users will automatically be assigned to the team if they are a member of the group the team is mapped to. If the user is later removed from the OpenID Connect group, they will also be removed from the team. This option provides the ability to dynamically control user permissions via the identity provider. Note that team synchronization is only performed during user provisioning and after successful authentication.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.oidc.teams.claim

Defines the name of the claim that contains group memberships or role assignments in the provider's userinfo endpoint. The claim must be an array of strings. Most public identity providers do not support group or role management. When using a customizable / on−demand hosted identity provider, name, content, and inclusion in the userinfo endpoint will most likely need to be configured.

Type: string

Default:

```
"groups"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.oidc.teams.default

Defines one or more team names that auto−provisioned OIDC users shall be added to. Multiple team names may be provided as comma−separated list.

Has no effect when **services.dependency−track.oidc.userProvisioning**=false, or **services.dependency−track.oidc.teamSynchronization**=true.

Type: null or strings concatenated with ","

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.oidc.userProvisioning

Specifies if mapped OpenID Connect accounts are automatically created upon successful authentication. When a user logs in with a valid access token but an account has not been previously provisioned, an authentication failure will be returned. This allows admins to control specifically which OpenID Connect users can access the system and which users cannot. When this value is set to true, a local OpenID Connect user will be created and mapped to the OpenID Connect account automatically. This automatic provisioning only affects authentication, not authorization.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.oidc.usernameClaim

Defines the name of the claim that contains the username in the provider's userinfo endpoint. Common claims are "name", "username", "preferred_username" or "nickname". See also: **https://openid.net/specs/openid−connect−core−1_0.html#UserInfoResponse**

Type: string

Default:

```
"name"
```

Example:

```
"preferred_username"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.port
On which port dependency−track should listen for new HTTP connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.settings
See **https://docs.dependencytrack.org/getting−started/configuration/#default−configuration** for possible options

Type: open submodule of attribute set of (string, package, bool, int or float)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.settings."alpine.data.directory"
Defines the path to the data directory. This directory will hold logs, keys, and any database or index files along with application−specific files or directories.

Type: absolute path

Default:

```
"/var/lib/dependency−track"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.settings."alpine.database.driver"
Specifies the JDBC driver class to use.

Type: one of “org.h2.Driver”, “org.postgresql.Driver”, “com.microsoft.sqlserver.jdbc.SQLServerDriver”, “com.mysql.cj.jdbc.Driver”

Default:

```
if config.services.dependency−track.database.type == "h2" then "or \
g.h2.Driver"
else if config.services.dependency−track.database.type == "postgre \
sql" then "org.postgresql.Driver"
else null;
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.settings."alpine.database.mode"
Defines the database mode of operation. Valid choices are: ‘server’, ‘embedded’, and ‘external’. In server mode, the database will listen for connections from remote hosts. In embedded mode, the system will be more secure and slightly faster. External mode should be used when utilizing an external database server (i.e. mysql, postgresql, etc).

Type: one of “server”, “embedded”, “external”

Default:

```
if config.services.dependency-track.database.type == "h2" then "em \
bedded"
else if config.services.dependency-track.database.type == "postgre \
sql" then "external"
else null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/dependency-track.nix>

services.dependency-track.settings."alpine.database.url"
Specifies the JDBC URL to use when connecting to the database.

Type: string

Default:

```
if config.services.dependency-track.database.type == "h2" then "jd \
bc:h2:/var/lib/dependency-track/db"
  else if config.services.dependency-track.database.type == "postg \
resql" then "jdbc:postgresql:${config.services.dependency-track.da \
tabase.name}?socketFactory=org.newsclub.net.unix.AFUNIXSocketFactor \
y$FactoryArg&socketFactoryArg=/run/postgresql/.s.PGSQL.5432"
  else null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/dependency-track.nix>

services.dependency-track.settings."alpine.database.username"
Specifies the username to use when authenticating to the database.

Type: string

Default:

```
if config.services.dependency-track.database.createLocally then "d \
ependency-track"
else config.services.dependency-track.database.username
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/dependency-track.nix>

services.dependency-track.settings."alpine.ldap.enabled"
Defines if LDAP will be used for user authentication. If enabled, alpine.ldap.* properties should be set accordingly.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/dependency-track.nix>

services.dependency-track.settings."alpine.oidc.client.id"
Defines the client ID to be used for OpenID Connect. The client ID should be the same as the one configured for the frontend, and will only be used to validate ID tokens.

Type: string

Default:

```
config.services.dependency-track.oidc.clientId
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.settings."alpine.oidc.enabled"
Defines if OpenID Connect will be used for user authentication. If enabled, alpine.oidc.* properties should be set accordingly.

Type: boolean

Default:

```
config.services.dependency−track.oidc.enable
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.settings."alpine.oidc.issuer"
Defines the issuer URL to be used for OpenID Connect. This issuer MUST support provider configuration via the /.well−known/openid−configuration endpoint. See also:

- **https://openid.net/specs/openid−connect−discovery−1_0.html#ProviderMetadata**
- **https://openid.net/specs/openid−connect−discovery−1_0.html#ProviderConfig**

Type: string

Default:

```
config.services.dependency−track.oidc.issuer
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.settings."alpine.oidc.team.synchronization"
This option will ensure that team memberships for OpenID Connect users are dynamic and synchronized with membership of OpenID Connect groups or assigned roles. When a team is mapped to an OpenID Connect group, all local OpenID Connect users will automatically be assigned to the team if they are a member of the group the team is mapped to. If the user is later removed from the OpenID Connect group, they will also be removed from the team. This option provides the ability to dynamically control user permissions via the identity provider. Note that team synchronization is only performed during user provisioning and after successful authentication.

Type: boolean

Default:

```
config.services.dependency−track.oidc.teamSynchronization
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.settings."alpine.oidc.teams.claim"
Defines the name of the claim that contains group memberships or role assignments in the provider's userinfo endpoint. The claim must be an array of strings. Most public identity providers do not support group or role management. When using a customizable / on−demand hosted identity provider, name, content, and inclusion in the userinfo endpoint will most likely need to be configured.

Type: string

Default:

```
config.services.dependency−track.oidc.teams.claim
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.settings."alpine.oidc.teams.default"

Defines one or more team names that auto−provisioned OIDC users shall be added to. Multiple team names may be provided as comma−separated list.

Has no effect when **services.dependency−track.oidc.userProvisioning**=false, or **services.dependency−track.oidc.teamSynchronization**=true.

Type: null or strings concatenated with ","

Default:

```
config.services.dependency-track.oidc.teams.default
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.settings."alpine.oidc.user.provisioning"

Specifies if mapped OpenID Connect accounts are automatically created upon successful authentication. When a user logs in with a valid access token but an account has not been previously provisioned, an authentication failure will be returned. This allows admins to control specifically which OpenID Connect users can access the system and which users cannot. When this value is set to true, a local OpenID Connect user will be created and mapped to the OpenID Connect account automatically. This automatic provisioning only affects authentication, not authorization.

Type: boolean

Default:

```
config.services.dependency-track.oidc.userProvisioning
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.dependency−track.settings."alpine.oidc.username.claim"

Defines the name of the claim that contains the username in the provider's userinfo endpoint. Common claims are "name", "username", "preferred_username" or "nickname". See also: **https://openid.net/specs/openid−connect−core−1_0.html#UserInfoResponse**

Type: string

Default:

```
config.services.dependency-track.oidc.usernameClaim
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dependency−track.nix>

services.desktopManager.budgie.enable

Whether to enable the Budgie desktop.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/desktop−managers/budgie.nix>

services.desktopManager.budgie.extraGSettingsOverridePackages
List of packages for which GSettings are overridden.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/budgie.nix>

services.desktopManager.budgie.extraGSettingsOverrides
Additional GSettings overrides.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/budgie.nix>

services.desktopManager.budgie.extraPlugins
Extra plugins for the Budgie desktop

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.budgie-analogue-clock-applet ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/budgie.nix>

services.desktopManager.budgie.sessionPath
Additional list of packages to be added to the session search path. Useful for GSettings-conditional autostart.

Note that this should be a last resort; patching the package is preferred (see GPaste).

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.gpaste ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/budgie.nix>

services.desktopManager.cosmic.enable
Whether to enable COSMIC desktop environment.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/cosmic.nix>

services.desktopManager.cosmic.showExcludedPkgsWarning
Whether to enable the warning for excluding core packages.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/cosmic.nix>

services.desktopManager.cosmic.xwayland.enable
Whether to enable Xwayland support for the COSMIC compositor.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/cosmic.nix>

services.desktopManager.gnome.enable
Enable GNOME desktop manager.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/gnome.nix>

services.desktopManager.gnome.debug
Whether to enable pkgs.gnome−session debug messages.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/gnome.nix>

services.desktopManager.gnome.extraGSettingsOverridePackages
List of packages for which gsettings are overridden.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/gnome.nix>

services.desktopManager.gnome.extraGSettingsOverrides
Additional gsettings overrides.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/gnome.nix>

services.desktopManager.gnome.flashback.enableMetacity
Whether to enable the standard GNOME Flashback session with Metacity.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/gnome.nix>

services.desktopManager.gnome.flashback.customSessions
Other GNOME Flashback sessions to enable.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/gnome.nix>

services.desktopManager.gnome.flashback.customSessions.*.enableGnomePanel
Whether to enable the GNOME panel in this session.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/gnome.nix>

services.desktopManager.gnome.flashback.customSessions.*.wmCommand
The executable of the window manager to use.

Type: string

Example:

```
"${pkgs.haskellPackages.xmonad}/bin/xmonad"
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/gnome.nix>

services.desktopManager.gnome.flashback.customSessions.*.wmLabel
The name of the window manager to show in the session chooser.

Type: string

Example:

```
"XMonad"
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/gnome.nix>

services.desktopManager.gnome.flashback.customSessions.*.wmName
A unique identifier for the window manager.

Type: string matching the pattern [a−zA−Z0−9_−]+

Example:

```
"xmonad"
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/gnome.nix>

services.desktopManager.gnome.flashback.panelModulePackages
Packages containing modules that should be made available to ‘pkgs.gnome−panel’ (usually for applets).

If you’re packaging something to use here, please install the modules in ‘$out/lib/gnome−panel/modules’.

Type: list of package

Default:

```
[ pkgs.gnome−applets ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/gnome.nix>

services.desktopManager.gnome.sessionPath
Additional list of packages to be added to the session search path. Useful for GNOME Shell extensions or GSettings−conditional autostart.

Note that this should be a last resort; patching the package is preferred (see GPaste).

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.gpaste ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/gnome.nix>

services.desktopManager.lomiri.enable
Whether to enable the Lomiri graphical shell (formerly known as Unity8) .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/lomiri.nix>

services.desktopManager.pantheon.enable
Enable the pantheon desktop manager

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/pantheon.nix>

services.desktopManager.pantheon.debug
Whether to enable gnome-session debug messages.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/pantheon.nix>

services.desktopManager.pantheon.extraGSettingsOverridePackages
List of packages for which gsettings are overridden.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/pantheon.nix>

services.desktopManager.pantheon.extraGSettingsOverrides
Additional gsettings overrides.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/pantheon.nix>

services.desktopManager.pantheon.extraSwitchboardPlugs
Plugs to add to Switchboard.

Type: null or (list of package)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/pantheon.nix>

services.desktopManager.pantheon.extraWingpanelIndicators
Indicators to add to Wingpanel.

Type: null or (list of package)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/pantheon.nix>

services.desktopManager.pantheon.sessionPath
Additional list of packages to be added to the session search path. Useful for GSettings−conditional autostart.

Note that this should be a last resort; patching the package is preferred (see GPaste).

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.gpaste ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/pantheon.nix>

services.desktopManager.plasma6.enable
Enable the Plasma 6 (KDE 6) desktop environment.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/plasma6.nix>

services.desktopManager.plasma6.enableQt5Integration
Enable Qt 5 integration (theming, etc). Disable for a pure Qt 6 system.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/plasma6.nix>

services.desktopManager.plasma6.notoPackage
The Noto fonts − used for UI by default package to use.

Type: package

Default:

```
pkgs.noto−fonts
```

Example:

```
noto−fonts−lgc−plus
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/plasma6.nix>

services.devmon.enable
Whether to enable devmon, an automatic device mounting daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/devmon.nix>

services.devpi−server.enable
Whether to enable Devpi Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/devpi−server.nix>

services.devpi−server.package
The devpi−server package to use.

Type: package

Default:

```
pkgs.devpi−server
```

Declared by:
<nixpkgs/nixos/modules/services/misc/devpi−server.nix>

services.devpi−server.extraPackages
Plugins and extra Python packages to be available to devpi−server.

Type: (function that evaluates to a(n) list of package) or (list of package) convertible to it

Default:

```
ps: [ ]
```

Example:

```
ps: with ps; [ devpi−web devpi−ldap ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/devpi−server.nix>

services.devpi−server.host
domain/ip address to listen on

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/devpi-server.nix>

services.devpi-server.openFirewall
Whether to enable opening the default ports in the firewall for Devpi Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/devpi-server.nix>

services.devpi-server.port
The port on which Devpi Server will listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3141
```

Declared by:
<nixpkgs/nixos/modules/services/misc/devpi-server.nix>

services.devpi-server.primaryUrl
Url for the primary node. Required option for replica nodes.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/devpi-server.nix>

services.devpi-server.replica
Run node as a replica. Requires the secretFile option and the primaryUrl to be enabled.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/devpi-server.nix>

services.devpi-server.secretFile
Path to a shared secret file used for synchronization, Required for all nodes in a replica/primary setup.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/devpi-server.nix>

services.dex.enable
Whether to enable the OpenID Connect and OAuth2 identity provider.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dex.nix>

services.dex.package
The dex−oidc package to use.

Type: package

Default:

```
pkgs.dex-oidc
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dex.nix>

services.dex.environmentFile
Environment file (see **systemd.exec**(5) “EnvironmentFile=” section for the syntax) to define variables for dex. This option can be used to safely include secret keys into the dex configuration.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dex.nix>

services.dex.settings
The available options can be found in **the example configuration**.

It’s also possible to refer to environment variables (defined in **services.dex.environmentFile**) using the syntax ‘$VARIABLE_NAME’.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  # External url
  issuer = "http://127.0.0.1:5556/dex";
  storage = {
    type = "postgres";
    config.host = "/var/run/postgres";
  };
  web = {
    http = "127.0.0.1:5556";
  };
  enablePasswordDB = true;
  staticClients = [
    {
      id = "oidcclient";
      name = "Client";
      redirectURIs = [ "https://example.com/callback" ];
      secretFile = "/etc/dex/oidcclient"; # The content of ‘secretF \
```

```
ile‘ will be written into to the config as ‘secret‘.
    }
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dex.nix>

services.deye−dummycloud.enable
Whether to enable the deye−dummycloud service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/deye−dummycloud.nix>

services.deye−dummycloud.mqttBrokerUrl
MQTT broker URL

Type: string

Default:

```
"mqtt://localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/deye−dummycloud.nix>

services.deye−dummycloud.mqttPassword
MQTT password

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/deye−dummycloud.nix>

services.deye−dummycloud.mqttUsername
MQTT username

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/deye−dummycloud.nix>

services.dgraph.enable
Whether to enable Dgraph native GraphQL database with a graph backend.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/dgraph.nix>

services.dgraph.package
The dgraph package to use.

Type: package

Default:

```
pkgs.dgraph
```

Declared by:
<nixpkgs/nixos/modules/services/databases/dgraph.nix>

services.dgraph.alpha.host
The host which dgraph alpha will be run on.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/dgraph.nix>

services.dgraph.alpha.port
The port which to run dgraph alpha on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7080
```

Declared by:
<nixpkgs/nixos/modules/services/databases/dgraph.nix>

services.dgraph.settings
Contents of the dgraph config. For more details see **https://dgraph.io/docs/deploy/config**

Type: JSON value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/databases/dgraph.nix>

services.dgraph.zero.host
The host which dgraph zero will be run on.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/dgraph.nix>

services.dgraph.zero.port

The port which to run dgraph zero on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5080
```

Declared by:

<nixpkgs/nixos/modules/services/databases/dgraph.nix>

services.dictd.enable

Whether to enable the DICT.org dictionary server.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/dictd.nix>

services.dictd.DBs

List of databases to make available.

Type: list of package

Default:

```
with pkgs.dictdDBs; [ wiktionary wordnet ]
```

Example:

```
[ pkgs.dictdDBs.nld2eng ]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/dictd.nix>

services.diod.enable

Whether to enable the diod 9P file server.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/diod.nix>

services.diod.allsquash

Remap all users to “nobody”. The attaching user need not be present in the password file.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/diod.nix>

services.diod.authRequired

Allow clients to connect without authentication, i.e. without a valid MUNGE credential.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/diod.nix>

services.diod.exportall

Export all file systems listed in /proc/mounts. If new file systems are mounted after diod has started, they will become immediately mountable. If there is a duplicate entry for a file system in the exports list, any options listed in the exports entry will apply.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/diod.nix>

services.diod.exportopts

Establish a default set of export options. These are overridden, not appended to, by opts attributes in an “exports” entry.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/diod.nix>

services.diod.exports

List the file systems that clients will be allowed to mount. All paths should be fully qualified. The exports table can include two types of element: a string element (as above), or an alternate table element form { path=“/path”, opts=“ro” }. In the alternate form, the (optional) opts attribute is a comma−separated list of export options. The two table element forms can be mixed in the exports table. Note that although diod will not traverse file system boundaries for a given mount due to inode uniqueness constraints, subdirectories of a file system can be separately exported.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/diod.nix>

services.diod.extraConfig

Extra configuration options for diod.conf.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/diod.nix>

services.diod.listen
[“IP:PORT” [,“IP:PORT”,…]] List the interfaces and ports that diod should listen on.

Type: list of string

Default:

```
[
  "0.0.0.0:564"
]
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/diod.nix>

services.diod.logdest
Set the destination for logging. The value has the form of “syslog:facility:level” or “filename”.

Type: string

Default:

```
"syslog:daemon:err"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/diod.nix>

services.diod.nwthreads
Sets the (fixed) number of worker threads created to handle 9P requests for a unique aname.

Type: signed integer

Default:

```
16
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/diod.nix>

services.diod.squashuser
Change the squash user. The squash user must be present in the password file.

Type: string

Default:

```
"nobody"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/diod.nix>

services.diod.statfsPassthru
This option configures statfs to return the host file system’s type rather than V9FS_MAGIC.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/diod.nix>

services.diod.userdb

This option disables password/group lookups. It allows any uid to attach and assumes gid=uid, and supplementary groups contain only the primary gid.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/diod.nix>

services.discourse.enable

Whether to enable Discourse, an open source discussion platform.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.enableACME

Whether an ACME certificate should be used to secure connections to the server.

Type: boolean

Default: true, unless **services.discourse.sslCertificate** and **services.discourse.sslCertificateKey** are set.

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.package

The discourse package to use.

Type: package

Default:

```
pkgs.discourse
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.admin.email

The admin user email address.

Type: string

Example:

```
"admin@example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.admin.fullName

The admin user’s full name.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.admin.passwordFile
A path to a file containing the admin user's password.

This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.admin.skipCreate
Do not create the admin account, instead rely on other existing admin accounts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.admin.username
The admin user username.

Type: string

Example:

```
"admin"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.backendSettings
Additional settings to put in the *discourse.conf* file.

Look in the **discourse_defaults.conf** file in the upstream distribution to find available options.

Setting an option to 'null' means "define variable, but leave right−hand side empty".

Type: attribute set of (null or string or signed integer or boolean or floating point number)

Default:

```
{ }
```

Example:

```
{
  max_reqs_per_ip_per_minute = 300;
  max_reqs_per_ip_per_10_seconds = 60;
  max_asset_reqs_per_ip_per_10_seconds = 250;
  max_reqs_per_ip_mode = "warn+block";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.database.createLocally

Whether a database should be automatically created on the local host. Set this to ‘false’ if you plan on provisioning a local database yourself. This has no effect if **services.discourse.database.host** is customized.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.database.host

Discourse database hostname. ‘null’ means “prefer local unix socket connection”.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.database.ignorePostgresqlVersion

Whether to allow other versions of PostgreSQL than the recommended one. Only effective when **services.discourse.database.createLocally** is enabled.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.database.name

Discourse database name.

Type: string

Default:

```
"discourse"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.database.passwordFile

File containing the Discourse database user password.

This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.database.pool
Database connection pool size.

Type: signed integer

Default:

```
8
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.database.username
Discourse database user.

Type: string

Default:

```
"discourse"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.hostname
The hostname to serve Discourse on.

Type: string

Default:

```
config.networking.fqdnOrHostName
```

Example:

```
"discourse.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.mail.contactEmailAddress
Email address of key contact responsible for this site. Used for critical notifications, as well as on the '/about' contact form for urgent matters.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.mail.incoming.enable
Whether to set up Postfix to receive incoming mail.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.mail.incoming.apiKeyFile

A file containing the Discourse API key used to add posts and messages from mail. If left at its default value ‘null’, one will be automatically generated.

This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.mail.incoming.mailReceiverPackage

The discourse−mail−receiver package to use.

Type: package

Default:

```
pkgs.discourse-mail-receiver
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.mail.incoming.replyEmailAddress

Template for reply by email incoming email address, for example: %{reply_key}@reply.example.com or replies+%{reply_key}@example.com

Type: string

Default:

```
"%{reply_key}@${config.services.discourse.hostname}"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.mail.notificationEmailAddress

The ‘from:’ email address used when sending all essential system emails. The domain specified here must have SPF, DKIM and reverse PTR records set correctly for email to arrive.

Type: string

Default:

```
"${if config.services.discourse.mail.incoming.enable then "notifica \
tions" else "noreply"}@${config.services.discourse.hostname}"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.mail.outgoing.enableStartTLSAuto

Whether to try to use StartTLS.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.mail.outgoing.authentication
Authentication type to use, see **https://api.rubyonrails.org/classes/ActionMailer/Base.html**

Type: null or one of “plain”, “login”, “cram_md5”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.mail.outgoing.domain
HELO domain to use for outgoing mail.

Type: string

Default:

```
config.services.discourse.hostname
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.mail.outgoing.forceTLS
Force implicit TLS as per RFC 8314 3.3.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.mail.outgoing.opensslVerifyMode
How OpenSSL checks the certificate, see **https://api.rubyonrails.org/classes/ActionMailer/Base.html**

Type: string

Default:

```
"peer"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.mail.outgoing.passwordFile
A file containing the password of the SMTP server account.

This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.mail.outgoing.port
The port of the SMTP server Discourse should use to send email.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
25
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.mail.outgoing.serverAddress
The address of the SMTP server Discourse should use to send email.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.mail.outgoing.username
The username of the SMTP server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.nginx.enable
Whether an ‘nginx’ virtual host should be set up to serve Discourse. Only disable if you’re planning to use a different web server, which is not recommended.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.plugins
Plugins to install as part of Discourse, expressed as a list of derivations.

Type: list of package

Default:

```
[ ]
```

Example:

```
with config.services.discourse.package.plugins; [
  discourse−canned−replies
  discourse−github
];
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.redis.dbNumber
Redis database number.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.redis.host
Redis server hostname.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.redis.passwordFile
File containing the Redis password.

This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.redis.useSSL
Connect to Redis with SSL.

Type: boolean

Default:

```
config.services.discourse.redis.host != "localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.secretKeyBaseFile
The path to a file containing the ‘secret_key_base’ secret.

Discourse uses ‘secret_key_base’ to encrypt the cookie store, which contains session data, and to digest user auth tokens.

Needs to be a 64 byte long string of hexadecimal characters. You can generate one by running

```
openssl rand −hex 64 >/path/to/secret_key_base_file
```

This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/secret_key_base"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.sidekiqProcesses

How many Sidekiq processes should be spawned.

Type: signed integer

Default:

```
1
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.siteSettings

Discourse site settings. These are the settings that can be changed from the UI. This only defines their default values: they can still be overridden from the UI.

Available settings can be found by looking in the **site_settings.yml** file of the upstream distribution. To find a setting's path, you only need to care about the first two levels; i.e. its category and name. See the example.

Settings containing secret data should be set to an attribute set containing the attribute '_secret' − a string pointing to a file containing the value the option should be set to. See the example to get a better picture of this: in the resulting *config/nixos_site_settings.json* file, the 'login.github_client_secret' key will be set to the contents of the */run/keys/discourse_github_client_secret* file.

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  required = {
    title = "My Cats";
    site_description = "Discuss My Cats (and be nice plz)";
  };
  login = {
    enable_github_logins = true;
    github_client_id = "a2f6dfe838cb3206ce20";
    github_client_secret._secret = /run/keys/discourse_github_clien \
t_secret;
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.sslCertificate

The path to the server SSL certificate. Set this to enable SSL.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/ssl.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.sslCertificateKey
The path to the server SSL certificate key. Set this to enable SSL.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/ssl.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.discourse.unicornTimeout
Time in seconds before a request to Unicorn times out.

This can be raised if the system Discourse is running on is too slow to handle many requests within 30 seconds.

Type: signed integer

Default:

```
30
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/discourse.nix>

services.disnix.enable
Whether to enable Disnix.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/disnix.nix>

services.disnix.enableMultiUser
Whether to support multi−user mode by enabling the Disnix D−Bus service

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/disnix.nix>

services.disnix.enableProfilePath
Whether to enable exposing the Disnix profiles in the system's PATH.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/disnix.nix>

services.disnix.package
The disnix package to use.

Type: package

Default:

```
pkgs.disnix
```

Declared by:
<nixpkgs/nixos/modules/services/misc/disnix.nix>

services.disnix.profiles
Names of the Disnix profiles to expose in the system's PATH

Type: list of string

Default:

```
[
  "default"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/disnix.nix>

services.disnix.useWebServiceInterface
Whether to enable the DisnixWebService interface running on Apache Tomcat.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/disnix.nix>

services.displayManager.enable
Whether to enable shared display manager integration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/default.nix>

services.displayManager.autoLogin
Auto login configuration attrset.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/default.nix>

services.displayManager.autoLogin.enable
Automatically log in as **autoLogin.user**.

Type: boolean

Default:

```
config.services.displayManager.autoLogin.user != null
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/default.nix>

services.displayManager.autoLogin.user
User to be used for the automatic login.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/default.nix>

services.displayManager.cosmic−greeter.enable
Whether to enable COSMIC greeter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/cosmic−greeter.nix>

services.displayManager.cosmic−greeter.package
The cosmic−greeter package to use.

Type: package

Default:

```
pkgs.cosmic−greeter
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/cosmic−greeter.nix>

services.displayManager.defaultSession

Graphical session to pre−select in the session chooser (only effective for GDM, LightDM and SDDM).

On GDM, LightDM and SDDM, it will also be used as a session for auto−login.

Set this option to empty string to get an error with a list of currently available sessions.

Type: session name

Default:

```
null
```

Example:

```
"gnome"
```

Declared by:

<nixpkgs/nixos/modules/services/display−managers/default.nix>

services.displayManager.dms−greeter.enable

Whether to enable DankMaterialShell greeter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/display−managers/dms−greeter.nix>

services.displayManager.dms−greeter.package

The DankMaterialShell package to use for the greeter.

Defaults to the package from ‘programs.dms−shell’ if it is enabled, otherwise defaults to ‘pkgs.dms−shell’.

Type: package

Default:

```
if config.programs.dms-shell.enable
then config.programs.dms-shell.package
else pkgs.dms-shell;
```

Declared by:

<nixpkgs/nixos/modules/services/display−managers/dms−greeter.nix>

services.displayManager.dms−greeter.compositor.customConfig

Custom compositor configuration to use for the greeter session.

This configuration is written to a file and passed to the compositor when launching the greeter. The format and available options depend on the selected compositor.

Leave empty to use the system’s default compositor configuration.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  # Niri example
```

```
input {
    keyboard {
        xkb {
            layout "us"
        }
    }
}
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/dms−greeter.nix>

services.displayManager.dms−greeter.compositor.name
The Wayland compositor to run the greeter in.

The specified compositor must be enabled via its corresponding ‘programs.<compositor>.enable’ option.

Supported compositors:

- niri: A scrollable−tiling Wayland compositor
- hyprland: A dynamic tiling Wayland compositor
- sway: An i3−compatible Wayland compositor

Type: one of “niri”, “hyprland”, “sway”

Example:

```
"niri"
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/dms−greeter.nix>

services.displayManager.dms−greeter.configFiles
List of DankMaterialShell configuration files to copy into the greeter data directory at ‘/var/lib/dms−greeter’.

This is useful for preserving user preferences like wallpapers, themes, and other settings in the greeter screen.

Tip
Use **configHome** instead if your configuration files are in standard XDG locations.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/home/user/.config/DankMaterialShell/settings.json"
  "/home/user/.local/state/DankMaterialShell/session.json"
]
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/dms−greeter.nix>

services.displayManager.dms−greeter.configHome
Path to a user’s home directory from which to copy DankMaterialShell configuration files.

When set, the following files will be automatically copied to the greeter:

- ‘~/.config/DankMaterialShell/settings.json’
- ‘~/.local/state/DankMaterialShell/session.json’
- ‘~/.cache/DankMaterialShell/dms−colors.json’

If your configuration files are in non−standard locations, use the **configFiles** option instead.

Type: null or string

Default:

```
null
```

Example:

```
"/home/alice"
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/dms−greeter.nix>

services.displayManager.dms−greeter.logs.path
File path where DMS greeter logs will be saved.

This is useful for debugging greeter issues. Logs will include output from both the greeter and the compositor.

Type: absolute path

Default:

```
"/tmp/dms−greeter.log"
```

Example:

```
"/var/log/dms−greeter.log"
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/dms−greeter.nix>

services.displayManager.dms−greeter.logs.save
Whether to enable saving logs from the DMS greeter to a file.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/dms−greeter.nix>

services.displayManager.dms−greeter.quickshell.package
The Quickshell package to use for the greeter.

Defaults to the quickshell package from ‘programs.dms−shell’ if it is enabled, otherwise defaults to ‘pkgs.quickshell’.

Type: package

Default:

```
if config.programs.dms−shell.enable
then config.programs.dms−shell.quickshell.package
else pkgs.quickshell;
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/dms−greeter.nix>

services.displayManager.gdm.enable
Whether to enable GDM, the GNOME Display Manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/gdm.nix>

services.displayManager.gdm.autoLogin.delay
Seconds of inactivity after which the autologin will be performed.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/display−managers/gdm.nix>

services.displayManager.gdm.autoSuspend
On the GNOME Display Manager login screen, suspend the machine after inactivity. (Does not affect automatic suspend while logged in, or at lock screen.)

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/gdm.nix>

services.displayManager.gdm.banner
Optional message to display on the login screen.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Example:

```
foo
bar
baz
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/gdm.nix>

services.displayManager.gdm.debug
Whether to enable debugging messages in GDM.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/gdm.nix>

services.displayManager.gdm.extraPackages
Additional packages to add to XDG_DATA_DIRS for GDM. The '/share' directory of each package will be added to the data path.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.gnome−themes−extra ]
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/gdm.nix>

services.displayManager.gdm.settings
Options passed to the gdm daemon. See **here** for supported options.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  debug = {
    enable = true;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/gdm.nix>

services.displayManager.gdm.wayland
Allow GDM to run on Wayland instead of Xserver.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/gdm.nix>

services.displayManager.generic.enable
Whether to enable generic display manager integration − deprecated.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/generic.nix>

services.displayManager.generic.environment

Additional environment variables needed by the display manager.

Type: attribute set of unspecified value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/display−managers/generic.nix>

services.displayManager.generic.execCmd

Command to start the display manager.

Type: null or string

Default:

```
null
```

Example:

```
"${pkgs.lightdm}/bin/lightdm"
```

Declared by:

<nixpkgs/nixos/modules/services/display−managers/generic.nix>

services.displayManager.generic.preStart

Script executed before the display manager is started.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"rm −f /var/log/my−display−manager.log"
```

Declared by:

<nixpkgs/nixos/modules/services/display−managers/generic.nix>

services.displayManager.hiddenUsers

A list of users which will not be shown in the display manager.

Type: list of string

Default:

```
[
  "nobody"
]
```

Declared by:

<nixpkgs/nixos/modules/services/display−managers/default.nix>

services.displayManager.lemurs.enable

Whether to enable lemurs, a customizable TUI display/login manager.

Note
For Wayland compositors, your user must be in the “seat” group.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/lemurs.nix>

services.displayManager.lemurs.package
The lemurs package to use.

Type: package

Default:

```
pkgs.lemurs
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/lemurs.nix>

services.displayManager.lemurs.settings
Configuration for lemurs, provided as a Nix attribute set and automatically serialized to TOML. See **lemurs configuration documentation** for available options.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  do_log = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/lemurs.nix>

services.displayManager.logToFile
Whether the display manager redirects the output of the session script to *~/.xsession−errors*.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/default.nix>

services.displayManager.logToJournal
Whether the display manager redirects the output of the session script to the systemd journal.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/default.nix>

services.displayManager.ly.enable
Whether to enable ly as the display manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/ly.nix>

services.displayManager.ly.package
The ly package to use.

Type: package

Default:

```
pkgs.ly
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/ly.nix>

services.displayManager.ly.settings
Extra settings merged in and overwriting defaults in config.ini.

Type: attribute set of (INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  load = false;
  save = false;
}
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/ly.nix>

services.displayManager.ly.x11Support
Whether to enable support for X11

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/ly.nix>

services.displayManager.plasma−login−manager.enable
Whether to enable Plasma Login Manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/plasma−login−manager.nix>

services.displayManager.plasma−login−manager.package
The plasma−login−manager package to use.

Type: package

Default:

```
pkgs.kdePackages.plasma−login−manager
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/plasma−login−manager.nix>

services.displayManager.plasma−login−manager.settings
Additional settings for Plasma Login Manager (see ‘man plasmalogin.conf’)

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  Users = {
    ReuseSession = false;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/plasma−login−manager.nix>

services.displayManager.sddm.enable
Whether to enable sddm as the display manager.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/sddm.nix>

services.displayManager.sddm.enableHidpi
Whether to enable automatic HiDPI mode.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/sddm.nix>

services.displayManager.sddm.package
The sddm package to use.

Type: package

Default:

```
pkgs.kdePackages.sddm
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/sddm.nix>

services.displayManager.sddm.autoLogin.minimumUid
Minimum user ID for auto−login user.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/sddm.nix>

services.displayManager.sddm.autoLogin.relogin
If true automatic login will kick in again on session exit (logout), otherwise it will only log in automatically when the display−manager is started.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/sddm.nix>

services.displayManager.sddm.autoNumlock
Enable numlock at login.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/sddm.nix>

services.displayManager.sddm.extraPackages
Extra Qt plugins / QML libraries to add to the environment.

Type: list of package

Default:

```
"[]"
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/sddm.nix>

services.displayManager.sddm.settings
Extra settings merged in and overwriting defaults in sddm.conf.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  Autologin = {
    Session = "plasma.desktop";
    User = "john";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/sddm.nix>

services.displayManager.sddm.setupScript
A script to execute when starting the display server. DEPRECATED, please use **services.xserver.displayManager.setupCommands**.

Type: string

Default:
```
""
```

Example:
```
# workaround for using NVIDIA Optimus without Bumblebee
xrandr −−setprovideroutputsource modesetting NVIDIA−0
xrandr −−auto
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/sddm.nix>

services.displayManager.sddm.stopScript
A script to execute when stopping the display server.

Type: string

Default:
```
""
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/sddm.nix>

services.displayManager.sddm.theme
Greeter theme to use.

Type: string

Default:
```
""
```

Example:
```
"${pkgs.where−is−my−sddm−theme.override { variants = [ "qt5" ]; \
 }}/share/sddm/themes/where_is_my_sddm_theme_qt5"
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/sddm.nix>

services.displayManager.sddm.wayland.enable
Whether to enable experimental Wayland support.

Type: boolean

Default:
```
false
```

Example:
```
true
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/sddm.nix>

services.displayManager.sddm.wayland.compositor

The compositor to use: kwin, weston

Type: one of “kwin”, “weston”

Default:

```
"weston"
```

Declared by:

<nixpkgs/nixos/modules/services/display−managers/sddm.nix>

services.displayManager.sessionPackages

A list of packages containing x11 or wayland session files to be passed to the display manager.

Type: list of package with provided sessions

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/display−managers/default.nix>

services.distccd.enable

Whether to enable distccd, a distributed C/C++ compiler.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/development/distccd.nix>

services.distccd.package

The distcc package to use.

Type: package

Default:

```
pkgs.distcc
```

Declared by:

<nixpkgs/nixos/modules/services/development/distccd.nix>

services.distccd.allowedClients

Client IPs which are allowed to connect to distccd in CIDR notation.

Anyone who can connect to the distccd server can run arbitrary commands on that system as the distcc user, therefore you should use this judiciously.

Type: list of string

Default:

```
[
  "127.0.0.1"
]
```

Example:

```
[
  "127.0.0.1"
```

```
  "192.168.0.0/24"
  "10.0.0.0/24"
]
```

Declared by:
<nixpkgs/nixos/modules/services/development/distccd.nix>

services.distccd.jobTimeout
Maximum duration, in seconds, of a single compilation request.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/distccd.nix>

services.distccd.logLevel
Set the minimum severity of error that will be included in the log file. Useful if you only want to see error messages rather than an entry for each connection.

Type: null or one of “critical”, “error”, “warning”, “notice”, “info”, “debug”

Default:

```
"warning"
```

Declared by:
<nixpkgs/nixos/modules/services/development/distccd.nix>

services.distccd.maxJobs
Maximum number of tasks distccd should execute at lib.any time.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/distccd.nix>

services.distccd.nice
Niceness of the compilation tasks.

Type: null or integer between −20 and 19 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/distccd.nix>

services.distccd.openFirewall
Opens the specified TCP port for distcc.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/development/distccd.nix>

services.distccd.port

The TCP port which distccd will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3632
```

Declared by:

<nixpkgs/nixos/modules/services/development/distccd.nix>

services.distccd.stats.enable

Whether to enable statistics reporting via HTTP server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/development/distccd.nix>

services.distccd.stats.port

The TCP port which the distccd statistics HTTP server will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3633
```

Declared by:

<nixpkgs/nixos/modules/services/development/distccd.nix>

services.distccd.zeroconf

Whether to register via mDNS/DNS−SD

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/development/distccd.nix>

services.dkimproxy−out.enable

Whether to enable dkimproxy_out.

Note that a key will be auto−generated, and can be found in /var/lib/dkimproxy−out.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dkimproxy−out.nix>

services.dkimproxy−out.domains

List of domains DKIMproxy can sign for.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "example.org"
  "example.com"
]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dkimproxy−out.nix>

services.dkimproxy−out.keySize

Size of the RSA key to use to sign outgoing emails. Note that the maximum mandatorily verified as per RFC6376 is 2048.

Type: signed integer

Default:

```
2048
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dkimproxy−out.nix>

services.dkimproxy−out.listen

Address:port DKIMproxy should listen on.

Type: string

Example:

```
"127.0.0.1:10027"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dkimproxy−out.nix>

services.dkimproxy−out.relay

Address:port DKIMproxy should forward mail to.

Type: string

Example:

```
"127.0.0.1:10028"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dkimproxy−out.nix>

services.dkimproxy−out.selector

The selector to use for DKIM key identification.

For example, if ‘selector1’ is used here, then for each domain ‘example.org’ given in ‘domain’, ‘selector1._domainkey.example.org’ should contain the TXT record indicating the public key is the one in /var/lib/dkimproxy−out/public.key: “v=DKIM1; t=s; p=[THE PUBLIC KEY]”.

Type: string

Example:

```
"selector1"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dkimproxy-out.nix>

services.dleyna.enable
Whether to enable dleyna-renderer and dleyna-server service, a DBus service for handling DLNA servers and renderers.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/dleyna.nix>

services.dnscache.enable
Whether to run the dnscache caching dns server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnscache.nix>

services.dnscache.clientIps
Client IP addresses (or prefixes) from which to accept connections.

Type: list of string

Default:

```
[
  "127.0.0.1"
]
```

Example:

```
[
  "192.168"
  "172.23.75.82"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnscache.nix>

services.dnscache.domainServers
Table of {hostname: server} pairs to use as authoritative servers for hosts (and subhosts). If entry for @ is not specified predefined list of root servers is used.

Type: attribute set of list of string

Default:

```
{ }
```

Example:

```
{
  "@" = ["8.8.8.8" "8.8.4.4"];
  "example.com" = ["192.168.100.100"];
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnscache.nix>

services.dnscache.forwardOnly
Whether to treat root servers (for @) as caching servers, requesting addresses the same way a client does. This is needed if you want to use e.g. Google DNS as your upstream DNS.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnscache.nix>

services.dnscache.ip
IP address on which to listen for connections.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnscache.nix>

services.dnscrypt−proxy.enable
Whether to enable dnscrypt−proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnscrypt−proxy.nix>

services.dnscrypt−proxy.package
The dnscrypt−proxy package to use.

Type: package

Default:

```
pkgs.dnscrypt−proxy
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnscrypt−proxy.nix>

services.dnscrypt−proxy.configFile
Path to TOML config file. See: **https://github.com/DNSCrypt/dnscrypt−proxy/blob/master/dnscrypt−proxy/example−dnscrypt−proxy.toml** If this option is set, it will override any configuration done in options.services.dnscrypt−proxy.settings.

Type: absolute path

Default: TOML file generated from **services.dnscrypt−proxy.settings**

Example:

```
"/etc/dnscrypt−proxy/dnscrypt−proxy.toml"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnscrypt−proxy.nix>

services.dnscrypt−proxy.settings
Attrset that is converted and passed as TOML config file. For available params, see: **https://github.com/DNSCrypt/dnscrypt−proxy/blob/2.1.15/dnscrypt−proxy/example−dnscrypt−proxy.toml**

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  sources.public−resolvers = {
    urls = [ "https://download.dnscrypt.info/resolvers−list/v2/pub \
lic−resolvers.md" ];
    cache_file = "public−resolvers.md";
    minisign_key = "RWQf6LRCGA9i53mlYecO4IzT51TGPpvWucNSCh1CBM0QTaL \
n73Y7GFO3";
    refresh_delay = 72;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnscrypt−proxy.nix>

services.dnscrypt−proxy.upstreamDefaults
Whether to base the config declared in **services.dnscrypt−proxy.settings** on the upstream example config (**https://github.com/DNSCrypt/dnscrypt−proxy/blob/master/dnscrypt−proxy/example−dnscrypt−proxy.toml**)

Disable this if you want to declare your dnscrypt config from scratch.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnscrypt−proxy.nix>

services.dnsdist.enable
Whether to enable dnsdist domain name server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnsdist.nix>

services.dnsdist.dnscrypt.enable

Whether to enable a DNSCrypt endpoint to dnsdist.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dnsdist.nix>

services.dnsdist.dnscrypt.certLifetime

The lifetime (in minutes) of the resolver certificate. This will be automatically rotated before expiration.

Type: positive integer, meaning >0

Default:

```
15
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dnsdist.nix>

services.dnsdist.dnscrypt.listenAddress

Listen IP address of the endpoint

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dnsdist.nix>

services.dnsdist.dnscrypt.listenPort

Listen port of the endpoint

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
443
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dnsdist.nix>

services.dnsdist.dnscrypt.providerKey

The filepath to the provider secret key. If not given a new provider key pair will be generated in /var/lib/dnsdist on the first run.

Note
The file must be readable by the dnsdist user/group.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dnsdist.nix>

services.dnsdist.dnscrypt.providerName
The name that will be given to this DNSCrypt resolver.

> **Note**
> The provider name must start with ‘2.dnscrypt−cert.’.

Type: string

Default:

```
2.dnscrypt-cert.${config.networking.hostName}
```

Example:

```
"2.dnscrypt-cert.myresolver"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnsdist.nix>

services.dnsdist.extraConfig
Extra lines to be added verbatim to dnsdist.conf.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnsdist.nix>

services.dnsdist.listenAddress
Listen IP address

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnsdist.nix>

services.dnsdist.listenPort
Listen port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
53
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnsdist.nix>

services.dnsmasq.enable
Whether to run dnsmasq.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnsmasq.nix>

services.dnsmasq.package

The dnsmasq package to use.

Type: package

Default:

```
pkgs.dnsmasq
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dnsmasq.nix>

services.dnsmasq.alwaysKeepRunning

If enabled, systemd will always respawn dnsmasq even if shut down manually. The default, disabled, will only restart it on error.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dnsmasq.nix>

services.dnsmasq.configFile

Path to the configuration file of dnsmasq.

Type: package *(read only)*

Default:

```
Path of dnsmasq config file
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dnsmasq.nix>

services.dnsmasq.resolveLocalQueries

Whether dnsmasq should resolve local queries (i.e. add 127.0.0.1 to /etc/resolv.conf).

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dnsmasq.nix>

services.dnsmasq.settings

Configuration of dnsmasq. Lists get added one value per line (empty lists and false values don't get added, though false values get turned to comments). Gets merged with

```
{
  dhcp-leasefile = "/var/lib/dnsmasq/dnsmasq.leases";
  conf-file = optional cfg.resolveLocalQueries "/etc/dnsmasq-conf \
.conf";
  resolv-file = optional cfg.resolveLocalQueries "/etc/dnsmasq-re \
solv.conf";
}
```

Type: open submodule of attribute set of (atom (null, bool, int, float or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Example:

```
{
  domain-needed = true;
  dhcp-range = [ "192.168.0.2,192.168.0.254" ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnsmasq.nix>

services.dnsmasq.settings.server
The DNS servers which dnsmasq should query.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "8.8.8.8"
  "8.8.4.4"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnsmasq.nix>

services.dnsproxy.enable
Whether to enable dnsproxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnsproxy.nix>

services.dnsproxy.package
The dnsproxy package to use.

Type: package

Default:

```
pkgs.dnsproxy
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dnsproxy.nix>

services.dnsproxy.flags
A list of extra command-line flags to pass to dnsproxy. For details on the available options, see **https://github.com/AdguardTeam/dnsproxy#usage**. Keep in mind that options passed through command-line flags override config options.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--upstream=1.1.1.1:53"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dnsproxy.nix>

services.dnsproxy.settings

Contents of the *config.yaml* config file. The '--config-path' argument will only be passed if this set is not empty.

See **https://github.com/AdguardTeam/dnsproxy/blob/master/config.yaml.dist**.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  bootstrap = [
    "8.8.8.8:53"
  ];
  listen-addrs = [
    "0.0.0.0"
  ];
  listen-ports = [
    53
  ];
  upstream = [
    "1.1.1.1:53"
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dnsproxy.nix>

services.do-agent.enable

Whether to enable do-agent, the DigitalOcean droplet metrics agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/do-agent.nix>

services.dockerRegistry.enable

Whether to enable Docker Registry.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/docker−registry.nix>

services.dockerRegistry.enableDelete
Enable delete for manifests and blobs.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/docker−registry.nix>

services.dockerRegistry.enableGarbageCollect
Whether to enable garbage collect.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/docker−registry.nix>

services.dockerRegistry.enableRedisCache
Whether to enable redis as blob cache.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/docker−registry.nix>

services.dockerRegistry.package
The distribution package to use.

Type: package

Default:

```
pkgs.distribution
```

Example:

```
gitlab−container−registry
```

Declared by:
<nixpkgs/nixos/modules/services/misc/docker−registry.nix>

services.dockerRegistry.configFile
Path to CNCF distribution config file.

Setting this option will override any configuration applied by the extraConfig option.

Type: absolute path

Default:

```
pkgs.writeText "docker-registry-config.yml" "# my custom docker- \
registry-config.yml ..."
```

Declared by:
<nixpkgs/nixos/modules/services/misc/docker-registry.nix>

services.dockerRegistry.extraConfig
Docker extra registry configuration.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  log.level = "debug";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/docker-registry.nix>

services.dockerRegistry.garbageCollectDates
Specification (in the format described by **systemd.time**(7)) of the time at which the garbage collect will occur.

Type: string

Default:

```
"daily"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/docker-registry.nix>

services.dockerRegistry.listenAddress
Docker registry host or ip to bind to.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/docker-registry.nix>

services.dockerRegistry.openFirewall
Opens the port used by the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/docker−registry.nix>

services.dockerRegistry.port
Docker registry port to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/docker−registry.nix>

services.dockerRegistry.redisPassword
Set redis password.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/docker−registry.nix>

services.dockerRegistry.redisUrl
Set redis host and port.

Type: string

Default:

```
"localhost:6379"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/docker−registry.nix>

services.dockerRegistry.storagePath
Docker registry storage path for the filesystem storage backend. Set to null to configure another backend via extraConfig.

Type: null or absolute path

Default:

```
"/var/lib/docker−registry"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/docker−registry.nix>

services.docling−serve.enable
Whether to enable Docling Serve server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/docling−serve.nix>

services.docling−serve.package

The docling−serve package to use.

Type: package

Default:

```
pkgs.docling-serve
```

Declared by:

<nixpkgs/nixos/modules/services/misc/docling−serve.nix>

services.docling−serve.environment

Extra environment variables for Docling Serve. For more details see **https://github.com/docling−project/docling−serve/blob/main/docs/configuration.md**

Type: attribute set of string

Default:

```
{
  DOCLING_SERVE_ENABLE_UI = "False";
}
```

Example:

```
{
  DOCLING_SERVE_ENABLE_UI = "True";
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/docling−serve.nix>

services.docling−serve.environmentFile

Environment file to be passed to the systemd service. Useful for passing secrets to the service to prevent them from being world−readable in the Nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/secrets/doclingServeSecrets"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/docling−serve.nix>

services.docling−serve.host

The host address which the Docling Serve server HTTP interface listens to.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/docling−serve.nix>

services.docling−serve.openFirewall

Whether to open the firewall for Docling Serve. This adds ‘services.Docling Serve.port’ to ‘networking.firewall.allowedTCPPorts’.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/docling−serve.nix>

services.docling−serve.port

Which port the Docling Serve server listens to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5001
```

Example:

```
11111
```

Declared by:

<nixpkgs/nixos/modules/services/misc/docling−serve.nix>

services.docling−serve.stateDir

State directory of Docling Serve.

Type: absolute path

Default:

```
"/var/lib/docling−serve"
```

Example:

```
"/home/foo"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/docling−serve.nix>

services.documize.enable

Whether to enable Documize Wiki.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/documize.nix>

services.documize.package

The documize−community package to use.

Type: package

Default:

```
pkgs.documize−community
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/documize.nix>

services.documize.cert
The *cert.pem* file used for https.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/documize.nix>

services.documize.db
Database specific connection string for example:

- MySQL/Percona/MariaDB: ‘user:password@tcp(host:3306)/documize’
- MySQLv8+: ‘user:password@tcp(host:3306)/documize?allowNativePasswords=true’
- PostgreSQL: ‘host=localhost port=5432 dbname=documize user=admin password=secret sslmode=disable’
- MSSQL: ‘sqlserver://username:password@localhost:1433?database=Documize’ or ‘sqlserver://sa@localhost/SQLExpress?database=Documize’

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/documize.nix>

services.documize.dbtype
Specify the database provider: ‘mysql’, ‘percona’, ‘mariadb’, ‘postgresql’, ‘sqlserver’

Type: one of “mysql”, “percona”, “mariadb”, “postgresql”, “sqlserver”

Default:

```
"postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/documize.nix>

services.documize.forcesslport
Redirect given http port number to TLS.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/documize.nix>

services.documize.key
The *key.pem* file used for https.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/documize.nix>

services.documize.location
reserved

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/documize.nix>

services.documize.offline
Set ‘true’ for offline mode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/documize.nix>

services.documize.port
The http/https port number.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5001
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/documize.nix>

services.documize.salt
The salt string used to encode JWT tokens, if not set a random value will be generated.

Type: null or string

Default:

```
null
```

Example:

```
"3edIYV6c8B28b19fh"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/documize.nix>

services.documize.stateDirectoryName
The name of the directory below */var/lib/private* where documize runs in and stores, for example, backups.

Type: string

Default:

```
"documize"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/documize.nix>

services.docuseal.enable

Whether to enable DocuSeal, open source document signing.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/docuseal.nix>

services.docuseal.package

The docuseal package to use.

Type: package

Default:

```
pkgs.docuseal
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/docuseal.nix>

services.docuseal.extraConfig

Extra environment variables to pass to DocuSeal services.

Type: attribute set

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/docuseal.nix>

services.docuseal.extraEnvFiles

Extra environment files to pass to DocuSeal services. Useful for passing down environmental secrets. e.g. DATABASE_URL

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/etc/docuseal/s3config.env"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/docuseal.nix>

services.docuseal.host

DocuSeal host.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/docuseal.nix>

services.docuseal.port
DocuSeal port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/docuseal.nix>

services.docuseal.redis.createLocally
Whether to create a local redis automatically.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/docuseal.nix>

services.docuseal.redis.host
Redis server address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/docuseal.nix>

services.docuseal.redis.name
Name of the redis server. Only used if ‘createLocally’ is set to true.

Type: string

Default:

```
"docuseal"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/docuseal.nix>

services.docuseal.redis.port
Port of the redis server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6379
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/docuseal.nix>

services.docuseal.secretKeyBaseFile
Path to file containing the secret key base. A new secret key base can be generated by running:

‘openssl rand −hex 64’

If this file does not exist, it will be created with a new secret key base.

Type: absolute path

Default:

```
"/var/lib/docuseal/secrets/secret-key-base"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/docuseal.nix>

services.docuum.enable
Whether to enable docuum daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/admin/docuum.nix>

services.docuum.deletionChunkSize
Removes specified quantity of images at a time.

Type: signed integer

Default:

```
1
```

Example:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/admin/docuum.nix>

services.docuum.keep
Prevents deletion of images for which repository:tag matches the specified regex.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "^my-image"
]
```

Declared by:
<nixpkgs/nixos/modules/services/admin/docuum.nix>

services.docuum.minAge
Sets the minimum age of images to be considered for deletion.

Type: null or string

Default:

```
null
```

Example:

```
"1d"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/docuum.nix>

services.docuum.threshold
Threshold for deletion in bytes, like ‘10 GB’, ‘10 GiB’, ‘10GB’ or percentage−based thresholds like ‘50%’

Type: string

Default:

```
"10 GB"
```

Example:

```
"50%"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/docuum.nix>

services.doh−proxy−rust.enable
Whether to enable doh−proxy−rust.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/doh−proxy−rust.nix>

services.doh−proxy−rust.flags
A list of command−line flags to pass to doh−proxy. For details on the available options, see **https://github.com/jedisct1/doh−server#usage**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−server−address=9.9.9.9:53"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/doh−proxy−rust.nix>

services.doh−server.enable
Whether to enable DNS−over−HTTPS server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/doh−server.nix>

services.doh−server.package
The dns−over−https package to use.

Type: package

Default:

```
pkgs.dns-over-https
```

Declared by:
<nixpkgs/nixos/modules/services/networking/doh−server.nix>

services.doh−server.configFile
The config file for the doh−server. Setting this option will override any configuration applied by the ‘settings’ option.

Type: absolute path

Example:

```
"/path/to/doh-server.conf"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/doh−server.nix>

services.doh−server.settings
Configuration of doh−server in toml. See example in **https://github.com/m13253/dns−over−https/blob/master/doh−server/doh−server.conf**

Type: open submodule of (TOML value)

Default:

```
{ }
```

Example:

```
{
  listen = [
    ":8153"
  ];
  upstream = [
    "udp:127.0.0.1:53"
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/doh−server.nix>

services.doh−server.settings.ecs_allow_non_global_ip
By default, non global IP addresses are never forwarded to upstream servers. This is to prevent two things from happening:

1. the upstream server knowing your private LAN addresses;
2. the upstream server unable to provide geographically near results, or even fail to provide any result. However, if you are deploying a split tunnel corporation network environment, or for any other reason you want to inhibit this behavior and allow local (eg RFC1918) address to be forwarded, change the following option to “true”.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/doh−server.nix>

services.doh−server.settings.ecs_use_precise_ip
If ECS is added to the request, let the full IP address or cap it to 24 or 128 mask. This option is to be used only on private networks where knowledge of the terminal endpoint may be required for security purposes (eg. DNS Firewalling). Not a good option on the internet where IP address may be used to identify the user and not only the approximate location.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/doh−server.nix>

services.doh−server.settings.listen
HTTP listen address and port

Type: list of string

Default:

```
[
  "127.0.0.1:8053"
  "[::1]:8053"
]
```

Example:

```
[
  ":443"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/doh−server.nix>

services.doh−server.settings.log_guessed_client_ip
Enable log IP from HTTPS−reverse proxy header: X−Forwarded−For or X−Real−IP Note: http uri/useragent log cannot be controlled by this config

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/doh−server.nix>

services.doh−server.settings.path

HTTP path for resolve application

Type: string

Default:

```
"/dns−query"
```

Example:

```
"/dns−query"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/doh−server.nix>

services.doh−server.settings.timeout

Upstream timeout

Type: signed integer

Default:

```
10
```

Example:

```
15
```

Declared by:

<nixpkgs/nixos/modules/services/networking/doh−server.nix>

services.doh−server.settings.tries

Number of tries if upstream DNS fails

Type: signed integer

Default:

```
3
```

Example:

```
5
```

Declared by:

<nixpkgs/nixos/modules/services/networking/doh−server.nix>

services.doh−server.settings.upstream

Upstream DNS resolver. If multiple servers are specified, a random one will be chosen each time. You can use “udp”, “tcp” or “tcp−tls” for the type prefix. For “udp”, UDP will first be used, and switch to TCP when the server asks to or the response is too large. For “tcp”, only TCP will be used. For “tcp−tls”, DNS−over−TLS (RFC 7858) will be used to secure the upstream connection.

Type: list of string

Default:

```
[
  "udp:1.1.1.1:53"
  "udp:1.0.0.1:53"
  "udp:8.8.8.8:53"
  "udp:8.8.4.4:53"
]
```

Example:

```
[
  "udp:127.0.0.1:53"
```

```
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/doh−server.nix>

services.doh−server.settings.verbose
Enable logging

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/doh−server.nix>

services.doh−server.useACMEHost
A host of an existing Let's Encrypt certificate to use. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[1].

Type: null or string

Default:

```
null
```

Example:

```
"doh.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/doh−server.nix>

1. see the **security.acme.certs** option

services.dokuwiki.sites
Specification of one or more DokuWiki sites to serve

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.package
The dokuwiki package to use.

Type: package

Default:

```
pkgs.dokuwiki
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.acl

Access Control Lists: see **https://www.dokuwiki.org/acl** Mutually exclusive with services.dokuwiki.aclFile Set this to a value other than null to take precedence over aclFile option.

Warning: Consider using aclFile instead if you do not want to store the ACL in the world−readable Nix store.

Type: null or (list of (submodule))

Default:

```
null
```

Example:

```
[
  {
    page = "start";
    actor = "@external";
    level = "read";
  }
  {
    page = "*";
    actor = "@users";
    level = "upload";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.acl.*.actor

User or group to restrict

Type: string

Example:

```
"@external"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.acl.*.level

Permission level to restrict the actor(s) to. See **https://www.dokuwiki.org/acl#background_info** for explanation

Type: one of 4, 16, 2, 0, 1, 8, “create”, “delete”, “edit”, “none”, “read”, “upload”

Example:

```
"read"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.acl.*.page

Page or namespace to restrict

Type: string

Example:

```
"start"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.aclFile
Location of the dokuwiki acl rules. Mutually exclusive with services.dokuwiki.acl which is preferred. Consult documentation **https://www.dokuwiki.org/acl** for further instructions. Example: **https://github.com/splitbrain/dokuwiki/blob/master/conf/acl.auth.php.dist**

Type: null or string

Default:

```
"/var/lib/dokuwiki/‹name›/acl.auth.php"
```

Example:

```
"/var/lib/dokuwiki/‹name›/acl.auth.php"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.extraConfigs
Path(s) to additional configuration files that are then linked to the ‘conf’ directory.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  "acronyms.local.conf" = pkgs.writeText "acronyms.local.conf" ''
    r13y  reproducibility
  '';
  "entities.local.conf" = ./dokuwiki−entities;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.mergedConfig
Read only representation of the final configuration.

Type: unspecified value *(read only)*

Default:

```
{
  useacl = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.phpOptions
Options for PHP’s php.ini file for this dokuwiki site.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
```

```
    "opcache.interned_strings_buffer" = "8";
    "opcache.max_accelerated_files" = "10000";
    "opcache.memory_consumption" = "128";
    "opcache.revalidate_freq" = "15";
    "opcache.fast_shutdown" = "1";
  }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.phpPackage

The php package to use.

Type: package

Default:

```
pkgs.php84
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.plugins

List of path(s) to respective plugin(s) which are copied into the ‘plugin’ directory.

Note

These plugins need to be packaged before use, see example.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
let
  plugin−icalevents = pkgs.stdenv.mkDerivation rec {
    name = "icalevents";
    version = "2017−06−16";
    src = pkgs.fetchzip {
      stripRoot = false;
      url = "https://github.com/real−or−random/dokuwiki−plugin− \
icalevents/releases/download/${version}/dokuwiki−plugin−icalevent \
s−${version}.zip";
      hash = "sha256−IPs4+qgEfe8AAWevbcCM9PnyI0uoyamtWeg4rEb+9Wc=" \
;
    };
    installPhase = "mkdir −p $out; cp −R * $out/";
  };
# And then pass this plugin to the plugin list like this:
in [ plugin−icalevents ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.pluginsConfig

List of the dokuwiki (un)loaded plugins.

Type: attribute set of boolean

Default:

```
{
```

```
  authad = false;
  authldap = false;
  authmysql = false;
  authpgsql = false;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.poolConfig

Options for the DokuWiki PHP pool. See the documentation on ‘php−fpm.conf’ for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.settings

Structural DokuWiki configuration. Refer to **https://www.dokuwiki.org/config** for details and supported values. Settings can either be directly set from nix, loaded from a file using ‘._file’ or obtained from any PHP function calls using ‘._raw’.

Type: attribute set of anything

Default:

```
{
  superuser = "admin";
  useacl = true;
}
```

Example:

```
{
  title = "My Wiki";
  userewrite = 1;
  disableactions = [ "register" ]; # Will be concatenated with comm \
as
  plugin.smtp = {
    smtp_pass._file = "/var/run/secrets/dokuwiki/smtp_pass";
    smtp_user._raw = "getenv('DOKUWIKI_SMTP_USER')";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.stateDir

Location of the DokuWiki state directory.

Type: absolute path

Default:

```
"/var/lib/dokuwiki/‹name›/data"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.templates

List of path(s) to respective template(s) which are copied into the ‘tpl’ directory.

Note

These templates need to be packaged before use, see example.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
let
  template−bootstrap3 = pkgs.stdenv.mkDerivation rec {
  name = "bootstrap3";
  version = "2022−07−27";
  src = pkgs.fetchFromGitHub {
    owner = "giterlizzi";
    repo = "dokuwiki−template−bootstrap3";
    rev = "v${version}";
    hash = "sha256−B3Yd4lxdwqfCnfmZdp+i/Mzwn/aEuZ0ovagDxuR6lxo=";
  };
  installPhase = "mkdir −p $out; cp −R * $out/";
};
# And then pass this theme to the template list like this:
in [ template−bootstrap3 ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.sites.<name>.usersFile

Location of the dokuwiki users file. List of users. Format:

```
login:passwordhash:Real Name:email:groups,comma,separated
```

Create passwordHash easily by using:

```
mkpasswd −5 password ‘pwgen 8 1‘
```

Example: **https://github.com/splitbrain/dokuwiki/blob/master/conf/users.auth.php.dist**

Type: null or string

Default:

```
"/var/lib/dokuwiki/‹name›/users.auth.php"
```

Example:

```
"/var/lib/dokuwiki/‹name›/users.auth.php"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dokuwiki.webserver
Whether to use nginx or caddy for virtual host management.

Further nginx configuration can be done by adapting ‘services.nginx.virtualHosts.<name>’. See **services.nginx.virtualHosts** for further information.

Further caddy configuration can be done by adapting ‘services.caddy.virtualHosts.<name>’. See **services.caddy.virtualHosts** for further information.

Type: one of “nginx”, “caddy”

Default:

```
"nginx"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dokuwiki.nix>

services.dolibarr.enable
Whether to enable dolibarr.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.package
The dolibarr package to use.

Type: package

Default:

```
pkgs.dolibarr
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.database.host
Database host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.database.name
Database name.

Type: string

Default:

```
"dolibarr"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.database.passwordFile
Database password file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/dolibarr−dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.database.type
Database engine to use.

Type: one of “mysql”, “postgresql”

Default:

```
"mysql"
```

Example:

```
"postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.database.user
Database username.

Type: string

Default:

```
"dolibarr"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.domain
Domain name of your server.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.group
Group account under which dolibarr runs.

Note
If left as the default value this group will automatically be created on system activation, otherwise you are responsible for ensuring the group exists before the dolibarr application starts.

Type: string

Default:

```
"dolibarr"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o
With this option, you can customize an H2O virtual host which already has sensible defaults for Dolibarr. Set to '{ }' if you do not need any customization to the virtual host. If enabled, then by default, the **serverName** is '${domain}', If this is set to 'null' (the default), no H2O 'hosts' will be configured.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  acme.enable = true;
  tls.policy = "force";
  compress = "ON";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.acme
ACME options for virtual host.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.acme.enable

Whether to ask Let's Encrypt to sign a certificate for this virtual host. Alternatively, an existing host can be used thru **acme.useHost**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.acme.root

Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to 'null' to inherit from config.security.acme.

Type: null or absolute path

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.acme.useHost

An existing Let's Encrypt certificate to use for this virtual host. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **acme.enable**. Note that this option neither creates any certificates nor does it add subdomains to existing ones — you will need to create them manually using **security.acme.certs**.

Type: null or non−empty string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.host

Set the host address for this virtual host. If unset, the default is to listen on all network interfaces.

Type: null or non−empty string

Default:

```
null
```

Example:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.http

HTTP options for virtual host

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.http.port
Override the default HTTP port for this virtual host.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
config.services.h2o.defaultHTTPListenPort
```

Example:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of non−empty string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.serverName
Server name to be used for this virtual host. Defaults to attribute name in hosts.

Type: null or non−empty string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.settings
Attrset to be transformed into YAML for host config. Note that the HTTP / TLS configurations will override these config values. See **https://h2o.examp1e.net/configure/base_directives.html#hosts**.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.tls

TLS options for virtual host

Type: null or (submodule)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.tls.extraSettings

Additional TLS/SSL−related configuration options. See **https://h2o.examp1e.net/configure/base_directives.html#listen−ssl**.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  minimum−version = "TLSv1.3";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.tls.identity

Key / certificate pairs for the virtual host.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    key−file = "/path/to/rsa.key";
    certificate−file = "/path/to/rsa.crt";
  }
  {
    key−file = "/path/to/ecdsa.key";
    certificate−file = "/path/to/ecdsa.crt";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.tls.identity.*.certificate−file

Path to certificate file. See **https://h2o.examp1e.net/configure/base_directives.html#certificate−file**.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.tls.identity.*.key−file
Path to key file. See **https://h2o.examp1e.net/configure/base_directives.html#key−file**.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.tls.policy
'add' will additionally listen for TLS connections. 'only' will disable TLS connections. 'force' will redirect non−TLS traffic to the TLS connection.

Type: one of "add", "only", "force"

Example:

```
"force"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.tls.port
Override the default TLS port for this virtual host.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
config.services.h2o.defaultTLSListenPort
```

Example:

```
8443
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.tls.quic
Enables HTTP/3 over QUIC on the UDP port for TLS. The attrset provides fine−turning for QUIC behavior, but can be empty. See **https://h2o.examp1e.net/configure/http3_directives.html#quic−attributes**.

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  amp−limit = 2;
  handshake−timeout−rtt−multiplier = 300;
  retry = "ON";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.tls.recommendations
By default, H2O, without prejudice, will use as many TLS versions & cipher suites as it & the TLS library (OpenSSL) can support. The user is expected to hone settings for the security of their server. Setting some constraints is recommended, & if unsure about what TLS settings to use, this option gives curated TLS settings recommendations from Mozilla's 'SSL Configuration Generator' project (see **https://ssl−config.mozilla.org**) or read more at Mozilla's Wiki (see **https://wiki.mozilla.org/Security/Server_Side_TLS**).

modern
: Services with clients that support TLS 1.3 & don't need backward compatibility

intermediate
: General−purpose servers with a variety of clients, recommended for almost all systems

old
: Compatible with a number of very old clients, & should be used only as a last resort

The default for all virtual hosts can be set with services.h2o.defaultTLSRecommendations, but this value can be overridden on a per−host basis using services.h2o.hosts.<name>.tls.recommmendations. The settings will also be overidden by manual values set with services.settings.h2o.hosts.<name>.tls.extraSettings.

NOTE: older/weaker ciphers might require overriding the OpenSSL version of H2O (such as 'openssl_legacy'). This can be done with sevices.settings.h2o.package.

Type: null or one of "modern", "intermediate", "old"

Default:

```
null
```

Example:

```
"intermediate"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.h2o.tls.redirectCode

HTTP status used by 'globalRedirect' & 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method & body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx

With this option, you can customize an nginx virtual host which already has sensible defaults for Dolibarr. Set to {} if you do not need any customization to the virtual host. If enabled, then by default, the **serverName** is '${domain}', SSL is active, and certificates are acquired via ACME. If this is set to null (the default), no nginx virtualHost will be configured.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  serverAliases = [
    "dolibarr.${config.networking.domain}"
    "erp.${config.networking.domain}"
  ];
```

```
  enableACME = false;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/dolibarr.nix>

services.dolibarr.nginx.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/dolibarr.nix>

services.dolibarr.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/dolibarr.nix>

services.dolibarr.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme-challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/dolibarr.nix>

services.dolibarr.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/dolibarr.nix>

services.dolibarr.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.globalRedirect

If set, all requests for this host are redirected (defaults to 301, configurable with 'redirectCode') to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.http2

Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.http3

Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.http3_hq

Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides ‘addSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.listen.*.addr

Listen address.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.listen.*.extraParameters

Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
```

```
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.listen.*.ssl
Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations.<name>.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations.<name>.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.rejectSSL
Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.reuseport
Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.root
The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.serverName
Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

2. see the **security.acme.certs** option

services.dolibarr.poolConfig
Options for the Dolibarr PHP pool. See the documentation on ‘php−fpm.conf’ for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.settings
Dolibarr settings, see **https://github.com/Dolibarr/dolibarr/blob/develop/htdocs/conf/conf.php.example** for details.

Type: attribute set of (boolean or signed integer or string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.stateDir
State and configuration directory dolibarr will use.

Type: string

Default:

```
"/var/lib/dolibarr"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.dolibarr.user
User account under which dolibarr runs.

Note
If left as the default value this user will automatically be created on system activation, otherwise you are responsible for ensuring the user exists before the dolibarr application starts.

Type: string

Default:

```
"dolibarr"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/dolibarr.nix>

services.domoticz.enable
Whether to enable Domoticz home automation.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/domoticz.nix>

services.domoticz.bind
IP address to bind to.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/domoticz.nix>

services.domoticz.port
Port to bind to for HTTP, set to 0 to disable HTTP.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/misc/domoticz.nix>

services.dovecot2.enable
Whether to enable the dovecot 2.x POP3/IMAP server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.enablePAM
Whether to enable creating a own Dovecot PAM service and configure PAM user logins.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.package
The dovecot package to use.

Type: package

Default:

```
if versionAtLeast config.system.stateVersion "26.05" then pkgs.dove \
cot else pkgs.dovecot_2_3
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.configFile
Config file used for the whole dovecot configuration.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.createMailUser
Whether to enable automatically creating the user given in **services.dovecot2.settings.mail_uid** and the group given in **services.dovecot2.settings.mail_gid**.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.imapsieve.mailbox
Configure Sieve filtering rules on IMAP actions

Note
This option is no longer used starting from Dovecot version 2.4.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.imapsieve.mailbox.*.after
When an IMAP event of interest occurs, this sieve script is executed after any user script respectively.

This setting each specify the location of a single sieve script. The semantics of this setting is similar to sieve_after: the specified scripts form a sequence together with the user script in which the next script is only executed when an (implicit) keep action is executed.

Type: null or absolute path

Default:

```
null
```

Example:

```
./report-spam.sieve
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.imapsieve.mailbox.*.before
When an IMAP event of interest occurs, this sieve script is executed before any user script respectively.

This setting each specify the location of a single sieve script. The semantics of this setting is similar to sieve_before: the specified scripts form a sequence together with the user script in which the next script is only executed when an (implicit) keep action is executed.

Type: null or absolute path

Default:

```
null
```

Example:

```
./report-spam.sieve
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.imapsieve.mailbox.*.causes
Only execute the administrator Sieve scripts for the mailbox configured with services.dovecot2.imapsieve.mailbox.<name>.name when one of the listed IMAPSIEVE causes apply.

This has no effect on the user script, which is always executed no matter the cause.

Type: list of (one of “APPEND”, “COPY”, “FLAG”)

Default:

```
[ ]
```

Example:

```
[
  "COPY"
  "APPEND"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.imapsieve.mailbox.*.from
Only execute the administrator Sieve scripts for the mailbox configured with services.dovecot2.imapsieve.mailbox.<name>.name when the message originates from the indicated mailbox.

This setting supports wildcards with a syntax compatible with the IMAP LIST command, meaning that this setting can apply to multiple or even all (“*”) mailboxes.

Type: null or string

Default:

```
null
```

Example:

```
"*"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.imapsieve.mailbox.*.name
This setting configures the name of a mailbox for which administrator scripts are configured.

The settings defined hereafter with matching sequence numbers apply to the mailbox named by this setting.

This setting supports wildcards with a syntax compatible with the IMAP LIST command, meaning that this setting can apply to multiple or even all (“*”) mailboxes.

Type: string

Example:

```
"Junk"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.includeFiles
Files to include in the Dovecot config file using !include directives.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/foo/bar/extraDovecotConfig.conf"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.mailPlugins
Additional entries to add to the mail_plugins variable, globally and per protocol

Type: submodule

Default:

```
{
  globally = {
    enable = [ ];
  };
  perProtocol = { };
}
```

Example:

```
{
  globally = {
    enable = [
      "acl"
    ];
  };
  perProtocol = {
    imap = {
      enable = [
        "imap_acl"
```

```
        ];
      };
    };
  }
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.mailPlugins.globally

Additional entries to add to the mail_plugins variable for all protocols

Type: submodule

Default:

```
{
  enable = [ ];
}
```

Example:

```
{
  enable = [
    "virtual"
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.mailPlugins.globally.enable

mail plugins to enable as a list of strings to append to the top−level ‘$mail_plugins’ configuration variable

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.mailPlugins.perProtocol

Additional entries to add to the mail_plugins variable, per protocol

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  imap = [
    "imap_acl"
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.mailPlugins.perProtocol.<name>.enable

mail plugins to enable as a list of strings to append to the corresponding per−protocol '$mail_plugins' configuration variable

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings

Dovecot configuration, see **https://doc.dovecot.org/latest/core/summaries/settings.html#all−dovecot−settings** for all available options.

For information on the configuration structure, see **https://doc.dovecot.org/latest/core/settings/syntax.html**.

Warning

Explicit settings in **services.dovecot2.settings** can silently override values set by other 'services.dovecot2.*' options.

Type: open submodule of attribute set of (Dovecot config value)

Default:

```
{ }
```

Example:

```
{
  mail_attribute = {
    "dict file" = {
      path = "%{home}/dovecot−attributes";
    };
  };
  mail_driver = "maildir";
  mail_home = "/var/vmail/%{user | domain}/%{user | username}";
  mail_path = "~/mail";
  "namespace inbox" = {
    inbox = true;
    separator = "/";
  };
  "protocol imap" = {
    mail_plugins = {
      imap_filter_sieve = true;
      imap_sieve = true;
    };
  };
  protocols = {
    imap = true;
    lmtp = true;
    submission = true;
  };
  service = [
    {
      _section = {
        name = "imap";
```

```
            };
            client_limit = 100;
            "inet_listener imap" = {
              port = 31143;
            };
            "inet_listener imaps" = {
              port = 31993;
            };
            process_min_avail = 1;
          }
          {
            _section = {
              name = "lmtp";
            };
            "unix_listener lmtp" = {
              mode = "0660";
              user = "postfix";
            };
            user = "dovemail";
          }
        ];
      }
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.auth_mechanisms

Here you can supply a space−separated list of the authentication mechanisms you wish to use.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#auth_mechanisms**.

Type: (attribute set of boolean) or list of string

Default:

```
[
  "plain"
  "login"
]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.base_dir

The base directory in which Dovecot should store runtime data.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#base_dir**.

Type: absolute path

Default:

```
"/run/dovecot2"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.default_internal_group
Define the default internal group.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#default_internal_group**.

Type: string

Default:

```
"dovecot2"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.default_internal_user
Define the default internal user.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#default_internal_user**.

Type: string

Default:

```
"dovecot2"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.dovecot_config_version
Dovecot configuration version. It uses the same versioning as Dovecot in general, e.g. 3.0.5. It specifies the configuration syntax, the used setting names and the expected default values.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#dovecot_config_version**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.dovecot_storage_version
Dovecot storage file format version. It uses the same versioning as Dovecot in general, e.g. 3.0.5. It specifies the oldest Dovecot version that must be able to read files written by this Dovecot instance.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#dovecot_storage_version**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.mail_plugin_dir
The directory in which to search for Dovecot mail plugins.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#mail_plugin_dir**.

Type: absolute path

Default:

```
"/run/current-system/sw/lib/dovecot/modules"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.maildir_copy_with_hardlinks
If enabled, copying of a message is done with hard links whenever possible.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#maildir_copy_with_hardlinks**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings."passdb pam"
Configuration for the PAM password database.

See **https://doc.dovecot.org/latest/core/config/auth/databases/pam.html**.

Type: null or (open submodule of attribute set of (Dovecot config value))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings."passdb pam".args
Arguments for the passdb backend.

This option is exclusive to Dovecot 2.3.

See **https://doc.dovecot.org/2.3/configuration_manual/authentication/password_databases_passdb/#passdb-setting**.

Type: null or (list of string)

Default:

```
"if isPre24 then [ \"dovecot2\" ] else null"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings."passdb pam".driver
The driver used for this password database.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#passdb_driver**.

Type: null or string

Default:

```
if isPre24 then "pam" else null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings."passdb pam".failure_show_msg
Replace the default “Authentication failed” reply with PAM’s failure.

This option is exclusive to Dovecot 2.4.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#passdb_pam_failure_show_msg**.

Type: null or boolean

Default:

```
if isPre24 then null else config.services.dovecot2.showPAMFailure
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings."passdb pam".service_name

The PAM service name to be used with the pam passdb.

This option is exclusive to Dovecot 2.4.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#passdb_pam_service_name**.

Type: null or string

Default:

```
if isPre24 then null else "dovecot2"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.plugin

Plugin settings. This option is exclusive to Dovecot 2.3.

Type: null or (open submodule of attribute set of (Dovecot config value))

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.plugin.sieve_extensions

The Sieve language extensions available to users.

This option is exclusive to Dovecot 2.3.

See **https://doc.dovecot.org/2.3/settings/pigeonhole/#pigeonhole_setting-sieve_extensions**.

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.plugin.sieve_global_extensions

Which Sieve language extensions are **only** available in global scripts.

This option is exclusive to Dovecot 2.3.

See **https://doc.dovecot.org/2.3/settings/pigeonhole/#pigeonhole_setting-sieve_global_extensions**.

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.plugin.sieve_pipe_bin_dir

Points to a directory where the plugin looks for programs (shell scripts) to execute directly and pipe messages to for the *vnd.dovecot.pipe* extension.

This option is exclusive to Dovecot 2.3.

See **https://doc.dovecot.org/2.3/configuration_manual/sieve/plugins/extprograms/#configuration**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.plugin.sieve_plugins

List of Sieve plugins to load.

This option is exclusive to Dovecot 2.3.

See **https://doc.dovecot.org/2.3/settings/pigeonhole/#pigeonhole_setting-sieve_plugins**.

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.sendmail_path

The binary to use for sending email.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#sendmail_path**.

Type: absolute path

Default:

```
"/run/wrappers/bin/sendmail"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.sieve_global_extensions

Which Sieve language extensions are **only** available in global scripts.

This option is exclusive to Dovecot 2.4.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#sieve_global_extensions**.

Type: null or (attribute set of boolean) or list of string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.sieve_pipe_bin_dir

Points to a directory where the plugin looks for programs (shell scripts) to execute directly and pipe messages to for the *vnd.dovecot.pipe* extension.

This option is exclusive to Dovecot 2.4.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#sieve_plugins**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.sieve_plugins
List of Sieve plugins to load.

This option is exclusive to Dovecot 2.4.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#sieve_plugins**.

Type: null or (attribute set of boolean) or list of string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings.sieve_script_bin_path
Points to the directory where the compiled binaries for this script location are stored. This directory is created automatically if possible.

This option is exclusive to Dovecot 2.4.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#sieve_script_bin_path**.

Type: null or string

Default:

```
if isPre24 || !hasPigeonhole
then null
else "/tmp/dovecot-%{user|username|lower}"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings."userdb passwd"
Configuration for the Passwd user database.

See **https://doc.dovecot.org/latest/core/config/auth/databases/passwd.html**.

Type: null or (open submodule of attribute set of (Dovecot config value))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.settings."userdb passwd".driver
The driver used for this user database.

See **https://doc.dovecot.org/latest/core/summaries/settings.html#userdb_driver**.

Type: null or string

Default:

```
if isPre24 then "passwd" else null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.showPAMFailure
Whether to enable showing the PAM failure message on authentication error (useful for OTPW).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.sieve.extensions
Sieve extensions for use in user scripts

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "notify"
  "imapflags"
  "vnd.dovecot.filter"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.sieve.globalExtensions
Sieve extensions for use in global scripts

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "vnd.dovecot.environment"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.sieve.pipeBins
Programs available for use by the vnd.dovecot.pipe extension

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
map lib.getExe [
```

```
  (pkgs.writeShellScriptBin "learn-ham.sh" "exec ${pkgs.rspamd}/bi \
n/rspamc learn_ham")
  (pkgs.writeShellScriptBin "learn-spam.sh" "exec ${pkgs.rspamd}/b \
in/rspamc learn_spam")
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dovecot2.sieve.scripts
Sieve scripts to be executed. Key is a sequence, e.g. ‘before2’, ‘after’ etc.

Type: attribute set of absolute path

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dovecot.nix>

services.dragonflydb.enable
Whether to enable DragonflyDB.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/dragonflydb.nix>

services.dragonflydb.bind
The IP interface to bind to. ‘null’ means “all interfaces”.

Type: null or string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/dragonflydb.nix>

services.dragonflydb.cacheMode
Once this mode is on, Dragonfly will evict items least likely to be stumbled upon in the future but only when it is near maxmemory limit.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/dragonflydb.nix>

services.dragonflydb.dbNum

Maximum number of supported databases for ‘select’

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/databases/dragonflydb.nix>

services.dragonflydb.keysOutputLimit

Maximum number of returned keys in keys command. ‘keys’ is a dangerous command. We truncate its result to avoid blowup in memory when fetching too many keys.

Type: unsigned integer, meaning >=0

Default:

```
8192
```

Declared by:

<nixpkgs/nixos/modules/services/databases/dragonflydb.nix>

services.dragonflydb.maxMemory

The maximum amount of memory to use for storage (in bytes). ‘null’ means this will be automatically set.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/databases/dragonflydb.nix>

services.dragonflydb.memcachePort

To enable memcached compatible API on this port. ‘null’ means disabled.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/databases/dragonflydb.nix>

services.dragonflydb.port

The TCP port to accept connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6379
```

Declared by:

<nixpkgs/nixos/modules/services/databases/dragonflydb.nix>

services.dragonflydb.requirePass

Password for database

Type: null or string

Default:

```
null
```

Example:

```
"letmein!"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/dragonflydb.nix>

services.dragonflydb.user
The user to run DragonflyDB as

Type: string

Default:

```
"dragonfly"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/dragonflydb.nix>

services.drasl.enable
Whether to enable Drasl.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drasl.nix>

services.drasl.enableDebug
Whether to enable debugging.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drasl.nix>

services.drasl.package
The drasl package to use.

Type: package

Default:

```
pkgs.drasl
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drasl.nix>

services.drasl.settings
Configuration for Drasl. See the **Drasl documentation** for possible options.

Type: open submodule of (TOML value)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drasl.nix>

services.drasl.settings.RegistrationOIDC
List of OpenID connect providers.

Type: list of (open submodule of (TOML value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drasl.nix>

services.drasl.settings.RegistrationOIDC.*.ClientSecretFile
Path to a file containing the OIDC client secret.

Note
The NixOS module will automatically load this file using systemd's LoadCredential. Make sure this file is only readable by the root user.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drasl.nix>

services.draupnir.enable
Whether to enable Draupnir, a moderations bot for Matrix.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/draupnir.nix>

services.draupnir.package
The draupnir package to use.

Type: package

Default:

```
pkgs.draupnir
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/draupnir.nix>

services.draupnir.secrets.accessToken
File containing the access token for Draupnir's Matrix account to be used in place of **services.draupnir.settings.accessToken**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/draupnir.nix>

services.draupnir.secrets.pantalaimon.password
File containing the password for Draupnir's Matrix account when used in conjunction with Pantalaimon to be used in place of **services.draupnir.settings.pantalaimon.password**.

Warning
Take note that upstream has limited Pantalaimon and E2EE support: **https://the-draupnir-project.github.io/draupnir-documentation/bot/encryption** and **https://the-draupnir-project.github.io/draupnir-documentation/shared/dogfood#e2ee-support**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/draupnir.nix>

services.draupnir.secrets.web.synapseHTTPAntispam.authorization
File containing the secret token when using the Synapse HTTP Antispam module to be used in place of **services.draupnir.settings.web.synapseHTTPAntispam.authorization**.

See **https://the-draupnir-project.github.io/draupnir-documentation/bot/synapse-http-antispam** for details.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/draupnir.nix>

services.draupnir.settings
Free-form settings written to Draupnir's configuration file. See **Draupnir's default configuration** for available settings.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
{
  homeserverUrl = "https://matrix.org";
  managementRoom = "#moderators:example.org";
  autojoinOnlyIfManager = true;
  automaticallyRedactForReasons = [ "spam" "advertising" ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/draupnir.nix>

services.draupnir.settings.dataPath
The path Draupnir will store its state/data in.

Warning
This option is read-only.

Note

If you want to customize where this data is stored, use a bind mount.

Type: absolute path *(read only)*

Default:

```
"/var/lib/draupnir"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/draupnir.nix>

services.draupnir.settings.homeserverUrl
Base URL of the Matrix homeserver that provides the Client−Server API.

Note
When using Pantalaimon, set this to the Pantalaimon URL and **services.draupnir.settings.rawHomeserverUrl** to the public URL.

Type: string

Example:

```
"https://matrix.org"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/draupnir.nix>

services.draupnir.settings.managementRoom
The room ID or alias where moderators can use the bot's functionality.

The bot has no access controls, so anyone in this room can use the bot − secure this room! Do not enable end−to−end encryption for this room, unless set up with Pantalaimon.

Warning
When using a room alias, make sure the alias used is on the local homeserver! This prevents an issue where the control room becomes undefined when the alias can't be resolved.

Type: string

Example:

```
"#moderators:example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/draupnir.nix>

services.draupnir.settings.rawHomeserverUrl
Public base URL of the Matrix homeserver that provides the Client−Server API when using the Draupnir's **Report forwarding feature**.

Warning
When using Pantalaimon, do not set this to the Pantalaimon URL!

Type: string

Default:

```
config.services.draupnir.settings.homeserverUrl
```

Example:

```
"https://matrix.org"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/draupnir.nix>

services.drbd.enable

Whether to enable support for DRBD, the Distributed Replicated Block Device.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/drbd.nix>

services.drbd.config

Contents of the *drbd.conf* configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/drbd.nix>

services.druid.package

The apache−druid package to use.

Type: package

Default:

```
pkgs.druid
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.broker.enable

Whether to enable Druid Broker.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.broker.config

(key=value) Configuration to be written to runtime.properties of the druid Druid Broker **https://druid.apache.org/docs/latest/configuration/index.html**

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  "druid.plainTextPort" = "8082";
  "druid.service" = "servicename";
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.broker.jdk
The JDK package to use.

Type: package

Default:

```
pkgs.jdk17_headless
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.broker.jvmArgs
Arguments to pass to the JVM

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.broker.openFirewall
Open firewall ports for Druid Broker.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.broker.restartIfChanged
Automatically restart the service on config change. This can be set to false to defer restarts on clusters running critical applications. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.commonConfig
(key=value) Configuration to be written to common.runtime.properties

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  "druid.extensions.loadList" = "[ \"mysql-metadata-storage\" ] \
";
  "druid.metadata.storage.connector.connectURI" = "jdbc:mysql://loc \
```

```
alhost:3306/druid";
  "druid.metadata.storage.type" = "mysql";
  "druid.zk.service.host" = "localhost:2181";
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.commonTmpDirs
Common List of directories used by druid processes

Type: list of string

Default:

```
[
  "/var/log/druid/requests"
]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.coordinator.enable
Whether to enable Druid Coordinator.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.coordinator.config
(key=value) Configuration to be written to runtime.properties of the druid Druid Coordinator **https://druid.apache.org/docs/latest/configuration/index.html**

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  "druid.plainTextPort" = "8082";
  "druid.service" = "servicename";
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.coordinator.jdk
The JDK package to use.

Type: package

Default:

```
pkgs.jdk17_headless
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.coordinator.jvmArgs
Arguments to pass to the JVM

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.coordinator.openFirewall
Open firewall ports for Druid Coordinator.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.coordinator.restartIfChanged
Automatically restart the service on config change. This can be set to false to defer restarts on clusters running critical applications. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.extraClassPaths
Extra classpath to include in the jvm

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.extraConfDirs
Extra Conf Dirs to include in the jvm

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.historical.enable

Whether to enable Druid Historical.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.historical.config

(key=value) Configuration to be written to runtime.properties of the druid Druid Historical **https://druid.apache.org/docs/latest/configuration/index.html**

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  "druid.plainTextPort" = "8082";
  "druid.service" = "servicename";
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.historical.jdk

The JDK package to use.

Type: package

Default:

```
pkgs.jdk17_headless
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.historical.jvmArgs

Arguments to pass to the JVM

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.historical.openFirewall

Open firewall ports for Druid Historical.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.historical.restartIfChanged
Automatically restart the service on config change. This can be set to false to defer restarts on clusters running critical applications. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.historical.segmentLocations
Locations where the historical will store its data.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.historical.segmentLocations.*.freeSpacePercent
Druid Historical will fail to write if it exceeds this value

Type: floating point number

Default:

```
1.0
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.historical.segmentLocations.*.maxSize
Max size the druid historical can occupy

Type: string

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.historical.segmentLocations.*.path
the path to store the segments

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.log4j
Log4j Configuration for the druid process

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.middleManager.enable

Whether to enable Druid middleManager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.middleManager.config

(key=value) Configuration to be written to runtime.properties of the druid Druid middleManager **https://druid.apache.org/docs/latest/configuration/index.html**

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  "druid.plainTextPort" = "8082";
  "druid.service" = "servicename";
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.middleManager.jdk

The JDK package to use.

Type: package

Default:

```
pkgs.jdk17_headless
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.middleManager.jvmArgs

Arguments to pass to the JVM

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.middleManager.openFirewall

Open firewall ports for Druid middleManager.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.middleManager.restartIfChanged
Automatically restart the service on config change. This can be set to false to defer restarts on clusters running critical applications. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.overlord.enable
Whether to enable Druid Overlord.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.overlord.config
(key=value) Configuration to be written to runtime.properties of the druid Druid Overlord **https://druid.apache.org/docs/latest/configuration/index.html**

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  "druid.plainTextPort" = "8082";
  "druid.service" = "servicename";
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.overlord.jdk
The JDK package to use.

Type: package

Default:

```
pkgs.jdk17_headless
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.overlord.jvmArgs

Arguments to pass to the JVM

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.overlord.openFirewall

Open firewall ports for Druid Overlord.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.overlord.restartIfChanged

Automatically restart the service on config change. This can be set to false to defer restarts on clusters running critical applications. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.router.enable

Whether to enable Druid Router.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.router.config

(key=value) Configuration to be written to runtime.properties of the druid Druid Router **https://druid.apache.org/docs/latest/configuration/index.html**

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  "druid.plainTextPort" = "8082";
```

```
  "druid.service" = "servicename";
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.router.jdk
The JDK package to use.

Type: package

Default:

```
pkgs.jdk17_headless
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.router.jvmArgs
Arguments to pass to the JVM

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.router.openFirewall
Open firewall ports for Druid Router.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.druid.router.restartIfChanged
Automatically restart the service on config change. This can be set to false to defer restarts on clusters running critical applications. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/druid/default.nix>

services.drupal.enable
Whether to enable drupal.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.package
The drupal package to use.

Type: package

Default:

```
pkgs.drupal
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites
Specification of one or more Drupal sites to serve

Type: attribute set of (submodule)

Default:

```
{
  localhost = {
    enable = true;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.enable
Whether to enable Drupal web application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.package
The drupal package to use.

Type: package

Default:

```
pkgs.drupal
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.configRoot
An optional path string with a leading slash indicating the location of the config sync directory on the Drupal package. Your package will probably have a config sync directory if it has been significantly customized.

The path must be relative to the project root directory.

This option differs from the ‘configSyncDir’ option, which tells this service where to create a user−writeable config directory on NixOS.

Type: string

Default:

```
""
```

Example:

```
"/config"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.configSyncDir
The location of the user−managed Drupal config sync directory. Drupal will both read from and write to this directory when executing configuration management operations.

This option differs from the ‘configRoot’ option, which this service uses to discover the location of the config sync directory in the package’s source code.

Type: absolute path

Default:

```
"/var/lib/drupal/<name>/config/sync"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.database.host
Database host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.database.name
Database name.

Type: string

Default:

```
"drupal"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.database.passwordFile
A file containing the password corresponding to **database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/database-dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/drupal.nix>

services.drupal.sites.<name>.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/drupal.nix>

services.drupal.sites.<name>.database.socket
Path to the unix socket file to use for authentication.

Type: null or absolute path

Default:

```
/run/mysqld/mysqld.sock
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/drupal.nix>

services.drupal.sites.<name>.database.tablePrefix
The $table_prefix is the value placed in the front of your database tables. Change the value if you want to use something other than dp_ for your database prefix. Typically this is changed if you are installing multiple Drupal sites in the same database.

Type: string

Default:

```
"dp_"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/drupal.nix>

services.drupal.sites.<name>.database.user
Database user.

Type: string

Default:

```
"drupal"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/drupal.nix>

services.drupal.sites.<name>.extraConfig

Extra configuration values that you want to insert into settings.php. All configuration must be written as PHP script.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
$config['user.settings']['anonymous'] = 'Visitor';
$settings['entity_update_backup'] = TRUE;
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.filesDir

The location of the Drupal files directory.

Many of the files in this directory are variable, so they must be located in a location writeable by users of the webgroup.

Type: absolute path

Default:

```
"/var/lib/drupal/<name>/sites/default/files"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.modulesDir

The location for users to manually install Drupal modules.

Note: in most instances, it is preferable to install modules using composer, or to package them with your source code repository, if you are using a custom Drupal.

Type: absolute path

Default:

```
"/var/lib/drupal/<name>/modules"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.phpOptions

Options for PHP’s php.ini file for this Drupal site.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "opcache.interned_strings_buffer" = "8";
  "opcache.max_accelerated_files" = "10000";
  "opcache.memory_consumption" = "128";
  "opcache.revalidate_freq" = "15";
  "opcache.fast_shutdown" = "1";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.poolConfig
Options for the Drupal PHP pool. See the documentation on ‘php−fpm.conf’ for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.privateFilesDir
The location of the Drupal private files directory.

Type: absolute path

Default:

```
"/var/lib/drupal/<name>/private"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.stateDir
The location of the user−managed Drupal site state directory. This directory will contain the settings and configuration files for your Drupal instance. It may also contain your files directory if the ‘filesDir’ option remains unchanged.

Many of the files in this directory are variable, so they must be located in a location writeable by users of the webgroup.

Type: absolute path

Default:

```
"/var/lib/drupal/<name>"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.themesDir
The location for users to manually install Drupal themes.

Note: in most instances, it is preferable to install themes using composer, or to package them with your source code repository, if you are using a custom Drupal.

Type: absolute path

Default:

```
"/var/lib/drupal/<name>/themes"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost
Apache configuration can be done by adapting **services.httpd.virtualHosts**.

Type: submodule

Example:

```
{
  adminAddr = "webmaster@example.org";
  forceSSL = true;
  enableACME = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.enableACME
Whether to ask Let’s Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.enableUserDir
Whether to enable serving *~/public_html* as ‘/~«username»’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.acmeRoot
Directory for the acme challenge which is PUBLIC, don’t put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.adminAddr
E−mail address of the server administrator.

Type: null or string

Default:

```
null
```

Example:

```
"admin@example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.documentRoot
The path of Apache's document root directory. If left undefined, an empty directory in the Nix store will be used as root.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.extraConfig
These lines go to httpd.conf verbatim. They will go after directories and directory aliases defined by default.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
<Directory /home>
  Options FollowSymlinks
  AllowOverride All
</Directory>
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.forceSSL
Whether to add a separate nginx server block that permanently redirects (301) all plain HTTP traffic to HTTPS. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.globalRedirect
If set, all requests for this host are redirected permanently to the given URL.

Type: null or string

Default:

```
null
```

Example:

```
"http://newserver.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.hostName
Canonical hostname for the server.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.http2
Whether to enable HTTP 2. HTTP/2 is supported in all multi−processing modules that come with httpd. *However, if you use the prefork mpm, there will be severe restrictions.* Refer to **https://httpd.apache.org/docs/2.4/howto/http2.html#mpm−config** for details.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.listen
Listen addresses and ports for this virtual host.

Note
This option overrides ‘addSSL’, ‘forceSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    ip = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
```

```
      ip = "192.154.1.1";
      port = 80;
    }
    {
      ip = "*";
      port = 8080;
    }
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.listen.*.ip
IP to listen on. 0.0.0.0 for IPv4 only, * for all.

Type: string

Default:

```
"*"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.listen.*.port
Port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.listen.*.ssl
Whether to enable SSL (https) support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Type: non−empty (list of string)

Default:

```
[
  "*"
]
```

Example:

```
[
  "127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.locations

Declarative location config. See **https://httpd.apache.org/docs/2.4/mod/core.html#location** for details.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
  "/foo/bar.png" = {
    alias = "/home/eelco/some-file.png";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.locations.<name>.alias

Alias directory for requests. See **https://httpd.apache.org/docs/2.4/mod/mod_alias.html#alias**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.locations.<name>.extraConfig

These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.locations.<name>.index

Adds DirectoryIndex directive. See **https://httpd.apache.org/docs/2.4/mod/mod_dir.html#directoryindex**.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.locations.<name>.proxyPass
Sets up a simple reverse proxy as described by **https://httpd.apache.org/docs/2.4/howto/reverse_proxy.html#simple**.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.logFormat
Log format for Apache’s log files. Possible values are: combined, common, referer, agent.

Type: string

Default:

```
"common"
```

Example:

```
"combined"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for ‘listen’ to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.robotsEntries
Specification of pages to be ignored by web crawlers. See **http://www.robotstxt.org/** for details.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"Disallow: /foo/"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.servedDirs

This option provides a simple way to serve static directories.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    dir = "/home/eelco/Dev/nix−homepage";
    urlPath = "/nix";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.servedFiles

This option provides a simple way to serve individual, static files.

Note

This option has been deprecated and will be removed in a future version of NixOS. You can achieve the same result by making use of the ‘locations.<name>.alias’ option.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    file = "/home/eelco/some−file.png";
    urlPath = "/foo/bar.png";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "www.example.org:8080"
```

```
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.sslServerCert
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.sslServerChain
Path to server SSL chain file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/ca.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.sslServerKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.sites.<name>.virtualHost.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

2. see the **security.acme.certs** option

services.drupal.sites.<name>.webRoot

An optional path string with a leading slash indicating the location of the Drupal webroot in your package's source code.

The path relative to the project root directory.

Type: string

Default:

```
""
```

Example:

```
"/web"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.drupal.webserver

Whether to use nginx or caddy for virtual host management.

Further nginx configuration can be done by adapting 'services.nginx.virtualHosts.<name>'. See **services.nginx.virtualHosts** for further information.

Further caddy configuration can be done by adapting 'services.caddy.virtualHosts.<name>'. See **services.caddy.virtualHosts** for further information.

Type: one of "nginx", "caddy"

Default:

```
"nginx"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/drupal.nix>

services.dsnet.enable

Whether to enable dsnet, a centralised Wireguard VPN manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dsnet.nix>

services.dsnet.package

The dsnet package to use.

Type: package

Default:

```
pkgs.dsnet
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dsnet.nix>

services.dsnet.settings

The settings to use for dsnet. This will be converted to a JSON object that will be passed to dsnet as a patch, using the patch command when the service is started. See the dsnet documentation for more information on the additional options.

Note that the resulting /etc/dsnetconfg.json is more of a database than it is a configuration file. It is therefore recommended that system specific values are configured here, rather than the full configuration including peers.

Peers may be managed via the dsnet add/remove commands, negating the need to manage key material and cumbersom configuration with nix. If you want peer configuration in nix, you may as well use the regular wireguard module.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Example:

```
{
  DNS = "8.8.8.8";
  ExternalHostname = "vpn.example.com";
  ExternalIP = "127.0.0.1";
  ExternalIP6 = "";
  IP = "10.3.148.1";
  IP6 = "";
  ListenPort = 51820;
  Network = "10.3.148.0/22";
  Network6 = "";
  Networks = [
    "0.0.0.0/0"
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dsnet.nix>

services.dsnet.settings.ExternalHostname

The hostname that clients should use to connect to this server. This is used to generate the client configuration files.

This is preferred over ExternalIP, as it allows for IPv4 and IPv6, as well as enabling the ability tp change IP.

Type: null or string

Default:

```
null
```

Example:

```
"vpn.example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/dsnet.nix>

services.dsnet.settings.ExternalIP

The external IP address of the server. This is used to generate the client configuration files for when an ExternalHostname is not set.

Leaving this empty will cause dsnet to use the IP address of what looks like the WAN interface.

Type: null or string

Default:

```
null
```

Example:

```
"192.0.2.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dsnet.nix>

services.dsnet.settings.ExternalIP6

The external IPv6 address of the server. This is used to generate the client configuration files for when an ExternalHostname is not set. Used in preference to ExternalIP.

Leaving this empty will cause dsnet to use the IP address of what looks like the WAN interface.

Type: null or string

Default:

```
null
```

Example:

```
"2001:db8::1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dsnet.nix>

services.dsnet.settings.IP

The IPv4 address that the server will use on the network. Leave this empty to let dsnet choose an address.

Type: null or string

Default:

```
null
```

Example:

```
"172.18.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dsnet.nix>

services.dsnet.settings.IP6

The IPv6 address that the server will use on the network Leave this empty to let dsnet choose an address.

Type: null or string

Default:

```
null
```

Example:

```
"2001:db8::1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dsnet.nix>

services.dsnet.settings.Network
The IPv4 network that the server will use to allocate IPs on the network. Leave this empty to let dsnet choose a network.

Type: null or string

Default:

```
null
```

Example:

```
"172.18.0.0/24"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dsnet.nix>

services.dsnet.settings.Network6
The IPv6 network that the server will use to allocate IPs on the network. Leave this empty to let dsnet choose a network.

Type: null or string

Default:

```
null
```

Example:

```
"2001:db8::1/64"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dsnet.nix>

services.dsnet.settings.Networks
The CIDR networks that should route through this server. Clients will be configured to route traffic for these networks through the server peer.

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "0.0.0.0/0"
  "192.168.0.0/24"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/dsnet.nix>

services.dspam.enable
Whether to enable the dspam spam filter.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dspam.nix>

services.dspam.domainSocket
Path to local domain socket which is used for communication with the daemon. Set to null to disable UNIX socket.

Type: null or absolute path

Default:

```
"/run/dspam/dspam.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dspam.nix>

services.dspam.extraConfig
Additional dspam configuration.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dspam.nix>

services.dspam.group
Group for the dspam daemon.

Type: string

Default:

```
"dspam"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dspam.nix>

services.dspam.maintenanceInterval
If set, maintenance script will be run at specified (in systemd.timer format) interval

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dspam.nix>

services.dspam.storageDriver
Storage driver backend to use for dspam.

Type: string

Default:

```
"hash"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/dspam.nix>

services.dspam.user

User for the dspam daemon.

Type: string

Default:

```
"dspam"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/dspam.nix>

services.duckdns.enable

Whether to enable DuckDNS Dynamic DNS Client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/duckdns.nix>

services.duckdns.domains

The domain(s) to update in DuckDNS (without the .duckdns.org suffix)

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "examplehost"
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/duckdns.nix>

services.duckdns.domainsFile

The path to a file containing a newline−separated list of DuckDNS domain(s) to be updated (without the .duckdns.org suffix)

Type: null or absolute path

Default:

```
null
```

Example:

```
pkgs.writeText "duckdns−domains.txt" ''
  examplehost
  examplehost2
  examplehost3
```

Declared by:

<nixpkgs/nixos/modules/services/misc/duckdns.nix>

services.duckdns.tokenFile
The path to a file containing the token used to authenticate with DuckDNS.

Type: absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/duckdns.nix>

services.duckling.enable
Whether to enable duckling.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/duckling.nix>

services.duckling.port
Port on which duckling will run.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/misc/duckling.nix>

services.dump1090−fa.enable
Whether to enable dump1090−fa.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dump1090−fa.nix>

services.dump1090−fa.package
The dump1090−fa package to use.

Type: package

Default:

```
pkgs.dump1090−fa
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dump1090−fa.nix>

services.dump1090−fa.extraArgs
Additional passed arguments

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dump1090−fa.nix>

services.dunst.enable
Whether to enable Dunst notification daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/dunst.nix>

services.dunst.enableWayland
Whether to enable Wayland support.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/dunst.nix>

services.dunst.enableX11
Whether to enable X11 support.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/dunst.nix>

services.dunst.package
The dunst package to use.

Type: package

Default:

```
pkgs.dunst
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/dunst.nix>

services.dunst.settings

Dunst configuration, see dunst(5)

Type: attribute set of attribute set of (INI atom (null, bool, int, float or string) or attribute set of (INI atom (null, bool, int, float or string)))

Default:

```
{ }
```

Example:

```
{
  global = {
    width = 300;
    height = 300;
    offset = "30x50";
    origin = "top-right";
    transparency = 10;
    frame_color = "#eceff1";
    font = "Droid Sans 9";
  };
  urgency_normal = {
    background = "#37474f";
    foreground = "#eceff1";
    timeout = 10;
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/dunst.nix>

services.duplicati.enable

Whether to enable Duplicati.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/duplicati.nix>

services.duplicati.package

The duplicati package to use.

Type: package

Default:

```
pkgs.duplicati
```

Declared by:

<nixpkgs/nixos/modules/services/backup/duplicati.nix>

services.duplicati.dataDir

The directory where Duplicati stores its data files.

> **Note**
> If left as the default value this directory will automatically be created before the Duplicati server starts, otherwise you are responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: string

Default:

```
"/var/lib/duplicati"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/duplicati.nix>

services.duplicati.interface

Listening interface for the web UI Set it to “any” to listen on all available interfaces

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/duplicati.nix>

services.duplicati.parameters

This option can be used to store some or all of the options given to the commandline client. Each line in this option should be of the format −−option=value. The options in this file take precedence over the options provided through command line arguments. <link xlink:href=“https://duplicati.readthedocs.io/en/latest/06−advanced−options/#parameters−file”>Duplicati docs: parameters−file</link>

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
--webservice-allowedhostnames=*
```

Declared by:

<nixpkgs/nixos/modules/services/backup/duplicati.nix>

services.duplicati.parametersFile

This file can be used to store some or all of the options given to the commandline client. Each line in the file option should be of the format −−option=value. The options in this file take precedence over the options provided through command line arguments. <link xlink:href=“https://duplicati.readthedocs.io/en/latest/06−advanced−options/#parameters−file”>Duplicati docs: parameters−file</link>

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/backup/duplicati.nix>

services.duplicati.port

Port serving the web interface

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8200
```

Declared by:

<nixpkgs/nixos/modules/services/backup/duplicati.nix>

services.duplicati.user

Duplicati runs as it's own user. It will only be able to backup world−readable files. Run as root with special care.

Type: string

Default:

```
"duplicati"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/duplicati.nix>

services.duplicity.enable

Whether to enable backups with duplicity.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/duplicity.nix>

services.duplicity.cleanup.maxAge

If non−null, delete all backup sets older than the given time. Old backup sets will not be deleted if backup sets newer than time depend on them.

Type: null or string

Default:

```
null
```

Example:

```
"6M"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/duplicity.nix>

services.duplicity.cleanup.maxFull

If non−null, delete all backups sets that are older than the count:th last full backup (in other words, keep the last count full backups and associated incremental sets).

Type: null or signed integer

Default:

```
null
```

Example:

```
2
```

Declared by:

<nixpkgs/nixos/modules/services/backup/duplicity.nix>

services.duplicity.cleanup.maxIncr

If non−null, delete incremental sets of all backups sets that are older than the count:th last full backup (in other words, keep only old full backups and not their increments).

Type: null or signed integer

Default:

```
null
```

Example:

```
1
```

Declared by:

<nixpkgs/nixos/modules/services/backup/duplicity.nix>

services.duplicity.exclude

List of paths to exclude from backups. See the FILE SELECTION section in **duplicity**(1) for details on the syntax.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/duplicity.nix>

services.duplicity.excludeFileList

File containing newline−separated list of paths to exclude into the backups. See the FILE SELECTION section in **duplicity**(1) for details on the syntax.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/fileList.txt"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/duplicity.nix>

services.duplicity.extraFlags

Extra command−line flags passed to duplicity. See **duplicity**(1).

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--backend-retry-delay"
  "100"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/duplicity.nix>

services.duplicity.frequency
Run duplicity with the given frequency (see **systemd.time**(7) for the format). If null, do not run automatically.

Type: null or string

Default:

```
"daily"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/duplicity.nix>

services.duplicity.fullIfOlderThan
If ‘"never"’ (the default) always do incremental backups (the first backup will be a full backup, of course). If ‘"always"’ always do full backups. Otherwise, this must be a string representing a duration. Full backups will be made when the latest full backup is older than this duration. If this is not the case, an incremental backup is performed.

Type: string

Default:

```
"never"
```

Example:

```
"1M"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/duplicity.nix>

services.duplicity.include
List of paths to include into the backups. See the FILE SELECTION section in **duplicity**(1) for details on the syntax.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/home"
]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/duplicity.nix>

services.duplicity.includeFileList
File containing newline−separated list of paths to include into the backups. See the FILE SELECTION section in **duplicity**(1) for details on the syntax.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/fileList.txt"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/duplicity.nix>

services.duplicity.root
Root directory to backup.

Type: absolute path

Default:

```
"/"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/duplicity.nix>

services.duplicity.secretFile
Path of a file containing secrets (gpg passphrase, access key…) in the format of EnvironmentFile as described by **systemd.exec**(5). For example:

```
PASSPHRASE=«...»
AWS_ACCESS_KEY_ID=«...»
AWS_SECRET_ACCESS_KEY=«...»
```

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/backup/duplicity.nix>

services.duplicity.targetUrl
Target url to backup to. See the URL FORMAT section in **duplicity**(1) for supported urls.

Type: string

Example:

```
"s3://host:port/prefix"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/duplicity.nix>

services.dwm−status.enable
Whether to enable dwm−status user service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dwm−status.nix>

services.dwm−status.package
The dwm−status package to use.

Type: package

Default:

```
pkgs.dwm−status
```

Example:

```
dwm-status.override { enableAlsaUtils = false; }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dwm-status.nix>

services.dwm-status.settings
Config options for dwm-status, see **https://github.com/Gerschtli/dwm-status#configuration** for available options.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Example:

```
{
  order = [
    "battery"
    "cpu_load"
    "time"
  ];
  time = {
    format = "%F %a %r";
    update_seconds = true;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dwm-status.nix>

services.dwm-status.settings.order
List of enabled features in order.

Type: list of (one of “audio”, “backlight”, “battery”, “cpu_load”, “network”, “time”)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dwm-status.nix>

services.dysnomia.enable
Whether to enable Dysnomia

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dysnomia.nix>

services.dysnomia.enableAuthentication
Whether to publish privacy-sensitive authentication credentials

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dysnomia.nix>

services.dysnomia.enableLegacyModules
Whether to enable Dysnomia legacy process and wrapper modules

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dysnomia.nix>

services.dysnomia.package
The Dysnomia package

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/misc/dysnomia.nix>

services.dysnomia.components
An attribute set in which each key represents a container and each value an attribute set in which each key represents a component and each value a derivation constructing its initial state

Type: attribute set of (attribute set)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dysnomia.nix>

services.dysnomia.containers
An attribute set in which each key represents a container and each value an attribute set providing its configuration properties

Type: attribute set of (attribute set)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dysnomia.nix>

services.dysnomia.extraContainerPaths
A list of paths containing additional container configurations that are added to the search folders

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dysnomia.nix>

services.dysnomia.extraContainerProperties
An attribute set providing additional container settings in addition to the default properties

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dysnomia.nix>

services.dysnomia.extraModulePaths
A list of paths containing additional modules that are added to the search folders

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dysnomia.nix>

services.dysnomia.properties
An attribute set in which each attribute represents a machine property. Optionally, these values can be shell substitutions.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/dysnomia.nix>

services.e−imzo.enable
Whether to enable E−IMZO.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/e−imzo.nix>

services.e−imzo.package
The e−imzo package to use. Official mirror deletes old versions as soon as they release new one. Feel free to use either unstable or your own custom e−imzo package and ping maintainer.

Type: package

Default:

```
pkgs.e−imzo
```

Declared by:
<nixpkgs/nixos/modules/services/security/e−imzo.nix>

services.earlyoom.enable
Whether to enable early out of memory killing.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/earlyoom.nix>

services.earlyoom.enableDebugInfo
Enable debugging messages.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/system/earlyoom.nix>

services.earlyoom.enableNotifications
Send notifications about killed processes via the system d−bus.

WARNING: enabling this option (while convenient) should *not* be done on a machine where you do not trust the other users as it allows any other local user to DoS your session by spamming notifications.

To actually see the notifications in your GUI session, you need to have ‘systembus−notify’ running as your user, which this option handles by enabling **services.systembus−notify**.

See **README** for details.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/system/earlyoom.nix>

services.earlyoom.package
The earlyoom package to use.

Type: package

Default:

```
pkgs.earlyoom
```

Declared by:
<nixpkgs/nixos/modules/services/system/earlyoom.nix>

services.earlyoom.extraArgs
Extra command−line arguments to be passed to earlyoom. Each element in the value list will be escaped as an argument without further word−breaking.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−g"
  "−−prefer"
  "(^|/)(java|chromium)$"
]
```

Declared by:
<nixpkgs/nixos/modules/services/system/earlyoom.nix>

services.earlyoom.freeMemKillThreshold
Minimum available memory (in percent) before sending SIGKILL. If unset, this defaults to half of **freeMemThreshold**.

See the description of **services.earlyoom.freeMemThreshold**.

Type: null or integer between 1 and 100 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/system/earlyoom.nix>

services.earlyoom.freeMemThreshold
Minimum available memory (in percent).

If the available memory falls below this threshold (and the analog is true for **freeSwapThreshold**) the killing begins. SIGTERM is sent first to the process that uses the most memory; then, if the available memory falls below **freeMemKillThreshold** (and the analog is true for **freeSwapKillThreshold**), SIGKILL is sent.

See **README** for details.

Type: integer between 1 and 100 (both inclusive)

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/system/earlyoom.nix>

services.earlyoom.freeSwapKillThreshold
Minimum free swap space (in percent) before sending SIGKILL. If unset, this defaults to half of **freeSwapThreshold**.

See the description of **services.earlyoom.freeMemThreshold**.

Type: null or integer between 1 and 100 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/system/earlyoom.nix>

services.earlyoom.freeSwapThreshold
Minimum free swap space (in percent) before sending SIGTERM.

See the description of **services.earlyoom.freeMemThreshold**.

Type: integer between 1 and 100 (both inclusive)

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/system/earlyoom.nix>

services.earlyoom.killHook

An absolute path to an executable to be run for each process killed. Some environment variables are available, see **README** and **the man page** for details.

WARNING: earlyoom is running in a sandbox with ProtectSystem="strict" by default, so filesystem write is also prohibited for the hook. If you want to change these protection rules, override the systemd service via 'systemd.services.earlyoom.serviceConfig.ProtectSystem'.

Type: null or absolute path

Default:

```
null
```

Example:

```
pkgs.writeShellScript "earlyoom-kill-hook" ''
  echo "Process $EARLYOOM_NAME ($EARLYOOM_PID) was killed" >> /path \
/to/log
```

Declared by:

<nixpkgs/nixos/modules/services/system/earlyoom.nix>

services.earlyoom.reportInterval

Interval (in seconds) at which a memory report is printed (set to 0 to disable).

Type: signed integer

Default:

```
3600
```

Example:

Declared by:

<nixpkgs/nixos/modules/services/system/earlyoom.nix>

services.easytier.enable

Whether to enable EasyTier daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.package

The easytier package to use.

Type: package

Default:

```
pkgs.easytier
```

Declared by:

<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.allowSystemForward

Whether to enable Allow the system to forward packets from easytier. Useful when ‘proxy_forward_by_system’ enabled. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances

EasyTier instances.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  extraSettings = {
    flags = {
      dev_name = "tun1";
    };
  };
  settings = {
    ipv4 = "10.144.144.1/24";
    network_name = "easytier";
    network_secret = "easytier";
    peers = [
      "tcp://public.easytier.cn:11010"
      "wss://example.com:443"
    ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances.<name>.enable

Enable the instance.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances.<name>.configFile

Path to easytier config file. Setting this option will override ‘settings’ and ‘extraSettings’ of this instance.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances.<name>.configServer

Configure the instance from config server. When this option set, any other settings for configuring the instance manually except ‘hostname’ will be ignored. Valid formats are:

- full uri for custom server: ‘udp://example.com:22020/<token>’
- username only for official server: ‘<token>’

Type: null or string

Default:

```
null
```

Example:

```
"udp://example.com:22020/myusername"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances.<name>.environmentFiles

Environment files for this instance. All command−line args have corresponding environment variables.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  /path/to/.env
  /path/to/.env.secret
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances.<name>.extraArgs

Extra args append to the easytier command−line.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances.<name>.extraSettings

Extra settings to add to *easytier-‹name›.toml*.

Type: TOML value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances.<name>.settings

Settings to generate *easytier-‹name›.toml*

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances.<name>.settings.dhcp

Automatically determine the IPv4 address of this peer based on existing peers on network.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances.<name>.settings.hostname

Hostname shown in peer list and web console.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances.<name>.settings.instance_name

Identify different instances on same host

Type: string

Default:

```
"‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances.<name>.settings.ipv4

IPv4 cidr address of this peer in the virtual network. If empty, this peer will only forward packets and no TUN device will be created.

Type: null or string

Default:

```
null
```

Example:

```
"10.144.144.1/24"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances.<name>.settings.listeners
Listener addresses to accept connections from other peers. Valid format is: '<proto>://<addr>:<port>', where the protocol can be 'tcp', 'udp', 'ring', 'wg', 'ws', 'wss'.

Type: list of string

Default:

```
[
  "tcp://0.0.0.0:11010"
  "udp://0.0.0.0:11010"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances.<name>.settings.network_name
EasyTier network name.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances.<name>.settings.network_secret
EasyTier network credential used for verification and encryption. It can also be set in environmentFile.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.easytier.instances.<name>.settings.peers
Peers to connect initially. Valid format is: '<proto>://<addr>:<port>'.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "tcp://example.com:11010"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/easytier.nix>

services.ebusd.enable

Whether to enable ebusd, a daemon for communication with eBUS heating systems.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.package

The ebusd package to use.

Type: package

Default:

```
pkgs.ebusd
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.configpath

Directory to read CSV config files from. This can be a local folder or a URL.

Type: string

Default:

```
"https://ebus.github.io/"
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.device

Use DEV as eBUS device [/dev/ttyUSB0]. This can be either: enh:DEVICE or enh:IP:PORT for enhanced device (only adapter v3 and newer), ens:DEVICE for enhanced high speed serial device (only adapter v3 and newer with firmware since 20220731), DEVICE for serial device (normal speed, for all other serial adapters like adapter v2 as well as adapter v3 in non−enhanced mode), or [udp:]IP:PORT for network device.

Source: **https://github.com/john30/ebusd/wiki/2.−Run#device−options**

Type: string

Default:

```
""
```

Example:

```
"IP:PORT"
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.extraArguments

Extra arguments to the ebus daemon

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.logs.all
Only write log for matching ‘AREA’s (all|main|network|bus|device|update|other) below or equal to ‘LEVEL’ (none|error|notice|info|debug)

Type: one of “none”, “error”, “notice”, “info”, “debug”

Default:

```
"notice"
```

Example:

```
"debug"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.logs.bus
Only write log for matching ‘AREA’s (all|main|network|bus|device|update|other) below or equal to ‘LEVEL’ (none|error|notice|info|debug)

Type: one of “none”, “error”, “notice”, “info”, “debug”

Default:

```
"notice"
```

Example:

```
"debug"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.logs.device
Only write log for matching ‘AREA’s (all|main|network|bus|device|update|other) below or equal to ‘LEVEL’ (none|error|notice|info|debug)

Type: one of “none”, “error”, “notice”, “info”, “debug”

Default:

```
"notice"
```

Example:

```
"debug"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.logs.main
Only write log for matching ‘AREA’s (all|main|network|bus|device|update|other) below or equal to ‘LEVEL’ (none|error|notice|info|debug)

Type: one of “none”, “error”, “notice”, “info”, “debug”

Default:

```
"notice"
```

Example:

```
"debug"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.logs.network
Only write log for matching ‘AREA’s (all|main|network|bus|device|update|other) below or equal to ‘LEVEL’ (none|error|notice|info|debug)

Type: one of “none”, “error”, “notice”, “info”, “debug”

Default:

```
"notice"
```

Example:

```
"debug"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.logs.other
Only write log for matching ‘AREA’s (all|main|network|bus|device|update|other) below or equal to ‘LEVEL’ (none|error|notice|info|debug)

Type: one of “none”, “error”, “notice”, “info”, “debug”

Default:

```
"notice"
```

Example:

```
"debug"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.logs.update
Only write log for matching ‘AREA’s (all|main|network|bus|device|update|other) below or equal to ‘LEVEL’ (none|error|notice|info|debug)

Type: one of “none”, “error”, “notice”, “info”, “debug”

Default:

```
"notice"
```

Example:

```
"debug"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.mqtt.enable
Whether to enable support for MQTT.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.mqtt.home−assistant
Adds the Home Assistant topics to MQTT, read more at **MQTT Integration**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.mqtt.host
Connect to MQTT broker on HOST.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.mqtt.password
The MQTT password.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.mqtt.port
The port on which to connect to MQTT

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1883
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.mqtt.retain
Whether to enable set the retain flag on all topics instead of only selected global ones.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.mqtt.user
The MQTT user to use

Type: string

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.port
The port on which to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8888
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.readonly
Only read from device, never write to it

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.ebusd.scanconfig
Pick CSV config files matching initial scan (“none” or empty for no initial scan message, “full” for full scan, or a single hex address to scan, default is to send a broadcast ident message). If combined with −−checkconfig, you can add scan message data as arguments for checking a particular scan configuration, e.g. “FF08070400/0AB54548503003277201”. For further details on this option, see **Automatic configuration**.

Type: string

Default:

```
"full"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/ebusd.nix>

services.echoip.enable
Whether to enable echoip.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/echoip.nix>

services.echoip.enablePortLookup
Whether to enable port lookup.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/echoip.nix>

services.echoip.enableReverseHostnameLookups
Whether to enable reverse hostname lookups.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/echoip.nix>

services.echoip.package
The echoip package to use.

Type: package

Default:

```
pkgs.echoip
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/echoip.nix>

services.echoip.extraArgs
Extra command line arguments to pass to echoip. See **https://github.com/mpolden/echoip** for details.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/echoip.nix>

services.echoip.listenAddress
The address echoip should listen on

Type: string

Default:

```
":8080"
```

Example:

```
"127.0.0.1:8000"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/echoip.nix>

services.echoip.remoteIpHeader
Header to trust for remote IP, if present

Type: null or string

Default:

```
null
```

Example:

```
"X-Real-IP"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/echoip.nix>

services.echoip.virtualHost
Name of the nginx virtual host to use and setup. If null, do not setup anything.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/echoip.nix>

services.ecs-agent.enable
Whether to enable Amazon ECS agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/ecs-agent.nix>

services.ecs-agent.package
The ecs-agent package to use.

Type: package

Default:

```
pkgs.ecs-agent
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/ecs-agent.nix>

services.ecs-agent.extra-environment
The environment the ECS agent should run with. See the ECS agent documentation for keys that work here.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/virtualisation/ecs-agent.nix>

services.eg25-manager.enable
Whether to enable Quectel EG25 modem manager service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/hardware/network/eg25−manager.nix>

services.eg25−manager.package
The eg25−manager package to use.

Type: package

Default:

```
pkgs.eg25−manager
```

Declared by:
<nixpkgs/nixos/modules/hardware/network/eg25−manager.nix>

services.ejabberd.enable
Whether to enable ejabberd server

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ejabberd.nix>

services.ejabberd.package
The ejabberd package to use.

Type: package

Default:

```
pkgs.ejabberd
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ejabberd.nix>

services.ejabberd.configFile
Configuration file for ejabberd in YAML format

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ejabberd.nix>

services.ejabberd.ctlConfig
Configuration of ejabberdctl

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ejabberd.nix>

services.ejabberd.group
Group under which ejabberd is ran

Type: string

Default:

```
"ejabberd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ejabberd.nix>

services.ejabberd.imagemagick
Add ImageMagick to server's path; allows for image thumbnailing

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ejabberd.nix>

services.ejabberd.loadDumps
Configuration dumps that should be loaded on the first startup

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[ ./myejabberd.dump ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ejabberd.nix>

services.ejabberd.logsDir
Location of the logfile directory of ejabberd

Type: absolute path

Default:

```
"/var/log/ejabberd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ejabberd.nix>

services.ejabberd.spoolDir
Location of the spooldir of ejabberd

Type: absolute path

Default:

```
"/var/lib/ejabberd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ejabberd.nix>

services.ejabberd.user
User under which ejabberd is ran

Type: string

Default:

```
"ejabberd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ejabberd.nix>

services.elasticsearch.enable

Whether to enable elasticsearch.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/search/elasticsearch.nix>

services.elasticsearch.package

The elasticsearch package to use.

Type: package

Default:

```
pkgs.elasticsearch
```

Declared by:

<nixpkgs/nixos/modules/services/search/elasticsearch.nix>

services.elasticsearch.cluster_name

Elasticsearch name that identifies your cluster for auto−discovery.

Type: string

Default:

```
"elasticsearch"
```

Declared by:

<nixpkgs/nixos/modules/services/search/elasticsearch.nix>

services.elasticsearch.dataDir

Data directory for elasticsearch.

Type: absolute path

Default:

```
"/var/lib/elasticsearch"
```

Declared by:

<nixpkgs/nixos/modules/services/search/elasticsearch.nix>

services.elasticsearch.extraCmdLineOptions

Extra command line options for the elasticsearch launcher.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/search/elasticsearch.nix>

services.elasticsearch.extraConf

Extra configuration for elasticsearch.

Type: string

Default:

```
""
```

Example:

```
node.name: "elasticsearch"
node.master: true
node.data: false
```

Declared by:
<nixpkgs/nixos/modules/services/search/elasticsearch.nix>

services.elasticsearch.extraJavaOptions
Extra command line options for Java.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-Djava.net.preferIPv4Stack=true"
]
```

Declared by:
<nixpkgs/nixos/modules/services/search/elasticsearch.nix>

services.elasticsearch.listenAddress
Elasticsearch listen address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/search/elasticsearch.nix>

services.elasticsearch.logging
Elasticsearch logging configuration.

Type: string

Default:

```
logger.action.name = org.elasticsearch.action
logger.action.level = info

appender.console.type = Console
appender.console.name = console
appender.console.layout.type = PatternLayout
appender.console.layout.pattern = [%d{ISO8601}][%-5p][%-25c{1.} \
] %marker%m%n

rootLogger.level = info
rootLogger.appenderRef.console.ref = console
```

Declared by:
<nixpkgs/nixos/modules/services/search/elasticsearch.nix>

services.elasticsearch.plugins
Extra elasticsearch plugins

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.elasticsearchPlugins.discovery-ec2 ]
```

Declared by:
<nixpkgs/nixos/modules/services/search/elasticsearch.nix>

services.elasticsearch.port
Elasticsearch port to listen for HTTP traffic.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9200
```

Declared by:
<nixpkgs/nixos/modules/services/search/elasticsearch.nix>

services.elasticsearch.restartIfChanged
Automatically restart the service on config change. This can be set to false to defer restarts on a server or cluster. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/search/elasticsearch.nix>

services.elasticsearch.single_node
Start a single-node cluster

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/search/elasticsearch.nix>

services.elasticsearch.tcp_port
Elasticsearch port for the node to node communication.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9300
```

Declared by:
<nixpkgs/nixos/modules/services/search/elasticsearch.nix>

services.elasticsearch−curator.enable

Whether to enable elasticsearch curator.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/search/elasticsearch−curator.nix>

services.elasticsearch−curator.actionYAML

curator action.yaml file contents, alternatively use curator−cli which takes a simple action command

Type: strings concatenated with “\n”

Example:

```
  ---
  actions:
    1:
      action: delete_indices
      description: >−
        Delete indices older than 45 days (based on index name), fo \
r logstash−
        prefixed indices. Ignore the error if the filter does not r \
esult in an
        actionable list of indices (ignore_empty_list) and exit cle \
anly.
      options:
        ignore_empty_list: True
        disable_action: False
      filters:
      − filtertype: pattern
        kind: prefix
        value: logstash−
      − filtertype: age
        source: name
        direction: older
        timestring: '%Y.%m.%d'
        unit: days
        unit_count: 45
```

Declared by:

<nixpkgs/nixos/modules/services/search/elasticsearch−curator.nix>

services.elasticsearch−curator.hosts

a list of elasticsearch hosts to connect to

Type: list of string

Default:

```
[
  "localhost"
]
```

Declared by:
<nixpkgs/nixos/modules/services/search/elasticsearch-curator.nix>

services.elasticsearch-curator.interval
The frequency to run curator, a systemd.time such as ‘hourly’

Type: string

Default:

```
"hourly"
```

Declared by:
<nixpkgs/nixos/modules/services/search/elasticsearch-curator.nix>

services.elasticsearch-curator.port
the port that elasticsearch is listening on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9200
```

Declared by:
<nixpkgs/nixos/modules/services/search/elasticsearch-curator.nix>

services.elephant.enable
Whether to enable Elephant application launcher backend.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/elephant.nix>

services.elephant.package
The elephant package to use.

Type: package

Default:

```
pkgs.elephant
```

Declared by:
<nixpkgs/nixos/modules/services/misc/elephant.nix>

services.emacs.enable
Whether to enable a user service for the Emacs daemon. Use ‘emacsclient’ to connect to the daemon. If ‘true’, *services.emacs.install* is considered ‘true’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/editors/emacs.nix>

services.emacs.package

The emacs package to use.

Type: package

Default:

```
pkgs.emacs
```

Declared by:

<nixpkgs/nixos/modules/services/editors/emacs.nix>

services.emacs.defaultEditor

When enabled, configures emacsclient to be the default editor using the EDITOR environment variable.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/editors/emacs.nix>

services.emacs.install

Whether to install a user service for the Emacs daemon. Once the service is started, use emacsclient to connect to the daemon.

The service must be manually started for each user with “systemctl −−user start emacs” or globally through *services.emacs.enable*.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/editors/emacs.nix>

services.emacs.startWithGraphical

Start emacs with the graphical session instead of any session. Without this, emacs clients will not be able to create frames in the graphical session.

Type: boolean

Default:

```
config.services.xserver.enable
```

Declared by:

<nixpkgs/nixos/modules/services/editors/emacs.nix>

services.endlessh.enable

Whether to enable endlessh service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/endlessh.nix>

services.endlessh.extraOptions
Additional command line options to pass to the endlessh daemon.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-6"
  "-d 9000"
  "-v"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/endlessh.nix>

services.endlessh.openFirewall
Whether to open a firewall port for the SSH listener.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/endlessh.nix>

services.endlessh.port
Specifies on which port the endlessh daemon listens for SSH connections.

Setting this to ‘22’ may conflict with **services.openssh**.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2222
```

Example:

```
22
```

Declared by:
<nixpkgs/nixos/modules/services/security/endlessh.nix>

services.endlessh-go.enable
Whether to enable endlessh-go service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/endlessh−go.nix>

services.endlessh−go.package
The endlessh−go package to use.

Type: package

Default:

```
pkgs.endlessh-go
```

Declared by:
<nixpkgs/nixos/modules/services/security/endlessh−go.nix>

services.endlessh−go.extraOptions
Additional command line options to pass to the endlessh−go daemon.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-conn_type=tcp4"
  "-max_clients=8192"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/endlessh−go.nix>

services.endlessh−go.listenAddress
Interface address to bind the endlessh−go daemon to SSH connections.

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"[::]"
```

Declared by:
<nixpkgs/nixos/modules/services/security/endlessh−go.nix>

services.endlessh−go.openFirewall
Whether to open a firewall port for the SSH listener.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/endlessh−go.nix>

services.endlessh−go.port
Specifies on which port the endlessh−go daemon listens for SSH connections.

Setting this to ‘22’ may conflict with **services.openssh**.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2222
```

Example:

```
22
```

Declared by:
<nixpkgs/nixos/modules/services/security/endlessh−go.nix>

services.endlessh−go.prometheus.enable
Whether to enable Prometheus integration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/endlessh−go.nix>

services.endlessh−go.prometheus.listenAddress
Interface address to bind the endlessh−go daemon to answer Prometheus queries.

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"[::]"
```

Declared by:
<nixpkgs/nixos/modules/services/security/endlessh−go.nix>

services.endlessh−go.prometheus.port
Specifies on which port the endlessh−go daemon listens for Prometheus queries.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2112
```

Example:

```
9119
```

Declared by:
<nixpkgs/nixos/modules/services/security/endlessh−go.nix>

services.engelsystem.enable
Whether to enable engelsystem, an online tool for coordinating volunteers and shifts on large events.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/engelsystem.nix>

services.engelsystem.package
The engelsystem package to use.

Type: package

Default:

```
pkgs.engelsystem
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/engelsystem.nix>

services.engelsystem.createDatabase
Whether to create a local database automatically. This will override every database setting in **services.engelsystem.settings**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/engelsystem.nix>

services.engelsystem.domain
Domain to serve on.

Type: string

Example:

```
"engelsystem.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/engelsystem.nix>

services.engelsystem.settings
Options to be added to config.php, as a nix attribute set. Options containing secret data should be set to an attribute set containing the attribute _secret − a string pointing to a file containing the value the option should be set to. See the example to get a better picture of this: in the resulting config.php file, the email.password key will be set to the contents of the /var/keys/engelsystem/mail file.

See **https://engelsystem.de/doc/admin/configuration/** for available options.

Note that the admin user login credentials cannot be set here − they always default to admin:asdfasdf. Log in and change them immediately.

Type: attribute set

Default:

```
{
  database = {
    database = "engelsystem";
    host = "localhost";
    username = "engelsystem";
  };
}
```

Example:

```
{
  autoarrive = true;
```

```
database = {
  database = "engelsystem";
  host = "database.example.com";
  password = {
    _secret = "/var/keys/engelsystem/database";
  };
  username = "engelsystem";
};
default_locale = "de_DE";
email = {
  driver = "smtp";
  encryption = "tls";
  from = {
    address = "engelsystem@example.com";
    name = "example engelsystem";
  };
  host = "smtp.example.com";
  password = {
    _secret = "/var/keys/engelsystem/mail";
  };
  port = 587;
  username = "engelsystem@example.com";
};
maintenance = false;
min_password_length = 6;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/engelsystem.nix>

services.ente.api.enable
Whether to enable Museum (API server for ente.io).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.api.enableLocalDB
Whether to enable the automatic creation of a local postgres database for museum…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.api.package
The museum package to use.

Type: package

Default:

```
pkgs.museum
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.api.domain
The domain under which the api will be served.

Type: string

Example:

```
"api.ente.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.api.group
Group under which museum runs. If you set this option you must make sure the group exists.

Type: string

Default:

```
"ente"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.api.nginx.enable
Whether to enable nginx proxy for the API server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.api.settings
Museum yaml configuration. Refer to upstream **local.yaml** for more information. You can specify secret values in this configuration by setting ‘somevalue._secret = "/path/to/file"’ instead of setting ‘somevalue’ directly.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.api.settings.apps.accounts
Set this to the URL where your accounts page is running. This is primarily for passkey support.

Type: string

Default:

```
"https://accounts.ente.io"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.api.settings.apps.cast
Set this to the URL where your cast page is running. This is for browser and chromecast casting support.

Type: string

Default:

```
"https://cast.ente.io"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.api.settings.apps.public−albums
If you’re running a self hosted instance and wish to serve public links, set this to the URL where your albums web app is running.

Type: string

Default:

```
"https://albums.ente.io"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.api.settings.db.host
The database host

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.api.settings.db.name
The database name

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.api.settings.db.port
The database port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5432
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.api.settings.db.user
The database user

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.api.user
User under which museum runs. If you set this option you must make sure the user exists.

Type: string

Default:

```
"ente"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.web.enable
Whether to enable Ente web frontend (Photos, Albums).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.web.package
The ente−web package to use.

Type: package

Default:

```
pkgs.ente−web
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.web.domains.accounts
The domain under which the accounts frontend will be served.

Type: string

Example:

```
"accounts.ente.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.web.domains.albums
The domain under which the albums frontend will be served.

Type: string

Example:

```
"albums.ente.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.web.domains.api
The domain under which the api is served. This will NOT serve the api itself, but is a required setting to host the frontends! This will automatically be set for you if you enable both the api server and web frontends.

Type: string

Example:

```
"api.ente.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.web.domains.cast
The domain under which the cast frontend will be served.

Type: string

Example:

```
"cast.ente.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.ente.web.domains.photos
The domain under which the photos frontend will be served.

Type: string

Example:

```
"photos.ente.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ente.nix>

services.envfs.enable
Fuse filesystem that returns symlinks to executables based on the PATH of the requesting process. This is useful to execute shebangs on NixOS that assume hard coded locations in locations like /bin or /usr/bin etc.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/envfs.nix>

services.envfs.package
Which package to use for the envfs.

Type: package

Default:

```
pkgs.envfs
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/envfs.nix>

services.envfs.extraFallbackPathCommands
Extra commands to run in the package that contains fallback executables in case not other executable is found

Type: strings concatenated with "\n"

Default:
```
""
```

Example:
```
"ln -s $''{pkgs.bash}/bin/bash $out/bash"
```

Declared by:
<nixpkgs/nixos/modules/tasks/filesystems/envfs.nix>

services.envoy.enable
Whether to enable Envoy reverse proxy.

Type: boolean

Default:
```
false
```

Example:
```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/envoy.nix>

services.envoy.package
The envoy package to use.

Type: package

Default:
```
pkgs.envoy
```

Declared by:
<nixpkgs/nixos/modules/services/networking/envoy.nix>

services.envoy.requireValidConfig
Whether a failure during config validation at build time is fatal. When the config can't be checked during build time, for example when it includes other files, disable this option.

Type: boolean

Default:
```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/envoy.nix>

services.envoy.settings
Specify the configuration for Envoy in Nix.

Type: JSON value

Default:
```
{ }
```

Example:

```
{
  admin = {
    access_log_path = "/dev/null";
    address = {
      socket_address = {
        protocol = "TCP";
        address = "127.0.0.1";
        port_value = 9901;
      };
    };
  };
  static_resources = {
    listeners = [];
    clusters = [];
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/envoy.nix>

services.epgstation.enable
Whether to enable EPGStation: DVR system for Mirakurun−managed TV tuners.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/video/epgstation/default.nix>

services.epgstation.package
The epgstation package to use.

Type: package

Default:

```
pkgs.epgstation
```

Declared by:
<nixpkgs/nixos/modules/services/video/epgstation/default.nix>

services.epgstation.database.name
Name of the MySQL database that holds EPGStation’s data.

Type: string

Default:

```
"epgstation"
```

Declared by:
<nixpkgs/nixos/modules/services/video/epgstation/default.nix>

services.epgstation.database.passwordFile

A file containing the password for the database named **database.name**.

Type: absolute path

Example:

```
"/run/keys/epgstation-db-password"
```

Declared by:

<nixpkgs/nixos/modules/services/video/epgstation/default.nix>

services.epgstation.ffmpeg

The ffmpeg package to use.

Type: package

Default:

```
pkgs.ffmpeg-headless
```

Example:

```
ffmpeg-full
```

Declared by:

<nixpkgs/nixos/modules/services/video/epgstation/default.nix>

services.epgstation.openFirewall

Open ports in the firewall for the EPGStation web interface.

Warning
Exposing EPGStation to the open internet is generally advised against. Only use it inside a trusted local network, or consider putting it behind a VPN if you want remote access.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/video/epgstation/default.nix>

services.epgstation.settings

Options to add to config.yml.

Documentation: **https://github.com/l3tnun/EPGStation/blob/master/doc/conf-manual.md**

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
{
  conflictPriority = 10;
  recPriority = 20;
}
```

Declared by:

<nixpkgs/nixos/modules/services/video/epgstation/default.nix>

services.epgstation.settings.clientSocketioPort

Socket.io port that the web client is going to connect to. This may be different from **services.epgstation.settings.socketioPort** if EPGStation is hidden behind a reverse proxy.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
config.services.epgstation.settings.socketioPort
```

Declared by:

<nixpkgs/nixos/modules/services/video/epgstation/default.nix>

services.epgstation.settings.concurrentEncodeNum

The maximum number of encoding jobs that EPGStation would run at the same time.

Type: positive integer, meaning >0

Default:

```
1
```

Declared by:

<nixpkgs/nixos/modules/services/video/epgstation/default.nix>

services.epgstation.settings.encode

Encoding presets for recorded videos.

Type: list of (attribute set)

Default:

```
[
  {
    name = "H.264";
    cmd = "%NODE% config.services.epgstation.package/libexec/enc.js \
";
    suffix = ".mp4";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/video/epgstation/default.nix>

services.epgstation.settings.encodeProcessNum

The maximum number of processes that EPGStation would allow to run at the same time for encoding or streaming videos.

Type: positive integer, meaning >0

Default:

```
4
```

Declared by:

<nixpkgs/nixos/modules/services/video/epgstation/default.nix>

services.epgstation.settings.mirakurunPath

URL to connect to Mirakurun.

Type: string

Default:

```
"http+unix://${lib.replaceStrings ["/"] ["%2F"] config.services.mir \
akurun.unixSocket}"
```

Example:

```
"http://localhost:40772"
```

Declared by:
<nixpkgs/nixos/modules/services/video/epgstation/default.nix>

services.epgstation.settings.port
HTTP port for EPGStation to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
20772
```

Declared by:
<nixpkgs/nixos/modules/services/video/epgstation/default.nix>

services.epgstation.settings.socketioPort
Socket.io port for EPGStation to listen on. It is valid to share ports with **services.epgstation.settings.port**.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
config.services.epgstation.settings.port + 1
```

Declared by:
<nixpkgs/nixos/modules/services/video/epgstation/default.nix>

services.epgstation.usePreconfiguredStreaming
Use preconfigured default streaming options.

Upstream defaults: **https://github.com/l3tnun/EPGStation/blob/master/config/config.yml.template**

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/video/epgstation/default.nix>

services.epmd.enable
Whether to enable socket activation for Erlang Port Mapper Daemon (epmd), which acts as a name server on all hosts involved in distributed Erlang computations.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/epmd.nix>

services.epmd.package
The erlang package to use.

Type: package

Default:

```
pkgs.erlang
```

Declared by:
<nixpkgs/nixos/modules/services/networking/epmd.nix>

services.epmd.listenStream
the listenStream used by the systemd socket. see **https://www.freedesktop.org/software/systemd/man/systemd.socket.html#ListenStream=** for more information. use this to change the port epmd will run on. if not defined, epmd will use “[::]:4369”

Type: string or list of string

Default:

```
"[::]:4369"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/epmd.nix>

services.ergo.enable
Whether to enable Ergo service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ergo.nix>

services.ergo.api.keyHash
Hex−encoded Blake2b256 hash of an API key as a 64−chars long Base16 string.

Type: null or string

Default:

```
null
```

Example:

```
"324dcf027dd4a30a932c441f365a25e86b173defa4b8e58948253471b81b72cf"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ergo.nix>

services.ergo.api.listen.ip
IP address that the Ergo node API should listen on if **api.keyHash** is defined.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ergo.nix>

services.ergo.api.listen.port
Listen port for the API endpoint if **api.keyHash** is defined.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9052
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ergo.nix>

services.ergo.dataDir
The data directory for the Ergo node.

Type: absolute path

Default:

```
"/var/lib/ergo"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ergo.nix>

services.ergo.group
The group as which to run the Ergo node.

Type: string

Default:

```
config.services.ergo.user
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ergo.nix>

services.ergo.listen.ip
IP address on which the Ergo node should listen.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ergo.nix>

services.ergo.listen.port
Listen port for the Ergo node.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9006
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ergo.nix>

services.ergo.openFirewall
Open ports in the firewall for the Ergo node as well as the API.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ergo.nix>

services.ergo.testnet
Connect to testnet network instead of the default mainnet.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ergo.nix>

services.ergo.user
The user as which to run the Ergo node.

Type: string

Default:

```
"ergo"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ergo.nix>

services.ergochat.enable
Whether to enable Ergo IRC daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ergochat.nix>

services.ergochat.configFile
Path to configuration file. Setting this will skip any configuration done via ‘settings’

Type: absolute path

Default: generated config file from settings

Declared by:
<nixpkgs/nixos/modules/services/networking/ergochat.nix>

services.ergochat.openFilesLimit
Maximum number of open files. Limits the clients and server connections.

Type: signed integer

Default:

```
1024
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ergochat.nix>

services.ergochat.settings
Ergo IRC daemon configuration file. https://raw.githubusercontent.com/ergochat/ergo/master/default.yaml

Type: YAML 1.1 value

Default:

```
{
  accounts = {
    authentication-enabled = true;
    multiclient = {
      allowed-by-default = true;
      always-on = "opt-out";
```

```
    auto-away = "opt-out";
    enabled = true;
  };
  registration = {
    allow-before-connect = true;
    bcrypt-cost = 4;
    email-verification = {
      enabled = false;
    };
    enabled = true;
    throttling = {
      duration = "10m";
      enabled = true;
      max-attempts = 30;
    };
  };
};
channels = {
  default-modes = "+ntC";
  registration = {
    enabled = true;
  };
};
datastore = {
  autoupgrade = true;
  path = "/var/lib/ergo/ircd.db";
};
history = {
  autoreplay-on-join = 0;
  autoresize-window = "3d";
  channel-length = 2048;
  chathistory-maxmessages = 100;
  client-length = 256;
  enabled = true;
  restrictions = {
    expire-time = "1w";
    grace-period = "1h";
    query-cutoff = "none";
  };
  retention = {
    allow-individual-delete = false;
    enable-account-indexing = false;
  };
  tagmsg-storage = {
    default = false;
    whitelist = [
      "+draft/react"
      "+react"
    ];
  };
  znc-maxmessages = 2048;
};
limits = {
```

```
      awaylen = 390;
      channellen = 64;
      identlen = 20;
      kicklen = 390;
      nicklen = 32;
      topiclen = 390;
    };
    network = {
      name = "testnetwork";
    };
    server = {
      casemapping = "permissive";
      check-ident = false;
      enforce-utf = true;
      forward-confirm-hostnames = false;
      ip-cloaking = {
        enabled = false;
      };
      ip-limits = {
        count = false;
        throttle = false;
      };
      listeners = {
        ":6667" = { };
      };
      lookup-hostnames = false;
      max-sendq = "1M";
      name = "example.com";
      relaymsg = {
        enabled = false;
      };
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ergochat.nix>

services.erigon.enable

Whether to enable Ethereum implementation on the efficiency frontier.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/erigon.nix>

services.erigon.package

The erigon package to use.

Type: package

Default:

```
pkgs.erigon
```

Declared by:

<nixpkgs/nixos/modules/services/blockchain/ethereum/erigon.nix>

services.erigon.extraArgs

Additional arguments passed to Erigon

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/blockchain/ethereum/erigon.nix>

services.erigon.secretJwtPath

Path to the secret jwt used for the http api authentication.

Type: absolute path

Default:

```
""
```

Example:

```
"config.age.secrets.ERIGON_JWT.path"
```

Declared by:

<nixpkgs/nixos/modules/services/blockchain/ethereum/erigon.nix>

services.erigon.settings

Configuration for Erigon Refer to **https://github.com/ledgerwatch/erigon#usage** for details on supported values.

Type: TOML value

Default:

```
{
  datadir = "/var/lib/erigon";
  chain = "mainnet";
  http = true;
  "http.port" = 8545;
  "http.api" = ["eth" "debug" "net" "trace" "web3" "erigon"];
  ws = true;
  port = 30303;
  "authrpc.port" = 8551;
  "torrent.port" = 42069;
  "private.api.addr" = "localhost:9090";
  "log.console.verbosity" = 3; # info
}
```

Example:

```
{
  "authrpc.port" = 8551;
```

```
  chain = "mainnet";
  datadir = "/var/lib/erigon";
  http = true;
  "http.api" = [
    "eth"
    "debug"
    "net"
    "trace"
    "web3"
    "erigon"
  ];
  "http.port" = 8545;
  "log.console.verbosity" = 3;
  port = 30303;
  "private.api.addr" = "localhost:9090";
  "torrent.port" = 42069;
  ws = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/erigon.nix>

services.errbot.instances
Errbot instance configs

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/errbot.nix>

services.errbot.instances.<name>.admins
List of identifiers of errbot admins.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/errbot.nix>

services.errbot.instances.<name>.backend
Errbot backend name.

Type: string

Default:

```
"XMPP"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/errbot.nix>

services.errbot.instances.<name>.dataDir
Data directory for errbot instance.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/errbot.nix>

services.errbot.instances.<name>.extraConfig
String to be appended to the config verbatim

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/errbot.nix>

services.errbot.instances.<name>.identity
Errbot identity configuration

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/errbot.nix>

services.errbot.instances.<name>.logLevel
Errbot log level

Type: string

Default:

```
"INFO"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/errbot.nix>

services.errbot.instances.<name>.plugins
List of errbot plugin derivations.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/errbot.nix>

services.ersatztv.enable
Whether to enable ErsatzTV.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ersatztv.nix>

services.ersatztv.package
The ersatztv package to use.

Type: package

Default:

```
pkgs.ersatztv
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ersatztv.nix>

services.ersatztv.baseUrl
Base URL to support reverse proxies that use paths (e.g. ‘/ersatztv’)

Type: string

Default:

```
"/"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ersatztv.nix>

services.ersatztv.environment
Environment variables to set for the ErsatzTV service.

Type: attribute set of (string or signed integer or floating point number or boolean or absolute path or package)

Default:

```
{
  ETV_BASE_URL = "/";
  ETV_UI_PORT = 8409;
}
```

Example:

```
{
  ETV_STREAMING_PORT = 8001;
  ETV_UI_PORT = 8000;
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ersatztv.nix>

services.ersatztv.group
Group under which ErsatzTV runs.

Type: string

Default:

```
"ersatztv"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ersatztv.nix>

services.ersatztv.openFirewall

Open the default ports in the firewall for the server.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/ersatztv.nix>

services.ersatztv.user

User account under which ErsatzTV runs.

Type: string

Default:

```
"ersatztv"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/ersatztv.nix>

services.esdm.enable

Whether to enable ESDM service configuration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/esdm.nix>

services.esdm.enableLinuxCompatServices

Enable /dev/random, /dev/urandom and /proc/sys/kernel/random/* userspace wrapper.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/esdm.nix>

services.esdm.package

The esdm package to use.

Type: package

Default:

```
pkgs.esdm
```

Declared by:

<nixpkgs/nixos/modules/services/security/esdm.nix>

services.espanso.enable

Whether to enable Espanso.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/espanso.nix>

services.espanso.package

The espanso package to use.

Type: package

Default:

```
pkgs.espanso
```

Example:

```
pkgs.espanso-wayland
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/espanso.nix>

services.esphome.enable

Whether to enable esphome, for making custom firmwares for ESP32/ESP8266.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/home-automation/esphome.nix>

services.esphome.enableUnixSocket

Listen on a unix socket '/run/esphome/esphome.sock' instead of the TCP port.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/home-automation/esphome.nix>

services.esphome.package

The esphome package to use.

Type: package

Default:

```
pkgs.esphome
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/esphome.nix>

services.esphome.address
esphome address

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/esphome.nix>

services.esphome.allowedDevices
A list of device nodes to which **esphome** has access to. Refer to DeviceAllow in **systemd.resource−control**(5) for more information. Beware that if a device is referred to by an absolute path instead of a device category, it will only allow devices that already are plugged in when the service is started.

Type: list of string

Default:

```
[
  "char−ttyS"
  "char−ttyUSB"
]
```

Example:

```
[
  "/dev/serial/by−id/usb−Silicon_Labs_CP2102_USB_to_UART_Bridge_C \
ontroller_0001−if00−port0"
]
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/esphome.nix>

services.esphome.environment
Extra environment variables to pass to ESPHome. Secrets should be passed using the **services.esphome.environmentFile** option.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  PASSWORD = "gensokyo9";
  USERNAME = "reimu";
}
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/esphome.nix>

services.esphome.environmentFile
Path to an environment file. Use this option for setting the dashboard password.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/esphome.nix>

services.esphome.openFirewall
Whether to open the firewall for the specified port.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/esphome.nix>

services.esphome.port
esphome port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6052
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/esphome.nix>

services.esphome.usePing
Use ping to check online status of devices instead of mDNS

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/esphome.nix>

services.etcd.enable
Whether to enable etcd.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.package
The etcd package to use.

Type: package

Default:

```
pkgs.etcd
```

Declared by:
<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.advertiseClientUrls
Etcd list of this member’s client URLs to advertise to the rest of the cluster.

Type: list of string

Default:

```
config.services.etcd.listenClientUrls
```

Declared by:
<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.certFile
Cert file to use for clients

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.clientCertAuth
Whether to use certs for client authentication

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.dataDir
Etcd data directory.

Type: absolute path

Default:

```
"/var/lib/etcd"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.discovery
Etcd discovery url

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.extraConf
Etcd extra configuration. See **https://github.com/coreos/etcd/blob/master/Documentation/op-guide/configuration.md#configuration-flags**

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "CORS" = "*";
  "NAME" = "default-name";
  "MAX_RESULT_BUFFER" = "1024";
```

```
  "MAX_CLUSTER_SIZE" = "9";
  "MAX_RETRY_ATTEMPTS" = "3";
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.initialAdvertisePeerUrls
Etcd list of this member's peer URLs to advertise to rest of the cluster.

Type: list of string

Default:

```
config.services.etcd.listenPeerUrls
```

Declared by:
<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.initialCluster
Etcd initial cluster configuration for bootstrapping.

Type: list of string

Default:

```
["${config.services.etcd.name}=http://127.0.0.1:2380"]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.initialClusterState
Etcd initial cluster configuration for bootstrapping.

Type: one of "new", "existing"

Default:

```
"new"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.initialClusterToken
Etcd initial cluster token for etcd cluster during bootstrap.

Type: string

Default:

```
"etcd-cluster"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.keyFile
Key file to use for clients

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.listenClientUrls

Etcd list of URLs to listen on for client traffic.

Type: list of string

Default:

```
[
  "http://127.0.0.1:2379"
]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.listenPeerUrls

Etcd list of URLs to listen on for peer traffic.

Type: list of string

Default:

```
[
  "http://127.0.0.1:2380"
]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.name

Etcd unique node name.

Type: string

Default:

```
config.networking.hostName
```

Declared by:

<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.openFirewall

Open etcd ports in the firewall. Ports opened:

- 2379/tcp for client requests
- 2380/tcp for peer communication

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.peerCertFile

Cert file to use for peer to peer communication

Type: null or absolute path

Default:

```
config.services.etcd.certFile
```

Declared by:

<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.peerClientCertAuth

Whether to check all incoming peer requests from the cluster for valid client certificates signed by the supplied CA

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.peerKeyFile

Key file to use for peer to peer communication

Type: null or absolute path

Default:

```
config.services.etcd.keyFile
```

Declared by:

<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.peerTrustedCaFile

Certificate authority file to use for peer to peer communication

Type: null or absolute path

Default:

```
config.services.etcd.trustedCaFile
```

Declared by:

<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etcd.trustedCaFile

Certificate authority file to use for clients

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/databases/etcd.nix>

services.etebase−server.enable

Whether to enable the Etebase server.

Once enabled you need to create an admin user by invoking the shell command ‘etebase−server createsuperuser’ with the user specified by the ‘user’ option or a superuser. Then you can login and create accounts on your−etebase−server.com/admin

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etebase−server.nix>

services.etebase−server.package
The etebase−server package to use.

Type: package

Default:

```
pkgs.etebase−server
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etebase−server.nix>

services.etebase−server.dataDir
Directory to store the Etebase server data.

Type: string

Default:

```
"/var/lib/etebase−server"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etebase−server.nix>

services.etebase−server.openFirewall
Whether to open ports in the firewall for the server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etebase−server.nix>

services.etebase−server.port
Port to listen on.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8001
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etebase−server.nix>

services.etebase−server.settings
Configuration for ‘etebase−server’. Refer to **https://github.com/etesync/server/blob/master/etebase−server.ini.example** and **https://github.com/etesync/server/wiki** for details on supported values.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  allowed_hosts = {
    allowed_host2 = "localhost";
  };
  global = {
```

```
    debug = true;
    media_root = "/path/to/media";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etebase-server.nix>

services.etebase-server.settings.allowed_hosts.allowed_host1
The main host that is allowed access.

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etebase-server.nix>

services.etebase-server.settings.database.engine
The database engine to use.

Type: one of “django.db.backends.sqlite3”, “django.db.backends.postgresql”

Default:

```
"django.db.backends.sqlite3"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etebase-server.nix>

services.etebase-server.settings.database.name
The database name.

Type: string

Default:

```
"${config.services.etebase-server.dataDir}/db.sqlite3"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etebase-server.nix>

services.etebase-server.settings.global.debug
Whether to set django’s DEBUG flag.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etebase-server.nix>

services.etebase-server.settings.global.media_root
The media directory.

Type: string

Default:

```
"${config.services.etebase-server.dataDir}/media"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etebase-server.nix>

services.etebase-server.settings.global.secret_file
The path to a file containing the secret used as django's SECRET_KEY.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etebase-server.nix>

services.etebase-server.settings.global.static_root
The directory for static files.

Type: string

Default:

```
"${config.services.etebase-server.dataDir}/static"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etebase-server.nix>

services.etebase-server.unixSocket
The path to the socket to bind to.

Type: null or string

Default:

```
null
```

Example:

```
"/run/etebase-server/etebase-server.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etebase-server.nix>

services.etebase-server.user
User under which Etebase server runs.

Type: string

Default:

```
"etebase-server"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etebase-server.nix>

services.eternal-terminal.enable
Whether to enable Eternal Terminal server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/eternal−terminal.nix>

services.eternal−terminal.logSize
The maximum log size.

Type: signed integer

Default:

```
20971520
```

Declared by:
<nixpkgs/nixos/modules/services/networking/eternal−terminal.nix>

services.eternal−terminal.port
The port the server should listen on. Will use the server's default (2022) if not specified.

Make sure to open this port in the firewall if necessary.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2022
```

Declared by:
<nixpkgs/nixos/modules/services/networking/eternal−terminal.nix>

services.eternal−terminal.silent
If enabled, disables all logging.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/eternal−terminal.nix>

services.eternal−terminal.verbosity
The verbosity level (0−9).

Type: one of 0, 1, 2, 3, 4, 5, 6, 7, 8, 9

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/eternal−terminal.nix>

services.etesync−dav.enable
Whether to enable etesync−dav, end−to−end encrypted sync for contacts, calendars and tasks.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etesync−dav.nix>

services.etesync−dav.apiUrl
The url to the etesync API.

Type: string

Default:

```
"https://api.etebase.com/partner/etesync/"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etesync−dav.nix>

services.etesync−dav.host
The server host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etesync−dav.nix>

services.etesync−dav.openFirewall
Whether to open the firewall for the specified port.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etesync−dav.nix>

services.etesync−dav.port
The server host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
37358
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etesync−dav.nix>

services.etesync−dav.sslCertificate
Path to server SSL certificate. It will be copied into etesync−dav's data directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/etesync.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/etesync−dav.nix>

services.etesync−dav.sslCertificateKey

Path to server SSL certificate key. It will be copied into etesync−dav's data directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/etesync.key"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/etesync−dav.nix>

services.evcc.enable

Whether to enable EVCC, the extensible EV Charge Controller and Home Energy Management System.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/evcc.nix>

services.evcc.package

The evcc package to use.

Type: package

Default:

```
pkgs.evcc
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/evcc.nix>

services.evcc.environmentFile

File with environment variables to pass into the runtime environment.

Useful to pass secrets into the configuration, that get applied using 'envsubst'.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/evcc"
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/evcc.nix>

services.evcc.extraArgs

Extra arguments to pass to the 'evcc' executable.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/evcc.nix>

services.evcc.settings
evcc configuration as a Nix attribute set. Supports substitution of secrets using 'envsubst' from the 'environmentFile'.

Check for possible options in the sample **evcc.dist.yaml**.

Type: YAML 1.1 value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/evcc.nix>

services.evdevremapkeys.enable
Whether to enable evdevremapkeys, a daemon to remap events on linux input devices.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/evdevremapkeys.nix>

services.evdevremapkeys.settings
config.yaml for evdevremapkeys

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/evdevremapkeys.nix>

services.evremap.enable
Whether to enable evremap, a keyboard input remapper for Linux/Wayland systems.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/evremap.nix>

services.evremap.settings
Settings for evremap.

See the **upstream documentation** for how to configure evremap.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/evremap.nix>

services.evremap.settings.device_name
The name of the device that should be remapped.

You can get a list of devices by running ‘evremap list−devices’ with elevated permissions.

Type: string

Example:

```
"AT Translated Set 2 keyboard"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/evremap.nix>

services.evremap.settings.dual_role
List of dual−role remappings that output different key sequences based on whether the input key is held or tapped.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    hold = [
      "KEY_LEFTCTRL"
    ];
    input = "KEY_CAPSLOCK";
    tap = [
      "KEY_ESC"
    ];
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/evremap.nix>

services.evremap.settings.dual_role.*.hold
The key sequence that should be output when the input key is held.

You can get a list of keys by running ‘evremap list−keys’.

Type: list of key ID prefixed with BTN_ or KEY_

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/evremap.nix>

services.evremap.settings.dual_role.*.input
The key that should be remapped.

You can get a list of keys by running ‘evremap list−keys’.

Type: key ID prefixed with BTN_ or KEY_

Declared by:
<nixpkgs/nixos/modules/services/misc/evremap.nix>

services.evremap.settings.dual_role.*.tap
The key sequence that should be output when the input key is tapped.

You can get a list of keys by running ‘evremap list−keys’.

Type: list of key ID prefixed with BTN_ or KEY_

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/evremap.nix>

services.evremap.settings.phys
The physical device name to listen on.

This attribute may be specified to disambiguate multiple devices with the same device name. The physical device names of each device can be obtained by running ‘evremap list−devices’ with elevated permissions.

Type: null or string

Default:

```
null
```

Example:

```
"usb−0000:07:00.3−2.1.1/input0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/evremap.nix>

services.evremap.settings.remap
List of remappings.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    input = [
      "KEY_LEFTALT"
      "KEY_UP"
    ];
    output = [
      "KEY_PAGEUP"
    ];
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/evremap.nix>

services.evremap.settings.remap.*.input

The key sequence that should be remapped.

You can get a list of keys by running ‘evremap list−keys’.

Type: list of key ID prefixed with BTN_ or KEY_

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/evremap.nix>

services.evremap.settings.remap.*.output

The key sequence that should be output when the input sequence is entered.

You can get a list of keys by running ‘evremap list−keys’.

Type: list of key ID prefixed with BTN_ or KEY_

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/evremap.nix>

services.exim.enable

Whether to enable the Exim mail transfer agent.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/mail/exim.nix>

services.exim.package

The exim package to use. This can be used to enable features such as LDAP or PAM support.

Type: package

Default:

```
pkgs.exim
```

Declared by:

<nixpkgs/nixos/modules/services/mail/exim.nix>

services.exim.config

Verbatim Exim configuration. This should not contain exim_user, exim_group, exim_path, or spool_directory.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/mail/exim.nix>

services.exim.group

Group to use when no root privileges are required.

Type: string

Default:

```
"exim"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/exim.nix>

services.exim.queueRunnerInterval

How often to spawn a new queue runner.

Type: string

Default:

```
"5m"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/exim.nix>

services.exim.spoolDir

Location of the spool directory of exim.

Type: absolute path

Default:

```
"/var/spool/exim"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/exim.nix>

services.exim.user

User to use when no root privileges are required. In particular, this applies when receiving messages and when doing remote deliveries. (Local deliveries run as various non−root users, typically as the owner of a local mailbox.) Specifying this value as root is not supported.

Type: string

Default:

```
"exim"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/exim.nix>

services.expressvpn.enable

Enable the ExpressVPN daemon.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/expressvpn.nix>

services.factorio.enable

Whether to enable Factorio.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.package
The factorio−headless package to use.

Type: package

Default:

```
pkgs.factorio-headless
```

Example:

```
factorio-headless-experimental
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.admins
List of player names which will be admin.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "username"
]
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.allowedPlayers
If non−empty, only these player names are allowed to connect. The game will not be able to save any changes made in−game with the /whitelist console command, though they will still take effect until the server is restarted.

If empty, the whitelist defaults to open, but can be managed with the in−game /whitelist console command (see: /help whitelist), which will cause changes to be saved to the game's state directory (see also: 'stateDirName').

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "Rseding91"
  "Oxyd"
]
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.autosave−interval

Autosave interval in minutes.

Type: null or signed integer

Default:

```
null
```

Example:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.bind

The address to which the service should bind.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.configFile

The server's configuration file.

The default file generated by this module contains lines essential to the server's operation. Use its contents as a basis for any customizations.

Type: absolute path

Default:

```
configFile
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.description

Description of the game that will appear in the listing.

Type: null or string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.extraArgs

Extra command line arguments.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--rcon-bind=localhost:27015"
  "--rcon-password=..."
]
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.extraSettings
Extra game configuration that will go into server−settings.json

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  max_players = 64;
}
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.extraSettingsFile
File, which is dynamically applied to server−settings.json before startup.

This option should be used for credentials.

For example a settings file could contain:

```
{
  "game−password": "hunter1"
}
```

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.game−name
Name of the game as it will appear in the game listing.

Type: null or string

Default:

```
"Factorio Game"
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.game−password
Game password.

This option is insecure. Use extraSettingsFile instead.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.lan

Game will be broadcast on LAN.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.loadLatestSave

Load the latest savegame on startup. This overrides saveName, in that the latest save will always be used even if a saved game of the given name exists. It still controls the 'canonical' name of the savegame.

Set this to true to have the server automatically reload a recent autosave after a crash or desync.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.mods

Mods the server should install and activate.

The derivations in this list must "build" the mod by simply copying the .zip, named correctly, into the output directory. Eventually, there will be a way to pull in the most up−to−date list of derivations via nixos−channel. Until then, this is for experts only.

Type: list of package

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.mods−dat

Mods settings can be changed by specifying a dat file, in the **mod settings file format**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.nonBlockingSaving

Highly experimental feature, enable only at your own risk of losing your saves. On UNIX systems, server will fork itself to create an autosave. Autosaving on connected Windows clients will be disabled regardless of autosave_only_on_server option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.openFirewall
Whether to automatically open the specified UDP port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.password
Your factorio.com login credentials. Required for games with visibility public.

This option is insecure. Use extraSettingsFile instead.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.port
The port to which the service should bind.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
34197
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.public
Game will be published on the official Factorio matching server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.requireUserVerification
When set to true, the server will only allow clients that have a valid factorio.com account.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.saveName

The name of the savegame that will be used by the server.

When not present in /var/lib/${config.services.factorio.stateDirName}/saves, a new map with default settings will be generated before starting the service.

Type: string

Default:

```
"default"
```

Declared by:

<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.stateDirName

Name of the directory under /var/lib holding the server's data.

The configuration and map will be stored here.

Type: string

Default:

```
"factorio"
```

Declared by:

<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.token

Authentication token. May be used instead of 'password' above.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/games/factorio.nix>

services.factorio.username

Your factorio.com login credentials. Required for games with visibility public.

This option is insecure. Use extraSettingsFile instead.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/games/factorio.nix>

services.fail2ban.enable

Whether to enable the fail2ban service.

See the documentation of **services.fail2ban.jails** for what jails are enabled by default.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.package

The fail2ban package to use.

Type: package

Default:

```
pkgs.fail2ban
```

Example:

```
fail2ban_0_11
```

Declared by:

<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.packageFirewall

The firewall package used by fail2ban service. Defaults to the package for your firewall (iptables or nftables).

Type: package

Default:

```
config.networking.firewall.package
```

Declared by:

<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.banaction

Default banning action (e.g. iptables, iptables−new, iptables−multiport, iptables−ipset−proto6−allports, shorewall, etc). It is used to define action_* variables. Can be overridden globally or per section within jail.local file

Type: string

Default:

```
if config.networking.nftables.enable then "nftables-multiport" els \
e "iptables-multiport"
```

Declared by:

<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.banaction−allports

Default banning action (e.g. iptables, iptables−new, iptables−multiport, shorewall, etc) for “allports” jails. It is used to define action_* variables. Can be overridden globally or per section within jail.local file

Type: string

Default:

```
if config.networking.nftables.enable then "nftables-allports" else \
 "iptables-allports"
```

Declared by:

<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.bantime

Number of seconds that a host is banned.

Type: string

Default:

```
"10m"
```

Example:

```
"1h"
```

Declared by:
<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.bantime−increment.enable
“bantime.increment” allows to use database for searching of previously banned ip’s to increase a default ban time using special formula, default it is banTime * 1, 2, 4, 8, 16, 32 …

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.bantime−increment.factor
“bantime.factor” is a coefficient to calculate exponent growing of the formula or common multiplier, default value of factor is 1 and with default value of formula, the ban time grows by 1, 2, 4, 8, 16 …

Type: null or string

Default:

```
null
```

Example:

```
"4"
```

Declared by:
<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.bantime−increment.formula
“bantime.formula” used by default to calculate next value of ban time, default value below, the same ban time growing will be reached by multipliers 1, 2, 4, 8, 16, 32 …

Type: null or string

Default:

```
null
```

Example:

```
"ban.Time * math.exp(float(ban.Count+1)*banFactor)/math.exp(1*banFa \
ctor)"
```

Declared by:
<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.bantime−increment.maxtime
“bantime.maxtime” is the max number of seconds using the ban time can reach (don’t grows further)

Type: null or string

Default:

```
null
```

Example:

```
"48h"
```

Declared by:
<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.bantime−increment.multipliers
"bantime.multipliers" used to calculate next value of ban time instead of formula, corresponding previously ban count and given "bantime.factor" (for multipliers default is 1); following example grows ban time by 1, 2, 4, 8, 16 … and if last ban count greater as multipliers count, always used last multiplier (64 in example), for factor '1' and original ban time 600 − 10.6 hours

Type: null or string

Default:

```
null
```

Example:

```
"1 2 4 8 16 32 64"
```

Declared by:
<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.bantime−increment.overalljails
"bantime.overalljails" (if true) specifies the search of IP in the database will be executed cross over all jails, if false (default), only current jail of the ban IP will be searched.

Type: null or boolean

Default:

```
null
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.bantime−increment.rndtime
"bantime.rndtime" is the max number of seconds using for mixing with random time to prevent "clever" botnets calculate exact time IP can be unbanned again

Type: null or string

Default:

```
null
```

Example:

```
"8m"
```

Declared by:
<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.daemonSettings
The contents of Fail2ban's main configuration file. It's generally not necessary to change it.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{
  Definition = {
    logtarget = "SYSLOG";
    socket = "/run/fail2ban/fail2ban.sock";
    pidfile = "/run/fail2ban/fail2ban.pid";
```

```
      dbfile = "/var/lib/fail2ban/fail2ban.sqlite3";
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.extraPackages
Extra packages to be made available to the fail2ban service. The example contains the packages needed by the ‘iptables−ipset−proto6’ action.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.ipset ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.ignoreIP
“ignoreIP” can be a list of IP addresses, CIDR masks or DNS hosts. Fail2ban will not ban a host which matches an address in this list. Several addresses can be defined using space (and/or comma) separator.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "192.168.0.0/16"
  "2001:DB8::42"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.jails
The configuration of each Fail2ban “jail”. A jail consists of an action (such as blocking a port using **iptables**) that is triggered when a filter applied to a log file triggers more than a certain number of times in a certain time period. Actions are defined in */etc/fail2ban/action.d*, while filters are defined in */etc/fail2ban/filter.d*.

NixOS comes with a default ‘sshd’ jail; for it to work well, **services.openssh.settings.LogLevel** should be set to ‘"VERBOSE"’ or higher so that fail2ban can observe failed login attempts. This module sets it to ‘"VERBOSE"’ if not set otherwise, so enabling fail2ban can make SSH logs more verbose.

Type: attribute set of (strings concatenated with “\n” or (submodule))

Default:

```
{ }
```

Example:

```
{
  apache−nohome−iptables = {
    settings = {
      # Block an IP address if it accesses a non−existent
```

```
            # home directory more than 5 times in 10 minutes,
            # since that indicates that it's scanning.
            filter = "apache-nohome";
            action = ''iptables-multiport[name=HTTP, port="http,https"]' \
        ';
            logpath = "/var/log/httpd/error_log*";
            backend = "auto";
            findtime = 600;
            bantime = 600;
            maxretry = 5;
          };
        };
        dovecot = {
          settings = {
            # block IPs which failed to log-in
            # aggressive mode add blocking for aborted connections
            filter = "dovecot[mode=aggressive]";
            maxretry = 3;
          };
        };
      };
```

Declared by:

<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fail2ban.maxretry

Number of failures before a host gets banned.

Type: unsigned integer, meaning >=0

Default:

```
3
```

Declared by:

<nixpkgs/nixos/modules/services/security/fail2ban.nix>

services.fakeroute.enable

Whether to enable the fakeroute service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fakeroute.nix>

services.fakeroute.route

Fake route that will appear after the real one to any host running a traceroute.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "216.102.187.130"
  "4.0.1.122"
  "198.116.142.34"
  "63.199.8.242"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fakeroute.nix>

services.fanout.enable
Whether to enable fanout.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/config/fanout.nix>

services.fanout.bufferSize
Size of /dev/fanout buffer in bytes

Type: signed integer

Default:

```
16384
```

Declared by:
<nixpkgs/nixos/modules/config/fanout.nix>

services.fanout.fanoutDevices
Number of /dev/fanout devices

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/config/fanout.nix>

services.fastnetmon−advanced.enable
Whether to enable the fastnetmon−advanced DDoS Protection daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fastnetmon−advanced.nix>

services.fastnetmon−advanced.enableAdvancedTrafficPersistence
Store historical flow data in clickhouse

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fastnetmon−advanced.nix>

services.fastnetmon−advanced.bgpPeers
BGP Peers to declaratively load into FastNetMon Advanced

Type: attribute set of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fastnetmon−advanced.nix>

services.fastnetmon−advanced.hostgroups
Hostgroups to declaratively load into FastNetMon Advanced

Type: attribute set of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fastnetmon−advanced.nix>

services.fastnetmon−advanced.settings
Extra configuration options to declaratively load into FastNetMon Advanced.

See the **FastNetMon Advanced Configuration options reference** for more details.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  networks_list = [ "192.0.2.0/24" ];
  gobgp = true;
  gobgp_flow_spec_announces = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fastnetmon−advanced.nix>

services.fastnetmon−advanced.traffic_db.settings
Additional settings for /etc/fastnetmon/traffic_db.conf

Type: YAML 1.1 value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fastnetmon−advanced.nix>

services.fcgiwrap.instances
Configuration for fcgiwrap instances.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/fcgiwrap.nix>

services.fcgiwrap.instances.<name>.process.group
Group as which this instance of fcgiwrap will be run.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/fcgiwrap.nix>

services.fcgiwrap.instances.<name>.process.prefork
Number of processes to prefork.

Type: positive integer, meaning >0

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/fcgiwrap.nix>

services.fcgiwrap.instances.<name>.process.user
User as which this instance of fcgiwrap will be run. Set to ‘null’ (the default) to use a dynamically allocated user.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/fcgiwrap.nix>

services.fcgiwrap.instances.<name>.socket.address
Socket address. In case of a UNIX socket, this should be its filesystem path.

Type: string

Default:

```
"/run/fcgiwrap−‹name›.sock"
```

Example:

```
"1.2.3.4:5678"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/fcgiwrap.nix>

services.fcgiwrap.instances.<name>.socket.group
Group to be set as owner of the UNIX socket.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/fcgiwrap.nix>

services.fcgiwrap.instances.<name>.socket.mode
Mode to be set on the UNIX socket. Defaults to private to the socket's owner.

Type: null or string

Default:

```
if config.socket.type == "unix" then "0600" else null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/fcgiwrap.nix>

services.fcgiwrap.instances.<name>.socket.type
Socket type: 'unix', 'tcp' or 'tcp6'.

Type: one of "unix", "tcp", "tcp6"

Default:

```
"unix"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/fcgiwrap.nix>

services.fcgiwrap.instances.<name>.socket.user
User to be set as owner of the UNIX socket.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/fcgiwrap.nix>

services.fcron.enable
Whether to enable the **fcron** daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/fcron.nix>

services.fcron.allow
Users allowed to use fcrontab and fcrondyn (one name per line, 'all' for everyone).

Type: list of string

Default:

```
[
  "all"
]
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/fcron.nix>

services.fcron.deny
Users forbidden from using fcron.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/fcron.nix>

services.fcron.maxSerialJobs
Maximum number of serial jobs which can run simultaneously.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/fcron.nix>

services.fcron.queuelen
Number of jobs the serial queue and the lavg queue can contain.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/fcron.nix>

services.fcron.systab
The “system” crontab contents.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/scheduling/fcron.nix>

services.fedimintd
Specification of one or more fedimintd instances.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.enable
Whether to enable fedimintd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.package
The fedimint package to use.

Type: package

Default:

```
pkgs.fedimint
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.api_iroh.bind
Address to bind on for Iroh endpoint for API connections

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.api_iroh.openFirewall
Opens UDP port in firewall for fedimintd's API Iroh endpoint

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.api_iroh.port
UDP Port to bind Iroh endpoint for API connections

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8174
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.api_ws.bind
Address to bind on for API connections relied by the reverse proxy/tls terminator.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.api_ws.openFirewall

Opens TCP port in firewall for fedimintd's Websocket API

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.api_ws.port

TCP Port to bind on for API connections relayed by the reverse proxy/tls terminator.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8174
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.api_ws.url

Public URL of the API address of the reverse proxy/tls terminator. Usually starting with 'wss://'.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.bitcoin.network

Bitcoin network to participate in.

Type: string

Default:

```
"signet"
```

Example:

```
"bitcoin"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.bitcoin.rpc.kind

Kind of a bitcoin node.

Type: string

Default:

```
"bitcoind"
```

Example:

```
"electrum"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.bitcoin.rpc.secretFile

If set the URL specified in ‘bitcoin.rpc.url’ will get the content of this file added as an URL password, so ‘http://user@example.com’ will turn into ‘http://user:SOMESECRET@example.com’.

Example:

‘/etc/nix−bitcoin−secrets/bitcoin−rpcpassword−public’ (for nix−bitcoin default)

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.bitcoin.rpc.url

Bitcoin node (bitcoind/electrum/esplora) address to connect to

Type: string

Default:

```
"http://127.0.0.1:38332"
```

Example:

```
"signet"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.consensus.finalityDelay

Consensus peg−in finality delay.

Type: unsigned integer, meaning >=0

Default:

```
10
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.dataDir

Path to the data dir fedimintd will use to store its data. Note that due to using the DynamicUser feature of systemd, this value should not be changed and is set to be read only.

Type: absolute path *(read only)*

Default:

```
"/var/lib/fedimintd−‹name›/"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.environment

Extra Environment variables to pass to the fedimintd.

Type: attribute set of string

Default:

```
{
  RUST_BACKTRACE = "1";
}
```

Example:

```
{
  RUST_BACKTRACE = "1";
  RUST_LOG = "info,fm=debug";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.enable
Whether to configure nginx for fedimintd

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config
Overrides to the nginx vhost section for api

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.
