With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme-challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix-shell --packages apacheHttpd --run 'htpasswd -B -c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.extraConfig

These lines go to the end of the vhost verbatim.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.forceSSL

Whether to add a separate nginx server block that redirects (defaults to 301, configurable with 'redirectCode') all plain HTTP traffic to HTTPS. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.globalRedirect

If set, all requests for this host are redirected (defaults to 301, configurable with 'redirectCode') to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.http2

Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.http3

Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.http3_hq

Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides 'addSSL' and 'onlySSL'.

If you only want to set the addresses manually and not the ports, take a look at 'listenAddresses'.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.listen.*.ssl
Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations.<name>.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations.<name>.priority

Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations.<name>.proxyPass

Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations.<name>.proxyWebsockets

Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations.<name>.recommendedProxySettings

Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations.<name>.recommendedUwsgiSettings

Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.onlySSL

Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.quic

Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.redirectCode

HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en-US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.rejectSSL

Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.root
The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.serverName
Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca-bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.config.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

2. see the **security.acme.certs** option

services.fedimintd.<name>.nginx.fqdn
Public domain of the API address of the reverse proxy/tls terminator.

Type: string

Example:

```
"api.myfedimint.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.path_ui
Path to host the built−in UI on and forward to the daemon's api port

Type: string

Default:

```
"/"
```

Example:

```
"/"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.nginx.path_ws
Path to host the API on and forward to the daemon's api port

Type: string

Default:

```
"/ws/"
```

Example:

```
"/"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.p2p.bind
Address to bind on for p2p connections from peers (both TCP and UDP)

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.p2p.openFirewall
Opens port in firewall for fedimintd's p2p port (both TCP and UDP)

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.p2p.port
Port to bind on for p2p connections from peers (both TCP and UDP)

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8173
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.p2p.url
Public address for p2p connections from peers (if TCP is used)

Type: null or string

Default:

```
null
```

Example:

```
"fedimint://p2p.myfedimint.com:8173"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.ui.bind
Address to bind on for UI connections

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.ui.openFirewall
Opens TCP port in firewall for built−in UI

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fedimintd.<name>.ui.port
TCP Port to bind on for UI connections

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8175
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fedimintd.nix>

services.fediwall.enable
Whether to enable fediwall, a social media wall for the fediverse.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.package
The fediwall package to use.

Type: package

Default:

```
pkgs.fediwall
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.hostName

The hostname to serve fediwall on.

Type: string

Default:

```
config.networking.fqdnOrHostName
```

Example:

```
"fediwall.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx

Allows customizing the nginx virtualHost settings

Type: submodule

Default:

```
{ }
```

Example:

```
{
  serverAliases = [
    "fedi.${config.networking.domain}"
  ];
  # Enable TLS and use let’s encrypt for ACME
  forceSSL = true;
  enableACME = true;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.enableACME

Whether to ask Let’s Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.acmeFallbackHost

Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don’t put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with ‘redirectCode’) to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.http2
Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx’s implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.http3
Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.http3_hq
Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.kTLS
Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.listen
Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides 'addSSL' and 'onlySSL'.

If you only want to set the addresses manually and not the ports, take a look at 'listenAddresses'.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
```

```
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.listen.*.ssl

Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations.<name>.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with 'lib.mkOrder'. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.rejectSSL
Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.root

The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.serverName

Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.sslCertificate

Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

2. see the **security.acme.certs** option

services.fediwall.settings
Fediwall configuration. See https://github.com/defnull/fediwall/blob/main/public/wall−config.json.example for information on supported values.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.settings.hideBoosts
Hide boosts

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.settings.hideBots
Hide posts from bot accounts

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.settings.hideReplies
Hide replies

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.settings.hideSensitive
Hide sensitive (potentially NSFW) posts

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.settings.loadFederated
Load federated posts

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.settings.loadPublic
Load public posts

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.settings.loadTrends
Load trending posts

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.settings.playVideos
Autoplay videos in posts

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.settings.servers
Servers to load posts from

Type: list of string

Default:

```
[
  "mastodon.social"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.settings.showMedia
Show media in posts

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.fediwall.settings.tags
Tags to follow

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "cats" "dogs"]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fediwall.nix>

services.felix.enable
Whether to enable the Apache Felix OSGi service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/felix.nix>

services.felix.bundles
List of bundles that should be activated on startup

Type: list of package

Default:

```
[ pkgs.felix_remoteshell ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/felix.nix>

services.felix.group
Group account under which Apache Felix runs.

Type: string

Default:

```
"osgi"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/felix.nix>

services.felix.user
User account under which Apache Felix runs.

Type: string

Default:

```
"osgi"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/felix.nix>

services.ferm.enable
Whether to enable Ferm Firewall. *Warning*: Enabling this service WILL disable the existing NixOS firewall! Default firewall rules provided by packages are not considered at the moment.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ferm.nix>

services.ferm.package
The ferm package to use.

Type: package

Default:

```
pkgs.ferm
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ferm.nix>

services.ferm.config
Verbatim ferm.conf configuration.

Type: strings concatenated with "\n"

Default: empty firewall, allows any traffic

Declared by:
<nixpkgs/nixos/modules/services/networking/ferm.nix>

services.ferretdb.enable
Whether to enable FerretDB, an Open Source MongoDB alternative.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/ferretdb.nix>

services.ferretdb.package
The ferretdb package to use.

Type: package

Default:

```
pkgs.ferretdb
```

Declared by:
<nixpkgs/nixos/modules/services/databases/ferretdb.nix>

services.ferretdb.settings
Additional configuration for FerretDB, see **https://docs.ferretdb.io/configuration/flags/** for supported values.

Type: open submodule of attribute set of string

Example:

```
{
  FERRETDB_LOG_LEVEL = "warn";
  FERRETDB_MODE = "normal";
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/ferretdb.nix>

services.ferretdb.settings.FERRETDB_HANDLER
Backend handler

Type: one of “sqlite”, “pg”

Default:

```
"sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/ferretdb.nix>

services.ferretdb.settings.FERRETDB_POSTGRESQL_URL
PostgreSQL URL for ‘pg’ handler

Type: string

Default:

```
"postgres://ferretdb@localhost/ferretdb?host=/run/postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/ferretdb.nix>

services.ferretdb.settings.FERRETDB_SQLITE_URL
SQLite URI (directory) for ‘sqlite’ handler

Type: string

Default:

```
"file:/var/lib/ferretdb/"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/ferretdb.nix>

services.ferretdb.settings.FERRETDB_TELEMETRY
Enable or disable basic telemetry.

See **https://docs.ferretdb.io/telemetry/** for more information.

Type: one of “enable”, “disable”

Default:

```
"disable"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/ferretdb.nix>

services.fider.enable
Whether to enable the Fider server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fider.nix>

services.fider.package

The fider package to use.

Type: package

Default:

```
pkgs.fider
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fider.nix>

services.fider.dataDir

Default data folder for Fider.

Type: string

Default:

```
"/var/lib/fider"
```

Example:

```
"/mnt/fider"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fider.nix>

services.fider.database.url

URI to use for the main PostgreSQL database. If this needs to include credentials that shouldn't be world−readable in the Nix store, set an environment file on the systemd service and override the 'DATABASE_URL' entry. Pass the string 'local' to setup a database on the local server.

Type: string

Default:

```
"local"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fider.nix>

services.fider.environment

Environment variables to set for the service. Secrets should be specified using **environmentFiles**. Refer to **https://github.com/getfider/fider/blob/stable/.example.env** and **https://github.com/getfider/fider/blob/stable/app/pkg/env/env.go** for available options.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  BASE_URL = "https://fider.example.com";
  BLOB_STORAGE = "fs";
  EMAIL = "smtp";
  EMAIL_NOREPLY = "fider@example.com";
  EMAIL_SMTP_HOST = "mail.example.com";
  EMAIL_SMTP_PORT = "587";
  EMAIL_SMTP_USERNAME = "fider@example.com";
  PORT = "31213";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fider.nix>

services.fider.environmentFiles
Files to load environment variables from. Loaded variables override values set in **environment**.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
"/run/secrets/fider.env"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fider.nix>

services.filebeat.enable
Whether to enable filebeat.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/logging/filebeat.nix>

services.filebeat.package
The filebeat package to use.

Type: package

Default:

```
pkgs.filebeat
```

Example:

```
filebeat7
```

Declared by:
<nixpkgs/nixos/modules/services/logging/filebeat.nix>

services.filebeat.inputs
Inputs specify how Filebeat locates and processes input data.

This is like ‘services.filebeat.settings.filebeat.inputs’, but structured as an attribute set. This has the benefit that multiple NixOS modules can contribute settings to a single filebeat input.

An input type can be specified multiple times by choosing a different ‘<name>’ for each, but setting **services.filebeat.inputs.<name>.type** to the same value.

See **https://www.elastic.co/guide/en/beats/filebeat/current/configuration−filebeat−options.html**.

Type: attribute set of (open submodule of (JSON value))

Default:

```
{ }
```

Example:

```
{
```

```
    journald.id = "everything";  # Only for filebeat7
    log = {
      enabled = true;
      paths = [
        "/var/log/*.log"
      ];
    };
  };
```

Declared by:
<nixpkgs/nixos/modules/services/logging/filebeat.nix>

services.filebeat.inputs.<name>.type
The input type.

Look for the value after 'type:' on the individual input pages linked from **https://www.elastic.co/guide/en/beats/filebeat/current/configuration−filebeat−options.html**.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/filebeat.nix>

services.filebeat.modules
Filebeat modules provide a quick way to get started processing common log formats. They contain default configurations, Elasticsearch ingest pipeline definitions, and Kibana dashboards to help you implement and deploy a log monitoring solution.

This is like 'services.filebeat.settings.filebeat.modules', but structured as an attribute set. This has the benefit that multiple NixOS modules can contribute settings to a single filebeat module.

A module can be specified multiple times by choosing a different '<name>' for each, but setting **services.filebeat.modules.<name>.module** to the same value.

See **https://www.elastic.co/guide/en/beats/filebeat/current/filebeat−modules.html**.

Type: attribute set of (open submodule of (JSON value))

Default:

```
{ }
```

Example:

```
{
  nginx = {
    access = {
      enabled = true;
      var.paths = [ "/path/to/log/nginx/access.log*" ];
    };
    error = {
      enabled = true;
      var.paths = [ "/path/to/log/nginx/error.log*" ];
    };
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/logging/filebeat.nix>

services.filebeat.modules.<name>.module
The name of the module.

Look for the value after 'module:' on the individual input pages linked from **https://www.elastic.co/guide/en/beats/filebeat/current/filebeat-modules.html**.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/filebeat.nix>

services.filebeat.settings
Configuration for filebeat. See **https://www.elastic.co/guide/en/beats/filebeat/current/filebeat-reference-yml.html** for supported values.

Options containing secret data should be set to an attribute set containing the attribute '_secret' − a string pointing to a file containing the value the option should be set to. See the example to get a better picture of this: in the resulting *filebeat.yml* file, the 'output.elasticsearch.password' key will be set to the contents of the */var/keys/elasticsearch_password* file.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Example:

```
{
  settings = {
    output.elasticsearch = {
      hosts = [ "myEShost:9200" ];
      username = "filebeat_internal";
      password = { _secret = "/var/keys/elasticsearch_password"; };
    };
    logging.level = "info";
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/logging/filebeat.nix>

services.filebeat.settings.output.elasticsearch.hosts
The list of Elasticsearch nodes to connect to.

The events are distributed to these nodes in round robin order. If one node becomes unreachable, the event is automatically sent to another node. Each Elasticsearch node can be defined as a URL or IP:PORT. For example: 'http://192.15.3.2', 'https://es.found.io:9230' or '192.24.3.2:9300'. If no port is specified, '9200' is used.

Type: list of string

Default:

```
[
  "127.0.0.1:9200"
]
```

Example:

```
[
  "myEShost:9200"
]
```

Declared by:
<nixpkgs/nixos/modules/services/logging/filebeat.nix>

services.filebrowser.enable
Whether to enable FileBrowser.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/filebrowser.nix>

services.filebrowser.package
The filebrowser package to use.

Type: package

Default:

```
pkgs.filebrowser
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/filebrowser.nix>

services.filebrowser.group
Group under which FileBrowser runs.

Type: string

Default:

```
"filebrowser"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/filebrowser.nix>

services.filebrowser.openFirewall
Whether to enable opening firewall ports for FileBrowser.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/filebrowser.nix>

services.filebrowser.settings

Settings for FileBrowser. Refer to **https://filebrowser.org/cli/filebrowser#options** for all supported values.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/filebrowser.nix>

services.filebrowser.settings.address

The address to listen on.

Type: string

Default:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/filebrowser.nix>

services.filebrowser.settings.cache−dir

The directory where FileBrowser stores its cache.

Type: absolute path *(read only)*

Default:

```
"/var/cache/filebrowser"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/filebrowser.nix>

services.filebrowser.settings.database

The path to FileBrowser's Bolt database.

Type: absolute path

Default:

```
"/var/lib/filebrowser/database.db"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/filebrowser.nix>

services.filebrowser.settings.port

The port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/filebrowser.nix>

services.filebrowser.settings.root

The directory where FileBrowser stores files.

Type: absolute path

Default:

```
"/var/lib/filebrowser/data"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/filebrowser.nix>

services.filebrowser.user
User account under which FileBrowser runs.

Type: string

Default:

```
"filebrowser"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/filebrowser.nix>

services.firebird.enable
Whether to enable the Firebird super server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/firebird.nix>

services.firebird.package
The firebird package to use. For SuperServer use override: ‘pkgs.firebird_3.override { superServer = true; };’

Type: package

Default:

```
pkgs.firebird
```

Example:

```
firebird_3
```

Declared by:
<nixpkgs/nixos/modules/services/databases/firebird.nix>

services.firebird.baseDir
Location containing data/ and system/ directories. data/ stores the databases, system/ stores the password database security2.fdb.

Type: string

Default:

```
"/var/lib/firebird"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/firebird.nix>

services.firebird.port
Port Firebird uses.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3050
```

Declared by:
<nixpkgs/nixos/modules/services/databases/firebird.nix>

services.firebird.user
User account under which firebird runs.

Type: string

Default:

```
"firebird"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/firebird.nix>

services.firefly−iii.enable
Whether to enable Firefly III: A free and open source personal finance manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii.nix>

services.firefly−iii.enableNginx
Whether to enable nginx or not. If enabled, an nginx virtual host will be created for access to firefly−iii. If not enabled, then you may use '${config.services.firefly−iii.package}' as your document root in whichever webserver you wish to setup.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii.nix>

services.firefly−iii.package
The firefly−iii package to use.

Type: package

Default:

```
pkgs.firefly-iii
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii.nix>

services.firefly−iii.dataDir
The place where firefly−iii stores its state.

Type: absolute path

Default:

```
"/var/lib/firefly-iii"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii.nix>

services.firefly−iii.group
Group under which firefly−iii runs. It is best to set this to the group of whatever webserver is being used as the frontend.

Type: string

Default:

```
"If ‘services.firefly−iii.enableNginx‘ is true then ‘nginx‘ else f \
irefly−iii"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii.nix>

services.firefly−iii.poolConfig
Options for the Firefly III PHP pool. See the documentation on <literal>php−fpm.conf</literal> for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  "pm" = "dynamic";
  "pm.max_children" = 32;
  "pm.start_servers" = 2;
  "pm.min_spare_servers" = 2;
  "pm.max_spare_servers" = 4;
  "pm.max_requests" = 500;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii.nix>

services.firefly−iii.settings
Options for firefly−iii configuration. Refer to **https://github.com/firefly−iii/firefly−iii/blob/main/.env.example** for details on supported values. All <option>_FILE values supported by upstream are supported here.

APP_URL will be the same as ‘services.firefly−iii.virtualHost’ if the former is unset in ‘services.firefly−iii.settings’.

Type: open submodule of attribute set of (string or signed integer or boolean)

Default:

```
{ }
```

Example:

```
{
  APP_ENV = "production";
  APP_KEY_FILE = "/var/secrets/firefly−iii−app−key.txt";
  SITE_OWNER = "mail@example.com";
  DB_CONNECTION = "mysql";
  DB_HOST = "db";
  DB_PORT = 3306;
  DB_DATABASE = "firefly";
  DB_USERNAME = "firefly";
  DB_PASSWORD_FILE = "/var/secrets/firefly−iii−mysql−password.tx \
```

```
t";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii.nix>

services.firefly−iii.settings.APP_ENV
The app environment. It is recommended to keep this at “local”. Possible values are “local”, “production” and “testing”

Type: one of “local”, “production”, “testing”

Default:

```
"local"
```

Example:

```
"production"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii.nix>

services.firefly−iii.settings.APP_KEY_FILE
The path to your appkey. The file should contain a 32 character random app key. This may be set using ‘echo "base64:$(head −c 32 /dev/urandom | base64)" > /path/to/key−file’.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii.nix>

services.firefly−iii.settings.APP_URL
The APP_URL used by firefly−iii internally. Please make sure this URL matches the external URL of your Firefly III installation. It is used to validate specific requests and to generate URLs in emails.

Type: string

Default:

```
http(s)://''${config.services.firefly−iii.virtualHost}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii.nix>

services.firefly−iii.settings.DB_CONNECTION
The type of database you wish to use. Can be one of “sqlite”, “mysql” or “pgsql”.

Type: one of “sqlite”, “pgsql”, “mysql”

Default:

```
"sqlite"
```

Example:

```
"pgsql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii.nix>

services.firefly−iii.settings.DB_HOST
The machine which hosts your database. This is left at the default value for “mysql” because we use the “DB_SOCKET” option to connect to a unix socket instead. “pgsql” requires that the unix socket location be specified here instead of at “DB_SOCKET”. This option does not affect “sqlite”.

Type: string

Default:

```
  "localhost" if DB_CONNECTION is "sqlite" or "mysql", "/run/postgr \
esql" if "pgsql".
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii.nix>

services.firefly−iii.settings.DB_PORT
The port your database is listening at. sqlite does not require this value to be filled.

Type: null or signed integer

Default:

```
 ‘null‘ if DB_CONNECTION is "sqlite", ‘3306‘ if "mysql", ‘5432‘ if \
"pgsql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii.nix>

services.firefly−iii.user
User account under which firefly−iii runs.

Type: string

Default:

```
"firefly−iii"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii.nix>

services.firefly−iii.virtualHost
The hostname at which you wish firefly−iii to be served. If you have enabled nginx using ‘services.firefly−iii.enableNginx’ then this will be used.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii.nix>

services.firefly−iii−data−importer.enable
Whether to enable Firefly III Data Importer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii−data−importer.nix>

services.firefly−iii−data−importer.enableNginx
Whether to enable nginx or not. If enabled, an nginx virtual host will be created for access to firefly−iii data importer. If not enabled, then you may use ‘${config.services.firefly−iii−data−importer.package}’ as your document root in whichever webserver you wish to setup.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii−data−importer.nix>

services.firefly−iii−data−importer.package
The firefly−iii−data−importer package served by php−fpm and the webserver of choice. This option can be used to point the webserver to the correct root. It may also be used to set the package to a different version, say a development version.

Type: package

Default:

```
pkgs.firefly−iii−data−importer
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii−data−importer.nix>

services.firefly−iii−data−importer.dataDir
The place where firefly−iii data importer stores its state.

Type: absolute path

Default:

```
"/var/lib/firefly−iii−data−importer"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii−data−importer.nix>

services.firefly−iii−data−importer.group
Group under which firefly−iii−data−importer runs. It is best to set this to the group of whatever webserver is being used as the frontend.

Type: string

Default:

```
"If ‘services.firefly−iii−data−importer.enableNginx‘ is true the \
n ‘nginx‘ else firefly−iii−data−importer"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii−data−importer.nix>

services.firefly−iii−data−importer.poolConfig
Options for the Firefly III Data Importer PHP pool. See the documentation on <literal>php−fpm.conf</literal> for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  "pm" = "dynamic";
  "pm.max_children" = 32;
  "pm.start_servers" = 2;
  "pm.min_spare_servers" = 2;
  "pm.max_spare_servers" = 4;
  "pm.max_requests" = 500;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/firefly−iii−data−importer.nix>

services.firefly−iii−data−importer.settings

Options for firefly−iii data importer configuration. Refer to **https://github.com/firefly−iii/data−importer/blob/main/.env.example** for details on supported values. All <option>_FILE values supported by upstream are supported here.

APP_URL will be the same as ‘services.firefly−iii−data−importer.virtualHost’ if the former is unset in ‘services.firefly−iii−data−importer.settings’.

Type: open submodule of attribute set of (string or signed integer or boolean)

Default:

```
{ }
```

Example:

```
{
  APP_ENV = "local";
  LOG_CHANNEL = "syslog";
  FIREFLY_III_ACCESS_TOKEN= = "/var/secrets/firefly−iii−access−t \
oken.txt";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/firefly−iii−data−importer.nix>

services.firefly−iii−data−importer.user

User account under which firefly−iii−data−importer runs.

Type: string

Default:

```
"firefly−iii−data−importer"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/firefly−iii−data−importer.nix>

services.firefly−iii−data−importer.virtualHost

The hostname at which you wish firefly−iii−data−importer to be served. If you have enabled nginx using ‘services.firefly−iii−data−importer.enableNginx’ then this will be used.

Type: string

Default:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/firefly−iii−data−importer.nix>

services.firefox−syncserver.enable

Whether to enable the Firefox Sync storage service.

Out of the box this will not be very useful unless you also configure at least one service and one nodes by inserting them into the mysql database manually, e.g. by running

```
  INSERT INTO ‘services‘ (‘id‘, ‘service‘, ‘pattern‘) VALUES (’1’,  \
’sync−1.5’, ’{node}/1.5/{uid}’);
  INSERT INTO ‘nodes‘ (‘id‘, ‘service‘, ‘node‘, ‘available‘, ‘curre \
nt_load‘,
      ‘capacity‘, ‘downed‘, ‘backoff‘)
    VALUES (’1’, ’1’, ’https://mydomain.tld’, ’1’, ’0’, ’10’, ’0’,  \
’0’);
```

services.firefox−syncserver.singleNode.enable does this automatically when enabled .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.package
The syncstorage−rs package to use.

Type: package

Default:

```
pkgs.syncstorage−rs
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.database.createLocally
Whether to create database and user on the local machine if they do not exist. This includes enabling unix domain socket authentication for the configured user.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.database.host
Database host name. ‘localhost’ is treated specially and inserts systemd dependencies, other hostnames or IP addresses of the local machine do not.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.database.name
Database to use for storage. Will be created automatically if it does not exist and ‘config.services.firefox−syncserver.database.createLocally’ is set.

Type: string matching the pattern [a−z_][a−z0−9_]*

Default:

```
"firefox_syncserver"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.database.user

Username for database connections.

Type: string

Default:

```
"firefox-syncserver"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.logLevel

Log level to run with. This can be a simple log level like ‘error’ or ‘trace’, or a more complicated logging expression.

Type: string

Default:

```
"error"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.secrets

A file containing the various secrets. Should be in the format expected by systemd’s ‘EnvironmentFile’ directory. Two secrets are currently available: ‘SYNC_MASTER_SECRET’ and ‘SYNC_TOKENSERVER__FXA_METRICS_HASH_SECRET’.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.settings

Settings for the sync server. These take priority over values computed from NixOS options.

See the example config in **https://github.com/mozilla−services/syncstorage−rs/blob/master/config/local.example.toml** and the doc comments on the ‘Settings’ structs in **https://github.com/mozilla−services/syncstorage−rs/blob/master/syncstorage−settings/src/lib.rs** and **https://github.com/mozilla−services/syncstorage−rs/blob/master/tokenserver−settings/src/lib.rs** for available options.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.settings.port

Port to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5000
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.settings.tokenserver.enabled
Whether to enable the token service as well.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.singleNode.enable
Whether to enable auto−configuration for a simple single−node setup.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.singleNode.enableNginx
Whether to enable nginx virtualhost definitions.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.singleNode.enableTLS
Whether to enable automatic TLS setup.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.singleNode.capacity
How many sync accounts are allowed on this server. Setting this value equal to or less than the number of currently active accounts will effectively deny service to accounts not yet registered here.

Type: unsigned integer, meaning >=0

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.singleNode.hostname
Host name to use for this service.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.firefox−syncserver.singleNode.url
URL of the host. If you are not using the automatic webserver proxy setup you will have to change this setting or your sync server may not be functional.

Type: string

Default:

```
${if cfg.singleNode.enableTLS then "https" else "http"}://${config. \
services.firefox−syncserver.singleNode.hostname}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firefox−syncserver.nix>

services.fireqos.enable
Whether to enable FireQOS.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fireqos.nix>

services.fireqos.config
The FireQOS configuration.

Type: strings concatenated with “\n”

Example:

```
interface wlp3s0 world−in input rate 10mbit ethernet
  class web commit 50kbit
    match tcp ports 80,443

interface wlp3s0 world−out input rate 10mbit ethernet
  class web commit 50kbit
    match tcp ports 80,443
```

Declared by:
<nixpkgs/nixos/modules/services/networking/fireqos.nix>

services.firewalld.enable
Whether to enable FirewallD.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld>

services.firewalld.package
The firewalld package to use.

Type: package

Default:

```
pkgs.firewalld
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld>

services.firewalld.packages
Packages providing firewalld zones and other files. Files found in '/lib/firewalld' will be included.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld>

services.firewalld.extraArgs
Extra arguments to pass to FirewallD.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--debug"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld>

services.firewalld.services
firewalld service configuration files. See **firewalld.service**(5).

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.services.<name>.description
Description for the service.

Type: null or non−empty string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.services.<name>.destination
Destinations for the service.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.services.<name>.destination.ipv4
IPv4 destination.

Type: null or string matching the pattern ([0−9]{1,3}\.){3}[0−9]{1,3}(/[0−9]{1,2})?

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.services.<name>.destination.ipv6
IPv6 destination.

Type: null or string matching the pattern [0−9A−Fa−f:]{3,39}(/[0−9]{1,3})?

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.services.<name>.helpers
Helpers for the service.

Type: list of non−empty string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.services.<name>.includes
Services to include for the service.

Type: list of non−empty string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.services.<name>.ports
Ports of the service.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.services.<name>.ports.*.port
Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive) or (submodule)

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.services.<name>.ports.*.protocol
Type: one of “tcp”, “udp”, “sctp”, “dccp”

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.services.<name>.protocols
Protocols for the service.

Type: list of non−empty string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.services.<name>.short
Short description for the service.

Type: null or non−empty string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.services.<name>.sourcePorts
Source ports for the service.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.services.<name>.sourcePorts.*.port
Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive) or (submodule)

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.services.<name>.sourcePorts.*.protocol
Type: one of “tcp”, “udp”, “sctp”, “dccp”

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.services.<name>.version

Version of the service.

Type: null or non−empty string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/service.nix>

services.firewalld.settings

FirewallD config file. See **firewalld.conf**(5).

Type: open submodule of attribute set of (boolean or non−empty string)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/settings.nix>

services.firewalld.settings.CleanupModulesOnExit

Whether to unload all firewall−related kernel modules when firewalld stops.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/settings.nix>

services.firewalld.settings.CleanupOnExit

Whether to clean up firewall rules when firewalld stops.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/settings.nix>

services.firewalld.settings.DefaultZone

Default zone for connections.

Type: non−empty string

Default:

```
"public"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/settings.nix>

services.firewalld.settings.FirewallBackend

The firewall backend implementation. This applies to all firewalld primitives. The only exception is direct and passthrough rules which always use the traditional iptables, ip6tables, and ebtables backends.

Caution
The iptables backend is deprecated. It will be removed in a future release.

Type: one of “nftables”, “iptables”

Default:

```
"nftables"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/settings.nix>

services.firewalld.settings.FlushAllOnReload
Whether to flush all runtime rules on a reload.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/settings.nix>

services.firewalld.settings.IPv6_rpfilter
Performs reverse path filtering (RPF) on IPv6 packets as per RFC 3704.

Possible values:

‘"strict"’
: Performs “strict” filtering as per RFC 3704. This check verifies that the in ingress interface is the same interface that would be used to send a packet reply to the source. That is, ‘ingress == egress’.

‘"loose"’
: Performs “loose” filtering as per RFC 3704. This check only verifies that there is a route back to the source through any interface; even if it’s not the same one on which the packet arrived.

‘"strict−forward"’
: This is almost identical to “strict”, but does not perform RPF for packets targeted to the host (INPUT).

‘"loose−forward"’
: This is almost identical to “loose”, but does not perform RPF for packets targeted to the host (INPUT).

‘"no"’
: RPF is completely disabled.

The rp_filter for IPv4 is controlled using sysctl.

Type: one of “strict”, “loose”, “strict−forward”, “loose−forward”, “no”

Default:

```
"strict"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/settings.nix>

services.firewalld.settings.IndividualCalls
Whether to use individual −restore calls to apply changes to the firewall. The use of individual calls increases the time that is needed to apply changes and to start the daemon, but is good for debugging as error messages are more specific.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/settings.nix>

services.firewalld.settings.LogDenied
Add logging rules right before reject and drop rules in the INPUT, FORWARD and OUTPUT chains for the default rules and also final reject and drop rules in zones for the configured link−layer packet type.

Type: one of “all”, “unicast”, “broadcast”, “multicast”, “off”

Default:

```
"off"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/settings.nix>

services.firewalld.settings.NftablesCounters
Whether to add a counter to every nftables rule.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/settings.nix>

services.firewalld.settings.NftablesFlowtable
This may improve forwarded traffic throughput by enabling nftables flowtable. It is a software fastpath and avoids calling nftables rule evaluation for data packets. Its value is a space separate list of interfaces.

Type: strings concatenated with " "

Default:

```
"off"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/settings.nix>

services.firewalld.settings.NftablesTableOwner
If enabled, the generated nftables rule set will be owned exclusively by firewalld. This prevents other entities from mistakenly (or maliciously) modifying firewalld’s rule set. If you intend to modify firewalld’s rules, set this to ‘false’.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/settings.nix>

services.firewalld.settings.RFC3964_IPv4
Whether to filter IPv6 traffic with 6to4 destination addresses that correspond to IPv4 addresses that should not be routed over the public internet.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/settings.nix>

services.firewalld.settings.ReloadPolicy
The policy during reload.

Type: one of “DROP”, “REJECT”, “ACCEPT” or strings concatenated with “,”

Default:

```
"INPUT:DROP,FORWARD:DROP,OUTPUT:DROP"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/settings.nix>

services.firewalld.settings.StrictForwardPorts
If enabled, the generated destination NAT (DNAT) rules will NOT accept traffic that was DNAT’d by other entities, e.g. docker. Firewalld will be strict and not allow published container ports until they’re explicitly allowed via firewalld. If set to ‘false’, then docker (and podman) integrates seamlessly with firewalld. Published container ports are implicitly allowed.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/settings.nix>

services.firewalld.zones
firewalld zone configuration files. See **firewalld.zone**(5).

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  dmz = {
    forward = true;
    services = [
      "ssh"
    ];
  };
  external = {
    forward = true;
    masquerade = true;
    services = [
      "ssh"
    ];
  };
  home = {
    forward = true;
    services = [
      "ssh"
      "mdns"
      "samba-client"
      "dhcpv6-client"
    ];
```

```
    };
    internal = {
      forward = true;
      services = [
        "ssh"
        "mdns"
        "samba-client"
        "dhcpv6-client"
      ];
    };
    public = {
      forward = true;
      services = [
        "ssh"
        "dhcpv6-client"
      ];
    };
    work = {
      forward = true;
      services = [
        "ssh"
        "dhcpv6-client"
      ];
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.description

Description for the zone.

Type: null or non−empty string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.egressPriority

Priority for outbound traffic. Lower values have higher priority.

Type: null or 16 bit signed integer; between −32768 and 32767 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.forward

Whether to enable intra−zone forwarding. When enabled, packets will be forwarded between interfaces or sources within a zone, even if the zone's target is not set to ACCEPT.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.forwardPorts
Ports to forward in the zone.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.forwardPorts.*.port
Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive) or (submodule)

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.forwardPorts.*.protocol
Type: one of “tcp”, “udp”, “sctp”, “dccp”

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.forwardPorts.*.to−addr
Destination IP address.

Type: null or non−empty string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.forwardPorts.*.to−port
Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive) or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.icmpBlockInversion
Whether to invert the icmp block handling. Only enabled ICMP types are accepted and all others are rejected in the zone.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.icmpBlocks

ICMP types to block in the zone.

Type: list of non−empty string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.ingressPriority

Priority for inbound traffic. Lower values have higher priority.

Type: null or 16 bit signed integer; between −32768 and 32767 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.interfaces

Interfaces to bind.

Type: list of non−empty string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.masquerade

Whether to enable masquerading in the zone.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.ports

Ports to allow in the zone.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.ports.*.port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive) or (submodule)

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.ports.*.protocol

Type: one of “tcp”, “udp”, “sctp”, “dccp”

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.protocols

Protocols to allow in the zone.

Type: list of non−empty string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.rules

Rich rules for the zone.

Type: list of (XML value)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.services

Services to allow in the zone.

Type: list of non−empty string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.short

Short description for the zone.

Type: null or non−empty string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.sourcePorts

Source ports to allow in the zone.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.sourcePorts.*.port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive) or (submodule)

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.sourcePorts.*.protocol

Type: one of “tcp”, “udp”, “sctp”, “dccp”

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.sources

Source addresses, address ranges, MAC addresses or ipsets to bind.

Type: list of attribute−tagged union with choices: address, ipset, mac

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.sources.*.address

An IP address or a network IP address with a mask for IPv4 or IPv6. For IPv4, the mask can be a network mask or a plain number. For IPv6 the mask is a plain number. The use of host names is not supported.

Type: non−empty string

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.sources.*.ipset

An ipset.

Type: non−empty string

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.sources.*.mac

A MAC address.

Type: string matching the pattern ([[:xdigit:]]{2}:){5}[[:xdigit:]]{2}

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.target

Action for packets that doesn’t match any rules.

Type: one of “ACCEPT”, “%%REJECT%%”, “DROP”

Default:

```
"%%REJECT%%"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firewalld.zones.<name>.version

Version of the zone.

Type: null or non−empty string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firewalld/zone.nix>

services.firezone.gateway.enable

Whether to enable the firezone gateway.

You have to manually masquerade and forward traffic from the tun−firezone interface to your resource! Refer to the **upstream setup script** for a list of iptable commands.

See the firezone nixos test in this repository for an nftables based example.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/gateway.nix>

services.firezone.gateway.enableTelemetry

Whether to enable telemetry.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/gateway.nix>

services.firezone.gateway.package

The firezone−gateway package to use.

Type: package

Default:

```
pkgs.firezone-gateway
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/gateway.nix>

services.firezone.gateway.apiUrl

The URL of your firezone server's API. This should be the same as your server's setting for **services.firezone.server.settings.api.externalUrl**, but with 'wss://' instead of 'https://'.

Type: string matching the pattern ^wss://.+/$

Example:

```
"wss://firezone.example.com/api/"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/gateway.nix>

services.firezone.gateway.logLevel
The log level for the firezone application. See **RUST_LOG** for the format.

Type: string

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/gateway.nix>

services.firezone.gateway.name
The name of this gateway as shown in firezone

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/gateway.nix>

services.firezone.gateway.tokenFile
A file containing the firezone gateway token. Do not use a nix−store path here as it will make the token publicly readable!

This file will be passed via systemd credentials, it should only be accessible by the root user.

Type: absolute path

Example:

```
"/run/secrets/firezone−gateway−token"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/gateway.nix>

services.firezone.gui−client.enable
Whether to enable the firezone gui client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/gui−client.nix>

services.firezone.gui−client.package
The firezone−gui−client package to use.

Type: package

Default:

```
pkgs.firezone−gui−client
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/gui−client.nix>

services.firezone.gui−client.allowedUsers

All listed users will become part of the ‘firezone−client’ group so they can control the tunnel service. This is a convenience option.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/gui−client.nix>

services.firezone.gui−client.logLevel

The log level for the firezone application. See **RUST_LOG** for the format.

Type: string

Default:

```
"info"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/gui−client.nix>

services.firezone.gui−client.name

The name of this client as shown in firezone

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/gui−client.nix>

services.firezone.headless−client.enable

Whether to enable the firezone headless client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/headless−client.nix>

services.firezone.headless−client.enableTelemetry

Whether to enable telemetry.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/headless−client.nix>

services.firezone.headless−client.package

The firezone−headless−client package to use.

Type: package

Default:

```
pkgs.firezone-headless-client
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/headless−client.nix>

services.firezone.headless−client.apiUrl

The URL of your firezone server's API. This should be the same as your server's setting for **services.firezone.server.settings.api.externalUrl**, but with 'wss://' instead of 'https://'.

Type: string matching the pattern ^wss://.+/$

Example:

```
"wss://firezone.example.com/api/"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/headless−client.nix>

services.firezone.headless−client.logLevel

The log level for the firezone application. See **RUST_LOG** for the format.

Type: string

Default:

```
"info"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/headless−client.nix>

services.firezone.headless−client.name

The name of this client as shown in firezone

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/headless−client.nix>

services.firezone.headless−client.tokenFile

A file containing the firezone client token. Do not use a nix−store path here as it will make the token publicly readable!

This file will be passed via systemd credentials, it should only be accessible by the root user.

Type: absolute path

Example:

```
"/run/secrets/firezone-client-token"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/headless−client.nix>

services.firezone.relay.enable

Whether to enable the firezone relay server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/relay.nix>

services.firezone.relay.enableTelemetry
Whether to enable telemetry.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/relay.nix>

services.firezone.relay.package
The firezone−relay package to use.

Type: package

Default:

```
pkgs.firezone-relay
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/relay.nix>

services.firezone.relay.apiUrl
The URL of your firezone server's API. This should be the same as your server's setting for **services.firezone.server.settings.api.externalUrl**, but with 'wss://' instead of 'https://'.

Type: string matching the pattern ^wss://.+/$

Example:

```
"wss://firezone.example.com/api/"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/relay.nix>

services.firezone.relay.highestPort
The highest port to use in TURN allocation

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
65535
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/relay.nix>

services.firezone.relay.logLevel
The log level for the firezone application. See **RUST_LOG** for the format.

Type: string

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/relay.nix>

services.firezone.relay.lowestPort
The lowest port to use in TURN allocation

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
49152
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/relay.nix>

services.firezone.relay.name
The name of this gateway as shown in firezone

Type: string

Example:

```
"My relay"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/relay.nix>

services.firezone.relay.openFirewall
Opens up the main STUN port and the TURN allocation range.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/relay.nix>

services.firezone.relay.port
The port to listen on for STUN messages

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3478
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/relay.nix>

services.firezone.relay.publicIpv4
The public ipv4 address of this relay

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/relay.nix>

services.firezone.relay.publicIpv6
The public ipv6 address of this relay

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/relay.nix>

services.firezone.relay.tokenFile
A file containing the firezone relay token. Do not use a nix−store path here as it will make the token publicly readable!

This file will be passed via systemd credentials, it should only be accessible by the root user.

Type: absolute path

Example:

```
"/run/secrets/firezone-relay-token"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/relay.nix>

services.firezone.server.enable
Whether to enable all Firezone components.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.enableLocalDB
Whether to enable a local postgresql database for Firezone.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.api.enable
Whether to enable the Firezone api server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.api.package

The firezone−server−api package to use.

Type: package

Default:

```
pkgs.firezone-server-api
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.api.address

The address to listen on

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.api.externalUrl

The external URL under which you will serve the api. You need to setup a reverse proxy for TLS termination, either with **services.firezone.server.nginx.enable** or manually.

Type: string matching the pattern ^https://.+/$

Example:

```
"https://firezone.example.com/api/"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.api.port

The port under which the api will be served locally

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8081
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.api.settings

Environment variables for this component of the Firezone server. For a list of available variables, please refer to the **upstream definitions**. Some variables like 'OUTBOUND_EMAIL_ADAPTER_OPTS' require json values for which you can use 'VAR = builtins.toJSON { /* ... */ }'.

This component will automatically inherit all variables defined via **services.firezone.server.settings** and **services.firezone.server.settingsSecret**, but which can be overwritten by this option.

Type: open submodule of attribute set of (boolean or floating point number or signed integer or string or absolute path or package)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.api.trustedProxies

A list of trusted proxies

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.clusterHosts

A list of components and their hosts that are part of this cluster. For a single−machine setup, the default value will be sufficient. This value will automatically set 'ERLANG_CLUSTER_ADAPTER_CONFIG'.

The format is '<COMPONENT_NAME>@<HOSTNAME>'.

Type: list of string

Default:

```
[
  "api@localhost.localdomain"
  "web@localhost.localdomain"
  "domain@localhost.localdomain"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.domain.enable

Whether to enable the Firezone domain server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.domain.package

The firezone−server−domain package to use.

Type: package

Default:

```
pkgs.firezone-server-domain
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.domain.settings

Environment variables for this component of the Firezone server. For a list of available variables, please refer to the **upstream definitions**. Some variables like 'OUTBOUND_EMAIL_ADAPTER_OPTS' require json values for which you can use 'VAR = builtins.toJSON { /* ... */ }'.

This component will automatically inherit all variables defined via **services.firezone.server.settings** and **services.firezone.server.settingsSecret**, but which can be overwritten by this option.

Type: open submodule of attribute set of (boolean or floating point number or signed integer or string or

absolute path or package)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.nginx.enable
Whether to enable nginx virtualhost definition.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.openClusterFirewall
Opens up the erlang distribution port of all enabled components to allow reaching the server cluster from the internet. You only need to set this if you are actually distributing your cluster across multiple machines.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.enable
Whether to enable provisioning of the Firezone domain server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts
All accounts to provision. The attribute name specified here will become the account slug. By using ‘'{file:/path/to/file}'’ as a string value anywhere in these settings, the provisioning script will replace that value with the content of the given file at runtime.

Please refer to the **Firezone source code** for all available properties.

Type: attribute set of (open submodule of (JSON value))

Default:

```
{ }
```

Example:

```
{
  main = {
    features = {
      rest_api = false;
    };
    metadata = {
      stripe = {
        billing_email = "org@myorg.example.com";
      };
    };
    name = "My Account / Organization";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.actors
All actors (users) to provision. The attribute name will only be used to track the actor and does not have any significance for Firezone.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  admin = {
    email = "admin@myorg.example.com";
    name = "Admin";
    type = "account_admin_user";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.actors.<name>.email
The email address used to authenticate as this account

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.actors.<name>.name
The name of this actor

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.actors.<name>.type
The account type

Type: one of “account_admin_user”, “account_user”, “service_account”, “api_client”

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.auth
All authentication providers to provision. The attribute name will only be used to track the provider and does not have any significance for Firezone.

Type: attribute set of (open submodule of (JSON value))

Default:

```
{ }
```

Example:

```
{
  myoidcprovider = {
    adapter = "openid_connect";
    adapter_config = {
      clientSecretFile = "/run/secrets/oidc-client-secret";
      client_id = "clientid";
      discovery_document_uri = "https://auth.example.com/.well-kno \
wn/openid-configuration";
      response_type = "code";
      scope = "openid email name";
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.auth.<name>.adapter
The auth adapter type

Type: one of “email”, “openid_connect”, “userpass”, “token”, “google_workspace”, “microsoft_entra”, “okta”, “jumpcloud”

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.auth.<name>.adapter_config.clientSecretFile
A file containing a the client secret for an openid_connect adapter. You only need to set this if this is an openid_connect provider.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.auth.<name>.name
The name of this authentication provider

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.features.idp_sync
Whether to enable the ‘idp_sync’ feature for this account.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.features.internet_resource
Whether to enable the ‘internet_resource’ feature for this account.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.features.multi_site_resources
Whether to enable the ‘multi_site_resources’ feature for this account.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.features.policy_conditions
Whether to enable the ‘policy_conditions’ feature for this account.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.features.rest_api
Whether to enable the ‘rest_api’ feature for this account.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.features.self_hosted_relays
Whether to enable the ‘self_hosted_relays’ feature for this account.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.features.traffic_filters
Whether to enable the ‘traffic_filters’ feature for this account.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.gatewayGroups
All gateway groups (sites) to provision. The attribute name will only be used to track the gateway group and does not have any significance for Firezone.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  my-gateways = {
    name = "My Gateways";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.gatewayGroups.<name>.name
The name of this gateway group

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.groups
All groups to provision. The attribute name will only be used to track the group and does not have any significance for Firezone.

A group named ‘everyone’ will automatically be managed by Firezone.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  users = {
    name = "Users";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.groups.<name>.forceMembers
Ensure that only the given members are part of this group at every server start.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.groups.<name>.members
The members of this group

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.groups.<name>.name
The name of this group

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.name
The account name

Type: string

Example:

```
"My Organization"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.policies
All policies to provision. The attribute name will only be used to track the policy and does not have any significance for Firezone.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  access_vaultwarden = {
    group = "everyone";
    name = "Allow anyone to access vaultwarden";
    resource = "vaultwarden";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.policies.<name>.description
The description of this policy

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.policies.<name>.group
The group which should be allowed access to the given resource.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.policies.<name>.resource
The resource to which access should be allowed.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.relayGroups
All relay groups to provision. The attribute name will only be used to track the relay group and does not have any significance for Firezone.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  my-relays = {
    name = "My Relays";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.relayGroups.<name>.name
The name of this relay group

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.resources
All resources to provision. The attribute name will only be used to track the resource and does not have any significance for Firezone.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  vaultwarden = {
    address = "vault.example.com";
    address_description = "https://vault.example.com";
    filters = [
      {
        protocol = "icmp";
      }
      {
        ports = [
          80
          443
        ];
        protocol = "tcp";
      }
    ];
    gatewayGroups = [
      "my-site"
    ];
    name = "Vaultwarden";
    type = "dns";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.resources.<name>.address

The address of this resource. Depending on the resource type, this should be an ip, ip with cidr mask or a domain.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.resources.<name>.addressDescription

An optional description for resource address, usually a full link to the resource including a schema.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.resources.<name>.filters

A list of filter to restrict traffic. If no filters are given, all traffic is allowed.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.resources.<name>.filters.*.ports
Either a single port or port range to allow. Both bounds are inclusive.

Type: list of ((submodule) or 16 bit unsigned integer; between 0 and 65535 (both inclusive) convertible to it)

Default:

```
[ ]
```

Example:

```
[
  443
  {
    from = 8080;
    to = 8100;
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.resources.<name>.filters.*.ports.*.from
The start of the port range, inclusive.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.resources.<name>.filters.*.ports.*.to
The end of the port range, inclusive.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.resources.<name>.filters.*.protocol
The protocol to allow

Type: one of “icmp”, “tcp”, “udp”

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.resources.<name>.gatewayGroups
A list of gateway groups (sites) which can reach the resource and may be used to connect to it.

Type: non−empty (list of string)

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.resources.<name>.name
The name of this resource

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.provision.accounts.<name>.resources.<name>.type
The resource type

Type: one of “dns”, “cidr”, “ip”

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.settings
Environment variables for the Firezone server. For a list of available variables, please refer to the **upstream definitions**. Some variables like ‘OUTBOUND_EMAIL_ADAPTER_OPTS’ require json values for which you can use ‘VAR = builtins.toJSON { /* ... */ }’.

Each component has an additional ‘settings’ option which allows you to override specific variables passed to that component.

Type: open submodule of attribute set of (boolean or floating point number or signed integer or string or absolute path or package)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.settingsSecret
This is a convenience option which allows you to set secret values for environment variables by specifying a file which will contain the value at runtime. Before starting the server, the content of each file will be loaded into the respective environment variable.

Otherwise, this option is equivalent to **services.firezone.server.settings**. Refer to the settings option for more information regarding the actual variables and how filtering rules are applied for each component.

Type: open submodule of attribute set of absolute path

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.settingsSecret.COOKIE_ENCRYPTION_SALT
A file containing a unique base64 encoded secret for the ‘COOKIE_ENCRYPTION_SALT’. All Firezone components in your cluster must use the same value.

If this is ‘null’, a shared value will automatically be generated on startup and used for all components on this machine. You do not need to set this except when you spread your cluster over multiple hosts.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.settingsSecret.COOKIE_SIGNING_SALT

A file containing a unique base64 encoded secret for the 'COOKIE_SIGNING_SALT'. All Firezone components in your cluster must use the same value.

If this is 'null', a shared value will automatically be generated on startup and used for all components on this machine. You do not need to set this except when you spread your cluster over multiple hosts.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.settingsSecret.LIVE_VIEW_SIGNING_SALT

A file containing a unique base64 encoded secret for the 'LIVE_VIEW_SIGNING_SALT'. All Firezone components in your cluster must use the same value.

If this is 'null', a shared value will automatically be generated on startup and used for all components on this machine. You do not need to set this except when you spread your cluster over multiple hosts.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.settingsSecret.RELEASE_COOKIE

A file containing a unique secret identifier for the Erlang cluster. All Firezone components in your cluster must use the same value.

If this is 'null', a shared value will automatically be generated on startup and used for all components on this machine. You do not need to set this except when you spread your cluster over multiple hosts.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.settingsSecret.SECRET_KEY_BASE

A file containing a unique base64 encoded secret for the 'SECRET_KEY_BASE'. All Firezone components in your cluster must use the same value.

If this is 'null', a shared value will automatically be generated on startup and used for all components on this machine. You do not need to set this except when you spread your cluster over multiple hosts.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.settingsSecret.TOKENS_KEY_BASE

A file containing a unique base64 encoded secret for the 'TOKENS_KEY_BASE'. All Firezone components in your cluster must use the same value.

If this is 'null', a shared value will automatically be generated on startup and used for all components on this machine. You do not need to set this except when you spread your cluster over multiple hosts.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.settingsSecret.TOKENS_SALT

A file containing a unique base64 encoded secret for the 'TOKENS_SALT'. All Firezone components in your cluster must use the same value.

If this is 'null', a shared value will automatically be generated on startup and used for all components on this machine. You do not need to set this except when you spread your cluster over multiple hosts.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.smtp.configureManually

Outbound email configuration is mandatory for Firezone and supports many different delivery adapters. Yet, most users will only need an SMTP relay to send emails, so this configuration enforced by default.

If you want to utilize an alternative way to send emails (e.g. via a supportd API−based service), enable this option and define 'OUTBOUND_EMAIL_FROM', 'OUTBOUND_EMAIL_ADAPTER' and 'OUTBOUND_EMAIL_ADAPTER_OPTS' manually via **services.firezone.server.settings** and/or **services.firezone.server.settingsSecret**.

The Firezone documentation holds **a list of supported Swoosh adapters**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.smtp.from

Outbound SMTP FROM address

Type: string

Example:

```
"firezone@example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.smtp.host
Outbound SMTP host

Type: string

Example:

```
"mail.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.smtp.implicitTls
Whether to use implicit TLS instead of STARTTLS (usually port 465)

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.smtp.passwordFile
File containing the password for the given username. Beware that a file in the nix store will be world readable.

Type: absolute path

Example:

```
"/run/secrets/smtp-password"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.smtp.port
Outbound SMTP port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Example:

```
465
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.smtp.username
Username to authenticate against the SMTP relay

Type: string

Example:

```
"firezone@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.web.enable
Whether to enable the Firezone web server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.web.package
The firezone−server−web package to use.

Type: package

Default:

```
pkgs.firezone-server-web
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.web.address
The address to listen on

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.web.externalUrl
The external URL under which you will serve the web interface. You need to setup a reverse proxy for TLS termination, either with **services.firezone.server.nginx.enable** or manually.

Type: string matching the pattern ^https://.+/$

Example:

```
"https://firezone.example.com/"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.web.port
The port under which the web interface will be served locally

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.web.settings
Environment variables for this component of the Firezone server. For a list of available variables, please refer to the **upstream definitions**. Some variables like ‘OUTBOUND_EMAIL_ADAPTER_OPTS’ require json values for which you can use ‘VAR = builtins.toJSON { /* ... */ }’.

This component will automatically inherit all variables defined via **services.firezone.server.settings** and **services.firezone.server.settingsSecret**, but which can be overwritten by this option.

Type: open submodule of attribute set of (boolean or floating point number or signed integer or string or absolute path or package)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.firezone.server.web.trustedProxies

A list of trusted proxies

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/firezone/server.nix>

services.flannel.enable

Whether to enable flannel.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.package

The flannel package to use.

Type: package

Default:

```
pkgs.flannel
```

Declared by:

<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.backend

Type of backend to use and specific configurations for that backend.

Type: attribute set

Default:

```
{
  Type = "vxlan";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.etcd.caFile

Etcd certificate authority file

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.etcd.certFile
Etcd cert file

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.etcd.endpoints
Etcd endpoints

Type: list of string

Default:

```
[
  "http://127.0.0.1:2379"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.etcd.keyFile
Etcd key file

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.etcd.prefix
Etcd key prefix

Type: string

Default:

```
"/coreos.com/network"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.extraNetworkConfig
Extra configuration to be added to the net−conf.json/etcd−backed network configuration.

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  EnableIPv6 = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.iface
Interface to use (IP or name) for inter−host communication. Defaults to the interface for the default route on the machine.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.kubeconfig
Path to kubeconfig to use for storing flannel config using the Kubernetes API

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.network
IPv4 network in CIDR format to use for the entire flannel network

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.nodeName
Needed when running with Kubernetes as backend as this cannot be auto−detected";

Type: null or string

Default:

```
config.networking.fqdnOrHostName
```

Example:

```
"node1.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.publicIp
IP accessible by other nodes for inter−host communication. Defaults to the IP of the interface being used for communication.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.storageBackend

Determines where flannel stores its configuration at runtime

Type: one of “etcd”, “kubernetes”

Default:

```
"etcd"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.subnetLen

The size of the subnet allocated to each host. Defaults to 24 (i.e. /24) unless the Network was configured to be smaller than a /24 in which case it is one less than the network.

Type: signed integer

Default:

```
24
```

Declared by:

<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.subnetMax

The end of IP range which the subnet allocation should start with. Defaults to the last subnet of Network.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flannel.subnetMin

The beginning of IP range which the subnet allocation should start with. Defaults to the first subnet of Network.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/flannel.nix>

services.flaresolverr.enable

Whether to enable FlareSolverr, a proxy server to bypass Cloudflare protection.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/flaresolverr.nix>

services.flaresolverr.package
The flaresolverr package to use.

Type: package

Default:

```
pkgs.flaresolverr
```

Declared by:
<nixpkgs/nixos/modules/services/misc/flaresolverr.nix>

services.flaresolverr.openFirewall
Open the port in the firewall for FlareSolverr.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/flaresolverr.nix>

services.flaresolverr.port
The port on which FlareSolverr will listen for incoming HTTP traffic.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8191
```

Declared by:
<nixpkgs/nixos/modules/services/misc/flaresolverr.nix>

services.flarum.enable
Whether to enable Flarum discussion platform.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/flarum.nix>

services.flarum.package
The flarum package to use.

Type: package

Default:

```
pkgs.flarum
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/flarum.nix>

services.flarum.adminEmail
Email for first web application administrator

Type: string

Default:

```
"admin@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/flarum.nix>

services.flarum.adminUser
Username for first web application administrator

Type: string

Default:

```
"flarum"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/flarum.nix>

services.flarum.baseUrl
Change ‘domain’ instead.

Type: string

Default:

```
"http://localhost"
```

Example:

```
"https://forum.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/flarum.nix>

services.flarum.createDatabaseLocally
Create the database and database user locally, and run installation.

WARNING: Due to **https://github.com/flarum/framework/issues/4018**, this option is set to false by default. The ‘flarum install’ command may delete existing database tables. Only set this to true if you are certain you are working with a fresh, empty database.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/flarum.nix>

services.flarum.database
MySQL database parameters

Type: attribute set of (string or boolean or signed integer)

Default:

```
{
  database = "flarum";
  driver = "mysql";
  host = "localhost";
  password = "";
  port = 3306;
```

```
  prefix = "";
  strict = false;
  username = "flarum";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/flarum.nix>

services.flarum.domain
Domain to serve on.

Type: string

Default:

```
"localhost"
```

Example:

```
"forum.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/flarum.nix>

services.flarum.forumTitle
Title of the forum.

Type: string

Default:

```
"A Flarum Forum on NixOS"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/flarum.nix>

services.flarum.group
System group to run Flarum

Type: string

Default:

```
"flarum"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/flarum.nix>

services.flarum.initialAdminPassword
Initial password for the adminUser

Type: string

Default:

```
"flarum"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/flarum.nix>

services.flarum.stateDir
Home directory for writable storage

Type: absolute path

Default:

```
"/var/lib/flarum"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/flarum.nix>

services.flarum.user
System user to run Flarum

Type: string

Default:

```
"flarum"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/flarum.nix>

services.flatpak.enable
Whether to enable flatpak.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/flatpak.nix>

services.flatpak.package
The flatpak package to use.

Type: package

Default:

```
pkgs.flatpak
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/flatpak.nix>

services.flexget.enable
Whether to enable FlexGet daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/flexget.nix>

services.flexget.package
The flexget package to use.

Type: package

Default:

```
pkgs.flexget
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/flexget.nix>

services.flexget.config
The YAML configuration for FlexGet.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/flexget.nix>

services.flexget.homeDir
Where files live.

Type: absolute path

Default:

```
"/var/lib/deluge"
```

Example:

```
"/home/flexget"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/flexget.nix>

services.flexget.interval
When to perform a **flexget** run. See **man 7 systemd.time** for the format.

Type: string

Default:

```
"10m"
```

Example:

```
"1h"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/flexget.nix>

services.flexget.systemScheduler
When true, execute the runs via the flexget−runner.timer. If false, you have to specify the settings yourself in the YML file.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/flexget.nix>

services.flexget.user

The user under which to run flexget.

Type: string

Default:

```
"deluge"
```

Example:

```
"some_user"
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/flexget.nix>

services.flood.enable

Whether to enable flood.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/flood.nix>

services.flood.package

The flood package to use.

Type: package

Default:

```
pkgs.flood
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/flood.nix>

services.flood.extraArgs

Extra arguments passed to ‘flood’.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--baseuri=/"
]
```

Declared by:

<nixpkgs/nixos/modules/services/torrent/flood.nix>

services.flood.host

Host to bind webserver.

Type: string

Default:

```
"localhost"
```

Example:

```
"::"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/flood.nix>

services.flood.openFirewall
Whether to open the firewall for the port in **services.flood.port**.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/flood.nix>

services.flood.port
Port to bind webserver.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Example:

```
3001
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/flood.nix>

services.fluent−bit.enable
Whether to enable Fluent Bit.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/fluent−bit.nix>

services.fluent−bit.package
The fluent−bit package to use.

Type: package

Default:

```
pkgs.fluent−bit
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/fluent−bit.nix>

services.fluent−bit.configurationFile

Fluent Bit configuration. See **https://docs.fluentbit.io/manual/administration/configuring−fluent−bit/yaml** for supported values.

configurationFile takes precedence over **settings**.

Note: Restricted evaluation blocks access to paths outside the Nix store. This means detecting content changes for mutable paths (i.e. not input or content−addressed) can't be done. As a result, 'nixos−rebuild' won't reload/restart the systemd unit when mutable path contents change. 'systemctl restart fluent−bit.service' must be used instead.

Type: absolute path

Default:

```
yamlFormat.generate "fluent−bit.yaml" cfg.settings
```

Example:

```
"/etc/fluent−bit/fluent−bit.yaml"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/fluent−bit.nix>

services.fluent−bit.graceLimit

The grace time limit. Sets the systemd unit's 'TimeoutStopSec'.

The 'service.grace' option in the Fluent Bit configuration should be ≤ this option.

Type: null or positive integer, meaning >0, or string

Default:

```
null
```

Example:

```
30
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/fluent−bit.nix>

services.fluent−bit.settings

See **configurationFile**.

configurationFile takes precedence over **settings**.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  pipeline = {
    inputs = [
      {
        name = "systemd";
        systemd_filter = "_SYSTEMD_UNIT=fluent−bit.service";
      }
    ];
    outputs = [
      {
        file = "fluent−bit.out";
        name = "file";
```

```
            path = "/var/log/fluent-bit";
          }
        ];
      };
      service = {
        grace = 30;
      };
    }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/fluent-bit.nix>

services.fluentd.enable
Whether to enable fluentd, a data/log collector.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/logging/fluentd.nix>

services.fluentd.package
The fluentd package to use.

Type: package

Default:

```
pkgs.fluentd
```

Declared by:
<nixpkgs/nixos/modules/services/logging/fluentd.nix>

services.fluentd.config
Fluentd config.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/logging/fluentd.nix>

services.fluentd.plugins
A list of plugin paths to pass into fluentd. It will make plugins defined in ruby files there available in your config.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/logging/fluentd.nix>

services.fluidd.enable

Whether to enable Fluidd, a Klipper web interface for managing your 3d printer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.package

The fluidd package to use.

Type: package

Default:

```
pkgs.fluidd
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.hostName

Hostname to serve fluidd on

Type: string

Default:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx

Extra configuration for the nginx virtual host of fluidd.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  serverAliases = [ "fluidd.${config.networking.domain}" ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.enableACME

Whether to ask Let’s Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.default

Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.extraConfig

These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.forceSSL

Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.globalRedirect

If set, all requests for this host are redirected (defaults to 301, configurable with ‘redirectCode’) to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.http2

Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.http3

Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.http3_hq

Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides 'addSSL' and 'onlySSL'.

If you only want to set the addresses manually and not the ports, take a look at 'listenAddresses'.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.listen.*.proxyProtocol

Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.listen.*.ssl

Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations.<name>.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations.<name>.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations.<name>.extraConfig

These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations.<name>.fastcgiParams

FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with 'lib.mkOrder'. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.rejectSSL

Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.root

The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.serverName

Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

services.fluidd.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/fluidd.nix>

2. see the **security.acme.certs** option

services.foldingathome.enable

Whether to enable Folding@home client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/computing/foldingathome/client.nix>

services.foldingathome.package

The fahclient package to use.

Type: package

Default:

```
pkgs.fahclient
```

Declared by:

<nixpkgs/nixos/modules/services/computing/foldingathome/client.nix>

services.foldingathome.daemonNiceLevel

Daemon process priority for FAHClient. 0 is the default Unix process priority, 19 is the lowest.

Type: integer between −20 and 19 (both inclusive)

Default:

Declared by:

<nixpkgs/nixos/modules/services/computing/foldingathome/client.nix>

services.foldingathome.extraArgs

Extra startup options for the FAHClient. Run ‘fah−client −−help’ to find all the available options.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/computing/foldingathome/client.nix>

services.foldingathome.team

The team ID associated with the reported computation results. This will be used in the ranking statistics.

By default, use the NixOS folding@home team ID is being used.

Type: signed integer

Default:

```
236565
```

Declared by:

<nixpkgs/nixos/modules/services/computing/foldingathome/client.nix>

services.foldingathome.user

The user associated with the reported computation results. This will be used in the ranking statistics.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/computing/foldingathome/client.nix>

services.forgejo.enable

Whether to enable Forgejo, a software forge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.package

The forgejo−lts package to use.

Type: package

Default:

```
pkgs.forgejo-lts
```

Declared by:

<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.customDir

Base directory for custom templates and other options.

If **services.forgejo.useWizard** is disabled (default), this directory will also hold secrets and the resulting *app.ini* config at runtime.

Type: string

Default:

```
"${config.services.forgejo.stateDir}/custom"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.database.createDatabase

Whether to create a local database automatically.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.database.host
Database host address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.database.name
Database name.

Type: string

Default:

```
"forgejo"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.database.passwordFile
A file containing the password corresponding to **services.forgejo.database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/forgejo-dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.database.path
Path to the sqlite3 database file.

Type: string

Default:

```
"${config.services.forgejo.stateDir}/data/forgejo.db"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
if config.services.forgejo.database.type != "postgresql"
then 3306
else 5432
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.database.socket
Path to the unix socket file to use for authentication.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/mysqld/mysqld.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.database.type
Database engine to use.

Type: one of “sqlite3”, “mysql”, “postgres”

Default:

```
"sqlite3"
```

Example:

```
"mysql"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.database.user
Database user.

Type: string

Default:

```
"forgejo"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.dump.enable
Whether to enable periodic dumps via the **built−in dump command**.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.dump.age
Age of backup used to decide what files to delete when cleaning. If a file or directory is older than the current time minus the age field, it is deleted.

The format is described in **tmpfiles.d**(5).

Type: string

Default:

```
"4w"
```

Example:

```
"5d"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.dump.backupDir
Path to the directory where the dump archives will be stored.

Type: string

Default:

```
"${config.services.forgejo.stateDir}/dump"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.dump.file
Filename to be used for the dump. If ‘null’ a default name is chosen by forgejo.

Type: null or string

Default:

```
null
```

Example:

```
"forgejo-dump"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.dump.interval
Run a Forgejo dump at this interval. Runs by default at 04:31 every day.

The format is described in **systemd.time**(7).

Type: string

Default:

```
"04:31"
```

Example:

```
"hourly"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.dump.type
Archive format used to store the dump file.

Type: one of “zip”, “tar”, “tar.sz”, “tar.gz”, “tar.xz”, “tar.bz2”, “tar.br”, “tar.lz4”, “tar.zst”

Default:

```
"zip"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.group
Group under which Forgejo runs.

Type: string

Default:

```
"forgejo"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.lfs.enable
Enables git−lfs support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.lfs.contentDir
Where to store LFS files.

Type: string

Default:

```
"${config.services.forgejo.stateDir}/data/lfs"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.repositoryRoot
Path to the git repositories.

Type: string

Default:

```
"${config.services.forgejo.stateDir}/repositories"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.secrets
This is a small wrapper over systemd's 'LoadCredential'.

It takes the same sections and keys as **services.forgejo.settings**, but the value of each key is a path instead of a string or bool.

The path is then loaded as credential, exported as environment variable and then feed through **https://codeberg.org/forgejo/forgejo/src/branch/forgejo/contrib/environment−to−ini/environment−to−ini.go**.

It does the required environment variable escaping for you.

Note
Keys specified here take priority over the ones in **services.forgejo.settings**!

Type: open submodule of attribute set of attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  metrics = {
    TOKEN = "/run/keys/forgejo-metrics-token";
  };
  camo = {
    HMAC_KEY = "/run/keys/forgejo-camo-hmac";
  };
  service = {
    HCAPTCHA_SECRET = "/run/keys/forgejo-hcaptcha-secret";
    HCAPTCHA_SITEKEY = "/run/keys/forgejo-hcaptcha-sitekey";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.settings

Free-form settings written directly to the 'app.ini' configfile file. Refer to **https://forgejo.org/docs/latest/admin/config-cheat-sheet/** for supported values.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  DEFAULT = {
    RUN_MODE = "dev";
  };
  "cron.sync_external_users" = {
    RUN_AT_START = true;
    SCHEDULE = "@every 24h";
    UPDATE_EXISTING = true;
  };
  mailer = {
    ENABLED = true;
    PROTOCOL = "sendmail";
    FROM = "do-not-reply@example.org";
    SENDMAIL_PATH = "${pkgs.system-sendmail}/bin/sendmail";
  };
  other = {
    SHOW_FOOTER_VERSION = false;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.settings.log.LEVEL

General log level.

Type: one of "Trace", "Debug", "Info", "Warn", "Error", "Critical"

Default:

```
"Info"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.settings.log.ROOT_PATH
Root path for log files.

Type: string

Default:

```
"${config.services.forgejo.stateDir}/log"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.settings.server.DISABLE_SSH
Disable external SSH feature.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.settings.server.DOMAIN
Domain name of your server.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.settings.server.HTTP_ADDR
Listen address. Must be a path when using a unix socket.

Type: string or absolute path

Default:

```
if lib.hasSuffix "+unix" cfg.settings.server.PROTOCOL then "/run/fo \
rgejo/forgejo.sock" else "0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.settings.server.HTTP_PORT
Listen port. Ignored when using a unix socket.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.settings.server.PROTOCOL

Listen protocol. '+unix' means "over unix", not "in addition to."

Type: one of "http", "https", "fcgi", "http+unix", "fcgi+unix"

Default:

```
"http"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.settings.server.ROOT_URL

Full public URL of Forgejo server.

Type: string

Default:

```
"http://${config.services.forgejo.settings.server.DOMAIN}:${toStrin \
g config.services.forgejo.settings.server.HTTP_PORT}/"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.settings.server.SSH_PORT

SSH port displayed in clone URL. The option is required to configure a service when the external visible port differs from the local listening port i.e. if port forwarding is used.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
22
```

Example:

```
2222
```

Declared by:

<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.settings.server.STATIC_ROOT_PATH

Upper level of template and static files path.

Type: string or absolute path

Default:

```
config.services.forgejo.package.data
```

Example:

```
"/var/lib/forgejo/data"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.settings.session.COOKIE_SECURE

Marks session cookies as "secure" as a hint for browsers to only send them via HTTPS. This option is recommend, if Forgejo is being served over HTTPS.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.stateDir
Forgejo data directory.

Type: string

Default:

```
"/var/lib/forgejo"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.useWizard
Whether to use the built−in installation wizard instead of declaratively managing the *app.ini* config file in nix.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.forgejo.user
User account under which Forgejo runs.

Type: string

Default:

```
"forgejo"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/forgejo.nix>

services.foundationdb.enable
Whether to enable FoundationDB Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.package
The FoundationDB package to use for this server. This must be specified by the user in order to ensure migrations and upgrades are controlled appropriately.

Type: package

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.backupProcesses

Number of backup_agent processes to run for snapshots.

Type: signed integer

Default:

```
1
```

Declared by:

<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.class

Process class

Type: null or one of “storage”, “transaction”, “stateless”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.dataDir

Data directory. All cluster data will be put under here.

Type: absolute path

Default:

```
"/var/lib/foundationdb"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.extraReadWritePaths

An extra set of filesystem paths that FoundationDB can read to and write from. By default, FoundationDB runs under a heavily namespaced systemd environment without write access to most of the filesystem outside of its data and log directories. By adding paths to this list, the set of writeable paths will be expanded. This is useful for allowing e.g. backups to local files, which must be performed on behalf of the foundationdb service.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.group

Group account under which FoundationDB runs.

Type: string

Default:

```
"foundationdb"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.listenAddress

Publicly visible IP address of the process. Port is determined by process ID

Type: string

Default:

```
"public"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.listenPortStart

Starting port number for database listening sockets. Every FDB process binds to a subsequent port, to this number reflects the start of the overall range. e.g. having 8 server processes will use all ports between 4500 and 4507.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4500
```

Declared by:

<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.locality

FoundationDB locality settings.

Type: submodule

Default:

```
{
  dataHall = null;
  datacenterId = null;
  machineId = null;
  zoneId = null;
}
```

Declared by:

<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.locality.dataHall

Data hall identifier key. All processes physically located in a data hall should share the id. If you are depending on data hall based replication this must be set on all processes.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.locality.datacenterId

Data center identifier key. All processes physically located in a data center should share the id. If you are depending on data center based replication this must be set on all processes.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.locality.machineId
Machine identifier key. All processes on a machine should share a unique id. By default, processes on a machine determine a unique id to share. This does not generally need to be set.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.locality.zoneId
Zone identifier key. Processes that share a zone id are considered non−unique for the purposes of data replication. If unset, defaults to machine id.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.logDir
Log directory.

Type: absolute path

Default:

```
"/var/log/foundationdb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.logSize
Roll over to a new log file after the current log file reaches the specified size.

Type: string

Default:

```
"10MiB"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.maxLogSize
Delete the oldest log file when the total size of all log files exceeds the specified size. If set to 0, old log files will not be deleted.

Type: string

Default:

```
"100MiB"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.memory

Maximum memory used by the process. The default value is '8GiB'. When specified without a unit, 'MiB' is assumed. This parameter does not change the memory allocation of the program. Rather, it sets a hard limit beyond which the process will kill itself and be restarted. The default value of '8GiB' is double the intended memory usage in the default configuration (providing an emergency buffer to deal with memory leaks or similar problems). It is not recommended to decrease the value of this parameter below its default value. It may be increased if you wish to allocate a very large amount of storage engine memory or cache. In particular, when the 'storageMemory' parameter is increased, the 'memory' parameter should be increased by an equal amount.

Type: string

Default:

```
"8GiB"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.openFirewall

Open the firewall ports corresponding to FoundationDB processes and coordinators using **config.networking.firewall.***.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.pidfile

Path to pidfile for fdbmonitor.

Type: absolute path

Default:

```
"/run/foundationdb.pid"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.publicAddress

Publicly visible IP address of the process. Port is determined by process ID

Type: string

Default:

```
"auto"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.restartDelay

Number of seconds to wait before restarting servers.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.serverProcesses
Number of fdbserver processes to run.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.storageMemory
Maximum memory used for data storage. The default value is ‘1GiB’. When specified without a unit, ‘MB’ is assumed. Clusters using the memory storage engine will be restricted to using this amount of memory per process for purposes of data storage. Memory overhead associated with storing the data is counted against this total. If you increase the ‘storageMemory’, you should also increase the ‘memory’ parameter by the same amount.

Type: string

Default:

```
"1GiB"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.tls
FoundationDB Transport Security Layer (TLS) settings.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.tls.allowedPeers
“Peer verification string”. This may be used to adjust which TLS client certificates a server will accept, as a form of user authorization; for example, it may only accept TLS clients who offer a certificate abiding by some locality or organization name.

For more information, please see the FoundationDB documentation.

Type: string

Default:

```
"Check.Valid=1,Check.Unexpired=1"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.tls.certificate
Path to the TLS certificate file. This certificate will be offered to, and may be verified by, clients.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.tls.key
Private key file for the certificate.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.traceFormat
Trace logging format.

Type: one of “xml”, “json”

Default:

```
"xml"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.foundationdb.user
User account under which FoundationDB runs.

Type: string

Default:

```
"foundationdb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/foundationdb.nix>

services.fprintd.enable
Whether to enable fprintd daemon and PAM module for fingerprint readers handling.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/fprintd.nix>

services.fprintd.package
fprintd package to use.

Type: package

Default:

```
if config.services.fprintd.tod.enable then pkgs.fprintd-tod else p \
kgs.fprintd
```

Declared by:
<nixpkgs/nixos/modules/services/security/fprintd.nix>

services.fprintd.tod.enable

Whether to enable Touch OEM Drivers library support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/fprintd.nix>

services.fprintd.tod.driver

Touch OEM Drivers (TOD) package to use.

Type: package

Example:

```
pkgs.libfprint-2-tod1-goodix
```

Declared by:

<nixpkgs/nixos/modules/services/security/fprintd.nix>

services.fractalart.enable

Enable FractalArt for generating colorful wallpapers on login

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/x11/fractalart.nix>

services.fractalart.height

Screen height

Type: null or signed integer

Default:

```
null
```

Example:

```
1080
```

Declared by:

<nixpkgs/nixos/modules/services/x11/fractalart.nix>

services.fractalart.width

Screen width

Type: null or signed integer

Default:

```
null
```

Example:

```
1920
```

Declared by:
<nixpkgs/nixos/modules/services/x11/fractalart.nix>

services.freeciv.enable
Whether to enable freeciv.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/freeciv.nix>

services.freeciv.openFirewall
Whether to enable opening the firewall for the port listening for clients.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/freeciv.nix>

services.freeciv.settings
Parameters of freeciv−server.

Type: open submodule of (freeciv−server params)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/games/freeciv.nix>

services.freeciv.settings.Announce
Announce game in LAN using given protocol.

Type: one of “IPv4”, “IPv6”, “none”

Default:

```
"none"
```

Declared by:
<nixpkgs/nixos/modules/services/games/freeciv.nix>

services.freeciv.settings.Database
Enable database connection with given configuration.

Type: null or string

Default:

```
[fcdb]
  backend="sqlite"
  database="/var/lib/freeciv/auth.sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/games/freeciv.nix>

services.freeciv.settings.Guests
Whether to enable guests to login if auth is enabled.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/freeciv.nix>

services.freeciv.settings.Newusers
Whether to enable new users to login if auth is enabled.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/freeciv.nix>

services.freeciv.settings.auth
Whether to enable server authentication.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/freeciv.nix>

services.freeciv.settings.debug
Set debug log level.

Type: integer between 0 and 3 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/services/games/freeciv.nix>

services.freeciv.settings.exit−on−end
Whether to enable exit instead of restarting when a game ends.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/freeciv.nix>

services.freeciv.settings.port
Listen for clients on given port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5556
```

Declared by:
<nixpkgs/nixos/modules/services/games/freeciv.nix>

services.freeciv.settings.quitidle
Quit if no players for given time in seconds.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/games/freeciv.nix>

services.freeciv.settings.read
Startup script.

Type: strings concatenated with "\n"

Default:

```
/fcdb lua sqlite_createdb()
```

Declared by:
<nixpkgs/nixos/modules/services/games/freeciv.nix>

services.freeciv.settings.saves
Save games to given directory, a sub−directory named after the starting date of the service will me inserted to preserve older saves.

Type: null or string

Default:

```
"/var/lib/freeciv/saves/"
```

Declared by:
<nixpkgs/nixos/modules/services/games/freeciv.nix>

services.freefall.enable
Whether to protect HP/Dell laptop hard drives (not SSDs) in free fall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/freefall.nix>

services.freefall.package

The freefall package to use.

Type: package

Default:

```
pkgs.freefall
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/freefall.nix>

services.freefall.devices

Device paths to all internal spinning hard drives.

Type: list of string

Default:

```
[
  "/dev/sda"
]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/freefall.nix>

services.freenet.enable

Whether to enable Freenet daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/freenet.nix>

services.freenet.nice

Set the nice level for the Freenet daemon

Type: integer between −20 and 19 (both inclusive)

Default:

```
10
```

Declared by:

<nixpkgs/nixos/modules/services/networking/freenet.nix>

services.freeradius.enable

Whether to enable the freeradius server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/freeradius.nix>

services.freeradius.package
The freeradius package to use.

Type: package

Default:

```
pkgs.freeradius
```

Declared by:
<nixpkgs/nixos/modules/services/networking/freeradius.nix>

services.freeradius.configDir
The path of the freeradius server configuration directory.

Type: absolute path

Default:

```
"/etc/raddb"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/freeradius.nix>

services.freeradius.debug
Whether to enable debug logging for freeradius (−xx option). This should not be left on, since it includes sensitive data such as passwords in the logs.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/freeradius.nix>

services.freeswitch.enable
Whether to enable FreeSWITCH.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/freeswitch.nix>

services.freeswitch.enableReload
Issue the ‘reloadxml’ command to FreeSWITCH when configuration directory changes (instead of restart). See **FreeSWITCH documentation** for more info. The configuration directory is exposed at */etc/freeswitch*. See also ‘systemd.services.*.restartIfChanged’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/freeswitch.nix>

services.freeswitch.package
The freeswitch package to use.

Type: package

Default:

```
pkgs.freeswitch
```

Declared by:
<nixpkgs/nixos/modules/services/misc/freeswitch.nix>

services.freeswitch.configDir
Override file in FreeSWITCH config template directory. Each top−level attribute denotes a file path in the configuration directory, its value is the file path. See **FreeSWITCH documentation** for more info. Also check available templates in **FreeSWITCH repository**.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  "freeswitch.xml" = ./freeswitch.xml;
  "dialplan/default.xml" = pkgs.writeText "dialplan−default.xml" ’ \
’
    [xml lines]
  ’’;
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/freeswitch.nix>

services.freeswitch.configTemplate
Configuration template to use. See available templates in **FreeSWITCH repository**. You can also set your own configuration directory.

Type: absolute path

Default:

```
"${config.services.freeswitch.package}/share/freeswitch/conf/vanill \
a"
```

Example:

```
"${config.services.freeswitch.package}/share/freeswitch/conf/minima \
l"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/freeswitch.nix>

services.freshrss.enable
Whether to enable FreshRSS RSS aggregator and reader with php−fpm backend.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/freshrss.nix>

services.freshrss.package
The freshrss package to use.

Type: package

Default:

```
pkgs.freshrss
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/freshrss.nix>

services.freshrss.api.enable
Whether to enable API access for mobile apps and third−party clients (Google Reader API and Fever API). Users must set individual API passwords in their profile settings.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/freshrss.nix>

services.freshrss.authType
Authentication type for FreshRSS.

Type: one of “form”, “http_auth”, “none”

Default:

```
"form"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/freshrss.nix>

services.freshrss.baseUrl
Default URL for FreshRSS.

Type: string

Example:

```
"https://freshrss.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/freshrss.nix>

services.freshrss.dataDir
Default data folder for FreshRSS.

Type: string

Default:

```
"/var/lib/freshrss"
```

Example:

```
"/mnt/freshrss"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/freshrss.nix>

services.freshrss.database.host
Database host for FreshRSS.

Type: null or string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/freshrss.nix>

services.freshrss.database.name
Database name for FreshRSS.

Type: null or string

Default:

```
"freshrss"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/freshrss.nix>

services.freshrss.database.passFile
Database password file for FreshRSS.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/freshrss"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/freshrss.nix>

services.freshrss.database.port
Database port for FreshRSS.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Example:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/freshrss.nix>

services.freshrss.database.tableprefix
Database table prefix for FreshRSS.

Type: null or string

Default:

```
null
```

Example:

```
"freshrss"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/freshrss.nix>

services.freshrss.database.type
Database type.

Type: one of “sqlite”, “pgsql”, “mysql”

Default:

```
"sqlite"
```

Example:

```
"pgsql"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/freshrss.nix>

services.freshrss.database.user
Database user for FreshRSS.

Type: null or string

Default:

```
"freshrss"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/freshrss.nix>

services.freshrss.defaultUser
Default username for FreshRSS.

Type: string

Default:

```
"admin"
```

Example:

```
"eva"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/freshrss.nix>

services.freshrss.extensions
Additional extensions to be used.

Type: list of package

Default:

```
[]
```

Example:

```
with freshrss-extensions; [
  youtube
] ++ [
  (freshrss-extensions.buildFreshRssExtension {
    FreshRssExtUniqueId = "ReadingTime";
    pname = "reading-time";
    version = "1.5";
    src = pkgs.fetchFromGitLab {
      domain = "framagit.org";
```

```
            owner = "Lapineige";
            repo = "FreshRSS_Extension-ReadingTime";
            rev = "fb6e9e944ef6c5299fa56ffddbe04c41e5a34ebf";
           hash = "sha256-C5cRfaphx4Qz2xg2z+v5qRji8WVSIpvzMbethTdSqsk=";
         };
        })
      ]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/freshrss.nix>

services.freshrss.language
Default language for FreshRSS.

Type: string

Default:

```
"en"
```

Example:

```
"de"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/freshrss.nix>

services.freshrss.passwordFile
Password for the defaultUser for FreshRSS.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/freshrss"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/freshrss.nix>

services.freshrss.pool
Name of the php-fpm pool to use and setup. If not specified, a pool will be created with default values.

Type: null or string

Default:

```
"freshrss"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/freshrss.nix>

services.freshrss.user
User under which FreshRSS runs.

Type: string

Default:

```
"freshrss"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/freshrss.nix>

services.freshrss.virtualHost

Name of the caddy/nginx virtualhost to use and setup.

Type: string

Default:

```
"freshrss"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/freshrss.nix>

services.freshrss.webserver

Whether to use nginx or caddy for virtual host management.

Further nginx configuration can be done by adapting ‘services.nginx.virtualHosts.<name>’. See **services.nginx.virtualHosts** for further information.

Further caddy configuration can be done by adapting ‘services.caddy.virtualHosts.<name>’. See **services.caddy.virtualHosts** for further information.

Type: one of “nginx”, “caddy”

Default:

```
"nginx"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/freshrss.nix>

services.frigate.enable

Whether to enable Frigate NVR.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/video/frigate.nix>

services.frigate.package

The frigate package to use.

Type: package

Default:

```
pkgs.frigate
```

Declared by:

<nixpkgs/nixos/modules/services/video/frigate.nix>

services.frigate.checkConfig

Whether to check the configuration at build time.

Type: boolean

Default:

```
pkgs.stdenv.buildPlatform.canExecute pkgs.stdenv.hostPlatform && !( \
pkgs.stdenv.hostPlaform.isAarch64)
```

Declared by:
<nixpkgs/nixos/modules/services/video/frigate.nix>

services.frigate.hostname
Hostname of the nginx vhost to configure.

Only nginx is supported by upstream for direct reverse proxying.

Type: string

Example:

```
"frigate.exampe.com"
```

Declared by:
<nixpkgs/nixos/modules/services/video/frigate.nix>

services.frigate.preCheckConfig
This script gets run before the config is checked. It can be used to, e.g., set environment variables needed or transform the config (available as '$out') to make it checkable in the sandbox.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/video/frigate.nix>

services.frigate.settings
Frigate configuration as a nix attribute set.

See the project documentation for how to configure frigate.

- **Creating a config file**
- **Configuration reference**

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/video/frigate.nix>

services.frigate.settings.cameras
Attribute set of cameras configurations.

https://docs.frigate.video/configuration/cameras

Type: attribute set of (open submodule of (YAML 1.1 value))

Declared by:
<nixpkgs/nixos/modules/services/video/frigate.nix>

services.frigate.settings.cameras.<name>.ffmpeg.inputs
List of inputs for this camera.

Type: list of (open submodule of (YAML 1.1 value))

Declared by:
<nixpkgs/nixos/modules/services/video/frigate.nix>

services.frigate.settings.cameras.<name>.ffmpeg.inputs.*.path
Stream URL

Type: string

Example:

```
"rtsp://192.0.2.1:554/rtsp"
```

Declared by:
<nixpkgs/nixos/modules/services/video/frigate.nix>

services.frigate.settings.cameras.<name>.ffmpeg.inputs.*.roles
List of roles for this stream

Type: list of (one of “audio”, “detect”, “record”)

Default:

```
[ ]
```

Example:

```
[
  "detect"
  "record"
]
```

Declared by:
<nixpkgs/nixos/modules/services/video/frigate.nix>

services.frigate.settings.database.path
Path to the SQLite database used

Type: absolute path

Default:

```
"/var/lib/frigate/frigate.db"
```

Declared by:
<nixpkgs/nixos/modules/services/video/frigate.nix>

services.frigate.settings.ffmpeg.path
Package providing the ffmpeg and ffprobe executables below the bin/ directory.

Type: string or package convertible to it

Default:

```
<derivation ffmpeg-headless-8.0.1>
```

Example:

```
pkgs.ffmpeg-full
```

Declared by:
<nixpkgs/nixos/modules/services/video/frigate.nix>

services.frigate.settings.mqtt.enabled
Whether to enable MQTT support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/video/frigate.nix>

services.frigate.settings.mqtt.host
MQTT server hostname

Type: null or string

Default:

```
null
```

Example:

```
"mqtt.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/video/frigate.nix>

services.frigate.vaapiDriver
Force usage of a particular VA−API driver for video acceleration. Use together with 'settings.ffmpeg.hwaccel_args'.

Setting this *is not required* for VA−API to work, but it can help steer VA−API towards the correct card if you have multiple.

> **Note**
> For VA−API to work you must enable **hardware.graphics.enable** (sufficient for AMDGPU) and pass for example 'pkgs.intel−media−driver' (required for Intel 5th Gen. and newer) into **hardware.graphics.extraPackages**.

See also:

- **https://docs.frigate.video/configuration/hardware_acceleration**
- **https://docs.frigate.video/configuration/ffmpeg_presets#hwaccel−presets**

Type: null or one of "i965", "iHD", "nouveau", "vdpau", "nvidia", "radeonsi"

Default:

```
null
```

Example:

```
"radeonsi"
```

Declared by:
<nixpkgs/nixos/modules/services/video/frigate.nix>

services.froide−govplan.enable
Whether to enable Gouvernment planer web app Govplan.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/froide−govplan.nix>

services.froide−govplan.package
The froide−govplan package to use.

Type: package

Default:

```
pkgs.froide-govplan
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/froide−govplan.nix>

services.froide−govplan.dataDir
Directory to store the Froide−Govplan server data.

Type: string

Default:

```
"/var/lib/froide-govplan"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/froide−govplan.nix>

services.froide−govplan.hostName
FQDN for the froide−govplan instance.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/froide−govplan.nix>

services.froide−govplan.secretKeyFile
Path to a file containing the secret key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/froide−govplan.nix>

services.froide−govplan.settings
Configuration options to set in ‘extra_settings.py’.

Type: open submodule of attribute set of (Python value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/froide−govplan.nix>

services.froide−govplan.settings.ALLOWED_HOSTS
A list of valid fully−qualified domain names (FQDNs) and/or IP addresses that can be used to reach the Froide−Govplan service.

Type: list of string

Default:

```
[
  "*"
```

```
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/froide−govplan.nix>

services.frp.package
The frp package to use.

Type: package

Default:

```
pkgs.frp
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frp.nix>

services.frp.instances
Frp instances.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frp.nix>

services.frp.instances.<name>.enable
Whether to enable frp.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frp.nix>

services.frp.instances.<name>.environmentFiles
List of paths files that follows systemd environmentfile structure. Can be used to pass secrets to settings attribute.

Example content of a file: SECRET_TOKEN=1234

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frp.nix>

services.frp.instances.<name>.role
The frp consists of ‘client’ and ‘server’. The server is usually deployed on the machine with a public IP address, and the client is usually deployed on the machine where the Intranet service to be penetrated resides.

Type: one of “server”, “client”

Declared by:
<nixpkgs/nixos/modules/services/networking/frp.nix>

services.frp.instances.<name>.settings
Frp configuration, for configuration options see the example of **client** or **server** on github.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  proxies = [
    {
      localIP = "127.0.0.1";
      localPort = 22;
      name = "ssh";
      remotePort = 6000;
      type = "tcp";
    }
  ];
  serverAddr = "x.x.x.x";
  serverPort = 7000;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frp.nix>

services.frr.babeld.enable
Whether to enable FRR babeld.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.babeld.extraOptions
Extra options to be appended to the FRR babeld daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.babeld.options
Options for the FRR babeld daemon.

Type: list of string

Default:

```
[
```

```
  "-A 127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.bfdd.enable
Whether to enable FRR bfdd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.bfdd.extraOptions
Extra options to be appended to the FRR bfdd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.bfdd.options
Options for the FRR bfdd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.bgpd.enable
Whether to enable FRR bgpd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.bgpd.extraOptions

Extra options to be appended to the FRR bgpd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.bgpd.options

Options for the FRR bgpd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.config

FRR configuration statements.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
router rip
  network 10.0.0.0/8
router ospf
  network 10.0.0.0/8 area 0
router bgp 65001
  neighbor 10.0.0.1 remote-as 65001
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.configFile

Configuration file to use for FRR. By default the NixOS generated files are used.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/frr/frr.conf"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.eigrpd.enable

Whether to enable FRR eigrpd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.eigrpd.extraOptions

Extra options to be appended to the FRR eigrpd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.eigrpd.options

Options for the FRR eigrpd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.fabricd.enable

Whether to enable FRR fabricd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.fabricd.extraOptions

Extra options to be appended to the FRR fabricd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.fabricd.options
Options for the FRR fabricd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.isisd.enable
Whether to enable FRR isisd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.isisd.extraOptions
Extra options to be appended to the FRR isisd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.isisd.options
Options for the FRR isisd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.ldpd.enable
Whether to enable FRR ldpd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.ldpd.extraOptions

Extra options to be appended to the FRR ldpd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.ldpd.options

Options for the FRR ldpd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.mgmtd.extraOptions

Extra options to be appended to the FRR mgmtd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.mgmtd.options

Options for the FRR mgmtd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.nhrpd.enable

Whether to enable FRR nhrpd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.nhrpd.extraOptions
Extra options to be appended to the FRR nhrpd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.nhrpd.options
Options for the FRR nhrpd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.openFilesLimit
This is the maximum number of FD's that will be available. Use a reasonable value for your setup if you are expecting a large number of peers in say BGP.

Type: unsigned integer, meaning >=0

Default:

```
1024
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.ospf6d.enable
Whether to enable FRR ospf6d.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.ospf6d.extraOptions
Extra options to be appended to the FRR ospf6d daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.ospf6d.options
Options for the FRR ospf6d daemon.

Type: list of string

Default:

```
[
  "-A ::1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.ospfd.enable
Whether to enable FRR ospfd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.ospfd.extraOptions
Extra options to be appended to the FRR ospfd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.ospfd.options
Options for the FRR ospfd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.pathd.enable
Whether to enable FRR pathd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.pathd.extraOptions

Extra options to be appended to the FRR pathd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.pathd.options

Options for the FRR pathd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.pbrd.enable

Whether to enable FRR pbrd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.pbrd.extraOptions

Extra options to be appended to the FRR pbrd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.pbrd.options

Options for the FRR pbrd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.pim6d.enable
Whether to enable FRR pim6d.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.pim6d.extraOptions
Extra options to be appended to the FRR pim6d daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.pim6d.options
Options for the FRR pim6d daemon.

Type: list of string

Default:

```
[
  "-A ::1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.pimd.enable
Whether to enable FRR pimd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.pimd.extraOptions
Extra options to be appended to the FRR pimd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.pimd.options
Options for the FRR pimd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.ripd.enable
Whether to enable FRR ripd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.ripd.extraOptions
Extra options to be appended to the FRR ripd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.ripd.options
Options for the FRR ripd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.ripngd.enable
Whether to enable FRR ripngd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.ripngd.extraOptions

Extra options to be appended to the FRR ripngd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.ripngd.options

Options for the FRR ripngd daemon.

Type: list of string

Default:

```
[
  "-A ::1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.sharpd.enable

Whether to enable FRR sharpd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.sharpd.extraOptions

Extra options to be appended to the FRR sharpd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.sharpd.options

Options for the FRR sharpd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.staticd.extraOptions
Extra options to be appended to the FRR staticd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.staticd.options
Options for the FRR staticd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.vrrpd.enable
Whether to enable FRR vrrpd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.vrrpd.extraOptions
Extra options to be appended to the FRR vrrpd daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.vrrpd.options
Options for the FRR vrrpd daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.zebra.extraOptions
Extra options to be appended to the FRR zebra daemon options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.frr.zebra.options
Options for the FRR zebra daemon.

Type: list of string

Default:

```
[
  "-A 127.0.0.1 -s 90000000"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/frr.nix>

services.fstrim.enable
Whether to enable periodic SSD TRIM of mounted partitions in background.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/fstrim.nix>

services.fstrim.interval
How often we run fstrim. For most desktop and server systems a sufficient trimming frequency is once a week.

The format is described in **systemd.time**(7).

Type: string

Default:

```
"weekly"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/fstrim.nix>

services.fusionInventory.enable
Whether to enable Fusion Inventory Agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/fusion−inventory.nix>

services.fusionInventory.extraConfig
Configuration that is injected verbatim into the configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/fusion−inventory.nix>

services.fusionInventory.servers
The urls of the OCS/GLPI servers to connect to.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/fusion−inventory.nix>

services.fwupd.enable
Whether to enable fwupd, a DBus service that allows applications to update firmware.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/fwupd.nix>

services.fwupd.package
The fwupd package to use.

Type: package

Default:

```
pkgs.fwupd
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/fwupd.nix>

services.fwupd.daemonSettings
Configurations for the fwupd daemon.

Type: open submodule of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a non−empty list of them)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/fwupd.nix>

services.fwupd.daemonSettings.DisabledDevices

List of device GUIDs to be disabled.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "2082b5e0-7a64-478a-b1b2-e3404fab6dad"
]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/fwupd.nix>

services.fwupd.daemonSettings.DisabledPlugins

List of plugins to be disabled.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "udev"
]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/fwupd.nix>

services.fwupd.daemonSettings.EspLocation

The EFI system partition (ESP) path used if UDisks is not available or if this partition is not mounted at /boot/efi, /boot, or /efi

Type: absolute path

Default:

```
config.boot.loader.efi.efiSysMountPoint
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/fwupd.nix>

services.fwupd.extraRemotes

Enables extra remotes in fwupd. See ‘/etc/fwupd/remotes.d’.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "lvfs-testing"
]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/fwupd.nix>

services.fwupd.extraTrustedKeys

Installing a public key allows firmware signed with a matching private key to be recognized as trusted, which may require less authentication to install than for untrusted files. By default trusted firmware can be upgraded (but not downgraded) without the user or administrator password. Only very few keys are installed by default.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[ /etc/nixos/fwupd/myfirmware.pem ]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/fwupd.nix>

services.fwupd.uefiCapsuleSettings

UEFI capsule configurations for the fwupd daemon.

Type: open submodule of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a non−empty list of them)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/fwupd.nix>

services.g3proxy.enable

Whether to enable g3proxy, a generic purpose forward proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/g3proxy.nix>

services.g3proxy.package

The g3proxy package to use.

Type: package

Default:

```
pkgs.g3proxy
```

Declared by:

<nixpkgs/nixos/modules/services/networking/g3proxy.nix>

services.g3proxy.settings

Settings of g3proxy.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  server = [{
    name = "test";
    escaper = "default";
    type = "socks_proxy";
    listen = {
      address = "[::]:10086";
    };
  }];
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/g3proxy.nix>

services.g810−led.enable
Whether to enable g810−led, a Linux LED controller for some Logitech G Keyboards.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/g810−led.nix>

services.g810−led.package
The g810−led package to use.

Type: package

Default:

```
pkgs.g810−led
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/g810−led.nix>

services.g810−led.earlySetup
Whether to enable g810−led in early stage initrd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/g810−led.nix>

services.g810−led.profile
Keyboard profile to apply at boot time.

The upstream repository provides **example configurations**.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
# G810-LED Profile (turn all keys on)

# Set all keys on
a ffffff

# Commit changes
c
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/g810-led.nix>

services.galene.enable
Whether to enable Galene Service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/galene.nix>

services.galene.package
The galene package to use.

Type: package

Default:

```
pkgs.galene
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/galene.nix>

services.galene.certFile
Path to the server's certificate. The file is copied at runtime to Galene's data directory where it needs to reside.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/your/cert.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/galene.nix>

services.galene.dataDir
Data directory.

Type: absolute path

Default:

```
"${config.services.galene.stateDir}/data"
```

Example:

```
"/var/lib/galene/data"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/galene.nix>

services.galene.group
Group under which galene runs.

Type: string

Default:

```
"galene"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/galene.nix>

services.galene.groupsDir
Web server directory.

Type: absolute path

Default:

```
"${config.services.galene.stateDir}/groups"
```

Example:

```
"/var/lib/galene/groups"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/galene.nix>

services.galene.httpAddress
HTTP listen address for galene.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/galene.nix>

services.galene.httpPort
HTTP listen port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8443
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/galene.nix>

services.galene.insecure
Whether Galene should listen in http or in https. If left as the default value (false), Galene needs to be fed a private key and a certificate.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/galene.nix>

services.galene.keyFile
Path to the server's private key. The file is copied at runtime to Galene's data directory where it needs to reside.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/your/key.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/galene.nix>

services.galene.recordingsDir
Recordings directory.

Type: absolute path

Default:

```
"${config.services.galene.stateDir}/recordings"
```

Example:

```
"/var/lib/galene/recordings"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/galene.nix>

services.galene.stateDir
The directory where Galene stores its internal state. If left as the default value this directory will automatically be created before the Galene server starts, otherwise the sysadmin is responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: absolute path

Default:

```
"/var/lib/galene"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/galene.nix>

services.galene.staticDir
Web server directory.

Type: absolute path

Default:

```
"${package.static}/static"
```

Example:

```
"/var/lib/galene/static"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/galene.nix>

services.galene.turnAddress

Built−in TURN server listen address and port. Set to “” to disable.

Type: string

Default:

```
"auto"
```

Example:

```
"127.0.0.1:1194"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/galene.nix>

services.galene.user

User account under which galene runs.

Type: string

Default:

```
"galene"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/galene.nix>

services.gammu−smsd.enable

Whether to enable gammu−smsd daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.backend.files.errorSMSPath

Where SMSes with error in transmission is placed

Type: absolute path

Default:

```
"/var/spool/sms/error/"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.backend.files.inboxPath

Where the received SMSes are stored

Type: absolute path

Default:

```
"/var/spool/sms/inbox/"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.backend.files.outboxPath
Where SMSes to be sent should be placed

Type: absolute path

Default:

```
"/var/spool/sms/outbox/"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.backend.files.sentSMSPath
Where the transmitted SMSes are placed

Type: absolute path

Default:

```
"/var/spool/sms/sent/"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.backend.service
Service to use to store sms data.

Type: one of “null”, “files”, “sql”

Default:

```
"null"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.backend.sql.database
Database name to store sms data

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.backend.sql.driver
DB driver to use

Type: one of “native_mysql”, “native_pgsql”, “odbc”, “dbi”

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.backend.sql.host
Database server address

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.backend.sql.password
User password used for connection to the database

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.backend.sql.sqlDialect
SQL dialect to use (odbc driver only)

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.backend.sql.user
User name used for connection to the database

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.device.connection
Protocol which will be used to talk to the phone

Type: string

Default:

```
"at"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.device.group
Owner group of the device

Type: string

Default:

```
"root"
```

Example:

```
"dialout"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.device.path
Device node or address of the phone

Type: absolute path

Example:

```
"/dev/ttyUSB2"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.device.pin
PIN code for the simcard

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.device.synchronizeTime
Whether to set time from computer to the phone during starting connection

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.extraConfig.gammu
Extra config lines to be added into [gammu] section

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.extraConfig.smsd
Extra config lines to be added into [smsd] section

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu−smsd.nix>

services.gammu−smsd.log.file
Path to file where information about communication will be stored

Type: string

Default:

```
"syslog"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu-smsd.nix>

services.gammu-smsd.log.format
Determines what will be logged to the LogFile

Type: one of “nothing”, “text”, “textall”, “textalldate”, “errors”, “errorsdate”, “binary”

Default:

```
"errors"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu-smsd.nix>

services.gammu-smsd.user
User that has access to the device

Type: string

Default:

```
"smsd"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gammu-smsd.nix>

services.gancio.enable
Whether to enable Gancio, a shared agenda for local communities.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/gancio.nix>

services.gancio.package
The gancio package to use.

Type: package

Default:

```
pkgs.gancio
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/gancio.nix>

services.gancio.nginx
Extra configuration for the nginx virtual host of gancio.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  enableACME = false;
  forceSSL = false;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with ‘redirectCode’) to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.http2
Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.http3
Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.http3_hq
Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.kTLS
Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.listen
Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides ‘addSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.listen.*.port

Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.listen.*.proxyProtocol

Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.listen.*.ssl

Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
```

```
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations.<name>.alias
Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations.<name>.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won't unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with 'lib.mkOrder'. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.locations.<name>.uwsgiPass

Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.onlySSL

Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.quic

Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.redirectCode

HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.rejectSSL

Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.root

The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.serverName

Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

2. see the **security.acme.certs** option

services.gancio.plugins

Paths of gancio plugins to activate (linked under $WorkingDirectory/plugins/).

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.gancioPlugins.telegram-bridge ]
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/gancio.nix>

services.gancio.settings

Configuration for Gancio, see **https://gancio.org/install/config** for supported values.

Type: open submodule of (JSON value)

Declared by:

<nixpkgs/nixos/modules/services/web-apps/gancio.nix>

services.gancio.settings.baseurl

The full URL under which the server is reachable.

Type: string

Default:

```
"https://${config.services.gancio.settings.hostname}"
```

Example:

```
"https://demo.gancio.org/gancio"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/gancio.nix>

services.gancio.settings.db.database

Name of the PostgreSQL database

Type: null or string *(read only)*

Default:

```
"if config.services.gancio.settings.db.dialect == \"postgres\" th \
en cfg.user else null"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/gancio.nix>

services.gancio.settings.db.dialect

The database dialect to use

Type: one of “sqlite”, “postgres”

Default:

```
"sqlite"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/gancio.nix>

services.gancio.settings.db.host
Connection string for the PostgreSQL database

Type: null or string *(read only)*

Default:

```
"if config.services.gancio.settings.db.dialect == \"postgres\" th \
en \"/run/postgresql\" else null"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.settings.db.storage
Location for the SQLite database.

Type: null or string *(read only)*

Default:

```
"if config.services.gancio.settings.db.dialect == \"sqlite\" then \
 \"/var/lib/gancio/db.sqlite\" else null"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.settings.hostname
The domain name under which the server is reachable.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.settings.log_level
Gancio log level.

Type: one of “debug”, “info”, “warning”, “error”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.settings.log_path
Directory Gancio logs into

Type: string *(read only)*

Default:

```
"/var/log/gancio"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.settings.server.socket
The unix socket for the gancio server to listen on.

Type: absolute path *(read only)*

Default:

```
"/run/gancio/socket"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.user
The user (and PostgreSQL database name) used to run the gancio server

Type: string

Default:

```
"gancio"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.gancio.userLocale
Override default locales within gancio. See **default languages and locales**.

Type: attribute set of attribute set of attribute set of string

Default:

```
{ }
```

Example:

```
{
  en = {
    register = {
      description = "My new registration page description";
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gancio.nix>

services.garage.enable
Whether to enable Garage Object Storage (S3 compatible).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/garage.nix>

services.garage.package
Garage package to use, needs to be set explicitly. If you are upgrading from a major version, please read NixOS and Garage release notes for upgrade instructions.

Type: package

Declared by:
<nixpkgs/nixos/modules/services/web−servers/garage.nix>

services.garage.environmentFile

File containing environment variables to be passed to the Garage server.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/garage.nix>

services.garage.extraEnvironment

Extra environment variables to pass to the Garage server.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  RUST_BACKTRACE = "yes";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/garage.nix>

services.garage.logLevel

Garage log level, see **https://garagehq.deuxfleurs.fr/documentation/quick−start/#launching−the−garage−server** for examples.

Type: one of “error”, “warn”, “info”, “debug”, “trace”

Default:

```
"info"
```

Example:

```
"debug"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/garage.nix>

services.garage.settings

Garage configuration, see **https://garagehq.deuxfleurs.fr/documentation/reference−manual/configuration/** for reference.

Type: open submodule of (TOML value)

Declared by:

<nixpkgs/nixos/modules/services/web−servers/garage.nix>

services.garage.settings.data_dir

The directory in which Garage will store the data blocks of objects. This folder can be placed on an HDD. Since v0.9.0, Garage supports multiple data directories, refer to **https://garagehq.deuxfleurs.fr/documentation/reference−manual/configuration/#data_dir** for the exact format.

Type: absolute path or list of (attribute set)

Default:

```
"/var/lib/garage/data"
```

Example:

```
[
  {
    capacity = "2T";
    path = "/var/lib/garage/data";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/garage.nix>

services.garage.settings.metadata_dir
The metadata directory, put this on a fast disk (e.g. SSD) if possible.

Type: absolute path

Default:

```
"/var/lib/garage/meta"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/garage.nix>

services.gatus.enable
Whether to enable Gatus.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/gatus.nix>

services.gatus.package
The gatus package to use.

Type: package

Default:

```
pkgs.gatus
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/gatus.nix>

services.gatus.configFile
Path to the Gatus configuration file. Overrides any configuration made using the ‘settings’ option.

Type: absolute path

Default:

```
(pkgs.formats.yaml { }).generate "gatus.yaml" config.services.gatus \
.settings
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/gatus.nix>

services.gatus.environmentFile

File to load as environment file. Environmental variables from this file can be interpolated in the configuration file using '${VARIABLE}'. This is useful to avoid putting secrets into the nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/gatus.nix>

services.gatus.openFirewall

Whether to open the firewall for the Gatus web interface.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/gatus.nix>

services.gatus.settings

Configuration for Gatus. Supported options can be found at the **docs**.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
{
  web.port = 8080;
  endpoints = [{
    name = "website";
    url = "https://twin.sh/health";
    interval = "5m";
    conditions = [
      "[STATUS] == 200"
      "[BODY].status == UP"
      "[RESPONSE_TIME] < 300"
    ];
  }];
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/gatus.nix>

services.gatus.settings.web.port

The TCP port to serve the Gatus service at.

Type: signed integer

Default:

```
8080
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/gatus.nix>

services.gdomap.enable

Whether to enable GNUstep Distributed Objects name server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/gdomap.nix>

services.gemstash.enable

Whether to enable gemstash, a cache for rubygems.org and a private gem server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/development/gemstash.nix>

services.gemstash.openFirewall

Whether to open the firewall for the port in **services.gemstash.bind**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/development/gemstash.nix>

services.gemstash.settings

Configuration for Gemstash. The details can be found at in **gemstash documentation**. Each key set here is automatically prefixed with ":" to match the gemstash expectations.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/development/gemstash.nix>

services.gemstash.settings.base_path

Path to store the gem files and the sqlite database. If left unchanged, the directory will be created.

Type: absolute path

Default:

```
"/var/lib/gemstash"
```

Declared by:

<nixpkgs/nixos/modules/services/development/gemstash.nix>

services.gemstash.settings.bind
Host and port combination for the server to listen on.

Type: string

Default:

```
"tcp://0.0.0.0:9292"
```

Declared by:
<nixpkgs/nixos/modules/services/development/gemstash.nix>

services.gemstash.settings.db_adapter
Which database type to use. For choices other than sqlite3, the dbUrl has to be specified as well.

Type: null or one of “sqlite3”, “postgres”, “mysql”, “mysql2”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/gemstash.nix>

services.gemstash.settings.db_url
The database to connect to when using postgres, mysql, or mysql2.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/development/gemstash.nix>

services.geoclue2.enable
Whether to enable GeoClue 2 daemon, a DBus service that provides location information for accessing.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.enable3G
Whether to enable 3G source.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.enableCDMA
Whether to enable CDMA source.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.enableDemoAgent
Whether to use the GeoClue demo agent. This should be overridden by desktop environments that provide their own agent.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.enableModemGPS
Whether to enable Modem−GPS source.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.enableNmea
Whether to fetch location from NMEA sources on local network.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.enableStatic
Whether to enable the static source. This source defines a fixed location using the ‘staticLatitude’, ‘staticLongitude’, ‘staticAltitude’, and ‘staticAccuracy’ options.

Setting ‘enableStatic’ to true will disable all other sources, to prevent conflicts. Use ‘lib.mkForce true’ when enabling other sources if for some reason you want to override this.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.enableWifi
Whether to enable WiFi source.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.package
The geoclue2 package to use

Type: package

Default:

```
pkgs.geoclue2
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.appConfig
Specify extra settings per application.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
"com.github.app" = {
  isAllowed = true;
  isSystem = true;
  users = [ "300" ];
};
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.appConfig.<name>.desktopID
Desktop ID of the application.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.appConfig.<name>.isAllowed
Whether the application will be allowed access to location information.

Type: boolean

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.appConfig.<name>.isSystem
Whether the application is a system component or not.

Type: boolean

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.appConfig.<name>.users
List of UIDs of all users for which this application is allowed location info access, Defaults to an empty string to allow it for all users.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.geoProviderUrl
The url to the wifi GeoLocation Service.

Type: string

Default:

```
"https://api.beacondb.net/v1/geolocate"
```

Example:

```
"https://www.googleapis.com/geolocation/v1/geolocate?key=YOUR_KEY"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.staticAccuracy
Accuracy radius in meters to use for the static source.

Type: positive integer or floating point number, meaning >0

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.staticAltitude
Altitude in meters to use for the static source.

Type: signed integer or floating point number

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.staticLatitude
Latitude to use for the static source. Defaults to ‘location.latitude’.

Type: integer or floating point number between −90 and 90 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.staticLongitude
Longitude to use for the static source. Defaults to ‘location.longitude’.

Type: integer or floating point number between −180 and 180 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.submissionNick
A nickname to submit network data with. Must be 2−32 characters long.

Type: string

Default:

```
"geoclue"
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.submissionUrl

The url to submit data to a GeoLocation Service.

Type: string

Default:

```
"https://api.beacondb.net/v2/geosubmit"
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.submitData

Whether to submit data to a GeoLocation Service.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoclue2.whitelistedAgents

Desktop IDs (without the .desktop extension) of whitelisted agents.

Type: list of string

Default:

```
[
  "gnome-shell"
  "io.elementary.desktop.agent-geoclue2"
]
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/geoclue2.nix>

services.geoipupdate.enable

Whether to enable periodic downloading of GeoIP databases using geoipupdate .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/geoipupdate.nix>

services.geoipupdate.interval

Update the GeoIP databases at this time / interval. The format is described in **systemd.time**(7).

Type: string

Default:

```
"weekly"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/geoipupdate.nix>

services.geoipupdate.settings

geoipupdate configuration options. See **https://github.com/maxmind/geoipupdate/blob/main/doc/GeoIP.conf.md** for a full list of available options.

Settings containing secret data should be set to an attribute set containing the attribute '_secret' − a string pointing to a file containing the value the option should be set to. See the example to get a better picture of this: in the resulting *GeoIP.conf* file, the 'ProxyUserPassword' key will be set to the contents of the */run/keys/proxy_pass* file.

Type: open submodule of attribute set of (string or signed integer or boolean or list of (string or signed integer or boolean))

Example:

```
{
  AccountID = 200001;
  DatabaseDirectory = "/var/lib/GeoIP";
  LicenseKey = { _secret = "/run/keys/maxmind_license_key"; };
  Proxy = "10.0.0.10:8888";
  ProxyUserPassword = { _secret = "/run/keys/proxy_pass"; };
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/geoipupdate.nix>

services.geoipupdate.settings.AccountID

Your MaxMind account ID.

Type: signed integer

Declared by:

<nixpkgs/nixos/modules/services/misc/geoipupdate.nix>

services.geoipupdate.settings.DatabaseDirectory

The directory to store the database files in. The directory will be automatically created, the owner changed to 'geoip' and permissions set to world readable. This applies if the directory already exists as well, so don't use a directory with sensitive contents.

Type: absolute path

Default:

```
"/var/lib/GeoIP"
```

Example:

```
"/run/GeoIP"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/geoipupdate.nix>

services.geoipupdate.settings.EditionIDs

List of database edition IDs. This includes new string IDs like 'GeoIP2−City' and old numeric IDs like '106'.

Type: list of (string or signed integer)

Default:

```
[ ]
```

Example:

```
[
  "GeoLite2-ASN"
  "GeoLite2-City"
```

```
  "GeoLite2-Country"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/geoipupdate.nix>

services.geoipupdate.settings.LicenseKey
A file containing the MaxMind license key.

Always handled as a secret whether the value is wrapped in a '{ _secret = ...; }' attrset or not (refer to **services.geoipupdate.settings** for details).

Type: absolute path or attribute set of absolute path

Declared by:
<nixpkgs/nixos/modules/services/misc/geoipupdate.nix>

services.geph.enable
Whether to enable geph client daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/geph.nix>

services.geph.package
The geph package to use.

Type: package

Default:

```
pkgs.geph
```

Declared by:
<nixpkgs/nixos/modules/services/networking/geph.nix>

services.geph.configFile
Path to the geph config file.

This file contain sensitive credentials, so it must not live in the Nix store.

Type: absolute path not in the Nix store

Declared by:
<nixpkgs/nixos/modules/services/networking/geph.nix>

services.gerbil.environmentFile
Path to a file containing sensitive environment variables for Gerbil. See the **Gerbil Documentation** for more information. These will overwrite anything defined in the config.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/nixos/secrets/gerbil.env"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pangolin.nix>

services.gerbil.port
Specifies the port to listen on for Gerbil.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3004
```

Declared by:
<nixpkgs/nixos/modules/services/networking/pangolin.nix>

services.gerrit.enable
Whether to enable Gerrit service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gerrit.nix>

services.gerrit.package
The gerrit package to use.

Type: package

Default:

```
pkgs.gerrit
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gerrit.nix>

services.gerrit.builtinPlugins
List of builtins plugins to install. Those are shipped in the ‘gerrit.war’ file.

Type: list of (one of “codemirror−editor”, “commit−message−length−validator”, “delete−project”, “download−commands”, “gitiles”, “hooks”, “plugin−manager”, “replication”, “reviewnotes”, “singleusergroup”, “webhooks”)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gerrit.nix>

services.gerrit.jvmHeapLimit
How much memory to allocate to the JVM heap

Type: string

Default:

```
"1024m"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gerrit.nix>

services.gerrit.jvmOpts
A list of JVM options to start gerrit with.

Type: list of string

Default:

```
[
  "-Dlogger.backend_factory=com.google.common.flogger.backend.log \
4j.Log4jBackendFactory#getInstance"
  "-Dlogger.logging_context=com.google.gerrit.server.logging.Logg \
ingContext#getInstance"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gerrit.nix>

services.gerrit.jvmPackage
The jdk21_headless package to use.

Type: package

Default:

```
pkgs.jdk21_headless
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gerrit.nix>

services.gerrit.listenAddress
‘hostname:port’ to listen for HTTP traffic.

This is bound using the systemd socket activation.

Type: string

Default:

```
"[::]:8080"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gerrit.nix>

services.gerrit.plugins
List of plugins to add to Gerrit. Each derivation is a jar file itself where the name of the derivation is the name of plugin.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gerrit.nix>

services.gerrit.replicationSettings
Replication configuration. This will be generated to the ‘etc/replication.config’ file.

Type: lazy attribute set of lazy attribute set of (string or boolean or signed integer or list of (string or boolean or signed integer) or lazy attribute set of (string or boolean or signed integer or list of (string or boolean or signed integer)))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gerrit.nix>

services.gerrit.serverId
Set a UUID that uniquely identifies the server.

This can be generated with ‘nix−shell −p util−linux −−run uuidgen’.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gerrit.nix>

services.gerrit.settings
Gerrit configuration. This will be generated to the ‘etc/gerrit.config’ file.

Type: lazy attribute set of lazy attribute set of (string or boolean or signed integer or list of (string or boolean or signed integer) or lazy attribute set of (string or boolean or signed integer or list of (string or boolean or signed integer)))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gerrit.nix>

services.geth
Specification of one or more geth instances.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.enable
Whether to enable Go Ethereum Node.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.package
The geth package to use.

Type: package

Default:

```
pkgs.go−ethereum.geth
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.authrpc.enable
Whether to enable Go Ethereum Auth RPC API.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.authrpc.address
Listen address of Go Ethereum Auth RPC API.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.authrpc.jwtsecret
Path to a JWT secret for authenticated RPC endpoint.

Type: string

Default:

```
""
```

Example:

```
"/var/run/geth/jwtsecret"
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.authrpc.port
Port number of Go Ethereum Auth RPC API.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8551
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.authrpc.vhosts
List of virtual hostnames from which to accept requests.

Type: null or (list of string)

Default:

```
[
  "localhost"
]
```

Example:

```
[
  "localhost"
  "geth.example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.extraArgs
Additional arguments passed to Go Ethereum.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.gcmode
Blockchain garbage collection mode.

Type: one of “full”, “archive”

Default:

```
"full"
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.http.enable
Whether to enable Go Ethereum HTTP API.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.http.address
Listen address of Go Ethereum HTTP API.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.http.apis
APIs to enable over WebSocket

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "net"
  "eth"
]
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.http.port
Port number of Go Ethereum HTTP API.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8545
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.maxpeers
Maximum peers to connect to.

Type: signed integer

Default:

```
50
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.metrics.enable
Whether to enable Go Ethereum prometheus metrics.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.metrics.address
Listen address of Go Ethereum metrics service.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.metrics.port
Port number of Go Ethereum metrics service.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6060
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.network
The network to connect to. Mainnet (null) is the default ethereum network.

Type: null or one of “holesky”, “sepolia”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.port
Port number Go Ethereum will be listening on, both TCP and UDP.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
30303
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.syncmode
Blockchain sync mode.

Type: one of “snap”, “fast”, “full”, “light”

Default:

```
"snap"
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.websocket.enable
Whether to enable Go Ethereum WebSocket API.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.websocket.address
Listen address of Go Ethereum WebSocket API.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.websocket.apis

APIs to enable over WebSocket

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "net"
  "eth"
]
```

Declared by:

<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.geth.<name>.websocket.port

Port number of Go Ethereum WebSocket API.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8546
```

Declared by:

<nixpkgs/nixos/modules/services/blockchain/ethereum/geth.nix>

services.getty.autologinOnce

If enabled the automatic login will only happen in the first tty once per boot. This can be useful to avoid retyping the account password on systems with full disk encrypted.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/ttys/getty.nix>

services.getty.autologinUser

Username of the account that will be automatically logged in at the console. If unspecified, a login prompt is shown as usual.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/ttys/getty.nix>

services.getty.extraArgs

Additional arguments passed to agetty.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
```

```
  "--nohostname"
]
```

Declared by:
<nixpkgs/nixos/modules/services/ttys/getty.nix>

services.getty.greetingLine
Welcome line printed by agetty. The default shows current NixOS version label, machine type and tty.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/ttys/getty.nix>

services.getty.helpLine
Help line printed by agetty below the welcome line. Used by the installation CD to give some hints on how to proceed.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/ttys/getty.nix>

services.getty.loginOptions
Template for arguments to be passed to **login**(1).

See **agetty**(1) for details, including security considerations. If unspecified, agetty will not be invoked with a **--login-options** option.

Type: null or string

Default:

```
null
```

Example:

```
"-h darkstar -- \\u"
```

Declared by:
<nixpkgs/nixos/modules/services/ttys/getty.nix>

services.getty.loginProgram
Path to the login binary executed by agetty.

Type: absolute path

Default:

```
"${pkgs.shadow}/bin/login"
```

Declared by:
<nixpkgs/nixos/modules/services/ttys/getty.nix>

services.ghostunnel.enable
Whether to enable ghostunnel.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.package
The ghostunnel package to use.

Type: package

Default:

```
pkgs.ghostunnel
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.servers
Server mode ghostunnels (TLS listener -> plain TCP/UNIX target)

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.servers.<name>.allowAll
If true, allow all clients, do not check client cert subject.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.servers.<name>.allowCN
Allow client if common name appears in the list.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.servers.<name>.allowDNS
Allow client if DNS subject alternative name appears in the list.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.servers.<name>.allowOU
Allow client if organizational unit name appears in the list.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.servers.<name>.allowURI

Allow client if URI subject alternative name appears in the list.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.servers.<name>.cacert

Path to CA bundle file (PEM/X509). Uses system trust store if ‘null’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.servers.<name>.cert

Path to certificate (PEM with certificate chain).

Not required if ‘keystore’ is set.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.servers.<name>.disableAuthentication

Disable client authentication, no client certificate will be required.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.servers.<name>.extraArguments

Extra arguments to pass to ‘ghostunnel server’

Type: strings concatenated with " "

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.servers.<name>.key
Path to certificate private key (PEM with private key).

Not required if ‘keystore’ is set.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.servers.<name>.keystore
Path to keystore (combined PEM with cert/key, or PKCS12 keystore).

NB: storepass is not supported because it would expose credentials via ‘/proc/*/cmdline’.

Specify this or ‘cert’ and ‘key’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.servers.<name>.listen
Address and port to listen on (can be HOST:PORT, unix:PATH).

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.servers.<name>.target
Address to forward connections to (can be HOST:PORT or unix:PATH).

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.ghostunnel.servers.<name>.unsafeTarget
If set, does not limit target to localhost, 127.0.0.1, [::1], or UNIX sockets.

This is meant to protect against accidental unencrypted traffic on untrusted networks.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ghostunnel.nix>

services.gitDaemon.enable
Enable Git daemon, which allows public hosting of git repositories without any access controls. This is mostly intended for read−only access.

You can allow write access by setting daemon.receivepack configuration item of the repository to true. This is solely meant for a closed LAN setting where everybody is friendly.

If you need any access controls, use something else.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/git−daemon.nix>

services.gitDaemon.package

The git package to use.

Type: package

Default:

```
pkgs.git
```

Declared by:

<nixpkgs/nixos/modules/services/networking/git−daemon.nix>

services.gitDaemon.basePath

Remap all the path requests as relative to the given path. For example, if you set base−path to /srv/git, then if you later try to pull git://example.com/hello.git, Git daemon will interpret the path as /srv/git/hello.git.

Type: string

Default:

```
""
```

Example:

```
"/srv/git/"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/git−daemon.nix>

services.gitDaemon.exportAll

Publish all directories that look like Git repositories (have the objects and refs subdirectories), even if they do not have the git−daemon−export−ok file.

If disabled, you need to touch .git/git−daemon−export−ok in each repository you want the daemon to publish.

Warning: enabling this without a repository whitelist or basePath publishes every git repository you have.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/git−daemon.nix>

services.gitDaemon.group

Group under which Git daemon would be running.

Type: string

Default:

```
"git"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/git−daemon.nix>

services.gitDaemon.listenAddress

Listen on a specific IP address or hostname.

Type: string

Default:

```
""
```

Example:

```
"example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/git−daemon.nix>

services.gitDaemon.options

Extra configuration options to be passed to Git daemon.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/git−daemon.nix>

services.gitDaemon.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9418
```

Declared by:

<nixpkgs/nixos/modules/services/networking/git−daemon.nix>

services.gitDaemon.repositories

A whitelist of paths of git repositories, or directories containing repositories all of which would be published. Paths must not end in “/”.

Warning: leaving this empty and enabling exportAll publishes all repositories in your filesystem or basePath if specified.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/srv/git"
  "/home/user/git/repo2"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/git−daemon.nix>

services.gitDaemon.user
User under which Git daemon would be running.

Type: string

Default:

```
"git"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/git-daemon.nix>

services.gitea.enable
Enable Gitea Service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.package
The gitea package to use.

Type: package

Default:

```
pkgs.gitea
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.appName
Application name.

Type: string

Default:

```
"gitea: Gitea Service"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.camoHmacKeyFile
Path to a file containing the camo HMAC key.

Type: null or string

Default:

```
null
```

Example:

```
"/var/lib/secrets/gitea/camoHmacKey"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.captcha.enable

Enables Gitea to display a CAPTCHA challenge on registration.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.captcha.requireForExternalRegistration

Displays a CAPTCHA challenge for users that register externally.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.captcha.requireForLogin

Displays a CAPTCHA challenge whenever a user logs in.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.captcha.secretFile

Path to a file containing the CAPTCHA secret key.

Type: null or string

Default:

```
null
```

Example:

```
"/var/lib/secrets/gitea/captcha_secret"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.captcha.siteKey

CAPTCHA site key to use for Gitea.

Type: null or string

Default:

```
null
```

Example:

```
"my_site_key"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.captcha.type
The type of CAPTCHA to use for Gitea.

Type: one of “image”, “recaptcha”, “hcaptcha”, “mcaptcha”, “cfturnstile”

Default:

```
"image"
```

Example:

```
"recaptcha"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.captcha.url
CAPTCHA url to use for Gitea. Only relevant for ‘recaptcha’ and ‘mcaptcha’.

Type: null or string

Default:

```
null
```

Example:

```
"https://google.com/recaptcha"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.customDir
Gitea custom directory. Used for config, custom templates and other options.

Type: string

Default:

```
"${config.services.gitea.stateDir}/custom"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.database.createDatabase
Whether to create a local database automatically.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.database.host
Database host address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.database.name
Database name.

Type: string

Default:

```
"gitea"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.database.password
The password corresponding to **database.user**. Warning: this is stored in cleartext in the Nix store! Use **database.passwordFile** instead.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.database.passwordFile
A file containing the password corresponding to **database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/gitea-dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.database.path
Path to the sqlite3 database file.

Type: string

Default:

```
"${config.services.gitea.stateDir}/data/gitea.db"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
if config.services.gitea.database.type != "postgresql"
then 3306
else 5432
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.database.socket
Path to the unix socket file to use for authentication.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/mysqld/mysqld.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.database.type
Database engine to use.

Type: one of “sqlite3”, “mysql”, “postgres”

Default:

```
"sqlite3"
```

Example:

```
"mysql"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.database.user
Database user.

Type: string

Default:

```
"gitea"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.dump.enable
Enable a timer that runs gitea dump to generate backup−files of the current gitea database and repositories.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.dump.backupDir
Path to the dump files.

Type: string

Default:

```
"${config.services.gitea.stateDir}/dump"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.dump.file
Filename to be used for the dump. If ‘null’ a default name is chosen by gitea.

Type: null or string

Default:

```
null
```

Example:

```
"gitea-dump"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.dump.interval
Run a gitea dump at this interval. Runs by default at 04:31 every day.

The format is described in **systemd.time**(7).

Type: string

Default:

```
"04:31"
```

Example:

```
"hourly"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.dump.type
Archive format used to store the dump file.

Type: one of “zip”, “rar”, “tar”, “sz”, “tar.gz”, “tar.xz”, “tar.bz2”, “tar.br”, “tar.lz4”, “tar.zst”

Default:

```
"zip"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.extraConfig
Configuration lines appended to the generated gitea configuration file.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.group
Group under which gitea runs.

Type: string

Default:

```
"gitea"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.lfs.enable
Enables git−lfs support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.lfs.contentDir
Where to store LFS files.

Type: string

Default:

```
"${config.services.gitea.stateDir}/data/lfs"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.mailerPasswordFile
Path to a file containing the SMTP password.

Type: null or string

Default:

```
null
```

Example:

```
"/var/lib/secrets/gitea/mailpw"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.metricsTokenFile
Path to a file containing the metrics authentication token.

Type: null or string

Default:

```
null
```

Example:

```
"/var/lib/secrets/gitea/metrics_token"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.minioAccessKeyId
Path to a file containing the Minio access key id.

Type: null or string

Default:

```
null
```

Example:

```
"/var/lib/secrets/gitea/minio_access_key_id"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.minioSecretAccessKey
Path to a file containing the Minio secret access key.

Type: null or string

Default:

```
null
```

Example:

```
"/var/lib/secrets/gitea/minio_secret_access_key"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.repositoryRoot
Path to the git repositories.

Type: string

Default:

```
"${config.services.gitea.stateDir}/repositories"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings
Gitea configuration. Refer to **https://docs.gitea.io/en-us/config-cheat-sheet/** for details on supported values.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  "cron.sync_external_users" = {
    RUN_AT_START = true;
    SCHEDULE = "@every 24h";
    UPDATE_EXISTING = true;
  };
  mailer = {
    ENABLED = true;
    PROTOCOL = "smtp+starttls";
    SMTP_ADDR = "smtp.example.org";
    SMTP_PORT = "587";
    FROM = "Gitea Service <do-not-reply@example.org>";
    USER = "do-not-reply@example.org";
  };
  other = {
    SHOW_FOOTER_VERSION = false;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings.log.LEVEL
General log level.

Type: one of “Trace”, “Debug”, “Info”, “Warn”, “Error”, “Critical”

Default:

```
"Info"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings.log.ROOT_PATH
Root path for log files.

Type: string

Default:

```
"${config.services.gitea.stateDir}/log"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings.mailer.ENABLED
Whether to use an email service to send notifications.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings.mailer.PROTOCOL
Which mail server protocol to use.

Type: one of <null>, “smtp”, “smtps”, “smtp+starttls”, “smtp+unix”, “sendmail”, “dummy”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings.mailer.SENDMAIL_PATH
Path to sendmail binary or script.

Type: string

Default:

```
if config.services.gitea.settings.mailer.ENABLED && config.services \
.gitea.settings.mailer.PROTOCOL == "sendmail" then "/run/wrappers/b \
in/sendmail" else "sendmail"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings.server.DISABLE_SSH
Disable external SSH feature.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings.server.DOMAIN
Domain name of your server.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings.server.HTTP_ADDR
Listen address. Must be a path when using a unix socket.

Type: string or absolute path

Default:

```
if lib.hasSuffix "+unix" cfg.settings.server.PROTOCOL then "/run/gi \
tea/gitea.sock" else "0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings.server.HTTP_PORT
Listen port. Ignored when using a unix socket.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings.server.PROTOCOL
Listen protocol. '+unix' means "over unix", not "in addition to."

Type: one of "http", "https", "fcgi", "http+unix", "fcgi+unix"

Default:

```
"http"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings.server.ROOT_URL
Full public URL of gitea server.

Type: string

Default:

```
"http://${config.services.gitea.settings.server.DOMAIN}:${toString  \
config.services.gitea.settings.server.HTTP_PORT}/"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings.server.SSH_PORT
SSH port displayed in clone URL. The option is required to configure a service when the external visible port differs from the local listening port i.e. if port forwarding is used.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
22
```

Example:

```
2222
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings.server.STATIC_ROOT_PATH
Upper level of template and static files path.

Type: string or absolute path

Default:

```
config.services.gitea.package.data
```

Example:

```
"/var/lib/gitea/data"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings.service.DISABLE_REGISTRATION
By default any user can create an account on this ‘gitea’ instance. This can be disabled by using this option.

Note: please keep in mind that this should be added after the initial deploy as the first registered user will be the administrator.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.settings.session.COOKIE_SECURE
Marks session cookies as “secure” as a hint for browsers to only send them via HTTPS. This option is recommend, if gitea is being served over HTTPS.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.stateDir
Gitea data directory.

Type: string

Default:

```
"/var/lib/gitea"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea.user
User account under which gitea runs.

Type: string

Default:

```
"gitea"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitea.nix>

services.gitea-actions-runner.package
The gitea-actions-runner package to use.

Type: package

Default:

```
pkgs.gitea-actions-runner
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitea-actions-runner.nix>

services.gitea-actions-runner.instances
Gitea Actions Runner instances.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitea-actions-runner.nix>

services.gitea-actions-runner.instances.<name>.enable
Whether to enable Gitea Actions Runner instance.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitea-actions-runner.nix>

services.gitea-actions-runner.instances.<name>.hostPackages

List of packages, that are available to actions, when the runner is configured with a host execution label.

Type: list of package

Default:

```
with pkgs; [
  bash
  coreutils
  curl
  gawk
  gitMinimal
  gnused
  nodejs
  wget
]
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/gitea-actions-runner.nix>

services.gitea-actions-runner.instances.<name>.labels

Labels used to map jobs to their runtime environment. Changing these labels currently requires a new registration token.

Many common actions require bash, git and nodejs, as well as a filesystem that follows the filesystem hierarchy standard.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  # provide a debian base with nodejs for actions
  "debian-latest:docker://node:18-bullseye"
  # fake the ubuntu name, because node provides no ubuntu builds
  "ubuntu-latest:docker://node:18-bullseye"
  # provide native execution on the host
  #"native:host"
]
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/gitea-actions-runner.nix>

services.gitea-actions-runner.instances.<name>.name

The name identifying the runner instance towards the Gitea/Forgejo instance.

Type: string

Example:

```
config.networking.hostName
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/gitea-actions-runner.nix>

services.gitea-actions-runner.instances.<name>.settings
Configuration for ‘act_runner daemon’. See **https://gitea.com/gitea/act_runner/src/branch/main/internal/pkg/config/config.example.yaml** for an example configuration

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitea-actions-runner.nix>

services.gitea-actions-runner.instances.<name>.token
Plain token to register at the configured Gitea/Forgejo instance.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitea-actions-runner.nix>

services.gitea-actions-runner.instances.<name>.tokenFile
Path to an environment file, containing the ‘TOKEN’ environment variable, that holds a token to register at the configured Gitea/Forgejo instance.

Type: null or string or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitea-actions-runner.nix>

services.gitea-actions-runner.instances.<name>.url
Base URL of your Gitea/Forgejo instance.

Type: string

Example:

```
"https://forge.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitea-actions-runner.nix>

services.github-runners
Multiple GitHub Runners.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  runner1 = {
    enable = true;
    name = "runner1";
    tokenFile = "/secrets/token1";
    url = "https://github.com/owner/repo";
  };
```

```
    runner2 = {
      enable = true;
      name = "runner2";
      tokenFile = "/secrets/token2";
      url = "https://github.com/owner/repo";
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/github-runner/options.nix>

services.github-runners.<name>.enable
Whether to enable GitHub Actions runner.

Note: GitHub recommends using self-hosted runners with private repositories only. Learn more here: **About self-hosted runners**.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/github-runner/options.nix>

services.github-runners.<name>.package
The github-runner package to use.

Type: package

Default:

```
pkgs.github-runner
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/github-runner/options.nix>

services.github-runners.<name>.ephemeral
If enabled, causes the following behavior:

- Passes the '--ephemeral' flag to the runner configuration script
- De-registers and stops the runner with GitHub after it has processed one job
- On stop, systemd wipes the runtime directory (this always happens, even without using the ephemeral option)
- Restarts the service after its successful exit
- On start, wipes the state directory and configures a new runner

You should only enable this option if 'tokenFile' points to a file which contains a personal access token (PAT). If you're using the option with a registration token, restarting the service will fail as soon as the registration token expired.

Changing this option triggers a new runner registration.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/github-runner/options.nix>

services.github-runners.<name>.extraEnvironment
Extra environment variables to set for the runner, as an attrset.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  GIT_CONFIG = "/path/to/git/config";
}
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/github-runner/options.nix>

services.github-runners.<name>.extraLabels
Extra labels in addition to the default (unless disabled through the ‘noDefaultLabels’ option).

Changing this option triggers a new runner registration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "nixos" ]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/github-runner/options.nix>

services.github-runners.<name>.extraPackages
Extra packages to add to ‘PATH’ of the service to make them available to workflows.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/github-runner/options.nix>

services.github-runners.<name>.group
Group under which to run the service.

The effect of this option depends on the value of the ‘user’ option:

- ‘group == null’ and ‘user == null’: The service runs with a dynamically allocated user and group.
- ‘group == null’ and ‘user != null’: The service runs as the given user and its default group.
- ‘group != null’ and ‘user == null’: This configuration is invalid. In this case, the service would use the given group but run as root implicitly. If this is really what you want, set ‘user = "root"’ explicitly.

Type: null or string

Default:

```
groupname
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/github−runner/options.nix>

services.github−runners.<name>.name
Name of the runner to configure. If null, defaults to the hostname.

Changing this option triggers a new runner registration.

Type: null or string

Default:

```
"‹name›"
```

Example:

```
"nixos"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/github−runner/options.nix>

services.github−runners.<name>.noDefaultLabels
Disables adding the default labels. Also see the ‘extraLabels’ option.

Changing this option triggers a new runner registration.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/github−runner/options.nix>

services.github−runners.<name>.nodeRuntimes
List of Node.js runtimes the runner should support.

Type: non−empty (list of (one of “node20”, “node24”))

Default:

```
[
  "node20"
  "node24"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/github−runner/options.nix>

services.github−runners.<name>.replace
Replace any existing runner with the same name.

Without this flag, registering a new runner with the same name fails.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/github−runner/options.nix>

services.github−runners.<name>.runnerGroup

Name of the runner group to add this runner to (defaults to the default runner group).

Changing this option triggers a new runner registration.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/github−runner/options.nix>

services.github−runners.<name>.serviceOverrides

Modify the systemd service. Can be used to, e.g., adjust the sandboxing options. See **systemd.exec**(5) for more options.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  ProtectHome = false;
  RestrictAddressFamilies = [
    "AF_PACKET"
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/github−runner/options.nix>

services.github−runners.<name>.tokenFile

The full path to a file which contains either

- a fine−grained personal access token (PAT),
- a classic PAT
- or a runner registration token

Changing this option or the ‘tokenFile’’s content triggers a new runner registration.

We suggest using the fine−grained PATs. A runner registration token is valid only for 1 hour after creation, so the next time the runner configuration changes this will give you hard−to−debug HTTP 404 errors in the configure step.

The file should contain exactly one line with the token without any newline. (Use ‘echo −n '…token…' > …token file…’ to make sure no newlines sneak in.)

If the file contains a PAT, the service creates a new registration token on startup as needed. If a registration token is given, it can be used to re−register a runner of the same name but is time−limited as noted above.

For fine−grained PATs:

Give it “Read and Write access to organization/repository self hosted runners”, depending on whether it is organization wide or per−repository. You might have to experiment a little, fine−grained PATs are a ‘beta’ Github feature and still subject to change; nonetheless they are the best option at the moment.

For classic PATs:

Make sure the PAT has a scope of ‘admin:org’ for organization−wide registrations or a scope of ‘repo’ for a single repository.

For runner registration tokens:

Nothing special needs to be done, but updating will break after one hour, so these are not recommended.

Type: absolute path

Example:

```
"/run/secrets/github-runner/nixos.token"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/github-runner/options.nix>

services.github-runners.<name>.tokenType
Type of token to use for runner registration.

An access token is a personal access token or any other kind of GitHub token that starts with ‘ghp_’, ‘gho_’, etc prefix. It is passed as ‘--pat’ to the runner config script.

A registration token is an unprefixed string generated by the “Add new self-hosted runner” page. It is passed as ‘--token’ to runner config script.

The default ‘auto’ attempts to detect the token type automatically based on its format.

Type: one of “auto”, “access”, “registration”

Default:

```
"auto"
```

Example:

```
"registration"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/github-runner/options.nix>

services.github-runners.<name>.url
Repository to add the runner to.

Changing this option triggers a new runner registration.

IMPORTANT: If your token is org-wide (not per repository), you need to provide a github org link, not a single repository, so do it like this ‘https://github.com/nixos’, not like this ‘https://github.com/nixos/nixpkgs’. Otherwise, you are going to get a ‘404 NotFound’ from ‘POST https://api.github.com/actions/runner-registration’ in the configure script.

Type: string

Example:

```
"https://github.com/nixos/nixpkgs"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/github-runner/options.nix>

services.github-runners.<name>.user
User under which to run the service.

If this option and the ‘group’ option is set to ‘null’, the service runs as a dynamically allocated user.

Also see the ‘group’ option for an overview on the effects of the ‘user’ and ‘group’ settings.

Type: null or string

Default:

```
username
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/github-runner/options.nix>

services.github-runners.<name>.workDir
Working directory, available as 'GITHUB_WORKSPACE' during workflow runs and used as a default for **repository checkouts**. The service cleans this directory on every service start.

A value of 'null' will default to the systemd 'RuntimeDirectory'.

Changing this option triggers a new runner registration.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/github-runner/options.nix>

services.gitlab.enable
Enable the gitlab service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.packages.gitaly
The gitaly package to use.

Type: package

Default:

```
pkgs.gitaly
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.packages.gitlab
The gitlab package to use.

Type: package

Default:

```
pkgs.gitlab
```

Example:

```
gitlab-ee
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.packages.gitlab-shell
The gitlab-shell package to use.

Type: package

Default:

```
pkgs.gitlab-shell
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.packages.gitlab−workhorse
The gitlab−workhorse package to use.

Type: package

Default:

```
pkgs.gitlab−workhorse
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.packages.pages
The gitlab−pages package to use.

Type: package

Default:

```
pkgs.gitlab−pages
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.backup.keepTime
How long to keep the backups around, in hours. ‘0’ means “keep forever”.

Type: signed integer

Default:

Example:

```
48
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.backup.path
GitLab path for backups.

Type: string

Default:

```
config.services.gitlab.statePath + "/backup"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.backup.skip
Directories to exclude from the backup. The example excludes CI artifacts and LFS objects from the backups. The ‘tar’ option skips the creation of a tar file.

Refer to **https://docs.gitlab.com/ee/raketasks/backup_restore.html#excluding−specific−directories−from−the−backup** for more information.

Type: one of “db”, “uploads”, “builds”, “artifacts”, “lfs”, “registry”, “pages”, “repositories”, “tar” or list of (one of “db”, “uploads”, “builds”, “artifacts”, “lfs”, “registry”, “pages”, “repositories”, “tar”)

Default:

```
[ ]
```

Example:

```
[
```

```
  "artifacts"
  "lfs"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.backup.startAt

The time(s) to run automatic backup of GitLab state. Specified in systemd's time format; see **systemd.time**(7).

Type: string or list of string

Default:

```
[ ]
```

Example:

```
"03:00"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.backup.uploadOptions

GitLab automatic upload specification. Tells GitLab to upload the backup to a remote location when done.

Attributes specified here are added under 'production −> backup −> upload' in *config/gitlab.yml*.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  # Fog storage connection settings, see http://fog.io/storage/
  connection = {
    provider = "AWS";
    region = "eu-north-1";
    aws_access_key_id = "AKIAXXXXXXXXXXXXXXX";
    aws_secret_access_key = { _secret = config.deployment.keys.aws_ \
access_key.path; };
  };
  # The remote 'directory' to store your backups in.
  # For S3, this would be the bucket name.
  remote_directory = "my-gitlab-backups";
  # Use multipart uploads when file size reaches 100MB, see
  # http://docs.aws.amazon.com/AmazonS3/latest/dev/uploadobjusingmp \
u.html
  multipart_chunk_size = 104857600;
  # Turns on AWS Server-Side Encryption with Amazon S3-Managed Ke \
ys for backups, this is optional
  encryption = "AES256";
  # Specifies Amazon S3 storage class to use for backups, this is o \
ptional
  storage_class = "STANDARD";
};
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.databaseCreateLocally
Whether a database should be automatically created on the local host. Set this to ‘false’ if you plan on provisioning a local database yourself. This has no effect if **services.gitlab.databaseHost** is customized.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.databaseHost
GitLab database hostname. An empty string means “use local unix socket connection”.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.databaseName
GitLab database name.

Type: string

Default:

```
"gitlab"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.databasePasswordFile
File containing the GitLab database user password.

This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.databasePool
Database connection pool size.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.databaseUsername

GitLab database user.

Type: string

Default:

```
"gitlab"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.extraConfig

Extra options to be added under ‘production’ in *config/gitlab.yml*, as a nix attribute set.

Options containing secret data should be set to an attribute set containing the attribute ‘_secret’ − a string pointing to a file containing the value the option should be set to. See the example to get a better picture of this: in the resulting *config/gitlab.yml* file, the ‘production.omniauth.providers[0].args.client_options.secret’ key will be set to the contents of the */var/keys/gitlab_oidc_secret* file.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  gitlab = {
    default_projects_features = {
      builds = false;
    };
  };
  omniauth = {
    enabled = true;
    auto_sign_in_with_provider = "openid_connect";
    allow_single_sign_on = ["openid_connect"];
    block_auto_created_users = false;
    providers = [
      {
        name = "openid_connect";
        label = "OpenID Connect";
        args = {
          name = "openid_connect";
          scope = ["openid" "profile"];
          response_type = "code";
          issuer = "https://keycloak.example.com/auth/realms/My%20R \
ealm";
          discovery = true;
          client_auth_method = "query";
          uid_field = "preferred_username";
          client_options = {
            identifier = "gitlab";
            secret = { _secret = "/var/keys/gitlab_oidc_secret"; };
            redirect_uri = "https://git.example.com/users/auth/open \
id_connect/callback";
          };
        };
      }
```

```
        ];
      };
    };
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.extraDatabaseConfig
Extra configuration in config/database.yml.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.extraEnv
Additional environment variables for the GitLab environment.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.extraGitlabRb
Extra configuration to be placed in config/extra−gitlab.rb. This can be used to add configuration not otherwise exposed through this module's options.

Type: string

Default:

```
""
```

Example:

```
    if Rails.env.production?
      Rails.application.config.action_mailer.delivery_method = :sendm \
ail
      ActionMailer::Base.delivery_method = :sendmail
      ActionMailer::Base.sendmail_settings = {
        location: "/run/wrappers/bin/sendmail",
        arguments: "−i −t"
      }
    end
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.extraShellConfig
Extra configuration to merge into shell−config.yml

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.group
Group to run gitlab and all related services.

Type: string

Default:

```
"gitlab"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.host
GitLab host name. Used e.g. for copy−paste URLs.

Type: string

Default:

```
config.networking.hostName
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.https
Whether gitlab prints URLs with https as scheme.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.initialRootEmail
Initial email address of the root account if this is a new install.

Type: string

Default:

```
"admin@local.host"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.initialRootPasswordFile
File containing the initial password of the root account if this is a new install.

This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.logrotate.enable
Enable rotation of log files.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.logrotate.frequency
How often to rotate the logs.

Type: string

Default:

```
"daily"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.logrotate.keep
How many rotations to keep.

Type: signed integer

Default:

```
30
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.pages.enable
Whether to enable the GitLab Pages service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.pages.settings
Configuration options to set in the GitLab Pages config file.

Options containing secret data should be set to an attribute set containing the attribute '_secret' − a string pointing to a file containing the value the option should be set to. See the example to get a better picture of this: in the resulting configuration file, the 'auth−client−secret' and 'auth−secret' keys will be set to the contents of the */var/keys/auth−client−secret* and */var/keys/auth−secret* files respectively.

Type: open submodule of attribute set of (null or string or signed integer or boolean or (attribute set))

Example:

```
{
  pages-domain = "example.com";
  auth-client-id = "generated-id-xxxxxxx";
  auth-client-secret = { _secret = "/var/keys/auth-client-secre \
t"; };
```

```
    auth-redirect-uri = "https://projects.example.com/auth";
    auth-secret = { _secret = "/var/keys/auth-secret"; };
    auth-server = "https://gitlab.example.com";
  }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.pages.settings.artifacts-server
API URL to proxy artifact requests to.

Type: null or string

Default:

```
"http(s)://<services.gitlab.host>/api/v4"
```

Example:

```
"https://gitlab.example.com/api/v4"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.pages.settings.gitlab-server
Public GitLab server URL.

Type: null or string

Default:

```
"http(s)://<services.gitlab.host>"
```

Example:

```
"https://gitlab.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.pages.settings.internal-gitlab-server
Internal GitLab server used for API requests, useful if you want to send that traffic over an internal load balancer. By default, the value of ‘services.gitlab.pages.settings.gitlab-server’ is used.

Type: null or string

Default:

```
"http(s)://<services.gitlab.host>"
```

Example:

```
"https://gitlab.example.internal"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.pages.settings.listen-http
The address(es) to listen on for HTTP requests.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.pages.settings.listen−https
The address(es) to listen on for HTTPS requests.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.pages.settings.listen−proxy
The address(es) to listen on for proxy requests.

Type: list of string

Default:

```
[
  "127.0.0.1:8090"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.pages.settings.pages−domain
The domain to serve static pages on.

Type: null or string

Default:

```
null
```

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.pages.settings.pages−root
The directory where pages are stored.

Type: string

Default:

```
config.services.gitlab.extraConfig.production.shared.path + "/pages \
"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.port
GitLab server port for copy−paste URLs, e.g. 80 or 443 if you’re service over https.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.puma.threadsMax
The maximum number of threads Puma should use per worker. This limits how many threads Puma will automatically spawn in response to requests. In contrast to workers, threads will never be able to run Ruby code in parallel, but give higher IO parallelism.

Note
Each thread consumes memory and contributes to Global VM Lock contention, so be careful when increasing this.

Type: signed integer

Default:

```
4
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.puma.threadsMin
The minimum number of threads Puma should use per worker.

Note
Each thread consumes memory and contributes to Global VM Lock contention, so be careful when increasing this.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.puma.workers
The number of worker processes Puma should spawn. This controls the amount of parallel Ruby code can be executed. GitLab recommends ‘Number of CPU cores − 1’, but at least two.

Note
Each worker consumes quite a bit of memory, so be careful when increasing this.

Type: signed integer

Default:

```
2
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.redisUrl
Redis URL for all GitLab services.

Type: string

Default:

```
"unix:/run/gitlab/redis.sock"
```

Example:

```
"redis://localhost:6379/"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.registry.enable
Enable GitLab container registry.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.registry.package
Container registry package to use.

External container registries such as 'pkgs.distribution' are not supported anymore since GitLab 16.0.0.

Type: package

Default:

```
pkgs.distribution
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.registry.certFile
Path to GitLab container registry certificate.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.registry.defaultForProjects
If GitLab container registry should be enabled by default for projects.

Type: boolean

Default:

```
config.services.gitlab.registry.enable
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.registry.externalAddress
External address used to access registry from the internet

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.registry.externalPort
External port used to access registry from the internet

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.registry.host
GitLab container registry host name.

Type: string

Default:

```
config.services.gitlab.host
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.registry.issuer
GitLab container registry issuer.

Type: string

Default:

```
"gitlab-issuer"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.registry.keyFile
Path to GitLab container registry certificate-key.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.registry.port
GitLab container registry port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4567
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.registry.serviceName
GitLab container registry service name.

Type: string

Default:

```
"container_registry"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.secrets.activeRecordDeterministicKeyFile
A file containing the secret used to encrypt some rails data in a deterministic way in the DB. This should not be the same as 'services.gitlab.secrets.activeRecordPrimaryKeyFile'!

Make sure the secret is at ideally 32 characters and all random, no regular words or you'll be exposed to dictionary attacks.

This should be a string, not a nix path, since nix paths are copied into the world-readable nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.secrets.activeRecordPrimaryKeyFile

A file containing the secret used to encrypt some rails data in the DB. This should not be the same as 'services.gitlab.secrets.activeRecordDeterministicKeyFile'!

Make sure the secret is at ideally 32 characters and all random, no regular words or you'll be exposed to dictionary attacks.

This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.secrets.activeRecordSaltFile

A file containing the salt for active record encryption in the DB.

Make sure the secret is at ideally 32 characters and all random, no regular words or you'll be exposed to dictionary attacks.

This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.secrets.dbFile

A file containing the secret used to encrypt variables in the DB. If you change or lose this key you will be unable to access variables stored in database.

Make sure the secret is at least 32 characters and all random, no regular words or you'll be exposed to dictionary attacks.

This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.secrets.jwsFile

A file containing the secret used to encrypt session keys. If you change or lose this key, users will be disconnected.

Make sure the secret is an RSA private key in PEM format. You can generate one with

openssl genrsa 2048

This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.secrets.otpFile
A file containing the secret used to encrypt secrets for OTP tokens. If you change or lose this key, users which have 2FA enabled for login won't be able to login anymore.

Make sure the secret is at least 32 characters and all random, no regular words or you'll be exposed to dictionary attacks.

This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.secrets.secretFile
A file containing the secret used to encrypt variables in the DB. If you change or lose this key you will be unable to access variables stored in database.

Make sure the secret is at least 32 characters and all random, no regular words or you'll be exposed to dictionary attacks.

This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.sidekiq.concurrency
How many processor threads to use for processing sidekiq background job queues. When null, the GitLab default is used.

See **https://docs.gitlab.com/ee/administration/sidekiq/extra_sidekiq_processes.html#manage−thread−counts−explicitly** for details.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.sidekiq.memoryKiller.enable
Whether the Sidekiq MemoryKiller should be turned on. MemoryKiller kills Sidekiq when its memory consumption exceeds a certain limit.

See **https://docs.gitlab.com/ee/administration/operations/sidekiq_memory_killer.html** for details.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.sidekiq.memoryKiller.graceTime

The time MemoryKiller waits after noticing excessive memory consumption before killing Sidekiq.

Type: signed integer

Default:

```
900
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.sidekiq.memoryKiller.maxMemory

The maximum amount of memory, in MiB, a Sidekiq worker is allowed to consume before being killed.

Type: signed integer

Default:

```
2000
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.sidekiq.memoryKiller.shutdownWait

The time allowed for all jobs to finish before Sidekiq is killed forcefully.

Type: signed integer

Default:

```
30
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.smtp.enable

Enable gitlab mail delivery over SMTP.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.smtp.enableStartTLSAuto

Whether to try to use StartTLS.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.smtp.address
Address of the SMTP server for GitLab.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.smtp.authentication
Authentication type to use, see **http://api.rubyonrails.org/classes/ActionMailer/Base.html**

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.smtp.domain
HELO domain to use for outgoing mail.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.smtp.opensslVerifyMode
How OpenSSL checks the certificate, see **http://api.rubyonrails.org/classes/ActionMailer/Base.html**

Type: string

Default:

```
"peer"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.smtp.passwordFile
File containing the password of the SMTP server for GitLab.

This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.smtp.port
Port of the SMTP server for GitLab.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
25
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.smtp.tls
Whether to use TLS wrapper−mode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.smtp.username
Username of the SMTP server for GitLab.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.statePath
GitLab state directory. Configuration, repositories and logs, among other things, are stored here.

The directory will be created automatically if it doesn't exist already. Its parent directories must be owned by either 'root' or the user set in **services.gitlab.user**.

Type: string

Default:

```
"/var/gitlab/state"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.user
User to run gitlab and all related services.

Type: string

Default:

```
"gitlab"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab.workhorse.config
Configuration options to add to Workhorse's configuration file.

See **https://gitlab.com/gitlab−org/gitlab/−/blob/master/workhorse/config.toml.example** and **https://docs.gitlab.com/ee/development/workhorse/configuration.html** for examples and option documentation.

Options containing secret data should be set to an attribute set containing the attribute '_secret' − a string pointing to a file containing the value the option should be set to. See the example to get a better picture of this: in the resulting configuration file, the 'object_storage.s3.aws_secret_access_key' key will be set to the contents of the */var/keys/aws_secret_access_key* file.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  object_storage.provider = "AWS";
  object_storage.s3 = {
    aws_access_key_id = "AKIAXXXXXXXXXXXXXXX";
    aws_secret_access_key = { _secret = "/var/keys/aws_secret_acces \
s_key"; };
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitlab.nix>

services.gitlab−runner.enable
Whether to enable Gitlab Runner.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.package
The gitlab−runner package to use.

Type: package

Default:

```
pkgs.gitlab−runner
```

Example:

```
gitlab−runner_1_11
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.clear−docker−cache.enable
Whether to periodically prune gitlab runner's Docker resources. If enabled, a systemd timer will run **clear−docker−cache** as specified by the 'dates' option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.clear−docker−cache.package
Docker package to use for clearing up docker cache.

Type: unspecified value

Default:

```
config.virtualisation.docker.package
```

Example:

```
pkgs.docker
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab-runner.clear-docker-cache.dates
Specification (in the format described by **systemd.time**(7)) of the time at which the prune will occur.

Type: string

Default:

```
"weekly"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab-runner.clear-docker-cache.flags
Any additional flags passed to **clear-docker-cache**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "prune"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab-runner.configFile
Configuration file for gitlab-runner.

configFile takes precedence over **services**. **checkInterval** and **concurrent** will be ignored too.

This option is deprecated, please use **services** instead. You can use **registrationConfigFile** and **registrationFlags** for settings not covered by this module.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab-runner.extraPackages
Extra packages to add to 'PATH' for the 'gitlab-runner' process. These packages won't be added to the system, use 'environment.systemPackages' for that.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab−runner.gracefulTermination

Finish all remaining jobs before stopping. If not set gitlab−runner will stop immediately without waiting for jobs to finish, which will lead to failed builds.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.gracefulTimeout

Time to wait until a graceful shutdown is turned into a forceful one.

Type: string

Default:

```
"infinity"
```

Example:

```
"5min 20s"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services

GitLab Runner services.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  # runner for building in docker via host's nix-daemon
  # nix store will be readable in runner, might be insecure
  nix = {
    # File should contain at least these two variables:
    # - 'CI_SERVER_URL'
    # - 'REGISTRATION_TOKEN'
    #
    # NOTE: Support for runner registration tokens will be removed  \
in GitLab 18.0.
    # Please migrate to runner authentication tokens soon. For refe \
rence, the example
    # runners below this one are configured with authentication tok \
ens instead.
    registrationConfigFile = "/run/secrets/gitlab-runner-registra \
tion";
    dockerImage = "alpine";
    dockerVolumes = [
      "/nix/store:/nix/store:ro"
      "/nix/var/nix/db:/nix/var/nix/db:ro"
      "/nix/var/nix/daemon-socket:/nix/var/nix/daemon-socket:ro"
    ];
    dockerDisableCache = true;
```

```
    preBuildScript = pkgs.writeScript "setup-container" ''
      mkdir -p -m 0755 /nix/var/log/nix/drvs
      mkdir -p -m 0755 /nix/var/nix/gcroots
      mkdir -p -m 0755 /nix/var/nix/profiles
      mkdir -p -m 0755 /nix/var/nix/temproots
      mkdir -p -m 0755 /nix/var/nix/userpool
      mkdir -p -m 1777 /nix/var/nix/gcroots/per-user
      mkdir -p -m 1777 /nix/var/nix/profiles/per-user
      mkdir -p -m 0755 /nix/var/nix/profiles/per-user/root
      mkdir -p -m 0700 "$HOME/.nix-defexpr"
      . ${pkgs.nix}/etc/profile.d/nix.sh
      ${pkgs.nix}/bin/nix-env -i ${concatStringsSep " " (with pkg \
s; [ nix cacert git openssh ])}
      ${pkgs.nix}/bin/nix-channel --add https://channels.nixos.o \
rg/nixpkgs-unstable
      ${pkgs.nix}/bin/nix-channel --update nixpkgs
    '';
    environmentVariables = {
      ENV = "/etc/profile";
      USER = "root";
      NIX_REMOTE = "daemon";
      PATH = "/nix/var/nix/profiles/default/bin:/nix/var/nix/profil \
es/default/sbin:/bin:/sbin:/usr/bin:/usr/sbin";
      NIX_SSL_CERT_FILE = "/nix/var/nix/profiles/default/etc/ssl/ce \
rts/ca-bundle.crt";
    };
    tagList = [ "nix" ];
  };
  # runner for building docker images
  docker-images = {
    # File should contain at least these two variables:
    # `CI_SERVER_URL`
    # `CI_SERVER_TOKEN`
    authenticationTokenConfigFile = "/run/secrets/gitlab-runner-d \
ocker-images-token-env";
    dockerImage = "docker:stable";
    dockerVolumes = [
      "/var/run/docker.sock:/var/run/docker.sock"
    ];
    tagList = [ "docker-images" ];
  };
  # runner for executing stuff on host system (very insecure!)
  # make sure to add required packages (including git!)
  # to `environment.systemPackages`
  shell = {
    # File should contain at least these two variables:
    # `CI_SERVER_URL`
    # `CI_SERVER_TOKEN`
    authenticationTokenConfigFile = "/run/secrets/gitlab-runner-s \
hell-token-env";
    executor = "shell";
    tagList = [ "shell" ];
  };
```

```
    # runner for everything else
    default = {
      # File should contain at least these two variables:
      # 'CI_SERVER_URL'
      # 'CI_SERVER_TOKEN'
      authenticationTokenConfigFile = "/run/secrets/gitlab-runner-d \
efault-token-env";
      dockerImage = "debian:stable";
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab-runner.services.<name>.authenticationTokenConfigFile
Absolute path to a file containing environment variables used for gitlab-runner registrations with *runner authentication tokens*. They replace the deprecated *runner registration tokens*, as outlined in the **GitLab documentation**.

A list of all supported environment variables can be found with 'gitlab-runner register --help'.

The ones you probably want to set are:

- 'CI_SERVER_URL=<CI server URL>'
- 'CI_SERVER_TOKEN=<runner authentication token secret>'

Warning
Make sure to use a quoted absolute path, or it is going to be copied to Nix Store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab-runner.services.<name>.buildsDir
Absolute path to a directory where builds will be stored in context of selected executor (Locally, Docker, SSH).

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/gitlab-runner/builds"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab-runner.services.<name>.cloneUrl
Overwrite the URL for the GitLab instance. Used if the Runner can't connect to GitLab on the URL GitLab exposes itself.

Type: null or string

Default:

```
null
```

Example:

```
"http://gitlab.example.local"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab-runner.services.<name>.debugTraceDisabled
When set to true Runner will disable the possibility of using the 'CI_DEBUG_TRACE' feature.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab-runner.services.<name>.description
Name/description of the runner.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab-runner.services.<name>.dockerAllowedImages
Whitelist allowed images.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "ruby:*"
  "python:*"
  "php:*"
  "my.registry.tld:5000/*:*"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab-runner.services.<name>.dockerAllowedServices
Whitelist allowed services.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "postgres:9"
  "redis:*"
  "mysql:*"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.dockerDisableCache
Disable all container caching.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.dockerExtraHosts
Add a custom host−to−IP mapping.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "other−host:127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.dockerImage
Docker image to be used.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.dockerPrivileged
Give extended privileges to container.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.dockerPullPolicy
Default pull−policy for Docker images

Type: null or one of “always”, “never”, “if−not−present”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.dockerVolumes
Bind−mount a volume and create it if it doesn't exist prior to mounting.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/var/run/docker.sock:/var/run/docker.sock"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.environmentVariables
Custom environment variables injected to build environment. For secrets you can use **registrationConfigFile** with 'RUNNER_ENV' variable set.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  NAME = "value";
}
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.executor
Select executor, eg. shell, docker, etc. See **runner executor documentation** for more information.

Type: string

Default:

```
"docker"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.limit
Limit how many jobs can be handled concurrently by this service. 0 (default) simply means don't limit.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.maximumTimeout
What is the maximum timeout (in seconds) that will be set for job when using this Runner. 0 (default) simply means don't limit.

This option has no effect for runners registered with an runner authentication tokens and will be ignored.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.postBuildScript
Runner−specific command script executed after code is pulled and just after build executes.

Type: null or string or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.postGetSourcesScript
Runner−specific command script executed after code is pulled.

Type: null or string or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.preBuildScript
Runner−specific command script executed after code is pulled, just before build executes.

Type: null or string or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.preGetSourcesScript
Runner−specific command script executed before code is pulled.

Type: null or string or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.protected
When set to true Runner will only run on pipelines triggered on protected branches.

This option has no effect for runners registered with an runner authentication tokens and will be ignored.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab-runner.services.<name>.registrationConfigFile
Absolute path to a file with environment variables used for gitlab-runner registration with *runner registration tokens*.

A list of all supported environment variables can be found in 'gitlab-runner register --help'.

The ones you probably want to set are:

- 'CI_SERVER_URL=<CI server URL>'
- 'REGISTRATION_TOKEN=<registration secret>'

Support for *runner registration tokens* is deprecated since GitLab 16.0, has been disabled by default in GitLab 17.0 and will be removed in GitLab 18.0, as outlined in the **GitLab documentation**. Please consider migrating to **runner authentication tokens** and check the documentation on **services.gitlab-runner.services.<name>.authenticationTokenConfigFile**.

Warning
Make sure to use a quoted absolute path, or it is going to be copied to Nix Store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab-runner.services.<name>.registrationFlags
Extra command-line flags passed to 'gitlab-runner register'. Execute 'gitlab-runner register --help' for a list of supported flags.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--docker-helper-image my/gitlab-runner-helper"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab-runner.services.<name>.requestConcurrency
Limit number of concurrent requests for new jobs from GitLab.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gitlab-runner/runner.nix>

services.gitlab−runner.services.<name>.runUntagged
Register to run untagged builds; defaults to ‘true’ when **tagList** is empty.

This option has no effect for runners registered with an runner authentication tokens and will be ignored.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.services.<name>.tagList
Tag list.

This option has no effect for runners registered with an runner authentication tokens and will be ignored.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitlab−runner.settings
Global gitlab−runner configuration. See **https://docs.gitlab.com/runner/configuration/advanced−configuration.html#the−global−section** for supported values.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gitlab−runner/runner.nix>

services.gitolite.enable
Enable gitolite management under the ‘gitolite’ user. After switching to a configuration with Gitolite enabled, you can then run ‘git clone gitolite@host:gitolite−admin.git’ to manage it further.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitolite.nix>

services.gitolite.enableGitAnnex
Enable git−annex support. Uses the ‘extraGitoliteRc’ option to apply the necessary configuration.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitolite.nix>

services.gitolite.adminPubkey

Initial administrative public key for Gitolite. This should be an SSH Public Key. Note that this key will only be used once, upon the first initialization of the Gitolite user. The key string cannot have any line breaks in it.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/misc/gitolite.nix>

services.gitolite.commonHooks

A list of custom git hooks that get copied to '~/.gitolite/hooks/common'.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitolite.nix>

services.gitolite.dataDir

The gitolite home directory used to store all repositories. If left as the default value this directory will automatically be created before the gitolite server starts, otherwise the sysadmin is responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: string

Default:

```
"/var/lib/gitolite"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitolite.nix>

services.gitolite.description

Gitolite user account's description.

Type: string

Default:

```
"Gitolite user"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitolite.nix>

services.gitolite.extraGitoliteRc

Extra configuration to append to the default '~/.gitolite.rc'.

This should be Perl code that modifies the '%RC' configuration variable. The default '~/.gitolite.rc' content is generated by invoking 'gitolite print−default−rc', and extra configuration from this option is appended to it. The result is placed to Nix store, and the '~/.gitolite.rc' file becomes a symlink to it.

If you already have a customized (or otherwise changed) '~/.gitolite.rc' file, NixOS will refuse to replace it with a symlink, and the 'gitolite−init' initialization service will fail. In this situation, in order to use this option, you will need to take any customizations you may have in '~/.gitolite.rc', convert them to appropriate Perl statements, add them to this option, and remove the file.

See also the 'enableGitAnnex' option.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
  $RC{UMASK} = 0027;
  $RC{SITE_INFO} = 'This is our private repository host';
  push( @{$RC{ENABLE}}, 'Kindergarten' ); # enable the command/feat \
ure
  @{$RC{ENABLE}} = grep { $_ ne 'desc' } @{$RC{ENABLE}}; # disable  \
the command/feature
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitolite.nix>

services.gitolite.group
Primary group of the Gitolite user account.

Type: string

Default:

```
"gitolite"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitolite.nix>

services.gitolite.user
Gitolite user account. This is the username of the gitolite endpoint.

Type: string

Default:

```
"gitolite"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gitolite.nix>

services.gitwatch
A set of git repositories to watch for. See **gitwatch** for more.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  disabled-repo = {
    branch = "autobranch";
    enable = false;
    path = "/home/user/disabled-project";
    remote = "git@github.com:me/my-old-project.git";
    user = "user";
  };
  my-repo = {
    enable = true;
    message = "Auto-commit by gitwatch on %d";
    path = "/home/user/watched-project";
    remote = "git@github.com:me/my-project.git";
    user = "user";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/gitwatch.nix>

services.gitwatch.<name>.enable
Whether to enable watching for repo.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/gitwatch.nix>

services.gitwatch.<name>.branch
Optional branch in remote repository

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/gitwatch.nix>

services.gitwatch.<name>.message
Optional text to use in as commit message; all occurrences of '%d' will be replaced by formatted date/time

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/gitwatch.nix>

services.gitwatch.<name>.path
The path to repo in local machine

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/gitwatch.nix>

services.gitwatch.<name>.remote
Optional url of remote repository

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/gitwatch.nix>

services.gitwatch.<name>.user

The name of services's user

Type: string

Default:

```
"root"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/gitwatch.nix>

services.gitweb.extraConfig

Verbatim configuration text appended to the generated gitweb.conf file.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
$feature{'highlight'}{'default'} = [1];
$feature{'ctags'}{'default'} = [1];
$feature{'avatar'}{'default'} = ['gravatar'];
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitweb.nix>

services.gitweb.gitwebTheme

Use an alternative theme for gitweb, strongly inspired by GitHub.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitweb.nix>

services.gitweb.projectroot

Path to git projects (bare repositories) that should be served by gitweb. Must not end with a slash.

Type: absolute path

Default:

```
"/srv/git"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gitweb.nix>

services.glance.enable

Whether to enable glance.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glance.nix>

services.glance.package
The glance package to use.

Type: package

Default:

```
pkgs.glance
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glance.nix>

services.glance.environmentFile
Path to an environment file as defined in **systemd.exec**(5).

See upstream documentation **https://github.com/glanceapp/glance/blob/main/docs/configuration.md#environment−variables**.

Example content of the file:

```
TIMEZONE=Europe/Paris
```

Example ‘services.glance.settings.pages’ configuration:

```
[
  {
    name = "Home";
    columns = [
      {
        size = "full";
        widgets = [
          {
            type = "clock";
            timezone = "\${TIMEZONE}";
            label = "Local Time";
          }
        ];
      }
    ];
  }
];
```

Note that when using Glance’s ‘${ENV_VAR}’ syntax in Nix, you need to escape it as follows: use ‘\${ENV_VAR}’ in ‘"’ strings and ‘"${ENV_VAR}’ in ‘"’ strings.

Alternatively, you can put each secret in it’s own file, see ‘services.glance.settings’.

Type: null or absolute path

Default:

```
"/dev/null"
```

Example:

```
"/var/lib/secrets/glance"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glance.nix>

services.glance.openFirewall

Whether to open the firewall for Glance. This adds ‘services.glance.settings.server.port’ to ‘networking.firewall.allowedTCPPorts’.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/glance.nix>

services.glance.settings

Configuration written to a yaml file that is read by glance. See **https://github.com/glanceapp/glance/blob/main/docs/configuration.md** for more.

Settings containing secret data should be set to an attribute set with this format: ‘{ _secret = "/path/to/secret"; }’. See the example in ‘services.glance.settings.pages’ at the weather widget with a location secret to get a better picture of this.

Alternatively, you can use a single file with environment variables, see ‘services.glance.environmentFile’.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/glance.nix>

services.glance.settings.pages

List of pages to be present on the dashboard.

See **https://github.com/glanceapp/glance/blob/main/docs/configuration.md#pages−−columns**

Type: YAML 1.1 value

Default:

```
[
  {
    columns = [
      {
        size = "full";
        widgets = [
          {
            type = "calendar";
          }
        ];
      }
    ];
    name = "Calendar";
  }
]
```

Example:

```
[
  {
    columns = [
      {
```

```
              size = "full";
              widgets = [
                {
                  type = "calendar";
                }
                {
                  location = {
                    _secret = "/var/lib/secrets/glance/location";
                  };
                  type = "weather";
                }
              ];
            }
          ];
          name = "Home";
        }
      ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glance.nix>

services.glance.settings.server.host
Glance bind address

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glance.nix>

services.glance.settings.server.port
Glance port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Example:

```
5678
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glance.nix>

services.glances.enable
Whether to enable Glances.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/glances.nix>

services.glances.package
The glances package to use.

Type: package

Default:

```
pkgs.glances
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/glances.nix>

services.glances.extraArgs
Extra command−line arguments to pass to glances.

See **https://glances.readthedocs.io/en/latest/cmds.html** for all available options.

Type: list of string

Default:

```
[
  "−−webserver"
]
```

Example:

```
[
  "−−webserver"
  "−−disable−webui"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/glances.nix>

services.glances.openFirewall
Open port in the firewall for glances.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/glances.nix>

services.glances.port
Port the server will isten on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
61208
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/glances.nix>

services.glitchtip.enable

Whether to enable GlitchTip.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/glitchtip.nix>

services.glitchtip.package

The glitchtip package to use.

Type: package

Default:

```
pkgs.glitchtip
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/glitchtip.nix>

services.glitchtip.database.createLocally

Whether to enable and configure a local PostgreSQL database server.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/glitchtip.nix>

services.glitchtip.environmentFiles

Files to load environment variables from in addition to **services.glitchtip.settings**. This is useful to avoid putting secrets into the nix store. See **https://glitchtip.com/documentation/install#configuration** for more information.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/run/secrets/glitchtip.env"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/glitchtip.nix>

services.glitchtip.group

The group under which GlitchTip runs.

Type: string

Default:

```
"glitchtip"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glitchtip.nix>

services.glitchtip.nginx.createLocally
Whether to enable and configure a local Nginx server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glitchtip.nix>

services.glitchtip.nginx.domain
Domain under which GlitchTip will be reachable. In contrast to ‘settings.GLITCHTIP_DOMAIN’ this option has no protocol. It will also set ‘settings.GLITCHTIP_DOMAIN’ with the ‘https://’ protocol.

Type: string

Example:

```
"glitchtip.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glitchtip.nix>

services.glitchtip.redis.createLocally
Whether to enable and configure a local Redis instance.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glitchtip.nix>

services.glitchtip.settings
Configuration of GlitchTip. See **https://glitchtip.com/documentation/install#configuration** for more information and required settings.

Type: open submodule of attribute set of (string or signed integer or boolean)

Default:

```
{
  DEBUG = 0;
  DEBUG_TOOLBAR = 0;
  DATABASE_URL = lib.mkIf config.services.glitchtip.database.create \
Locally "postgresql://@/glitchtip";
  GLITCHTIP_DOMAIN = lib.mkIf config.services.glitchtip.nginx.creat \
eLocally "https://${config.services.glitchtip.nginx.domain}";
  GLITCHTIP_VERSION = config.services.glitchtip.package.version;
  GRANIAN_HOST = "127.0.0.1";
  GRANIAN_PORT = 8000;
  GRANIAN_STATIC_PATH_MOUNT = "${config.services.glitchtip.package} \
/lib/glitchtip/static";
  GRANIAN_WORKERS = 1;
  PYTHONUNBUFFERED = 1;
  REDIS_URL = lib.mkIf config.services.glitchtip.redis.createLocall \
y "unix://${config.services.redis.servers.glitchtip.unixSocket}";
```

```
}
```

Example:

```
{
  DATABASE_URL = "postgres://postgres:postgres@postgres/postgres";
  GLITCHTIP_DOMAIN = "https://glitchtip.example.com";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glitchtip.nix>

services.glitchtip.settings.ENABLE_OBSERVABILITY_API
Whether to enable the Prometheus metrics endpoint.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glitchtip.nix>

services.glitchtip.settings.ENABLE_ORGANIZATION_CREATION
When false, only superusers will be able to create new organizations after the first. When true, any user can create a new organization.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glitchtip.nix>

services.glitchtip.settings.ENABLE_USER_REGISTRATION
When true, any user will be able to register. When false, user self−signup is disabled after the first user is registered. Subsequent users must be created by a superuser on the backend and organization invitations may only be sent to existing users.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glitchtip.nix>

services.glitchtip.settings.GLITCHTIP_DOMAIN
The URL under which GlitchTip is externally reachable.

Type: null or string

Default:

```
null
```

Example:

```
"https://glitchtip.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glitchtip.nix>

services.glitchtip.settings.GLITCHTIP_ENABLE_MCP
Whether to enable the MCP api.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glitchtip.nix>

services.glitchtip.settings.GRANIAN_WORKERS
Number of granian workers to start

Type: positive integer, meaning >0

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glitchtip.nix>

services.glitchtip.stateDir
State directory of glitchtip.

Type: absolute path

Default:

```
"/var/lib/glitchtip"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glitchtip.nix>

services.glitchtip.user
The user account under which GlitchTip runs.

Type: string

Default:

```
"glitchtip"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/glitchtip.nix>

services.glpiAgent.enable
Whether to enable GLPI Agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/glpi−agent.nix>

services.glpiAgent.package

The glpi−agent package to use.

Type: package

Default:

```
pkgs.glpi−agent
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/glpi−agent.nix>

services.glpiAgent.settings

GLPI Agent configuration options. See **https://glpi−agent.readthedocs.io/en/latest/configuration.html** for all available options.

The ‘server’ option is mandatory and must point to your GLPI server.

Type: attribute set of (boolean or signed integer or string or list of string)

Default:

```
{ }
```

Example:

```
{
  server = [ "https://glpi.example.com/inventory" ];
  delaytime = 3600;
  tag = "production";
  logger = [ "stderr" "file" ];
  debug = 1;
  "no−category" = [ "printer" "software" ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/glpi−agent.nix>

services.glpiAgent.stateDir

Directory where GLPI Agent stores its state.

Type: string

Default:

```
"/var/lib/glpi−agent"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/glpi−agent.nix>

services.glusterfs.enable

Whether to enable GlusterFS Daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/glusterfs.nix>

services.glusterfs.enableGlustereventsd

Whether to enable the GlusterFS Events Daemon

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/glusterfs.nix>

services.glusterfs.extraFlags

Extra flags passed to the GlusterFS daemon

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/glusterfs.nix>

services.glusterfs.killMode

The systemd KillMode to use for glusterd.

glusterd spawns other daemons like gsyncd. If you want these to stop when glusterd is stopped (e.g. to ensure that NixOS config changes are reflected even for these sub−daemons), set this to ‘control−group’. If however you want running volume processes (glusterfsd) and thus gluster mounts not be interrupted when glusterd is restarted (for example, when you want to restart them manually at a later time), set this to ‘process’.

Type: one of “control−group”, “process”, “mixed”, “none”

Default:

```
"control-group"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/glusterfs.nix>

services.glusterfs.logLevel

Log level used by the GlusterFS daemon

Type: one of “DEBUG”, “INFO”, “WARNING”, “ERROR”, “CRITICAL”, “TRACE”, “NONE”

Default:

```
"INFO"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/glusterfs.nix>

services.glusterfs.stopKillTimeout

The systemd TimeoutStopSec to use.

After this time after having been asked to shut down, glusterd (and depending on the killMode setting also its child processes) are killed by systemd.

The default is set low because GlusterFS (as of 3.10) is known to not tell its children (like gsyncd) to terminate at all.

Type: string

Default:

```
"5s"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/glusterfs.nix>

services.glusterfs.tlsSettings
Make the server communicate via TLS. This means it will only connect to other gluster servers having certificates signed by the same CA.

Enabling this will create a file */var/lib/glusterd/secure−access*. Disabling will delete this file again.

See also: **https://gluster.readthedocs.io/en/latest/Administrator Guide/SSL/**

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/glusterfs.nix>

services.glusterfs.tlsSettings.caCert
Path certificate authority used to sign the cluster certificates.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/glusterfs.nix>

services.glusterfs.tlsSettings.tlsKeyPath
Path to the private key used for TLS.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/glusterfs.nix>

services.glusterfs.tlsSettings.tlsPem
Path to the certificate used for TLS.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/glusterfs.nix>

services.glusterfs.useRpcbind
Enable use of rpcbind. This is required for Gluster's NFS functionality.

You may want to turn it off to reduce the attack surface for DDoS reflection attacks.

See **https://davelozier.com/glusterfs−and−rpcbind−portmap−ddos−reflection−attacks/** and **https://bugzilla.redhat.com/show_bug.cgi?id=1426842** for details.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/glusterfs.nix>

services.gmediarender.enable
Whether to enable the gmediarender DLNA renderer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/gmediarender.nix>

services.gmediarender.package
The gmediarender package to use.

Type: package

Default:

```
pkgs.gmrender-resurrect
```

Declared by:
<nixpkgs/nixos/modules/services/audio/gmediarender.nix>

services.gmediarender.audioDevice
The audio device to use.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/audio/gmediarender.nix>

services.gmediarender.audioSink
The audio sink to use.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/audio/gmediarender.nix>

services.gmediarender.friendlyName
A “friendly name” for identifying the endpoint.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/audio/gmediarender.nix>

services.gmediarender.initialVolume
A default volume attenuation (in dB) for the endpoint.

Type: null or signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/audio/gmediarender.nix>

services.gmediarender.port

Port that will be used to accept client connections.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/audio/gmediarender.nix>

services.gmediarender.uuid

A UUID for uniquely identifying the endpoint. If you have multiple renderers on your network, you MUST set this.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/audio/gmediarender.nix>

services.gnome.at−spi2−core.enable

Whether to enable at−spi2−core, a service for the Assistive Technologies available on the GNOME platform.

Enable this if you get the error or warning ‘The name org.a11y.Bus was not provided by any .service files’.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/desktops/gnome/at−spi2−core.nix>

services.gnome.core−apps.enable

Whether to enable GNOME core apps.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/desktop−managers/gnome.nix>

services.gnome.core−developer−tools.enable

Whether to enable GNOME core developer tools.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/gnome.nix>

services.gnome.core−os−services.enable
Whether to enable essential services for GNOME3.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/gnome.nix>

services.gnome.core−shell.enable
Whether to enable GNOME Shell services.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktop−managers/gnome.nix>

services.gnome.evolution−data−server.enable
Whether to enable Evolution Data Server, a collection of services for storing addressbooks and calendars.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/evolution−data−server.nix>

services.gnome.evolution−data−server.plugins
Plugins for Evolution Data Server.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/evolution−data−server.nix>

services.gnome.games.enable
Whether to enable GNOME games.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktop-managers/gnome.nix>

services.gnome.gcr-ssh-agent.enable
Whether to enable GCR SSH agent.

Type: boolean

Default:

```
config.services.gnome.gnome-keyring.enable
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/gcr-ssh-agent.nix>

services.gnome.gcr-ssh-agent.package
The GCR package to use.

Type: package

Default:

```
pkgs.gcr_4
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/gcr-ssh-agent.nix>

services.gnome.glib-networking.enable
Whether to enable network extensions for GLib.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/glib-networking.nix>

services.gnome.gnome-browser-connector.enable
Whether to enable native host connector for the GNOME Shell browser extension, a DBus service allowing to install GNOME Shell extensions from a web browser .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/gnome-browser-connector.nix>

services.gnome.gnome−initial−setup.enable
Whether to enable GNOME Initial Setup, a Simple, easy, and safe way to prepare a new system.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/gnome−initial−setup.nix>

services.gnome.gnome−keyring.enable
Whether to enable GNOME Keyring daemon, a service designed to take care of the user's security credentials, such as user names and passwords .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/gnome−keyring.nix>

services.gnome.gnome−online−accounts.enable
Whether to enable GNOME Online Accounts daemon, a service that provides a single sign−on framework for the GNOME desktop.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/gnome−online−accounts.nix>

services.gnome.gnome−remote−desktop.enable
Whether to enable Remote Desktop support using Pipewire.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/gnome−remote−desktop.nix>

services.gnome.gnome−settings−daemon.enable
Whether to enable GNOME Settings Daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/gnome−settings−daemon.nix>

services.gnome.gnome−software.enable
Whether to enable GNOME Software, package manager for GNOME.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/gnome−software.nix>

services.gnome.gnome−user−share.enable
Whether to enable GNOME User Share, a user−level file sharing service for GNOME.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/gnome−user−share.nix>

services.gnome.localsearch.enable
Whether to enable LocalSearch, indexing services for TinySPARQL search engine and metadata storage system.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/localsearch.nix>

services.gnome.rygel.enable
Whether to enable Rygel UPnP Mediaserver.

You will need to also allow UPnP connections in firewall, see the following **comment**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/rygel.nix>

services.gnome.rygel.package
The rygel package to use.

Type: package

Default:

```
pkgs.rygel
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/rygel.nix>

services.gnome.sushi.enable
Whether to enable Sushi, a quick previewer for nautilus.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/sushi.nix>

services.gnome.tinysparql.enable
Whether to enable TinySPARQL services, a search engine, search tool and metadata storage system.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gnome/tinysparql.nix>

services.gns3-server.enable
Whether to enable GNS3 Server daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gns3-server.nix>

services.gns3-server.package
The gns3-server package to use.

Type: package

Default:

```
pkgs.gns3-server
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gns3-server.nix>

services.gns3−server.auth.enable

Whether to enable password based HTTP authentication to access the GNS3 Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/gns3−server.nix>

services.gns3−server.auth.passwordFile

A file containing the password to access the GNS3 Server.

Warning
This should be a string, not a nix path, since nix paths are copied into the world−readable nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/gns3−server−password"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/gns3−server.nix>

services.gns3−server.auth.user

Username used to access the GNS3 Server.

Type: null or string

Default:

```
null
```

Example:

```
"gns3"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/gns3−server.nix>

services.gns3−server.dynamips.enable

Whether to enable Dynamips support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/gns3−server.nix>

services.gns3-server.dynamips.package
The dynamips package to use.

Type: package

Default:

```
pkgs.dynamips
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gns3-server.nix>

services.gns3-server.log.debug
Whether to enable debug logging.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gns3-server.nix>

services.gns3-server.log.file
Path of the file GNS3 Server should log to.

Type: null or absolute path

Default:

```
"/var/log/gns3/server.log"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gns3-server.nix>

services.gns3-server.settings
The global options in ‘config’ file in ini format.

Refer to **https://docs.gns3.com/docs/using-gns3/administration/gns3-server-configuration-file/** for all available options.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  host = "127.0.0.1";
  port = 3080;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gns3-server.nix>

services.gns3-server.ssl.enable
Whether to enable SSL encryption.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gns3-server.nix>

services.gns3-server.ssl.certFile
Path to the SSL certificate file. This certificate will be offered to, and may be verified by, clients.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/gns3/ssl/server.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gns3-server.nix>

services.gns3-server.ssl.keyFile
Private key file for the certificate.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/gns3/ssl/server.key"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gns3-server.nix>

services.gns3-server.ubridge.enable
Whether to enable uBridge support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gns3-server.nix>

services.gns3-server.ubridge.package
The ubridge package to use.

Type: package

Default:

```
pkgs.ubridge
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gns3−server.nix>

services.gns3−server.vpcs.enable
Whether to enable VPCS support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gns3−server.nix>

services.gns3−server.vpcs.package
The vpcs package to use.

Type: package

Default:

```
pkgs.vpcs
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gns3−server.nix>

services.gnunet.enable
Whether to run the GNUnet daemon. GNUnet is GNU's anonymous peer−to−peer communication and file sharing framework.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gnunet.nix>

services.gnunet.package
The gnunet package to use.

Type: package

Default:

```
pkgs.gnunet
```

Example:

```
gnunet_git
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gnunet.nix>

services.gnunet.extraOptions
Additional options that will be copied verbatim in *gnunet.conf*. See **gnunet.conf**(5) for details.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gnunet.nix>

services.gnunet.fileSharing.quota
Maximum file system usage (in MiB) for file sharing.

Type: signed integer

Default:

```
1024
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gnunet.nix>

services.gnunet.load.hardNetUpBandwidth
Hard bandwidth limit (in bits per second) when uploading data.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/gnunet.nix>

services.gnunet.load.maxNetDownBandwidth
Maximum bandwidth usage (in bits per second) for GNUnet when downloading data.

Type: signed integer

Default:

```
50000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gnunet.nix>

services.gnunet.load.maxNetUpBandwidth
Maximum bandwidth usage (in bits per second) for GNUnet when downloading data.

Type: signed integer

Default:

```
50000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gnunet.nix>

services.gnunet.tcp.port
The TCP port for use by GNUnet.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2086
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gnunet.nix>

services.gnunet.udp.port
The UDP port for use by GNUnet.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2086
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gnunet.nix>

services.go−autoconfig.enable
Whether to enable IMAP/SMTP autodiscover feature for mail clients.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/go−autoconfig.nix>

services.go−autoconfig.settings
Configuration for go−autoconfig. See **https://github.com/L11R/go−autoconfig/blob/master/config.yml** for more information.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
{
  service_addr = ":1323";
  domain = "autoconfig.example.org";
  imap = {
    server = "example.org";
    port = 993;
  };
  smtp = {
    server = "example.org";
    port = 465;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/go−autoconfig.nix>

services.go−camo.enable
Whether to enable go−camo service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/go−camo.nix>

services.go−camo.extraOptions
Extra options passed to the go−camo command.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/go−camo.nix>

services.go−camo.keyFile
A file containing the HMAC key to use for signing URLs. The file can contain any string. Can be generated using “openssl rand −base64 18 > the_file”.

Type: absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/go−camo.nix>

services.go−camo.listen
Address:Port to bind to for HTTP (default: 0.0.0.0:8080).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/go−camo.nix>

services.go−camo.sslCert
Path to TLS certificate.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/go−camo.nix>

services.go−camo.sslKey
Path to TLS private key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/go−camo.nix>

services.go−camo.sslListen
Address:Port to bind to for HTTPS.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/go-camo.nix>

services.go-csp-collector.enable
Whether to enable go-csp-collector, a content security policy violation collector.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/go-csp-collector.nix>

services.go-csp-collector.package
The go-csp-collector package to use.

Type: package

Default:

```
pkgs.go-csp-collector
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/go-csp-collector.nix>

services.go-csp-collector.settings
Settings for go-csp-collector. See **https://github.com/jacobbednarz/go-csp-collector** for supported options.

Type: open submodule of attribute set of (boolean or absolute path or string)

Default:

```
{ }
```

Example:

```
{
  debug = true;
  health-check-path = "/health";
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/go-csp-collector.nix>

services.go-csp-collector.settings.output-format
Define how the violation reports are formatted for output.

Type: one of “text”, “json”

Default:

```
"text"
```

Example:

```
"text"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/go-csp-collector.nix>

services.go−csp−collector.settings.port

The port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Example:

```
8080
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/go−csp−collector.nix>

services.go−httpbin.enable

Whether to enable go−httpbin.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/go−httpbin.nix>

services.go−httpbin.package

The go−httpbin package to use.

Type: package

Default:

```
pkgs.go−httpbin
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/go−httpbin.nix>

services.go−httpbin.settings

Configuration of go−httpbin. See **https://github.com/mccutchen/go−httpbin#configuration** for a list of options.

Type: open submodule of attribute set of (string or signed integer or boolean)

Example:

```
{
  HOST = "0.0.0.0";
  PORT = 8080;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/go−httpbin.nix>

services.go−httpbin.settings.HOST

The host to listen on.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/go−httpbin.nix>

services.go−httpbin.settings.PORT
The port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Example:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/go−httpbin.nix>

services.go−neb.enable
Whether to enable an extensible matrix bot written in Go.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/go−neb.nix>

services.go−neb.baseUrl
Public−facing endpoint that can receive webhooks.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/go−neb.nix>

services.go−neb.bindAddress
Port (and optionally address) to listen on.

Type: string

Default:

```
":4050"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/go−neb.nix>

services.go−neb.config
Your *config.yaml* as a Nix attribute set. See **config.sample.yaml** for possible options.

Type: YAML 1.1 value

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/go−neb.nix>

services.go−neb.secretFile

Environment variables from this file will be interpolated into the final config file using envsubst with this syntax: '$ENVIRONMENT' or '${VARIABLE}'. The file should contain lines formatted as 'SECRET_VAR=SECRET_VALUE'. This is useful to avoid putting secrets into the nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/go−neb.env"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/go−neb.nix>

services.go−shadowsocks2.server.enable

Whether to enable go−shadowsocks2 server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/go−shadowsocks2.nix>

services.go−shadowsocks2.server.listenAddress

Server listen address or URL

Type: string

Example:

```
"ss://AEAD_CHACHA20_POLY1305:your−password@:8488"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/go−shadowsocks2.nix>

services.go2rtc.enable

Whether to enable go2rtc streaming server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/video/go2rtc/default.nix>

services.go2rtc.package

The go2rtc package to use.

Type: package

Default:

```
pkgs.go2rtc
```

Declared by:
<nixpkgs/nixos/modules/services/video/go2rtc/default.nix>

services.go2rtc.settings
go2rtc configuration as a Nix attribute set.

See the **wiki** for possible configuration options.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/video/go2rtc/default.nix>

services.go2rtc.settings.api.listen
API listen address, conforming to a Go address string.

Type: string

Default:

```
":1984"
```

Example:

```
"127.0.0.1:1984"
```

Declared by:
<nixpkgs/nixos/modules/services/video/go2rtc/default.nix>

services.go2rtc.settings.ffmpeg.bin
The ffmpeg package to use for transcoding.

Type: absolute path

Default:

```
lib.getExe pkgs.ffmpeg-headless
```

Declared by:
<nixpkgs/nixos/modules/services/video/go2rtc/default.nix>

services.go2rtc.settings.streams
Stream source configuration. Multiple source types are supported.

Check the **configuration reference** for possible options.

Type: attribute set of (string or list of string)

Default:

```
{ }
```

Example:

```
{
  cam1 = "onvif://admin:password@192.168.1.123:2020";
  cam2 = "tcp://192.168.1.123:12345";
}
```

Declared by:
<nixpkgs/nixos/modules/services/video/go2rtc/default.nix>

services.goatcounter.enable
Whether to enable goatcounter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/goatcounter.nix>

services.goatcounter.package
The goatcounter package to use.

Type: package

Default:

```
pkgs.goatcounter
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/goatcounter.nix>

services.goatcounter.address
Web interface address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/goatcounter.nix>

services.goatcounter.extraArgs
List of extra arguments to be passed to goatcounter cli. See **goatcounter help serve** for more information.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/goatcounter.nix>

services.goatcounter.port
Web interface port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8081
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/goatcounter.nix>

services.goatcounter.proxy

Whether Goatcounter service is running behind a reverse proxy. Will listen for HTTPS if ‘false’. Refer to **documentation** for more details.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/goatcounter.nix>

services.gobgpd.enable

Whether to enable GoBGP Routing Daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/gobgpd.nix>

services.gobgpd.settings

GoBGP configuration. Refer to **https://github.com/osrg/gobgp#documentation** for details on supported values.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  global = {
    config = {
      as = 64512;
      router−id = "192.168.255.1";
    };
  };
  neighbors = [
    {
      config = {
        neighbor−address = "10.0.255.1";
        peer−as = 65001;
      };
    }
    {
      config = {
        neighbor−address = "10.0.255.2";
        peer−as = 65002;
      };
    }
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gobgpd.nix>

services.gocd−agent.enable
Whether to enable gocd−agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gocd−agent/default.nix>

services.gocd−agent.packages
Packages to add to PATH for the Go.CD agent process.

Type: list of package

Default:

```
[ pkgs.stdenv pkgs.jre pkgs.git config.programs.ssh.package pkgs.ni \
x ]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gocd−agent/default.nix>

services.gocd−agent.agentConfig
Agent registration configuration.

Type: string

Default:

```
""
```

Example:

```
agent.auto.register.resources=ant,java
agent.auto.register.environments=QA,Performance
agent.auto.register.hostname=Agent01
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gocd−agent/default.nix>

services.gocd−agent.environment
Additional environment variables to be passed to the Go.CD agent process. As a base environment, Go.CD agent receives NIX_PATH from **environment.sessionVariables**, NIX_REMOTE is set to “daemon”.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gocd−agent/default.nix>

services.gocd−agent.extraGroups

List of extra groups that the “gocd−agent” user should be a part of.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "wheel"
  "docker"
]
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/gocd−agent/default.nix>

services.gocd−agent.extraOptions

Specifies additional command line arguments to pass to Go.CD agent java process. Example contains debug and gcLog arguments.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−X debug"
  "−Xrunjdwp:transport=dt_socket,server=y,suspend=n,address=5006"
  "−verbose:gc"
  "−Xloggc:go−agent−gc.log"
  "−XX:+PrintGCTimeStamps"
  "−XX:+PrintTenuringDistribution"
  "−XX:+PrintGCDetails"
  "−XX:+PrintGC"
]
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/gocd−agent/default.nix>

services.gocd−agent.goServer

URL of the GoCD Server to attach the Go.CD Agent to.

Type: string

Default:

```
"https://127.0.0.1:8154/go"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/gocd−agent/default.nix>

services.gocd−agent.group

If the default user “gocd−agent” is configured then this is the primary group of that user.

Type: string

Default:

```
"gocd−agent"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gocd-agent/default.nix>

services.gocd-agent.initialJavaHeapSize
Specifies the initial java heap memory size for the Go.CD agent java process.

Type: string

Default:

```
"128m"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gocd-agent/default.nix>

services.gocd-agent.maxJavaHeapMemory
Specifies the java maximum heap memory size for the Go.CD agent java process.

Type: string

Default:

```
"256m"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gocd-agent/default.nix>

services.gocd-agent.startupOptions
Specifies startup command line arguments to pass to Go.CD agent java process.

Type: list of string

Default:

```
[
  "-Xms${config.services.gocd-agent.initialJavaHeapSize}"
  "-Xmx${config.services.gocd-agent.maxJavaHeapMemory}"
  "-Djava.io.tmpdir=/tmp"
  "-Dcruise.console.publish.interval=10"
  "-Djava.security.egd=file:/dev/./urandom"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gocd-agent/default.nix>

services.gocd-agent.user
User the Go.CD agent should execute under.

Type: string

Default:

```
"gocd-agent"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/gocd-agent/default.nix>

services.gocd-agent.workDir
Specifies the working directory in which the Go.CD agent java archive resides.

Type: string

Default:

```
"/var/lib/go-agent"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gocd−agent/default.nix>

services.gocd−server.enable
Whether to enable gocd−server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gocd−server/default.nix>

services.gocd−server.packages
Packages to add to PATH for the Go.CD server's process.

Type: list of package

Default:

```
[ pkgs.stdenv pkgs.jre pkgs.git config.programs.ssh.package pkgs.ni \
x ]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gocd−server/default.nix>

services.gocd−server.environment
Additional environment variables to be passed to the gocd−server process. As a base environment, gocd−server receives NIX_PATH from **environment.sessionVariables**, NIX_REMOTE is set to "daemon".

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gocd−server/default.nix>

services.gocd−server.extraGroups
List of extra groups that the "gocd−server" user should be a part of.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "wheel"
  "docker"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gocd−server/default.nix>

services.gocd−server.extraOptions

Specifies additional command line arguments to pass to Go.CD server's java process. Example contains debug and gcLog arguments.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−X debug"
  "−Xrunjdwp:transport=dt_socket,server=y,suspend=n,address=5005"
  "−verbose:gc"
  "−Xloggc:go−server−gc.log"
  "−XX:+PrintGCTimeStamps"
  "−XX:+PrintTenuringDistribution"
  "−XX:+PrintGCDetails"
  "−XX:+PrintGC"
]
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/gocd−server/default.nix>

services.gocd−server.group

If the default user "gocd−server" is configured then this is the primary group of that user.

Type: string

Default:

```
"gocd−server"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/gocd−server/default.nix>

services.gocd−server.initialJavaHeapSize

Specifies the initial java heap memory size for the Go.CD server's java process.

Type: string

Default:

```
"512m"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/gocd−server/default.nix>

services.gocd−server.listenAddress

Specifies the bind address on which the Go.CD server HTTP interface listens.

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/gocd−server/default.nix>

services.gocd−server.maxJavaHeapMemory

Specifies the java maximum heap memory size for the Go.CD server's java process.

Type: string

Default:

```
"1024m"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/gocd−server/default.nix>

services.gocd−server.port

Specifies port number on which the Go.CD server HTTP interface listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8153
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/gocd−server/default.nix>

services.gocd−server.sslPort

Specifies port number on which the Go.CD server HTTPS interface listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8154
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/gocd−server/default.nix>

services.gocd−server.startupOptions

Specifies startup command line arguments to pass to Go.CD server java process.

Type: list of string

Default:

```
[
  "−Xms${config.services.gocd−server.initialJavaHeapSize}"
  "−Xmx${config.services.gocd−server.maxJavaHeapMemory}"
  "−Dcruise.listen.host=${config.services.gocd−server.listenAddre \
ss}"
  "−Duser.language=en"
  "−Djruby.rack.request.size.threshold.bytes=30000000"
  "−Duser.country=US"
  "−Dcruise.config.dir=${config.services.gocd−server.workDir}/con \
f"
  "−Dcruise.config.file=${config.services.gocd−server.workDir}/co \
nf/cruise−config.xml"
  "−Dcruise.server.port=${toString config.services.gocd−server.po \
rt}"
  "−Dcruise.server.ssl.port=${toString config.services.gocd−serve \
r.sslPort}"
  "−−add−opens=java.base/java.lang=ALL−UNNAMED"
  "−−add−opens=java.base/java.util=ALL−UNNAMED"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gocd−server/default.nix>

services.gocd−server.user
User the Go.CD server should execute under.

Type: string

Default:

```
"gocd−server"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gocd−server/default.nix>

services.gocd−server.workDir
Specifies the working directory in which the Go.CD server java archive resides.

Type: string

Default:

```
"/var/lib/go−server"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/gocd−server/default.nix>

services.godns.enable
Whether to enable GoDNS service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/godns.nix>

services.godns.package
The godns package to use.

Type: package

Default:

```
pkgs.godns
```

Declared by:
<nixpkgs/nixos/modules/services/networking/godns.nix>

services.godns.loadCredential
This can be used to pass secrets to the systemd service without adding them to the nix store.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "login_token:/path/to/login_token"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/godns.nix>

services.godns.settings
Configuration for GoDNS. Refer to the **configuration section** in the GoDNS GitHub repository for details.

Type: open submodule of (YAML 1.1 value)

Example:

```
{
  domains = [
    {
      domain_name = "example.com";
      sub_domains = [
        "foo"
      ];
    }
  ];
  interval = 300;
  ip_type = "IPv6";
  ipv6_urls = [
    "https://api6.ipify.org"
    "https://ip2location.io/ip"
    "https://v6.ipinfo.io/ip"
  ];
  login_token_file = "$CREDENTIALS_DIRECTORY/login_token";
  provider = "Cloudflare";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/godns.nix>

services.goeland.enable
Whether to enable goeland, an alternative to rss2email.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/goeland.nix>

services.goeland.schedule
How often to run goeland, in systemd time format.

Type: string

Default:

```
"12h"
```

Example:

```
"Mon, 00:00:00"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/goeland.nix>

services.goeland.settings
Configuration of goeland. See the **example config file** for the available options.

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/goeland.nix>

services.goeland.stateDir
The data directory for goeland where the database will reside if using the unseen filter. If left as the default value this directory will automatically be created before the goeland server starts, otherwise you are responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: absolute path

Default:

```
"/var/lib/goeland"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/goeland.nix>

services.gokapi.enable
Whether to enable Lightweight selfhosted Firefox Send alternative without public upload.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gokapi.nix>

services.gokapi.package
The gokapi package to use.

Type: package

Default:

```
pkgs.gokapi
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gokapi.nix>

services.gokapi.environment
Environment variables to be set for the gokapi service. Can use systemd specifiers. For full list see **https://gokapi.readthedocs.io/en/latest/advanced.html#environment-variables**.

Type: open submodule of attribute set of (string or signed integer)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gokapi.nix>

services.gokapi.environment.GOKAPI_CONFIG_DIR
Sets the directory for the config file.

Type: string

Default:

```
"%S/gokapi/config"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gokapi.nix>

services.gokapi.environment.GOKAPI_CONFIG_FILE
Sets the filename for the config file.

Type: string

Default:

```
"config.json"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gokapi.nix>

services.gokapi.environment.GOKAPI_DATA_DIR
Sets the directory for the data.

Type: string

Default:

```
"%S/gokapi/data"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gokapi.nix>

services.gokapi.environment.GOKAPI_PORT
Sets the port of the service.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
53842
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gokapi.nix>

services.gokapi.mutableSettings
Allow changes to the program config made by the program to persist between restarts. If disabled all required values must be set using nix, and all changes to config format over application updates must be resolved by user.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gokapi.nix>

services.gokapi.settings

Configuration settings for the generated config json file. See **https://gokapi.readthedocs.io/en/latest/advanced.html#config−json** for more information

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/gokapi.nix>

services.gokapi.settingsFile

Path to config file to parse and append to settings. Largely useful for loading secrets from a file not in the nix store. Can use systemd specifiers. See **https://gokapi.readthedocs.io/en/latest/advanced.html#config−json** for more information

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/gokapi.nix>

services.gollum.enable

Whether to enable Gollum, a git−powered wiki service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gollum.nix>

services.gollum.package

The gollum package to use.

Type: package

Default:

```
pkgs.gollum
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gollum.nix>

services.gollum.address

IP address on which the web server will listen.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gollum.nix>

services.gollum.allowUploads
Enable uploads of external files

Type: null or one of “dir”, “page”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gollum.nix>

services.gollum.branch
Git branch to serve

Type: string

Default:

```
"master"
```

Example:

```
"develop"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gollum.nix>

services.gollum.emoji
Parse and interpret emoji tags

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gollum.nix>

services.gollum.extraConfig
Content of the configuration file

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
wiki_options = {
  show_local_time: true
}

Precious::App.set(:wiki_options, wiki_options)
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gollum.nix>

services.gollum.group
Specifies the owner group of the wiki directory

Type: string

Default:

```
"gollum"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gollum.nix>

services.gollum.h1−title
Use the first h1 as page title

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gollum.nix>

services.gollum.math
Enable support for math rendering using KaTeX

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gollum.nix>

services.gollum.no−edit
Disable editing pages

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gollum.nix>

services.gollum.port
Port on which the web server will run.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4567
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gollum.nix>

services.gollum.stateDir
Specifies the path of the repository directory. If it does not exist, Gollum will create it on startup.

Type: absolute path

Default:

```
"/var/lib/gollum"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gollum.nix>

services.gollum.user
Specifies the owner of the wiki directory

Type: string

Default:

```
"gollum"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gollum.nix>

services.gollum.user−icons
Enable specific user icons for history view

Type: null or one of “gravatar”, “identicon”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gollum.nix>

services.gonic.enable
Whether to enable Gonic music server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/gonic.nix>

services.gonic.package
The gonic package to use.

Type: package

Default:

```
pkgs.gonic
```

Declared by:
<nixpkgs/nixos/modules/services/audio/gonic.nix>

services.gonic.settings
Configuration for Gonic, see **https://github.com/sentriz/gonic#configuration−options** for supported values.

Type: attribute set of (atom (null, bool, int, float or string) or a list of them for duplicate keys)

Default:

```
{
  cache−path = "/var/cache/gonic";
  listen−addr = "127.0.0.1:4747";
  tls−cert = null;
  tls−key = null;
}
```

Example:

```
{
  music−path = [
    "/mnt/music"
  ];
  playlists−path = "/mnt/playlists";
```

```
  podcast-path = "/mnt/podcasts";
}
```

Declared by:
<nixpkgs/nixos/modules/services/audio/gonic.nix>

services.goss.enable
Whether to enable Goss daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/goss.nix>

services.goss.package
The goss package to use.

Type: package

Default:

```
pkgs.goss
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/goss.nix>

services.goss.environment
Environment variables to set for the goss service.

See **https://github.com/goss-org/goss/blob/master/docs/manual.md**

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  GOSS_FMT = "json";
  GOSS_LISTEN = ":8080";
  GOSS_LOGLEVEL = "FATAL";
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/goss.nix>

services.goss.settings
The global options in ‘config’ file in yaml format.

Refer to **https://github.com/goss-org/goss/blob/master/docs/goss-json-schema.yaml** for schema.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
{
```

```
      addr = {
        "tcp://localhost:8080" = {
          local-address = "127.0.0.1";
          reachable = true;
        };
      };
      service = {
        goss = {
          enabled = true;
          running = true;
        };
      };
    }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/goss.nix>

services.gotenberg.enable
Whether to enable Gotenberg, a stateless API for PDF files.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.enableBasicAuth
HTTP Basic Authentication.

If you set this, be sure to set 'GOTENBERG_API_BASIC_AUTH_USERNAME'and 'GOTENBERG_API_BASIC_AUTH_PASSWORD' in your 'services.gotenberg.environmentFile' file.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.package
The gotenberg package to use.

Type: package

Default:

```
pkgs.gotenberg
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.bindIP

Port the API listener should bind to. Set to 0.0.0.0 to listen on all available IPs.

Type: null or string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.bodyLimit

Sets the max limit for ‘multipart/form−data’ requests. Accepts values like ‘5M’, ‘20G’, etc.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.chromium.package

The chromium package to use.

Type: package

Default:

```
pkgs.chromium
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.chromium.autoStart

Automatically start Chromium when Gotenberg starts. If false, Chromium will start on the first conversion request that uses it.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.chromium.disableJavascript

Disable Javascript execution.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.chromium.disableRoutes

Disable all routes allowing Chromium−based conversion.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.chromium.maxQueueSize
Maximum queue size for chromium−based conversions. Setting to 0 disables the limit.

Type: unsigned integer, meaning >=0

Default:

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.downloadFrom.allowList
Allow these URLs to be used in the 'downloadFrom' API field. Accepts a regular expression.

Type: null or string

Default:

```
".*"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.downloadFrom.denyList
Deny accepting URLs from these domains in the 'downloadFrom' API field. Accepts a regular expression.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.downloadFrom.disable
Whether to disable the ability to download files for conversion from outside sources.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.downloadFrom.maxRetries
The maximum amount of times to retry downloading a file specified with 'downloadFrom'.

Type: unsigned integer, meaning >=0

Default:

```
4
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.environmentFile
Environment file to load extra environment variables from.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.extraArgs
Any extra command−line flags to pass to the Gotenberg service.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.extraFontPackages
Extra fonts to make available.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.libreoffice.package
The libreoffice package to use.

Type: package

Default:

```
pkgs.libreoffice
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.libreoffice.autoStart
Automatically start LibreOffice when Gotenberg starts. If false, LibreOffice will start on the first conversion request that uses it.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.libreoffice.disableRoutes
Disable all routes allowing LibreOffice−based conversion.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.libreoffice.maxQueueSize

Maximum queue size for LibreOffice−based conversions. Setting to 0 disables the limit.

Type: unsigned integer, meaning >=0

Default:

Declared by:

<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.libreoffice.restartAfter

Restart LibreOffice after this many conversions. Setting to 0 disables this feature.

Type: unsigned integer, meaning >=0

Default:

```
10
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.logLevel

The logging level for Gotenberg.

Type: one of “error”, “warn”, “info”, “debug”

Default:

```
"info"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.pdfEngines.convert

PDF Engines to use for converting files.

Type: list of value “libreoffice−pdfengine” (singular enum)

Default:

```
[
  "libreoffice-pdfengine"
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.pdfEngines.disableRoutes

Disable routes related to PDF engines.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.pdfEngines.merge

PDF Engines to use for merging files.

Type: list of (one of “qpdf”, “pdfcpu”, “pdftk”)

Default:

```
[
  "qpdf"
```

```
  "pdfcpu"
  "pdftk"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.pdfEngines.readMetadata
PDF Engines to use for reading metadata from files.

Type: list of value “exiftool” (singular enum)

Default:

```
[
  "exiftool"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.pdfEngines.writeMetadata
PDF Engines to use for writing metadata to files.

Type: list of value “exiftool” (singular enum)

Default:

```
[
  "exiftool"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.port
Port on which the API should listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.rootPath
Root path for the Gotenberg API.

Type: string

Default:

```
"/"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotenberg.timeout
Timeout for API requests.

Type: null or string

Default:

```
"30s"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gotenberg.nix>

services.gotify.enable
Whether to enable Gotify webserver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gotify−server.nix>

services.gotify.package
The gotify−server package to use.

Type: package

Default:

```
pkgs.gotify−server
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gotify−server.nix>

services.gotify.environment
Config environment variables for the gotify−server. See **https://gotify.net/docs/config** for more details.

Type: attribute set of (string or signed integer)

Default:

```
{ }
```

Example:

```
{
  GOTIFY_DATABASE_DIALECT = "sqlite3";
  GOTIFY_SERVER_PORT = 8080;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gotify−server.nix>

services.gotify.environmentFiles
Files containing additional config environment variables for gotify−server. Secrets should be set in environmentFiles instead of environment.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gotify−server.nix>

services.gotify.stateDirectoryName

The name of the directory below */var/lib* where gotify stores its runtime data.

Type: string

Default:

```
"gotify-server"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/gotify-server.nix>

services.gotosocial.enable

Whether to enable ActivityPub social network server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/gotosocial.nix>

services.gotosocial.package

The gotosocial package to use.

Type: package

Default:

```
pkgs.gotosocial
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/gotosocial.nix>

services.gotosocial.environmentFile

File path containing environment variables for configuring the GoToSocial service in the format of an EnvironmentFile as described by **systemd.exec**(5).

This option could be used to pass sensitive configuration to the GoToSocial daemon.

Please refer to the Environment Variables section in the **documentation**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/root/nixos/secrets/gotosocial.env"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/gotosocial.nix>

services.gotosocial.openFirewall

Open the configured port in the firewall. Using a reverse proxy instead is highly recommended.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gotosocial.nix>

services.gotosocial.settings
Contents of the GoToSocial YAML config.

Please refer to the **documentation** and **example config**.

Please note that the 'host' option cannot be changed later so it is important to configure this correctly before you start GoToSocial.

Type: YAML 1.1 value

Default:

```
{
  application−name = "gotosocial";
  bind−address = "127.0.0.1";
  db−address = "/var/lib/gotosocial/database.sqlite";
  db−type = "sqlite";
  port = 8080;
  protocol = "https";
  storage−local−base−path = "/var/lib/gotosocial/storage";
}
```

Example:

```
{
  application−name = "My GoToSocial";
  host = "gotosocial.example.com";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gotosocial.nix>

services.gotosocial.setupPostgresqlDB
Whether to setup a local postgres database and populate the 'db−type' fields in 'services.gotosocial.settings'.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/gotosocial.nix>

services.goupile.enable
Whether to enable Goupile server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/goupile.nix>

services.goupile.enableSandbox
Enable the sandbox option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/goupile.nix>

services.goupile.package
The goupile package to use.

Type: package

Default:

```
pkgs.goupile
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/goupile.nix>

services.goupile.configFile
The configuration file to be passed to goupile server.

By default the configuration file is created from ‘services.goupile.settings’.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/goupile.nix>

services.goupile.hostName
Nginx service name for goupile service.

Type: string

Default:

```
"goupile"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/goupile.nix>

services.goupile.settings
The options for ‘systemd.services.goupile’ in ini format.

The configuration options available can be found here https://github.com/Koromix/rygel/blob/goupile/3.11.1/src/goupile/server/admin.cc#L41

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  HTTP.Port = 8888;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/goupile.nix>

services.goupile.settings.Data.RootDirectory
Goupile's data directory.

Type: string

Default:

```
"/var/lib/goupile"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/goupile.nix>

services.goupile.settings.HTTP.Port
The port goupile runs on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8889
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/goupile.nix>

services.govee2mqtt.enable
Whether to enable Govee2MQTT.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/govee2mqtt.nix>

services.govee2mqtt.package
The govee2mqtt package to use.

Type: package

Default:

```
pkgs.govee2mqtt
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/govee2mqtt.nix>

services.govee2mqtt.environmentFile
Environment file as defined in **systemd.exec**(5).

See upstream documentation **https://github.com/wez/govee2mqtt/blob/main/docs/CONFIG.md**.

Type: absolute path

Example:

```
"/var/lib/govee2mqtt/govee2mqtt.env"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/govee2mqtt.nix>

services.govee2mqtt.group
Group under which Govee2MQTT should run.

Type: string

Default:

```
"govee2mqtt"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/govee2mqtt.nix>

services.govee2mqtt.user
User under which Govee2MQTT should run.

Type: string

Default:

```
"govee2mqtt"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/govee2mqtt.nix>

services.goxlr−utility.enable
Whether to enable goxlr−utility for controlling your TC−Helicon GoXLR or GoXLR Mini

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/audio/goxlr−utility.nix>

services.goxlr−utility.package
The goxlr−utility package to use.

Type: package

Default:

```
pkgs.goxlr−utility
```

Declared by:
<nixpkgs/nixos/modules/services/audio/goxlr−utility.nix>

services.goxlr−utility.autoStart.xdg
Start the daemon automatically using XDG autostart. Sets ‘xdg.autostart.enable = true’ if not already enabled.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/goxlr−utility.nix>

services.gpm.enable
Whether to enable GPM, the General Purpose Mouse daemon, which enables mouse support in virtual consoles.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/ttys/gpm.nix>

services.gpm.protocol
Mouse protocol to use.

Type: string

Default:

```
"ps/2"
```

Declared by:
<nixpkgs/nixos/modules/services/ttys/gpm.nix>

services.gpsd.enable
Whether to enable ‘gpsd’, a GPS service daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gpsd.nix>

services.gpsd.debugLevel
The debugging level.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/misc/gpsd.nix>

services.gpsd.devices
List of devices that ‘gpsd’ should subscribe to.

A device may be a local serial device for GPS input, or a URL of the form: ‘[{dgpsip|ntrip}://][user:passwd@]host[:port][/stream]’ in which case it specifies an input source for DGPS or ntrip data.

Type: list of string

Default:

```
[
  "/dev/ttyUSB0"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gpsd.nix>

services.gpsd.extraArgs
A list of extra command line arguments to pass to gpsd. Check **gpsd**(8) mangpage for possible arguments.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-r"
```

```
  "-s"
  "19200"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gpsd.nix>

services.gpsd.listenany
Listen on all addresses rather than just loopback.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gpsd.nix>

services.gpsd.nowait
don't wait for client connects to poll GPS

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gpsd.nix>

services.gpsd.port
The port where to listen for TCP connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2947
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gpsd.nix>

services.gpsd.readonly
Whether to enable the broken−device−safety, otherwise known as read−only mode. Some popular bluetooth and USB receivers lock up or become totally inaccessible when probed or reconfigured. This switch prevents gpsd from writing to a receiver. This means that gpsd cannot configure the receiver for optimal performance, but it also means that gpsd cannot break the receiver. A better solution would be for Bluetooth to not be so fragile. A platform independent method to identify serial−over−Bluetooth devices would also be nice.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/gpsd.nix>

services.grafana.enable
Whether to enable grafana.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.package
The grafana package to use.

Type: package

Default:

```
pkgs.grafana
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.dataDir
Data directory.

Type: absolute path

Default:

```
"/var/lib/grafana"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.declarativePlugins
If non−null, then a list of packages containing Grafana plugins to install. If set, plugins cannot be manually installed.

Keep in mind that this turns off drilldown: for this to work, you need to add ‘grafana−metricsdrilldown−app’, ‘grafana−lokiexplore−app’, ‘grafana−exploretraces−app’ and ‘grafana−pyroscope−app’ to this option.

Type: null or (list of absolute path)

Default:

```
null
```

Example:

```
with pkgs.grafanaPlugins; [ grafana−piechart−panel ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.openFirewall
Open the ports in the firewall for the server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.enable

Whether to enable provision.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.contactPoints.path

Path to YAML contact points configuration. Can't be used with **services.grafana.provision.alerting.contactPoints.settings** simultaneously. Can be either a directory or a single YAML file. Will end up in the store.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.contactPoints.settings

Grafana contact points configuration in Nix. Can't be used with **services.grafana.provision.alerting.contactPoints.path** simultaneously. See **https://grafana.com/docs/grafana/latest/administration/provisioning/#contact-points** for supported options.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  apiVersion = 1;
  contactPoints = [{
    orgId = 1;
    name = "cp_1";
    receivers = [{
      uid = "first_uid";
      type = "prometheus-alertmanager";
      settings.url = "http://test:9000";
    }];
  }];
  deleteContactPoints = [{
    orgId = 1;
    uid = "first_uid";
  }];
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.contactPoints.settings.apiVersion
Config file version.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.contactPoints.settings.contactPoints
List of contact points to import or update.

Type: list of (open submodule of (YAML 1.1 value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.contactPoints.settings.contactPoints.*.name
Name of the contact point. Required.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.contactPoints.settings.deleteContactPoints
List of receivers that should be deleted.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.contactPoints.settings.deleteContactPoints.*.orgId
Organization ID, default = 1.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.contactPoints.settings.deleteContactPoints.*.uid
Unique identifier for the receiver. Required.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.muteTimings.path

Path to YAML mute timings configuration. Can't be used with **services.grafana.provision.alerting.muteTimings.settings** simultaneously. Can be either a directory or a single YAML file. Will end up in the store.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.muteTimings.settings

Grafana mute timings configuration in Nix. Can't be used with **services.grafana.provision.alerting.muteTimings.path** simultaneously. See **https://grafana.com/docs/grafana/latest/administration/provisioning/#mute-timings** for supported options.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  apiVersion = 1;
  muteTimes = [{
    orgId = 1;
    name = "mti_1";
    time_intervals = [{
      times = [{
        start_time = "06:00";
        end_time = "23:59";
      }];
      weekdays = [
        "monday:wednesday"
        "saturday"
        "sunday"
      ];
      months = [
        "1:3"
        "may:august"
        "december"
      ];
      years = [
        "2020:2022"
        "2030"
      ];
      days_of_month = [
        "1:5"
        "-3:-1"
      ];
    }];
  }];
  deleteMuteTimes = [{
    orgId = 1;
```

```
    name = "mti_1";
  }];
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.muteTimings.settings.apiVersion
Config file version.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.muteTimings.settings.deleteMuteTimes
List of mute time intervals that should be deleted.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.muteTimings.settings.deleteMuteTimes.*.name
Name of the mute time interval, must be unique. Required.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.muteTimings.settings.deleteMuteTimes.*.orgId
Organization ID, default = 1.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.muteTimings.settings.muteTimes
List of mute time intervals to import or update.

Type: list of (open submodule of (YAML 1.1 value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.muteTimings.settings.muteTimes.*.name

Name of the mute time interval, must be unique. Required.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.policies.path

Path to YAML notification policies configuration. Can't be used with **services.grafana.provision.alerting.policies.settings** simultaneously. Can be either a directory or a single YAML file. Will end up in the store.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.policies.settings

Grafana notification policies configuration in Nix. Can't be used with **services.grafana.provision.alerting.policies.path** simultaneously. See **https://grafana.com/docs/grafana/latest/administration/provisioning/#notification-policies** for supported options.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  apiVersion = 1;
  policies = [{
    orgId = 1;
    receiver = "grafana-default-email";
    group_by = [ "..." ];
    matchers = [
      "alertname = Watchdog"
      "severity =~ \"warning|critical\""
    ];
    mute_time_intervals = [
      "abc"
    ];
    group_wait = "30s";
    group_interval = "5m";
    repeat_interval = "4h";
  }];
  resetPolicies = [
    1
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.policies.settings.apiVersion
Config file version.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.policies.settings.policies
List of contact points to import or update.

Type: list of (open submodule of (YAML 1.1 value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.policies.settings.resetPolicies
List of orgIds that should be reset to the default policy.

Type: list of signed integer

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.rules.path
Path to YAML rules configuration. Can't be used with **services.grafana.provision.alerting.rules.settings** simultaneously. Can be either a directory or a single YAML file. Will end up in the store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.rules.settings
Grafana rules configuration in Nix. Can't be used with **services.grafana.provision.alerting.rules.path** simultaneously. See **https://grafana.com/docs/grafana/latest/administration/provisioning/#rules** for supported options.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  apiVersion = 1;
  groups = [{
    orgId = 1;
    name = "my_rule_group";
    folder = "my_first_folder";
```

```
            interval = "60s";
            rules = [{
              uid = "my_id_1";
              title = "my_first_rule";
              condition = "A";
              data = [{
                refId = "A";
                datasourceUid = "-100";
                model = {
                  conditions = [{
                    evaluator = {
                      params = [ 3 ];
                      type = "git";
                    };
                    operator.type = "and";
                    query.params = [ "A" ];
                    reducer.type = "last";
                    type = "query";
                  }];
                  datasource = {
                    type = "__expr__";
                    uid = "-100";
                  };
                  expression = "1==0";
                  intervalMs = 1000;
                  maxDataPoints = 43200;
                  refId = "A";
                  type = "math";
                };
              }];
              dashboardUid = "my_dashboard";
              panelId = 123;
              noDataState = "Alerting";
              for = "60s";
              annotations.some_key = "some_value";
              labels.team = "sre_team1";
            }];
          }];
          deleteRules = [{
            orgId = 1;
            uid = "my_id_1";
          }];
        }
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.rules.settings.apiVersion

Config file version.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.rules.settings.deleteRules
List of alert rule UIDs that should be deleted.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.rules.settings.deleteRules.*.orgId
Organization ID, default = 1

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.rules.settings.deleteRules.*.uid
Unique identifier for the rule. Required.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.rules.settings.groups
List of rule groups to import or update.

Type: list of (open submodule of (YAML 1.1 value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.rules.settings.groups.*.folder
Name of the folder the rule group will be stored in. Required.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.rules.settings.groups.*.interval
Interval that the rule group should be evaluated at. Required.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.rules.settings.groups.*.name
Name of the rule group. Required.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.templates.path
Path to YAML templates configuration. Can't be used with **services.grafana.provision.alerting.templates.settings** simultaneously. Can be either a directory or a single YAML file. Will end up in the store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.templates.settings
Grafana templates configuration in Nix. Can't be used with **services.grafana.provision.alerting.templates.path** simultaneously. See **https://grafana.com/docs/grafana/latest/administration/provisioning/#templates** for supported options.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  apiVersion = 1;
  templates = [{
    orgId = 1;
    name = "my_first_template";
    template = "Alerting with a custom text template";
  }];
  deleteTemplates = [{
    orgId = 1;
    name = "my_first_template";
  }];
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.templates.settings.apiVersion
Config file version.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.templates.settings.deleteTemplates
List of alert rule UIDs that should be deleted.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.templates.settings.deleteTemplates.*.name
Name of the template, must be unique. Required.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.templates.settings.deleteTemplates.*.orgId
Organization ID, default = 1.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.templates.settings.templates
List of templates to import or update.

Type: list of (open submodule of (YAML 1.1 value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.templates.settings.templates.*.name
Name of the template, must be unique. Required.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.alerting.templates.settings.templates.*.template
Alerting with a custom text template

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.dashboards
Declaratively provision Grafana’s dashboards.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.dashboards.path
Path to YAML dashboard configuration. Can't be used with **services.grafana.provision.dashboards.settings** simultaneously. Can be either a directory or a single YAML file. Will end up in the store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.dashboards.settings
Grafana dashboard configuration in Nix. Can't be used with **services.grafana.provision.dashboards.path** simultaneously. See **https://grafana.com/docs/grafana/latest/administration/provisioning/#dashboards** for supported options.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  apiVersion = 1;
  providers = [{
      name = "default";
      options.path = "/var/lib/grafana/dashboards";
  }];
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.dashboards.settings.apiVersion
Config file version.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.dashboards.settings.providers
List of dashboards to insert/update.

Type: list of (open submodule of (YAML 1.1 value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.dashboards.settings.providers.*.name
A unique provider name.

Type: string

Default:

```
"default"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.dashboards.settings.providers.*.options.path
Path grafana will watch for dashboards. Required when using the 'file' type.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.dashboards.settings.providers.*.type
Dashboard provider type.

Type: string

Default:

```
"file"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources
Declaratively provision Grafana's datasources.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.path
Path to YAML datasource configuration. Can't be used with **services.grafana.provision.datasources.settings** simultaneously. Can be either a directory or a single YAML file. Will end up in the store.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.settings
Grafana datasource configuration in Nix. Can't be used with **services.grafana.provision.datasources.path** simultaneously. See **https://grafana.com/docs/grafana/latest/administration/provisioning/#data−sources** for supported options.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  apiVersion = 1;
  datasources = [{
    name = "Graphite";
    type = "graphite";
  }];
  deleteDatasources = [{
    name = "Graphite";
    orgId = 1;
  }];
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.settings.apiVersion
Config file version.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.settings.datasources
List of datasources to insert/update.

Type: list of (open submodule of (YAML 1.1 value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.settings.datasources.*.access
Access mode. proxy or direct (Server or Browser in the UI). Required.

Type: one of “proxy”, “direct”

Default:

```
"proxy"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.settings.datasources.*.editable
Allow users to edit datasources from the UI.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.settings.datasources.*.jsonData
Extra data for datasource plugins.

Type: null or (attribute set)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.settings.datasources.*.name
Name of the datasource. Required.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.settings.datasources.*.secureJsonData
Datasource specific secure configuration. Please note that the contents of this option will end up in a world−readable Nix store. Use the file provider pointing at a reasonably secured file in the local filesystem to work around that. Look at the documentation for details: **https://grafana.com/docs/grafana/latest/setup−grafana/configure−grafana/#file−provider**

Type: null or (attribute set)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.settings.datasources.*.type
Datasource type. Required.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.settings.datasources.*.uid
Custom UID which can be used to reference this datasource in other parts of the configuration, if not specified will be generated automatically.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.settings.datasources.*.url
Url of the datasource.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.settings.deleteDatasources
List of datasources that should be deleted from the database.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.settings.deleteDatasources.*.name
Name of the datasource to delete.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.settings.deleteDatasources.*.orgId
Organization ID of the datasource to delete.

Type: signed integer

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.provision.datasources.settings.prune
When ‘true’, provisioned datasources from this file will be deleted automatically when removed from **services.grafana.provision.datasources.settings.datasources**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings
Grafana settings. See **https://grafana.com/docs/grafana/latest/setup−grafana/configure−grafana/** for available options. INI format is used.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a non−empty list of them)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.analytics.check_for_plugin_updates
When set to ‘false’, disables checking for new versions of installed plugins from https://grafana.com. When enabled, the check for a new plugin runs every 10 minutes. It will notify, via the UI, when a new plugin update exists. The check itself will not prompt any auto−updates of the plugin, nor will it send any sensitive information.

Type: boolean

Default:

```
cfg.declarativePlugins == null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.analytics.check_for_updates
When set to ‘false’, disables checking for new versions of Grafana from Grafana’s GitHub repository. When enabled, the check for a new version runs every 10 minutes. It will notify, via the UI, when a new version is available. The check itself will not prompt any auto−updates of the Grafana software, nor will it send any sensitive information.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.analytics.feedback_links_enabled
Set to ‘false’ to remove all feedback links from the UI.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.analytics.reporting_enabled
When enabled Grafana will send anonymous usage statistics to ‘stats.grafana.org’. No IP addresses are being tracked, only simple counters to track running instances, versions, dashboard and error counts. Counters are sent every 24 hours.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.ca_cert_path
The path to the CA certificate to use.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.cache_mode
For ‘sqlite3’ only. **Shared cache** setting used for connecting to the database.

Type: one of “private”, “shared”

Default:

```
"private"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.client_cert_path
The path to the client cert. Only if server requires client authentication.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.client_key_path
The path to the client key. Only if server requires client authentication.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.conn_max_lifetime
Sets the maximum amount of time a connection may be reused. The default is 14400 (which means 14400 seconds or 4 hours). For MySQL, this setting should be shorter than the 'wait_timeout' variable.

Type: signed integer

Default:

```
14400
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.host
Only applicable to MySQL or Postgres. Includes IP or hostname and port or in case of Unix sockets the path to it. For example, for MySQL running on the same host as Grafana: 'host = "127.0.0.1:3306"' or with Unix sockets: 'host = "/var/run/mysqld/mysqld.sock"'

Type: string

Default:

```
"127.0.0.1:3306"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.isolation_level
Only the MySQL driver supports isolation levels in Grafana. In case the value is empty, the driver's default isolation level is applied.

Type: null or one of "READ−UNCOMMITTED", "READ−COMMITTED", "REPEATABLE−READ", "SERIALIZABLE"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.locking_attempt_timeout_sec
For ‘mysql’, if the ‘migrationLocking’ feature toggle is set, specify the time (in seconds) to wait before failing to lock the database for the migrations.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.log_queries
Set to ‘true’ to log the sql calls and execution times

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.max_idle_conn
The maximum number of connections in the idle connection pool.

Type: signed integer

Default:

```
2
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.max_open_conn
The maximum number of open connections to the database.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.name
The name of the Grafana database.

Type: string

Default:

```
"grafana"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.password
The database user’s password (not applicable for ‘sqlite3’).

Please note that the contents of this option will end up in a world−readable Nix store. Use the file provider pointing at a reasonably secured file in the local filesystem to work around that. Look at the documentation for details: **https://grafana.com/docs/grafana/latest/setup−grafana/configure−grafana/#file−provider**

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.path

Only applicable to ‘sqlite3’ database. The file path where the database will be stored.

Type: absolute path

Default:

```
"${config.services.grafana.dataDir}/data/grafana.db"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.query_retries

This setting applies to ‘sqlite3’ only and controls the number of times the system retries a query when the database is locked.

Type: signed integer

Default:

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.server_cert_name

The common name field of the certificate used by the ‘mysql’ or ‘postgres’ server. Not necessary if ‘ssl_mode’ is set to ‘skip−verify’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.ssl_mode

For Postgres, use either ‘disable’, ‘require’ or ‘verify−full’. For MySQL, use either ‘true’, ‘false’, or ‘skip−verify’.

Type: one of “disable”, “require”, “verify−full”, “true”, “false”, “skip−verify”

Default:

```
"disable"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.transaction_retries

This setting applies to ‘sqlite3’ only and controls the number of times the system retries a transaction when the database is locked.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.type
Database type.

Type: one of “mysql”, “sqlite3”, “postgres”

Default:

```
"sqlite3"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.user
The database user (not applicable for ‘sqlite3’).

Type: string

Default:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.database.wal
For ‘sqlite3’ only. Setting to enable/disable **Write−Ahead Logging**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.paths.plugins
Directory where grafana will automatically scan and look for plugins

Type: absolute path

Default:

```
if (cfg.declarativePlugins == null) then "${cfg.dataDir}/plugins" e \
lse declarativePlugins
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.paths.provisioning
Folder that contains provisioning config files that grafana will apply on startup and while running. Don’t change the value of this option if you are planning to use ‘services.grafana.provision’ options.

Type: absolute path

Default:

```
"directory with links to files generated from services.grafana.prov \
ision"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.plugins.preinstall_disabled

When set to ‘true’, disables the Background Plugin Installer, which runs before Grafana starts. This component causes issues with ‘declarativePlugins’ and is disabled by default if those are used.

Type: boolean

Default:

```
cfg.declarativePlugins != null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.admin_email

The email of the default Grafana Admin, created on startup.

Type: string

Default:

```
"admin@localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.admin_password

Default admin password. Please note that the contents of this option will end up in a world−readable Nix store. Use the file provider pointing at a reasonably secured file in the local filesystem to work around that. Look at the documentation for details: **https://grafana.com/docs/grafana/latest/setup−grafana/configure−grafana/#file−provider**

Type: string

Default:

```
"admin"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.admin_user

Default admin username.

Type: string

Default:

```
"admin"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.allow_embedding

When ‘false’, the HTTP header ‘X−Frame−Options: deny’ will be set in Grafana HTTP responses which will instruct browsers to not allow rendering Grafana in a ‘<frame>’, ‘<iframe>’, ‘<embed>’ or ‘<object>’. The main goal is to mitigate the risk of **Clickjacking**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.content_security_policy

Set to ‘true’ to add the ‘Content−Security−Policy’ header to your requests. CSP allows to control resources that the user agent can load and helps prevent XSS attacks.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.content_security_policy_report_only

Set to ‘true’ to add the ‘Content−Security−Policy−Report−Only’ header to your requests. CSP in Report Only mode enables you to experiment with policies by monitoring their effects without enforcing them. You can enable both policies simultaneously.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.cookie_samesite

Sets the ‘SameSite’ cookie attribute and prevents the browser from sending this cookie along with cross−site requests. The main goal is to mitigate the risk of cross−origin information leakage. This setting also provides some protection against cross−site request forgery attacks (CSRF), **read more about SameSite here**. Using value ‘disabled’ does not add any ‘SameSite’ attribute to cookies.

Type: one of “lax”, “strict”, “none”, “disabled”

Default:

```
"lax"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.cookie_secure

Set to ‘true’ if you host Grafana behind HTTPS.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.csrf_additional_headers

List of allowed headers to be set by the user. Suggested to use for if authentication lives behind reverse proxies.

Type: string or list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.csrf_trusted_origins
List of additional allowed URLs to pass by the CSRF check. Suggested when authentication comes from an IdP.

Type: string or list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.data_source_proxy_whitelist
Define a whitelist of allowed IP addresses or domains, with ports, to be used in data source URLs with the Grafana data source proxy. Format: 'ip_or_domain:port' separated by spaces. PostgreSQL, MySQL, and MSSQL data sources do not use the proxy and are therefore unaffected by this setting.

Type: string or list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.disable_brute_force_login_protection
Set to 'true' to disable **brute force login protection**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.disable_gravatar
Set to 'true' to disable the use of Gravatar for user profile images.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.disable_initial_admin_creation
Disable creation of admin user on first start of Grafana.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.secret_key

Secret key used for signing data source settings like secrets and passwords. Set this to a unique, random string in production, generated for example by running ‘openssl rand −hex 32’.

If you change this later you will need to update data source settings to re−encode them.

https://grafana.com/docs/grafana/latest/setup−grafana/configure−grafana/#secret_key

Please note that the contents of this option will end up in a world−readable Nix store. Use the file provider pointing at a reasonably secured file in the local filesystem to work around that. Look at the documentation for details: **https://grafana.com/docs/grafana/latest/setup−grafana/configure−grafana/#file−provider**

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.strict_transport_security

Set to ‘true’ if you want to enable HTTP ‘Strict−Transport−Security’ (HSTS) response header. Only use this when HTTPS is enabled in your configuration, or when there is another upstream system that ensures your application does HTTPS (like a frontend load balancer). HSTS tells browsers that the site should only be accessed using HTTPS.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.strict_transport_security_max_age_seconds

Sets how long a browser should cache HSTS in seconds. Only applied if ‘strict_transport_security’ is enabled.

Type: signed integer

Default:

```
86400
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.strict_transport_security_preload

Set to ‘true’ to enable HSTS ‘preloading’ option. Only applied if ‘strict_transport_security’ is enabled.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.strict_transport_security_subdomains

Set to ‘true’ to enable HSTS ‘includeSubDomains’ option. Only applied if ‘strict_transport_security’ is enabled.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.x_content_type_options

Set to ‘false’ to disable the ‘X−Content−Type−Options’ response header. The ‘X−Content−Type−Options’ response HTTP header is a marker used by the server to indicate that the MIME types advertised in the ‘Content−Type’ headers should not be changed and be followed.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.security.x_xss_protection

Set to ‘true’ to enable the ‘X−XSS−Protection’ header, which tells browsers to stop pages from loading when they detect reflected cross−site scripting (XSS) attacks.

Note: this is the default in Grafana, it’s turned off here since it’s **recommended to not use this header anymore**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.enable_gzip

Set this option to ‘true’ to enable HTTP compression, this can improve transfer speed and bandwidth utilization. It is recommended that most users set it to ‘true’. By default it is set to ‘false’ for compatibility reasons.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.cdn_url

Specify a full HTTP URL address to the root of your Grafana CDN assets. Grafana will add edition and version paths.

For example, given a cdn url like ‘https://cdn.myserver.com’ grafana will try to load a javascript file from ‘http://cdn.myserver.com/grafana−oss/7.4.0/public/build/app.<hash>.js’.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.cert_file
Path to the certificate file (if 'protocol' is set to 'https' or 'h2').

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.cert_key
Path to the certificate key file (if 'protocol' is set to 'https' or 'h2').

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.domain
The public facing domain name used to access grafana from a browser.

This setting is only used in the default value of the 'root_url' setting. If you set the latter manually, this option does not have to be specified.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.enforce_domain
Redirect to correct domain if the host header does not match the domain. Prevents DNS rebinding attacks.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.http_addr
Listening address.

Note
This setting intentionally varies from upstream's default to be a bit more secure by default.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.http_port
Listening port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.protocol
Which protocol to listen.

Type: one of “http”, “https”, “h2”, “socket”

Default:

```
"http"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.read_timeout
Sets the maximum time using a duration format (5s/5m/5ms) before timing out read of an incoming request and closing idle connections. 0 means there is no timeout for reading the request.

Type: string

Default:

```
"0"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.root_url
This is the full URL used to access Grafana from a web browser. This is important if you use Google or GitHub OAuth authentication (for the callback URL to be correct).

This setting is also important if you have a reverse proxy in front of Grafana that exposes it through a subpath. In that case add the subpath to the end of this URL setting.

Type: string

Default:

```
"%(protocol)s://%(domain)s:%(http_port)s/"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.router_logging
Set to ‘true’ for Grafana to log all HTTP requests (not just errors). These are logged as Info level events to the Grafana log.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.serve_from_sub_path
Serve Grafana from subpath specified in the ‘root_url’ setting. By default it is set to ‘false’ for compatibility reasons.

By enabling this setting and using a subpath in ‘root_url’ above, e.g. ‘root_url = "http://localhost:3000/grafana"’, Grafana is accessible on ‘http://localhost:3000/grafana’. If accessed without subpath, Grafana will redirect to an URL with the subpath.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.socket
Path where the socket should be created when ‘protocol=socket’. Make sure that Grafana has appropriate permissions before you change this setting.

Type: string

Default:

```
"/run/grafana/grafana.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.socket_gid
GID where the socket should be set when ‘protocol=socket’. Make sure that the target group is in the group of Grafana process and that Grafana process is the file owner before you change this setting. It is recommended to set the gid as http server user gid. Not set when the value is −1.

Type: signed integer

Default:

```
-1
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.socket_mode
Mode where the socket should be set when ‘protocol=socket’. Make sure that Grafana process is the file owner before you change this setting.

Type: string

Default:

```
"0660"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.server.static_root_path
Root path for static assets.

Type: string

Default:

```
"${package}/share/grafana/public"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.smtp.enabled
Whether to enable SMTP.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.smtp.cert_file
File path to a cert file.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.smtp.ehlo_identity
Name to be used as client identity for EHLO in SMTP dialog.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.smtp.from_address
Address used when sending out emails.

Type: string

Default:

```
"admin@grafana.localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.smtp.from_name
Name to be used as client identity for EHLO in SMTP dialog.

Type: string

Default:

```
"Grafana"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.smtp.host
Host to connect to.

Type: string

Default:

```
"localhost:25"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.smtp.key_file
File path to a key file.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.smtp.password
Password used for authentication. Please note that the contents of this option will end up in a world−readable Nix store. Use the file provider pointing at a reasonably secured file in the local filesystem to work around that. Look at the documentation for details: **https://grafana.com/docs/grafana/latest/setup−grafana/configure−grafana/#file−provider**

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.smtp.skip_verify
Verify SSL for SMTP server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.smtp.startTLS_policy
StartTLS policy when connecting to server.

Type: null or one of “OpportunisticStartTLS”, “MandatoryStartTLS”, “NoStartTLS”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.smtp.user
User used for authentication.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.users.allow_org_create

Set to ‘false’ to prohibit users from creating new organizations.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.users.allow_sign_up

Set to false to prohibit users from being able to sign up / create user accounts. The admin user can still create users.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.users.auto_assign_org

Set to ‘true’ to automatically add new users to the main organization (id 1). When set to ‘false,’ new users automatically cause a new organization to be created for that new user. The organization will be created even if the ‘allow_org_create’ setting is set to ‘false’.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.users.auto_assign_org_id

Set this value to automatically add new users to the provided org. This requires ‘auto_assign_org’ to be set to ‘true’. Please make sure that this organization already exists.

Type: signed integer

Default:

```
1
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.users.auto_assign_org_role

The role new users will be assigned for the main organization (if the ‘auto_assign_org’ setting is set to ‘true’).

Type: one of “Viewer”, “Editor”, “Admin”

Default:

```
"Viewer"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.users.default_language

This setting configures the default UI language, which must be a supported IETF language tag, such as ‘en−US’.

Type: string

Default:

```
"en-US"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.users.default_theme

Sets the default UI theme. ‘system’ matches the user’s system theme.

Type: one of “dark”, “light”, “system”

Default:

```
"dark"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.users.hidden_users

This is a comma−separated list of usernames. Users specified here are hidden in the Grafana UI. They are still visible to Grafana administrators and to themselves.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.users.home_page

Path to a custom home page. Users are only redirected to this if the default home dashboard is used. It should match a frontend route and contain a leading slash.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.users.login_hint

Text used as placeholder text on login page for login/username input.

Type: string

Default:

```
"email or username"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.users.password_hint

Text used as placeholder text on login page for password input.

Type: string

Default:

```
"password"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.users.user_invite_max_lifetime_duration

The duration in time a user invitation remains valid before expiring. This setting should be expressed as a duration. Examples: ‘6h’ (hours), ‘2d’ (days), ‘1w’ (week). The minimum supported duration is ‘15m’ (15 minutes).

Type: string

Default:

```
"24h"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.users.verify_email_enabled

Require email validation before sign up completes.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana.settings.users.viewers_can_edit

Viewers can access and use Explore and perform temporary edits on panels in dashboards they have access to. They cannot save their changes.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana.nix>

services.grafana−image−renderer.enable

Whether to enable grafana−image−renderer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana−image−renderer.nix>

services.grafana−image−renderer.provisionGrafana
Whether to enable Grafana configuration for grafana−image−renderer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana−image−renderer.nix>

services.grafana−image−renderer.settings
Configuration attributes for ‘grafana−image−renderer’.

Type: open submodule of attribute set of attribute set of (string or signed integer or boolean or list of (string or signed integer))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana−image−renderer.nix>

services.grafana−image−renderer.settings.browser.path
Path to the executable of the chromium to use.

Type: absolute path

Default:

```
lib.getExe pkgs.chromium
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana−image−renderer.nix>

services.grafana−image−renderer.settings.server.addr
Listen address of the service.

Type: string

Default:

```
"localhost:8081"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana−image−renderer.nix>

services.grafana−to−ntfy.enable
Whether to enable grafana−to−ntfy, a Grafana/Alertmanager to ntfy.sh bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana−to−ntfy.nix>

services.grafana−to−ntfy.package

The grafana−to−ntfy package to use.

Type: package

Default:

```
pkgs.grafana-to-ntfy
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana−to−ntfy.nix>

services.grafana−to−ntfy.settings.address

Address to listen on.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana−to−ntfy.nix>

services.grafana−to−ntfy.settings.bauthPass

Path to the password file for Basic Auth on incoming webhook requests. When set together with **bauthUser**, incoming requests require Basic Auth. When both are null, the endpoint is open (unauthenticated).

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/grafana-to-ntfy-bauth-pass"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana−to−ntfy.nix>

services.grafana−to−ntfy.settings.bauthUser

The user for Basic Auth on incoming webhook requests from Grafana or Alertmanager. When set together with **bauthPass**, incoming requests require Basic Auth. When both are null, the endpoint is open (unauthenticated).

Type: null or string

Default:

```
null
```

Example:

```
"admin"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana−to−ntfy.nix>

services.grafana−to−ntfy.settings.markdown

Enable Markdown formatting in ntfy notifications. Sets the X−Markdown header.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana−to−ntfy.nix>

services.grafana−to−ntfy.settings.ntfyBAuthPass

The path to the password for the specified ntfy−sh user. Setting this option is required when using a ntfy−sh instance with access control enabled.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/grafana-to-ntfy-ntfy-pass"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana−to−ntfy.nix>

services.grafana−to−ntfy.settings.ntfyBAuthUser

The ntfy−sh user to use for authenticating with the ntfy−sh instance. Setting this option is required when using a ntfy−sh instance with access control enabled.

Type: null or string

Default:

```
null
```

Example:

```
"grafana"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana−to−ntfy.nix>

services.grafana−to−ntfy.settings.ntfyUrl

The URL to the ntfy−sh topic.

Type: string

Example:

```
"https://push.example.com/grafana"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/grafana−to−ntfy.nix>

services.grafana−to−ntfy.settings.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana−to−ntfy.nix>

services.grafana_reporter.enable
Whether to enable grafana_reporter.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana−reporter.nix>

services.grafana_reporter.addr
Listening address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana−reporter.nix>

services.grafana_reporter.grafana.addr
Grafana address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana−reporter.nix>

services.grafana_reporter.grafana.port
Grafana port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana−reporter.nix>

services.grafana_reporter.grafana.protocol
Grafana protocol.

Type: one of “http”, “https”

Default:

```
"http"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana−reporter.nix>

services.grafana_reporter.port
Listening port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8686
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana-reporter.nix>

services.grafana_reporter.templateDir
Optional template directory to use custom tex templates

Type: string or absolute path

Default:

```
pkgs.grafana_reporter
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/grafana-reporter.nix>

services.graphite.carbon.enableAggregator
Whether to enable carbon aggregator, the carbon buffering service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.carbon.enableCache
Whether to enable carbon cache, the graphite storage daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.carbon.enableRelay
Whether to enable carbon relay, the carbon replication and sharding service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.carbon.aggregationRules
Defines if and how received metrics will be aggregated.

Type: null or string

Default:

```
null
```

Example:

```
  <env>.applications.<app>.all.requests (60) = sum <env>.applicatio \
ns.<app>.*.requests
  <env>.applications.<app>.all.latency (60) = avg <env>.application \
s.<app>.*.latency
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.carbon.blacklist
Any metrics received which match one of the expressions will be dropped.

Type: null or string

Default:

```
null
```

Example:

```
"^some\\.noisy\\.metric\\.prefix\\..*"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.carbon.config
Content of carbon configuration file.

Type: string

Default:

```
[cache]
# Listen on localhost by default for security reasons
UDP_RECEIVER_INTERFACE = 127.0.0.1
PICKLE_RECEIVER_INTERFACE = 127.0.0.1
LINE_RECEIVER_INTERFACE = 127.0.0.1
CACHE_QUERY_INTERFACE = 127.0.0.1
# Do not log every update
LOG_UPDATES = False
LOG_CACHE_HITS = False
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.carbon.relayRules
Relay rules are used to send certain metrics to a certain backend.

Type: null or string

Default:

```
null
```

Example:

```
[example]
pattern = ^mydata\.foo\..+
servers = 10.1.2.3, 10.1.2.4:2004, myserver.mydomain.com
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.carbon.rewriteRules

Regular expression patterns that can be used to rewrite metric names in a search and replace fashion.

Type: null or string

Default:

```
null
```

Example:

```
[post]
_sum$ =
_avg$ =
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.carbon.storageAggregation

Defines how to aggregate data to lower−precision retentions.

Type: null or string

Default:

```
null
```

Example:

```
[all_min]
pattern = \.min$
xFilesFactor = 0.1
aggregationMethod = min
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.carbon.storageSchemas

Defines retention rates for storing metrics.

Type: null or string

Default:

```
""
```

Example:

```
[apache_busyWorkers]
pattern = ^servers\.www.*\.workers\.busyWorkers$
retentions = 15s:7d,1m:21d,15m:5y
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.carbon.whitelist

Only metrics received which match one of the expressions will be persisted.

Type: null or string

Default:

```
null
```

Example:

```
".*"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.dataDir
Data directory for graphite.

Type: absolute path

Default:

```
"/var/db/graphite"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.seyren.enable
Whether to enable seyren service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.seyren.extraConfig
Extra seyren configuration. See **https://github.com/scobal/seyren#config**

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  GRAPHITE_USERNAME = "user";
  GRAPHITE_PASSWORD = "pass";
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.seyren.graphiteUrl
Host where graphite service runs.

Type: string

Default:

```
"http://${config.services.graphite.web.listenAddress}:${toString co \
nfig.services.graphite.web.port}"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.seyren.mongoUrl
Mongodb connection string.

Type: string

Default:

```
"mongodb://${config.services.mongodb.bind_ip}:27017/seyren"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.seyren.port
Seyren listening port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8081
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.seyren.seyrenUrl
Host where seyren is accessible.

Type: string

Default:

```
"http://localhost:${toString config.services.graphite.seyren.port}/ \
"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.web.enable
Whether to enable graphite web frontend.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.web.extraConfig
Graphite webapp settings. See: **https://graphite.readthedocs.io/en/latest/config−local−settings.html**

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.web.listenAddress
Graphite web frontend listen address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.graphite.web.port
Graphite web frontend port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/graphite.nix>

services.grav.enable
Whether to enable grav.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/grav.nix>

services.grav.package
The grav package to use.

Type: package

Default:

```
pkgs.grav
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/grav.nix>

services.grav.maxUploadSize
The upload limit for files. This changes the relevant options in *php.ini* and nginx if enabled.

Type: string

Default:

```
"128M"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/grav.nix>

services.grav.phpPackage
The php83 package to use.

Type: package

Default:

```
pkgs.php83
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/grav.nix>

services.grav.pool

Name of existing phpfpm pool that is used to run web−application. If not specified a pool will be created automatically with default values.

Type: string

Default:

```
"grav"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/grav.nix>

services.grav.root

Root of the application.

Type: absolute path

Default:

```
"/var/lib/grav"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/grav.nix>

services.grav.systemSettings

Settings written to *user/config/system.yaml*.

Type: YAML 1.1 value

Default:

```
{
  log = {
    handler = "syslog";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/grav.nix>

services.grav.virtualHost

Name of the nginx virtualhost to use and setup. If null, do not setup any virtualhost.

Type: null or string

Default:

```
"grav"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/grav.nix>

services.graylog.enable

Whether to enable Graylog, a log management solution.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/logging/graylog.nix>

services.graylog.package
The graylog package to use.

Type: package

Default:

```
pkgs.graylog
```

Example:

```
graylog-6_0
```

Declared by:
<nixpkgs/nixos/modules/services/logging/graylog.nix>

services.graylog.dataDir
Directory used to store Graylog server state.

Type: string

Default:

```
"/var/lib/graylog/data"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/graylog.nix>

services.graylog.elasticsearchHosts
List of valid URIs of the http ports of your elastic nodes. If one or more of your elasticsearch hosts require authentication, include the credentials in each node URI that requires authentication

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "http://node1:9200" "http://user:password@node2:19200" ]
```

Declared by:
<nixpkgs/nixos/modules/services/logging/graylog.nix>

services.graylog.extraConfig
Any other configuration options you might want to add

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/logging/graylog.nix>

services.graylog.isMaster
Whether this is the master instance of your Graylog cluster

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/logging/graylog.nix>

services.graylog.messageJournalDir
The directory which will be used to store the message journal. The directory must be exclusively used by Graylog and must not contain any other files than the ones created by Graylog itself

Type: string

Default:

```
"/var/lib/graylog/data/journal"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/graylog.nix>

services.graylog.mongodbUri
MongoDB connection string. See http://docs.mongodb.org/manual/reference/connection−string/ for details

Type: string

Default:

```
"mongodb://localhost/graylog"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/graylog.nix>

services.graylog.nodeIdFile
Path of the file containing the graylog node−id

Type: string

Default:

```
"/var/lib/graylog/server/node-id"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/graylog.nix>

services.graylog.passwordSecret
You MUST set a secret to secure/pepper the stored user passwords here. Use at least 64 characters. Generate one by using for example: pwgen −N 1 −s 96

Type: string

Declared by:
<nixpkgs/nixos/modules/services/logging/graylog.nix>

services.graylog.plugins
Extra graylog plugins

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/logging/graylog.nix>

services.graylog.rootPasswordSha2

You MUST specify a hash password for the root user (which you only need to initially set up the system and in case you lose connectivity to your authentication backend) This password cannot be changed using the API or via the web interface. If you need to change it, modify it here. Create one by using for example: echo −n yourpassword | shasum −a 256 and use the resulting hash value as string for the option

Type: string

Example:

```
"e3c652f0ba0b4801205814f8b6bc49672c4c74e25b497770bb89b22cdeb4e952"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/graylog.nix>

services.graylog.rootUsername

Name of the default administrator user

Type: string

Default:

```
"admin"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/graylog.nix>

services.graylog.user

User account under which graylog runs

Type: string

Default:

```
"graylog"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/graylog.nix>

services.greenclip.enable

Whether to enable Greenclip, a clipboard manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/greenclip.nix>

services.greenclip.package

The greenclip package to use.

Type: package

Default:

```
pkgs.haskellPackages.greenclip
```

Declared by:

<nixpkgs/nixos/modules/services/misc/greenclip.nix>

services.greetd.enable

Whether to enable greetd, a minimal and flexible login manager daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/display−managers/greetd.nix>

services.greetd.package

The greetd package to use.

Type: package

Default:

```
pkgs.greetd
```

Declared by:

<nixpkgs/nixos/modules/services/display−managers/greetd.nix>

services.greetd.restart

Whether to restart greetd when it terminates (e.g. on failure). This is usually desirable so a user can always log in, but should be disabled when using ‘settings.initial_session’ (autologin), because every greetd restart will trigger the autologin again.

Type: boolean

Default:

```
!(config.services.greetd.settings ? initial_session)
```

Declared by:

<nixpkgs/nixos/modules/services/display−managers/greetd.nix>

services.greetd.settings

greetd configuration (**documentation**) as a Nix attribute set.

Type: TOML value

Example:

```
{
  default_session = {
    command = "${pkgs.greetd}/bin/agreety --cmd sway";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/display−managers/greetd.nix>

services.greetd.useTextGreeter

Whether the greeter uses text−based user interfaces (For example, tuigreet).

When set to true, some systemd service configuration will be adjusted to avoid systemd boot messages interrupt TUI.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/display−managers/greetd.nix>

services.grocy.enable
Whether to enable grocy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/grocy.nix>

services.grocy.package
The grocy package to use.

Type: package

Default:

```
pkgs.grocy
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/grocy.nix>

services.grocy.dataDir
Home directory of the ‘grocy’ user which contains the application’s state.

Type: string

Default:

```
"/var/lib/grocy"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/grocy.nix>

services.grocy.extraConfig
These lines go at the end of config.php verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
Setting('FEATURE_FLAG_RECIPES', false);
Setting('FEATURE_FLAG_STOCK_PRODUCT_FREEZING', false);
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/grocy.nix>

services.grocy.hostName
FQDN for the grocy instance.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/grocy.nix>

services.grocy.nginx.enableSSL

Whether or not to enable SSL (with ACME and let's encrypt) for the grocy vhost.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/grocy.nix>

services.grocy.phpfpm.settings

Options for grocy's PHPFPM pool.

Type: attribute set of (signed integer or string or boolean)

Default:

```
{
  "pm" = "dynamic";
  "php_admin_value[error_log]" = "stderr";
  "php_admin_flag[log_errors]" = true;
  "listen.owner" = config.services.nginx.user;
  "catch_workers_output" = true;
  "pm.max_children" = "32";
  "pm.start_servers" = "2";
  "pm.min_spare_servers" = "2";
  "pm.max_spare_servers" = "4";
  "pm.max_requests" = "500";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/grocy.nix>

services.grocy.settings.calendar.firstDayOfWeek

Which day of the week (0=Sunday, 1=Monday etc.) should be the first day.

Type: null or one of 0, 1, 2, 3, 4, 5, 6

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/grocy.nix>

services.grocy.settings.calendar.showWeekNumber

Show the number of the weeks in the calendar views.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/grocy.nix>

services.grocy.settings.culture

Display language of the frontend.

Type: one of "bg_BG", "ca", "cs", "da", "de", "el_GR", "en", "en_GB", "es", "et_EE", "fi", "fr", "he_IL", "hu", "it", "ja", "ko_KR", "lt", "nl", "no", "pl", "pt_BR", "pt_PT", "ro_RO", "ru", "sk_SK", "sl", "sv_SE", "ta", "tr", "uk", "zh_CN", "zh_TW"

Default:

```
"en"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/grocy.nix>

services.grocy.settings.currency
ISO 4217 code for the currency to display.

Type: string

Default:

```
"USD"
```

Example:

```
"EUR"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/grocy.nix>

services.grocy.settings.entryPage
Specify an custom homepage if desired.

Type: one of “stock”, “shoppinglist”, “recipes”, “chores”, “tasks”, “batteries”, “equipment”, “calendar”, “mealplan”

Default:

```
"stock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/grocy.nix>

services.guacamole−client.enable
Whether to enable Apache Guacamole Client (Tomcat).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/guacamole−client.nix>

services.guacamole−client.enableWebserver
Enable the Guacamole web application in a Tomcat webserver.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/guacamole−client.nix>

services.guacamole−client.package

The guacamole−client package to use.

Type: package

Default:

```
pkgs.guacamole−client
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/guacamole−client.nix>

services.guacamole−client.logbackXml

Configuration file that correspond to ‘logback.xml’.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/logback.xml"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/guacamole−client.nix>

services.guacamole−client.settings

Configuration written to ‘guacamole.properties’.

Note

The Guacamole web application uses one main configuration file called ‘guacamole.properties’. This file is the common location for all configuration properties read by Guacamole or any extension of Guacamole, including authentication providers.

Type: open submodule of attribute set of (string, package, bool, int or float)

Default:

```
{
  guacd−hostname = "localhost";
  guacd−port = 4822;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/guacamole−client.nix>

services.guacamole−client.userMappingXml

Configuration file that correspond to ‘user−mapping.xml’.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/user−mapping.xml"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/guacamole−client.nix>

services.guacamole−server.enable

Whether to enable Apache Guacamole Server (guacd).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/guacamole−server.nix>

services.guacamole−server.package

The guacamole−server package to use.

Type: package

Default:

```
pkgs.guacamole−server
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/guacamole−server.nix>

services.guacamole−server.extraEnvironment

Environment variables to pass to guacd.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  ENVIRONMENT = "production";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/guacamole−server.nix>

services.guacamole−server.host

The host name or IP address the server should listen to.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/guacamole−server.nix>

services.guacamole−server.port

The port the guacd server should listen to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4822
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/guacamole−server.nix>

services.guix.enable
Whether to enable Guix build daemon service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/guix>

services.guix.package
The guix package to use. It should contain **guix−daemon** and **guix** executable.

Type: package

Default:

```
pkgs.guix
```

Declared by:
<nixpkgs/nixos/modules/services/misc/guix>

services.guix.extraArgs
Extra flags to pass to the Guix daemon service.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−max−jobs=4"
  "−−debug"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/guix>

services.guix.gc.enable
Whether to enable automatic garbage collection service for Guix.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/guix>

services.guix.gc.dates

How often the garbage collection occurs. This takes the time format from **systemd.time**(7).

Type: string

Default:

```
"03:15"
```

Example:

```
"weekly"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/guix>

services.guix.gc.extraArgs

List of arguments to be passed to **guix gc**.

When given no option, it will try to collect all garbage which is often inconvenient so it is recommended to set **some options**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--delete-generations=1m"
  "--free-space=10G"
  "--optimize"
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/guix>

services.guix.group

The group of the Guix build user pool.

Type: string

Default:

```
"guixbuild"
```

Example:

```
"guixbuild"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/guix>

services.guix.nrBuildUsers

Number of Guix build users to be used in the build pool.

Type: unsigned integer, meaning >=0

Default:

```
10
```

Example:

```
20
```

Declared by:
<nixpkgs/nixos/modules/services/misc/guix>

services.guix.publish.enable
Whether to enable substitute server for your Guix store directory.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/guix>

services.guix.publish.extraArgs
Extra flags to pass to the substitute server.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--compression=zstd:6"
  "--discover=no"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/guix>

services.guix.publish.generateKeyPair
Whether to generate signing keys in */etc/guix* which are required to initialize a substitute server. Otherwise, '--public-key=$FILE' and '--private-key=$FILE' can be passed in **services.guix.publish.extraArgs**.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/guix>

services.guix.publish.port
Port of the substitute server to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8181
```

Example:

```
8200
```

Declared by:
<nixpkgs/nixos/modules/services/misc/guix>

services.guix.publish.user
Name of the user to change once the server is up.

Type: string

Default:

```
"guix-publish"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/guix>

services.guix.stateDir
The state directory where Guix service will store its data such as its user-specific profiles, cache, and state files.

Warning
Changing it to something other than the default will rebuild the package.

Type: absolute path

Default:

```
"/var"
```

Example:

```
"/gnu/var"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/guix>

services.guix.storeDir
The store directory where the Guix service will serve to/from. Take note Guix cannot take advantage of substitutes if you set it something other than */gnu/store* since most of the cached builds are assumed to be in there.

Warning
This will also recompile all packages because the normal cache no longer applies.

Type: absolute path

Default:

```
"/gnu/store"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/guix>

services.guix.substituters.authorizedKeys
A list of signing keys for each substitute server to be authorized as a source of substitutes. Without this, the listed substitute servers from **services.guix.substituters.urls** would be ignored **with some exceptions**.

Type: list of absolute path

Default:

```
The packaged signing keys from {option}‘services.guix.package‘.
```

Example:

```
options.services.guix.substituters.authorizedKeys.default ++ [
  (builtins.fetchurl {
    url = "https://guix.example.com/signing-key.pub";
```

```
  })
  (builtins.fetchurl {
    url = "https://guix.example.org/static/signing-key.pub";
  })
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/guix>

services.guix.substituters.urls
A list of substitute servers' URLs for the Guix daemon to download substitutes from.

Type: list of string

Default:

```
[
  "https://ci.guix.gnu.org"
  "https://bordeaux.guix.gnu.org"
  "https://berlin.guix.gnu.org"
]
```

Example:

```
options.services.guix.substituters.urls.default ++ [
  "https://guix.example.com"
  "https://guix.example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/guix>

services.gvfs.enable
Whether to enable GVfs, a userspace virtual filesystem.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gvfs.nix>

services.gvfs.package
The gvfs package to use.

Type: package

Default:

```
pkgs.gnome.gvfs
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/gvfs.nix>

services.gvpe.enable
Whether to enable gvpe.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gvpe.nix>

services.gvpe.configFile
GVPE config file, if already present

Type: null or absolute path

Default:

```
null
```

Example:

```
"/root/my-gvpe-conf"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gvpe.nix>

services.gvpe.configText
GVPE config contents

Type: null or strings concatenated with “\n”

Default:

```
null
```

Example:

```
tcp-port = 655
udp-port = 655
mtu = 1480
ifname = vpn0

node = alpha
hostname = alpha.example.org
connect = always
enable-udp = true
enable-tcp = true
on alpha if-up = if-up-0
on alpha pid-file = /var/gvpe/gvpe.pid
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gvpe.nix>

services.gvpe.customIFSetup
Additional commands to apply in ifup script

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gvpe.nix>

services.gvpe.ipAddress
IP address to assign to GVPE interface

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gvpe.nix>

services.gvpe.nodename
GVPE node name

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gvpe.nix>

services.gvpe.subnet
IP subnet assigned to GVPE network

Type: null or string

Default:

```
null
```

Example:

```
"10.0.0.0/8"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/gvpe.nix>

services.h2o.enable
Whether to enable H2O web server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.package
The h2o package to use.

Type: package

Default:

```
pkgs.h2o
```

Example:

```
pkgs.h2o.override {
  withMruby = false;
  openssl = pkgs.openssl_legacy;
```

```
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.defaultHTTPListenPort
If hosts do not specify listen.port, use these ports for HTTP by default.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
80
```

Example:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.defaultTLSListenPort
If hosts do not specify listen.port, use these ports for SSL by default.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
443
```

Example:

```
8443
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.defaultTLSRecommendations
By default, H2O, without prejudice, will use as many TLS versions & cipher suites as it & the TLS library (OpenSSL) can support. The user is expected to hone settings for the security of their server. Setting some constraints is recommended, & if unsure about what TLS settings to use, this option gives curated TLS settings recommendations from Mozilla's 'SSL Configuration Generator' project (see **https://ssl−config.mozilla.org**) or read more at Mozilla's Wiki (see **https://wiki.mozilla.org/Security/Server_Side_TLS**).

modern
: Services with clients that support TLS 1.3 & don't need backward compatibility

intermediate
: General−purpose servers with a variety of clients, recommended for almost all systems

old
: Compatible with a number of very old clients, & should be used only as a last resort

The default for all virtual hosts can be set with services.h2o.defaultTLSRecommendations, but this value can be overridden on a per−host basis using services.h2o.hosts.<name>.tls.recommmendations. The settings will also be overidden by manual values set with services.settings.h2o.hosts.<name>.tls.extraSettings.

NOTE: older/weaker ciphers might require overriding the OpenSSL version of H2O (such as 'openssl_legacy'). This can be done with sevices.settings.h2o.package.

Type: null or one of "modern", "intermediate", "old"

Default:

```
null
```

Example:

```
"intermediate"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.group

Group running H2O services

Type: non−empty string

Default:

```
"h2o"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts

The ‘hosts’ config to be merged with the settings.

Note that unlike YAML used for H2O, Nix will not support duplicate keys to, for instance, have multiple listens in a host block; use the virtual host options in like ‘http’ & ‘tls’ or use ‘$HOST:$PORT’ keys if manually specifying config.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "hydra.example.com" = {
    tls = {
      policy = "force";
      identity = [
        {
          key−file = "/path/to/key";
          certificate−file = "/path/to/cert";
        };
      ];
      extraSettings = {
        minimum−version = "TLSv1.3";
      };
    };
    settings = {
      paths."/" = {
        "file:dir" = "/var/www/default";
      };
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.acme
ACME options for virtual host.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.acme.enable
Whether to ask Let's Encrypt to sign a certificate for this virtual host. Alternatively, an existing host can be used thru **acme.useHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.acme.root
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to 'null' to inherit from config.security.acme.

Type: null or absolute path

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.acme.useHost
An existing Let's Encrypt certificate to use for this virtual host. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **acme.enable**. Note that this option neither creates any certificates nor does it add subdomains to existing ones — you will need to create them manually using **security.acme.certs**.

Type: null or non−empty string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.host
Set the host address for this virtual host. If unset, the default is to listen on all network interfaces.

Type: null or non−empty string

Default:

```
null
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.http
HTTP options for virtual host

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.http.port
Override the default HTTP port for this virtual host.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
config.services.h2o.defaultHTTPListenPort
```

Example:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of non−empty string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.serverName
Server name to be used for this virtual host. Defaults to attribute name in hosts.

Type: null or non−empty string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.settings

Attrset to be transformed into YAML for host config. Note that the HTTP / TLS configurations will override these config values. See **https://h2o.examp1e.net/configure/base_directives.html#hosts**.

Type: attribute set

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.tls

TLS options for virtual host

Type: null or (submodule)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.tls.extraSettings

Additional TLS/SSL−related configuration options. See **https://h2o.examp1e.net/configure/base_directives.html#listen−ssl**.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  minimum−version = "TLSv1.3";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.tls.identity

Key / certificate pairs for the virtual host.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    key−file = "/path/to/rsa.key";
    certificate−file = "/path/to/rsa.crt";
  }
  {
    key−file = "/path/to/ecdsa.key";
    certificate−file = "/path/to/ecdsa.crt";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.tls.identity.*.certificate−file
Path to certificate file. See **https://h2o.examp1e.net/configure/base_directives.html#certificate−file**.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.tls.identity.*.key−file
Path to key file. See **https://h2o.examp1e.net/configure/base_directives.html#key−file**.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.tls.policy
‘add’ will additionally listen for TLS connections. ‘only’ will disable TLS connections. ‘force’ will redirect non−TLS traffic to the TLS connection.

Type: one of “add”, “only”, “force”

Example:

```
"force"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.tls.port
Override the default TLS port for this virtual host.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
config.services.h2o.defaultTLSListenPort
```

Example:

```
8443
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.tls.quic
Enables HTTP/3 over QUIC on the UDP port for TLS. The attrset provides fine−turning for QUIC behavior, but can be empty. See **https://h2o.examp1e.net/configure/http3_directives.html#quic−attributes**.

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  amp−limit = 2;
  handshake−timeout−rtt−multiplier = 300;
  retry = "ON";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.tls.recommendations
By default, H2O, without prejudice, will use as many TLS versions & cipher suites as it & the TLS library (OpenSSL) can support. The user is expected to hone settings for the security of their server. Setting some constraints is recommended, & if unsure about what TLS settings to use, this option gives curated TLS settings recommendations from Mozilla's 'SSL Configuration Generator' project (see **https://ssl−config.mozilla.org**) or read more at Mozilla's Wiki (see **https://wiki.mozilla.org/Security/Server_Side_TLS**).

modern
Services with clients that support TLS 1.3 & don't need backward compatibility

intermediate
General−purpose servers with a variety of clients, recommended for almost all systems

old
Compatible with a number of very old clients, & should be used only as a last resort

The default for all virtual hosts can be set with services.h2o.defaultTLSRecommendations, but this value can be overridden on a per−host basis using services.h2o.hosts.<name>.tls.recommmendations. The settings will also be overidden by manual values set with services.settings.h2o.hosts.<name>.tls.extraSettings.

NOTE: older/weaker ciphers might require overriding the OpenSSL version of H2O (such as 'openssl_legacy'). This can be done with sevices.settings.h2o.package.

Type: null or one of "modern", "intermediate", "old"

Default:

```
null
```

Example:

```
"intermediate"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.hosts.<name>.tls.redirectCode
HTTP status used by 'globalRedirect' & 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method & body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/h2o/default.nix>

services.h2o.settings
Configuration for H2O (see **https://h2o.examp1e.net/configure.html**)

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  compress = "ON";
  ssl-offload = "kernel";
  http2-reprioritize-blocking-assets = "ON";
  "file.mime.addtypes" = {
    "text/x-rst" = {
      extensions = [ ".rst" ];
      is_compressible = "YES";
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/h2o/default.nix>

services.h2o.user
User running H2O service

Type: non-empty string

Default:

```
"h2o"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/h2o/default.nix>

services.hadoop.package
The hadoop package to use.

Type: package

Default:

```
pkgs.hadoop
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/default.nix>

services.hadoop.containerExecutorCfg
Yarn container-executor.cfg definition **https://hadoop.apache.org/docs/r2.7.2/hadoop-yarn/hadoop-yarn-site/SecureContainer.html**

Type: attribute set of anything

Default:

```
{
  "feature.mount-cgroup.enabled" = 1;
  "feature.terminal.enabled" = 1;
  "min.user.id" = 1000;
  "yarn.nodemanager.linux-container-executor.group" = "hadoop";
}
```

Example:

```
options.services.hadoop.containerExecutorCfg.default // {
  "feature.terminal.enabled" = 0;
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/default.nix>

services.hadoop.coreSite
Hadoop core−site.xml definition **https://hadoop.apache.org/docs/current/hadoop−project−dist/hadoop−common/core−default.xml**

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  "fs.defaultFS" = "hdfs://localhost";
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/default.nix>

services.hadoop.extraConfDirs
Directories containing additional config files to be added to HADOOP_CONF_DIR

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  ./extraHDFSConfs
  ./extraYARNConfs
]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/default.nix>

services.hadoop.gatewayRole.enable
Whether to enable gateway role for deploying hadoop configs.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/default.nix>

services.hadoop.gatewayRole.enableHbaseCli
Whether to enable HBase CLI tools.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.package
The hbase package to use.

Type: package

Default:

```
pkgs.hbase
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.master.enable
Whether to enable HBase master.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.master.environment
Environment variables passed to master.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  HBASE_MASTER_OPTS = "-Dcom.sun.management.jmxremote.ssl=true";
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.master.extraFlags
Extra flags for the master service.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "--backup" ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.master.initHDFS
Whether to enable initialization of the hbase directory on HDFS.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.master.openFirewall
Open firewall ports for HBase master.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.master.restartIfChanged
Restart master con config change.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.regionServer.enable
Whether to enable HBase regionServer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.regionServer.environment
Environment variables passed to regionServer.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  HBASE_MASTER_OPTS = "-Dcom.sun.management.jmxremote.ssl=true";
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.regionServer.extraFlags
Extra flags for the regionServer service.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "--backup" ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.regionServer.openFirewall
Open firewall ports for HBase regionServer.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.regionServer.overrideHosts
Remove /etc/hosts entries for “127.0.0.2” and “::1” defined in nixos/modules/config/networking.nix Regionservers must be able to resolve their hostnames to their IP addresses, through PTR records or /etc/hosts entries.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.regionServer.restartIfChanged
Restart regionServer con config change.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.rest.enable
Whether to enable HBase rest.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.rest.environment
Environment variables passed to rest.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  HBASE_MASTER_OPTS = "-Dcom.sun.management.jmxremote.ssl=true";
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.rest.extraFlags
Extra flags for the rest service.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "--backup" ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.rest.infoPort
web UI port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8085
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.rest.openFirewall
Open firewall ports for HBase rest.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.rest.port
RPC port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.rest.restartIfChanged
Restart rest con config change.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.rootdir
This option will set “hbase.rootdir” in hbase−site.xml and determine the directory shared by region servers and into which HBase persists. The URL should be ‘fully−qualified’ to include the filesystem scheme. If a core−site.xml is provided, the FS scheme defaults to the value of “fs.defaultFS”.

Filesystems other than HDFS (like S3, QFS, Swift) are also supported.

Type: string

Default:

```
"/hbase"
```

Example:

```
"hdfs://nameservice1/hbase"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.thrift.enable
Whether to enable HBase thrift.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.thrift.environment
Environment variables passed to thrift.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  HBASE_MASTER_OPTS = "−Dcom.sun.management.jmxremote.ssl=true";
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.thrift.extraFlags
Extra flags for the thrift service.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "--backup" ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.thrift.infoPort
web UI port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9095
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.thrift.openFirewall
Open firewall ports for HBase thrift.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.thrift.port
RPC port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9090
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.thrift.restartIfChanged
Restart thrift con config change.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbase.zookeeperQuorum

This option will set “hbase.zookeeper.quorum” in hbase−site.xml. Comma separated list of servers in the ZooKeeper ensemble.

Type: null or strings concatenated with “,”

Default:

```
null
```

Example:

```
"zk1.internal,zk2.internal,zk3.internal"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbaseSite

Additional options and overrides for hbase−site.xml **https://github.com/apache/hbase/blob/rel/2.4.11/hbase−common/src/main/resources/hbase−default.xml**

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  "hbase.hregion.max.filesize" = 20*1024*1024*1024;
  "hbase.table.normalization.enabled" = "true";
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hbaseSiteDefault

Default options for hbase−site.xml

Type: attribute set of anything

Default:

```
{
  "hbase.cluster.distributed" = "true";
  "hbase.master.info.bindAddress" = "0.0.0.0";
  "hbase.master.ipc.address" = "0.0.0.0";
  "hbase.regionserver.info.bindAddress" = "0.0.0.0";
  "hbase.regionserver.ipc.address" = "0.0.0.0";
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/hbase.nix>

services.hadoop.hdfs.datanode.enable

Whether to enable HDFS DataNode.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.datanode.dataDirs
Tier and path definitions for datanode storage.

Type: null or (list of (submodule))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.datanode.dataDirs.*.path
Determines where on the local filesystem a data node should store its blocks.

Type: absolute path

Example:

```
[
  "/var/lib/hadoop/hdfs/dn"
]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.datanode.dataDirs.*.type
Storage types ([SSD]/[DISK]/[ARCHIVE]/[RAM_DISK]) for HDFS storage policies.

Type: one of “SSD”, “DISK”, “ARCHIVE”, “RAM_DISK”

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.datanode.extraEnv
Extra environment variables for HDFS DataNode

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.datanode.extraFlags
Extra command line flags to pass to HDFS DataNode

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-Dcom.sun.management.jmxremote"
  "-Dcom.sun.management.jmxremote.port=8010"
]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.datanode.openFirewall
Open firewall ports for HDFS DataNode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.datanode.restartIfChanged
Automatically restart the service on config change. This can be set to false to defer restarts on clusters running critical applications. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.httpfs.enable
Whether to enable HDFS JournalNode.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.httpfs.extraEnv
Extra environment variables for HDFS JournalNode

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.httpfs.extraFlags
Extra command line flags to pass to HDFS JournalNode

Type: list of string

Default:

```
[ ]
```

Example:

```
[
```

```
    "-Dcom.sun.management.jmxremote"
    "-Dcom.sun.management.jmxremote.port=8010"
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.httpfs.openFirewall
Open firewall ports for HDFS JournalNode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.httpfs.restartIfChanged
Automatically restart the service on config change. This can be set to false to defer restarts on clusters running critical applications. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.httpfs.tempPath
HTTPFS_TEMP path used by HTTPFS

Type: absolute path

Default:

```
"/tmp/hadoop/httpfs"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.journalnode.enable
Whether to enable HDFS JournalNode.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.journalnode.extraEnv

Extra environment variables for HDFS JournalNode

Type: attribute set of string

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.journalnode.extraFlags

Extra command line flags to pass to HDFS JournalNode

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-Dcom.sun.management.jmxremote"
  "-Dcom.sun.management.jmxremote.port=8010"
]
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.journalnode.openFirewall

Open firewall ports for HDFS JournalNode.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.journalnode.restartIfChanged

Automatically restart the service on config change. This can be set to false to defer restarts on clusters running critical applications. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.namenode.enable

Whether to enable HDFS NameNode.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.namenode.extraEnv
Extra environment variables for HDFS NameNode

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.namenode.extraFlags
Extra command line flags to pass to HDFS NameNode

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-Dcom.sun.management.jmxremote"
  "-Dcom.sun.management.jmxremote.port=8010"
]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.namenode.formatOnInit
Format HDFS namenode on first start. This is useful for quickly spinning up ephemeral HDFS clusters with a single namenode. For HA clusters, initialization involves multiple steps across multiple nodes. Follow this guide to initialize an HA cluster manually: **https://hadoop.apache.org/docs/stable/hadoop-project-dist/hadoop-hdfs/HDFSHighAvailabilityWithQJM.html**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.namenode.openFirewall
Open firewall ports for HDFS NameNode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.namenode.restartIfChanged

Automatically restart the service on config change. This can be set to false to defer restarts on clusters running critical applications. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.zkfc.enable

Whether to enable HDFS ZooKeeper failover controller.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.zkfc.extraEnv

Extra environment variables for HDFS ZooKeeper failover controller

Type: attribute set of string

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.zkfc.extraFlags

Extra command line flags to pass to HDFS ZooKeeper failover controller

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-Dcom.sun.management.jmxremote"
  "-Dcom.sun.management.jmxremote.port=8010"
]
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfs.zkfc.restartIfChanged

Automatically restart the service on config change. This can be set to false to defer restarts on clusters running critical applications. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/hdfs.nix>

services.hadoop.hdfsSite

Additional options and overrides for hdfs−site.xml **https://hadoop.apache.org/docs/current/hadoop−project−dist/hadoop−hdfs/hdfs−default.xml**

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  "dfs.nameservices" = "namenode1";
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/default.nix>

services.hadoop.hdfsSiteDefault

Default options for hdfs−site.xml

Type: attribute set of anything

Default:

```
{
  "dfs.namenode.http−address" = "0.0.0.0:9870";
  "dfs.namenode.http−bind−host" = "0.0.0.0";
  "dfs.namenode.rpc−bind−host" = "0.0.0.0";
  "dfs.namenode.servicerpc−bind−host" = "0.0.0.0";
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/default.nix>

services.hadoop.httpfsSite

Hadoop httpfs−site.xml definition **https://hadoop.apache.org/docs/current/hadoop−hdfs−httpfs/httpfs−default.html**

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  "hadoop.http.max.threads" = 500;
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/default.nix>

services.hadoop.log4jProperties
log4j.properties file added to HADOOP_CONF_DIR

Type: absolute path

Default:

```
"${config.services.hadoop.package}/etc/hadoop/log4j.properties"
```

Example:

```
"${pkgs.hadoop}/etc/hadoop/log4j.properties";
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/default.nix>

services.hadoop.mapredSite
Additional options and overrides for mapred−site.xml **https://hadoop.apache.org/docs/current/hadoop−mapreduce−client/hadoop−mapreduce−client−core/mapred−default.xml**

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  "mapreduce.map.java.opts" = "−Xmx900m −XX:+UseParallelGC";
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/default.nix>

services.hadoop.mapredSiteDefault
Default options for mapred−site.xml

Type: attribute set of anything

Default:

```
{
  "mapreduce.framework.name" = "yarn";
  "yarn.app.mapreduce.am.env" = "HADOOP_MAPRED_HOME=${config.servic \
es.hadoop.package}";
  "mapreduce.map.env" = "HADOOP_MAPRED_HOME=${config.services.hadoo \
p.package}";
  "mapreduce.reduce.env" = "HADOOP_MAPRED_HOME=${config.services.ha \
doop.package}";
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/default.nix>

services.hadoop.yarn.nodemanager.enable
Whether to enable Hadoop YARN NodeManager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.nodemanager.addBinBash
Add /bin/bash. This is needed by the linux container executor's launch script.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.nodemanager.extraEnv
Extra environment variables

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.nodemanager.extraFlags
Extra command line flags to pass to the service

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-Dcom.sun.management.jmxremote"
  "-Dcom.sun.management.jmxremote.port=8010"
]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.nodemanager.localDir
List of directories to store localized files in.

Type: null or (list of absolute path)

Default:

```
null
```

Example:

```
[
  "/var/lib/hadoop/yarn/nm"
]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.nodemanager.openFirewall

Open firewall ports for nodemanager. Because containers can listen on any ephemeral port, TCP ports 1024–65535 will be opened.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.nodemanager.resource.cpuVCores

Number of vcores that can be allocated for containers.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.nodemanager.resource.maximumAllocationMB

The maximum physical memory any container can be allocated.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.nodemanager.resource.maximumAllocationVCores

The maximum virtual CPU cores any container can be allocated.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.nodemanager.resource.memoryMB

Amount of physical memory, in MB, that can be allocated for containers.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.nodemanager.restartIfChanged

Automatically restart the service on config change. This can be set to false to defer restarts on clusters running critical applications. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.nodemanager.useCGroups

Use cgroups to enforce resource limits on containers

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.resourcemanager.enable

Whether to enable Hadoop YARN ResourceManager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.resourcemanager.extraEnv

Extra environment variables

Type: attribute set of string

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.resourcemanager.extraFlags

Extra command line flags to pass to the service

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-Dcom.sun.management.jmxremote"
  "-Dcom.sun.management.jmxremote.port=8010"
]
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.resourcemanager.openFirewall

Open firewall ports for resourcemanager

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarn.resourcemanager.restartIfChanged

Automatically restart the service on config change. This can be set to false to defer restarts on clusters running critical applications. Please consider the security implications of inadvertently running an older version, and the possibility of unexpected behavior caused by inconsistent versions across a cluster when disabling this option.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/yarn.nix>

services.hadoop.yarnSite

Additional options and overrides for yarn−site.xml **https://hadoop.apache.org/docs/current/hadoop−yarn/hadoop−yarn−common/yarn−default.xml**

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  "yarn.resourcemanager.hostname" = "${config.networking.hostName}" \
;
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/hadoop/default.nix>

services.hadoop.yarnSiteDefault

Default options for yarn−site.xml

Type: attribute set of anything

Default:

```
{
  "yarn.nodemanager.admin−env" = "PATH=$PATH";
  "yarn.nodemanager.aux−services" = "mapreduce_shuffle";
  "yarn.nodemanager.aux−services.mapreduce_shuffle.class" = "org.a \
pache.hadoop.mapred.ShuffleHandler";
  "yarn.nodemanager.bind−host" = "0.0.0.0";
  "yarn.nodemanager.container−executor.class" = "org.apache.hadoop \
.yarn.server.nodemanager.LinuxContainerExecutor";
  "yarn.nodemanager.env−whitelist" = "JAVA_HOME,HADOOP_COMMON_HOME \
,HADOOP_HDFS_HOME,HADOOP_CONF_DIR,CLASSPATH_PREPEND_DISTCACHE,HADOO \
P_YARN_HOME,HADOOP_HOME,LANG,TZ";
```

```
  "yarn.nodemanager.linux-container-executor.group" = "hadoop";
  "yarn.nodemanager.linux-container-executor.path" = "/run/wrappe \
rs/yarn-nodemanager/bin/container-executor";
  "yarn.nodemanager.log-dirs" = "/var/log/hadoop/yarn/nodemanager" \
;
  "yarn.resourcemanager.bind-host" = "0.0.0.0";
  "yarn.resourcemanager.scheduler.class" = "org.apache.hadoop.yarn. \
server.resourcemanager.scheduler.fair.FairScheduler";
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/hadoop/default.nix>

services.handheld-daemon.enable
Whether to enable Handheld Daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/handheld-daemon.nix>

services.handheld-daemon.package
The handheld-daemon package to use.

Type: package

Default:

```
pkgs.handheld-daemon
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/handheld-daemon.nix>

services.handheld-daemon.adjustor.enable
Whether to enable Handheld Daemon TDP control plugin.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/handheld-daemon.nix>

services.handheld-daemon.adjustor.loadAcpiCallModule
Whether to load the acpi_call kernel module. Required for TDP control by adjustor on most devices.

Type: boolean

Declared by:
<nixpkgs/nixos/modules/services/hardware/handheld-daemon.nix>

services.handheld−daemon.ui.enable
Whether to enable Handheld Daemon UI.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/handheld−daemon.nix>

services.handheld−daemon.ui.package
The handheld−daemon−ui package to use.

Type: package

Default:

```
pkgs.handheld−daemon−ui
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/handheld−daemon.nix>

services.handheld−daemon.user
The user to run Handheld Daemon with.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/hardware/handheld−daemon.nix>

services.hans.clients
Each attribute of this option defines a systemd service that runs hans. Many or none may be defined. The name of each service is ‘hans−«name»’ where «name» is the name of the corresponding attribute name.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  foo = {
    server = "192.0.2.1";
    extraConfig = "−v";
  }
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hans.nix>

services.hans.clients.<name>.extraConfig
Additional command line parameters

Type: string

Default:

```
""
```

Example:

```
"-v"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hans.nix>

services.hans.clients.<name>.passwordFile
File that contains password

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hans.nix>

services.hans.clients.<name>.server
IP address of server running hans

Type: string

Default:

```
""
```

Example:

```
"192.0.2.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hans.nix>

services.hans.server.enable
enable hans server

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hans.nix>

services.hans.server.extraConfig
Additional command line parameters

Type: string

Default:

```
""
```

Example:

```
"-v"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hans.nix>

services.hans.server.ip
The assigned ip range

Type: string

Default:

```
""
```

Example:

```
"198.51.100.0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hans.nix>

services.hans.server.passwordFile
File that contains password

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hans.nix>

services.hans.server.respondToSystemPings
Force hans respond to ordinary pings

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hans.nix>

services.haproxy.enable
Whether to enable HAProxy, the reliable, high performance TCP/HTTP load balancer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/haproxy.nix>

services.haproxy.package
The haproxy package to use.

Type: package

Default:

```
pkgs.haproxy
```

Declared by:
<nixpkgs/nixos/modules/services/networking/haproxy.nix>

services.haproxy.config
Contents of the HAProxy configuration file, *haproxy.conf*.

Type: null or strings concatenated with “\n”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/haproxy.nix>

services.haproxy.group

Group account under which haproxy runs.

Type: string

Default:

```
"haproxy"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/haproxy.nix>

services.haproxy.user

User account under which haproxy runs.

Type: string

Default:

```
"haproxy"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/haproxy.nix>

services.hardware.argonone.enable

Whether to enable the driver for Argon One Raspberry Pi case fan and power button.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/argonone.nix>

services.hardware.argonone.package

The argononed package to use.

Type: package

Default:

```
pkgs.argononed
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/argonone.nix>

services.hardware.bolt.enable

Whether to enable Bolt, a userspace daemon to enable security levels for Thunderbolt 3 on GNU/Linux.

Bolt is used by GNOME 3 to handle Thunderbolt settings.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/bolt.nix>

services.hardware.bolt.package
The bolt package to use.

Type: package

Default:

```
pkgs.bolt
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/bolt.nix>

services.hardware.deepcool−digital−linux.enable
Whether to enable DeepCool Digital monitoring daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/deepcool−digital−linux.nix>

services.hardware.deepcool−digital−linux.package
The deepcool−digital−linux package to use.

Type: package

Default:

```
pkgs.deepcool−digital−linux
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/deepcool−digital−linux.nix>

services.hardware.deepcool−digital−linux.extraArgs
Extra command line arguments to be passed to the deepcool−digital−linux daemon.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  # Change the update interval
  "−−update 750"
  # Enable the alarm
  "−−alarm"
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/deepcool−digital−linux.nix>

services.hardware.dell−bios−fan−control.enable
Whether to enable One−shot service to disable dell bios fan control on startup.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/dell−bios−fan−control.nix>

services.hardware.dell−bios−fan−control.package
The dell−bios−fan−control package to use.

Type: package

Default:

```
pkgs.dell−bios−fan−control
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/dell−bios−fan−control.nix>

services.hardware.lcd.client.enable
Enable the LCD panel client (LCDproc)

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/lcd.nix>

services.hardware.lcd.client.extraConfig
Additional configuration added verbatim to the client config.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/lcd.nix>

services.hardware.lcd.client.restartForever
Try restarting the client forever.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/lcd.nix>

services.hardware.lcd.server.enable
Enable the LCD panel server (LCDd)

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/lcd.nix>

services.hardware.lcd.server.extraConfig

Additional configuration added verbatim to the server config.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/lcd.nix>

services.hardware.lcd.server.openPorts

Open the ports in the firewall

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/lcd.nix>

services.hardware.lcd.server.usbGroup

The group to use for settings permissions. This group must exist or you will have to create it.

Type: string

Default:

```
"dialout"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/lcd.nix>

services.hardware.lcd.server.usbPermissions

Set group−write permissions on a USB device.

A USB connected LCD panel will most likely require having its permissions modified for lcdd to write to it. Enabling this option sets group−write permissions on the device identified by **services.hardware.lcd.usbVid** and **services.hardware.lcd.usbPid**. In order to find the values, you can run the **lsusb** command. Example output:

```
Bus 005 Device 002: ID 0403:c630 Future Technology Devices Internat \
ional, Ltd lcd2usb interface
```

In this case the vendor id is 0403 and the product id is c630.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/lcd.nix>

services.hardware.lcd.server.usbPid

The product ID of the USB device to claim.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/lcd.nix>

services.hardware.lcd.server.usbVid
The vendor ID of the USB device to claim.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/lcd.nix>

services.hardware.lcd.serverHost
Host on which LCDd is listening.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/lcd.nix>

services.hardware.lcd.serverPort
Port on which LCDd is listening.

Type: signed integer

Default:

```
13666
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/lcd.nix>

services.hardware.openrgb.enable
Whether to enable OpenRGB server, for RGB lighting control.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/openrgb.nix>

services.hardware.openrgb.package
The openrgb package to use.

Type: package

Default:

```
pkgs.openrgb
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/openrgb.nix>

services.hardware.openrgb.motherboard
CPU family of motherboard. Allows for addition motherboard i2c support.

Type: null or one of “amd”, “intel”

Default: if config.hardware.cpu.intel.updateMicrocode then “intel” else if config.hardware.cpu.amd.updateMicrocode then “amd” else null;

Declared by:
<nixpkgs/nixos/modules/services/hardware/openrgb.nix>

services.hardware.openrgb.server.port
Set server port of openrgb.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6742
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/openrgb.nix>

services.hardware.openrgb.startupProfile
The profile file to load from “/var/lib/OpenRGB” at startup.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/openrgb.nix>

services.hardware.pommed.enable
Whether to use the pommed tool to handle Apple laptop keyboard hotkeys.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/pommed.nix>

services.hardware.pommed.configFile
The path to the *pommed.conf* file. Leave to null to use the default config file (*/etc/pommed.conf.mactel*). See the files */etc/pommed.conf.mactel* and */etc/pommed.conf.pmac* for examples to build on.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/pommed.nix>

services.harmonia.package
The harmonia package to use.

Type: package

Default:

```
pkgs.harmonia
```

Declared by:
<nixpkgs/nixos/modules/services/networking/harmonia.nix>

services.harmonia.cache.enable
Whether to enable Harmonia: Nix binary cache written in Rust.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/harmonia.nix>

services.harmonia.cache.settings
Settings to merge with the default configuration. For the list of the default configuration, see **https://github.com/nix-community/harmonia/tree/master#configuration**.

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/harmonia.nix>

services.harmonia.cache.signKeyPath
DEPRECATED: Use ‘services.harmonia-dev.cache.signKeyPaths’ instead. Path to the signing key to use for signing the cache

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/harmonia.nix>

services.harmonia.cache.signKeyPaths
Paths to the signing keys to use for signing the cache

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/harmonia.nix>

services.harmonia.daemon.enable
Whether to enable Harmonia daemon: Nix daemon protocol implementation.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/harmonia.nix>

services.harmonia.daemon.dbPath
Path to the Nix database

Type: string

Default:

```
"/nix/var/nix/db/db.sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/harmonia.nix>

services.harmonia.daemon.logLevel
Log level for the daemon

Type: string

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/harmonia.nix>

services.harmonia.daemon.socketPath
Path where the daemon socket will be created

Type: string

Default:

```
"/run/harmonia-daemon/socket"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/harmonia.nix>

services.harmonia.daemon.storeDir
Path to the Nix store directory

Type: string

Default:

```
"/nix/store"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/harmonia.nix>

services.haste-server.enable
Whether to enable haste-server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/editors/haste.nix>

services.haste−server.openFirewall

Whether to enable firewall passthrough for haste−server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/editors/haste.nix>

services.haste−server.settings

Configuration for haste−server. For documentation see **project readme**

Type: JSON value

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/editors/haste.nix>

services.hatsu.enable

Whether to enable Self−hosted and fully−automated ActivityPub bridge for static sites.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/hatsu.nix>

services.hatsu.package

The hatsu package to use.

Type: package

Default:

```
pkgs.hatsu
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/hatsu.nix>

services.hatsu.settings

Configuration for Hatsu, see <link xlink:href=“https://hatsu.cli.rs/admins/environments.html”/> for supported values.

Type: open submodule of attribute set of (null or boolean or signed integer or 16 bit unsigned integer; between 0 and 65535 (both inclusive) or string)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hatsu.nix>

services.hatsu.settings.HATSU_DATABASE_URL
Database URL.

Type: string

Default:

```
"sqlite:///var/lib/hatsu/hatsu.sqlite?mode=rwc"
```

Example:

```
"postgres://username:password@host/database"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hatsu.nix>

services.hatsu.settings.HATSU_DOMAIN
The domain name of your instance (eg ‘hatsu.local’).

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hatsu.nix>

services.hatsu.settings.HATSU_LISTEN_HOST
Host where hatsu should listen for incoming requests.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hatsu.nix>

services.hatsu.settings.HATSU_LISTEN_PORT
Port where hatsu should listen for incoming requests.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3939
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hatsu.nix>

services.hatsu.settings.HATSU_PRIMARY_ACCOUNT
The primary account of your instance (eg ‘example.com’).

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hatsu.nix>

services.haveged.enable
Whether to enable haveged entropy daemon, which refills /dev/random when low. NOTE: does nothing on kernels newer than 5.6 .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/haveged.nix>

services.haveged.refill_threshold
The number of bits of available entropy beneath which haveged should refill the entropy pool.

Type: signed integer

Default:

```
1024
```

Declared by:
<nixpkgs/nixos/modules/services/security/haveged.nix>

services.haven.enable
Whether to enable haven.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/haven.nix>

services.haven.package
The haven package to use.

Type: package

Default:

```
pkgs.haven
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/haven.nix>

services.haven.blastrRelays
List of relay configurations for blastr

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "relay.example.com"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/haven.nix>

services.haven.environmentFile
Path to a file containing sensitive environment variables. See **https://github.com/bitvora/haven** for documentation. The file should contain environment−variable assignments like: S3_SECRET_KEY=mysecretkey S3_ACCESS_KEY_ID=myaccesskey

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/haven/secrets.env"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/haven.nix>

services.haven.importRelays
List of relay configurations for importing historical events

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "relay.example.com"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/haven.nix>

services.haven.settings
See **https://github.com/bitvora/haven** for documentation.

Type: unspecified value

Default:

```
"See <https://github.com/bitvora/haven/blob/master/.env.example>"
```

Example:

```
{
  RELAY_URL = "relay.example.com";
  OWNER_NPUB = "npub1...";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/haven.nix>

services.hbase-standalone.enable
Whether to enable HBase master in standalone mode with embedded regionserver and zookeper. Do not use this configuration for production nor for evaluating HBase performance .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/hbase-standalone.nix>

services.hbase−standalone.package

The hbase package to use.

Type: package

Default:

```
pkgs.hbase
```

Declared by:

<nixpkgs/nixos/modules/services/databases/hbase−standalone.nix>

services.hbase−standalone.dataDir

Specifies location of HBase database files. This location should be writable and readable for the user the HBase service runs as (hbase by default).

Type: absolute path

Default:

```
"/var/lib/hbase"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/hbase−standalone.nix>

services.hbase−standalone.group

Group account under which HBase runs.

Type: string

Default:

```
"hbase"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/hbase−standalone.nix>

services.hbase−standalone.logDir

Specifies the location of HBase log files.

Type: absolute path

Default:

```
"/var/log/hbase"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/hbase−standalone.nix>

services.hbase−standalone.settings

configurations in hbase−site.xml, see **https://github.com/apache/hbase/blob/master/hbase−server/src/test/resources/hbase−site.xml** for details.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  "hbase.rootdir" = "file://${config.services.hbase−standalone.dat \
aDir}/hbase";
  "hbase.zookeeper.property.dataDir" = "${config.services.hbase−st \
andalone.dataDir}/zookeeper";
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/hbase−standalone.nix>

services.hbase−standalone.user
User account under which HBase runs.

Type: string

Default:

```
"hbase"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/hbase−standalone.nix>

services.hdapsd.enable
Whether to enable Hard Drive Active Protection System Daemon, devices are detected and managed automatically by udev and systemd .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/hdaps.nix>

services.hddfancontrol.enable
Whether to enable hddfancontrol daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/hddfancontrol.nix>

services.hddfancontrol.package
The hddfancontrol package to use.

Type: package

Default:

```
pkgs.hddfancontrol
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/hddfancontrol.nix>

services.hddfancontrol.settings
Parameter−sets for each instance of hddfancontrol.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  harddrives = {
    disks = [
      "/dev/sda"
      "/dev/sdb"
      "/dev/sdc"
    ];
    pwmPaths = [
      "/sys/class/hwmon/hwmon1/pwm1:25:10"
    ];
    logVerbosity = "DEBUG";
  };
  ssddrives = {
    disks = [
      "/dev/sdd"
      "/dev/sde"
      "/dev/sdf"
    ];
    pwmPaths = [
      "/sys/class/hwmon/hwmon1/pwm2:25:10"
    ];
    extraArgs = [
      "--interval=30s"
    ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/hddfancontrol.nix>

services.hddfancontrol.settings.<drive-bay-name>.disks

Drive(s) to get temperature from

Can also use command substitution to automatically grab all matching drives; such as all scsi (sas) drives

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/dev/sda"
  "'find /dev/disk/by-id -name \"scsi*\" -and -not -name \" \
*-part*\" -printf \"%p \"'"
]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/hddfancontrol.nix>

services.hddfancontrol.settings.<drive-bay-name>.extraArgs

Extra commandline arguments for hddfancontrol

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--min-fan-speed-prct=10"
  "--interval=1min"
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/hddfancontrol.nix>

services.hddfancontrol.settings.<drive-bay-name>.logVerbosity
Verbosity of the log level

Type: one of “TRACE”, “DEBUG”, “INFO”, “WARN”, “ERROR”

Default:

```
"INFO"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/hddfancontrol.nix>

services.hddfancontrol.settings.<drive-bay-name>.pwmPaths
PWM filepath(s) to control fan speed (under /sys), followed by initial and fan-stop PWM values Can also use command substitution to ensure the correct hwmonX is selected on every boot

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/sys/class/hwmon/hwmon2/pwm1:30:10"
  "'echo /sys/devices/platform/nct6775.656/hwmon/hwmon[[:print:]]'/ \
pwm4:80:20"
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/hddfancontrol.nix>

services.headphones.enable
Whether to enable the headphones server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/headphones.nix>

services.headphones.configFile
Path to config file.

Type: absolute path

Default:

```
"${config.services.headphones.dataDir}/config.ini"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/headphones.nix>

services.headphones.dataDir
Path where to store data files.

Type: absolute path

Default:

```
"/var/lib/headphones"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/headphones.nix>

services.headphones.group
Group to run the service as

Type: string

Default:

```
"headphones"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/headphones.nix>

services.headphones.host
Host to listen on.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/headphones.nix>

services.headphones.port
Port to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8181
```

Declared by:
<nixpkgs/nixos/modules/services/misc/headphones.nix>

services.headphones.user
User to run the service as

Type: string

Default:

```
"headphones"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/headphones.nix>

services.headplane.enable
Whether to enable Headplane.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.package
The headplane package to use.

Type: package

Default:

```
pkgs.headplane
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.agent.package
The headplane−agent package to use.

Type: package

Default:

```
pkgs.headplane-agent
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.debug
Whether to enable debug logging.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings
Headplane configuration options. Generates a YAML config file. See: https://github.com/tale/headplane/blob/main/config.example.yaml

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.headscale
Headscale specific settings for Headplane integration.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.headscale.config_path
Path to the Headscale configuration file. This is optional, but HIGHLY recommended for the best experience. If this is read only, Headplane will show your configuration settings in the Web UI, but they cannot be changed.

Type: null or absolute path

Default:

```
config.services.headscale.configFile
```

Example:

```
"/etc/headscale/config.yaml"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.headscale.config_strict
Whether to enable Headplane internally validates the Headscale configuration to ensure that it changes the configuration in a safe way. Disabled by default because it clashes with how the Headplane works in NixOS. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.headscale.dns_records_path
If you are using 'dns.extra_records_path' in your Headscale configuration, you need to set this to the path for Headplane to be able to read the DNS records. Ensure that the file is both readable and writable by the Headplane process. When using this, Headplane will no longer need to automatically restart Headscale for DNS record changes.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/headplane/extra_records.json"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.headscale.public_url
Public URL if different. This affects certain parts of the web UI.

Type: null or string

Default:

```
config.services.headscale.settings.server_url
```

Example:

```
"https://headscale.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.headscale.tls_cert_path
Path to a file containing the TLS certificate.

Type: null or absolute path

Default:

```
null
```

Example:

```
config.sops.secrets.tls_cert.path
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.headscale.url
The URL to your Headscale instance. All API requests are routed through this URL. THIS IS NOT the gRPC endpoint, but the HTTP endpoint. IMPORTANT: If you are using TLS this MUST be set to 'https://'.

Type: string

Default:

```
http://127.0.0.1:${toString config.services.headscale.port}
```

Example:

```
"https://headscale.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.integration
Integration configurations for Headplane to interact with Headscale.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.integration.agent
Agent configuration for the Headplane agent.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.integration.agent.enabled
The Headplane agent allows retrieving information about nodes. This allows the UI to display version, OS, and connectivity data. You will see the Headplane agent in your Tailnet as a node when it connects.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.integration.agent.cache_path
Where to store the agent cache.

Type: absolute path

Default:

```
"/var/lib/headplane/agent_cache.json"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.integration.agent.cache_ttl
How long to cache agent information (in milliseconds). If you want data to update faster, reduce the TTL, but this will increase the frequency of requests to Headscale.

Type: positive integer, meaning >0

Default:

```
180000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.integration.agent.executable_path
Path to the headplane agent binary.

Type: absolute path *(read only)*

Default:

```
"${config.services.headplane.agent.package}/bin/hp_agent"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.integration.agent.host_name
Optionally change the name of the agent in the Tailnet

Type: string

Default:

```
"headplane-agent"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.integration.agent.pre_authkey_path
Path to a file containing the agent preauth key. To connect to your Tailnet, you need to generate a pre-auth key. This can be done via the web UI or through the 'headscale' CLI.

Type: null or absolute path

Default:

```
null
```

Example:

```
config.sops.secrets.agent_pre_authkey.path
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.integration.agent.work_dir
Do not change this unless you are running a custom deployment. The work_dir represents where the agent will store its data to be able to automatically reauthenticate with your Tailnet. It needs to be writable by the user running the Headplane process.

Type: absolute path

Default:

```
"/var/lib/headplane/agent"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.integration.proc
Native process integration settings.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.integration.proc.enabled
Enable “Native” integration that works when Headscale and Headplane are running outside of a container. There is no additional configuration, but you need to ensure that the Headplane process can terminate the Headscale process.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc
OIDC Configuration for authentication.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc.authorization_endpoint
Custom authorization endpoint URL.

Type: null or string

Default:

```
null
```

Example:

```
"https://provider.example.com/authorize"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc.client_id
The client ID for the OIDC client.

Type: string

Example:

```
"your-client-id"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc.client_secret_path
Path to a file containing the OIDC client secret.

Type: null or absolute path

Default:

```
null
```

Example:

```
config.sops.secrets.oidc_client_secret.path
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc.disable_api_key_login
Whether to disable API key login.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc.extra_params
Extra parameters to send to the OIDC provider.

Type: null or (attribute set of string)

Default:

```
null
```

Example:

```
{
  prompt = "consent";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc.headscale_api_key_path
Path to a file containing the Headscale API key. Required when ‘services.headplane.settings.oidc’ is set.

Type: null or absolute path

Default:

```
null
```

Example:

```
config.sops.secrets.headscale_api_key.path
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc.issuer
URL to OpenID issuer.

Type: string

Example:

```
"https://provider.example.com/issuer-url"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc.profile_picture_source
Source for user profile pictures.

Type: one of “oidc”, “gravatar”

Default:

```
"oidc"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc.redirect_uri
This should point to your publicly accessible URL for your Headplane instance with /admin/oidc/callback.

Type: null or string

Default:

```
null
```

Example:

```
"https://headscale.example.com/admin/oidc/callback"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc.scope
OIDC scope to request.

Type: string

Default:

```
"openid email profile"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc.strict_validation
Enable strict validation of OIDC configuration.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc.token_endpoint
Custom token endpoint URL.

Type: null or string

Default:

```
null
```

Example:

```
"https://provider.example.com/token"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc.token_endpoint_auth_method
The token endpoint authentication method.

Type: one of “client_secret_post”, “client_secret_basic”, “client_secret_jwt”

Default:

```
"client_secret_post"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc.user_storage_file
Path to a file containing the users and their permissions for Headplane.

Type: absolute path

Default:

```
"/var/lib/headplane/users.json"
```

Example:

```
"/var/lib/headplane/users.json"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.oidc.userinfo_endpoint
Custom userinfo endpoint URL.

Type: null or string

Default:

```
null
```

Example:

```
"https://provider.example.com/userinfo"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.server
Server configuration for Headplane web application.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.server.cookie_secret_path
Path to a file containing the cookie secret. The secret must be exactly 32 characters long.

Type: null or absolute path

Default:

```
null
```

Example:

```
config.sops.secrets.headplane_cookie.path
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.server.cookie_secure
Should the cookies only work over HTTPS? Set to false if running via HTTP without a proxy. Recommended to be true in production.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.server.data_path
The path to persist Headplane specific data. All data going forward is stored in this directory, including the internal database and any cache related files. Data formats prior to 0.6.1 will automatically be migrated.

Type: absolute path

Default:

```
"/var/lib/headplane"
```

Example:

```
"/var/lib/headplane"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.server.host
The host address to bind to.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headplane.settings.server.port

The port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headplane.nix>

services.headscale.enable

Whether to enable headscale, Open Source coordination server for Tailscale.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.package

The headscale package to use.

Type: package

Default:

```
pkgs.headscale
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.address

Listening address of headscale.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.configFile

Path to the configuration file of headscale.

Type: absolute path *(read only)*

Default:

```
(pkgs.formats.yaml { }).generate "headscale.yaml" config.services.h \
eadscale.settings
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.group

Group under which headscale runs.

> **Note**
> If left as the default value this group will automatically be created on system activation, otherwise you are responsible for ensuring the user exists before the headscale service starts.

Type: string

Default:

```
"headscale"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.port

Listening port of headscale.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Example:

```
443
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings

Overrides to *config.yaml* as a Nix attribute set. Check the **example config** for possible options.

Type: open submodule of (YAML 1.1 value)

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.database.postgres.host

Database host address.

Type: null or string

Default:

```
null
```

Example:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.database.postgres.name

Database name.

Type: null or string

Default:

```
null
```

Example:

```
"headscale"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.database.postgres.password_file
A file containing the password corresponding to **database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/headscale-dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.database.postgres.port
Database host port.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Example:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.database.postgres.user
Database user.

Type: null or string

Default:

```
null
```

Example:

```
"headscale"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.database.sqlite.path
Path to the sqlite3 database file.

Type: null or string

Default:

```
"/var/lib/headscale/db.sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.database.sqlite.write_ahead_log
Enable WAL mode for SQLite. This is recommended for production environments. **https://www.sqlite.org/wal.html**

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.database.type
Database engine to use. Please note that using Postgres is highly discouraged as it is only supported for legacy reasons. All new development, testing and optimisations are done with SQLite in mind.

Type: one of “sqlite”, “sqlite3”, “postgres”

Default:

```
"sqlite"
```

Example:

```
"postgres"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.derp.auto_update_enabled
Whether to automatically update DERP maps on a set frequency.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.derp.paths
List of file paths containing DERP maps. See **How Tailscale works** for more information on DERP maps.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.derp.server.private_key_path
Path to derp private key file, generated automatically if it does not exist.

Type: absolute path

Default:

```
"/var/lib/headscale/derp_server_private.key"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.derp.update_frequency

Frequency to update DERP maps.

Type: string

Default:

```
"24h"
```

Example:

```
"5m"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.derp.urls

List of urls containing DERP maps. See **How Tailscale works** for more information on DERP maps.

Type: list of string

Default:

```
[
  "https://controlplane.tailscale.com/derpmap/default"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.dns.base_domain

Defines the base domain to create the hostnames for MagicDNS. This domain must be different from the **server_url** domain. **base_domain** must be a FQDN, without the trailing dot. The FQDN of the hosts will be 'hostname.base_domain' (e.g. 'myhost.tailnet.example.com').

Type: string

Default:

```
""
```

Example:

```
"tailnet.example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.dns.extra_records

Extra DNS records to expose to clients.

Type: null or (list of (submodule))

Default:

```
null
```

Example:

```
[ {
  name = "grafana.tailnet.example.com";
  type = "A";
  example = "100.64.0.3";
} ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.dns.extra_records.*.name
DNS record name.

Type: string

Example:

```
"grafana.tailnet.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.dns.extra_records.*.type
DNS record type.

Type: one of “A”, “AAAA”

Example:

```
"A"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.dns.extra_records.*.value
DNS record value (IP address).

Type: string

Example:

```
"100.64.0.3"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.dns.magic_dns
Whether to use **MagicDNS**.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.dns.nameservers.global
List of nameservers to pass to Tailscale clients.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.dns.override_local_dns

Whether to **override clients' DNS servers**.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.dns.search_domains

Search domains to inject to Tailscale clients.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "mydomain.internal"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.dns.split

Split DNS configuration (map of domains and which DNS server to use for each). See **https://tailscale.com/kb/1054/dns/**.

Type: attribute set of list of string

Default:

```
{ }
```

Example:

```
{
  "foo.bar.com" = [
    "1.1.1.1"
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.ephemeral_node_inactivity_timeout

Time before an inactive ephemeral node is deleted.

Type: string

Default:

```
"30m"
```

Example:

```
"5m"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.log.format
headscale log format.

Type: string

Default:

```
"text"
```

Example:

```
"json"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.log.level
headscale log level.

Type: string

Default:

```
"info"
```

Example:

```
"debug"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.noise.private_key_path
Path to noise private key file, generated automatically if it does not exist.

Type: absolute path

Default:

```
"/var/lib/headscale/noise_private.key"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.oidc.allowed_domains
Allowed principal domains. if an authenticated user's domain is not in this list authentication request will be rejected.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "example.com"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.oidc.allowed_users

Users allowed to authenticate even if not in allowedDomains.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "alice@example.com"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.oidc.client_id

OpenID Connect client ID.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.oidc.client_secret_path

Path to OpenID Connect client secret file. Expands environment variables in format ${VAR}.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.oidc.extra_params

Custom query parameters to send with the Authorize Endpoint request.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  domain_hint = "example.com";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.oidc.issuer

URL to OpenID issuer.

Type: string

Default:

```
""
```

Example:

```
"https://openid.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.oidc.pkce.enabled
Enable or disable PKCE (Proof Key for Code Exchange) support. PKCE adds an additional layer of security to the OAuth 2.0 authorization code flow by preventing authorization code interception attacks See https://datatracker.ietf.org/doc/html/rfc7636

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.oidc.pkce.method
PKCE method to use:

- plain: Use plain code verifier
- S256: Use SHA256 hashed code verifier (default, recommended)

Type: string

Default:

```
"S256"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.oidc.scope
Scopes used in the OIDC flow.

Type: list of string

Default:

```
[
  "openid"
  "profile"
  "email"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.policy.mode
The mode can be “file” or “database” that defines where the ACL policies are stored and read from.

Type: one of “file”, “database”

Default:

```
"file"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.policy.path

If the mode is set to “file”, the path to a HuJSON file containing ACL policies.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.prefixes.allocation

Strategy used for allocation of IPs to nodes, available options:

- sequential (default): assigns the next free IP from the previous given IP.
- random: assigns the next free IP from a pseudo−random IP generator (crypto/rand).

Type: one of “sequential”, “random”

Default:

```
"sequential"
```

Example:

```
"random"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.prefixes.v4

Each prefix consists of either an IPv4 or IPv6 address, and the associated prefix length, delimited by a slash. It must be within IP ranges supported by the Tailscale client − i.e., subnets of 100.64.0.0/10 and fd7a:115c:a1e0::/48.

Type: string

Default:

```
"100.64.0.0/10"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.prefixes.v6

Each prefix consists of either an IPv4 or IPv6 address, and the associated prefix length, delimited by a slash. It must be within IP ranges supported by the Tailscale client − i.e., subnets of 100.64.0.0/10 and fd7a:115c:a1e0::/48.

Type: string

Default:

```
"fd7a:115c:a1e0::/48"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.server_url

The url clients will connect to.

Type: string

Default:

```
"http://127.0.0.1:8080"
```

Example:

```
"https://myheadscale.example.com:443"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.tls_cert_path
Path to already created certificate.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.tls_key_path
Path to key for already created certificate.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.tls_letsencrypt_challenge_type
Type of ACME challenge to use, currently supported types: ‘HTTP−01’ or ‘TLS−ALPN−01’.

Type: one of “TLS−ALPN−01”, “HTTP−01”

Default:

```
"HTTP-01"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.tls_letsencrypt_hostname
Domain name to request a TLS certificate for.

Type: null or string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.settings.tls_letsencrypt_listen
When HTTP−01 challenge is chosen, letsencrypt must set up a verification endpoint, and it will be listening on: ‘:http = port 80’.

Type: null or string

Default:

```
":http"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.headscale.user

User account under which headscale runs.

> **Note**
> If left as the default value this user will automatically be created on system activation, otherwise you are responsible for ensuring the user exists before the headscale service starts.

Type: string

Default:

```
"headscale"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/headscale.nix>

services.healthchecks.enable

Enable healthchecks. It is expected to be run behind a HTTP reverse proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/healthchecks.nix>

services.healthchecks.package

The healthchecks package to use.

Type: package

Default:

```
pkgs.healthchecks
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/healthchecks.nix>

services.healthchecks.dataDir

The directory used to store all data for healthchecks.

> **Note**
> If left as the default value this directory will automatically be created before the healthchecks server starts, otherwise you are responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: string

Default:

```
"/var/lib/healthchecks"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/healthchecks.nix>

services.healthchecks.group

Group account under which healthchecks runs.

> **Note**
> If left as the default value this group will automatically be created on system activation, otherwise you are responsible for ensuring the group exists before the healthchecks service starts.

Type: string

Default:

```
"healthchecks"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/healthchecks.nix>

services.healthchecks.listenAddress
Address the server will listen on.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/healthchecks.nix>

services.healthchecks.port
Port the server will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/healthchecks.nix>

services.healthchecks.settings
Environment variables which are read by healthchecks ‘(local)_settings.py’.

Settings which are explicitly covered in options below, are type−checked and/or transformed before added to the environment, everything else is passed as a string.

See **https://healthchecks.io/docs/self_hosted_configuration/** for a full documentation of settings.

We add additional variables to this list inside the packages ‘local_settings.py.’

- ‘STATIC_ROOT’ to set a state directory for dynamically generated static files.
- ‘SECRET_KEY_FILE’ to read ‘SECRET_KEY’ from a file at runtime and keep it out of /nix/store.
- ‘_FILE’ variants for several values that hold sensitive information in **Healthchecks configuration** so that they also can be read from a file and kept out of /nix/store. To see which values have support for a ‘_FILE’ variant, run:
  - ‘nix−instantiate −−eval −−expr '(import <nixpkgs> {}).healthchecks.secrets'’
  - or ‘nix eval 'nixpkgs#healthchecks.secrets'’ if the flake support has been enabled.

If the same variable is set in both ‘settings’ and ‘settingsFile’ the value from ‘settingsFile’ has priority.

Type: open submodule of attribute set of string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/healthchecks.nix>

services.healthchecks.settings.ALLOWED_HOSTS
The host/domain names that this site can serve.

Type: list of string

Default:

```
[
  "*"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/healthchecks.nix>

services.healthchecks.settings.DB
Database engine to use.

Type: one of “sqlite”, “postgres”, “mysql”

Default:

```
"sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/healthchecks.nix>

services.healthchecks.settings.DB_NAME
Database name.

Type: string

Default:

```
if config.services.healthchecks.settings.DB == "sqlite"
then "${config.services.healthchecks.dataDir}/healthchecks.sqlite"
else "hc"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/healthchecks.nix>

services.healthchecks.settings.DEBUG
Enable debug mode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/healthchecks.nix>

services.healthchecks.settings.REGISTRATION_OPEN
A boolean that controls whether site visitors can create new accounts. Set it to false if you are setting up a private Healthchecks instance, but it needs to be publicly accessible (so, for example, your cloud services can send pings to it). If you close new user registration, you can still selectively invite users to your team account.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/healthchecks.nix>

services.healthchecks.settings.SECRET_KEY_FILE
Path to a file containing the secret key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/healthchecks.nix>

services.healthchecks.settingsFile
Environment variables which are read by healthchecks '(local)_settings.py'.

Settings which are explicitly covered in options below, are type−checked and/or transformed before added to the environment, everything else is passed as a string.

See **https://healthchecks.io/docs/self_hosted_configuration/** for a full documentation of settings.

We add additional variables to this list inside the packages 'local_settings.py.'

- 'STATIC_ROOT' to set a state directory for dynamically generated static files.
- 'SECRET_KEY_FILE' to read 'SECRET_KEY' from a file at runtime and keep it out of /nix/store.
- '_FILE' variants for several values that hold sensitive information in **Healthchecks configuration** so that they also can be read from a file and kept out of /nix/store. To see which values have support for a '_FILE' variant, run:
  - 'nix−instantiate −−eval −−expr '(import <nixpkgs> {}).healthchecks.secrets''
  - or 'nix eval 'nixpkgs#healthchecks.secrets'' if the flake support has been enabled.

If the same variable is set in both 'settings' and 'settingsFile' the value from 'settingsFile' has priority.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/healthchecks.nix>

services.healthchecks.user
User account under which healthchecks runs.

Note
If left as the default value this user will automatically be created on system activation, otherwise you are responsible for ensuring the user exists before the healthchecks service starts.

Type: string

Default:

```
"healthchecks"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/healthchecks.nix>

services.heapster.enable
Whether to enable Heapster monitoring.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/heapster.nix>

services.heapster.package
The heapster package to use.

Type: package

Default:

```
pkgs.heapster
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/heapster.nix>

services.heapster.extraOpts
Heapster extra options

Type: strings concatenated with " "

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/heapster.nix>

services.heapster.sink
Heapster metic sink

Type: string

Example:

```
"influxdb:http://localhost:8086"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/heapster.nix>

services.heapster.source
Heapster metric source

Type: string

Example:

```
"kubernetes:https://kubernetes.default"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/heapster.nix>

services.heartbeat.enable
Whether to enable heartbeat, uptime monitoring.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/logging/heartbeat.nix>

services.heartbeat.package

The heartbeat package to use.

Type: package

Default:

```
pkgs.heartbeat
```

Example:

```
heartbeat7
```

Declared by:

<nixpkgs/nixos/modules/services/logging/heartbeat.nix>

services.heartbeat.extraConfig

Any other configuration options you want to add

Type: strings concatenated with “\n”

Default:

```
heartbeat.monitors:
- type: http
  urls: ["http://localhost:9200"]
  schedule: '@every 10s'
```

Declared by:

<nixpkgs/nixos/modules/services/logging/heartbeat.nix>

services.heartbeat.name

Name of the beat

Type: string

Default:

```
"heartbeat"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/heartbeat.nix>

services.heartbeat.stateDir

The state directory. heartbeat’s own logs and other data are stored here.

Type: string

Default:

```
"/var/lib/heartbeat"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/heartbeat.nix>

services.heartbeat.tags

Tags to place on the shipped log messages

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/logging/heartbeat.nix>

services.hebbot.enable
Whether to enable hebbot.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/hebbot.nix>

services.hebbot.package
The hebbot package to use.

Type: package

Default:

```
pkgs.hebbot
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/hebbot.nix>

services.hebbot.botPasswordFile
A path to the password file for your bot.

Consider using a path that does not end up in your Nix store as it would be world readable.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/matrix/hebbot.nix>

services.hebbot.settings
Configuration for Hebbot, see, for examples:

- **https://github.com/matrix-org/twim-config/blob/master/config.toml**
- **https://gitlab.gnome.org/Teams/Websites/thisweek.gnome.org/-/blob/main/hebbot/config.toml**

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/hebbot.nix>

services.hebbot.templates.project
A path to the Markdown file for the project template.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/matrix/hebbot.nix>

services.hebbot.templates.report
A path to the Markdown file for the report template.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/matrix/hebbot.nix>

services.hebbot.templates.section
A path to the Markdown file for the section template.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/matrix/hebbot.nix>

services.hedgedoc.enable
Whether to enable the HedgeDoc Markdown Editor.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hedgedoc.nix>

services.hedgedoc.package
The hedgedoc package to use.

Type: package

Default:

```
pkgs.hedgedoc
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hedgedoc.nix>

services.hedgedoc.configureNginx
Whether to configure nginx as a reverse proxy.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hedgedoc.nix>

services.hedgedoc.environmentFile
Environment file as defined in **systemd.exec**(5).

Secrets may be passed to the service without adding them to the world−readable Nix store, by specifying placeholder variables as the option value in Nix and setting these variables accordingly in the environment file.

Snippet of HedgeDoc config containing a secret:

```
services.hedgedoc.settings.dbURL = "postgres://hedgedoc:\${DB_PASS \
WORD}@db−host:5432/hedgedocdb";
```

and the content of this environment file:

```
  DB_PASSWORD=verysecretdbpassword
'''
```

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/hedgedoc/hedgedoc.env"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/hedgedoc.nix>

services.hedgedoc.settings
HedgeDoc configuration, see **https://docs.hedgedoc.org/configuration/** for documentation.

Type: open submodule of (JSON value)

Declared by:
<nixpkgs/nixos/modules/services/web-apps/hedgedoc.nix>

services.hedgedoc.settings.allowGravatar
Whether to enable **Libravatar** as profile picture source on your instance.

Despite the naming of the setting, Hedgedoc replaced Gravatar with Libravatar in **CodiMD 1.4.0**

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/hedgedoc.nix>

services.hedgedoc.settings.allowOrigin
List of domains to whitelist.

Type: list of string

Default:

```
with config.services.hedgedoc.settings; [ host ] ++ lib.optionals ( \
domain != null) [ domain ]
```

Example:

```
[
  "localhost"
  "hedgedoc.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/hedgedoc.nix>

services.hedgedoc.settings.db
Specify the configuration for sequelize. HedgeDoc supports ‘mysql’, ‘postgres’, ‘sqlite’ and ‘mssql’. See **https://sequelize.readthedocs.io/en/v3/** for more information.

Note
The relevant parts will be overriden if you set **dbURL**.

Type: attribute set

Default:

```
{
```

```
  dialect = "sqlite";
  storage = "/var/lib/hedgedoc/db.sqlite";
}
```

Example:

```
db = {
  username = "hedgedoc";
  database = "hedgedoc";
  host = "localhost:5432";
  # or via socket
  # host = "/run/postgresql";
  dialect = "postgresql";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/hedgedoc.nix>

services.hedgedoc.settings.domain
Domain to use for website.

This is useful if you are trying to run hedgedoc behind a reverse proxy.

Type: null or string

Default:

```
null
```

Example:

```
"hedgedoc.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/hedgedoc.nix>

services.hedgedoc.settings.host
Address to listen on.

Type: null or string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/hedgedoc.nix>

services.hedgedoc.settings.path
Path to UNIX domain socket to listen on

Note
If specified, **host** and **port** will be ignored.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/hedgedoc/hedgedoc.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/hedgedoc.nix>

services.hedgedoc.settings.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Example:

```
80
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/hedgedoc.nix>

services.hedgedoc.settings.protocolUseSSL
Use ‘https://’ for all links.

This is useful if you are trying to run hedgedoc behind a reverse proxy.

Note
Only applied if **domain** is set.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/hedgedoc.nix>

services.hedgedoc.settings.uploadsPath
Directory for storing uploaded images.

Type: absolute path

Default:

```
"/var/lib/hedgedoc/uploads"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/hedgedoc.nix>

services.hedgedoc.settings.urlPath
URL path for the website.

This is useful if you are hosting hedgedoc on a path like ‘www.example.com/hedgedoc’

Type: null or string

Default:

```
null
```

Example:

```
"hedgedoc"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hedgedoc.nix>

services.hedgedoc.settings.useSSL
Enable to use SSL server.

Note
This will also enable **protocolUseSSL**.

It will also require you to set the following:

- **sslKeyPath**
- **sslCertPath**
- **sslCAPath**
- **dhParamPath**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hedgedoc.nix>

services.heisenbridge.enable
Whether to enable the Matrix to IRC bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/heisenbridge.nix>

services.heisenbridge.package
The heisenbridge package to use.

Type: package

Default:

```
pkgs.heisenbridge
```

Declared by:
<nixpkgs/nixos/modules/services/misc/heisenbridge.nix>

services.heisenbridge.address
Address to listen on. IPv6 does not seem to be supported.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/heisenbridge.nix>

services.heisenbridge.debug
More verbose logging. Recommended during initial setup.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/heisenbridge.nix>

services.heisenbridge.extraArgs
Heisenbridge is configured over the command line. Append extra arguments here

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/heisenbridge.nix>

services.heisenbridge.homeserver
The URL to the home server for client−server API calls

Type: string

Example:

```
"http://localhost:8008"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/heisenbridge.nix>

services.heisenbridge.identd.enable
Whether to enable identd service support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/heisenbridge.nix>

services.heisenbridge.identd.port
identd listen port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
113
```

Declared by:
<nixpkgs/nixos/modules/services/misc/heisenbridge.nix>

services.heisenbridge.namespaces

Configure the ‘namespaces’ section of the registration.yml for the bridge and the server

Type: open submodule of (JSON value)

Default:

```
{
  aliases = [ ];
  rooms = [ ];
  users = [
    {
      exclusive = true;
      regex = "@irc_.*";
    }
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/heisenbridge.nix>

services.heisenbridge.owner

Set owner MXID otherwise first talking local user will claim the bridge

Type: null or string

Default:

```
null
```

Example:

```
"@admin:example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/heisenbridge.nix>

services.heisenbridge.port

The port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9898
```

Declared by:

<nixpkgs/nixos/modules/services/misc/heisenbridge.nix>

services.heisenbridge.registrationUrl

The URL where the application service is listening for HS requests, from the Matrix HS perspective.# The default value assumes the bridge runs on the same host as the home server, in the same network.

Type: string

Default:

```
"http://$\${cfg.address}:$\${toString cfg.port}"
```

Example:

```
"https://matrix.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/heisenbridge.nix>

services.hercules−ci−agent.enable

Enable to run Hercules CI Agent as a system service.

Hercules CI is a continuous integation service that is centered around Nix.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/hercules−ci−agent/common.nix>

services.hercules−ci−agent.package

The hercules−ci−agent package to use.

Type: package

Default:

```
pkgs.hercules−ci−agent
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/hercules−ci−agent/common.nix>

services.hercules−ci−agent.settings

These settings are written to the *agent.toml* file.

Not all settings are listed as options, can be set nonetheless.

For the exhaustive list of settings, see **https://docs.hercules−ci.com/hercules−ci/reference/agent−config/**.

Type: open submodule of (TOML value)

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/hercules−ci−agent/common.nix>

services.hercules−ci−agent.settings.apiBaseUrl

API base URL that the agent will connect to.

When using Hercules CI Enterprise, set this to the URL where your Hercules CI server is reachable.

Type: string

Default:

```
"https://hercules−ci.com"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/hercules−ci−agent/common.nix>

services.hercules−ci−agent.settings.baseDirectory

State directory (secrets, work directory, etc) for agent

Type: absolute path

Default:

```
"/var/lib/hercules−ci−agent"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/hercules−ci−agent/common.nix>

services.hercules−ci−agent.settings.binaryCachesPath
Path to a JSON file containing binary cache secret keys.

As these values are confidential, they should not be in the store, but copied over using other means, such as agenix, NixOps ‘deployment.keys’, or manual installation.

The format is described on **https://docs.hercules−ci.com/hercules−ci−agent/binary−caches−json/**.

Type: absolute path

Default:

```
staticSecretsDirectory + "/binary−caches.json"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/hercules−ci−agent/common.nix>

services.hercules−ci−agent.settings.clusterJoinTokenPath
Location of the cluster−join−token.key file.

You can retrieve the contents of the file when creating a new agent via **https://hercules−ci.com/dashboard**.

As this value is confidential, it should not be in the store, but installed using other means, such as agenix, NixOps ‘deployment.keys’, or manual installation.

The contents of the file are used for authentication between the agent and the API.

Type: absolute path

Default:

```
staticSecretsDirectory + "/cluster−join−token.key"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/hercules−ci−agent/common.nix>

services.hercules−ci−agent.settings.concurrentTasks
Number of tasks to perform simultaneously.

A task is a single derivation build, an evaluation or an effect run. At minimum, you need 2 concurrent tasks for ‘x86_64−linux’ in your cluster, to allow for import from derivation.

‘concurrentTasks’ can be around the CPU core count or lower if memory is the bottleneck.

The optimal value depends on the resource consumption characteristics of your workload, including memory usage and in−task parallelism. This is typically determined empirically.

When scaling, it is generally better to have a double−size machine than two machines, because each split of resources causes inefficiencies; particularly with regards to build latency because of extra downloads.

Type: positive integer, meaning >0, or value “auto” (singular enum)

Default: "auto", meaning equal to the number of CPU cores.

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/hercules−ci−agent/common.nix>

services.hercules−ci−agent.settings.labels
A key−value map of user data.

This data will be available to organization members in the dashboard and API.

The values can be of any TOML type that corresponds to a JSON type, but arrays can not contain tables/objects due to limitations of the TOML library. Values involving arrays of non−primitive types may not be representable currently.

Type: TOML value

Default:

```
{
  agent.source = "..."; # One of "nixpkgs", "flake", "override"
  lib.version = "...";
  pkgs.version = "...";
}
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hercules-ci-agent/common.nix>

services.hercules-ci-agent.settings.secretsJsonPath
Path to a JSON file containing secrets for effects.

As these values are confidential, they should not be in the store, but copied over using other means, such as agenix, NixOps 'deployment.keys', or manual installation.

The format is described on **https://docs.hercules-ci.com/hercules-ci-agent/secrets-json/**.

Type: absolute path

Default:

```
staticSecretsDirectory + "/secrets.json"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hercules-ci-agent/common.nix>

services.hercules-ci-agent.settings.staticSecretsDirectory
This is the default directory to look for statically configured secrets like 'cluster-join-token.key'.

See also 'clusterJoinTokenPath' and 'binaryCachesPath' for fine-grained configuration.

Type: absolute path

Default:

```
baseDirectory + "/secrets"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hercules-ci-agent/common.nix>

services.hercules-ci-agent.settings.workDirectory
The directory in which temporary subdirectories are created for task state. This includes sources for Nix evaluation.

Type: absolute path

Default:

```
baseDirectory + "/work"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hercules-ci-agent/common.nix>

services.hickory-dns.enable
Whether to enable hickory-dns.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hickory−dns.nix>

services.hickory−dns.package
The hickory−dns package to use. ::: {.note} The package must provide ‘meta.mainProgram’ which names the server binary; any other utilities (client, resolver) are not needed. :::

Type: package

Default:

```
pkgs.hickory−dns
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hickory−dns.nix>

services.hickory−dns.configFile
Path to an existing toml file to configure hickory−dns with.

This can usually be left unspecified, in which case it will be generated from the values in ‘settings’. If manually specified, then the options in ‘settings’ are ignored.

Type: absolute path

Default:

```
let toml = pkgs.formats.toml { }; in toml.generate "hickory−dns.to \
ml" cfg.settings
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hickory−dns.nix>

services.hickory−dns.debug
Log DEBUG, INFO, WARN and ERROR messages. This option is mutually exclusive with the ‘debug’ option. If neither ‘quiet’ nor ‘debug’ are enabled, logging defaults to the INFO level.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hickory−dns.nix>

services.hickory−dns.quiet
Log ERROR level messages only. This option is mutually exclusive with the ‘debug’ option. If neither ‘quiet’ nor ‘debug’ are enabled, logging defaults to the INFO level.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hickory−dns.nix>

services.hickory−dns.settings
Settings for hickory−dns. The options enumerated here are not exhaustive. Refer to upstream documentation for all available options:

- **Example settings**

Type: open submodule of (TOML value)

Declared by:
<nixpkgs/nixos/modules/services/networking/hickory−dns.nix>

services.hickory−dns.settings.directory
The directory in which hickory−dns should look for .zone files, whenever zones aren't specified by absolute path.

Type: string

Default:

```
"/var/lib/hickory−dns"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hickory−dns.nix>

services.hickory−dns.settings.listen_addrs_ipv4
List of ipv4 addresses on which to listen for DNS queries.

Type: list of string

Default:

```
[
  "0.0.0.0"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hickory−dns.nix>

services.hickory−dns.settings.listen_addrs_ipv6
List of ipv6 addresses on which to listen for DNS queries.

Type: list of string

Default:

```
lib.optional config.networking.enableIPv6 "::0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hickory−dns.nix>

services.hickory−dns.settings.listen_port
Port to listen on (applies to all listen addresses).

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
53
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hickory−dns.nix>

services.hickory−dns.settings.zones
List of zones to serve.

Type: list of ((open submodule of (TOML value)) or string convertible to it)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hickory−dns.nix>

services.hickory−dns.settings.zones.*.file

Path to the .zone file. If not fully−qualified, this path will be interpreted relative to the 'directory' option. If omitted, defaults to the value of the 'zone' option suffixed with ".zone" when 'zone_type' isn't External; otherwise, defaults to 'null'.

Type: null or absolute path or string

Default:

```
if config.zone_type != "External" then "${config.zone}.zone" else n \
ull
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hickory−dns.nix>

services.hickory−dns.settings.zones.*.zone

Zone name, like "example.com", "localhost", or "0.0.127.in−addr.arpa".

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/hickory−dns.nix>

services.hickory−dns.settings.zones.*.zone_type

One of:

- "Primary" (the master, authority for the zone).
- "Secondary" (the slave, replicated from the primary).
- "External" (a cached zone that queries other nameservers).

For more details about these zone types, consult the documentation for BIND, though note that hickory−dns supports only a subset of BIND's zone types: **https://bind9.readthedocs.io/en/v9_18_4/reference.html#type**

Type: one of "Primary", "Secondary", "External"

Default:

```
"Primary"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hickory−dns.nix>

services.hitch.enable

Whether to enable Hitch Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/hitch/default.nix>

services.hitch.backend

The host and port Hitch connects to when receiving a connection in the form [HOST]:PORT

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−servers/hitch/default.nix>

services.hitch.ciphers
The list of ciphers to use

Type: string

Default:

```
"EECDH+AESGCM:EDH+AESGCM:AES256+EECDH:AES256+EDH"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/hitch/default.nix>

services.hitch.extraConfig
Additional configuration lines

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/hitch/default.nix>

services.hitch.frontend
The port and interface of the listen endpoint in the form [HOST]:PORT[+CERT].

Type: string or list of string

Default:

```
"[127.0.0.1]:443"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/hitch/default.nix>

services.hitch.group
The group to run as

Type: string

Default:

```
"hitch"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/hitch/default.nix>

services.hitch.ocsp−stapling.enabled
Whether to enable OCSP Stapling

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/hitch/default.nix>

services.hitch.pem−files
PEM files to use

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/hitch/default.nix>

services.hitch.user
The user to run as

Type: string

Default:

```
"hitch"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/hitch/default.nix>

services.hledger−web.enable
Whether to enable hledger−web service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hledger−web.nix>

services.hledger−web.allow
User’s access level for changing data.

- view: view only permission.
- add: view and add permissions.
- edit: view, add, and edit permissions.
- sandstorm: permissions from the ‘X−Sandstorm−Permissions’ request header.

Type: one of “view”, “add”, “edit”, “sandstorm”

Default:

```
"view"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hledger−web.nix>

services.hledger−web.baseUrl
Base URL, when sharing over a network.

Type: null or string

Default:

```
null
```

Example:

```
"https://example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hledger−web.nix>

services.hledger−web.extraOptions

Extra command line arguments to pass to hledger−web.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−forecast"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/hledger−web.nix>

services.hledger−web.host

Address to listen on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/hledger−web.nix>

services.hledger−web.journalFiles

Paths to journal files relative to **services.hledger−web.stateDir**.

Type: list of string

Default:

```
[
  ".hledger.journal"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/hledger−web.nix>

services.hledger−web.port

Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5000
```

Example:

```
80
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/hledger−web.nix>

services.hledger−web.serveApi

Whether to enable serving only the JSON web API, without the web UI.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hledger−web.nix>

services.hledger−web.stateDir
Path the service has access to. If left as the default value this directory will automatically be created before the hledger−web server starts, otherwise the sysadmin is responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: absolute path

Default:

```
"/var/lib/hledger−web"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/hledger−web.nix>

services.hockeypuck.enable
Whether to enable Hockeypuck OpenPGP Key Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/hockeypuck.nix>

services.hockeypuck.port
HKP port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
11371
```

Declared by:
<nixpkgs/nixos/modules/services/security/hockeypuck.nix>

services.hockeypuck.settings
Configuration file for hockeypuck, here you can override certain settings (‘loglevel’ and ‘openpgp.db.dsn’) by just setting those values.

For other settings you need to use lib.mkForce to override them.

This service doesn’t provision or enable postgres on your system, it rather assumes that you enable postgres and create the database yourself.

Example:

```
services.postgresql = {
  enable = true;
  ensureDatabases = [ "hockeypuck" ];
  ensureUsers = [{
    name = "hockeypuck";
    ensureDBOwnership = true;
  }];
};
```

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  hockeypuck = {
    loglevel = "INFO";
    logfile = "/var/log/hockeypuck/hockeypuck.log";
    indexTemplate = "${pkgs.hockeypuck-web}/share/templates/index. \
html.tmpl";
    vindexTemplate = "${pkgs.hockeypuck-web}/share/templates/index \
.html.tmpl";
    statsTemplate = "${pkgs.hockeypuck-web}/share/templates/stats. \
html.tmpl";
    webroot = "${pkgs.hockeypuck-web}/share/webroot";
    hkp.bind = ":${toString cfg.port}";
    openpgp.db = {
      driver = "postgres-jsonb";
      dsn = "database=hockeypuck host=/var/run/postgresql sslmode=d \
isable";
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/security/hockeypuck.nix>

services.hologram-agent.enable
Whether to enable the Hologram agent for AWS instance credentials

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/hologram-agent.nix>

services.hologram-agent.dialAddress
Hologram server and port.

Type: string

Default:

```
"localhost:3100"
```

Declared by:
<nixpkgs/nixos/modules/services/security/hologram-agent.nix>

services.hologram-agent.httpPort
Port for metadata service to listen on.

Type: string

Default:

```
"80"
```

Declared by:
<nixpkgs/nixos/modules/services/security/hologram−agent.nix>

services.hologram−server.enable
Whether to enable the Hologram server for AWS instance credentials

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/hologram−server.nix>

services.hologram−server.enableLdapRoles
Whether to assign user roles based on the user's LDAP group memberships

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/hologram−server.nix>

services.hologram−server.awsAccount
AWS account number

Type: string

Declared by:
<nixpkgs/nixos/modules/services/security/hologram−server.nix>

services.hologram−server.awsDefaultRole
AWS default role

Type: string

Declared by:
<nixpkgs/nixos/modules/services/security/hologram−server.nix>

services.hologram−server.cacheTimeoutSeconds
How often (in seconds) to refresh the LDAP cache

Type: signed integer

Default:

```
3600
```

Declared by:
<nixpkgs/nixos/modules/services/security/hologram−server.nix>

services.hologram−server.groupClassAttr
The objectclass attribute to search for groups when enableLdapRoles is true

Type: string

Default:

```
"groupOfNames"
```

Declared by:
<nixpkgs/nixos/modules/services/security/hologram−server.nix>

services.hologram−server.ldapBaseDN
The base DN for your Hologram users

Type: string

Declared by:
<nixpkgs/nixos/modules/services/security/hologram−server.nix>

services.hologram−server.ldapBindDN
DN of account to use to query the LDAP server

Type: string

Declared by:
<nixpkgs/nixos/modules/services/security/hologram−server.nix>

services.hologram−server.ldapBindPassword
Password of account to use to query the LDAP server

Type: string

Declared by:
<nixpkgs/nixos/modules/services/security/hologram−server.nix>

services.hologram−server.ldapHost
Address of the LDAP server to use

Type: string

Declared by:
<nixpkgs/nixos/modules/services/security/hologram−server.nix>

services.hologram−server.ldapInsecure
Whether to connect to LDAP over SSL or not

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/hologram−server.nix>

services.hologram−server.ldapUserAttr
The LDAP attribute for usernames

Type: string

Default:

```
"cn"
```

Declared by:
<nixpkgs/nixos/modules/services/security/hologram−server.nix>

services.hologram−server.listenAddress
Address and port to listen on

Type: string

Default:

```
"0.0.0.0:3100"
```

Declared by:
<nixpkgs/nixos/modules/services/security/hologram−server.nix>

services.hologram−server.roleAttr

Which LDAP group attribute to search for authorized role ARNs

Type: string

Default:

```
"businessCategory"
```

Declared by:

<nixpkgs/nixos/modules/services/security/hologram−server.nix>

services.hologram−server.statsAddress

Address of statsd server

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/security/hologram−server.nix>

services.home−assistant.enable

Whether to enable Home Assistant. Please note that this installation method is unsupported upstream.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.package

The Home Assistant package to use.

Type: package

Default:

```
pkgs.home−assistant.overrideAttrs (oldAttrs: {
  doInstallCheck = false;
})
```

Example:

```
pkgs.home−assistant.override {
  extraPackages = python3Packages: with python3Packages; [
    psycopg2
  ];
  extraComponents = [
    "default_config"
    "esphome"
    "met"
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/home-assistant.nix>

services.home-assistant.blueprints.automation
List of automation **blueprints** to install into *${config.services.home-assistant.configDir}/blueprints/automation*.

Type: list of (path in the Nix store or absolute path convertible to it)

Default:

```
[ ]
```

Example:

```
[
  (pkgs.fetchurl {
    url = "https://github.com/home-assistant/core/raw/2025.1.4/hom \
eassistant/components/automation/blueprints/motion_light.yaml";
    hash = "sha256-4HrDX65ycBMfEY2nZ7A25/d3ZnIHdpHZ+80Cblp+P5w=";
  })
]
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/home-assistant.nix>

services.home-assistant.blueprints.script
List of script **blueprints** to install into *${config.services.home-assistant.configDir}/blueprints/script*.

Type: list of (path in the Nix store or absolute path convertible to it)

Default:

```
[ ]
```

Example:

```
[ ./blueprint.yaml ]
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/home-assistant.nix>

services.home-assistant.blueprints.template
List of template **blueprints** to install into *${config.services.home-assistant.configDir}/blueprints/template*.

Type: list of (path in the Nix store or absolute path convertible to it)

Default:

```
[ ]
```

Example:

```
[ "${pkgs.home-assistant.src}/homeassistant/components/template/bl \
ueprints/inverted_binary_sensor.yaml" ]
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/home-assistant.nix>

services.home-assistant.config
Your *configuration.yaml* as a Nix attribute set.

YAML functions like **secrets** can be passed as a string and will be unquoted automatically.

Unless this option is explicitly set to ‘null’ we assume your *configuration.yaml* is managed through this module and thereby overwritten on startup.

Type: null or (open submodule of (YAML 1.1 value))

Example:

```
{
  homeassistant = {
    name = "Home";
    latitude = "!secret latitude";
    longitude = "!secret longitude";
    elevation = "!secret elevation";
    unit_system = "metric";
    time_zone = "UTC";
  };
  frontend = {
    themes = "!include_dir_merge_named themes";
  };
  http = {};
  feedreader.urls = [ "https://nixos.org/blogs.xml" ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.config.homeassistant.latitude
Latitude of your location required to calculate the time the sun rises and sets.

Type: null or floating point number or string

Default:

```
null
```

Example:

```
52.3
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.config.homeassistant.longitude
Longitude of your location required to calculate the time the sun rises and sets.

Type: null or floating point number or string

Default:

```
null
```

Example:

```
4.9
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.config.homeassistant.name
Name of the location where Home Assistant is running.

Type: null or string

Default:

```
null
```

Example:

```
"Home"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.config.homeassistant.temperature_unit
Override temperature unit set by unit_system. ‘C’ for Celsius, ‘F’ for Fahrenheit.

Type: null or one of “C”, “F”

Default:

```
null
```

Example:

```
"C"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.config.homeassistant.time_zone
Pick your time zone from the column TZ of Wikipedia’s **list of tz database time zones**.

Type: null or string

Default:

```
config.time.timeZone or null
```

Example:

```
"Europe/Amsterdam"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.config.homeassistant.unit_system
The unit system to use. This also sets temperature_unit, Celsius for Metric and Fahrenheit for US Customary.

Type: null or one of “metric”, “us_customary”

Default:

```
null
```

Example:

```
"metric"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.config.http.server_host
Only listen to incoming requests on specific IP/host. The default listed assumes support for IPv4 and IPv6.

Type: string or list of string

Default:

```
[
  "0.0.0.0"
  "::"
]
```

Example:

```
"::1"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.config.http.server_port
The port on which to listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8123
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.config.lovelace.mode
In what mode should the main Lovelace panel be, ‘yaml’ or ‘storage’ (UI managed).

Type: one of “yaml”, “storage”

Default:

```
if (cfg.lovelaceConfig != null || cfg.lovelaceConfigFile != null)
  then "yaml"
else "storage";
```

Example:

```
"yaml"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.configDir
The config directory, where your *configuration.yaml* is located.

Type: absolute path

Default:

```
"/var/lib/hass"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.configWritable
Whether to make *configuration.yaml* writable.

This will allow you to edit it from Home Assistant’s web interface.

This only has an effect if **config** is set. However, bear in mind that it will be overwritten at every start of the service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.customComponents
List of custom component packages to install.

Available components can be found below ‘pkgs.home−assistant−custom−components’.

Type: list of package that is a Home Assistant component

Default:

```
[ ]
```

Example:

```
with pkgs.home-assistant-custom-components; [
  prometheus_sensor
];
```

Declared by:

<nixpkgs/nixos/modules/services/home-automation/home-assistant.nix>

services.home-assistant.customLovelaceModules

List of custom lovelace card packages to load as lovelace resources.

Available cards can be found below 'pkgs.home-assistant-custom-lovelace-modules'.

Note

Automatic loading only works with lovelace in 'yaml' mode.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs.home-assistant-custom-lovelace-modules; [
  mini-graph-card
  mini-media-player
];
```

Declared by:

<nixpkgs/nixos/modules/services/home-automation/home-assistant.nix>

services.home-assistant.defaultIntegrations

List of integrations set are always set up, unless in recovery mode.

Type: list of (one of "3_day_blinds", "abode", "acaia", "accuweather", "acer_projector", "acmeda", "acomax", "actiontec", "actron_air", "adax", "adguard", "ads", "advantage_air", "aemet", "aep_ohio", "aep_texas", "aftership", "agent_dvr", "ai_task", "air_quality", "airgradient", "airly", "airnow", "airobot", "airos", "airpatrol", "airq", "airthings", "airthings_ble", "airtouch4", "airtouch5", "airvisual", "airvisual_pro", "airzone", "airzone_cloud", "aladdin_connect", "alarm_control_panel", "alarmdecoder", "alert", "alexa", "alexa_devices", "alpha_vantage", "altruist", "amazon_polly", "amberelectric", "ambient_network", "ambient_station", "amcrest", "amp_motorization", "ampio", "analytics", "analytics_insights", "android_ip_webcam", "androidtv", "androidtv_remote", "anel_pwrctrl", "anglian_water", "anova", "anthemav", "anthropic", "anwb_energie", "aosmith", "apache_kafka", "apcupsd", "api", "apollo_automation", "appalachianpower", "apple_tv", "application_credentials", "apprise", "aprilaire", "aprs", "apsystems", "aquacell", "aqualogic", "aquostv", "aranet", "arcam_fmj", "arest", "aris_tg2492lg", "artsound", "aruba", "arve", "arwn", "aseko_pool_live", "assist_pipeline", "assist_satellite", "asuswrt", "atag", "aten_pe", "atlanticcityelectric", "atome", "august", "august_ble", "aurora", "aurora_abb_powerone", "aussie_broadband", "autarco", "auth", "automation", "autoskope", "avea", "avion", "awair", "aws", "aws_s3", "axis", "azure_data_explorer", "azure_devops", "azure_event_hub", "azure_service_bus", "azure_storage", "backblaze_b2", "backup", "baf", "baidu", "balay", "balboa", "bang_olufsen", "battery", "bauknecht", "bayesian", "bbox", "beewi_smartclim", "bge", "binary_sensor", "bitcoin", "bizkaibus", "blackbird", "blebox", "blink", "bliss_automation", "bloc_blinds", "blockchain", "blue_current", "bluemaestro", "blueprint", "bluesound", "bluetooth", "bluetooth_adapters", "bluetooth_le_tracker", "bmw_connected_drive", "bond", "bosch_alarm", "bosch_shc", "brands", "brandt", "braviatv", "brel_home", "bring", "broadlink", "brother", "brottsplatskartan", "browser", "brunt", "bryant_evolution", "bsblan", "bswitch", "bt_home_hub_5", "bt_smarthub", "bthome", "bticino", "bubendorff", "buienradar", "burbank_water_and_power", "button", "caldav",

  "schedule"
  "timer"
  "backup"
]
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.extraArgs

Extra arguments to pass to the hass executable.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−debug"
]
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.extraComponents

List of **components** that have their dependencies included in the package.

The component name can be found in the URL, for example ‘https://www.home−assistant.io/integrations/ffmpeg/’ would map to ‘ffmpeg’.

Type: list of (one of “3_day_blinds”, “abode”, “acaia”, “accuweather”, “acer_projector”, “acmeda”, “acomax”, “actiontec”, “actron_air”, “adax”, “adguard”, “ads”, “advantage_air”, “aemet”, “aep_ohio”, “aep_texas”, “aftership”, “agent_dvr”, “ai_task”, “air_quality”, “airgradient”, “airly”, “airnow”, “airobot”, “airos”, “airpatrol”, “airq”, “airthings”, “airthings_ble”, “airtouch4”, “airtouch5”, “airvisual”, “airvisual_pro”, “airzone”, “airzone_cloud”, “aladdin_connect”, “alarm_control_panel”, “alarmdecoder”, “alert”, “alexa”, “alexa_devices”, “alpha_vantage”, “altruist”, “amazon_polly”, “amberelectric”, “ambient_network”, “ambient_station”, “amcrest”, “amp_motorization”, “ampio”, “analytics”, “analytics_insights”, “android_ip_webcam”, “androidtv”, “androidtv_remote”, “anel_pwrctrl”, “anglian_water”, “anova”, “anthemav”, “anthropic”, “anwb_energie”, “aosmith”, “apache_kafka”, “apcupsd”, “api”, “apollo_automation”, “appalachianpower”, “apple_tv”, “application_credentials”, “apprise”, “aprilaire”, “aprs”, “apsystems”, “aquacell”, “aqualogic”, “aquostv”, “aranet”, “arcam_fmj”, “arest”, “arris_tg2492lg”, “artsound”, “aruba”, “arve”, “arwn”, “aseko_pool_live”, “assist_pipeline”, “assist_satellite”, “asuswrt”, “atag”, “aten_pe”, “atlanticcityelectric”, “atome”, “august”, “august_ble”, “aurora”, “aurora_abb_powerone”, “aussie_broadband”, “autarco”, “auth”, “automation”, “autoskope”, “avea”, “avion”, “awair”, “aws”, “aws_s3”, “axis”, “azure_data_explorer”, “azure_devops”, “azure_event_hub”, “azure_service_bus”, “azure_storage”, “backblaze_b2”, “backup”, “baf”, “baidu”, “balay”, “balboa”, “bang_olufsen”, “battery”, “bauknecht”, “bayesian”, “bbox”, “beewi_smartclim”, “bge”, “binary_sensor”, “bitcoin”, “bizkaibus”, “blackbird”, “blebox”, “blink”, “bliss_automation”, “bloc_blinds”, “blockchain”, “blue_current”, “bluemaestro”, “blueprint”, “bluesound”, “bluetooth”, “bluetooth_adapters”, “bluetooth_le_tracker”, “bmw_connected_drive”, “bond”, “bosch_alarm”, “bosch_shc”, “brands”, “brandt”, “braviatv”, “brel_home”, “bring”, “broadlink”, “brother”, “brottsplatskartan”, “browser”, “brunt”, “bryant_evolution”, “bsblan”, “bswitch”, “bt_home_hub_5”, “bt_smarthub”, “bthome”, “bticino”, “bubendorff”, “buienradar”, “burbank_water_and_power”, “button”, “caldav”, “calendar”, “cambridge_audio”, “camera”, “canary”, “casper_glow”, “cast”, “ccm15”, “cert_expiry”, “chacon_dio”, “channels”, “chess_com”, “cisco_ios”, “cisco_mobility_express”, “cisco_webex_teams”, “citybikes”, “clementine”, “clickatell”, “clicksend”, “clicksend_tts”, “climate”, “cloud”, “cloudflare”, “cloudflare_r2”, “cmus”, “co2signal”, “coautilities”, “coinbase”, “color_extractor”, “comed”, “comed_hourly_pricing”, “comelit”, “comfoconnect”, “command_line”, “compensation”, “compit”, “concord232”, “coned”, “config”, “configurator”, “constructa”, “control4”, “conversation”, “cookidoo”, “coolmaster”, “cosori”, “counter”, “cover”, “cozytouch”, “cppm_tracker”, “cpuspeed”, “cribl”, “crownstone”, “currencylayer”, “cync”, “dacia”, “daikin”, “danfoss_air”, “datadog”, “date”, “datetime”, “ddwrt”, “deako”, “debugpy”, “deconz”, “decora_wifi”, “decorquip”, “default_config”, “delijn”, “delmarva”, “deluge”, “demo”, “denon”, “denonavr”, “derivative”, “devialet”, “device_automation”, “device_sun_light_trigger”, “device_tracker”, “devolo_home_control”, “devolo_home_network”, “dexcom”, “dhcp”, “diagnostics”, “dialogflow”, “diaz”, “digital_loggers”, “digital_ocean”, “directv”, “discogs”, “discord”, “discovergy”, “dlink”, “dlna_dmr”, “dlna_dms”, “dnsip”, “doods”, “door”, “doorbird”, “dooya”, “dormakaba_dkey”, “downloader”, “dremel_3d_printer”, “drop_connect”, “droplet”, “dsmr”, “dsmr_reader”, “dublin_bus_transport”, “duckdns”, “dunehd”, “duotecno”, “duquesne_light”, “dwd_weather_warnings”, “dynalite”, “eafm”, “eastron”, “easyenergy”, “ebox”, “ebusd”, “ecoal_boiler”, “ecobee”, “ecoforest”, “econet”, “ecovacs”, “ecowitt”, “edimax”, “edl21”, “efergy”, “egardia”, “egauge”, “eheimdigital”, “eight_sleep”, “ekeybionyx”, “electrasmart”, “electric_kiwi”, “elevenlabs”, “elgato”, “eliqonline”, “elkm1”, “elmax”, “elv”, “elvia”, “emby”, “emoncms”, “emoncms_history”, “emonitor”, “emulated_hue”, “emulated_kasa”, “emulated_roku”, “energenie_power_sockets”, “energie_vanons”, “energy”, “energyid”, “energyzero”, “enigma2”, “enocean”, “enphase_envoy”, “entur_public_transport”, “environment_canada”, “envisalink”, “ephember”, “epic_games_store”, “epion”, “epson”, “eq3btsmart”, “escea”, “esera_onewire”, “esphome”, “essent”, “etherscan”, “eufy”, “eufylife_ble”, “event”, “evergy”, “everlights”, “evil_genius_labs”, “evohome”, “ezviz”, “faa_delays”, “facebook”, “fail2ban”, “familyhub”, “fan”, “fastdotcom”, “feedreader”, “ffmpeg”, “ffmpeg_motion”, “ffmpeg_noise”, “fibaro”, “fido”,

Default:

```
[
  "default_config"
  "met"
  "esphome"
]
```

Example:

```
[
  "analytics"
  "default_config"
  "esphome"
  "my"
  "shopping_list"
  "wled"
]
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.extraPackages
List of packages to add to propagatedBuildInputs.

A popular example is ‘python3Packages.psycopg2’ for PostgreSQL support in the recorder component.

Type: function that evaluates to a(n) list of package

Default:

```
python3Packages: with python3Packages; [];
```

Example:

```
python3Packages: with python3Packages; [
  # postgresql support
  psycopg2
];
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.lovelaceConfig
Your *ui−lovelace.yaml* as a Nix attribute set. Setting this option will automatically set ‘lovelace.mode’ to ‘yaml’.

Beware that setting this option will delete your previous *ui−lovelace.yaml*

Type: null or YAML 1.1 value

Default:

```
null
```

Example:

```
{
  title = "My Awesome Home";
  views = [ {
    title = "Example";
    cards = [ {
      type = "markdown";
      title = "Lovelace";
      content = "Welcome to your **Lovelace UI**.";
    } ];
  } ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.lovelaceConfigFile
Your *ui−lovelace.yaml* managed as configuraton file. Setting this option will automatically set ‘lovelace.mode’ to ‘yaml’.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/ui−lovelace.yaml"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.lovelaceConfigWritable
Whether to make *ui−lovelace.yaml* writable.

This will allow you to edit it from Home Assistant's web interface.

This only has an effect if **lovelaceConfig** is set. However, bear in mind that it will be overwritten at every start of the service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant.openFirewall
Whether to open the firewall for the specified port.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant.nix>

services.home−assistant−matter−hub.enable
Whether to enable home−assistant−matter−hub, a Matter bridge for Home Assistant.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant−matter−hub.nix>

services.home−assistant−matter−hub.package
The home−assistant−matter−hub package to use.

Type: package

Default:

```
pkgs.home−assistant−matter−hub
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant−matter−hub.nix>

services.home−assistant−matter−hub.accessTokenFile
Path to a file containing a Home Assistant long−lived access token. The file is loaded as a systemd credential and read into 'HAMH_HOME_ASSISTANT_ACCESS_TOKEN' at service start.

Type: absolute path not in the Nix store

Example:

```
"/run/secrets/home−assistant−matter−hub−token"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant−matter−hub.nix>

services.home−assistant−matter−hub.openFirewall
Whether to open the Matter commissioning ports (UDP/TCP 5540) in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant−matter−hub.nix>

services.home−assistant−matter−hub.settings
Configuration written to a JSON file and passed to 'home−assistant−matter−hub start −−config'. Keys use camelCase, matching the long−form CLI flags. See **https://riddix.github.io/home−assistant−matter−hub/getting−started/installation#23−configuration−options** for the full list of options.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Example:

```
{
  homeAssistantUrl = config.services.home−assistant.config.homeass \
istant.internal_url;
}
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant−matter−hub.nix>

services.home−assistant−matter−hub.settings.homeAssistantUrl
HTTP URL of the Home Assistant instance to bridge.

Type: string

Example:

```
config.services.home−assistant.config.homeassistant.internal_url
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant−matter−hub.nix>

services.home−assistant−matter−hub.settings.httpPort
Port the web interface listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8482
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/home−assistant−matter−hub.nix>

services.homebox.enable
Whether to enable homebox.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/homebox.nix>

services.homebox.package
The homebox package to use.

Type: package

Default:

```
pkgs.homebox
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/homebox.nix>

services.homebox.database.createLocally
Configure local PostgreSQL database server for Homebox.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/homebox.nix>

services.homebox.group
Group under which Homebox runs.

Type: string

Default:

```
"homebox"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/homebox.nix>

services.homebox.settings
The homebox configuration as environment variables. For definitions and available options see the upstream **documentation**.

Type: open submodule of attribute set of (null or string)

Default:

```
{
  HBOX_STORAGE_CONN_STRING = "file:///var/lib/homebox";
  HBOX_STORAGE_PREFIX_PATH = "data";
  HBOX_DATABASE_DRIVER = "sqlite3";
  HBOX_DATABASE_SQLITE_PATH = "/var/lib/homebox/data/homebox.db?_pr \
agma=busy_timeout=999&_pragma=journal_mode=WAL&_fk=1";
  HBOX_OPTIONS_ALLOW_REGISTRATION = "false";
  HBOX_OPTIONS_GITHUB_RELEASE_CHECK = "false";
  HBOX_MODE = "production";
  HOME = "/var/lib/homebox";
  TMPDIR = "/var/lib/homebox/tmp";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/homebox.nix>

services.homebox.user
User account under which Homebox runs.

Type: string

Default:

```
"homebox"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/homebox.nix>

services.homebridge.enable
Whether to enable Homebridge: Homekit home automation.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.environmentFile
Path to an environment−file which may contain secrets.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.group
Group to run homebridge as.

Type: string

Default:

```
"homebridge"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.openFirewall
Open ports in the firewall for the Homebridge web interface and service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.pluginPath
Path to the plugin download directory (needs to be writeable). Seems this needs to end with node_modules, as Homebridge will run npm on the parent directory.

Type: string

Default:

```
"/var/lib/homebridge/node_modules"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.settings
Configuration options for homebridge.

For more details, see **the homebridge documentation**.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.settings.accessories
Homebridge Accessories

Type: list of (open submodule of (JSON value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.settings.accessories.*.accessory
Accessory type

Type: string

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.settings.accessories.*.name
Name of the accessory

Type: string

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.settings.bridge.name
Name of the homebridge

Type: string

Default:

```
"Homebridge"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.settings.bridge.port
The port homebridge listens on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
51826
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.settings.description
Description of the homebridge instance.

Type: string *(read only)*

Default:

```
"Homebridge"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.settings.platforms
Homebridge Platforms

Type: list of (open submodule of (JSON value))

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.settings.platforms.*.name
Name of the platform

Type: string

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.settings.platforms.*.platform
Platform type

Type: string

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.uiSettings
Configuration options for homebridge config UI plugin.

For more details, see **the homebridge−config−ui−x documentation**.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.uiSettings.log.method
Method to use for logging

Type: string *(read only)*

Default:

```
"systemd"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.uiSettings.log.service
Name of the systemd service to log to

Type: string *(read only)*

Default:

```
"homebridge"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.uiSettings.name
Name of the homebridge UI platform

Type: string *(read only)*

Default:

```
"Config"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.uiSettings.platform
Type of the homebridge UI platform

Type: string *(read only)*

Default:

```
"config"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.uiSettings.port
The port the UI web service should listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8581
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/homebridge.nix>

services.homebridge.uiSettings.restart
Command to restart the homebridge UI service

Type: string *(read only)*

Default:

```
"sudo -n systemctl restart homebridge"
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/homebridge.nix>

services.homebridge.user
User to run homebridge as.

Type: string

Default:

```
"homebridge"
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/homebridge.nix>

services.homebridge.userStoragePath
Path to store homebridge user files (needs to be writeable).

Type: string

Default:

```
"/var/lib/homebridge"
```

Declared by:
<nixpkgs/nixos/modules/services/home-automation/homebridge.nix>

services.homed.enable
Whether to enable systemd home area/user account manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/homed.nix>

services.homed.promptOnFirstBoot
Whether to enable interactively prompting for user creation on first boot .

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/homed.nix>

services.homed.settings.Home
Options for systemd-homed. See **homed.conf**(5) man page for available options.

Type: open submodule of attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  DefaultFileSystemType = "btrfs";
  DefaultStorage = "luks";
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/homed.nix>

services.homepage−dashboard.enable
Whether to enable Homepage Dashboard, a highly customizable application dashboard.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/homepage−dashboard.nix>

services.homepage−dashboard.package
The homepage−dashboard package to use.

Type: package

Default:

```
pkgs.homepage−dashboard
```

Declared by:
<nixpkgs/nixos/modules/services/misc/homepage−dashboard.nix>

services.homepage−dashboard.allowedHosts
Hosts that homepage−dashboard will be running under. You will want to change this in order to acess homepage from anything other than localhost. see the upsream documentation:

https://gethomepage.dev/installation/#homepage_allowed_hosts

Type: string

Default:

```
"localhost:8082,127.0.0.1:8082"
```

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/homepage−dashboard.nix>

services.homepage−dashboard.bookmarks
Homepage bookmarks configuration.

See **https://gethomepage.dev/configs/bookmarks/**.

Type: YAML 1.1 value

Default:

```
[ ]
```

Example:

```
[
  {
```

```
      Developer = [
        {
          Github = [
            {
              abbr = "GH";
              href = "https://github.com/";
            }
          ];
        }
      ];
    }
    {
      Entertainment = [
        {
          YouTube = [
            {
              abbr = "YT";
              href = "https://youtube.com/";
            }
          ];
        }
      ];
    }
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/homepage-dashboard.nix>

services.homepage-dashboard.customCSS
Custom CSS for styling Homepage.

See **https://gethomepage.dev/configs/custom-css-js/**.

Type: strings concatenated with "\n"

Default:
`""`

Declared by:
<nixpkgs/nixos/modules/services/misc/homepage-dashboard.nix>

services.homepage-dashboard.customJS
Custom Javascript for Homepage.

See **https://gethomepage.dev/configs/custom-css-js/**.

Type: strings concatenated with "\n"

Default:
`""`

Declared by:
<nixpkgs/nixos/modules/services/misc/homepage-dashboard.nix>

services.homepage−dashboard.docker
Homepage docker configuration.

See **https://gethomepage.dev/configs/docker/**.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/homepage−dashboard.nix>

services.homepage−dashboard.environmentFiles
A list of paths to environment files that contain environment variables to pass to the homepage−dashboard service, for the purpose of passing secrets to the service.

See the upstream documentation:

https://gethomepage.dev/installation/docker/#using−environment−secrets

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/homepage−dashboard.nix>

services.homepage−dashboard.kubernetes
Homepage kubernetes configuration.

See **https://gethomepage.dev/configs/kubernetes/**.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/homepage−dashboard.nix>

services.homepage−dashboard.listenPort
Port for Homepage to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8082
```

Declared by:
<nixpkgs/nixos/modules/services/misc/homepage−dashboard.nix>

services.homepage−dashboard.openFirewall
Open ports in the firewall for Homepage.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/homepage−dashboard.nix>

services.homepage-dashboard.proxmox

Homepage proxmox configuration.

See **https://gethomepage.dev/configs/proxmox/**.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/misc/homepage-dashboard.nix>

services.homepage-dashboard.services

Homepage services configuration.

See **https://gethomepage.dev/configs/services/**.

Type: YAML 1.1 value

Default:

```
[ ]
```

Example:

```
[
  {
    "My First Group" = [
      {
        "My First Service" = {
          description = "Homepage is awesome";
          href = "http://localhost/";
        };
      }
    ];
  }
  {
    "My Second Group" = [
      {
        "My Second Service" = {
          description = "Homepage is the best";
          href = "http://localhost/";
        };
      }
    ];
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/homepage-dashboard.nix>

services.homepage-dashboard.settings

Homepage settings.

See **https://gethomepage.dev/configs/settings/**.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/homepage−dashboard.nix>

services.homepage−dashboard.widgets
Homepage widgets configuration.

See **https://gethomepage.dev/widgets/**.

Type: YAML 1.1 value

Default:

```
[ ]
```

Example:

```
[
  {
    resources = {
      cpu = true;
      disk = "/";
      memory = true;
    };
  }
  {
    search = {
      provider = "duckduckgo";
      target = "_blank";
    };
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/homepage−dashboard.nix>

services.homer.enable
Whether to enable A dead simple static HOMepage for your servER to keep your services on hand, from a simple yaml configuration file. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/homer.nix>

services.homer.package
The homer package to use.

Type: package

Default:

```
pkgs.homer
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/homer.nix>

services.homer.settings

Settings serialized into *config.yml* before build. If left empty, the default configuration shipped with the package will be used instead. For more information, see the **official documentation**.

Note that the full configuration will be written to the nix store as world readable, which may include secrets such as **api−keys**.

To add files such as icons or backgrounds, you can reference them in line such as

```
icon = "${./icon.png}";
```

This will add the file to the nix store upon build, referencing it by file path as expected by Homer.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
  {
    title = "App dashboard";
    subtitle = "Homer";
    logo = "assets/logo.png";
    header = true;
    footer = ''' 
      <p>Created with <span class="has−text−danger">♥</span> wit \
h
      <a href="https://bulma.io/">bulma</a>,

          }
        ];
      }
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/homer.nix>

services.homer.virtualHost.caddy.enable
Whether to enable a virtualhost to serve homer through caddy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/homer.nix>

services.homer.virtualHost.domain
Domain to use for the virtual host.

This can be used to change nginx options like

```
services.nginx.virtualHosts."$\{config.services.homer.virtualHost. \
domain}".listen = [ ... ]
```

or

```
services.nginx.virtualHosts."example.com".listen = [ ... ]
```

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web-apps/homer.nix>

services.homer.virtualHost.nginx.enable
Whether to enable a virtualhost to serve homer through nginx.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/homer.nix>

services.honk.enable
Whether to enable the Honk server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/honk.nix>

services.honk.package
The honk package to use.

Type: package

Default:

```
pkgs.honk
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/honk.nix>

services.honk.extraCSS
An extra CSS file to be loaded by the client.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/honk.nix>

services.honk.extraJS
An extra JavaScript file to be loaded by the client.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/honk.nix>

services.honk.host
The host name or IP address the server should listen to.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/honk.nix>

services.honk.passwordFile
Password for admin account. NOTE: Should be string not a store path, to prevent the password from being world readable

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/honk.nix>

services.honk.port
The port the server should listen to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/honk.nix>

services.honk.servername
The server name.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/honk.nix>

services.honk.username
The admin account username.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/honk.nix>

services.hoogle.enable
Whether to enable Haskell documentation server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/hoogle.nix>

services.hoogle.packages
The Haskell packages to generate documentation for.

The option value is a function that takes the package set specified in the *haskellPackages* option as its sole parameter and returns a list of packages.

Type: function that evaluates to a(n) list of package

Default:

```
hp: []
```

Example:

```
hp: with hp; [ text lens ]
```

Declared by:
<nixpkgs/nixos/modules/services/development/hoogle.nix>

services.hoogle.extraOptions
Additional command−line arguments to pass to **hoogle server**

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−no−security−headers"
]
```

Declared by:
<nixpkgs/nixos/modules/services/development/hoogle.nix>

services.hoogle.haskellPackages
Which haskell package set to use.

Type: attribute set

Default:

```
pkgs.haskellPackages
```

Declared by:
<nixpkgs/nixos/modules/services/development/hoogle.nix>

services.hoogle.home
Url for hoogle logo

Type: string

Default:

```
"https://hoogle.haskell.org"
```

Declared by:
<nixpkgs/nixos/modules/services/development/hoogle.nix>

services.hoogle.host
Set the host to bind on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/development/hoogle.nix>

services.hoogle.port
Port number Hoogle will be listening to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/development/hoogle.nix>

services.hostapd.enable
Whether to enable hostapd, a user space daemon for access point and authentication servers. It implements IEEE 802.11 access point management, IEEE 802.1X/WPA/WPA2/EAP Authenticators, RADIUS client, EAP server, and RADIUS authentication server .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.package
The hostapd package to use.

Type: package

Default:

```
pkgs.hostapd
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios
This option allows you to define APs for one or multiple physical radios. At least one radio must be specified.

For each radio, hostapd requires a separate logical interface (like wlp3s0, wlp3s1, …). A default interface is usually be created automatically by your system, but to use multiple radios of a single device, it may be required to create additional logical interfaces for example by using **networking.wlanInterfaces**.

Each physical radio can only support a single hardware−mode that is configured via (**services.hostapd.radios.<radio>.band**). To create a dual−band or tri−band AP, you will have to use a device that has multiple physical radios and supports configuring multiple APs (Refer to valid interface combinations in **iw list**).

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  # Simple 2.4GHz AP
  wlp2s0 = {
    # countryCode = "US";
    networks.wlp2s0 = {
      ssid = "AP 1";
      authentication.saePasswords = [{ passwordFile = "/run/secrets \
/my−password"; }];
    };
  };
  # WiFi 5 (5GHz) with two advertised networks
  wlp3s0 = {
    band = "5g";
    channel = 0; # Enable automatic channel selection (ACS). Use on \
ly if your hardware supports it.
    # countryCode = "US";
    networks.wlp3s0 = {
      ssid = "My AP";
      authentication.saePasswords = [{ passwordFile = "/run/secrets \
/my−password"; }];
    };
    networks.wlp3s0−1 = {
      ssid = "Open AP with WiFi5";
      authentication.mode = "none";
    };
```

```
    };
    # Legacy WPA2 example
    wlp4s0 = {
      # countryCode = "US";
      networks.wlp4s0 = {
        ssid = "AP 2";
        authentication = {
          mode = "wpa2-sha256";
          wpaPassword = "a flakey password"; # Use wpaPasswordFile if \
 possible.
        };
      };
    };
  }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.band

Specifies the frequency band to use, possible values are 2g for 2.4 GHz, 5g for 5 GHz, 6g for 6 GHz and 60g for 60 GHz.

Type: one of “2g”, “5g”, “6g”, “60g”

Default:

```
"2g"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.channel

The channel to operate on. Use 0 to enable ACS (Automatic Channel Selection). Beware that not every device supports ACS in which case **hostapd** will fail to start.

Type: unsigned integer, meaning >=0

Default:

Example:

```
11
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.countryCode

Country code (ISO/IEC 3166−1). Used to set regulatory domain. Set as needed to indicate country in which device is operating. This can limit available channels and transmit power. These two octets are used as the first two octets of the Country String (dot11CountryString).

Setting this will force you to also enable IEEE 802.11d and IEEE 802.11h.

IEEE 802.11d: This advertises the countryCode and the set of allowed channels and transmit power levels based on the regulatory limits.

IEEE802.11h: This enables radar detection and DFS (Dynamic Frequency Selection) support if available. DFS support is required on outdoor 5 GHz channels in most countries of the world.

Type: null or string

Default:

```
null
```

Example:

```
"US"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.driver

The driver **hostapd** will use. *nl80211* is used with all Linux mac80211 drivers. *none* is used if building a standalone RADIUS server that does not control any wireless/wired driver. Most applications will probably use the default.

Type: string

Default:

```
"nl80211"
```

Example:

```
"none"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.dynamicConfigScripts

All of these scripts will be executed in lexicographical order before hostapd is started, right after the global segment was generated and may dynamically append global options the generated configuration file.

The first argument will point to the configuration file that you may append to.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  exampleDynamicConfig = pkgs.writeShellScript "dynamic-config" ''
    HOSTAPD_CONFIG=$1
    cat >> "$HOSTAPD_CONFIG" << EOF
    # Add some dynamically generated statements here,
    # for example based on the physical adapter in use
    EOF
  '';
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks

This defines a BSS, colloquially known as a WiFi network. You have to specify at least one.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  wlp2s0 = {
    ssid = "Primary advertised network";
```

```
      authentication.saePasswords = [{ passwordFile = "/run/secrets/m \
    y-password"; }];
    };
    wlp2s0-1 = {
      ssid = "Secondary advertised network (Open)";
      authentication.mode = "none";
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.apIsolate
Isolate traffic between stations (clients) and prevent them from communicating with each other.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.authentication.enableRecommendedPairwiseCiphers
Additionally enable the recommended set of pairwise ciphers. This enables newer secure ciphers, additionally to those defined in **pairwiseCiphers**. You will have to test whether your hardware supports these by trial−and−error, because even if ‘iw list’ indicates hardware support, your driver might not expose it.

Beware **hostapd** will most likely not return a useful error message in case this is enabled despite the driver or hardware not supporting the newer ciphers. Look out for messages like ‘Failed to set beacon parameters’.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.authentication.mode
Selects the authentication mode for this AP.

- *"none"*: Don’t configure any authentication. This will disable wpa alltogether and create an open AP. Use **settings** together with this option if you want to configure the authentication manually. Any password options will still be effective, if set.
- *"wpa2−sha1"*: Not recommended. WPA2−Personal using HMAC−SHA1. Passwords are set using **wpaPassword** or preferably by **wpaPasswordFile** or **wpaPskFile**.
- *"wpa2−sha256"*: WPA2−Personal using HMAC−SHA256 (IEEE 802.11i/RSN). Passwords are set using **wpaPassword** or preferably by **wpaPasswordFile** or **wpaPskFile**.
- *"wpa3−sae−transition"*: Use WPA3−Personal (SAE) if possible, otherwise fallback to WPA2−SHA256. Only use if necessary and switch to the newer WPA3−SAE when possible. You will have to specify both **wpaPassword** and **saePasswords** (or one of their alternatives).
- *"wpa3−sae"*: Use WPA3−Personal (SAE). This is currently the recommended way to setup a secured WiFi AP (as of March 2023) and therefore the default. Passwords are set using either **saePasswords** or **saePasswordsFile**.

Type: one of “none”, “wpa2−sha1”, “wpa2−sha256”, “wpa3−sae−transition”, “wpa3−sae”

Default:

```
"wpa3-sae"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.authentication.pairwiseCiphers
Set of accepted cipher suites (encryption algorithms) for pairwise keys (unicast packets). By default this allows just CCMP, which is the only commonly supported secure option. Use **enableRecommendedPairwiseCiphers** to also enable newer recommended ciphers.

Please refer to the hostapd documentation for allowed values. Generally, only CCMP or GCMP modes should be considered safe options. Most devices support CCMP while GCMP and GCMP−256 is often only available with devices supporting WiFi 5 (IEEE 802.11ac) or higher. CCMP−256 support is rare.

Type: list of string

Default:

```
[
  "CCMP"
]
```

Example:

```
[
  "GCMP"
  "GCMP-256"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.authentication.saeAddToMacAllow
If set, all sae password entries that have a non−wildcard MAC associated to them will additionally be used to populate the MAC allow list. This is additional to any entries set via **macAllow** or **macAllowFile**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.authentication.saePasswords
Sets allowed passwords for WPA3−SAE.

The last matching (based on peer MAC address and identifier) entry is used to select which password to use. An empty string has the special meaning of removing all previously added entries.

Warning: These entries will get put into a world−readable file in the Nix store! Using **saePasswordFile** instead is recommended.

Not used when **mode** is *"wpa2−sha1"* or *"wpa2−sha256"*.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  # Any client may use these passwords
  { password = "Wi-Figure it out"; }
  { passwordFile = "/run/secrets/my-password-file"; mac = "ff:ff: \
ff:ff:ff:ff"; }
  # Only the client with MAC-address 11:22:33:44:55:66 can use thi \
s password
  { password = "sekret pazzword"; mac = "11:22:33:44:55:66"; }
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.authentication.saePasswords.*.id

If this attribute is given with non-zero length, it will set the password identifier for this entry. It can then only be used with that identifier.

Type: null or string

Default:

```
null
```

Example:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.authentication.saePasswords.*.mac

If this attribute is not included, or if is set to the wildcard address ('ff:ff:ff:ff:ff:ff'), the entry is available for any station (client) to use. If a specific peer MAC address is included, only a station with that MAC address is allowed to use the entry.

Type: null or string

Default:

```
null
```

Example:

```
"11:22:33:44:55:66"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.authentication.saePasswords.*.password

The password for this entry. SAE technically imposes no restrictions on password length or character set. But due to limitations of **hostapd**'s config file format, a true newline character cannot be parsed.

Warning: This password will get put into a world-readable file in the Nix store! Prefer using the sibling option **passwordFile** or directly set **saePasswordsFile**.

Type: null or string

Default:

```
null
```

Example:

```
"a flakey password"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.authentication.saePasswords.*.passwordFile
The password for this entry, read from the given file when starting hostapd. SAE technically imposes no restrictions on password length or character set. But due to limitations of **hostapd**'s config file format, a true newline character cannot be parsed.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.authentication.saePasswords.*.pk
If this attribute is given, SAE−PK will be enabled for this connection. This prevents evil−twin attacks, but a public key is required additionally to connect. (Essentially adds pubkey authentication such that the client can verify identity of the AP)

Type: null or string

Default:

```
null
```

Example:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.authentication.saePasswords.*.vlanid
If this attribute is given, all clients using this entry will get tagged with the given VLAN ID.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Example:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.authentication.saePasswordsFile
Sets the password for WPA3−SAE. Follows the same rules as **saePasswords**, but reads the entries from the given file to prevent them from being put into the Nix store.

One entry per line, empty lines and lines beginning with # will be ignored. Each line must match the following format, although the order of optional parameters doesn't matter: '<password>[|mac=<peer mac>][|vlanid=<VLAN ID>][|pk=<m:ECPrivateKey−base64>][|id=<identifier>]'

Not used when **mode** is *"wpa2−sha1"* or *"wpa2−sha256"*.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.authentication.wpaPassword
Sets the password for WPA−PSK that will be converted to the pre−shared key. The password length must be in the range [8, 63] characters. While some devices may allow arbitrary characters (such as UTF−8) to be used, but the standard specifies that each character in the passphrase must be an ASCII character in the range [0x20, 0x7e] (IEEE Std. 802.11i−2004, Annex H.4.1). Use emojis at your own risk.

Not used when **mode** is *"wpa3−sae"*.

Warning: This password will get put into a world−readable file in the Nix store! Using **wpaPasswordFile** or **wpaPskFile** instead is recommended.

Type: null or string

Default:

```
null
```

Example:

```
"a flakey password"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.authentication.wpaPasswordFile
Sets the password for WPA−PSK. Follows the same rules as **wpaPassword**, but reads the password from the given file to prevent the password from being put into the Nix store.

Not used when **mode** is *"wpa3−sae"*.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.authentication.wpaPskFile
Sets the password(s) for WPA−PSK. Similar to **wpaPasswordFile**, but additionally allows specifying multiple passwords, and some other options.

Each line, except for empty lines and lines starting with #, must contain a MAC address and either a 64−hex−digit PSK or a password separated with a space. The password must follow the same rules as outlined in **wpaPassword**. The special MAC address ‘00:00:00:00:00:00’ can be used to configure PSKs that any client can use.

An optional key identifier can be added by prefixing the line with ‘keyid=<keyid_string>’ An optional VLAN ID can be specified by prefixing the line with ‘vlanid=<VLAN ID>’. An optional WPS tag can be added by prefixing the line with ‘wps=<0/1>’ (default: 0). Any matching entry with that tag will be used when generating a PSK for a WPS Enrollee instead of generating a new random per−Enrollee PSK.

Not used when **mode** is *"wpa3−sae"*.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.bssid
Specifies the BSSID for this BSS. Usually determined automatically, but for now you have to manually specify them when using multiple BSS. Try assigning related addresses from the locally administered MAC address ranges, by reusing the hardware address but replacing the second nibble with 2, 6, A or E. (e.g. if real address is 'XX:XX:XX:XX:XX', try 'X2:XX:XX:XX:XX:XX', 'X6:XX:XX:XX:XX:XX', … for the second, third, … BSS)

Type: null or string

Default:

```
null
```

Example:

```
"11:22:33:44:55:66"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.dynamicConfigScripts
All of these scripts will be executed in lexicographical order before hostapd is started, right after the bss segment was generated and may dynamically append bss options to the generated configuration file.

The first argument will point to the configuration file that you may append to. The second and third argument will point to this BSS's MAC allow and MAC deny file respectively.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  exampleDynamicConfig = pkgs.writeShellScript "dynamic-config" ''
    HOSTAPD_CONFIG=$1
    # These always exist, but may or may not be used depending on t \
he actual configuration
    MAC_ALLOW_FILE=$2
    MAC_DENY_FILE=$3
    cat >> "$HOSTAPD_CONFIG" << EOF
    # Add some dynamically generated statements here
    EOF
  '';
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.group
Members of this group can access the control socket for this interface.

Type: string

Default:

```
"wheel"
```

Example:

```
"network"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.ignoreBroadcastSsid
Send empty SSID in beacons and ignore probe request frames that do not specify full SSID, i.e., require stations to know SSID. Note that this does not increase security, since your clients will then broadcast the SSID instead, which can increase congestion.

- *"disabled"*: Advertise ssid normally.
- *"empty"*: send empty (length=0) SSID in beacon and ignore probe request for broadcast SSID
- *"clear"*: clear SSID (ASCII 0), but keep the original length (this may be required with some legacy clients that do not support empty SSID) and ignore probe requests for broadcast SSID. Only use this if empty does not work with your clients.

Type: one of “disabled”, “empty”, “clear”

Default:

```
"disabled"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.logLevel
Levels (minimum value for logged events): 0 = verbose debugging 1 = debugging 2 = informational messages 3 = notification 4 = warning

Type: integer between 0 and 4 (both inclusive)

Default:

```
2
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.macAcl
Station MAC address −based authentication. The following modes are available:

- *"deny"*: Allow unless listed in **macDeny** (default)
- *"allow"*: Deny unless listed in **macAllow**
- *"radius"*: Use external radius server, but check both **macAllow** and **macDeny** first

Please note that this kind of access control requires a driver that uses hostapd to take care of management frame processing and as such, this can be used with driver=hostap or driver=nl80211, but not with driver=atheros.

Type: one of “deny”, “allow”, “radius”

Default:

```
"deny"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.macAllow
Specifies the MAC addresses to allow if **macAcl** is set to *"allow"* or *"radius"*. These values will be world−readable in the Nix store. Values will automatically be merged with **macAllowFile** if necessary.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "11:22:33:44:55:66"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.macAllowFile
Specifies a file containing the MAC addresses to allow if **macAcl** is set to *"allow"* or *"radius"*. The file should contain exactly one MAC address per line. Comments and empty lines are ignored, only lines starting with a valid MAC address will be considered (e.g. '11:22:33:44:55:66') and any content after the MAC address is ignored.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.macDeny
Specifies the MAC addresses to deny if **macAcl** is set to *"deny"* or *"radius"*. These values will be world−readable in the Nix store. Values will automatically be merged with **macDenyFile** if necessary.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "11:22:33:44:55:66"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.macDenyFile
Specifies a file containing the MAC addresses to deny if **macAcl** is set to *"deny"* or *"radius"*. The file should contain exactly one MAC address per line. Comments and empty lines are ignored, only lines starting with a valid MAC address will be considered (e.g. '11:22:33:44:55:66') and any content after the MAC address is ignored.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.settings
Extra configuration options to put at the end of this BSS's defintion in the hostapd.conf for the associated interface. To find out which options are global and which are per−bss you have to read hostapd's source code, which is non−trivial and not documented otherwise.

Lists will be converted to multiple definitions of the same key, and booleans to 0/1. Otherwise, the inputs are not modified or checked for correctness.

Type: open submodule of attribute set of (atom (bool, int or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Example:

```
{
  multi_ap = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.ssid
SSID to be used in IEEE 802.11 management frames.

Type: string

Example:

```
"☸ cool ☸"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.networks.<name>.utf8Ssid
Whether the SSID is to be interpreted using UTF−8 encoding.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.noScan
Disables scan for overlapping BSSs in HT40+/− mode. Caution: turning this on will likely violate regulatory requirements!

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.settings
Extra configuration options to put at the end of global initialization, before defining BSSs. To find out which options are global and which are per−bss you have to read hostapd's source code, which is non−trivial and not documented otherwise.

Lists will be converted to multiple definitions of the same key, and booleans to 0/1. Otherwise, the inputs are not modified or checked for correctness.

Type: open submodule of attribute set of (atom (bool, int or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Example:

```
{
  acs_exclude_dfs = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi4.enable
Enables support for IEEE 802.11n (WiFi 4, HT). This is enabled by default, since the vase majority of devices are expected to support this.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi4.capabilities
HT (High Throughput) capabilities given as a list of flags. Please refer to the hostapd documentation for allowed values and only set values supported by your physical adapter.

The default contains common values supported by most adapters.

Type: list of string

Default:

```
[
  "HT40"
  "SHORT-GI-20"
  "SHORT-GI-40"
]
```

Example:

```
[
  "LDPC"
  "HT40+"
  "HT40-"
  "GF"
  "SHORT-GI-20"
  "SHORT-GI-40"
  "TX-STBC"
  "RX-STBC1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi4.require
Require stations (clients) to support WiFi 4 (HT) and disassociate them if they don’t.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi5.enable

Enables support for IEEE 802.11ac (WiFi 5, VHT)

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi5.capabilities

VHT (Very High Throughput) capabilities given as a list of flags. Please refer to the hostapd documentation for allowed values and only set values supported by your physical adapter.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "SHORT-GI-80"
  "TX-STBC-2BY1"
  "RX-STBC-1"
  "RX-ANTENNA-PATTERN"
  "TX-ANTENNA-PATTERN"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi5.operatingChannelWidth

Determines the operating channel width for VHT.

- *"20or40"*: 20 or 40 MHz operating channel width
- *"80"*: 80 MHz channel width
- *"160"*: 160 MHz channel width
- *"80+80"*: 80+80 MHz channel width

Type: one of “20or40”, “80”, “160”, “80+80”

Default:

```
"20or40"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi5.require

Require stations (clients) to support WiFi 5 (VHT) and disassociate them if they don’t.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi6.enable
Enables support for IEEE 802.11ax (WiFi 6, HE)

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi6.multiUserBeamformer
HE multi user beamformee support

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi6.operatingChannelWidth
Determines the operating channel width for HE.

- *"20or40"*: 20 or 40 MHz operating channel width
- *"80"*: 80 MHz channel width
- *"160"*: 160 MHz channel width
- *"80+80"*: 80+80 MHz channel width

Type: one of “20or40”, “80”, “160”, “80+80”

Default:

```
"20or40"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi6.require
Require stations (clients) to support WiFi 6 (HE) and disassociate them if they don’t.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi6.singleUserBeamformee
HE single user beamformee support

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi6.singleUserBeamformer
HE single user beamformer support

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi7.enable
Enables support for IEEE 802.11be (WiFi 7, EHT). This is currently experimental and requires you to manually enable CONFIG_IEEE80211BE when building hostapd.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi7.multiUserBeamformer
EHT multi user beamformee support

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi7.operatingChannelWidth
Determines the operating channel width for EHT.

- *"20or40"*: 20 or 40 MHz operating channel width
- *"80"*: 80 MHz channel width
- *"160"*: 160 MHz channel width
- *"80+80"*: 80+80 MHz channel width

Type: one of “20or40”, “80”, “160”, “80+80”

Default:

```
"20or40"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi7.singleUserBeamformee
EHT single user beamformee support

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hostapd.radios.<name>.wifi7.singleUserBeamformer
EHT single user beamformer support

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hostapd.nix>

services.hound.enable
Whether to enable hound.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/search/hound.nix>

services.hound.package
The hound package to use.

Type: package

Default:

```
pkgs.hound
```

Declared by:
<nixpkgs/nixos/modules/services/search/hound.nix>

services.hound.group
Group the hound daemon should execute under.

Type: string

Default:

```
"hound"
```

Declared by:
<nixpkgs/nixos/modules/services/search/hound.nix>

services.hound.home
The path to use as hound's $HOME. If the default user "hound" is configured then this is the home of the "hound" user.

Type: absolute path

Default:

```
"/var/lib/hound"
```

Declared by:
<nixpkgs/nixos/modules/services/search/hound.nix>

services.hound.listen

Listen on this [IP]:port

Type: string

Default:

```
"0.0.0.0:6080"
```

Example:

```
":6080"
```

Declared by:

<nixpkgs/nixos/modules/services/search/hound.nix>

services.hound.settings

The full configuration of the Hound daemon. See the upstream documentation **https://github.com/hound-search/hound/blob/main/docs/config-options.md** for details.

Note

The 'dbpath' should be an absolute path to a writable directory. :::.com/hound-search/hound/blob/main/docs/config-options.md>.

Type: JSON value

Default:

```
null
```

Example:

```
{
  max-concurrent-indexers = 2;
  repos.nixpkgs.url = "https://www.github.com/NixOS/nixpkgs.git";
}
```

Declared by:

<nixpkgs/nixos/modules/services/search/hound.nix>

services.hound.user

User the hound daemon should execute under.

Type: string

Default:

```
"hound"
```

Declared by:

<nixpkgs/nixos/modules/services/search/hound.nix>

services.howdy.enable

Whether to enable Howdy and its PAM module for face recognition. See 'services.linux-enable-ir-emitter' for enabling the IR emitter support.

Caution

Howdy is not a safe alternative to unlocking with your password. It can be fooled using a well-printed photo.

Do **not** use it as the sole authentication method for your system.

Note

By default, the **config.services.howdy.control** option is set to '"required"', meaning it will act as a second-factor authentication in most services. To change this, set the option to '"sufficient"'.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/howdy>

services.howdy.package
The howdy package to use.

Type: package

Default:

```
pkgs.howdy
```

Declared by:
<nixpkgs/nixos/modules/services/security/howdy>

services.howdy.control
PAM control flag to use for Howdy.

Sets the **security.pam.howdy.control** option.

Refer to **pam.conf**(5) for options.

Type: string

Default:

```
"required"
```

Declared by:
<nixpkgs/nixos/modules/services/security/howdy>

services.howdy.settings
Howdy configuration file. Refer to **https://github.com/boltgolt/howdy/blob/d3ab99382f88f043d15f15c1450ab69433892a1c/howdy/src/config.ini** for options.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{
  core = {
    abort_if_lid_closed = true;
    abort_if_ssh = true;
    detection_notice = false;
    disabled = false;
    no_confirmation = false;
    suppress_unknown = false;
    timeout_notice = true;
    use_cnn = false;
    workaround = "off";
  };
  debug = {
    end_report = false;
    gtk_stdout = false;
    verbose_stamps = false;
  };
  rubberstamps = {
```

```
      enabled = false;
      stamp_rules = "nod            5s          failsafe     min_distance=12";
    };
    snapshots = {
      save_failed = false;
      save_successful = false;
    };
    video = {
      certainty = 3.5;
      dark_threshold = 60;
      device_format = "v4l2";
      device_fps = -1;
      device_path = "/dev/video2";
      exposure = -1;
      force_mjpeg = false;
      frame_height = -1;
      frame_width = -1;
      max_height = 320;
      recording_plugin = "opencv";
      rotate = 0;
      timeout = 4;
      warn_no_device = true;
    };
  }
```

Declared by:

<nixpkgs/nixos/modules/services/security/howdy>

services.hqplayerd.enable

Whether to enable HQPlayer Embedded.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/audio/hqplayerd.nix>

services.hqplayerd.auth.password

Password used for HQPlayer’s WebUI.

Without this you will need to manually create the credentials after first start by going to http://your.ip/8088/auth

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/audio/hqplayerd.nix>

services.hqplayerd.auth.username

Username used for HQPlayer's WebUI.

Without this you will need to manually create the credentials after first start by going to http://your.ip/8088/auth

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/audio/hqplayerd.nix>

services.hqplayerd.config

HQplayer daemon configuration, written to /etc/hqplayer/hqplayerd.xml.

Refer to share/doc/hqplayerd/readme.txt in the hqplayerd derivation for possible values.

Type: null or strings concatenated with "\n"

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/audio/hqplayerd.nix>

services.hqplayerd.licenseFile

Path to the HQPlayer license key file.

Without this, the service will run in trial mode and restart every 30 minutes.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/audio/hqplayerd.nix>

services.hqplayerd.openFirewall

Opens ports needed for the WebUI and controller API.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/audio/hqplayerd.nix>

services.htpdate.enable

Enable htpdate daemon.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/htpdate.nix>

services.htpdate.extraOptions

Additional command line arguments to pass to htpdate.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/htpdate.nix>

services.htpdate.proxy

HTTP proxy used for requests.

Type: string

Default:

```
""
```

Example:

```
"127.0.0.1:8118"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/htpdate.nix>

services.htpdate.servers

HTTP servers to use for time synchronization.

Type: list of string

Default:

```
[
  "www.google.com"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/htpdate.nix>

services.httpd.enable

Whether to enable the Apache HTTP Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.enableMellon

Whether to enable the mod_auth_mellon module.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.enablePHP
Whether to enable the PHP module.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.enablePerl
Whether to enable the Perl module (mod_perl).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.package
The apacheHttpd package to use.

Type: package

Default:

```
pkgs.apacheHttpd
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.adminAddr
E−mail address of the server administrator.

Type: null or string

Default:

```
null
```

Example:

```
"admin@example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.configFile
Override the configuration file used by Apache. By default, NixOS generates one automatically.

Type: absolute path

Default:

```
confFile
```

Example:

```
pkgs.writeText "httpd.conf" "# my custom config file ..."
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/apache-httpd/default.nix>

services.httpd.customLogFormat

Defines a custom Apache HTTPD access log format string.

This option is only consulted when 'logFormat' is set to 'custom'. The value must be a valid Apache 'LogFormat' specification and will be registered under the symbolic name 'custom'.

See **https://httpd.apache.org/docs/2.4/logs.html#formats** for the formal definition of log format directives.

Type: string

Default:

```
null
```

Example:

```
"%{X-Forwarded-For}i %l %u %t \\\"%r\\\" %>s %b"
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/apache-httpd/default.nix>

services.httpd.extraConfig

Configuration lines appended to the generated Apache configuration file. Note that this mechanism will not work when **configFile** is overridden.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/apache-httpd/default.nix>

services.httpd.extraModules

Additional Apache modules to be used. These can be specified as a string in the case of modules distributed with Apache, or as an attribute set specifying the *name* and *path* of the module.

Type: list of unspecified value

Default:

```
[ ]
```

Example:

```
[
  "proxy_connect"
  { name = "jk"; path = "${pkgs.apacheHttpdPackages.mod_jk}/modules \
/mod_jk.so"; }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web-servers/apache-httpd/default.nix>

services.httpd.group

Group under which httpd children processes run.

Type: string

Default:

```
"wwwrun"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.logDir

Directory for Apache's log files. It is created automatically.

Type: absolute path

Default:

```
"/var/log/httpd"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.logFormat

Selects the access log format written to log files.

The values 'combined', 'common', 'referer', and 'agent' correspond to predefined Apache HTTPD log formats. Setting the value to 'custom' enables the use of a user−defined format string specified via 'customLogFormat'. The value 'none' disables access logging entirely.

Further details on Apache log formats are available at **https://httpd.apache.org/docs/2.4/logs.html**.

Type: one of "combined", "common", "referer", "agent", "custom", "none"

Default:

```
"common"
```

Example:

```
"custom"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.logLevel

Controls the verbosity of the ErrorLog. See **https://httpd.apache.org/docs/2.4/mod/core.html#loglevel** for more details.

Type: null or one of "emerg", "alert", "crit", "error", "warn", "notice", "info", "debug", "trace1", "trace2", "trace3", "trace4", "trace5", "trace6", "trace7", "trace8"

Default:

```
"notice"
```

Example:

```
"crit"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.logPerVirtualHost

If enabled, each virtual host gets its own *access.log* and *error.log*, namely suffixed by the **hostName** of the virtual host.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.maxClients

Maximum number of httpd processes (prefork)

Type: positive integer, meaning >0

Default:

```
150
```

Example:

```
8
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.maxRequestsPerChild

Maximum number of httpd requests answered per httpd child (prefork), 0 means unlimited.

Type: unsigned integer, meaning >=0

Default:

Example:

```
500
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.mpm

Multi−processing module to be used by Apache. Available modules are ‘prefork’ (handles each request in a separate child process), ‘worker’ (hybrid approach that starts a number of child processes each running a number of threads) and ‘event’ (the default; a recent variant of ‘worker’ that handles persistent connections more efficiently).

Type: one of “event”, “prefork”, “worker”

Default:

```
"event"
```

Example:

```
"worker"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.phpOptions

Options appended to the PHP configuration file *php.ini*.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
date.timezone = "CET"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/apache-httpd/default.nix>

services.httpd.phpPackage
The php package to use.

Type: package

Default:

```
pkgs.php
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/apache-httpd/default.nix>

services.httpd.sslCiphers
Cipher Suite available for negotiation in SSL proxy handshake.

Type: string

Default:

```
"HIGH:!aNULL:!MD5:!EXP"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/apache-httpd/default.nix>

services.httpd.sslProtocols
Allowed SSL/TLS protocol versions.

Type: string

Default:

```
"All -SSLv2 -SSLv3 -TLSv1 -TLSv1.1"
```

Example:

```
"All -SSLv2 -SSLv3"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/apache-httpd/default.nix>

services.httpd.user
User account under which httpd children processes run.

If you require the main httpd process to run as ‘root’ add the following configuration:

```
systemd.services.httpd.serviceConfig.User = lib.mkForce "root";
```

Type: string

Default:

```
"wwwrun"
```

Declared by:
<nixpkgs/nixos/modules/services/web-servers/apache-httpd/default.nix>

services.httpd.virtualHosts
Specification of the virtual hosts served by Apache. Each element should be an attribute set specifying the configuration of the virtual host.

Type: attribute set of (submodule)

Default:

```
{
  localhost = {
    documentRoot = "${package.out}/htdocs";
  };
}
```

Example:

```
{
  "foo.example.com" = {
    forceSSL = true;
    documentRoot = "/var/www/foo.example.com"
  };
  "bar.example.com" = {
    addSSL = true;
    documentRoot = "/var/www/bar.example.com";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.enableACME
Whether to ask Let’s Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.enableUserDir
Whether to enable serving *~/public_html* as ‘/~«username»’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.acmeRoot
Directory for the acme challenge which is PUBLIC, don’t put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.addSSL

Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.adminAddr

E−mail address of the server administrator.

Type: null or string

Default:

```
null
```

Example:

```
"admin@example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.documentRoot

The path of Apache's document root directory. If left undefined, an empty directory in the Nix store will be used as root.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.extraConfig

These lines go to httpd.conf verbatim. They will go after directories and directory aliases defined by default.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
<Directory /home>
  Options FollowSymlinks
  AllowOverride All
</Directory>
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.forceSSL

Whether to add a separate nginx server block that permanently redirects (301) all plain HTTP traffic to HTTPS. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.globalRedirect

If set, all requests for this host are redirected permanently to the given URL.

Type: null or string

Default:

```
null
```

Example:

```
"http://newserver.example.org/"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.hostName

Canonical hostname for the server.

Type: string

Default:

```
"‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.http2

Whether to enable HTTP 2. HTTP/2 is supported in all multi−processing modules that come with httpd. *However, if you use the prefork mpm, there will be severe restrictions.* Refer to **https://httpd.apache.org/docs/2.4/howto/http2.html#mpm−config** for details.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.listen

Listen addresses and ports for this virtual host.

Note

This option overrides 'addSSL', 'forceSSL' and 'onlySSL'.

If you only want to set the addresses manually and not the ports, take a look at 'listenAddresses'.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    ip = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    ip = "192.154.1.1";
    port = 80;
  }
  {
    ip = "*";
    port = 8080;
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.listen.*.ip
IP to listen on. 0.0.0.0 for IPv4 only, * for all.

Type: string

Default:

```
"*"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.listen.*.port
Port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.listen.*.ssl
Whether to enable SSL (https) support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Type: non−empty (list of string)

Default:

```
[
  "*"
]
```

Example:

```
[
  "127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.locations
Declarative location config. See **https://httpd.apache.org/docs/2.4/mod/core.html#location** for details.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
  "/foo/bar.png" = {
    alias = "/home/eelco/some−file.png";
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.locations.<name>.alias
Alias directory for requests. See **https://httpd.apache.org/docs/2.4/mod/mod_alias.html#alias**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.locations.<name>.index
Adds DirectoryIndex directive. See **https://httpd.apache.org/docs/2.4/mod/mod_dir.html#directoryindex**.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with 'lib.mkOrder'. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.locations.<name>.proxyPass
Sets up a simple reverse proxy as described by **https://httpd.apache.org/docs/2.4/howto/reverse_proxy.html#simple**.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.logFormat
Log format for Apache's log files. Possible values are: combined, common, referer, agent.

Type: string

Default:

```
"common"
```

Example:

```
"combined"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.robotsEntries

Specification of pages to be ignored by web crawlers. See **http://www.robotstxt.org/** for details.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"Disallow: /foo/"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.servedDirs

This option provides a simple way to serve static directories.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    dir = "/home/eelco/Dev/nix−homepage";
    urlPath = "/nix";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.servedFiles

This option provides a simple way to serve individual, static files.

Note

This option has been deprecated and will be removed in a future version of NixOS. You can achieve the same result by making use of the ‘locations.<name>.alias’ option.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    file = "/home/eelco/some−file.png";
    urlPath = "/foo/bar.png";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "www.example.org:8080"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.sslServerCert

Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.sslServerChain

Path to server SSL chain file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/ca.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.sslServerKey

Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

services.httpd.virtualHosts.<name>.useACMEHost

A host of an existing Let’s Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/apache−httpd/default.nix>

2. see the **security.acme.certs** option

services.https−dns−proxy.enable
Whether to enable https−dns−proxy daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/https−dns−proxy.nix>

services.https−dns−proxy.address
The address on which to listen

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/https−dns−proxy.nix>

services.https−dns−proxy.extraArgs
Additional arguments to pass to the process.

Type: list of string

Default:

```
[
  "−v"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/https−dns−proxy.nix>

services.https−dns−proxy.port
The port on which to listen

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5053
```

Declared by:
<nixpkgs/nixos/modules/services/networking/https−dns−proxy.nix>

services.https−dns−proxy.preferIPv4
https_dns_proxy will by default use IPv6 and fail if it is not available. To play it safe, we choose IPv4.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/https−dns−proxy.nix>

services.https−dns−proxy.provider.ips
The custom provider IPs

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/https−dns−proxy.nix>

services.https−dns−proxy.provider.kind
The upstream provider to use or custom in case you do not trust any of the predefined providers or just want to use your own.

The default is quad9 and there are privacy and security trade−offs when using any upstream provider. Please consider that before using any of them.

Supported providers: cloudflare, custom, google, opendns, quad9

If you pick the custom provider, you will need to provide the bootstrap IP addresses as well as the resolver https URL.

Type: one of “cloudflare”, “custom”, “google”, “opendns”, “quad9”

Default:

```
"quad9"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/https−dns−proxy.nix>

services.https−dns−proxy.provider.url
The custom provider URL

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/https−dns−proxy.nix>

services.hydra.enable
Whether to run Hydra services.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/hydra/default.nix>

services.hydra.package
The hydra package to use.

Type: package

Default:

```
pkgs.hydra
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/hydra/default.nix>

services.hydra.buildMachinesFiles

List of files containing build machines.

Type: list of absolute path

Default:

```
lib.optional (config.nix.buildMachines != []) "/etc/nix/machines"
```

Example:

```
[
  "/etc/nix/machines"
  "/var/lib/hydra/provisioner/machines"
]
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/hydra/default.nix>

services.hydra.dbi

The DBI string for Hydra database connection.

NOTE: Attempts to set ‘application_name’ will be overridden by ‘hydra−TYPE’ (where TYPE is e.g. ‘evaluator’, ‘queue−runner’, etc.) in all hydra services to more easily distinguish where queries are coming from.

Type: string

Default:

```
"dbi:Pg:dbname=hydra;user=hydra;"
```

Example:

```
"dbi:Pg:dbname=hydra;host=postgres.example.org;user=foo;"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/hydra/default.nix>

services.hydra.debugServer

Whether to run the server in debug mode.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/hydra/default.nix>

services.hydra.extraConfig

Extra lines for the Hydra configuration.

Type: strings concatenated with “\n”

Declared by:

<nixpkgs/nixos/modules/services/continuous−integration/hydra/default.nix>

services.hydra.extraEnv

Extra environment variables for Hydra.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hydra/default.nix>

services.hydra.gcRootsDir
Directory that holds Hydra garbage collector roots.

Type: absolute path

Default:

```
"/nix/var/nix/gcroots/hydra"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hydra/default.nix>

services.hydra.hydraURL
The base URL for the Hydra webserver instance. Used for links in emails.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hydra/default.nix>

services.hydra.listenHost
The hostname or address to listen on or ‘*’ to listen on all interfaces.

Type: string

Default:

```
"*"
```

Example:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hydra/default.nix>

services.hydra.logo
Path to a file containing the logo of your Hydra instance.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hydra/default.nix>

services.hydra.maxServers
Maximum number of starman workers to spawn.

Type: signed integer

Default:

```
25
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hydra/default.nix>

services.hydra.maxSpareServers
Maximum number of spare starman workers to keep.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hydra/default.nix>

services.hydra.minSpareServers
Minimum number of spare starman workers to keep.

Type: signed integer

Default:

```
4
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hydra/default.nix>

services.hydra.minimumDiskFree
Threshold of minimum disk space (GiB) to determine if the queue runner should run or not.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hydra/default.nix>

services.hydra.minimumDiskFreeEvaluator
Threshold of minimum disk space (GiB) to determine if the evaluator should run or not.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hydra/default.nix>

services.hydra.notificationSender
Sender email address used for email notifications.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hydra/default.nix>

services.hydra.port
TCP port the web server should listen to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/hydra/default.nix>

services.hydra.smtpHost
Hostname of the SMTP server to use to send email.

Type: null or string

Default:

```
null
```

Example:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/hydra/default.nix>

services.hydra.tracker
Piece of HTML that is included on all pages.

Type: string

Default:
```
""
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/hydra/default.nix>

services.hydra.useSubstitutes
Whether to use binary caches for downloading store paths. Note that binary substitutions trigger (a potentially large number of) additional HTTP requests that slow down the queue monitor thread significantly. Also, this Hydra instance will serve those downloaded store paths to its users with its own signature attached as if it had built them itself, so don't enable this feature unless your active binary caches are absolute trustworthy.

Type: boolean

Default:
```
false
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/hydra/default.nix>

services.hylafax.enable
Whether to enable HylaFAX server.

Type: boolean

Default:
```
false
```

Example:
```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.package
The HylaFAX package to use.

Type: package

Default:
```
pkgs.hylafaxplus
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.areaCode
Area code for server and all modems.

Type: null or non−empty string

Default:
```
null
```

Example:

```
"30"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.autostart

Autostart the HylaFAX queue manager at system start. If this is ‘false’, the queue manager will still be started if there are pending jobs or if a user tries to connect to it.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.commonModemConfig

Attribute set of default values for modem config files *etc/config.**. Values can be either strings or integers (which will be added to the config file verbatimly) or lists thereof (which will be translated to multiple lines with the same configuration key). Boolean values are translated to “Yes” or “No”. The default contains some reasonable configuration to yield an operational system.

Think twice before changing paths of fax−processing scripts.

Type: attribute set of ((list of ((string or signed integer convertible to it) or boolean convertible to it)) or ((string or signed integer convertible to it) or boolean convertible to it) convertible to it)

Default:

```
{ }
```

Example:

```
{
  InternationalPrefix = "00";
  LongDistancePrefix = "0";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.countryCode

Country code for server and all modems.

Type: null or non−empty string

Default:

```
null
```

Example:

```
"49"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.faxcron.enable.frequency

purging old files from the spooling area with *faxcron* with the given frequency (see **systemd.time**(7))

Type: null or non−empty string

Default:

```
null
```

Example:

```
"daily"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.faxcron.enable.spoolInit

Whether to enable purging old files from the spooling area with *faxcron* each time the spooling area is initialized .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.faxcron.infoDays

Set the expiration time for data in the remote machine information directory in days.

Type: positive integer, meaning >0

Default:

```
30
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.faxcron.logDays

Set the expiration time for session trace log files in days.

Type: positive integer, meaning >0

Default:

```
30
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.faxcron.rcvDays

Set the expiration time for files in the received facsimile queue in days.

Type: positive integer, meaning >0

Default:

```
7
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.faxqConfig

Attribute set of lines for the global faxq config file *etc/config*. Values can be either strings or integers (which will be added to the config file verbatimly) or lists thereof (which will be translated to multiple lines with the same configuration key). Boolean values are translated to “Yes” or “No”. The default contains some reasonable configuration to yield an operational system.

Type: attribute set of ((list of ((string or signed integer convertible to it) or boolean convertible to it)) or ((string or signed integer convertible to it) or boolean convertible to it) convertible to it)

Default:

```
{ }
```

Example:

```
{
  InternationalPrefix = "00";
  LongDistancePrefix = "0";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.faxqclean.enable.frequency

Purge old files from the spooling area with *faxcron* with the given frequency (see **systemd.time**(7)).

Type: null or non−empty string

Default:

```
null
```

Example:

```
"daily"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.faxqclean.enable.spoolInit

Whether to enable purging old files from the spooling area with *faxqclean* each time the spooling area is initialized .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.faxqclean.archiving

Enable or suppress job archiving: ‘never’ disables job archiving, ‘as−flagged’ archives jobs that have been flagged for archiving by sendfax, ‘always’ forces archiving of all jobs. See also **sendfax**(1) and **faxqclean**(8).

Type: one of “never”, “as−flagged”, “always”

Default:

```
"as-flagged"
```

Example:

```
"always"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.faxqclean.docqMinutes
Set the document age threshold (in minutes) that controls how long unreferenced files may reside in the docq directory.

Type: positive integer, meaning >0

Default:

```
60
```

Example:

```
24*60
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.faxqclean.doneqMinutes
Set the job age threshold (in minutes) that controls how long jobs may reside in the doneq directory.

Type: positive integer, meaning >0

Default:

```
15
```

Example:

```
24*60
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.hfaxdConfig
Attribute set of lines for the global hfaxd config file *etc/hfaxd.conf*. Values can be either strings or integers (which will be added to the config file verbatimly) or lists thereof (which will be translated to multiple lines with the same configuration key). Boolean values are translated to “Yes” or “No”. The default contains some reasonable configuration to yield an operational system.

Type: attribute set of ((list of ((string or signed integer convertible to it) or boolean convertible to it)) or ((string or signed integer convertible to it) or boolean convertible to it) convertible to it)

Default:

```
{ }
```

Example:

```
{
  RecvqProtection = "0400";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.internationalPrefix
International prefix for server and all modems.

Type: null or string

Default:

```
null
```

Example:

```
"00"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.longDistancePrefix
Long distance prefix for server and all modems.

Type: null or string

Default:

```
null
```

Example:

```
"0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.modems
Description of installed modems. At least on modem must be defined to enable the HylaFAX server.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  ttyS1 = {
    config = {
      FAXNumber = "123456";
      LocalIdentifier = "Smith";
    };
    type = "cirrus";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.modems.<name>.config
Attribute set of values for the given modem. Values can be either strings or integers (which will be added to the config file verbatimly) or lists thereof (which will be translated to multiple lines with the same configuration key). Boolean values are translated to “Yes” or “No”. The default contains some reasonable configuration to yield an operational system.

Options defined here override options in **commonModemConfig** for this modem.

Type: attribute set of ((list of ((string or signed integer convertible to it) or boolean convertible to it)) or ((string or signed integer convertible to it) or boolean convertible to it) convertible to it)

Default:

```
{ }
```

Example:

```
{
  AreaCode = "49";
  FAXNumber = "123456";
```

```
    LocalCode = "30";
    LocalIdentifier = "LostInBerlin";
  }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.modems.<name>.name
Name of modem device, will be searched for in */dev*.

Type: non−empty string

Example:

```
"ttyS1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.modems.<name>.type
Name of modem configuration file, will be searched for in *config* in the spooling area directory.

Type: non−empty string

Example:

```
"cirrus"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.sendmailPath
Path to *sendmail* program. The default uses the local sendmail wrapper (see **config.services.mail.sendmailSetuidWrapper**), otherwise the *false* binary to cause an error if used.

Type: absolute path

Example:

```
lib.getExe' config.services.postfix.package "sendmail"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.spoolAreaPath
The spooling area will be created/maintained at the location given here.

Type: absolute path

Default:

```
"/var/spool/fax"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.spoolExtraInit
Additional shell code that is executed within the spooling area directory right after its setup.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"chmod 0755 .  # everyone may read my faxes"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hylafax.userAccessFile
The *hosts.hfaxd* file entry in the spooling area will be symlinked to the location given here. This file must exist and be readable only by the 'uucp' user. See **hosts.hfaxd**(5) for details. This configuration permits access for all users:

```
environment.etc."hosts.hfaxd" = {
  mode = "0600";
  user = "uucp";
  text = ".*";
};
```

Note that host−based access can be controlled with **config.systemd.sockets.hylafax−hfaxd.listenStreams**; by default, only 127.0.0.1 is permitted to connect.

Type: absolute path

Default:

```
"/etc/hosts.hfaxd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/hylafax/options.nix>

services.hypridle.enable
Whether to enable hypridle, Hyprland's idle daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/wayland/hypridle.nix>

services.hypridle.package
The hypridle package to use.

Type: package

Default:

```
pkgs.hypridle
```

Declared by:
<nixpkgs/nixos/modules/services/wayland/hypridle.nix>

services.hyprwhspr−rs.enable
Whether to enable hyprwhspr−rs.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/hyprwhspr−rs.nix>

services.hyprwhspr−rs.package
The hyprwhspr−rs package to use.

Type: package

Default:

```
pkgs.hyprwhspr−rs
```

Declared by:
<nixpkgs/nixos/modules/services/misc/hyprwhspr−rs.nix>

services.hyprwhspr−rs.environmentFile
File containing API keys (GROQ_API_KEY, GEMINI_API_KEY) for remote transcription.

Type: null or string

Default:

```
null
```

Example:

```
"/path/to/hyprwhspr_secret_file"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/hyprwhspr−rs.nix>

services.i2p.enable
Whether to enable I2P router.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2p.nix>

services.i2pd.enable
Enables I2Pd as a running service upon activation. Please read **https://i2pd.readthedocs.io/en/latest/** for further configuration help.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.enableIPv4

Whether to enable IPv4 connectivity.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.enableIPv6

Whether to enable IPv6 connectivity.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.package

The i2pd package to use.

Type: package

Default:

```
pkgs.i2pd
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.address

Your external IP or hostname.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.addressbook.defaulturl

AddressBook subscription URL for initial setup

Type: string

Default:

```
"http://joajgazyztfssty4w2on5oaqksz6tqoxbduy553y34mf4byv6gpq.b32.i2 \
p/export/alive-hosts.txt"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.addressbook.subscriptions

AddressBook subscription URLs

Type: list of string

Default:

```
[
  "http://inr.i2p/export/alive-hosts.txt"
  "http://i2p-projekt.i2p/hosts.txt"
  "http://stats.i2p/cgi-bin/newhosts.txt"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.bandwidth

Set a router bandwidth limit integer in KBps. If not set, **i2pd** defaults to 32KBps.

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.dataDir

Alternative path to storage of i2pd data (RI, keys, peer profiles, …)

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.exploratory.inbound.length

Guaranteed minimum hops for exploratory tunnels.

Type: signed integer

Default:

```
3
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.exploratory.inbound.quantity

Number of simultaneous exploratory tunnels.

Type: signed integer

Default:

```
5
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.exploratory.outbound.length
Guaranteed minimum hops for exploratory tunnels.

Type: signed integer

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.exploratory.outbound.quantity
Number of simultaneous exploratory tunnels.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.family
Specify a family the router belongs to.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.floodfill
Makes your router a floodfill, that means what other routers will publish and get LeaseSets and RouterInfos on your router.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.ifname
Network interface to bind to.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.ifname4

IPv4 interface to bind to.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.ifname6

IPv6 interface to bind to.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.inTunnels

Serve something on I2P network at port and delegate requests to address inPort.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.inTunnels.<name>.enable

Whether to enable ‹name›.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.inTunnels.<name>.accessList

I2P nodes that are allowed to connect to this service.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.inTunnels.<name>.address
Bind address for ‹name› endpoint.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.inTunnels.<name>.crypto.tagsToSend
Number of ElGamal/AES tags to send.

Type: signed integer

Default:

```
40
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.inTunnels.<name>.inPort
Service port. Default to the tunnel’s listen port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.inTunnels.<name>.inbound.length
Guaranteed minimum hops for ‹name› tunnels.

Type: signed integer

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.inTunnels.<name>.inbound.quantity
Number of simultaneous ‹name› tunnels.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.inTunnels.<name>.keys
Keyset used for tunnel identity.

Type: string

Default:

```
"‹name›-keys.dat"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.inTunnels.<name>.name
The endpoint name.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.inTunnels.<name>.outbound.length
Guaranteed minimum hops for ‹name› tunnels.

Type: signed integer

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.inTunnels.<name>.outbound.quantity
Number of simultaneous ‹name› tunnels.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.inTunnels.<name>.port
Bind port for ‹name› endpoint.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.inTunnels.<name>.type
Tunnel type.

Type: one of “server”, “http”, “irc”, “udpserver”

Default:

```
"server"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.limits.coreSize
Maximum size of corefile in Kb (0 − use system limit).

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.limits.ntcpHard
Maximum number of active transit sessions.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.limits.ntcpSoft
Threshold to start probabalistic backoff with ntcp sessions (default: use system limit).

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.limits.ntcpThreads
Maximum number of threads used by NTCP DH worker.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.limits.openFiles
Maximum number of open files (0 − use system default).

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.limits.transittunnels
Maximum number of active transit sessions.

Type: signed integer

Default:

```
2500
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.logCLFTime
Whether to enable full CLF−formatted date and time to log.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.logLevel
The log level. **i2pd** defaults to “info” but that generates copious amounts of log messages.

We default to “error” which is similar to the default log level of **tor**.

Type: one of “debug”, “info”, “warn”, “error”

Default:

```
"error"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.nat
Whether to enable NAT bypass.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.netid
I2P overlay netid.

Type: signed integer

Default:

```
2
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.notransit
Tells the router to not accept transit tunnels during startup.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.ntcp
Whether to enable ntcp.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.ntcp2.enable
Whether to enable NTCP2.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.ntcp2.port
Port to listen for incoming NTCP2 connections (0=auto).

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.ntcp2.published
Whether to enable NTCP2 publication.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.ntcpProxy
Proxy URL for NTCP transport.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.outTunnels
Connect to someone as a client and establish a local accept endpoint

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.outTunnels.<name>.enable
Whether to enable ‹name›.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.outTunnels.<name>.address
Bind address for ‹name› endpoint.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.outTunnels.<name>.crypto.tagsToSend
Number of ElGamal/AES tags to send.

Type: signed integer

Default:

```
40
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.outTunnels.<name>.destination
Remote endpoint, I2P hostname or b32.i2p address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.outTunnels.<name>.destinationPort
Connect to particular port at destination.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.outTunnels.<name>.inbound.length
Guaranteed minimum hops for ‹name› tunnels.

Type: signed integer

Default:

```
3
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.outTunnels.<name>.inbound.quantity

Number of simultaneous ‹name› tunnels.

Type: signed integer

Default:

```
5
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.outTunnels.<name>.keys

Keyset used for tunnel identity.

Type: string

Default:

```
"‹name›-keys.dat"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.outTunnels.<name>.name

The endpoint name.

Type: string

Default:

```
"‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.outTunnels.<name>.outbound.length

Guaranteed minimum hops for ‹name› tunnels.

Type: signed integer

Default:

```
3
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.outTunnels.<name>.outbound.quantity

Number of simultaneous ‹name› tunnels.

Type: signed integer

Default:

```
5
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.outTunnels.<name>.port

Bind port for ‹name› endpoint.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.outTunnels.<name>.type

Tunnel type.

Type: one of “client”, “udpclient”

Default:

```
"client"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.port

I2P listen port. If no one is given the router will pick between 9111 and 30777.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.precomputation.elgamal

Whenever to use precomputated tables for ElGamal. **i2pd** defaults to ‘false’ to save 64M of memory (and looses some performance).

We default to ‘true’ as that is what most users want anyway.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.bob.enable

Whether to enable bob.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.bob.address
Bind address for bob endpoint.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.bob.name
The endpoint name.

Type: string

Default:

```
"bob"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.bob.port
Bind port for bob endpoint.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2827
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.http.enable
Whether to enable http.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.http.address
Bind address for http endpoint.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.http.auth
Whether to enable webconsole authentication.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.http.hostname
Expected hostname for WebUI.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.http.name
The endpoint name.

Type: string

Default:

```
"http"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.http.pass
Password for webconsole access.

Type: string

Default:

```
"i2pd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.http.port
Bind port for http endpoint.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7070
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.http.strictHeaders
Enable strict host checking on WebUI.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.http.user
Username for webconsole access

Type: string

Default:

```
"i2pd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.httpProxy.enable
Whether to enable httpproxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.httpProxy.address
Bind address for httpproxy endpoint.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.httpProxy.inbound.length
Guaranteed minimum hops for httpproxy tunnels.

Type: signed integer

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.httpProxy.inbound.quantity
Number of simultaneous httpproxy tunnels.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.httpProxy.keys
File to persist HTTPPROXY keys.

Type: null or string

Default:

```
"httpproxy-keys.dat"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.httpProxy.latency.max
Max latency for tunnels.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.httpProxy.latency.min
Min latency for tunnels.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.httpProxy.name
The endpoint name.

Type: string

Default:

```
"httpproxy"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.httpProxy.outbound.length
Guaranteed minimum hops for httpproxy tunnels.

Type: signed integer

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.httpProxy.outbound.quantity
Number of simultaneous httpproxy tunnels.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.httpProxy.outproxy
Upstream outproxy bind address.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.httpProxy.port
Bind port for httpproxy endpoint.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4444
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.i2cp.enable
Whether to enable i2cp.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.i2cp.address
Bind address for i2cp endpoint.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.i2cp.name
The endpoint name.

Type: string

Default:

```
"i2cp"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.i2cp.port
Bind port for i2cp endpoint.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7654
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.i2pControl.enable
Whether to enable i2pcontrol.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.i2pControl.address
Bind address for i2pcontrol endpoint.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.i2pControl.name
The endpoint name.

Type: string

Default:

```
"i2pcontrol"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.i2pControl.port
Bind port for i2pcontrol endpoint.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7650
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.sam.enable
Whether to enable sam.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.sam.address
Bind address for sam endpoint.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.sam.name
The endpoint name.

Type: string

Default:

```
"sam"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.sam.port
Bind port for sam endpoint.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7656
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.socksProxy.enable
Whether to enable socksproxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.socksProxy.address
Bind address for socksproxy endpoint.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.socksProxy.inbound.length
Guaranteed minimum hops for socksproxy tunnels.

Type: signed integer

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.socksProxy.inbound.quantity
Number of simultaneous socksproxy tunnels.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.socksProxy.keys
File to persist SOCKSPROXY keys.

Type: null or string

Default:

```
"socksproxy-keys.dat"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.socksProxy.latency.max
Max latency for tunnels.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.socksProxy.latency.min
Min latency for tunnels.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.socksProxy.name
The endpoint name.

Type: string

Default:

```
"socksproxy"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.socksProxy.outbound.length
Guaranteed minimum hops for socksproxy tunnels.

Type: signed integer

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.socksProxy.outbound.quantity
Number of simultaneous socksproxy tunnels.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.socksProxy.outproxy
Upstream outproxy bind address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.socksProxy.outproxyEnable
Whether to enable SOCKS outproxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.socksProxy.outproxyPort
Upstream outproxy bind port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4444
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.proto.socksProxy.port
Bind port for socksproxy endpoint.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4447
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.reseed.file
Full path to SU3 file to reseed from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.reseed.floodfill
Path to router info of floodfill to reseed from.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.reseed.proxy

URL for reseed proxy, supports http/socks.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.reseed.urls

Reseed URLs.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.reseed.verify

Whether to enable SU3 signature verification.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.reseed.zipfile

Path to local .zip file to reseed from.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.share

Limit of transit traffic from max bandwidth in percents.

Type: signed integer

Default:

```
100
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.ssu

Whether to enable ssu.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.ssu2.enable

Whether to enable SSU2.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.ssu2.port

Port to listen for incoming SSU2 connections (0=auto).

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.ssu2.published

Whether to enable SSU2 publication.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.trust.enable

Whether to enable explicit trust options.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.trust.family
Router Family to trust for first hops.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.trust.hidden
Whether to enable router concealment.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.trust.routers
Only connect to the listed routers.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.upnp.enable
Whether to enable UPnP service discovery.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.upnp.name
Name i2pd appears in UPnP forwardings list.

Type: string

Default:

```
"I2Pd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.websocket.enable
Whether to enable websockets.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.websocket.address
Bind address for websockets endpoint.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.websocket.name
The endpoint name.

Type: string

Default:

```
"websockets"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.websocket.port
Bind port for websockets endpoint.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7666
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.yggdrasil.enable
Whether to enable Yggdrasil.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.i2pd.yggdrasil.address
Your local yggdrasil address. Specify it if you want to bind your router to a particular address.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/i2pd.nix>

services.icecast.enable
Whether to enable Icecast server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/icecast.nix>

services.icecast.admin.password
Password used for all administration functions.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/audio/icecast.nix>

services.icecast.admin.user
Username used for all administration functions.

Type: string

Default:

```
"admin"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/icecast.nix>

services.icecast.extraConfig
Extra configuration added to *icecast.xml* inside the ‘<icecast>’ element.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/audio/icecast.nix>

services.icecast.hostname
DNS name or IP address that will be used for the stream directory lookups or possibly the playlist generation if a Host header is not provided.

Type: null or string

Default:

```
config.networking.domain
```

Declared by:
<nixpkgs/nixos/modules/services/audio/icecast.nix>

services.icecast.listen.address
Address Icecast will listen on.

Type: string

Default:

```
"::"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/icecast.nix>

services.icecast.listen.port
TCP port that will be used to accept client connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8000
```

Declared by:
<nixpkgs/nixos/modules/services/audio/icecast.nix>

services.icecream.daemon.enable
Whether to enable Icecream Daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/icecream/daemon.nix>

services.icecream.daemon.package
The icecream package to use.

Type: package

Default:

```
pkgs.icecream
```

Declared by:
<nixpkgs/nixos/modules/services/networking/icecream/daemon.nix>

services.icecream.daemon.cacheLimit
Maximum size in Megabytes of cache used to store compile environments of compile clients.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
256
```

Declared by:
<nixpkgs/nixos/modules/services/networking/icecream/daemon.nix>

services.icecream.daemon.extraArgs

Additional command line parameters.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-v"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/icecream/daemon.nix>

services.icecream.daemon.hostname

Hostname of the daemon in the icecream infrastructure.

Uses the hostname retrieved via uname if set to null.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/icecream/daemon.nix>

services.icecream.daemon.maxProcesses

Maximum number of compile jobs started in parallel for this daemon.

Uses the number of CPUs if set to null.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/icecream/daemon.nix>

services.icecream.daemon.netName

Network name to connect to. A scheduler with the same name needs to be running.

Type: string

Default:

```
"ICECREAM"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/icecream/daemon.nix>

services.icecream.daemon.nice

The level of niceness to use.

Type: integer between −20 and 19 (both inclusive)

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/icecream/daemon.nix>

services.icecream.daemon.noRemote
Prevent jobs from other nodes being scheduled on this daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/icecream/daemon.nix>

services.icecream.daemon.openBroadcast
Whether to automatically open the firewall for scheduler discovery.

Type: boolean

Declared by:
<nixpkgs/nixos/modules/services/networking/icecream/daemon.nix>

services.icecream.daemon.openFirewall
Whether to automatically open receive port in the firewall.

Type: boolean

Declared by:
<nixpkgs/nixos/modules/services/networking/icecream/daemon.nix>

services.icecream.daemon.schedulerHost
Explicit scheduler hostname, useful in firewalled environments.

Uses scheduler autodiscovery via broadcast if set to null.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/icecream/daemon.nix>

services.icecream.daemon.user
User to run the icecream daemon as. Set to root to enable receive of remote compile environments.

Type: string

Default:

```
"icecc"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/icecream/daemon.nix>

services.icecream.scheduler.enable
Whether to enable Icecream Scheduler.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/icecream/scheduler.nix>

services.icecream.scheduler.package
The icecream package to use.

Type: package

Default:

```
pkgs.icecream
```

Declared by:
<nixpkgs/nixos/modules/services/networking/icecream/scheduler.nix>

services.icecream.scheduler.extraArgs
Additional command line parameters

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-v"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/icecream/scheduler.nix>

services.icecream.scheduler.netName
Network name for the icecream scheduler.

Uses the default ICECREAM if null.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/icecream/scheduler.nix>

services.icecream.scheduler.openFirewall
Whether to automatically open the daemon port in the firewall.

Type: boolean

Declared by:
<nixpkgs/nixos/modules/services/networking/icecream/scheduler.nix>

services.icecream.scheduler.openTelnet
Whether to open the telnet TCP port on 8766.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/icecream/scheduler.nix>

services.icecream.scheduler.persistentClientConnection

Whether to prevent clients from connecting to a better scheduler.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/icecream/scheduler.nix>

services.icecream.scheduler.port

Server port to listen for icecream daemon requests.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8765
```

Declared by:

<nixpkgs/nixos/modules/services/networking/icecream/scheduler.nix>

services.icingaweb2.enable

Whether to enable the icingaweb2 web interface.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.icingaweb2.authentications

authentication.ini contents. Will automatically be converted to a .ini file.

If the value is null, no authentication.ini is created and you can modify it manually (e.g. via the web interface).

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  icingaweb = {
    backend = "db";
    resource = "icingaweb_db";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.icingaweb2.generalConfig

config.ini contents. Will automatically be converted to a .ini file. If you don't set global.module_path, the module will take care of it.

If the value is null, no config.ini is created and you can modify it manually (e.g. via the web interface). Note that you need to update module_path manually.

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  general = {
    config_resource = "icingaweb_db";
    showStacktraces = 1;
  };
  logging = {
    level = "CRITICAL";
    log = "syslog";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.icingaweb2.groupBackends

groups.ini contents. Will automatically be converted to a .ini file.

If the value is null, no groups.ini is created and you can modify it manually (e.g. via the web interface).

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  icingaweb = {
    backend = "db";
    resource = "icingaweb_db";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.icingaweb2.libraryPaths

Libraries to add to the Icingaweb2 library path. The name of the attribute is the name of the library, the value is the package to add.

Type: attribute set of package

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.icingaweb2.modulePackages
Name−package attrset of Icingaweb 2 modules packages to enable.

If you enable modules manually (e.g. via the web ui), they will not be touched.

Type: attribute set of package

Default:

```
{ }
```

Example:

```
{
  "snow" = icingaweb2Modules.theme−snow;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.icingaweb2.modules.doc.enable
Whether to enable the icingaweb2 doc module.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.icingaweb2.modules.migrate.enable
Whether to enable the icingaweb2 migrate module.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.icingaweb2.modules.monitoring.enable
Whether to enable the icingaweb2 monitoring module.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.backends
Monitoring backends to define

Type: attribute set of (submodule)

Default:

```
{
  icinga = {
    resource = "icinga_ido";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.backends.<name>.disabled
Disable this backend

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.backends.<name>.resource
Name of the IDO resource

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.generalConfig.mutable
Make config.ini of the monitoring module mutable (e.g. via the web interface).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.generalConfig.protectedVars
List of string patterns for custom variables which should be excluded from user’s view.

Type: list of string

Default:

```
[
  "*pw*"
  "*pass*"
  "community"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.mutableBackends
Make backends.ini of the monitoring module mutable (e.g. via the web interface).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.mutableTransports
Make commandtransports.ini of the monitoring module mutable (e.g. via the web interface).

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.transports
Command transports to define

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.transports.<name>.host
Host for the api or remote transport

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.transports.<name>.instance
Assign a icinga instance to this transport

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.transports.<name>.password
Password for the api transport

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.transports.<name>.path
Path to the socket for local or remote transports

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.transports.<name>.port
Port to connect to for the api or remote transport

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.transports.<name>.resource
SSH identity resource for the remote transport

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.transports.<name>.type
Type of this transport

Type: one of “api”, “local”, “remote”

Default:

```
"api"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.monitoring.transports.<name>.username
Username for the api or remote transport

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/module−monitoring.nix>

services.icingaweb2.modules.setup.enable
Whether to enable the icingaweb2 setup module.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.icingaweb2.modules.test.enable

Whether to enable the icingaweb2 test module.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.icingaweb2.modules.translation.enable

Whether to enable the icingaweb2 translation module.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.icingaweb2.pool

Name of existing PHP−FPM pool that is used to run Icingaweb2. If not specified, a pool will automatically created with default values.

Type: string

Default:

```
"icingaweb2"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.icingaweb2.resources

resources.ini contents. Will automatically be converted to a .ini file.

If the value is null, no resources.ini is created and you can modify it manually (e.g. via the web interface). Note that if you set passwords here, they will go into the nix store.

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  icingaweb_db = {
    db = "mysql";
    dbname = "icingaweb2";
    host = "localhost";
    password = "icingaweb2";
    type = "db";
    username = "icingaweb2";
  };
```

```
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.icingaweb2.roles

roles.ini contents. Will automatically be converted to a .ini file.

If the value is null, no roles.ini is created and you can modify it manually (e.g. via the web interface).

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  Administrators = {
    permissions = "*";
    users = "admin";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.icingaweb2.timezone

PHP−compliant timezone specification

Type: string

Default:

```
"UTC"
```

Example:

```
"Europe/Berlin"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.icingaweb2.virtualHost

Name of the nginx virtualhost to use and setup. If null, no virtualhost is set up.

Type: null or string

Default:

```
"icingaweb2"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/icingaweb2/icingaweb2.nix>

services.ifm.enable

Whether to enable Improved file manager, a single−file web−based filemanager

Lightweight and minimal, served using PHP’s built−in server .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ifm.nix>

services.ifm.dataDir
Directory to serve throught the file managing service

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ifm.nix>

services.ifm.listenAddress
Address on which the service is listening

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ifm.nix>

services.ifm.port
Port on which to serve the IFM service

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9090
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ifm.nix>

services.ifm.settings
Configuration of the IFM service.

See **the documentation** for available options and default values.

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  IFM_GUI_SHOWPATH = 0;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/ifm.nix>

services.ihaskell.enable
Autostart an IHaskell notebook service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ihaskell.nix>

services.ihaskell.extraPackages
Extra packages available to ghc when running ihaskell. The value must be a function which receives the attrset defined in *haskellPackages* as the sole argument.

Type: function that evaluates to a(n) list of package

Default:

```
haskellPackages: []
```

Example:

```
haskellPackages: [
  haskellPackages.wreq
  haskellPackages.lens
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/ihaskell.nix>

services.iio−niri.enable
Whether to enable IIO−Niri.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/iio−niri.nix>

services.iio−niri.package
The iio−niri package to use.

Type: package

Default:

```
pkgs.iio-niri
```

Declared by:
<nixpkgs/nixos/modules/services/misc/iio−niri.nix>

services.iio−niri.extraArgs
Extra arguments to pass to IIO−Niri.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/iio−niri.nix>

services.iio−niri.niriUnit

The Niri **user** service unit to bind IIO−Niri's **user** service unit to.

Type: non−empty string

Default:

```
"niri.service"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/iio−niri.nix>

services.illum.enable

Enable illum, a daemon for controlling screen brightness with brightness buttons.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/illum.nix>

services.imaginary.enable

Whether to enable imaginary image processing microservice.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/imaginary.nix>

services.imaginary.address

Bind address. Corresponds to the '−a' flag. Set to '""' to bind to all addresses.

Type: string

Default:

```
"localhost"
```

Example:

```
"[::1]"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/imaginary.nix>

services.imaginary.port

Bind port. Corresponds to the '−p' flag.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8088
```

Declared by:

<nixpkgs/nixos/modules/services/networking/imaginary.nix>

services.imaginary.settings

Command line arguments passed to the imaginary executable, stripped of the prefix '−'. See upstream's **README** for all options.

Type: open submodule of attribute set of (boolean or signed integer or non−empty (list of string) or string)

Declared by:

<nixpkgs/nixos/modules/services/networking/imaginary.nix>

services.imaginary.settings.return−size

Return the image size in the HTTP headers.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/imaginary.nix>

services.immich.enable

Whether to enable Immich.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.package

The immich package to use.

Type: package

Default:

```
pkgs.immich
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.accelerationDevices

A list of device paths to hardware acceleration devices that immich should have access to. This is useful when transcoding media files. The special value '[ ]' will disallow all devices using 'PrivateDevices'. 'null' will give access to all devices.

Type: null or (list of string)

Default:

```
[ ]
```

Example:

```
[
  "/dev/dri/renderD128"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.database.enable
Whether to enable the postgresql database for use with immich. See **services.postgresql**.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.database.createDB
Whether to enable the automatic creation of the database for immich…

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.database.host
Hostname or address of the postgresql server. If an absolute path is given here, it will be interpreted as a unix socket path.

Type: string

Default:

```
"/run/postgresql"
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.database.name
The name of the immich database.

Type: string

Default:

```
"immich"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.database.port

Port of the postgresql server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5432
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.database.user

The database user for immich.

Type: string

Default:

```
"immich"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.environment

Extra configuration environment variables. Refer to the **documentation** for options tagged with ‘server’, ‘api’ or ‘microservices’.

Type: open submodule of attribute set of string

Default:

```
{ }
```

Example:

```
{
  IMMICH_LOG_LEVEL = "verbose";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.group

The group immich should run as.

Type: string

Default:

```
"immich"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.host

The host that immich will listen on.

Type: string

Default:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.machine−learning.enable

Whether to enable immich's machine−learning functionality to detect faces and search for objects.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.machine−learning.environment

Extra configuration environment variables. Refer to the **documentation** for options tagged with 'machine−learning'.

Type: open submodule of attribute set of string

Default:

```
{ }
```

Example:

```
{
  MACHINE_LEARNING_MODEL_TTL = "600";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.mediaLocation

Directory used to store media files. If it is not the default, the directory has to be created manually such that the immich user is able to read and write to it.

Type: absolute path

Default:

```
"/var/lib/immich"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.openFirewall

Whether to open the immich port in the firewall

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.port

The port that immich will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2283
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.redis.enable
Whether to enable a redis cache for use with immich.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.redis.host
The host that redis will listen on.

Type: string

Default:

```
config.services.redis.servers.immich.unixSocket
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.redis.port
The port that redis will listen on. Set to zero to disable TCP.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.secretsFile
Path of a file with extra environment variables to be loaded from disk. This file is not added to the nix store, so it can be used to pass secrets to immich. Refer to the **documentation** for options.

To set a database password set this to a file containing:

```
DB_PASSWORD=<pass>
```

Type: null or string

Default:

```
null
```

Example:

```
"/run/secrets/immich"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.settings
Configuration for Immich. See **https://immich.app/docs/install/config−file/** or navigate to **https://my.immich.app/admin/system−settings** for options and defaults. Setting it to ‘null’ allows configuring Immich in the web interface. You can load secret values from a file in this configuration by setting ‘somevalue._secret = "/path/to/file"’ instead of setting ‘somevalue’ directly.

Type: null or (open submodule of (JSON value))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.settings.newVersionCheck.enabled
Check for new versions. This feature relies on periodic communication with github.com.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.settings.server.externalDomain
Domain for publicly shared links, including ‘http(s)://’.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich.user
The user immich should run as.

Type: string

Default:

```
"immich"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich.nix>

services.immich−kiosk.enable
Whether to enable Immich Kiosk slideshow service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich−kiosk.nix>

services.immich−kiosk.package
The immich−kiosk package to use.

Type: package

Default:

```
pkgs.immich−kiosk
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich−kiosk.nix>

services.immich−kiosk.openFirewall
Whether to open the firewall for the immich−kiosk port.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich−kiosk.nix>

services.immich−kiosk.settings
Configuration for immich−kiosk. See **https://docs.immichkiosk.app/configuration/** for available options. Secret values can be loaded from files using '._secret = "/path/to/secret";'.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Example:

```
{
  immich_url = "https://immich.example.com";
  immich_api_key._secret = "/run/secrets/immich−kiosk−api−key";
  albums = [
    "4fa933cf−051f−4621−9ac7−8d06776c261c"
    "6466548c−4995−4fb5−ab1f−f63cc9ff3e5f"
  ];
  duration = 30;
  layout = "splitview";
  disable_ui = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich−kiosk.nix>

services.immich−kiosk.settings.immich_url
URL of the immich instance.

Type: string

Default:

```
config.services.immich.settings.server.externalDomain
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich−kiosk.nix>

services.immich−kiosk.settings.kiosk.port
Port on which immich−kiosk will listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich−kiosk.nix>

services.immich−public−proxy.enable
Whether to enable Immich Public Proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich−public−proxy.nix>

services.immich−public−proxy.package
The immich−public−proxy package to use.

Type: package

Default:

```
pkgs.immich−public−proxy
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich−public−proxy.nix>

services.immich−public−proxy.immichUrl
URL of the Immich instance

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich−public−proxy.nix>

services.immich−public−proxy.openFirewall
Whether to open the IPP port in the firewall

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich−public−proxy.nix>

services.immich−public−proxy.port
The port that IPP will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich−public−proxy.nix>

services.immich−public−proxy.settings
Configuration for IPP. See **https://github.com/alangrainger/immich−public−proxy/blob/main/README.md#additional−configuration** for options and defaults.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immich−public−proxy.nix>

services.immichframe.enable
Whether to enable ImmichFrame.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immichframe.nix>

services.immichframe.package
The immichframe package to use.

Type: package

Default:

```
pkgs.immichframe
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immichframe.nix>

services.immichframe.port
The port that ImmichFrame will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immichframe.nix>

services.immichframe.settings
Configuration for ImmichFrame. See **https://immichframe.online/docs/getting−started/configuration** for options and defaults.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immichframe.nix>

services.immichframe.settings.Accounts
Accounts configuration, multiple are permitted. See **https://immichframe.online/docs/getting−started/configuration**.

Type: list of (open submodule of (JSON value))

Declared by:
<nixpkgs/nixos/modules/services/web−apps/immichframe.nix>

services.immichframe.settings.Accounts.*.ApiKey

API key to talk to the Immich server. Warning: it will be world−readable in /nix/store. Consider using **ApiKeyFile** instead.

See **https://immichframe.online/docs/getting−started/configuration#api−key−permissions** for details on what permissions this key needs.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/immichframe.nix>

services.immichframe.settings.Accounts.*.ApiKeyFile

File containing an API key to talk to the Immich server.

See **https://immichframe.online/docs/getting−started/configuration#api−key−permissions** for details on what permissions this key needs.

Type: null or absolute path not in the Nix store

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/immichframe.nix>

services.immichframe.settings.Accounts.*.ImmichServerUrl

The URL of your Immich server.

Type: string

Example:

```
"http://photos.example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/immichframe.nix>

services.inadyn.enable

Whether to enable synchronise your machine's IP address with a dynamic DNS provider using inadyn .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.configFile

Configuration file for inadyn.

Setting this will override all other configuration options.

Passed to the inadyn service using LoadCredential.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.group
Group account under which inadyn runs.

Note
If left as the default value this user will automatically be created on system activation, otherwise you are responsible for ensuring the user exists before the inadyn service starts.

Type: string

Default:

```
"inadyn"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.interval
How often to check the current IP. Uses the format described in **systemd.time**(7)";

Type: string

Default:

```
"*-*-* *:*:00"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.logLevel
Set inadyn's log level.

Type: one of "none", "err", "warning", "info", "notice", "debug"

Default:

```
"notice"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings
See 'inadyn.conf (5)'

Type: open submodule of (attribute set)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.allow-ipv6
Whether to get IPv6 addresses from interfaces.

Type: boolean

Default:

```
config.networking.enableIPv6
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.custom
Settings for custom DNS providers.

Type: attribute set of (open submodule of (attribute set))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.custom.<name>.ddns−path
DDNS server path.

See ‘inadnyn.conf (5)’ for a list for format specifiers that can be used.

Type: string

Example:

```
"/update?user=%u&password=%p&domain=%h&myip=%i"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.custom.<name>.ddns−server
DDNS server name.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.custom.<name>.hostname
Hostname alias(es).

Type: string or list of string

Default:

```
"*"
```

Example:

```
"your.cool−domain.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.custom.<name>.include
File to include additional settings for this provider from.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.custom.<name>.password
Password for this DDNS provider.

WARNING: This will be world−readable in the nix store. To store credentials securely, use the ‘include’ or ‘configFile’ options.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.custom.<name>.ssl
Whether to use HTTPS for this DDNS provider.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.custom.<name>.username
Username for this DDNS provider.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.forced−update
Duration (in seconds) after which an update is forced.

Type: positive integer, meaning >0

Default:

```
2592000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.provider
Settings for DDNS providers built−in to inadyn.

For a list of built−in providers, see ‘inadyn.conf (5)’.

Type: attribute set of (open submodule of (attribute set))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.provider.<name>.hostname
Hostname alias(es).

Type: string or list of string

Default:

```
"*"
```

Example:

```
"your.cool-domain.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.provider.<name>.include
File to include additional settings for this provider from.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.provider.<name>.password
Password for this DDNS provider.

WARNING: This will be world−readable in the nix store. To store credentials securely, use the ‘include’ or ‘configFile’ options.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.provider.<name>.ssl
Whether to use HTTPS for this DDNS provider.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.settings.provider.<name>.username
Username for this DDNS provider.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.inadyn.user

User account under which inadyn runs.

> **Note**
> If left as the default value this user will automatically be created on system activation, otherwise you are responsible for ensuring the user exists before the inadyn service starts.

Type: string

Default:

```
"inadyn"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inadyn.nix>

services.incron.enable

Whether to enable the incron daemon.

Note that commands run under incrontab only support common Nix profiles for the **PATH** provided variable.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/incron.nix>

services.incron.allow

Users allowed to use incrontab.

If empty then no user will be allowed to have their own incrontab. If ‘null’ then will defer to **deny**. If both **allow** and **deny** are null then all users will be allowed to have their own incrontab.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/incron.nix>

services.incron.deny

Users forbidden from using incrontab.

Type: null or (list of string)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/incron.nix>

services.incron.extraPackages

Extra packages available to the system incrontab.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.rsync ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/incron.nix>

services.incron.systab
The system incrontab contents.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
/var/mail IN_CLOSE_WRITE abc $@/$#
/tmp IN_ALL_EVENTS efg $@/$# $&
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/incron.nix>

services.infinoted.enable
Whether to enable infinoted.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/editors/infinoted.nix>

services.infinoted.package
The libinfinity package to use.

Type: package

Default:

```
pkgs.libinfinity
```

Declared by:
<nixpkgs/nixos/modules/services/editors/infinoted.nix>

services.infinoted.certificateChain
Chain of CA−certificates to which our ‘certificateFile’ is relative. Optional for TLS.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/editors/infinoted.nix>

services.infinoted.certificateFile
Server certificate to use for TLS

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/editors/infinoted.nix>

services.infinoted.extraConfig
Additional configuration to append to infinoted.conf

Type: strings concatenated with “\n”

Default:

```
[autosave]
interval=10
```

Declared by:
<nixpkgs/nixos/modules/services/editors/infinoted.nix>

services.infinoted.group
What to call the primary group of the dedicated user under which infinoted is run

Type: string

Default:

```
"infinoted"
```

Declared by:
<nixpkgs/nixos/modules/services/editors/infinoted.nix>

services.infinoted.keyFile
Private key to use for TLS

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/editors/infinoted.nix>

services.infinoted.passwordFile
File to read server−wide password from

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/editors/infinoted.nix>

services.infinoted.plugins
Plugins to enable

Type: list of string

Default:

```
[
  "note-text"
  "note-chat"
  "logging"
  "autosave"
]
```

Declared by:
<nixpkgs/nixos/modules/services/editors/infinoted.nix>

services.infinoted.port
Port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6523
```

Declared by:
<nixpkgs/nixos/modules/services/editors/infinoted.nix>

services.infinoted.rootDirectory
Root of the directory structure to serve

Type: absolute path

Default:

```
"/var/lib/infinoted/documents/"
```

Declared by:
<nixpkgs/nixos/modules/services/editors/infinoted.nix>

services.infinoted.securityPolicy
How strictly to enforce clients connection with TLS.

Type: one of “no−tls”, “allow−tls”, “require−tls”

Default:

```
"require-tls"
```

Declared by:
<nixpkgs/nixos/modules/services/editors/infinoted.nix>

services.infinoted.user
What to call the dedicated user under which infinoted is run

Type: string

Default:

```
"infinoted"
```

Declared by:
<nixpkgs/nixos/modules/services/editors/infinoted.nix>

services.influxdb.enable
Whether to enable the influxdb server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb.nix>

services.influxdb.package
The influxdb package to use.

Type: package

Default:

```
pkgs.influxdb
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb.nix>

services.influxdb.dataDir
Data directory for influxd data files.

Type: absolute path

Default:

```
"/var/db/influxdb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb.nix>

services.influxdb.group
Group under which influxdb runs

Type: string

Default:

```
"influxdb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb.nix>

services.influxdb.settings
Extra configuration options for influxdb

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb.nix>

services.influxdb.user
User account under which influxdb runs

Type: string

Default:

```
"influxdb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb.nix>

services.influxdb2.enable
Whether to enable the influxdb2 server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.package
The influxdb2 package to use.

Type: package

Default:

```
pkgs.influxdb2
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.enable
Whether to enable initial database setup and provisioning.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.initialSetup.bucket
Primary bucket name

Type: string

Example:

```
"example"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.initialSetup.organization
Primary organization name

Type: string

Example:

```
"main"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.initialSetup.passwordFile
Password for primary user. Don’t use a file from the nix store!

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.initialSetup.retention
The duration in seconds for which the bucket will retain data (0 is infinite).

Type: unsigned integer, meaning >=0

Default:

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.initialSetup.tokenFile
API Token to set for the admin user. Don't use a file from the nix store!

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.initialSetup.username
Primary username

Type: string

Default:

```
"admin"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations
Organizations to provision.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  myorg = {
    description = "My organization";
    buckets.mybucket = {
      description = "My bucket";
      retention = 31536000; # 1 year
    };
    auths.mytoken = {
      readBuckets = ["mybucket"];
      tokenFile = "/run/secrets/mytoken";
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.auths
API tokens to provision for the user in this organization.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.auths.<name>.allAccess
Grants all permissions in the associated organization.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.auths.<name>.description
Optional description for the API token. Note that the actual token will always be created with a descriptionregardless of whether this is given or not. The name is always added plus a unique suffix to later identify the token to track whether it has already been created.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.auths.<name>.id
A unique identifier for this authentication token. Since influx doesn't store names for tokens, this will be hashed and appended to the description to identify the token.

Type: string *(read only)*

Default:

```
"<a hash derived from org and name>"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.auths.<name>.operator
Grants all permissions in all organizations.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.auths.<name>.present
Whether to ensure that this user is present or absent.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.auths.<name>.readBuckets
The organization's buckets which should be allowed to be read

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.auths.<name>.readPermissions
The read permissions to include for this token. Access is usually granted only for resources in the associated organization.

Available permissions are 'authorizations', 'buckets', 'dashboards', 'orgs', 'tasks', 'telegrafs', 'users', 'variables', 'secrets', 'labels', 'views', 'documents', 'notificationRules', 'notificationEndpoints', 'checks', 'dbrp', 'annotations', 'sources', 'scrapers', 'notebooks', 'remotes', 'replications'.

Refer to 'influx auth create −−help' for a full list with descriptions.

'buckets' grants read access to all associated buckets. Use 'readBuckets' to define more granular access permissions.

Type: list of (one of "authorizations", "buckets", "dashboards", "orgs", "tasks", "telegrafs", "users", "variables", "secrets", "labels", "views", "documents", "notificationRules", "notificationEndpoints", "checks", "dbrp", "annotations", "sources", "scrapers", "notebooks", "remotes", "replications")

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.auths.<name>.tokenFile
The token value. If not given, influx will automatically generate one.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.auths.<name>.writeBuckets
The organization's buckets which should be allowed to be written

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.auths.<name>.writePermissions
The read permissions to include for this token. Access is usually granted only for resources in the associated organization.

Available permissions are 'authorizations', 'buckets', 'dashboards', 'orgs', 'tasks', 'telegrafs', 'users', 'variables', 'secrets', 'labels', 'views', 'documents', 'notificationRules', 'notificationEndpoints', 'checks', 'dbrp', 'annotations', 'sources', 'scrapers', 'notebooks', 'remotes', 'replications'.

Refer to ‘influx auth create −−help’ for a full list with descriptions.

‘buckets’ grants write access to all associated buckets. Use ‘writeBuckets’ to define more granular access permissions.

Type: list of (one of “authorizations”, “buckets”, “dashboards”, “orgs”, “tasks”, “telegrafs”, “users”, “variables”, “secrets”, “labels”, “views”, “documents”, “notificationRules”, “notificationEndpoints”, “checks”, “dbrp”, “annotations”, “sources”, “scrapers”, “notebooks”, “remotes”, “replications”)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.buckets
Buckets to provision in this organization.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.buckets.<name>.description
Optional description for the bucket.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.buckets.<name>.present
Whether to ensure that this bucket is present or absent.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.buckets.<name>.retention
The duration in seconds for which the bucket will retain data (0 is infinite).

Type: unsigned integer, meaning >=0

Default:

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.description
Optional description for the organization.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.organizations.<name>.present
Whether to ensure that this organization is present or absent.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.users
Users to provision.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  # admin = {}; /* The initialSetup.username will automatically be  \
added. */
  myuser.passwordFile = "/run/secrets/myuser_password";
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.users.<name>.passwordFile
Password for the user. If unset, the user will not be able to log in until a password is set by an operator! Don't use a file from the nix store!

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.provision.users.<name>.present
Whether to ensure that this user is present or absent.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.influxdb2.settings
configuration options for influxdb2, see **https://docs.influxdata.com/influxdb/v2.0/reference/config-options** for details.

Type: JSON value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/databases/influxdb2.nix>

services.infnoise.enable
Whether to enable the Infinite Noise TRNG driver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/infnoise.nix>

services.infnoise.fillDevRandom
Whether to run the infnoise driver as a daemon to refill /dev/random.

If disabled, you can use the ‘infnoise’ command−line tool to manually obtain randomness.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/infnoise.nix>

services.input−remapper.enable
Whether to enable input−remapper, an easy to use tool to change the mapping of your input device buttons.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/input−remapper.nix>

services.input−remapper.enableUdevRules
Whether to enable udev rules added by input−remapper to handle hotplugged devices. Currently disabled by default due to **https://github.com/sezanzeb/input−remapper/issues/140**.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/input−remapper.nix>

services.input−remapper.package
The input−remapper package to use.

Type: package

Default:

```
pkgs.input−remapper
```

Declared by:
<nixpkgs/nixos/modules/services/misc/input−remapper.nix>

services.input−remapper.serviceWantedBy
Specifies the WantedBy setting for the input−remapper service.

Type: list of string

Default:

```
[
  "graphical.target"
]
```

Example:

```
[
  "multi−user.target"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/input−remapper.nix>

services.inputplumber.enable
Whether to enable InputPlumber.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/inputplumber.nix>

services.inputplumber.package
The inputplumber package to use.

Type: package

Default:

```
pkgs.inputplumber
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/inputplumber.nix>

services.inspircd.enable
Whether to enable InspIRCd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inspircd.nix>

services.inspircd.package
The InspIRCd package to use. This is mainly useful to specify an overridden version of the 'pkgs.inspircd' dervivation, for example if you want to use a more minimal InspIRCd distribution with less modules enabled or with modules enabled which can't be distributed in binary form due to licensing issues.

Type: package

Default:

```
pkgs.inspircd
```

Example:

```
pkgs.inspircdMinimal
```

Declared by:
<nixpkgs/nixos/modules/services/networking/inspircd.nix>

services.inspircd.config
Verbatim *inspircd.conf* file. For a list of options, consult the **InspIRCd documentation**, the **Module documentation** and the example configuration files distributed with 'pkgs.inspircd.doc'

Type: strings concatenated with "\n"

Declared by:
<nixpkgs/nixos/modules/services/networking/inspircd.nix>

services.interception−tools.enable
Whether to enable the interception tools service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/interception−tools.nix>

services.interception−tools.plugins
A list of interception tools plugins that will be made available to use inside the udevmon configuration.

Type: list of package

Default:

```
[ pkgs.interception−tools−plugins.caps2esc ]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/interception−tools.nix>

services.interception−tools.udevmonConfig
String of udevmon YAML configuration, or path to a udevmon YAML configuration file.

Type: string or absolute path

Default:

```
− JOB: "intercept −g $DEVNODE | caps2esc | uinput −d $DEVNODE"
  DEVICE:
    EVENTS:
      EV_KEY: [KEY_CAPSLOCK, KEY_ESC]
```

Example:

```
    - JOB: "intercept -g $DEVNODE | y2z | x2y | uinput -d $DEVNODE \
  "
      DEVICE:
        EVENTS:
          EV_KEY: [KEY_X, KEY_Y]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/interception-tools.nix>

services.intune.enable
Whether to enable Microsoft Intune.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/intune.nix>

services.invidious.enable
Whether to enable Invidious.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/invidious.nix>

services.invidious.package
The invidious package to use.

Type: package

Default:

```
pkgs.invidious
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/invidious.nix>

services.invidious.address
The IP address Invidious should bind to.

Type: string

Default:

```
if config.services.invidious.nginx.enable then "127.0.0.1" else "0. \
0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/invidious.nix>

services.invidious.database.createLocally

Whether to create a local database with PostgreSQL.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious.database.host

The database host Invidious should use.

If ‘null’, the local unix socket is used. Otherwise TCP is used.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious.database.passwordFile

Path to file containing the database password.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious.database.port

The port of the database Invidious should use.

Defaults to the the default postgresql port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
config.services.postgresql.settings.port
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious.domain

The FQDN Invidious is reachable on.

This is used to configure nginx and for building absolute URLs.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious.extraSettingsFile

A file including Invidious settings.

It gets merged with the settings specified in **services.invidious.settings** and can be used to store secrets like 'hmac_key' outside of the nix store.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious.hmacKeyFile

A path to a file containing the 'hmac_key'. If 'null', a key will be generated automatically on first start.

If non−'null', this option overrides any 'hmac_key' specified in **services.invidious.settings** or via **services.invidious.extraSettingsFile**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious.http3−ytproxy.enable

Whether to enable http3−ytproxy for faster loading of images and video playback.

If **services.invidious.nginx.enable** is used, nginx will be configured automatically. If not, you need to configure a reverse proxy yourself according to **https://docs.invidious.io/improve−public−instance/#3−speed−up−video−playback−with−http3−ytproxy**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious.http3−ytproxy.package

The http3−ytproxy package to use.

Type: package

Default:

```
pkgs.http3-ytproxy
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious.nginx.enable

Whether to configure nginx as a reverse proxy for Invidious.

It serves it under the domain specified in **services.invidious.settings.domain** with enabled TLS and ACME. Further configuration can be done through **services.nginx.virtualHosts.${config.services.invidious.settings.domain}.***, which can also be used to disable AMCE and TLS.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious.port
The port Invidious should listen on.

To allow access from outside, you can use either **services.invidious.nginx** or add 'config.services.invidious.port' to **networking.firewall.allowedTCPPorts**.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious.serviceScale
How many invidious instances to run.

See **https://docs.invidious.io/improve−public−instance/#2−multiple−invidious−processes** for more details on how this is intended to work. All instances beyond the first one have the options 'channel_threads' and 'feed_threads' set to 0 to avoid conflicts with multiple instances refreshing subscriptions. Instances will be configured to bind to consecutive ports starting with **services.invidious.port** for the first instance.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious.settings
The settings Invidious should use.

See **config.example.yml** for a list of all possible options.

Type: JSON value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious.sig−helper.enable
Whether to enable and configure inv−sig−helper to emulate the youtube client's javascript. This is required to make certain videos playable.

This will download and run completely untrusted javascript from youtube! While this service is sandboxed, this may still be an issue!

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious.sig−helper.package
The inv−sig−helper package to use.

Type: package

Default:

```
pkgs.inv-sig-helper
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious.sig−helper.listenAddress
The IP address/port where inv−sig−helper should listen.

Type: string

Default:

```
"127.0.0.1:2999"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/invidious.nix>

services.invidious−router.enable
Whether to enable the invidious−router service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/invidious−router.nix>

services.invidious−router.package
The invidious−router package to use.

Type: package

Default:

```
pkgs.invidious-router
```

Declared by:
<nixpkgs/nixos/modules/services/misc/invidious−router.nix>

services.invidious−router.address
Address on which invidious−router should listen on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/invidious−router.nix>

services.invidious−router.nginx.enable

Whether to enable Automatic nginx proxy configuration .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/invidious−router.nix>

services.invidious−router.nginx.domain

The domain on which invidious−router should be served.

Type: string

Example:

```
"invidious−router.example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/invidious−router.nix>

services.invidious−router.nginx.extraDomains

Additional domains to serve invidious−router on.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/invidious−router.nix>

services.invidious−router.port

Port to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8050
```

Declared by:

<nixpkgs/nixos/modules/services/misc/invidious−router.nix>

services.invidious−router.settings

Configuration for invidious−router. Check **https://gitlab.com/gaincoder/invidious−router#configuration** for configuration options.

Type: open submodule of (YAML 1.1 value)

Default:

```
{
  api = {
    allowed_regions = [
      "AT"
      "DE"
      "CH"
    ];
    enabled = true;
```

```
      filter_regions = true;
      url = "https://api.invidious.io/instances.json";
    };
    app = {
      enable_youtube_fallback = false;
      listen = "127.0.0.1:8050";
      reload_instance_list_interval = "60s";
    };
    healthcheck = {
      allowed_status_codes = [
        200
      ];
      filter_by_response_time = {
        enabled = true;
        qty_of_top_results = 3;
      };
      interval = "10s";
      minimum_ratio = 0.2;
      path = "/";
      remove_no_ratio = true;
      text_not_present = "YouTube is currently trying to block Invidi \
ous instances";
      timeout = "1s";
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/invidious-router.nix>

services.invoiceplane
InvoicePlane configuration.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/invoiceplane.nix>

services.invoiceplane.sites
Specification of one or more InvoicePlane sites to serve

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/invoiceplane.nix>

services.invoiceplane.sites.<name>.enable
Whether to enable InvoicePlane web application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/invoiceplane.nix>

services.invoiceplane.sites.<name>.cron.enable
Enable cron service which periodically runs Invoiceplane tasks. Requires key taken from the administration page. Refer to **https://wiki.invoiceplane.com/en/1.0/modules/recurring−invoices** on how to configure it.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/invoiceplane.nix>

services.invoiceplane.sites.<name>.cron.key
Cron key taken from the administration page.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/invoiceplane.nix>

services.invoiceplane.sites.<name>.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/invoiceplane.nix>

services.invoiceplane.sites.<name>.database.host
Database host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/invoiceplane.nix>

services.invoiceplane.sites.<name>.database.name
Database name.

Type: string

Default:

```
"invoiceplane"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/invoiceplane.nix>

services.invoiceplane.sites.<name>.database.passwordFile
A file containing the password corresponding to **database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/invoiceplane-dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/invoiceplane.nix>

services.invoiceplane.sites.<name>.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/invoiceplane.nix>

services.invoiceplane.sites.<name>.database.user
Database user.

Type: string

Default:

```
"invoiceplane"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/invoiceplane.nix>

services.invoiceplane.sites.<name>.invoiceTemplates
List of path(s) to respective template(s) which are copied from the ‘invoice_templates/pdf’ directory.

Note
These templates need to be packaged before use, see example.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
let
  # Let’s package an example template
  template-vtdirektmarketing = pkgs.stdenv.mkDerivation {
    name = "vtdirektmarketing";
    # Download the template from a public repository
    src = pkgs.fetchgit {
      url = "https://git.project-insanity.org/onny/invoiceplane-v \
tdirektmarketing.git";
      sha256 = "1hh0q7wzsh8v8x03i82p6qrgbxr4v5fb05xylyrpp975l8axyg2 \
z";
    };
    sourceRoot = ".";
    # Installing simply means copying template php file to the outp \
```

```
ut directory
    installPhase = ""
      mkdir -p $out
      cp invoiceplane-vtdirektmarketing/vtdirektmarketing.php $out \
/
    "";
  };
# And then pass this package to the template list like this:
in [ template-vtdirektmarketing ]
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/invoiceplane.nix>

services.invoiceplane.sites.<name>.poolConfig

Options for the InvoicePlane PHP pool. See the documentation on 'php-fpm.conf' for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/invoiceplane.nix>

services.invoiceplane.sites.<name>.quoteTemplates

List of path(s) to respective template(s) which are copied from the 'quote_templates/pdf' directory.

Note

These templates need to be packaged before use, see example.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
let
  # Let's package an example template
  template-vtdirektmarketing = pkgs.stdenv.mkDerivation {
    name = "vtdirektmarketing";
    # Download the template from a public repository
    src = pkgs.fetchgit {
      url = "https://git.project-insanity.org/onny/invoiceplane-v \
tdirektmarketing.git";
      sha256 = "1hh0q7wzsh8v8x03i82p6qrgbxr4v5fb05xylyrpp975l8axyg2 \
z";
    };
    sourceRoot = ".";
    # Installing simply means copying template php file to the outp \
ut directory
```

```
    installPhase = ""
      mkdir -p $out
      cp invoiceplane-vtdirektmarketing/vtdirektmarketing.php $out \
/
    "";
  };
# And then pass this package to the template list like this:
in [ template-vtdirektmarketing ]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/invoiceplane.nix>

services.invoiceplane.sites.<name>.settings
Structural InvoicePlane configuration. Refer to **https://github.com/InvoicePlane/InvoicePlane/blob/master/ipconfig.php.example** for details and supported values.

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  SETUP_COMPLETED = true;
  DISABLE_SETUP = true;
  IP_URL = "https://invoice.example.com";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/invoiceplane.nix>

services.invoiceplane.sites.<name>.stateDir
This directory is used for uploads of attachments and cache. The directory passed here is automatically created and permissions adjusted as required.

Type: absolute path

Default:

```
"/var/lib/invoiceplane/‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/invoiceplane.nix>

services.invoiceplane.webserver
Which webserver to use for virtual host management.

Type: one of “caddy”, “nginx”

Default:

```
"caddy"
```

Example:

```
"nginx"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/invoiceplane.nix>

services.iodine.clients

Each attribute of this option defines a systemd service that runs iodine. Many or none may be defined. The name of each service is ‘iodine−«name»’ where «name» is the name of the corresponding attribute name.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  foo = {
    server = "tunnel.mdomain.com";
    relay = "8.8.8.8";
    extraConfig = "−v";
  }
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/iodine.nix>

services.iodine.clients.<name>.extraConfig

Additional command line parameters

Type: string

Default:

```
""
```

Example:

```
"−l 192.168.1.10 −p 23"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/iodine.nix>

services.iodine.clients.<name>.passwordFile

Path to a file containing the password.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/iodine.nix>

services.iodine.clients.<name>.relay

DNS server to use as an intermediate relay to the iodined server

Type: string

Default:

```
""
```

Example:

```
"8.8.8.8"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iodine.nix>

services.iodine.clients.<name>.server
Hostname of server running iodined

Type: string

Default:
```
""
```

Example:
```
"tunnel.mydomain.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iodine.nix>

services.iodine.server.enable
enable iodined server

Type: boolean

Default:
```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iodine.nix>

services.iodine.server.domain
Domain or subdomain of which nameservers point to us

Type: string

Default:
```
""
```

Example:
```
"tunnel.mydomain.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iodine.nix>

services.iodine.server.extraConfig
Additional command line parameters

Type: string

Default:
```
""
```

Example:
```
"-l 192.168.1.10 -p 23"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iodine.nix>

services.iodine.server.ip
The assigned ip address or ip range

Type: string

Default:
```
""
```

Example:

```
"172.16.10.1/24"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/iodine.nix>

services.iodine.server.passwordFile

File that contains password

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/iodine.nix>

services.iperf3.enable

Whether to enable iperf3 network throughput testing server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/iperf3.nix>

services.iperf3.package

The iperf3 package to use.

Type: package

Default:

```
pkgs.iperf3
```

Declared by:

<nixpkgs/nixos/modules/services/networking/iperf3.nix>

services.iperf3.affinity

CPU affinity for the process.

Type: null or (unsigned integer, meaning >=0)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/iperf3.nix>

services.iperf3.authorizedUsersFile

Path to the configuration file containing authorized users credentials to run iperf tests.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iperf3.nix>

services.iperf3.bind
Bind to the specific interface associated with the given address.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iperf3.nix>

services.iperf3.debug
Emit debugging output.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iperf3.nix>

services.iperf3.extraFlags
Extra flags to pass to iperf3(1).

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iperf3.nix>

services.iperf3.forceFlush
Force flushing output at every interval.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iperf3.nix>

services.iperf3.openFirewall
Open ports in the firewall for iperf3.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iperf3.nix>

services.iperf3.port
Server port to listen on for iperf3 client requests.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5201
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iperf3.nix>

services.iperf3.rsaPrivateKey
Path to the RSA private key (not password−protected) used to decrypt authentication credentials from the client.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iperf3.nix>

services.iperf3.verbose
Give more detailed output.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/iperf3.nix>

services.ipfs−cluster.enable
Whether to enable Pinset orchestration for IPFS − requires ipfs daemon to be useful.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ipfs−cluster.nix>

services.ipfs−cluster.consensus
Consensus protocol − ‘raft’ or ‘crdt’. **https://cluster.ipfs.io/documentation/guides/consensus/**

Type: one of “raft”, “crdt”

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ipfs−cluster.nix>

services.ipfs−cluster.dataDir
The data dir for ipfs−cluster.

Type: string

Default:

```
"/var/lib/ipfs−cluster"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/ipfs−cluster.nix>

services.ipfs−cluster.initPeers

Peer addresses to initialize with on first run.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ipfs−cluster.nix>

services.ipfs−cluster.openSwarmPort

Open swarm port, secured by the cluster secret. This does not expose the API or proxy. **https://cluster.ipfs.io/documentation/guides/security/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ipfs−cluster.nix>

services.ipfs−cluster.secretFile

File containing the cluster secret in the format of EnvironmentFile as described by **systemd.exec**(5). For example: <programlisting> CLUSTER_SECRET=<replaceable>…</replaceable> </programlisting>

If null, a new secret will be generated on first run and stored in the data directory. A secret in the correct format can also be generated by: ‘openssl rand −hex 32’

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/ipfs−cluster.nix>

services.ipp−usb.enable

Whether to enable ipp−usb, a daemon to turn an USB printer/scanner supporting IPP everywhere (aka AirPrint, WSD, AirScan) into a locally accessible network printer/scanner.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/printing/ipp−usb.nix>

services.iptsd.enable

Whether to enable the userspace daemon for Intel Precise Touch & Stylus.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/iptsd.nix>

services.iptsd.config
Configuration for IPTSD. See the **reference configuration** for available options and defaults.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/iptsd.nix>

services.iptsd.config.Stylus.Disable
Disables the stylus. No stylus data will be processed.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/iptsd.nix>

services.iptsd.config.Touchscreen.DisableOnPalm
Ignore all touchscreen inputs if a palm was registered on the display.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/iptsd.nix>

services.iptsd.config.Touchscreen.DisableOnStylus
Ignore all touchscreen inputs if a stylus is in proximity.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/iptsd.nix>

services.ircdHybrid.enable
Whether to enable IRCD.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ircd−hybrid/default.nix>

services.ircdHybrid.adminEmail
IRCD server administrator e−mail.

Type: string

Default:

```
"<bit−bucket@example.com>"
```

Example:

```
"<name@domain.tld>"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ircd−hybrid/default.nix>

services.ircdHybrid.certificate
IRCD server SSL certificate. There are some limitations − read manual.

Type: null or absolute path

Default:

```
null
```

Example:

```
/root/certificates/irc.pem
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ircd−hybrid/default.nix>

services.ircdHybrid.description
IRCD server description.

Type: string

Default:

```
"Hybrid−7 IRC server."
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ircd−hybrid/default.nix>

services.ircdHybrid.extraIPs
Extra IP’s to bind.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ircd−hybrid/default.nix>

services.ircdHybrid.extraPort
Extra port to avoid filtering.

Type: string

Default:

```
"7117"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ircd−hybrid/default.nix>

services.ircdHybrid.rsaKey
IRCD server RSA key.

Type: null or absolute path

Default:

```
null
```

Example:

```
/root/certificates/irc.key
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ircd−hybrid/default.nix>

services.ircdHybrid.serverName
IRCD server name.

Type: string

Default:

```
"hades.arpa"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ircd−hybrid/default.nix>

services.ircdHybrid.sid
IRCD server unique ID in a net of servers.

Type: string

Default:

```
"0NL"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ircd−hybrid/default.nix>

services.irkerd.enable
Whether to enable irker, an IRC notification daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/irkerd.nix>

services.irkerd.listenAddress
Specifies the bind address on which the irker daemon listens. The default is localhost.

Irker authors strongly warn about the risks of running this on a publicly accessible interface, so change this with caution.

Type: string

Default:

```
"localhost"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/irkerd.nix>

services.irkerd.nick
Nick to use for irker

Type: string

Default:

```
"irker"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/irkerd.nix>

services.irkerd.openPorts
Open ports in the firewall for irkerd

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/irkerd.nix>

services.irqbalance.enable
Whether to enable irqbalance daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/irqbalance.nix>

services.irqbalance.package
The irqbalance package to use.

Type: package

Default:

```
pkgs.irqbalance
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/irqbalance.nix>

services.isso.enable
Whether to enable isso, a commenting server similar to Disqus.

Note: The application's author suppose to run isso behind a reverse proxy. The embedded solution offered by NixOS is also only suitable for small installations below 20 requests per second .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/isso.nix>

services.isso.settings
Configuration for ‘isso’.

See **Isso Server Configuration** for supported values.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Example:

```
{
  general = {
    host = "http://localhost";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/isso.nix>

services.ivpn.enable
This option enables iVPN daemon. This sets **networking.firewall.checkReversePath** to “loose”, which might be undesirable for security.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ivpn.nix>

services.jack.alsa.enable
Route audio to/from generic ALSA−using applications using ALSA JACK PCM plugin.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/jack.nix>

services.jack.alsa.support32Bit
Whether to support sound for 32−bit ALSA applications on 64−bit system.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/audio/jack.nix>

services.jack.jackd.enable
Whether to enable JACK Audio Connection Kit. You need to add yourself to the “jackaudio” group .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/jack.nix>

services.jack.jackd.extraOptions
Specifies startup command line arguments to pass to JACK server.

Type: list of string

Default:

```
[
  "-dalsa"
]
```

Example:

```
[ "-dalsa" "--device" "hw:1" ];
```

Declared by:
<nixpkgs/nixos/modules/services/audio/jack.nix>

services.jack.jackd.session
Commands to run after JACK is started.

Type: strings concatenated with “\n”

Declared by:
<nixpkgs/nixos/modules/services/audio/jack.nix>

services.jack.loopback.enable
Create ALSA loopback device, instead of using PCM plugin. Has broader application support (things like Steam will work), but may need fine-tuning for concrete hardware.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/audio/jack.nix>

services.jack.loopback.config
ALSA config for loopback device.

Type: strings concatenated with “\n”

Declared by:
<nixpkgs/nixos/modules/services/audio/jack.nix>

services.jack.loopback.dmixConfig
For music production software that still doesn’t support JACK natively you would like to put buffer/period adjustments here to decrease dmix device latency.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
period_size 2048
periods 2
```

Declared by:
<nixpkgs/nixos/modules/services/audio/jack.nix>

services.jack.loopback.index
Index of an ALSA loopback device.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/audio/jack.nix>

services.jack.loopback.session
Additional commands to run to setup loopback device.

Type: strings concatenated with “\n”

Declared by:
<nixpkgs/nixos/modules/services/audio/jack.nix>

services.jackett.enable
Whether to enable Jackett, API support for your favorite torrent trackers.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jackett.nix>

services.jackett.package
The jackett package to use.

Type: package

Default:

```
pkgs.jackett
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jackett.nix>

services.jackett.dataDir
The directory where Jackett stores its data files.

Type: string

Default:

```
"/var/lib/jackett/.config/Jackett"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jackett.nix>

services.jackett.group
Group under which Jackett runs.

Type: string

Default:

```
"jackett"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jackett.nix>

services.jackett.openFirewall
Open ports in the firewall for the Jackett web interface.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jackett.nix>

services.jackett.port
Port serving the web interface

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9117
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jackett.nix>

services.jackett.user
User account under which Jackett runs.

Type: string

Default:

```
"jackett"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jackett.nix>

services.jboss.enable
Whether to enable JBoss. WARNING : this package is outdated and is known to have vulnerabilities.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/jboss/default.nix>

services.jboss.deployDir
Location of the deployment files

Type: string

Default:

```
"/nix/var/nix/profiles/default/server/default/deploy/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/jboss/default.nix>

services.jboss.libUrl
Location where the shared library JARs are stored

Type: string

Default:

```
"file:///nix/var/nix/profiles/default/server/default/lib"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/jboss/default.nix>

services.jboss.logDir
Location of the logfile directory of JBoss

Type: string

Default:

```
"/var/log/jboss"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/jboss/default.nix>

services.jboss.serverDir
Location of the server instance files

Type: string

Default:

```
"/var/jboss/server"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/jboss/default.nix>

services.jboss.tempDir
Location where JBoss stores its temp files

Type: string

Default:

```
"/tmp"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/jboss/default.nix>

services.jboss.useJK
Whether to use to connector to the Apache HTTP server

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/jboss/default.nix>

services.jboss.user
User account under which jboss runs.

Type: string

Default:

```
"nobody"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/jboss/default.nix>

services.jellyfin.enable
Whether to enable Jellyfin Media Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.package
The jellyfin package to use.

Type: package

Default:

```
pkgs.jellyfin
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.cacheDir
Directory containing the jellyfin server cache, passed with '−−cachedir' see **#cache−directory**

Type: absolute path

Default:

```
"/var/cache/jellyfin"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.configDir
Directory containing the server configuration files, passed with '−−configdir' see **configuration−directory**

Type: absolute path

Default:

```
"${cfg.dataDir}/config"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.dataDir
Base data directory, passed with '−−datadir' see **#data−directory**

Type: absolute path

Default:

```
"/var/lib/jellyfin"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.forceEncodingConfig

Whether to overwrite Jellyfin's 'encoding.xml' configuration file on each service start.

When enabled, the encoding configuration specified in **services.jellyfin.transcoding** and **services.jellyfin.hardwareAcceleration** will be applied on every service restart. A backup of the existing 'encoding.xml' will be created at 'encoding.xml.backup−$timestamp'.

> **Warning**
> Enabling this option means that any changes made to transcoding settings through Jellyfin's web dashboard will be lost on the next service restart. The NixOS configuration becomes the single source of truth for encoding settings.

When disabled (the default), the encoding configuration is only written if no 'encoding.xml' exists yet. This allows settings to be changed through Jellyfin's web dashboard and persist across restarts, but means the NixOS configuration options will be ignored after the initial setup.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.group

Group under which jellyfin runs.

Type: string

Default:

```
"jellyfin"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.hardwareAcceleration.enable

Whether to enable hardware acceleration for video transcoding.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.hardwareAcceleration.device

Path to the hardware acceleration device that Jellyfin should use. For obscure configurations, additional devices can be added via **systemd.services.jellyfin.serviceConfig.DeviceAllow**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/dev/dri/renderD128"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.hardwareAcceleration.type
The method of hardware acceleration. See **Hardware Acceleration** for more details.

Type: one of “none”, “amf”, “qsv”, “nvenc”, “v4l2m2m”, “vaapi”, “rkmpp”

Default:

```
"none"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.logDir
Directory where the Jellyfin logs will be stored, passed with ‘−−logdir’ see **#log−directory**

Type: absolute path

Default:

```
"${cfg.dataDir}/log"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.openFirewall
Open the default ports in the firewall for the media server. The HTTP/HTTPS ports can be changed in the Web UI, so this option should only be used if they are unchanged, see **Port Bindings**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.enableHardwareEncoding
Enable hardware encoding for video transcoding.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.enableIntelLowPowerEncoding
Enable low−power encoding mode for Intel Quick Sync Video. Requires i915 HuC firmware to be configured.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.enableSubtitleExtraction

Embedded subtitles can be extracted from videos and delivered to clients in plain text, in order to help prevent video transcoding. On some systems this can take a long time and cause video playback to stall during the extraction process. Disable this to have embedded subtitles burned in with video transcoding when they are not natively supported by the client device.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.enableToneMapping

Enable tone mapping when transcoding HDR content.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.deleteSegments

Delete transcoding segments when finished.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.encodingPreset

Encoder preset for transcoding. Lower presets sacrifice quality for speed, higher presets optimize quality.

Type: one of “auto”, “veryslow”, “slower”, “slow”, “medium”, “fast”, “faster”, “veryfast”, “superfast”, “ultrafast”

Default:

```
"auto"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.h264Crf

Constant Rate Factor (CRF) for H.264 encoding. Lower values result in better quality. Range: 0−51.

Type: integer between 0 and 51 (both inclusive)

Default:

```
23
```

Declared by:

<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.h265Crf

Constant Rate Factor (CRF) for H.265 encoding. Lower values result in better quality. Range: 0−51.

Type: integer between 0 and 51 (both inclusive)

Default:

```
28
```

Declared by:

<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.hardwareDecodingCodecs

Which codecs to enable for hardware decoding.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  h264 = true;
  vp9 = true;
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.hardwareDecodingCodecs.av1

Enable hardware decoding for av1 codec.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.hardwareDecodingCodecs.h264

Enable hardware decoding for h264 codec.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.hardwareDecodingCodecs.hevc

Enable hardware decoding for hevc codec.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.hardwareDecodingCodecs.hevc10bit
Enable hardware decoding for hevc10bit codec.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.hardwareDecodingCodecs.hevcRExt10bit
Enable hardware decoding for hevcRExt10bit codec.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.hardwareDecodingCodecs.hevcRExt12bit
Enable hardware decoding for hevcRExt12bit codec.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.hardwareDecodingCodecs.mpeg2
Enable hardware decoding for mpeg2 codec.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.hardwareDecodingCodecs.vc1
Enable hardware decoding for vc1 codec.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.hardwareDecodingCodecs.vp8
Enable hardware decoding for vp8 codec.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.hardwareDecodingCodecs.vp9
Enable hardware decoding for vp9 codec.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.hardwareEncodingCodecs
Which codecs to enable for hardware encoding. h264 is always enabled.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  av1 = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.hardwareEncodingCodecs.av1
Enable hardware encoding for av1 codec.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.hardwareEncodingCodecs.hevc
Enable hardware encoding for hevc codec.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.maxConcurrentStreams
Maximum number of concurrent transcoding streams. Set to null for unlimited (limited by hardware capabilities).

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Example:

```
2
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.threadCount
Number of threads to use when transcoding. Set to null to use automatic detection.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Example:

```
4
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.transcoding.throttleTranscoding
When a transcode or remux gets far enough ahead from the current playback position, pause the process so it will consume fewer resources. This is most useful when watching without seeking often. Turn this off if you experience playback issues.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jellyfin.user
User account under which Jellyfin runs.

Type: string

Default:

```
"jellyfin"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/jellyfin.nix>

services.jenkins.enable
Whether to enable Jenkins, a continuous integration server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/jenkins/default.nix>

services.jenkins.package
The jenkins package to use.

Type: package

Default:

```
pkgs.jenkins
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/jenkins/default.nix>

services.jenkins.packages
Packages to add to PATH for the jenkins process.

Type: list of package

Default:

```
[ ]
```

Example:

```
[
  pkgs.stdenv
  pkgs.git
  pkgs.jdk25
  config.programs.ssh.package
  pkgs.nix
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/jenkins/default.nix>

services.jenkins.environment
Additional environment variables to be passed to the jenkins process. As a base environment, jenkins receives NIX_PATH from **environment.sessionVariables**, NIX_REMOTE is set to “daemon” and JENKINS_HOME is set to the value of **services.jenkins.home**. This option has precedence and can be used to override those mentioned variables.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/jenkins/default.nix>

services.jenkins.extraGroups
List of extra groups that the “jenkins” user should be a part of.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "wheel"
  "dialout"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/jenkins/default.nix>

services.jenkins.extraJavaOptions
Additional command line arguments to pass to the Java run time (as opposed to Jenkins).

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-Xmx80m"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/jenkins/default.nix>

services.jenkins.extraOptions
Additional command line arguments to pass to Jenkins.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--debug=9"
]
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/jenkins/default.nix>

services.jenkins.group
If the default user “jenkins” is configured then this is the primary group of that user.

Type: string

Default:

```
"jenkins"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/jenkins/default.nix>

services.jenkins.home
The path to use as JENKINS_HOME. If the default user “jenkins” is configured then this is the home of the “jenkins” user.

Type: absolute path

Default:

```
"/var/lib/jenkins"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/jenkins/default.nix>

services.jenkins.javaPackage
The jdk25 package to use.

Type: package

Default:

```
pkgs.jdk25
```

Declared by:
<nixpkgs/nixos/modules/services/continuous-integration/jenkins/default.nix>

services.jenkins.jobBuilder.enable

Whether to enable the Jenkins Job Builder (JJB) service. It allows defining jobs for Jenkins in a declarative manner.

Jobs managed through the Jenkins WebUI (or by other means) are left unchanged.

Note that it really is declarative configuration; if you remove a previously defined job, the corresponding job directory will be deleted.

Please see the Jenkins Job Builder documentation for more info: **https://jenkins-job-builder.readthedocs.io/** .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/jenkins/job-builder.nix>

services.jenkins.jobBuilder.accessToken

User token in Jenkins used to reload config. WARNING: This token will be world readable in the Nix store. To keep it secret, use the **accessTokenFile** option instead.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/jenkins/job-builder.nix>

services.jenkins.jobBuilder.accessTokenFile

File containing the API token for the **accessUser** user.

Type: string

Default:

```
"${config.services.jenkins.home}/secrets/initialAdminPassword"
```

Example:

```
"/run/keys/jenkins-job-builder-access-token"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/jenkins/job-builder.nix>

services.jenkins.jobBuilder.accessUser

User id in Jenkins used to reload config.

Type: string

Default:

```
"admin"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/jenkins/job-builder.nix>

services.jenkins.jobBuilder.jsonJobs

Job descriptions for Jenkins Job Builder in JSON format.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  ''
    [ { "job":
        { "name": "jenkins-job-test-2",
          "builders": [ "shell": "echo 'Hello world!'" ]
        }
      }
    ]
  ''
]
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/jenkins/job-builder.nix>

services.jenkins.jobBuilder.nixJobs

Job descriptions for Jenkins Job Builder in Nix format.

This is a trivial wrapper around jsonJobs, using builtins.toJSON behind the scene.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[ { job =
    { name = "jenkins-job-test-3";
      builders = [
        { shell = "echo 'Hello world!'"; }
      ];
    };
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/jenkins/job-builder.nix>

services.jenkins.jobBuilder.yamlJobs

Job descriptions for Jenkins Job Builder in YAML format.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
  - job:
      name: jenkins-job-test-1
      builders:
        - shell: echo 'Hello world!'
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/jenkins/job−builder.nix>

services.jenkins.listenAddress
Specifies the bind address on which the jenkins HTTP interface listens. The default is the wildcard address.

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/jenkins/default.nix>

services.jenkins.plugins
A set of plugins to activate. Note that this will completely remove and replace any previously installed plugins. If you have manually−installed plugins that you want to keep while using this module, set this option to ‘null’. You can generate this set with a tool such as ‘jenkinsPlugins2nix’.

Type: null or (attribute set of package)

Default:

```
null
```

Example:

```
import path/to/jenkinsPlugins2nix−generated−plugins.nix { inherit \
 (pkgs) fetchurl stdenv; }
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/jenkins/default.nix>

services.jenkins.port
Specifies port number on which the jenkins HTTP interface listens. The default is 8080.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/jenkins/default.nix>

services.jenkins.prefix
Specifies a urlPrefix to use with jenkins. If the example /jenkins is given, the jenkins server will be accessible using localhost:8080/jenkins.

Type: string

Default:

```
""
```

Example:

```
"/jenkins"
```

Declared by:
<nixpkgs/nixos/modules/services/continuous−integration/jenkins/default.nix>

services.jenkins.user

User the jenkins server should execute under.

Type: string

Default:

```
"jenkins"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/jenkins/default.nix>

services.jenkins.withCLI

Whether to make the CLI available.

More info about the CLI available at **https://www.jenkins.io/doc/book/managing/cli** .

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/jenkins/default.nix>

services.jenkinsSlave.enable

If true the system will be configured to work as a jenkins slave. If the system is also configured to work as a jenkins master then this has no effect. In progress: Currently only assures the jenkins user is configured.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/jenkins/slave.nix>

services.jenkinsSlave.group

If the default slave agent user “jenkins” is configured then this is the primary group of that user.

Type: string

Default:

```
"jenkins"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/jenkins/slave.nix>

services.jenkinsSlave.home

The path to use as JENKINS_HOME. If the default user “jenkins” is configured then this is the home of the “jenkins” user.

Type: absolute path

Default:

```
"/var/lib/jenkins"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/jenkins/slave.nix>

services.jenkinsSlave.javaPackage

The jdk package to use.

Type: package

Default:

```
pkgs.jdk
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/jenkins/slave.nix>

services.jenkinsSlave.user

User the jenkins slave agent should execute under.

Type: string

Default:

```
"jenkins"
```

Declared by:

<nixpkgs/nixos/modules/services/continuous-integration/jenkins/slave.nix>

services.jibri.enable

Whether to enable Jitsi BRoadcasting Infrastructure. Currently Jibri must be run on a host that is also running **services.jitsi-meet.enable**, so for most use cases it will be simpler to run **services.jitsi-meet.jibri.enable**.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.config

Jibri configuration. See **https://github.com/jitsi/jibri/blob/master/src/main/resources/reference.conf** for default configuration with comments.

Type: HOCON value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.finalizeScript

This script runs when jibri finishes recording a video of a conference.

Type: absolute path

Default:

```
pkgs.writeScript "finalize_recording.sh" ''''
#!/bin/sh
RECORDINGS_DIR=$1
echo "This is a dummy finalize script" > /tmp/finalize.out
echo "The script was invoked with recordings directory $RECORDINGS_ \
DIR." >> /tmp/finalize.out
```

```
echo "You should put any finalize logic (renaming, uploading to a s \
ervice" >> /tmp/finalize.out
echo "or storage provider, etc.) in this script" >> /tmp/finalize.o \
ut
exit 0
```

Example:

```
pkgs.writeScript "finalize_recording.sh" ''''
#!/bin/sh
RECORDINGS_DIR=$1
${pkgs.rclone}/bin/rclone copy $RECORDINGS_DIR RCLONE_REMOTE:jibri \
-recordings/ -v --log-file=/var/log/jitsi/jibri/recording-uplo \
ad.txt
exit 0
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.ignoreCert

Whether to enable the flag "–ignore-certificate-errors" for the Chromium browser opened by Jibri. Intended for use in automated tests or anywhere else where using a verified cert for Jitsi-Meet is not possible.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.xmppEnvironments

XMPP servers to connect to.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
"jitsi-meet" = {
  xmppServerHosts = [ "localhost" ];
  xmppDomain = config.services.jitsi-meet.hostName;
  control.muc = {
    domain = "internal.${config.services.jitsi-meet.hostName}";
    roomName = "JibriBrewery";
    nickname = "jibri";
  };
  control.login = {
    domain = "auth.${config.services.jitsi-meet.hostName}";
    username = "jibri";
    passwordFile = "/var/lib/jitsi-meet/jibri-auth-secret";
  };
  call.login = {
    domain = "recorder.${config.services.jitsi-meet.hostName}";
```

```
        username = "recorder";
        passwordFile = "/var/lib/jitsi-meet/jibri-recorder-secret";
      };
      usageTimeout = "0";
      disableCertificateVerification = true;
      stripFromRoomDomain = "conference.";
    };
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.xmppEnvironments.<name>.call.login.domain
The domain part of the JID for the recorder.

Type: string

Example:

```
"recorder.xmpp.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.xmppEnvironments.<name>.call.login.passwordFile
File containing the password for the user.

Type: string

Example:

```
"/run/keys/jibri-recorder-xmpp1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.xmppEnvironments.<name>.call.login.username
User part of the JID for the recorder.

Type: string

Default:

```
"recorder"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.xmppEnvironments.<name>.control.login.domain
The domain part of the JID for this Jibri instance.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.xmppEnvironments.<name>.control.login.passwordFile
File containing the password for the user.

Type: string

Example:

```
"/run/keys/jibri-xmpp1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.xmppEnvironments.<name>.control.login.username
User part of the JID.

Type: string

Default:

```
"jvb"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.xmppEnvironments.<name>.control.muc.domain
The domain part of the MUC to connect to for control.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.xmppEnvironments.<name>.control.muc.nickname
The nickname for this Jibri instance in the MUC.

Type: string

Default:

```
"jibri"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.xmppEnvironments.<name>.control.muc.roomName
The room name of the MUC to connect to for control.

Type: string

Default:

```
"JibriBrewery"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.xmppEnvironments.<name>.disableCertificateVerification
Whether to skip validation of the server's certificate.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.xmppEnvironments.<name>.stripFromRoomDomain
The prefix to strip from the room's JID domain to derive the call URL.

Type: string

Default:

```
"0"
```

Example:

```
"conference."
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.xmppEnvironments.<name>.usageTimeout
The duration that the Jibri session can be. A value of zero means indefinitely.

Type: string

Default:

```
"0"
```

Example:

```
"1 hour"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.xmppEnvironments.<name>.xmppDomain
The base XMPP domain.

Type: string

Example:

```
"xmpp.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jibri.xmppEnvironments.<name>.xmppServerHosts
Hostnames of the XMPP servers to connect to.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "xmpp.example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jibri/default.nix>

services.jicofo.enable
Whether to enable Jitsi Conference Focus − component of Jitsi Meet.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jicofo.nix>

services.jicofo.bridgeMuc

JID of the internal MUC used to communicate with Videobridges.

Type: string

Example:

```
"jvbbrewery@internal.meet.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jicofo.nix>

services.jicofo.componentPasswordFile

Path to file containing component secret.

Type: string

Example:

```
"/run/keys/jicofo-component"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jicofo.nix>

services.jicofo.config

Contents of the *jicofo.conf* configuration file.

Type: HOCON value

Default:

```
{ }
```

Example:

```
{
  jicofo.bridge.max-bridge-participants = 42;
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jicofo.nix>

services.jicofo.userDomain

Domain part of the JID for XMPP user connection.

Type: string

Example:

```
"auth.meet.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jicofo.nix>

services.jicofo.userName

User part of the JID for XMPP user connection.

Type: string

Default:

```
"focus"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jicofo.nix>

services.jicofo.userPasswordFile

Path to file containing password for XMPP user connection.

Type: string

Example:

```
"/run/keys/jicofo-user"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jicofo.nix>

services.jicofo.xmppDomain

Domain name of the XMMP server to which to connect as a component.

If null, **xmppHost** is used.

Type: null or string

Default:

```
null
```

Example:

```
"meet.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jicofo.nix>

services.jicofo.xmppHost

Hostname of the XMPP server to connect to.

Type: string

Example:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jicofo.nix>

services.jigasi.enable

Whether to enable Jitsi Gateway to SIP − component of Jitsi Meet.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jigasi.nix>

services.jigasi.bridgeMuc

JID of the internal MUC used to communicate with Videobridges.

Type: string

Example:

```
"jigasibrewery@internal.meet.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jigasi.nix>

services.jigasi.componentPasswordFile
Path to file containing component secret.

Type: string

Example:

```
"/run/keys/jigasi-component"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jigasi.nix>

services.jigasi.config
Contents of the <filename>sip-communicator.properties</filename> configuration file for jigasi.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "org.jitsi.jigasi.auth.URL" = "XMPP:jitsi-meet.example.com";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jigasi.nix>

services.jigasi.defaultJvbRoomName
Name of the default JVB room that will be joined if no special header is included in SIP invite.

Type: string

Default:

```
""
```

Example:

```
"siptest"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jigasi.nix>

services.jigasi.environmentFile
File containing environment variables to be passed to the jigasi service, in which secret tokens can be specified securely by defining values for <literal>JIGASI_SIPUSER</literal>, <literal>JIGASI_SIPPWD</literal>, <literal>JIGASI_SIPSERVER</literal> and <literal>JIGASI_SIPPORT</literal>.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jigasi.nix>

services.jigasi.userDomain

Domain part of the JID for XMPP user connection.

Type: string

Example:

```
"internal.meet.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jigasi.nix>

services.jigasi.userName

User part of the JID for XMPP user connection.

Type: string

Default:

```
"callcontrol"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jigasi.nix>

services.jigasi.userPasswordFile

Path to file containing password for XMPP user connection.

Type: string

Example:

```
"/run/keys/jigasi-user"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jigasi.nix>

services.jigasi.xmppDomain

Domain name of the XMMP server to which to connect as a component.

If null, <option>xmppHost</option> is used.

Type: null or string

Default:

```
null
```

Example:

```
"meet.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jigasi.nix>

services.jigasi.xmppHost

Hostname of the XMPP server to connect to.

Type: string

Example:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jigasi.nix>

services.jirafeau.enable

Whether to enable Jirafeau file upload application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.package

The jirafeau package to use.

Type: package

Default:

```
pkgs.jirafeau
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.adminPasswordSha256

SHA−256 of the desired administration password. Leave blank/unset for no password.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.dataDir

Location of Jirafeau storage directory.

Type: absolute path

Default:

```
"/var/lib/jirafeau/data/"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.extraConfig

Jirefeau configuration. Refer to **https://gitlab.com/mojo42/Jirafeau/−/blob/4.4.0/lib/config.original.php** for supported values.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
$cfg['style'] = 'courgette';
$cfg['organisation'] = 'ACME';
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.hostName
URL of instance. Must have trailing slash.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.maxUploadSizeMegabytes
Maximum upload size of accepted files.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.maxUploadTimeout
Timeout for reading client request bodies and headers. Refer to **http://nginx.org/en/docs/http/ngx_http_core_module.html#client_body_timeout** and **http://nginx.org/en/docs/http/ngx_http_core_module.html#client_header_timeout** for accepted values.

Type: string

Default:

```
"30m"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig
Extra configuration for the nginx virtual host of Jirafeau.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  serverAliases = [ "wiki.${config.networking.domain}" ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.default

Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.extraConfig

These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.forceSSL

Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.globalRedirect

If set, all requests for this host are redirected (defaults to 301, configurable with ‘redirectCode’) to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.http2

Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.http3

Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.http3_hq

Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides 'addSSL' and 'onlySSL'.

If you only want to set the addresses manually and not the ports, take a look at 'listenAddresses'.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.listen.*.proxyProtocol

Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.listen.*.ssl

Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations.<name>.alias
Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations.<name>.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.rejectSSL

Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.root

The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.serverName

Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jirafeau.nginxConfig.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

2. see the **security.acme.certs** option

services.jirafeau.poolConfig

Options for Jirafeau PHP pool. See documentation on ‘php−fpm.conf’ for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jirafeau.nix>

services.jitsi−meet.enable

Whether to enable Jitsi Meet − Secure, Simple and Scalable Video Conferences.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.caddy.enable

Whether to enable caddy reverse proxy to expose jitsi−meet.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.config

Client−side web application settings that override the defaults in *config.js*.

See **https://github.com/jitsi/jitsi−meet/blob/master/config.js** for default configuration with comments.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  enableWelcomePage = false;
  defaultLang = "fi";
```

```
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.excalidraw.enable
Whether to enable Excalidraw collaboration backend for Jitsi.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.excalidraw.port
The port which the Excalidraw backend for Jitsi should listen to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3002
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.extraConfig
Text to append to *config.js* web application config file.

Can be used to insert JavaScript logic to determine user's region in cascading bridges setup.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.hostName
FQDN of the Jitsi Meet instance.

Type: string

Example:

```
"meet.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.interfaceConfig
Client−side web−app interface settings that override the defaults in *interface_config.js*.

See **https://github.com/jitsi/jitsi−meet/blob/master/interface_config.js** for default configuration with comments.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  SHOW_JITSI_WATERMARK = false;
  SHOW_WATERMARK_FOR_GUESTS = false;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.jibri.enable
Whether to enable a Jibri instance and configure it to connect to Prosody.

Additional configuration is possible with **services.jibri**, and **services.jibri.finalizeScript** is especially useful.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.jicofo.enable
Whether to enable JiCoFo instance and configure it to connect to Prosody.

Additional configuration is possible with **services.jicofo**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.jigasi.enable
Whether to enable jigasi instance and configure it to connect to Prosody.

Additional configuration is possible with <option>services.jigasi</option>.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.nginx.enable
Whether to enable nginx virtual host that will serve the javascript application and act as a proxy for the XMPP server. Further nginx configuration can be done by adapting **services.nginx.virtualHosts.<hostName>**. When this is enabled, ACME will be used to retrieve a TLS certificate by default. To disable this, set the **services.nginx.virtualHosts.<hostName>.enableACME** to ‘false’ and if appropriate do the same for **services.nginx.virtualHosts.<hostName>.forceSSL**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.prosody.enable
Whether to configure Prosody to relay XMPP messages between Jitsi Meet components. Turn this off if you want to configure it manually.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.prosody.allowners_muc
Add module allowners, any user in chat is able to kick other. Usefull in jitsi−meet to kick ghosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.prosody.lockdown
Whether to disable Prosody features not needed by Jitsi Meet.

The default Prosody configuration assumes that it will be used as a general−purpose XMPP server rather than as a companion service for Jitsi Meet. This option reconfigures Prosody to only listen on localhost without support for TLS termination, XMPP federation or the file transfer proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.secureDomain.enable
Whether to enable Authenticated room creation.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.secureDomain.authentication
The authentication type to be used by jitsi

Type: string

Default:

```
"internal_hashed"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.videobridge.enable
Jitsi Videobridge instance and configure it to connect to Prosody.

Additional configuration is possible with **services.jitsi−videobridge**

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−meet.videobridge.passwordFile
File containing password to the Prosody account for videobridge.

If ‘null’, a file with password will be generated automatically. Setting this option is useful if you plan to connect additional videobridges to the XMPP server.

Type: null or string

Default:

```
null
```

Example:

```
"/run/keys/videobridge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/jitsi−meet.nix>

services.jitsi−videobridge.enable
Whether to enable Jitsi Videobridge, a WebRTC compatible video router.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi−videobridge.nix>

services.jitsi−videobridge.colibriRestApi
Whether to enable the private rest API for the COLIBRI control interface. Needed for monitoring jitsi, enabling scraping of the /colibri/stats endpoint.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi−videobridge.nix>

services.jitsi−videobridge.config
Videobridge configuration.

See **https://github.com/jitsi/jitsi−videobridge/blob/master/jvb/src/main/resources/reference.conf** for default configuration with comments.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  videobridge = {
    ice.udp.port = 5000;
    websockets = {
      enabled = true;
      server−id = "jvb1";
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi−videobridge.nix>

services.jitsi−videobridge.extraProperties
Additional Java properties passed to jitsi−videobridge.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi−videobridge.nix>

services.jitsi−videobridge.nat.harvesterAddresses
Addresses of public STUN services to use to automatically find the public and local addresses of this Jitsi−Videobridge instance without the need for manual configuration.

This option is ignored if **services.jitsi−videobridge.nat.localAddress** and **services.jitsi−videobridge.nat.publicAddress** are set.

Type: list of string

Default:

```
[
  "stunserver.stunprotocol.org:3478"
  "stun.framasoft.org:3478"
  "meet−jit−si−turnrelay.jitsi.net:443"
]
```

Example:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi-videobridge.nix>

services.jitsi-videobridge.nat.localAddress
Local address to assume when running behind NAT.

Type: null or string

Default:

```
null
```

Example:

```
"192.168.1.42"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi-videobridge.nix>

services.jitsi-videobridge.nat.publicAddress
Public address to assume when running behind NAT.

Type: null or string

Default:

```
null
```

Example:

```
"1.2.3.4"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi-videobridge.nix>

services.jitsi-videobridge.openFirewall
Whether to open ports in the firewall for the videobridge.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi-videobridge.nix>

services.jitsi-videobridge.xmppConfigs
XMPP servers to connect to.

See **https://github.com/jitsi/jitsi-videobridge/blob/master/doc/muc.md** for more information.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "localhost" = {
    hostName = "localhost";
    userName = "jvb";
    domain = "auth.xmpp.example.org";
    passwordFile = "/var/lib/jitsi-meet/videobridge-secret";
    mucJids = "jvbbrewery@internal.xmpp.example.org";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi-videobridge.nix>

services.jitsi-videobridge.xmppConfigs.<name>.disableCertificateVerification
Whether to skip validation of the server's certificate.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi-videobridge.nix>

services.jitsi-videobridge.xmppConfigs.<name>.domain
Domain part of JID of the XMPP user, if it is different from hostName.

Type: null or string

Default:

```
null
```

Example:

```
"auth.xmpp.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi-videobridge.nix>

services.jitsi-videobridge.xmppConfigs.<name>.hostName
Hostname of the XMPP server to connect to. Name of the attribute set is used by default.

Type: string

Example:

```
"xmpp.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi-videobridge.nix>

services.jitsi-videobridge.xmppConfigs.<name>.mucJids
JID of the MUC to join. JiCoFo needs to be configured to join the same MUC.

Type: string

Example:

```
"jvbbrewery@internal.xmpp.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi-videobridge.nix>

services.jitsi-videobridge.xmppConfigs.<name>.mucNickname
Videobridges use the same XMPP account and need to be distinguished by the nickname (aka resource part of the JID). By default, system hostname is used.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi-videobridge.nix>

services.jitsi−videobridge.xmppConfigs.<name>.passwordFile
File containing the password for the user.

Type: string

Example:

```
"/run/keys/jitsi−videobridge−xmpp1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi−videobridge.nix>

services.jitsi−videobridge.xmppConfigs.<name>.userName
User part of the JID.

Type: string

Default:

```
"jvb"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jitsi−videobridge.nix>

services.jitterentropy−rngd.enable
Whether to enable jitterentropy−rngd service configuration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/jitterentropy−rngd.nix>

services.jitterentropy−rngd.package
The jitterentropy−rngd package to use.

Type: package

Default:

```
pkgs.jitterentropy−rngd
```

Declared by:
<nixpkgs/nixos/modules/services/security/jitterentropy−rngd.nix>

services.jmusicbot.enable
Whether to enable jmusicbot, a Discord music bot that’s easy to set up and run yourself.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/jmusicbot.nix>

services.jmusicbot.package

The jmusicbot package to use.

Type: package

Default:

```
pkgs.jmusicbot
```

Declared by:

<nixpkgs/nixos/modules/services/audio/jmusicbot.nix>

services.jmusicbot.stateDir

The directory where config.txt and serversettings.json is saved. If left as the default value this directory will automatically be created before JMusicBot starts, otherwise the sysadmin is responsible for ensuring the directory exists with appropriate ownership and permissions. Untouched by the value of this option config.txt needs to be placed manually into this directory.

Type: absolute path

Default:

```
"/var/lib/jmusicbot/"
```

Declared by:

<nixpkgs/nixos/modules/services/audio/jmusicbot.nix>

services.jotta-cli.enable

Whether to enable Jottacloud Command-line Tool.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jotta-cli.nix>

services.jotta-cli.package

The jotta-cli package to use.

Type: package

Default:

```
pkgs.jotta-cli
```

Declared by:

<nixpkgs/nixos/modules/services/networking/jotta-cli.nix>

services.jotta-cli.options

Command-line options passed to jottad.

Type: list of string

Default:

```
[
  "stdoutlog"
  "datadir"
  "%h/.jottad/"
]
```

Example:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/jotta-cli.nix>

services.journalbeat.enable
Whether to enable journalbeat.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/logging/journalbeat.nix>

services.journalbeat.package
The journalbeat package to use.

Type: package

Default:

```
pkgs.journalbeat
```

Declared by:
<nixpkgs/nixos/modules/services/logging/journalbeat.nix>

services.journalbeat.extraConfig
Any other configuration options you want to add

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/logging/journalbeat.nix>

services.journalbeat.name
Name of the beat

Type: string

Default:

```
"journalbeat"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/journalbeat.nix>

services.journalbeat.stateDir
Directory below ‘/var/lib/’ to store journalbeat’s own logs and other data. This directory will be created automatically using systemd’s StateDirectory mechanism.

Type: string

Default:

```
"journalbeat"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/journalbeat.nix>

services.journalbeat.tags
Tags to place on the shipped log messages

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/logging/journalbeat.nix>

services.journald.audit
If enabled systemd−journald will turn on auditing on start−up. If disabled it will turn it off. If unset it will neither enable nor disable it, leaving the previous state unchanged.

NixOS defaults to leaving this unset as enabling audit without auditd running leads to spamming /dev/kmesg with random messages and if you enable auditd then auditd is responsible for turning auditing on.

If you want to have audit logs in journald and do not mind audit logs also ending up in /dev/kmesg you can set this option to true.

If you want to for some ununderstandable reason disable auditing if auditd enabled it then you can set this option to false. It is of NixOS' opinion that setting this to false is definitely the wrong thing to do − but it's an option.

Type: boolean or value "keep" (singular enum)

Default:

```
"keep"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald.nix>

services.journald.console
If non−empty, write log messages to the specified TTY device.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald.nix>

services.journald.extraConfig
Extra config options for systemd−journald. See **journald.conf**(5) for available options.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
"Storage=volatile"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald.nix>

services.journald.forwardToSyslog
Whether to forward log messages to syslog.

Type: boolean

Default:

```
services.rsyslogd.enable || services.syslog-ng.enable
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald.nix>

services.journald.gateway.enable
Whether to enable the HTTP gateway to the journal.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald-gateway.nix>

services.journald.gateway.cert
The path to a file or 'AF_UNIX' stream socket to read the server certificate from.

The certificate must be in PEM format. This option switches 'systemd-journal-gatewayd' into HTTPS mode and must be used together with **services.journald.gateway.key**.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald-gateway.nix>

services.journald.gateway.key
Specify the path to a file or 'AF_UNIX' stream socket to read the secret server key corresponding to the certificate specified with **services.journald.gateway.cert** from.

The key must be in PEM format.

This key should not be world-readable, and must be readably by the 'systemd-journal-gateway' user.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald-gateway.nix>

services.journald.gateway.merge
Serve entries interleaved from all available journals, including other machines.

This has the same meaning as '--merge' option for **journalctl**(1).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald−gateway.nix>

services.journald.gateway.port
The port to listen to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
19531
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald−gateway.nix>

services.journald.gateway.system
Serve entries from system services and the kernel.

This has the same meaning as '−−system' for **journalctl**(1).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald−gateway.nix>

services.journald.gateway.trust
Specify the path to a file or 'AF_UNIX' stream socket to read a CA certificate from.

The certificate must be in PEM format.

Setting this option enforces client certificate checking.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald−gateway.nix>

services.journald.gateway.user
Serve entries from services for the current user.

This has the same meaning as '−−user' for **journalctl**(1).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald−gateway.nix>

services.journald.rateLimitBurst
Configures the rate limiting burst limit (number of messages per interval) that is applied to all messages generated on the system. This rate limiting is applied per−service, so that two services which log do not interfere with each other's limit.

Note that the effective rate limit is multiplied by a factor derived from the available free disk space for the journal as described on **journald.conf**(5).

Note that the total amount of logs stored is limited by journald settings such as 'SystemMaxUse', which defaults to 10% the file system size (capped at max 4GB), and 'SystemKeepFree', which defaults to 15%

of the file system size.

It is thus recommended to compute what period of time that you will be able to store logs for when an application logs at full burst rate. With default settings for log lines that are 100 Bytes long, this can amount to just a few hours.

Type: signed integer

Default:

```
10000
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald.nix>

services.journald.rateLimitInterval
Configures the rate limiting interval that is applied to all messages generated on the system. This rate limiting is applied per−service, so that two services which log do not interfere with each other's limit. The value may be specified in the following units: s, min, h, ms, us. To turn off any kind of rate limiting, set either value to 0.

See **services.journald.rateLimitBurst** for important considerations when setting this value.

Type: string

Default:

```
"30s"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald.nix>

services.journald.remote.enable
Whether to enable receiving systemd journals from the network.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald−remote.nix>

services.journald.remote.listen
Which protocol to listen to.

Type: one of "https", "http"

Default:

```
"https"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald−remote.nix>

services.journald.remote.output
The location of the output journal.

In case the output file is not specified, journal files will be created underneath the selected directory. Files will be called *remote−hostname.journal*, where the 'hostname' part is the escaped hostname of the source endpoint of the connection, or the numerical address if the hostname cannot be determined.

Type: string

Default:

```
"/var/log/journal/remote/"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/journald−remote.nix>

services.journald.remote.port

The port to listen to.

Note that this option is used only if **services.journald.upload.listen** is configured to be either “https” or “http”.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
19532
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/journald−remote.nix>

services.journald.remote.settings

Configuration in the journal−remote configuration file. See **journal−remote.conf**(5) for available options.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/journald−remote.nix>

services.journald.remote.settings.Remote.Seal

Periodically sign the data in the journal using Forward Secure Sealing.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/journald−remote.nix>

services.journald.remote.settings.Remote.ServerCertificateFile

A path to a SSL certificate file in PEM format.

This option can be used with ‘listen = "https"’. If the path refers to an ‘AF_UNIX’ stream socket in the file system a connection is made to it and the certificate read from it.

Type: string

Default:

```
"/etc/ssl/certs/journal−remote.pem"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/journald−remote.nix>

services.journald.remote.settings.Remote.ServerKeyFile

A path to a SSL secret key file in PEM format.

Note that due to security reasons, ‘systemd−journal−remote’ will refuse files from the world−readable ‘/nix/store’. This file should be readable by the “” user.

This option can be used with ‘listen = "https"’. If the path refers to an ‘AF_UNIX’ stream socket in the file system a connection is made to it and the key read from it.

Type: string

Default:

```
"/etc/ssl/private/journal-remote.pem"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/journald−remote.nix>

services.journald.remote.settings.Remote.SplitMode

With “host”, a separate output file is used, based on the hostname of the other endpoint of a connection. With “none”, only one output journal file is used.

Type: one of “host”, “none”

Default:

```
"host"
```

Example:

```
"none"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/journald−remote.nix>

services.journald.remote.settings.Remote.TrustedCertificateFile

A path to a SSL CA certificate file in PEM format, or ‘all’.

If ‘all’ is set, then client certificate checking will be disabled.

This option can be used with ‘listen = "https"’. If the path refers to an ‘AF_UNIX’ stream socket in the file system a connection is made to it and the certificate read from it.

Type: string

Default:

```
"/etc/ssl/ca/trusted.pem"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/journald−remote.nix>

services.journald.storage

Controls where to store journal data. See **journald.conf**(5) for further information.

Type: one of “persistent”, “volatile”, “auto”, “none”

Default:

```
"persistent"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/journald.nix>

services.journald.upload.enable

Whether to enable uploading the systemd journal to a remote server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/journald−upload.nix>

services.journald.upload.settings

Configuration for journal−upload. See **journal−upload.conf**(5) for available options.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/journald−upload.nix>

services.journald.upload.settings.Upload.NetworkTimeoutSec

When network connectivity to the server is lost, this option configures the time to wait for the connectivity to get restored.

If the server is not reachable over the network for the configured time, ‘systemd−journal−upload’ exits. Takes a value in seconds (or in other time units if suffixed with “ms”, “min”, “h”, etc). For details, see **systemd.time**(5).

Type: null or string

Default:

```
null
```

Example:

```
"1s"
```

Declared by:

<nixpkgs/nixos/modules/system/boot/systemd/journald−upload.nix>

services.journald.upload.settings.Upload.ServerCertificateFile

SSL CA certificate in PEM format.

In contrary to what the name suggests, this option configures the client certificate sent to the remote journal server.

Type: null or string

Default:

```
null
```

Example:

```
./server−ca.pem
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald−upload.nix>

services.journald.upload.settings.Upload.ServerKeyFile
SSL key in PEM format.

In contrary to what the name suggests, this option configures the client private key sent to the remote journal server.

This key should not be world−readable, and must be readably by the ‘systemd−journal’ group.

Type: null or string

Default:

```
null
```

Example:

```
./server−key.pem
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald−upload.nix>

services.journald.upload.settings.Upload.TrustedCertificateFile
SSL CA certificate.

This certificate will be used to check the remote journal HTTPS server certificate.

Type: null or string

Default:

```
null
```

Example:

```
./ca
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald−upload.nix>

services.journald.upload.settings.Upload.URL
The URL to upload the journal entries to.

See the description of ‘−−url=’ option in **systemd−journal−upload**(8) for the description of possible values.

Type: string

Example:

```
"https://192.168.1.1"
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/journald−upload.nix>

services.journaldriver.enable
Whether to enable journaldriver to forward journald logs to Stackdriver Logging.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/logging/journaldriver.nix>

services.journaldriver.applicationCredentials

Path to the service account private key (in JSON−format) used to forward log entries to Stackdriver Logging on non−GCP instances.

This option is required on non−GCP machines, but should not be set on GCP instances.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/logging/journaldriver.nix>

services.journaldriver.googleCloudProject

Configures the name of the Google Cloud project to which to forward journald logs.

This option is required on non−GCP machines, but should not be set on GCP instances.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/logging/journaldriver.nix>

services.journaldriver.logLevel

Log level at which journaldriver logs its own output.

Type: string

Default:

```
"info"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/journaldriver.nix>

services.journaldriver.logName

Configures the name of the target log in Stackdriver Logging. This option can be set to, for example, the hostname of a machine to improve the user experience in the logging overview.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/logging/journaldriver.nix>

services.journaldriver.logStream

Configures the name of the Stackdriver Logging log stream into which to write journald entries.

This option is required on non−GCP machines, but should not be set on GCP instances.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/logging/journaldriver.nix>

services.journalwatch.enable

If enabled, periodically check the journal with journalwatch and report the results by mail.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/logging/journalwatch.nix>

services.journalwatch.package

The journalwatch package to use.

Type: package

Default:

```
pkgs.journalwatch
```

Declared by:

<nixpkgs/nixos/modules/services/logging/journalwatch.nix>

services.journalwatch.accuracy

The time window around the interval in which the journalwatch run will be scheduled.

The format is described in **systemd.time**(7).

Type: string

Default:

```
"10min"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/journalwatch.nix>

services.journalwatch.extraConfig

Extra lines to be added verbatim to the journalwatch/config configuration file. You can add any commandline argument to the config, without the '–'. See 'journalwatch −−help' for all arguments and their description.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/logging/journalwatch.nix>

services.journalwatch.filterBlocks

filterBlocks can be defined to blacklist journal messages which are not errors. Each block matches on a log entry field, and the filters in that block then are matched against all messages with a matching log entry field.

All messages whose PRIORITY is at least 6 (INFO) are processed by journalwatch. If you don't specify any filterBlocks, PRIORITY is reduced to 5 (NOTICE) by default.

All regular expressions are extended Python regular expressions, for details see: http://doc.pyschools.com/html/regex.html

Type: list of (submodule)

Default:

```
[
  {
```

```
      filters = ''
        (Stopped|Stopping|Starting|Started) .*
        (Created slice|Removed slice) user-\d*\.slice\.
        Received SIGRTMIN\+24 from PID .*
        (Reached target|Stopped target) .*
        Startup finished in \d*ms\.
      '';
      match = "SYSLOG_IDENTIFIER = systemd";
    }
  ]
```

Example:

```
  [
    {
      filters = ''
        New session [a-z]?\d+ of user \w+\.
        Removed session [a-z]?\d+\.
      '';
      match = "_SYSTEMD_UNIT = systemd-logind.service";
    }
    {
      filters = ''
        pam_unix\(crond:session\): session (opened|closed) for user \
 \w+
        \(\w+\) CMD .*
      '';
      match = "SYSLOG_IDENTIFIER = /(CROND|crond)/";
    }
  ]
```

Declared by:

<nixpkgs/nixos/modules/services/logging/journalwatch.nix>

services.journalwatch.filterBlocks.*.filters

The filters to apply on all messages which satisfy **match**. Any of those messages that match any specified filter will be removed from journalwatch's output. Each filter is an extended Python regular expression. You can specify multiple filters and separate them by newlines. Lines starting with '#' are comments. Inline-comments are not permitted.

Type: string

Example:

```
(Stopped|Stopping|Starting|Started) .*
(Reached target|Stopped target) .*
```

Declared by:

<nixpkgs/nixos/modules/services/logging/journalwatch.nix>

services.journalwatch.filterBlocks.*.match

Syntax: 'field = value' Specifies the log entry 'field' this block should apply to. If the 'field' of a message matches this 'value', this patternBlock's **filters** are applied. If 'value' starts and ends with a slash, it is interpreted as an extended python regular expression, if not, it's an exact match. The journal fields are explained in **systemd.journal-fields**(7).

Type: string

Example:

```
"SYSLOG_IDENTIFIER = systemd"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/journalwatch.nix>

services.journalwatch.interval
How often to run journalwatch.

The format is described in **systemd.time**(7).

Type: string

Default:

```
"hourly"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/journalwatch.nix>

services.journalwatch.mailBinary
Sendmail−compatible binary to be used to send the messages.

Type: absolute path

Default:

```
"/run/wrappers/bin/sendmail"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/journalwatch.nix>

services.journalwatch.mailFrom
Mail address to send journalwatch reports from.

Type: string

Default:

```
"journalwatch@${config.networking.hostName}"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/journalwatch.nix>

services.journalwatch.mailTo
Mail address to send journalwatch reports to.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/logging/journalwatch.nix>

services.journalwatch.priority
Lowest priority of message to be considered. A value between 7 (“debug”), and 0 (“emerg”). Defaults to 6 (“info”). If you don’t care about anything with “info” priority, you can reduce this to e.g. 5 (“notice”) to considerably reduce the amount of messages without needing many **filterBlocks**.

Type: integer between 0 and 7 (both inclusive)

Default:

```
6
```

Declared by:
<nixpkgs/nixos/modules/services/logging/journalwatch.nix>

services.joycond.enable
Whether to enable support for Nintendo Pro Controllers and Joycons.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/joycond.nix>

services.joycond.package
The joycond package to use.

Type: package

Default:

```
pkgs.joycond
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/joycond.nix>

services.jupyter.enable
Whether to enable Jupyter development server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.package
The jupyter package to use.

Type: package

Default:

```
pkgs.python3.pkgs.jupyter
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.command
Which command the service runs. Note that not all jupyter packages have all commands, e.g. ‘jupyter lab’ isn’t present in the ‘notebook’ package.

Type: string

Default:

```
"jupyter notebook"
```

Example:

```
"jupyter lab"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.extraEnvironmentVariables
Extra environment variables to be set in the runtime context of jupyter notebook

Type: attribute set of (null or (list of (signed integer or string or absolute path)) or signed integer or string or absolute path)

Default:

```
{ }
```

Example:

```
{
  PLAYWRIGHT_BROWSERS_PATH = "${pkgs.playwright-driver.browsers}";
  PLAYWRIGHT_SKIP_VALIDATE_HOST_REQUIREMENTS = "true";
}
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.extraPackages
Extra packages to be available in the jupyter runtime environment

Type: list of package

Default:

```
[ ]
```

Example:

```
[
  pkgs.python3.pkgs.nbconvert
  pkgs.python3.pkgs.playwright
]
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.group
Name of the group used to run the jupyter service. Use this if you want to create a group of users that are able to view the notebook directory's content.

Type: string

Default:

```
"jupyter"
```

Example:

```
"users"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.ip
IP address Jupyter will be listening on.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.kernels
Declarative kernel config.

Kernels can be declared in any language that supports and has the required dependencies to communicate with a jupyter server. In python's case, it means that ipykernel package must always be included in the list of packages of the targeted environment.

Type: null or (attribute set of (open submodule of (JSON value)))

Default:

```
null
```

Example:

```
{
  python3 = let
    env = (pkgs.python3.withPackages (pythonPackages: with pythonPa \
ckages; [
              ipykernel
              pandas
              scikit-learn
            ]));
  in {
    displayName = "Python 3 for machine learning";
    argv = [
      "${env.interpreter}"
      "-m"
      "ipykernel_launcher"
      "-f"
      "{connection_file}"
    ];
    language = "python";
    logo32 = "${env.sitePackages}/ipykernel/resources/logo-32x32.p \
ng";
    logo64 = "${env.sitePackages}/ipykernel/resources/logo-64x64.p \
ng";
    extraPaths = {
      "cool.txt" = pkgs.writeText "cool" "cool content";
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.kernels.<name>.argv
Command and arguments to start the kernel.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
```

```
  "{customEnv.interpreter}"
  "-m"
  "ipykernel_launcher"
  "-f"
  "{connection_file}"
]
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.kernels.<name>.displayName
Name that will be shown to the user.

Type: string

Default:

```
""
```

Example:

```
"Python 3"
"Python 3 for Data Science"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.kernels.<name>.env
Environment variables to set for the kernel.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  OMP_NUM_THREADS = "1";
}
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.kernels.<name>.extraPaths
Extra paths to link in kernel directory

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
"{ examples = ${env.sitePack}/IRkernel/kernelspec/kernel.js"; }
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.kernels.<name>.language
Language of the environment. Typically the name of the binary.

Type: string

Example:

```
"python"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.kernels.<name>.logo32
Path to 32x32 logo png.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${env.sitePackages}/ipykernel/resources/logo-32x32.png"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.kernels.<name>.logo64
Path to 64x64 logo png.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${env.sitePackages}/ipykernel/resources/logo-64x64.png"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.notebookConfig
Raw jupyter config. Please use the password configuration option to set a password instead of passing it in here.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.notebookDir
Root directory for notebooks.

Type: string

Default:

```
"~/"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.password
Password to use with notebook. Can be generated following: **https://jupyter-server.readthedocs.io/en/stable/operators/public-server.html#preparing-a-hashed-password**

Type: string

Example:

```
"argon2:$argon2id$v=19$m=10240,t=10,p=8$48hF+vTUuy1LB83/GzNhUg$J1nx \
4jPWD7PwOJHs5OtDW8pjYK2s0c1R3rYGbSIKB54"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.port
Port number Jupyter will be listening on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8888
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyter.user
Name of the user used to run the jupyter service. For security reason, jupyter should really not be run as root. If not set (jupyter), the service will create a jupyter user with appropriate settings.

Type: string

Default:

```
"jupyter"
```

Example:

```
"aborsu"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyter/default.nix>

services.jupyterhub.enable
Whether to enable Jupyterhub development server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.authentication
Jupyterhub authentication to use

There are many authenticators available including: oauth, pam, ldap, kerberos, etc.

Type: string

Default:

```
"jupyterhub.auth.PAMAuthenticator"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.extraConfig
Extra contents appended to the jupyterhub configuration

Jupyterhub configuration is a normal python file using Traitlets. **https://jupyterhub.readthedocs.io/en/stable/getting-started/config-basics.html**. The base configuration of this module was designed to have sane defaults for configuration but you can override anything since this is a python file.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
c.SystemdSpawner.mem_limit = '8G'
c.SystemdSpawner.cpu_limit = 2.0
```

Declared by:

<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.host

Bind IP JupyterHub will be listening on

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.jupyterhubEnv

Python environment to run jupyterhub

Customizing will affect the packages available in the hub and proxy. This will allow packages to be available for the extraConfig that you may need. This will not normally need to be changed.

Type: package

Default:

```
pkgs.python3.withPackages (p: with p; [
  jupyterhub
  jupyterhub-systemdspawner
])
```

Declared by:

<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.jupyterlabEnv

Python environment to run jupyterlab

Customizing will affect the packages available in the jupyterlab server and the default kernel provided. This is the way to customize the jupyterlab extensions and jupyter notebook extensions. This will not normally need to be changed.

Type: package

Default:

```
pkgs.python3.withPackages (p: with p; [
  jupyterhub
  jupyterlab
])
```

Declared by:

<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.kernels

Declarative kernel config

Kernels can be declared in any language that supports and has the required dependencies to communicate with a jupyter server. In python's case, it means that ipykernel package must always be included in the list of packages of the targeted environment.

Type: null or (attribute set of (open submodule of (JSON value)))

Default:

```
null
```

Example:

```
{
  python3 = let
    env = (pkgs.python3.withPackages (pythonPackages: with pythonPa \
ckages; [
            ipykernel
            pandas
            scikit-learn
          ]));
  in {
    displayName = "Python 3 for machine learning";
    argv = [
      "${env.interpreter}"
      "-m"
      "ipykernel_launcher"
      "-f"
      "{connection_file}"
    ];
    language = "python";
    logo32 = "${env}/${env.sitePackages}/ipykernel/resources/logo- \
32x32.png";
    logo64 = "${env}/${env.sitePackages}/ipykernel/resources/logo- \
64x64.png";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.kernels.<name>.argv

Command and arguments to start the kernel.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "{customEnv.interpreter}"
  "-m"
  "ipykernel_launcher"
  "-f"
  "{connection_file}"
]
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.kernels.<name>.displayName
Name that will be shown to the user.

Type: string

Default:

```
""
```

Example:

```
"Python 3"
"Python 3 for Data Science"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.kernels.<name>.env
Environment variables to set for the kernel.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  OMP_NUM_THREADS = "1";
}
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.kernels.<name>.extraPaths
Extra paths to link in kernel directory

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
"{ examples = ${env.sitePack}/IRkernel/kernelspec/kernel.js"; }
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.kernels.<name>.language
Language of the environment. Typically the name of the binary.

Type: string

Example:

```
"python"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.kernels.<name>.logo32
Path to 32x32 logo png.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${env.sitePackages}/ipykernel/resources/logo-32x32.png"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.kernels.<name>.logo64
Path to 64x64 logo png.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${env.sitePackages}/ipykernel/resources/logo-64x64.png"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.port
Port number Jupyterhub will be listening on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8000
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.spawner
Jupyterhub spawner to use

There are many spawners available including: local process, systemd, docker, kubernetes, yarn, batch, etc.

Type: string

Default:

```
"systemdspawner.SystemdSpawner"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.jupyterhub.stateDirectory
Directory for jupyterhub state (token + database)

Type: string

Default:

```
"jupyterhub"
```

Declared by:
<nixpkgs/nixos/modules/services/development/jupyterhub/default.nix>

services.k3s.enable
Whether to enable k3s.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.package
The k3s package to use.

Type: package

Default:

```
pkgs.k3s
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.agentToken
The k3s token agents can use to connect to the server. This option only makes sense on server nodes (‘role = server’).

WARNING: This option will expose your token unencrypted in the world−readable nix store. If this is undesired use the tokenFile option instead.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.agentTokenFile
File path containing the k3s token agents can use to connect to the server. This option only makes sense on server nodes (‘role = server’).

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.autoDeployCharts
Auto deploying Helm charts that are installed by the k3s Helm controller. Avoid using attribute names that are also used in the **services.k3s.manifests** and **services.k3s.charts** options. Manifests with the same name will override auto deploying charts with the same name. This option only makes sense on server nodes (‘role = server’). See the **k3s Helm documentation** for further information.

WARNING: If you have multiple server nodes, and set this option on more than one server, it is your responsibility to ensure that files stay in sync across those nodes. AddOn content is not synced between

nodes, and k3s cannot guarantee correct behavior if different servers attempt to deploy conflicting manifests.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  harbor = {
    name = "harbor";
    repo = "https://helm.goharbor.io";
    version = "1.14.0";
    hash = "sha256-fMP7q1MIbvzPGS9My91vbQ1d3OJMjwc+o8YE/BXZaYU=";
    values = {
      existingSecretAdminPassword = "harbor-admin";
      expose = {
        tls = {
          enabled = true;
          certSource = "secret";
          secret.secretName = "my-tls-secret";
        };
        ingress = {
          hosts.core = "example.com";
          className = "nginx";
        };
      };
    };
  };
  nginx = {
    repo = "oci://registry-1.docker.io/bitnamicharts/nginx";
    version = "20.0.0";
    hash = "sha256-sy+tzB+i9jIl/tqOMzzuhVhTU4EZVsoSBtPznxF/36c=";
  };
  custom-chart = {
    package = ../charts/my-chart.tgz;
    values = ../values/my-values.yaml;
    extraFieldDefinitions = {
      spec.timeout = "60s";
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.autoDeployCharts.<name>.enable

Whether to enable the installation of this Helm chart. Note that setting this option to ‘false’ will not uninstall the chart from the cluster, if it was previously installed. Please use the the ‘--disable’ flag or ‘.skip’ files to delete/disable Helm charts, as mentioned in the **docs**.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.autoDeployCharts.<name>.package

The packaged Helm chart. Overwrites the options ‘repo’, ‘name’, ‘version’ and ‘hash’ in case of conflicts.

Type: absolute path or package

Example:

```
../my-helm-chart.tgz
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.autoDeployCharts.<name>.createNamespace

Whether to create the target namespace if not present.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.autoDeployCharts.<name>.extraDeploy

List of extra Kubernetes manifests to deploy with this Helm chart.

Type: list of (absolute path or (attribute set))

Default:

```
[ ]
```

Example:

```
[
  ../manifests/my-extra-deployment.yaml
  {
    apiVersion = "v1";
    kind = "Service";
    metadata = {
      name = "app-service";
    };
    spec = {
      selector = {
        "app.kubernetes.io/name" = "MyApp";
      };
      ports = [
        {
          name = "name-of-service-port";
          protocol = "TCP";
          port = 80;
          targetPort = "http-web-svc";
```

```
            }
          ];
        };
      }
    ];
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.autoDeployCharts.<name>.extraFieldDefinitions

Extra HelmChart field definitions that are merged with the rest of the HelmChart custom resource. This can be used to set advanced fields or to overwrite generated fields. See **https://docs.k3s.io/helm#helm-chart-field-definitions** for possible fields.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  spec = {
    backOffLimit = 3;
    bootstrap = true;
    helmVersion = "v2";
    jobImage = "custom-helm-controller:v0.0.1";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.autoDeployCharts.<name>.hash

The hash of the packaged Helm chart. Only has an effect if ‘package’ is not set. The Helm chart is fetched during build time and placed as a ‘.tgz’ archive on the filesystem.

Type: string

Default:

```
""
```

Example:

```
"sha256-ej+vpPNdiOoXsaj1jyRpWLisJgWo8EqX+Z5VbpSjsPA="
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.autoDeployCharts.<name>.name

The name of the Helm chart. Only has an effect if ‘package’ is not set. The Helm chart is fetched during build time and placed as a ‘.tgz’ archive on the filesystem.

Type: non-empty string

Example:

```
"ingress-nginx"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.autoDeployCharts.<name>.repo

The repo of the Helm chart. Only has an effect if ‘package’ is not set. The Helm chart is fetched during build time and placed as a ‘.tgz’ archive on the filesystem.

Type: non−empty string

Example:

```
"https://kubernetes.github.io/ingress-nginx"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.autoDeployCharts.<name>.targetNamespace

The namespace in which the Helm chart gets installed.

Type: non−empty string

Default:

```
"default"
```

Example:

```
"kube-system"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.autoDeployCharts.<name>.values

Override default chart values via Nix expressions. This is equivalent to setting values in a ‘values.yaml’ file.

WARNING: The values (including secrets!) specified here are exposed unencrypted in the world−readable nix store.

Type: absolute path or (attribute set)

Default:

```
{ }
```

Example:

```
{
  hostName = "my-host";
  replicaCount = 3;
  server = {
    name = "nginx";
    port = 80;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.autoDeployCharts.<name>.version

The version of the Helm chart. Only has an effect if ‘package’ is not set. The Helm chart is fetched during build time and placed as a ‘.tgz’ archive on the filesystem.

Type: non−empty string

Example:

```
"4.7.0"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.charts
Packaged Helm charts that are linked to */var/lib/rancher/k3s/server/static/charts* before k3s starts. The attribute name will be used as the link target (relative to */var/lib/rancher/k3s/server/static/charts*). The specified charts will only be placed on the file system and made available via the Kubernetes APIServer from within the cluster. See the **services.k3s.autoDeployCharts** option and the **k3s Helm controller docs** to deploy Helm charts. This option only makes sense on server nodes (‘role = server’).

Type: attribute set of (absolute path or package)

Default:

```
{ }
```

Example:

```
nginx = ../charts/my-nginx-chart.tgz;
redis = ../charts/my-redis-chart.tgz;
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.clusterInit
Initialize HA cluster using an embedded etcd datastore.

If this option is ‘false’ and ‘role’ is ‘server’

On a server that was using the default embedded sqlite backend, enabling this option will migrate to an embedded etcd DB.

If an HA cluster using the embedded etcd datastore was already initialized, this option has no effect.

This option only makes sense in a server that is not connecting to another server.

If you are configuring an HA cluster with an embedded etcd, the 1st server must have ‘clusterInit = true’ and other servers must connect to it using ‘serverAddr’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.configPath
File path containing the k3s YAML config. This is useful when the config is generated (for example on boot).

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.containerdConfigTemplate
Config template for containerd, to be placed at ‘/var/lib/rancher/k3s/agent/etc/containerd/config.toml.tmpl’. See the docs on **configuring containerd**.

Type: null or string

Default:

```
null
```

Example:

```
# Base config
{{ template "base" . }}
# Add a custom runtime
[plugins."io.containerd.grpc.v1.cri".containerd.runtimes."custom"]
  runtime_type = "io.containerd.runc.v2"
[plugins."io.containerd.grpc.v1.cri".containerd.runtimes."custom".o \
ptions]
  BinaryName = "/path/to/custom-container-runtime"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.disable
Disable default components, see the **K3s documentation**.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.disableAgent
Only run the server. This option only makes sense for a server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.environmentFile
File path containing environment variables for configuring the k3s service in the format of an EnvironmentFile. See **systemd.exec**(5).

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.extraFlags
Extra flags to pass to the k3s command.

Type: string or list of string

Default:

```
[ ]
```

Example:

```
[
  "--etcd-expose-metrics"
  "--cluster-cidr 10.24.0.0/16"
```

```
]
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.extraKubeProxyConfig

Extra configuration to add to the kube−proxy's configuration file. The subset of the kube−proxy's configuration that can be configured via a file is defined by the **KubeProxyConfiguration** struct. Note that the kubeconfig param will be overriden by 'clientConnection.kubeconfig', so you must set the 'clientConnection.kubeconfig' option if you want to use 'extraKubeProxyConfig'.

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  clientConnection = {
    kubeconfig = "/var/lib/rancher/k3s/agent/kubeproxy.kubeconfig";
  };
  mode = "nftables";
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.extraKubeletConfig

Extra configuration to add to the kubelet's configuration file. The subset of the kubelet's configuration that can be configured via a file is defined by the **KubeletConfiguration** struct. See the **documentation** for further information.

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  containerLogMaxSize = "5Mi";
  memoryThrottlingFactor = 0.69;
  podsPerCore = 3;
}
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.gracefulNodeShutdown.enable

Whether to enable graceful node shutdowns where the kubelet attempts to detect node system shutdown and terminates pods running on the node. See the **documentation** for further information. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.gracefulNodeShutdown.shutdownGracePeriod
Specifies the total duration that the node should delay the shutdown by. This is the total grace period for pod termination for both regular and critical pods.

Type: non−empty string

Default:

```
"30s"
```

Example:

```
"1m30s"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.gracefulNodeShutdown.shutdownGracePeriodCriticalPods
Specifies the duration used to terminate critical pods during a node shutdown. This should be less than 'shutdownGracePeriod'.

Type: non−empty string

Default:

```
"10s"
```

Example:

```
"15s"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.images
List of derivations that provide container images. All images are linked to */var/lib/rancher/k3s/agent/images* before k3s starts and are consequently imported by the k3s agent. Consider importing the k3s airgap images archive of the k3s package in use, if you want to pre−provision this node with all k3s container images. This option only makes sense on nodes with an enabled agent.

Type: list of package

Default:

```
[ ]
```

Example:

```
[
  (pkgs.dockerTools.pullImage {
    imageName = "docker.io/bitnami/keycloak";
    imageDigest = "sha256:714dfadc66a8e3adea6609bda350345bd3711657b \
7ef3cf2e8015b526bac2d6b";
    hash = "sha256−IM2BLZ0EdKIZcRWOtuFY9TogZJXCpKtPZnMnPsGlq0Y=";
    finalImageTag = "21.1.2−debian−11−r0";
  })
  config.services.k3s.package.airgap−images
]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.manifests

Auto−deploying manifests that are linked to */var/lib/rancher/k3s/server/manifests* before k3s starts. Note that deleting manifest files will not remove or otherwise modify the resources it created. Please use the the '−−disable' flag or '.skip' files to delete/disable AddOns, as mentioned in the **docs**. This option only makes sense on server nodes ('role = server'). Read the **auto−deploying manifests docs** for further information.

WARNING: If you have multiple server nodes, and set this option on more than one server, it is your responsibility to ensure that files stay in sync across those nodes. AddOn content is not synced between nodes, and k3s cannot guarantee correct behavior if different servers attempt to deploy conflicting manifests.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  deployment.source = ../manifests/deployment.yaml;
  my−service = {
    enable = false;
    target = "app−service.yaml";
    content = {
      apiVersion = "v1";
      kind = "Service";
      metadata = {
        name = "app−service";
      };
      spec = {
        selector = {
          "app.kubernetes.io/name" = "MyApp";
        };
        ports = [
          {
            name = "name−of−service−port";
            protocol = "TCP";
            port = 80;
            targetPort = "http−web−svc";
          }
        ];
      };
    };
  };
  nginx.content = [
    {
      apiVersion = "v1";
      kind = "Pod";
      metadata = {
        name = "nginx";
        labels = {
          "app.kubernetes.io/name" = "MyApp";
        };
      };
      spec = {
```

```
            containers = [
              {
                name = "nginx";
                image = "nginx:1.14.2";
                ports = [
                  {
                    containerPort = 80;
                    name = "http-web-svc";
                  }
                ];
              }
            ];
          };
        }
        {
          apiVersion = "v1";
          kind = "Service";
          metadata = {
            name = "nginx-service";
          };
          spec = {
            selector = {
              "app.kubernetes.io/name" = "MyApp";
            };
            ports = [
              {
                name = "name-of-service-port";
                protocol = "TCP";
                port = 80;
                targetPort = "http-web-svc";
              }
            ];
          };
        }
      ];
    };
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.manifests.<name>.enable

Whether this manifest file should be generated.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.manifests.<name>.content
Content of the manifest file. A single attribute set will generate a single document YAML file. A list of attribute sets will generate multiple documents separated by '---' in a single YAML file.

Type: null or (attribute set) or list of (attribute set)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.manifests.<name>.source
Path of the source '.yaml' file.

Type: absolute path

Example:

```
./manifests/app.yaml
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.manifests.<name>.target
Name of the symlink (relative to */var/lib/rancher/k3s/server/manifests*). Defaults to the attribute name.

Type: non−empty string

Example:

```
"manifest.yaml"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.nodeExternalIP
IPv4/IPv6 external addresses to advertise for node.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.nodeIP
IPv4/IPv6 addresses to advertise for node.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.nodeLabel
Registering and starting kubelet with set of labels.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.nodeName
Node name.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.nodeTaint
Registering kubelet with set of taints.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.role
Whether k3s should run as a server or agent.

If it’s a server:

- By default it also runs workloads as an agent.
- Starts by default as a standalone server using an embedded sqlite datastore.
- Configure ‘clusterInit = true’ to switch over to embedded etcd datastore and enable HA mode.
- Configure ‘serverAddr’ to join an already−initialized HA cluster.

If it’s an agent:

- ‘serverAddr’ is required.

Type: one of “server”, “agent”

Default:

```
"server"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.selinux
Enable SELinux in containerd.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.serverAddr
The k3s server to connect to.

Servers and agents need to communicate each other. Read **the networking docs** to know how to configure the firewall.

Type: string

Default:

```
""
```

Example:

```
"https://10.0.0.10:6443"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.token

The k3s token to use when connecting to a server.

WARNING: This option will expose your token unencrypted in the world−readable nix store. If this is undesired use the tokenFile option instead.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.k3s.tokenFile

File path containing the k3s token to use when connecting to a server.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/rancher/default.nix>

services.kanata.enable

Whether to enable kanata, a tool to improve keyboard comfort and usability with advanced customization.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/kanata.nix>

services.kanata.package

The kanata package to use. ::: {.note} If **danger−enable−cmd** is enabled in any of the keyboards, the ‘kanata−with−cmd’ package should be used. :::

Type: package

Default:

```
pkgs.kanata
```

Example:

```
pkgs.kanata-with-cmd
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kanata.nix>

services.kanata.keyboards
Keyboard configurations.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kanata.nix>

services.kanata.keyboards.<name>.config
Configuration other than 'defcfg'.

See **the upstream documentation** and **example config files** for more information.

Type: strings concatenated with "\n"

Example:

```
(defsrc
  caps)

(deflayermap (default-layer)
  ;; tap caps lock as caps lock, hold caps lock as left control
  caps (tap-hold 100 100 caps lctl))
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kanata.nix>

services.kanata.keyboards.<name>.configFile
The config file.

By default, it is generated by values from other kanata module options.

You can also set it to your own full config file which overrides all other kanata module options. See **the upstream documentation** and **example config files** for more information.

Type: absolute path

Default:

```
"A config file generated by values from other kanata module options \
."
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kanata.nix>

services.kanata.keyboards.<name>.devices
Paths to keyboard devices.

An empty list, the default value, lets kanata detect which input devices are keyboards and intercept them all.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/dev/input/by-id/usb-0000_0000-event-kbd"
```

```
]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/kanata.nix>

services.kanata.keyboards.<name>.extraArgs

Extra command line arguments passed to kanata.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/kanata.nix>

services.kanata.keyboards.<name>.extraDefCfg

Configuration of ‘defcfg’ other than ‘linux−dev’ (generated from the devices option) and ‘linux−continue−if−no−devs−found’ (hardcoded to be yes).

See **the upstream documentation** and **example config files** for more information.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"danger-enable-cmd yes"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/kanata.nix>

services.kanata.keyboards.<name>.port

Port to run the TCP server on. ‘null’ will not run the server.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Example:

```
6666
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/kanata.nix>

services.kanboard.enable

Whether to enable Kanboard.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.package
The kanboard package to use.

Type: package

Default:

```
pkgs.kanboard
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.dataDir
Default data folder for Kanboard.

Type: string

Default:

```
"/var/lib/kanboard"
```

Example:

```
"/mnt/kanboard"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.domain
FQDN for the Kanboard instance.

Type: string

Default:

```
"kanboard"
```

Example:

```
"kanboard.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.group
Group under which Kanboard runs.

Type: string

Default:

```
"kanboard"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx
With this option, you can customize an NGINX virtual host which already has sensible defaults for Kanboard. Set to '{ }' if you do not need any customization for the virtual host. If enabled, then by default, the **serverName** is '${domain}'. If this is set to null (the default), no NGINX virtual host will be configured.

Type: null or (submodule)

Default:

```
{ }
```

Example:

```
{
  enableACME = true;
  forceSSL = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.default

Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.extraConfig

These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.forceSSL

Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with 'redirectCode') to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.http2
Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.http3
Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.http3_hq
Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides ‘addSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.listen.*.addr

Listen address.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.listen.*.extraParameters

Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
```

```
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.listen.*.ssl
Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations.<name>.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations.<name>.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.rejectSSL
Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.reuseport
Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.root
The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.serverName
Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

2. see the **security.acme.certs** option

services.kanboard.phpfpm.settings
Options for kanboard's PHPFPM pool.

Type: attribute set of (signed integer or string or boolean)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.settings
Customize the default settings, refer to **https://github.com/kanboard/kanboard/blob/main/config.default.php** for details on supported values.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanboard.user
User under which Kanboard runs.

Type: string

Default:

```
"kanboard"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kanboard.nix>

services.kanidm.package
The kanidm package to use. Must be set to an explicit version.

Type: package

Default:

```
pkgs.kanidm
```

Example:

```
kanidm_1_8
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.client.enable
Whether to enable the Kanidm client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.client.settings
Configure Kanidm clients, needed for the PAM daemon. See **the documentation** and **example configuration** for possible values.

Type: open submodule of (TOML value)

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.client.settings.uri
Address of the Kanidm server.

Type: string

Example:

```
"http://127.0.0.1:8080"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.enable
Whether to enable provisioning of groups, users and oauth2 resource servers.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.acceptInvalidCerts
Whether to allow invalid certificates when provisioning the target instance. By default this is only allowed when the instanceUrl is localhost. This is dangerous when used with an external URL.

Type: boolean

Default:

```
"hasPrefix \"https://localhost:\" cfg.provision.instanceUrl"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.adminPasswordFile
Path to a file containing the admin password for kanidm. Do NOT use a file from the nix store here!

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/kanidm-admin-password"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.autoRemove
Determines whether deleting an entity in this provisioning config should automatically cause them to be removed from kanidm, too. This works because the provisioning tool tracks all entities it has ever created. If this is set to false, you need to explicitly specify 'present = false' to delete an entity.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.extraJsonFile
A JSON file for provisioning persons, groups & systems. Options set in this file take precedence over values set using the other options. The files get deeply merged, and deduplicated. The accepted JSON schema can be found at **https://github.com/oddlama/kanidm-provision#json-schema**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.groups
Provisioning of kanidm groups

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.groups.<name>.members
List of kanidm entities (persons, groups, …) which are part of this group.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.groups.<name>.overwriteMembers
Whether the member list should be overwritten each time (true) or appended (false). Append mode allows interactive group management in addition to the declared members. Also, future member removals cannot be reflected automatically in append mode.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.groups.<name>.present
Whether to ensure that this group is present or absent.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.idmAdminPasswordFile
Path to a file containing the idm admin password for kanidm. Do NOT use a file from the nix store here! If this is not given but provisioning is enabled, the idm_admin password will be reset on each restart.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/kanidm-idm-admin-password"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.instanceUrl
The instance url to which the provisioning tool should connect.

Type: string

Default:

```
"https://localhost:<port from server.settings.bindaddress>"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.persons
Provisioning of kanidm persons

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.persons.<name>.displayName
Display name

Type: string

Example:

```
"My User"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.persons.<name>.groups
List of groups this person should belong to.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.persons.<name>.legalName
Full legal name

Type: null or string

Default:

```
null
```

Example:

```
"Jane Doe"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.persons.<name>.mailAddresses
Mail addresses. First given address is considered the primary address.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "jane.doe@example.com"
]
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.persons.<name>.present
Whether to ensure that this person is present or absent.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2
Provisioning of oauth2 resource servers

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.enableLegacyCrypto
Enable legacy crypto on this client. Allows JWT signing algorthms like RS256.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.enableLocalhostRedirects
Allow localhost redirects. Only for public clients.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.allowInsecureClientDisablePkce
Disable PKCE on this oauth2 resource server to work around insecure clients that may not support it. You should request the client to enable PKCE! Only for non−public clients.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.basicSecretFile
The basic secret to use for this service. If null, the random secret generated by kanidm will not be touched. Do NOT use a path from the nix store here!

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/some−oauth2−basic−secret"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.claimMaps
Adds additional claims (and values) based on which kanidm groups an authenticating party belongs to. See **Claim Maps** for more information.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.claimMaps.<name>.joinType
Determines how multiple values are joined to create the claim value. See **Claim Maps** for more information.

Type: one of “array”, “csv”, “ssv”

Default:

```
"array"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.claimMaps.<name>.valuesByGroup
Maps kanidm groups to values for the claim.

Type: attribute set of list of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.displayName
Display name

Type: string

Example:

```
"Some Service"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.imageFile
Application image to display in the WebUI. Kanidm supports “image/jpeg”, “image/png”, “image/gif”, “image/svg+xml”, and “image/webp”. The image will be uploaded each time kanidm−provision is run.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.originLanding
When redirecting from the Kanidm Apps Listing page, some linked applications may need to land on a specific page to trigger oauth2/oidc interactions.

Type: string

Example:

```
"https://someservice.example.com/home"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.originUrl
The redirect URL of the service. These need to exactly match the OAuth2 redirect target

Type: string matching the pattern .*://?.*$ or non−empty (list of string matching the pattern .*://?.*$)

Example:

```
"https://someservice.example.com/auth/login"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.preferShortUsername
Use ‘name’ instead of ‘spn’ in the preferred_username claim

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.present
Whether to ensure that this oauth2 resource server is present or absent.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.public
Whether this is a public client (enforces PKCE, doesn’t use a basic secret)

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.removeOrphanedClaimMaps
Whether claim maps not specified here but present in kanidm should be removed from kanidm.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.scopeMaps
Maps kanidm groups to returned oauth scopes. See **Scope Relations** for more information.

Type: attribute set of list of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.provision.systems.oauth2.<name>.supplementaryScopeMaps
Maps kanidm groups to additionally returned oauth scopes. See **Scope Relations** for more information.

Type: attribute set of list of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.server.enable
Whether to enable the Kanidm server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.server.settings
Settings for Kanidm, see **the documentation** and **example configuration** for possible values.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.server.settings.bindaddress
Address/port combination the webserver binds to.

Type: string

Default:

```
"127.0.0.1:8443"
```

Example:

```
"[::1]:8443"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.server.settings.db_path
Path to Kanidm database.

Type: absolute path *(read only)*

Default:

```
"/var/lib/kanidm/kanidm.db"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.server.settings.domain
The 'domain' that Kanidm manages. Must be below or equal to the domain specified in 'server.settings.origin'. This can be left at 'null', only if your instance has the role 'ReadOnlyReplica'. While it is possible to change the domain later on, it requires extra steps! Please consider the warnings and execute the steps described **in the documentation**.

Type: null or string

Default:
`null`

Example:
`"example.org"`

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.server.settings.ldapbindaddress
Address and port the LDAP server is bound to. Setting this to 'null' disables the LDAP interface.

Type: null or string

Default:
`null`

Example:
`"[::1]:636"`

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.server.settings.log_level
Log level of the server.

Type: one of "info", "debug", "trace"

Default:
`"info"`

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.server.settings.online_backup.path
Path to the output directory for backups.

Type: absolute path

Default:
`"/var/lib/kanidm/backups"`

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.server.settings.online_backup.schedule
The schedule for backups in cron format.

Type: string

Default:
`"00 22 * * *"`

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.server.settings.online_backup.versions
Number of backups to keep.

The default is set to ‘0’, in order to disable backups by default.

Type: unsigned integer, meaning >=0

Default:

Example:

```
7
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.server.settings.origin
The origin of your Kanidm instance. Must have https as protocol.

Type: string matching the pattern ^https://.*

Example:

```
"https://idm.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.server.settings.role
The role of this server. This affects the replication relationship and thereby available features.

Type: one of “WriteReplica”, “WriteReplicaNoUI”, “ReadOnlyReplica”

Default:

```
"WriteReplica"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.server.settings.tls_chain
TLS chain in pem format.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.server.settings.tls_key
TLS key in pem format.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.unix.enable
Whether to enable the Kanidm PAM and NSS integration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.unix.settings
Configure Kanidm unix daemon. See **the documentation** and **example configuration** for possible values.

Type: open submodule of (TOML value)

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.unix.settings.hsm_pin_path
Path to a HSM pin.

Type: absolute path

Default:

```
"/var/cache/kanidm-unixd/hsm-pin"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.unix.settings.kanidm.pam_allowed_login_groups
Kanidm groups that are allowed to login using PAM.

Type: list of string

Default:

```
[ ]
```

Example:

```
"my_pam_group"
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kanidm.unix.sshIntegration
Whether to enable Kanidm SSH keys login.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/security/kanidm.nix>

services.kapacitor.enable
Whether to enable kapacitor.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.alerta.enable
Whether to enable kapacitor alerta integration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.alerta.environment
Default Alerta environment

Type: string

Default:

```
"Production"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.alerta.origin
Default origin of alert

Type: string

Default:

```
"kapacitor"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.alerta.token
Default Alerta authentication token

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.alerta.url
The URL to the Alerta REST API

Type: string

Default:

```
"http://localhost:5000"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.bind

Address to bind to. The default is to bind to all addresses

Type: string

Default:

```
""
```

Example:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.dataDir

Location where Kapacitor stores its state

Type: absolute path

Default:

```
"/var/lib/kapacitor"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.defaultDatabase.enable

Whether to enable kapacitor.defaultDatabase.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.defaultDatabase.password

The password to connect to the remote InfluxDB server

Type: string

Declared by:

<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.defaultDatabase.url

The URL to an InfluxDB server that serves as the default database

Type: string

Example:

```
"http://localhost:8086"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.defaultDatabase.username
The username to connect to the remote InfluxDB server

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.extraConfig
These lines go into kapacitord.conf verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.group
Group under which Kapacitor runs

Type: string

Default:

```
"kapacitor"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.loadDirectory
Directory where to load services from, such as tasks, templates and handlers (or null to disable service loading on startup)

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.port
Port of Kapacitor

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9092
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.taskSnapshotInterval
Specifies how often to snapshot the task state (in InfluxDB time units)

Type: string

Default:

```
"1m0s"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.kapacitor.user
User account under which Kapacitor runs

Type: string

Default:

```
"kapacitor"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kapacitor.nix>

services.karakeep.enable
Whether to enable Enable the Karakeep service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/karakeep.nix>

services.karakeep.package
The karakeep package to use.

Type: package

Default:

```
pkgs.karakeep
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/karakeep.nix>

services.karakeep.browser.enable
Enable the karakeep−browser service that runs a chromium instance in the background with debugging ports exposed. This is necessary for certain features like screenshots.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/karakeep.nix>

services.karakeep.browser.exe
The browser executable (must be Chrome−like).

Type: string

Default:

```
${pkgs.chromium}/bin/chromium
```

Example:

```
${pkgs.google−chrome}/bin/google−chrome−stable
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/karakeep.nix>

services.karakeep.browser.port
The port the browser should run on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9222
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/karakeep.nix>

services.karakeep.environmentFile
An optional path to an environment file that will be used in the web and workers services. This is useful for loading private keys.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/karakeep/secrets.env"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/karakeep.nix>

services.karakeep.extraEnvironment
Environment variables to pass to Karakaeep. This is how most settings can be configured. Changing DATA_DIR is possible but not supported.

See **https://docs.karakeep.app/configuration/environment−variables**

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  PORT = "1234";
  DISABLE_SIGNUPS = "true";
  DISABLE_NEW_RELEASE_CHECK = "true";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/karakeep.nix>

services.karakeep.meilisearch.enable
Enable Meilisearch and configure Karakeep to use it. Meilisearch is required for text search.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/karakeep.nix>

services.karakeep.meilisearch.experimental_dumpless_upgrade

Whether to enable (experimental) dumpless upgrade of the search index. Allows upgrading Meilisearch without manually dumping and importing the database. **services.meilisearch.settings.experimental_dumpless_upgrade** overrides this option if set explicitly.

More information at **https://www.meilisearch.com/docs/learn/update_and_migration/updating#dumpless−upgrade**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/karakeep.nix>

services.karma.enable

Whether to enable the Karma dashboard service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/karma.nix>

services.karma.package

The karma package to use.

Type: package

Default:

```
pkgs.karma
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/karma.nix>

services.karma.configFile

A YAML config file which can be used to configure karma instead of the nix−generated file.

Type: absolute path

Default:

```
"A configuration file generated from the provided nix attributes se \
ttings option."
```

Example:

```
"/etc/karma/karma.conf"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/karma.nix>

services.karma.environment

Additional environment variables to provide to karma.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  ALERTMANAGER_NAME = "single";
  ALERTMANAGER_URI = "https://alertmanager.example.com";
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/karma.nix>

services.karma.extraOptions
Extra command line options.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--alertmanager.timeout 10s"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/karma.nix>

services.karma.openFirewall
Whether to open ports in the firewall needed for karma to function.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/karma.nix>

services.karma.settings
Karma dashboard configuration as nix attributes.

Reference: **https://github.com/prymitive/karma/blob/main/docs/CONFIGURATION.md**

Type: open submodule of (YAML 1.1 value)

Default:

```
{
  listen = {
    address = "127.0.0.1";
  };
}
```

Example:

```
{
  alertmanager = {
    interval = "15s";
    servers = [
      {
        name = "prod";
        uri = "http://alertmanager.example.com";
      }
    ];
```

```
  };
  listen = {
    address = "192.168.1.4";
    port = "8000";
    prefix = "/dashboard";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/karma.nix>

services.karma.settings.listen.address
Hostname or IP to listen on.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"[::]"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/karma.nix>

services.karma.settings.listen.port
HTTP port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Example:

```
8182
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/karma.nix>

services.kasmweb.enable
Whether to enable kasmweb.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kasmweb/default.nix>

services.kasmweb.datastorePath
The directory used to store all data for kasmweb.

Type: string

Default:

```
"/var/lib/kasmweb"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kasmweb/default.nix>

services.kasmweb.defaultAdminPassword
default admin password to use.

Type: string

Default:

```
"kasmweb"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kasmweb/default.nix>

services.kasmweb.defaultGuacToken
default guac token to use.

Type: string

Default:

```
"kasmweb"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kasmweb/default.nix>

services.kasmweb.defaultManagerToken
default manager token to use.

Type: string

Default:

```
"kasmweb"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kasmweb/default.nix>

services.kasmweb.defaultRegistrationToken
default registration token to use.

Type: string

Default:

```
"kasmweb"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kasmweb/default.nix>

services.kasmweb.defaultUserPassword
default user password to use.

Type: string

Default:

```
"kasmweb"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kasmweb/default.nix>

services.kasmweb.listenAddress
The address on which kasmweb should listen.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kasmweb/default.nix>

services.kasmweb.listenPort
The port on which kasmweb should listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
443
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kasmweb/default.nix>

services.kasmweb.networkSubnet
The network subnet to use for the containers.

Type: string

Default:

```
"172.20.0.0/16"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kasmweb/default.nix>

services.kasmweb.postgres.password
password to use for the postgres database.

Type: string

Default:

```
"kasmweb"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kasmweb/default.nix>

services.kasmweb.postgres.user
Username to use for the postgres database.

Type: string

Default:

```
"kasmweb"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kasmweb/default.nix>

services.kasmweb.redisPassword
password to use for the redis cache.

Type: string

Default:

```
"kasmweb"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kasmweb/default.nix>

services.kasmweb.sslCertificate

The SSL certificate to be used for kasmweb.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kasmweb/default.nix>

services.kasmweb.sslCertificateKey

The SSL certificate's key to be used for kasmweb. Make sure to specify this as a string and not a literal path, so that it is not accidentally included in your nixstore.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kasmweb/default.nix>

services.kavita.enable

Whether to enable Kavita reading server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kavita.nix>

services.kavita.package

The kavita package to use.

Type: package

Default:

```
pkgs.kavita
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kavita.nix>

services.kavita.dataDir

The directory where Kavita stores its state.

Type: string

Default:

```
"/var/lib/kavita"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kavita.nix>

services.kavita.settings

Kavita configuration options, as configured in *appsettings.json*.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kavita.nix>

services.kavita.settings.IpAddresses

IP Addresses to bind to. The default is to bind to all IPv4 and IPv6 addresses.

Type: strings concatenated with ","

Default:

```
"0.0.0.0,::"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kavita.nix>

services.kavita.settings.Port

Port to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kavita.nix>

services.kavita.tokenKeyFile

A file containing the TokenKey, a secret with at 512+ bits. It can be generated with 'head −c 64 /dev/urandom | base64 −−wrap=0'.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kavita.nix>

services.kavita.user

User account under which Kavita runs.

Type: string

Default:

```
"kavita"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kavita.nix>

services.kbfs.enable

Whether to mount the Keybase filesystem.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kbfs.nix>

services.kbfs.enableRedirector
Whether to enable the Keybase root redirector service, allowing any user to access KBFS files via '/keybase', which will show different contents depending on the requester.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kbfs.nix>

services.kbfs.extraFlags
Additional flags to pass to the Keybase filesystem on launch.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−label kbfs"
  "−mount−type normal"
]
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kbfs.nix>

services.kbfs.mountPoint
Mountpoint for the Keybase filesystem.

Type: string

Default:

```
"%h/keybase"
```

Example:

```
"/keybase"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kbfs.nix>

services.kea.package
The kea package to use.

Type: package

Default:

```
pkgs.kea
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.ctrl-agent

Kea Control Agent configuration

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.ctrl-agent.enable

Whether to enable Kea Control Agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.ctrl-agent.configFile

Kea Control Agent configuration as a path, see **https://kea.readthedocs.io/en/kea-3.0.3/arm/agent.html**.

Takes preference over **settings**. Most users should prefer using **settings** instead.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.ctrl-agent.extraArgs

List of additional arguments to pass to the daemon.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.ctrl-agent.settings

Kea Control Agent configuration as an attribute set, see **https://kea.readthedocs.io/en/kea-3.0.3/arm/agent.html**.

Type: JSON value

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.dhcp−ddns

Kea DHCP−DDNS configuration

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.dhcp−ddns.enable

Whether to enable Kea DDNS server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.dhcp−ddns.configFile

Kea DHCP−DDNS configuration as a path, see **https://kea.readthedocs.io/en/kea−3.0.3/arm/ddns.html**.

Takes preference over **settings**. Most users should prefer using **settings** instead.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.dhcp−ddns.extraArgs

List of additional arguments to pass to the daemon.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.dhcp−ddns.settings

Kea DHCP−DDNS configuration as an attribute set, see **https://kea.readthedocs.io/en/kea−3.0.3/arm/ddns.html**.

Type: JSON value

Default:

```
null
```

Example:

```
{
  dns-server-timeout = 100;
  forward-ddns = {
```

```
      ddns-domains = [ ];
    };
    ip-address = "127.0.0.1";
    ncr-format = "JSON";
    ncr-protocol = "UDP";
    port = 53001;
    reverse-ddns = {
      ddns-domains = [ ];
    };
    tsig-keys = [ ];
  }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.dhcp4
DHCP4 Server configuration

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.dhcp4.enable
Whether to enable Kea DHCP4 server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.dhcp4.configFile
Kea DHCP4 configuration as a path, see **https://kea.readthedocs.io/en/kea-3.0.3/arm/dhcp4-srv.html**.

Takes preference over **settings**. Most users should prefer using **settings** instead.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.dhcp4.extraArgs
List of additional arguments to pass to the daemon.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.dhcp4.settings
Kea DHCP4 configuration as an attribute set, see **https://kea.readthedocs.io/en/kea-3.0.3/arm/dhcp4-srv.html**.

Type: JSON value

Default:

```
null
```

Example:

```
{
  interfaces-config = {
    interfaces = [
      "eth0"
    ];
  };
  lease-database = {
    name = "/var/lib/kea/dhcp4.leases";
    persist = true;
    type = "memfile";
  };
  rebind-timer = 2000;
  renew-timer = 1000;
  subnet4 = [
    {
      id = 1;
      pools = [
        {
          pool = "192.0.2.100 - 192.0.2.240";
        }
      ];
      subnet = "192.0.2.0/24";
    }
  ];
  valid-lifetime = 4000;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.dhcp6
DHCP6 Server configuration

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.dhcp6.enable

Whether to enable Kea DHCP6 server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.dhcp6.configFile

Kea DHCP6 configuration as a path, see **https://kea.readthedocs.io/en/kea-3.0.3/arm/dhcp6-srv.html**.

Takes preference over **settings**. Most users should prefer using **settings** instead.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.dhcp6.extraArgs

List of additional arguments to pass to the daemon.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kea.nix>

services.kea.dhcp6.settings

Kea DHCP6 configuration as an attribute set, see **https://kea.readthedocs.io/en/kea-3.0.3/arm/dhcp6-srv.html**.

Type: JSON value

Default:

```
null
```

Example:

```
{
  interfaces-config = {
    interfaces = [
      "eth0"
    ];
  };
  lease-database = {
    name = "/var/lib/kea/dhcp6.leases";
    persist = true;
    type = "memfile";
  };
  preferred-lifetime = 3000;
```

```
      rebind-timer = 2000;
      renew-timer = 1000;
      subnet6 = [
        {
          id = 1;
          pools = [
            {
              pool = "2001:db8:1::1-2001:db8:1::ffff";
            }
          ];
          subnet = "2001:db8:1::/64";
        }
      ];
      valid-lifetime = 4000;
    }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kea.nix>

services.keepalived.enable
Whether to enable Keepalived.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.enableScriptSecurity
Don’t run scripts configured to be run as root if any part of the path is writable by a non-root user.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.package
The keepalived package to use.

Type: package

Default:

```
pkgs.keepalived
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.extraConfig
Extra lines to be added verbatim to the configuration file.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.extraGlobalDefs
Extra lines to be added verbatim to the ‘global_defs’ block of the configuration file

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.openFirewall
Whether to automatically allow VRRP and AH packets in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.secretFile
Environment variables from this file will be interpolated into the final config file using envsubst with this syntax: ‘$ENVIRONMENT’ or ‘${VARIABLE}’. The file should contain lines formatted as ‘SECRET_VAR=SECRET_VALUE’. This is useful to avoid putting secrets into the nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/keepalived.env"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.snmp.enable
Whether to enable the builtin AgentX subagent.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.snmp.enableChecker
Enable SNMP handling of checker element of KEEPALIVED MIB.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.snmp.enableKeepalived
Enable SNMP handling of vrrp element of KEEPALIVED MIB.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.snmp.enableRfc
Enable SNMP handling of RFC2787 and RFC6527 VRRP MIBs.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.snmp.enableRfcV2
Enable SNMP handling of RFC2787 VRRP MIB.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.snmp.enableRfcV3
Enable SNMP handling of RFC6527 VRRP MIB.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.snmp.enableTraps
Enable SNMP traps.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.snmp.socket
Socket to use for connecting to SNMP master agent. If this value is set to null, keepalived's default will be used, which is unix:/var/agentx/master, unless using a network namespace, when the default is udp:localhost:705.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances

Declarative vhost config

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.extraConfig

Extra lines to be added verbatim to the vrrp_instance section.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.interface

Interface for inside_network, bound by vrrp.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.noPreempt

VRRP will normally preempt a lower priority machine when a higher priority machine comes online. “nopreempt” allows the lower priority machine to maintain the master role, even when a higher priority machine comes back online. NOTE: For this to work, the initial state of this entry must be BACKUP.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.priority

For electing MASTER, highest priority wins. To be MASTER, make 50 more than other machines.

Type: signed integer

Default:

```
100
```

Declared by:

<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.state

Initial state. As soon as the other machine(s) come up, an election will be held and the machine with the highest “priority” will become MASTER. So the entry here doesn’t matter a whole lot.

Type: one of “MASTER”, “BACKUP”

Default:

```
"BACKUP"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.trackInterfaces

List of network interfaces to monitor for health tracking.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "eth0"
  "eth1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.trackScripts

List of script names to invoke for health tracking.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "chk_cmd1"
  "chk_cmd2"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.unicastPeers

Do not send VRRP adverts over VRRP multicast group. Instead it sends adverts to the following list of ip addresses using unicast design fashion. It can be cool to use VRRP FSM and features in a networking environment where multicast is not supported! IP Addresses specified can IPv4 as well as IPv6.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.unicastSrcIp

Default IP for binding vrrpd is the primary IP on interface. If you want to hide location of vrrpd, use this IP as src_addr for unicast vrrp packets.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.useVmac

Use VRRP Virtual MAC.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.virtualIps

Declarative vhost config

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.virtualIps.*.addr

IP address, optionally with a netmask: IPADDR[/MASK]

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.virtualIps.*.brd

The broadcast address on the interface.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.virtualIps.*.dev

The name of the device to add the address to.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.virtualIps.*.label
Each address may be tagged with a label string. In order to preserve compatibility with Linux−2.0 net aliases, this string must coincide with the name of the device or must be prefixed with the device name followed by colon.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.virtualIps.*.scope
The scope of the area where this address is valid.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.virtualRouterId
Arbitrary unique number 1…255. Used to differentiate multiple instances of vrrpd running on the same NIC (and hence same socket).

Type: integer between 1 and 255 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.vmacInterface
Name of the vmac interface to use. keepalived will come up with a name if you don’t specify one.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpInstances.<name>.vmacXmitBase
Send/Recv VRRP messages from base interface instead of VMAC interface.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpScripts
Declarative vrrp script config

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpScripts.<name>.extraConfig
Extra lines to be added verbatim to the vrrp_script section.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpScripts.<name>.fall
Required number of failures for KO transition.

Type: signed integer

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpScripts.<name>.group
Name of group to run the script under. Defaults to user group.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpScripts.<name>.interval
Seconds between script invocations.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpScripts.<name>.rise
Required number of successes for OK transition.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpScripts.<name>.script
(Path of) Script command to execute followed by args, i.e. cmd [args]…

Type: string

Example:

```
"${pkgs.curl} -f http://localhost:80"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpScripts.<name>.timeout
Seconds after which script is considered to have failed.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpScripts.<name>.user
Name of user to run the script under.

Type: string

Default:

```
"keepalived_script"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.keepalived.vrrpScripts.<name>.weight
Following a failure, adjust the priority by this weight.

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/keepalived/default.nix>

services.kerberos_server.enable
Whether to enable the kerberos authentication server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/system/kerberos/default.nix>

services.kerberos_server.extraKDCArgs

Extra arguments to pass to the KDC process. See **kdc**(8).

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/system/kerberos/default.nix>

services.kerberos_server.settings

Settings for the kerberos server of choice.

See the following documentation:

- Heimdal: **kdc.conf**(5)
- MIT Kerberos: **https://web.mit.edu/kerberos/krb5-1.21/doc/admin/conf_files/kdc_conf.html**

Type: open submodule of attribute set of attribute set of ((list of attribute set of ((list of (signed integer or string or boolean)) or signed integer or string or boolean)) or attribute set of ((list of (signed integer or string or boolean)) or signed integer or string or boolean) or (list of (signed integer or string or boolean)) or signed integer or string or boolean)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/system/kerberos/default.nix>

services.kerberos_server.settings.include

Files to include in the Kerberos configuration.

Type: (list of absolute path) or absolute path convertible to it

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/system/kerberos/default.nix>

services.kerberos_server.settings.includedir

Directories containing files to include in the Kerberos configuration.

Type: (list of absolute path) or absolute path convertible to it

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/system/kerberos/default.nix>

services.kerberos_server.settings.module

Modules to obtain Kerberos configuration from.

Type: (list of absolute path) or absolute path convertible to it

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/system/kerberos/default.nix>

services.kerberos_server.settings.realms

The realm(s) to serve keys for.

Type: attribute set of (open submodule of attribute set of ((list of attribute set of ((list of (signed integer or string or boolean)) or signed integer or string or boolean)) or attribute set of ((list of (signed integer or string or boolean)) or signed integer or string or boolean) or (list of (signed integer or string or boolean)) or signed integer or string or boolean))

Declared by:

<nixpkgs/nixos/modules/services/system/kerberos/default.nix>

services.kerberos_server.settings.realms.<name>.acl

The privileges granted to a user.

Type: list of (submodule)

Default:

```
[
  {
    access = "all";
    principal = "*/admin";
  }
  {
    access = "all";
    principal = "admin";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/system/kerberos/default.nix>

services.kerberos_server.settings.realms.<name>.acl.*.access

The changes the principal is allowed to make.

Important

The “all” permission does not imply the “get−keys” permission. This is consistent with the behavior of both MIT Kerberos and Heimdal.

Warning

Value “all” is allowed as a list member only if it appears alone or accompanied by “get−keys”. Any other combination involving “all” will raise an exception.

Type: (list of (one of “all”, “add”, “cpw”, “delete”, “get−keys”, “get”, “list”, “modify”)) or string convertible to it

Default:

```
"all"
```

Declared by:

<nixpkgs/nixos/modules/services/system/kerberos/default.nix>

services.kerberos_server.settings.realms.<name>.acl.*.principal

Which principal the rule applies to

Type: string

Declared by:

<nixpkgs/nixos/modules/services/system/kerberos/default.nix>

services.kerberos_server.settings.realms.<name>.acl.*.target
The principals that ‘access’ applies to.

Type: string

Default:

```
"*"
```

Declared by:
<nixpkgs/nixos/modules/services/system/kerberos/default.nix>

services.keter.enable
Whether to enable keter, a web app deployment manager. Note that this module only support loading of webapps: Keep an old app running and swap the ports when the new one is booted .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/keter>

services.keter.package
The keter package to use.

Type: package

Default:

```
pkgs.haskellPackages.keter
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/keter>

services.keter.bundle.appName
The name keter assigns to this bundle

Type: string

Default:

```
"myapp"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/keter>

services.keter.bundle.domain
The domain keter will bind to

Type: string

Default:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/keter>

services.keter.bundle.executable
The executable to be run

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−servers/keter>

services.keter.bundle.publicScript
Allows loading of public environment variables, these are emitted to the log so it shouldn't contain secrets.

Type: string

Default:

```
""
```

Example:

```
"ADMIN_EMAIL=hi@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/keter>

services.keter.bundle.secretScript
Allows loading of private environment variables

Type: string

Default:

```
""
```

Example:

```
"MY_AWS_KEY=$(cat /run/keys/AWS_ACCESS_KEY_ID)"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/keter>

services.keter.globalKeterConfig
Global config for keter, see **https://github.com/snoyberg/keter/blob/master/etc/keter−config.yaml** for reference

Type: open submodule of (YAML 1.1 value)

Declared by:
<nixpkgs/nixos/modules/services/web−servers/keter>

services.keter.globalKeterConfig.ip−from−header
You want that ip−from−header in the nginx setup case. It allows nginx setting the original ip address rather then it being localhost (due to reverse proxying)

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/keter>

services.keter.globalKeterConfig.listeners

You want that ip−from−header in the nginx setup case. It allows nginx setting the original ip address rather then it being localhost (due to reverse proxying). However if you configure keter to accept connections directly you may want to set this to false.

Type: list of (submodule)

Default:

```
[
  {
    host = "*";
    port = 6981;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/keter>

services.keter.globalKeterConfig.listeners.*.host

host

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web−servers/keter>

services.keter.globalKeterConfig.listeners.*.port

port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:

<nixpkgs/nixos/modules/services/web−servers/keter>

services.keter.globalKeterConfig.rotate−logs

emits keter logs and it's applications to stderr. which allows journald to capture them. Set to true to let keter put the logs in files (useful on non systemd systems, this is the old approach where keter handled log management)

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/keter>

services.keter.root

Mutable state folder for keter

Type: string

Default:

```
"/var/lib/keter"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/keter>

services.keybase.enable

Whether to start the Keybase service.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/keybase.nix>

services.keycloak.enable

Whether to enable the Keycloak identity and access management server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.package

The keycloak package to use.

Type: package

Default:

```
pkgs.keycloak
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.database.caCert

The SSL / TLS CA certificate that verifies the identity of the database server.

Required when PostgreSQL is used and SSL is turned on.

For MySQL, if left at ‘null’, the default Java keystore is used, which should suffice if the server certificate is issued by an official CA.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.database.createLocally

Whether a database should be automatically created on the local host. Set this to false if you plan on provisioning a local database yourself. This has no effect if services.keycloak.database.host is customized.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.database.host
Hostname of the database to connect to.

For PostgreSQL, this can also be a path to a Unix socket directory (e.g., '/run/postgresql') to use peer authentication. This requires adding 'junixsocket−common' and 'junixsocket−native−common' to **services.keycloak.plugins**.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.database.name
Database name to use when connecting to an external or manually provisioned database; has no effect when a local database is automatically provisioned.

To use this with a local database, set **services.keycloak.database.createLocally** to 'false' and create the database and user manually.

Type: string

Default:

```
"keycloak"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.database.passwordFile
The path to a file containing the database password.

Not required when using Unix socket authentication (peer auth) by setting 'host' to a socket path like '/run/postgresql'.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/db_password"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.database.port
Port of the database to connect to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default: default port of selected database

Declared by:
<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.database.type

The type of database Keycloak should connect to.

Type: one of “mysql”, “mariadb”, “postgresql”

Default:

```
"postgresql"
```

Example:

```
"mariadb"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.database.useSSL

Whether the database connection should be secured by SSL / TLS.

Defaults to ‘false’ for localhost and Unix socket connections.

Type: boolean

Default:

```
config.services.keycloak.database.host != "localhost" && !lib.hasPr \
efix "/" config.services.keycloak.database.host
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.database.username

Username to use when connecting to an external or manually provisioned database; has no effect when a local database is automatically provisioned.

To use this with a local database, set **services.keycloak.database.createLocally** to ‘false’ and create the database and user manually.

Type: string

Default:

```
"keycloak"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.initialAdminPassword

Initial password set for the temporary ‘admin’ user. The password is not stored safely and should be changed immediately in the admin panel.

See **Admin bootstrap and recovery** for details.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.plugins

Keycloak plugin jar, ear files or derivations containing them. Packaged plugins are available through ‘pkgs.keycloak.plugins’.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.realmFiles

Realm files that the server is going to import during startup. If a realm already exists in the server, the import operation is skipped. Importing the master realm is not supported. All files are expected to be in 'json' format. See the **documentation** for further information.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  ./some/realm.json
  ./another/realm.json
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.settings

Configuration options corresponding to parameters set in *conf/keycloak.conf*.

Most available options are documented at **https://www.keycloak.org/server/all−config**.

Options containing secret data should be set to an attribute set containing the attribute '_secret' − a string pointing to a file containing the value the option should be set to. See the example to get a better picture of this: in the resulting *conf/keycloak.conf* file, the 'https−key−store−password' key will be set to the contents of the */run/keys/store_password* file.

Type: open submodule of attribute set of (null or string or signed integer or boolean or attribute set of absolute path)

Example:

```
{
  hostname = "keycloak.example.com";
  https−key−store−file = "/path/to/file";
  https−key−store−password = { _secret = "/run/keys/store_passwo \
rd"; };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.settings.hostname

The hostname part of the public URL used as base for all frontend requests.

See **https://www.keycloak.org/server/hostname** for more information about hostname configuration.

Type: null or string

Default:

```
null
```

Example:

```
"keycloak.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.settings.hostname−backchannel−dynamic
Enables dynamic resolving of backchannel URLs, including hostname, scheme, port and context path.

See **https://www.keycloak.org/server/hostname** for more information about hostname configuration.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.settings.http−host
On which address Keycloak should accept new connections.

Type: string

Default:

```
"::"
```

Example:

```
"::1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.settings.http−port
On which port Keycloak should listen for new HTTP connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
80
```

Example:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.settings.http−relative−path
The path relative to ‘/’ for serving resources.

Note
In versions of Keycloak using Wildfly (<17), this defaulted to ‘/auth’. If upgrading from the Wildfly version of Keycloak, i.e. a NixOS version before 22.05, you’ll likely want to set this to ‘/auth’ to keep compatibility with your clients.

See **https://www.keycloak.org/migration/migrating−to−quarkus** for more information on migrating from Wildfly to Quarkus.

Type: string

Default:

```
"/"
```

Example:

```
"/auth"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.settings.https−port
On which port Keycloak should listen for new HTTPS connections.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
443
```

Example:

```
8443
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.sslCertificate
The path to a PEM formatted certificate to use for TLS/SSL connections.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/ssl_cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.sslCertificateKey
The path to a PEM formatted private key to use for TLS/SSL connections.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/ssl_key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keycloak.themes
Additional theme packages for Keycloak. Each theme is linked into subdirectory with a corresponding attribute name.

Theme packages consist of several subdirectories which provide different theme types: for example, ‘account’, ‘login’ etc. After adding a theme to this option you can select it by its name in Keycloak administration console.

Type: attribute set of package

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/keycloak.nix>

services.keyd.enable
Whether to enable keyd, a key remapping daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/keyd.nix>

services.keyd.package
The keyd package to use.

Type: package

Default:

```
pkgs.keyd
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/keyd.nix>

services.keyd.keyboards
Configuration for one or more device IDs. Corresponding files in the /etc/keyd/ directory are created according to the name of the keys (like ‘default’ or ‘externalKeyboard’).

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  default = {
    ids = [ "*" ];
    settings = {
      main = {
        capslock = "overload(control, esc)";
      };
    };
  };
  externalKeyboard = {
    ids = [ "1ea7:0907" ];
    settings = {
      main = {
        esc = capslock;
      };
    };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/keyd.nix>

services.keyd.keyboards.<name>.extraConfig
Extra configuration that is appended to the end of the file. **Do not** write 'ids' section here, use a separate option for it. You can use this option to define compound layers that must always be defined after the layer they are comprised.

Type: strings concatenated with "\n"

Default:
```
""
```

Example:
```
[control+shift]
h = left
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/keyd.nix>

services.keyd.keyboards.<name>.ids
Device identifiers, as shown by **keyd**(1).

Type: list of string

Default:
```
[
  "*"
]
```

Example:
```
[
  "*"
  "-0123:0456"
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/keyd.nix>

services.keyd.keyboards.<name>.settings
Configuration, except 'ids' section, that is written to */etc/keyd/<keyboard>.conf*. Appropriate names can be used to write non−alpha keys, for example "equal" instead of "=" sign (see **https://github.com/NixOS/nixpkgs/issues/236622**). See **https://github.com/rvaiya/keyd** how to configure.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:
```
{ }
```

Example:
```
{
  main = {
    capslock = "overload(control, esc)";
    rightalt = "layer(rightalt)";
  };
  rightalt = {
    h = "left";
    j = "down";
    k = "up";
```

```
      l = "right";
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/keyd.nix>

services.kimai.sites
Specification of one or more Kimai sites to serve

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kimai.nix>

services.kimai.sites.<name>.package
The kimai package to use.

Type: package

Default:

```
pkgs.kimai
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kimai.nix>

services.kimai.sites.<name>.database.charset
Database charset.

Type: string

Default:

```
"utf8mb4"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kimai.nix>

services.kimai.sites.<name>.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kimai.nix>

services.kimai.sites.<name>.database.host
Database host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kimai.nix>

services.kimai.sites.<name>.database.name
Database name.

Type: string

Default:

```
"kimai"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kimai.nix>

services.kimai.sites.<name>.database.passwordFile
A file containing the password corresponding to **database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/kimai−dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kimai.nix>

services.kimai.sites.<name>.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kimai.nix>

services.kimai.sites.<name>.database.serverVersion
MySQL *exact* version string. Not used if 'createdLocally' is set, but must be set otherwise. See **https://www.kimai.org/documentation/installation.html#column−table_name−in−where−clause−is−ambiguous** for how to set this value, especially if you're using MariaDB.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kimai.nix>

services.kimai.sites.<name>.database.socket
Path to the unix socket file to use for authentication.

Type: null or absolute path

Default:

```
/run/mysqld/mysqld.sock
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kimai.nix>

services.kimai.sites.<name>.database.user

Database user.

Type: string

Default:

```
"kimai"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kimai.nix>

services.kimai.sites.<name>.environmentFile

Securely pass environment variabels to Kimai. This can be used to set other environement variables such as MAILER_URL.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/kimai.env"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kimai.nix>

services.kimai.sites.<name>.poolConfig

Options for the Kimai PHP pool. See the documentation on ‘php−fpm.conf’ for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/kimai.nix>

services.kimai.sites.<name>.settings

Structural Kimai’s local.yaml configuration. Refer to **https://www.kimai.org/documentation/local−yaml.html#localyaml** for details.

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  kimai = {
    timesheet = {
      rounding = {
        default = {
```

```
            begin = 15;
            end = 15;
          };
        };
      };
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kimai.nix>

services.kimai.webserver
The webserver to configure for the PHP frontend.

At the moment, only ‘nginx’ is supported. PRs are welcome for support for other web servers.

Type: value “nginx” (singular enum)

Default:

```
"nginx"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/kimai.nix>

services.kismet.enable
Whether to enable kismet.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kismet.nix>

services.kismet.package
The kismet package to use.

Type: package

Default:

```
pkgs.kismet
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kismet.nix>

services.kismet.dataDir
The Kismet data directory.

Type: absolute path

Default:

```
"/var/lib/kismet"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kismet.nix>

services.kismet.extraConfig

Literal Kismet config lines appended to the site config. Note that ‘services.kismet.settings’ allows you to define all options here using Nix attribute sets.

Type: string

Default:

```
""
```

Example:

```
# Looks like the following in ‘services.kismet.settings‘:
# wepkey = [ "00:DE:AD:C0:DE:00" "FEEDFACE42" ];
wepkey=00:DE:AD:C0:DE:00,FEEDFACE42
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kismet.nix>

services.kismet.group

The group to run Kismet as.

Type: string

Default:

```
"kismet"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kismet.nix>

services.kismet.httpd.enable

True to enable the HTTP server.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kismet.nix>

services.kismet.httpd.address

The address to listen on. Note that this cannot be a hostname or Kismet will not start.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kismet.nix>

services.kismet.httpd.port

The port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2501
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kismet.nix>

services.kismet.logTypes

The log types.

Type: list of string

Default:

```
[
  "kismet"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kismet.nix>

services.kismet.serverDescription

The description of the server.

Type: string

Default:

```
"NixOS Kismet server"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kismet.nix>

services.kismet.serverName

The name of the server.

Type: string

Default:

```
"Kismet"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/kismet.nix>

services.kismet.settings

Options for Kismet. See: https://www.kismetwireless.net/docs/readme/configuring/configfiles/

Type: Kismet config stanza

Default:

```
{ }
```

Example:

```
{
  /* Examples for atoms */
  # dot11_link_bssts=false
  dot11_link_bssts = false; # Boolean
  # dot11_related_bss_window=10000000
  dot11_related_bss_window = 10000000; # Integer
  # devicefound=00:11:22:33:44:55
  devicefound = "00:11:22:33:44:55"; # String
  # log_types+=wiglecsv
  log_types' = "wiglecsv";
  /* Examples for lists of atoms */
  # wepkey=00:DE:AD:C0:DE:00,FEEDFACE42
  wepkey = [ "00:DE:AD:C0:DE:00" "FEEDFACE42" ];
  # alert=ADHOCCONFLICT,5/min,1/sec
  # alert=ADVCRYPTCHANGE,5/min,1/sec
  alert = [
```

```
      [ "ADHOCCONFLICT"  "5/min" "1/sec" ]
      [ "ADVCRYPTCHANGE" "5/min" "1/sec" ]
    ];
    /* Examples for sets of atoms */
    # source=wlan0:name=ath11k
    source.wlan0 = { name = "ath11k"; };
    /* Examples with colon-suffixed headers */
    # gps=gpsd:host=localhost,port=2947
    gps.gpsd = {
      host = "localhost";
      port = 2947;
    };
    # apspoof=Foo1:ssid=Bar1,validmacs="00:11:22:33:44:55,aa:bb:cc:dd \
  :ee:ff"
    # apspoof=Foo1:ssid=Bar2,validmacs="01:12:23:34:45:56,ab:bc:cd:de \
  :ef:f0"
    # apspoof=Foo2:ssid=Baz1,validmacs="11:22:33:44:55:66,bb:cc:dd:ee \
  :ff:00"
    apspoof.Foo1 = [
      { ssid = "Bar1"; validmacs = [ "00:11:22:33:44:55" "aa:bb:cc:dd \
  :ee:ff" ]; }
      { ssid = "Bar2"; validmacs = [ "01:12:23:34:45:56" "ab:bc:cd:de \
  :ef:f0" ]; }
    ];
    # because Foo1 is a list, Foo2 needs to be as well
    apspoof.Foo2 = [
      {
        ssid = "Bar2";
        validmacs = [ "00:11:22:33:44:55" "aa:bb:cc:dd:ee:ff" ];
      };
    ];
  }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kismet.nix>

services.kismet.user
The user to run Kismet as.

Type: string

Default:

```
"kismet"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kismet.nix>

services.kiwix-serve.enable
Whether to enable the kiwix-serve server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/kiwix-serve.nix>

services.kiwix-serve.package
The kiwix-tools package to use.

Type: package

Default:

```
pkgs.kiwix-tools
```

Declared by:
<nixpkgs/nixos/modules/services/misc/kiwix-serve.nix>

services.kiwix-serve.address
Listen only on the specified IP address. Specify “ipv4”, “ipv6” or “all” to listen on all IPv4, IPv6, or both types of addresses, respectively.

Type: string

Default:

```
"all"
```

Example:

```
"ipv4"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/kiwix-serve.nix>

services.kiwix-serve.extraArgs
Extra arguments to pass to kiwix-serve.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--verbose"
  "--skipInvalid"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/kiwix-serve.nix>

services.kiwix-serve.library
A set of ZIM files to serve. The key is used as the name for the ZIM files (e.g. in the example, the files will be served as ‘wikipedia.zim’ and ‘nix.zim’).

Exclusive with **services.kiwix-serve.libraryPath**.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  wikipedia = "/data/wikipedia_en_all_maxi_2026-02.zim";
  nix = pkgs.fetchurl {
    url = "https://download.kiwix.org/zim/devdocs/devdocs_en_nix_20 \
```

```
26-01.zim";
    hash = "sha256-QxB9qDKSzzEU8t4droI08BXdYn+HMVkgiJMO3SoGTqM=";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/kiwix-serve.nix>

services.kiwix-serve.libraryPath
An XML library file listing ZIM files to serve. For more information, see **https://wiki.kiwix.org/wiki/Kiwix-manage**.

Exclusive with **services.kiwix-serve.library**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/library.xml"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/kiwix-serve.nix>

services.kiwix-serve.openFirewall
Whether to open the firewall for the configured port.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/kiwix-serve.nix>

services.kiwix-serve.port
The port on which to run kiwix-serve.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/misc/kiwix-serve.nix>

services.klipper.enable
Whether to enable Klipper, the 3D printer firmware.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.package
The klipper package to use.

Type: package

Default:

```
pkgs.klipper
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.apiSocket
Path of the API socket to create.

Type: null or absolute path

Default:

```
"/run/klipper/api"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.configDir
Path to Klipper config file.

Type: absolute path

Default:

```
"/var/lib/klipper"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.configFile
Path to default Klipper config.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.extraSettings
Extra lines to append to the generated Klipper configuration.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.firmwares
Firmwares Klipper should manage

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  mcu = {
    configFile = {
      _type = "literalExpression";
      text = "./klipper-firmware.cfg";
    };
    enable = true;
    enableKlipperFlash = true;
    serial = "/dev/serial/by-id/usb-Klipper_123ABCDEF";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.firmwares.<name>.enable
Whether to enable building of firmware for manual flashing .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.firmwares.<name>.enableKlipperFlash
Whether to enable flashings scripts for firmware. This will add 'klipper-flash-$mcu' scripts to your environment which can be called to flash the firmware. Please check the configs at **klipper** whether your board supports flashing via 'make flash' .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.firmwares.<name>.package
Path to the built firmware package.

Type: null or package *(read only)*

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.firmwares.<name>.configFile
Path to firmware config which is generated using ‘klipper−genconf’

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.firmwares.<name>.klipperFlashPackage
Path to the built klipper−flash package.

Type: null or package *(read only)*

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.firmwares.<name>.serial
Path to serial port this printer is connected to. Derived from ‘service.klipper.settings’ by default.

Type: null or absolute path

Default:

```
config.services.klipper.settings.<name>.serial
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.group
Group account under which Klipper runs.

If null is specified (default), a temporary user will be created by systemd.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.inputTTY
Path of the virtual printer symlink to create.

Type: absolute path

Default:

```
"/run/klipper/tty"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.logFile
Path of the file Klipper should log to. If ‘null’, it logs to stdout, which is not recommended by upstream.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/klipper/klipper.log"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.mutableConfig
Whether to manage the config outside of NixOS.

It will still be initialized with the defined NixOS config if the file doesn't already exist.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.octoprintIntegration
Allows Octoprint to control Klipper.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.settings
Configuration for Klipper. See the **documentation** for supported values.

Type: null or (attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a non−empty list of them))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.klipper.user
User account under which Klipper runs.

If null is specified (default), a temporary user will be created by systemd.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/klipper.nix>

services.kmonad.enable
Whether to enable KMonad: an advanced keyboard manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kmonad.nix>

services.kmonad.package
The KMonad package to use.

Type: package

Default:

```
pkgs.kmonad
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kmonad.nix>

services.kmonad.extraArgs
Extra arguments to pass to KMonad.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--log-level"
  "debug"
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kmonad.nix>

services.kmonad.keyboards
Keyboard configuration.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kmonad.nix>

services.kmonad.keyboards.<name>.enableHardening
Whether to enable systemd hardening.

Note
If KMonad is used to execute shell commands, hardening may make some of them fail.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kmonad.nix>

services.kmonad.keyboards.<name>.config
Keyboard configuration.

Type: strings concatenated with “\n”

Declared by:
<nixpkgs/nixos/modules/services/hardware/kmonad.nix>

services.kmonad.keyboards.<name>.defcfg.enable
Whether to enable automatic generation of the defcfg block.

When this option is set to true, the config option for this keyboard should not include a defcfg block .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kmonad.nix>

services.kmonad.keyboards.<name>.defcfg.allowCommands
Whether to enable keys to run shell commands.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kmonad.nix>

services.kmonad.keyboards.<name>.defcfg.compose.delay
The delay (in milliseconds) between compose key sequences.

Type: unsigned integer, meaning >=0

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kmonad.nix>

services.kmonad.keyboards.<name>.defcfg.compose.key
The (optional) compose key to use.

Type: null or string

Default:

```
"ralt"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kmonad.nix>

services.kmonad.keyboards.<name>.defcfg.fallthrough
Whether to enable re−emitting unhandled key events.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kmonad.nix>

services.kmonad.keyboards.<name>.device
Path to the keyboard's device file.

Type: absolute path

Example:

```
"/dev/input/by−id/some−dev"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kmonad.nix>

services.kmonad.keyboards.<name>.extraGroups
Extra permission groups to attach to the KMonad instance for this keyboard.

Since KMonad runs as an unprivileged user, it may sometimes need extra permissions in order to read the keyboard device file. If your keyboard's device file isn't in the input group, you'll need to list its group in this option.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kmonad.nix>

services.kmonad.keyboards.<name>.name
Keyboard name.

Type: string

Default:

```
"‹name›"
```

Example:

```
"laptop−internal"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/kmonad.nix>

services.kmscon.enable
Whether to enable Use kmscon instead of autovt.

Kmscon is a simple terminal emulator based on linux kernel mode setting (KMS). It is an attempt to replace the in−kernel VT implementation with a userspace console. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/ttys/kmscon.nix>

services.kmscon.package
The kmscon package to use.

Type: package

Default:

```
pkgs.kmscon
```

Declared by:
<nixpkgs/nixos/modules/services/ttys/kmscon.nix>

services.kmscon.extraConfig
Extra contents of the kmscon.conf file.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"font-size=14"
```

Declared by:
<nixpkgs/nixos/modules/services/ttys/kmscon.nix>

services.kmscon.extraOptions
Extra flags to pass to kmscon.

Type: strings concatenated with " "

Default:

```
""
```

Example:

```
"--term xterm-256color"
```

Declared by:
<nixpkgs/nixos/modules/services/ttys/kmscon.nix>

services.kmscon.fonts
Fonts used by kmscon, in order of priority.

Type: null or (non-empty (list of (submodule)))

Default:

```
null
```

Example:

```
[ { name = "Source Code Pro"; package = pkgs.source-code-pro; } ]
```

Declared by:
<nixpkgs/nixos/modules/services/ttys/kmscon.nix>

services.kmscon.fonts.*.package
Package providing the font.

Type: package

Declared by:
<nixpkgs/nixos/modules/services/ttys/kmscon.nix>

services.kmscon.fonts.*.name
Font name, as used by fontconfig.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/ttys/kmscon.nix>

services.kmscon.hwRender
Whether to enable 3D hardware acceleration to render the console.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/ttys/kmscon.nix>

services.kmscon.term
Value for the TERM environment variable.

Type: null or string

Default:

```
null
```

Example:

```
"xterm-256color"
```

Declared by:
<nixpkgs/nixos/modules/services/ttys/kmscon.nix>

services.kmscon.useXkbConfig
Whether to enable configure keymap from xserver keyboard settings…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/ttys/kmscon.nix>

services.knot.enable

Whether to enable Knot authoritative−only DNS server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/knot.nix>

services.knot.enableXDP

Extends the systemd unit with permissions to allow for the use of the eXpress Data Path (XDP).

Note
Make sure to read up on functional **limitations** when running in XDP mode.

Type: boolean

Default:

```
  Enabled when the ‘xdp.listen‘ setting is configured through ‘sett \
ings‘.
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/knot.nix>

services.knot.package

The knot−dns package to use.

Type: package

Default:

```
pkgs.knot−dns
```

Declared by:

<nixpkgs/nixos/modules/services/networking/knot.nix>

services.knot.checkConfig

Toggles the configuration test at build time. It runs in a sandbox, and therefore cannot be used in all scenarios.

Type: boolean

Default:

```
  Disabled when the config uses ‘keyFiles‘ or ‘enableXDP‘.
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/knot.nix>

services.knot.extraArgs

List of additional command line parameters for knotd

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/knot.nix>

services.knot.keyFiles

A list of files containing additional configuration to be included using the include directive. This option allows to include configuration like TSIG keys without exposing them to the nix store readable to any process. Note that using this option will also disable configuration checks at build time.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/knot.nix>

services.knot.settings

Extra configuration as nix values.

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/knot.nix>

services.knot.settingsFile

As alternative to ‘settings’, you can provide whole configuration directly in the almost−YAML format of Knot DNS. You might want to utilize ‘pkgs.writeText "knot.conf" "longConfigString"’ for this.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/knot.nix>

services.knot−resolver.enable

Whether to enable knot−resolver (version 6) domain name server. DNSSEC validation is turned on by default. If you want to use knot−resolver 5, please use services.kresd.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/knot−resolver.nix>

services.knot−resolver.managerPackage

The knot−resolver−manager_6 package to use.

Type: package

Default:

```
pkgs.knot−resolver−manager_6
```

Example:

```
pkgs.knot−resolver−manager_6.override { extraFeatures = true; }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/knot−resolver.nix>

services.knot−resolver.settings

Nix−based (RFC 42) configuration for Knot Resolver. For configuration reference (described as YAML) see **https://www.knot−resolver.cz/documentation/latest/config−overview.html**

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/knot−resolver.nix>

services.knot−resolver.settings.network.listen

List of interfaces to listen to and its configuration.

Type: list of (open submodule of (YAML 1.1 value))

Default:

```
[
  {
    interface = [ "127.0.0.1" ];
    kind = "dns";
    freebind = false;
  }
]
++ lib.optionals config.networking.enableIPv6 [
  {
    interface = [ "::1" ];
    kind = "dns";
    freebind = false;
  }
 ];
```

Declared by:

<nixpkgs/nixos/modules/services/networking/knot−resolver.nix>

services.knot−resolver.settings.workers

The number of running kresd (Knot Resolver daemon) workers. If set to ‘auto’, it is equal to number of CPUs available.

Type: value “auto” (singular enum) or (unsigned integer, meaning >=0)

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/knot−resolver.nix>

services.komga.enable
Whether to enable Komga, a free and open source comics/mangas media server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/komga.nix>

services.komga.group
Group under which Komga runs.

Type: string

Default:

```
"komga"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/komga.nix>

services.komga.openFirewall
Whether to open the firewall for the port in **services.komga.settings.server.port**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/komga.nix>

services.komga.settings
Komga configuration.

See **documentation**.

Type: open submodule of (YAML 1.1 value)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/komga.nix>

services.komga.settings.server.port
The port that Komga will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/komga.nix>

services.komga.stateDir

State and configuration directory Komga will use.

Type: string

Default:

```
"/var/lib/komga"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/komga.nix>

services.komga.user

User account under which Komga runs.

Type: string

Default:

```
"komga"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/komga.nix>

services.komodo−periphery.enable

Whether to enable Periphery, a multi−server Docker and Git deployment agent by Komodo.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.package

The komodo package to use.

Type: package

Default:

```
pkgs.komodo
```

Declared by:

<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.allowedIps

IP addresses or subnets allowed to call the periphery API. Empty list allows all.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "::ffff:12.34.56.78"
  "10.0.10.0/24"
]
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.bindIp
IP address to bind to.

Type: string

Default:

```
"[::]"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.configFile
Path to the periphery configuration file. If null, a configuration file will be generated from the module options.

Type: null or absolute path

Default:

```
null
```

Example:

```
pkgs.writeText "periphery.toml" ''
  port = 8120
  bind_ip = "[::]"
  ssl_enabled = true
  [logging]
  level = "info"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.containerStatsPollingRate
Container stats polling interval.

Type: string

Default:

```
"30−sec"
```

Example:

```
"1−min"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.disableContainerExec
Disable remote container shell access through Periphery.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.disableTerminals
Disable remote shell access through Periphery.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.environment
Environment variables to set for the service.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  DOCKER_HOST = "unix:///var/run/docker.sock";
  RUST_LOG = "komodo=debug";
}
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.environmentFile
Environment file for additional configuration via environment variables.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/komodo−periphery.env"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.excludeDiskMounts
Exclude these mount paths from disk reporting.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/tmp"
  "/boot"
]
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.extraSettings

Extra settings to add to the generated TOML config.

Type: TOML value

Default:

```
{ }
```

Example:

```
{
  secrets = {
    GITHUB_TOKEN = "ghp_xxxx";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.group

Group under which the Periphery agent runs.

Type: string

Default:

```
"komodo−periphery"
```

Declared by:

<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.includeDiskMounts

Only include these mount paths in disk reporting.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/mnt/data"
  "/mnt/backup"
]
```

Declared by:

<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.legacyComposeCli

Use ‘docker−compose’ instead of ‘docker compose’.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.logging.level
Logging verbosity level.

Type: one of “off”, “error”, “warn”, “info”, “debug”, “trace”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.logging.otlpEndpoint
OpenTelemetry OTLP endpoint for traces.

Type: string

Default:

```
""
```

Example:

```
"http://localhost:4317"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.logging.stdio
Logging format for stdout/stderr.

Type: one of “standard”, “json”, “none”

Default:

```
"standard"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.passkeys
Passkeys required to access the periphery API. WARNING: These will be stored in the Nix store in plain text!

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "your−secure−passkey"
]
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.port
Port for the Periphery agent to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8120
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo-periphery.nix>

services.komodo-periphery.rootDirectory
Root directory for Komodo Periphery data.

Type: absolute path

Default:

```
"/var/lib/komodo-periphery"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo-periphery.nix>

services.komodo-periphery.ssl.enable
Whether to enable SSL/TLS support.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo-periphery.nix>

services.komodo-periphery.ssl.certFile
Path to SSL certificate file.

Type: absolute path

Default:

```
"${config.services.komodo-periphery.rootDirectory}/ssl/cert.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo-periphery.nix>

services.komodo-periphery.ssl.keyFile
Path to SSL key file.

Type: absolute path

Default:

```
"${config.services.komodo-periphery.rootDirectory}/ssl/key.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo-periphery.nix>

services.komodo-periphery.statsPollingRate
System stats polling interval.

Type: string

Default:

```
"5-sec"
```

Example:

```
"10-sec"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.komodo−periphery.user
User under which the Periphery agent runs.

Type: string

Default:

```
"komodo−periphery"
```

Declared by:
<nixpkgs/nixos/modules/services/admin/komodo−periphery.nix>

services.kresd.enable
Whether to enable knot−resolver (version 5) domain name server. DNSSEC validation is turned on by default. You can run ‘kresd−cli 1’ and give commands interactively to kresd@1.service. If you want to user knot−resolver 6, please use services.knot−resolver.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kresd.nix>

services.kresd.package
The knot−resolver_5 package to use.

Type: package

Default:

```
pkgs.knot−resolver_5
```

Example:

```
knot−resolver_5.override { extraFeatures = true; }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kresd.nix>

services.kresd.extraConfig
Extra lines to be added verbatim to the generated configuration file. See upstream documentation **https://www.knot−resolver.cz/documentation/stable/config−overview.html** for more details.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kresd.nix>

services.kresd.instances
The number of instances to start. They will be called kresd@{1,2,…}.service. Knot Resolver uses no threads, so this is the way to scale. You can dynamically start/stop them at will, so this is just system default.

Type: unsigned integer, meaning >=0

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kresd.nix>

services.kresd.listenDoH
Addresses and ports on which kresd should provide DNS over HTTPS/2 (see RFC 8484). For detailed syntax see ListenStream in **systemd.socket**(5).

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "198.51.100.1:443"
  "[2001:db8::1]:443"
  "443"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kresd.nix>

services.kresd.listenPlain
What addresses and ports the server should listen on. For detailed syntax see ListenStream in **systemd.socket**(5).

Type: list of string

Default:

```
[
  "[::1]:53"
  "127.0.0.1:53"
]
```

Example:

```
[
  "53"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kresd.nix>

services.kresd.listenTLS
Addresses and ports on which kresd should provide DNS over TLS (see RFC 7858). For detailed syntax see ListenStream in **systemd.socket**(5).

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "198.51.100.1:853"
  "[2001:db8::1]:853"
  "853"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/kresd.nix>

services.kthxbye.enable
Whether to enable kthxbye alert acknowledgement management daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kthxbye.nix>

services.kthxbye.package
The kthxbye package to use.

Type: package

Default:

```
pkgs.kthxbye
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kthxbye.nix>

services.kthxbye.alertmanager.timeout
Alertmanager request timeout duration in the **time.Duration** format.

Type: string

Default:

```
"1m0s"
```

Example:

```
"30s"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kthxbye.nix>

services.kthxbye.alertmanager.uri
Alertmanager URI to use.

Type: string

Default:

```
"http://localhost:9093"
```

Example:

```
"https://alertmanager.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kthxbye.nix>

services.kthxbye.extendBy
Extend silences by adding DURATION seconds.

DURATION should be provided in the **time.Duration** format.

Type: string

Default:

```
"15m0s"
```

Example:

```
"6h0m0s"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kthxbye.nix>

services.kthxbye.extendIfExpiringIn
Extend silences that are about to expire in the next DURATION seconds.

DURATION should be provided in the **time.Duration** format.

Type: string

Default:

```
"5m0s"
```

Example:

```
"1m0s"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kthxbye.nix>

services.kthxbye.extendWithPrefix
Extend silences with comment starting with PREFIX string.

Type: string

Default:

```
"ACK!"
```

Example:

```
"!perma-silence"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kthxbye.nix>

services.kthxbye.extraOptions
Extra command line options.

Documentation can be found **here**.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--extend-with-prefix 'ACK!'"
];
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kthxbye.nix>

services.kthxbye.interval
Silence check interval duration in the **time.Duration** format.

Type: string

Default:

```
"45s"
```

Example:

```
"30s"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kthxbye.nix>

services.kthxbye.listenAddress
The address to listen on for HTTP requests.

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kthxbye.nix>

services.kthxbye.logJSON
Format logged messages as JSON.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kthxbye.nix>

services.kthxbye.maxDuration
Maximum duration of a silence, it won’t be extended anymore after reaching it.

Duration should be provided in the **time.Duration** format.

Type: null or string

Default:

```
null
```

Example:

```
"30d"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kthxbye.nix>

services.kthxbye.openFirewall
Whether to open ports in the firewall needed for the daemon to function.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/kthxbye.nix>

services.kthxbye.port

The port to listen on for HTTP requests.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/kthxbye.nix>

services.kubernetes.package

The kubernetes package to use.

Type: package

Default:

```
pkgs.kubernetes
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubernetes.addonManager.enable

Whether to enable Kubernetes addon manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/addon−manager.nix>

services.kubernetes.addonManager.addons

Kubernetes addons (any kind of Kubernetes resource can be an addon).

Type: attribute set of ((attribute set) or list of (attribute set))

Default:

```
{ }
```

Example:

```
{
  "my−service" = {
    "apiVersion" = "v1";
    "kind" = "Service";
    "metadata" = {
      "name" = "my−service";
      "namespace" = "default";
    };
    "spec" = { ... };
  };
}
// import <nixpkgs/nixos/modules/services/cluster/kubernetes/dns.ni \
x> { cfg = config.services.kubernetes; };
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/addon−manager.nix>

services.kubernetes.addonManager.bootstrapAddons
Bootstrap addons are like regular addons, but they are applied with cluster−admin rights. They are applied at addon−manager startup only.

Type: attribute set of (attribute set)

Default:

```
{ }
```

Example:

```
{
  "my−service" = {
    "apiVersion" = "v1";
    "kind" = "Service";
    "metadata" = {
      "name" = "my−service";
      "namespace" = "default";
    };
    "spec" = { ... };
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/addon−manager.nix>

services.kubernetes.addons.dns.enable
Whether to enable kubernetes dns addon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/addons/dns.nix>

services.kubernetes.addons.dns.clusterDomain
Dns cluster domain

Type: string

Default:

```
"cluster.local"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/addons/dns.nix>

services.kubernetes.addons.dns.clusterIp
Dns addon clusterIP

Type: string

Default: The x.y.z.254 IP of config.services.kubernetes.apiserver.serviceClusterIpRange.

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/addons/dns.nix>

services.kubernetes.addons.dns.corednsImage
Docker image to seed for the CoreDNS container.

Type: package

Default:

```
<derivation docker-image-coredns.tar.gz>
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/addons/dns.nix>

services.kubernetes.addons.dns.corefile
Custom coredns corefile configuration.

See: **https://coredns.io/manual/toc/#configuration**.

Type: string

Default:

```
      .:10053 {
        errors
        health :10054
        kubernetes ${config.services.kubernetes.addons.dns.clusterDomai \
    n} in-addr.arpa ip6.arpa {
          pods insecure
          fallthrough in-addr.arpa ip6.arpa
        }
        prometheus :10055
        forward . /etc/resolv.conf
        cache 30
        loop
        reload
        loadbalance
      }
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/addons/dns.nix>

services.kubernetes.addons.dns.reconcileMode
Controls the addon manager reconciliation mode for the DNS addon.

Setting reconcile mode to EnsureExists makes it possible to tailor DNS behavior by editing the coredns ConfigMap.

See: **https://github.com/kubernetes/kubernetes/blob/master/cluster/addons/addon-manager/README.md**.

Type: one of “Reconcile”, “EnsureExists”

Default:

```
"Reconcile"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/addons/dns.nix>

services.kubernetes.addons.dns.replicas

Number of DNS pod replicas to deploy in the cluster.

Type: signed integer

Default:

```
2
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/addons/dns.nix>

services.kubernetes.apiserver.enable

Whether to enable Kubernetes apiserver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.enableAdmissionPlugins

Kubernetes admission control plugins to enable. See **https://kubernetes.io/docs/admin/admission−controllers/**

Type: list of string

Default:

```
[
  "NamespaceLifecycle"
  "LimitRanger"
  "ServiceAccount"
  "ResourceQuota"
  "DefaultStorageClass"
  "DefaultTolerationSeconds"
  "NodeRestriction"
]
```

Example:

```
[
  "NamespaceLifecycle"
  "NamespaceExists"
  "LimitRanger"
  "SecurityContextDeny"
  "ServiceAccount"
  "ResourceQuota"
  "PodSecurityPolicy"
  "NodeRestriction"
  "DefaultStorageClass"
]
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.advertiseAddress

Kubernetes apiserver IP address on which to advertise the apiserver to members of the cluster. This address must be reachable by the rest of the cluster.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.allowPrivileged

Whether to allow privileged containers on Kubernetes.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.apiAudiences

Kubernetes apiserver ServiceAccount issuer.

Type: string

Default:

```
"api,https://kubernetes.default.svc"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.authorizationMode

Kubernetes apiserver authorization mode (AlwaysAllow/AlwaysDeny/ABAC/Webhook/RBAC/Node). See **https://kubernetes.io/docs/reference/access−authn−authz/authorization/**

Type: list of (one of “AlwaysAllow”, “AlwaysDeny”, “ABAC”, “Webhook”, “RBAC”, “Node”)

Default:

```
[
  "RBAC"
  "Node"
]
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.authorizationPolicy

Kubernetes apiserver authorization policy file. See **https://kubernetes.io/docs/reference/access−authn−authz/authorization/**

Type: list of (attribute set)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.basicAuthFile

Kubernetes apiserver basic authentication file. See **https://kubernetes.io/docs/reference/access−authn−authz/authentication**

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.bindAddress

The IP address on which to listen for the −−secure−port port. The associated interface(s) must be reachable by the rest of the cluster, and by CLI/web clients.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.clientCaFile

Kubernetes apiserver CA file for client auth.

Type: null or absolute path

Default:

```
config.services.kubernetes.caFile
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.disableAdmissionPlugins

Kubernetes admission control plugins to disable. See **https://kubernetes.io/docs/admin/admission−controllers/**

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.etcd.caFile

Etcd ca file.

Type: null or absolute path

Default:

```
config.services.kubernetes.caFile
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.etcd.certFile
Etcd cert file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.etcd.keyFile
Etcd key file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.etcd.servers
List of etcd servers.

Type: list of string

Default:

```
[
  "http://127.0.0.1:2379"
]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.extraOpts
Kubernetes apiserver extra command line options.

Type: strings concatenated with " "

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.extraSANs
Extra x509 Subject Alternative Names to be added to the kubernetes apiserver tls cert.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.featureGates
Attribute set of feature gates.

Type: attribute set of boolean

Default:

```
config.services.kubernetes.featureGates
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.kubeletClientCaFile
Path to a cert file for connecting to kubelet.

Type: null or absolute path

Default:

```
config.services.kubernetes.caFile
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.kubeletClientCertFile
Client certificate to use for connections to kubelet.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.kubeletClientKeyFile
Key to use for connections to kubelet.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.preferredAddressTypes
List of the preferred NodeAddressTypes to use for kubelet connections.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.proxyClientCertFile
Client certificate to use for connections to proxy.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.proxyClientKeyFile
Key to use for connections to proxy.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.runtimeConfig
Api runtime configuration. See **https://kubernetes.io/docs/tasks/administer−cluster/cluster−management/**

Type: string

Default:

```
"authentication.k8s.io/v1beta1=true"
```

Example:

```
"api/all=false,api/v1=true"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.securePort
Kubernetes apiserver secure port.

Type: signed integer

Default:

```
6443
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.serviceAccountIssuer
Kubernetes apiserver ServiceAccount issuer.

Type: string

Default:

```
"https://kubernetes.default.svc"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.serviceAccountKeyFile
File containing PEM−encoded x509 RSA or ECDSA private or public keys, used to verify ServiceAccount tokens. The specified file can contain multiple keys, and the flag can be specified multiple times with different files. If unspecified, −−tls−private−key−file is used. Must be specified when −−service−account−signing−key is provided

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.serviceAccountSigningKeyFile
Path to the file that contains the current private key of the service account token issuer. The issuer will sign issued ID tokens with this private key.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.serviceClusterIpRange

A CIDR notation IP range from which to assign service cluster IPs. This must not overlap with any IP ranges assigned to nodes for pods.

Type: string

Default:

```
"10.0.0.0/24"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.storageBackend

Kubernetes apiserver storage backend.

Type: one of “etcd2”, “etcd3”

Default:

```
"etcd3"
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.tlsCertFile

Kubernetes apiserver certificate file.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.tlsKeyFile

Kubernetes apiserver private key file.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.tokenAuthFile

Kubernetes apiserver token authentication file. See **https://kubernetes.io/docs/reference/access−authn−authz/authentication**

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.verbosity

Optional glog verbosity level for logging statements. See **https://github.com/kubernetes/community/blob/master/contributors/devel/logging.md**

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserver.webhookConfig
Kubernetes apiserver Webhook config file. It uses the kubeconfig file format. See **https://kubernetes.io/docs/reference/access-authn-authz/webhook/**

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/apiserver.nix>

services.kubernetes.apiserverAddress
Clusterwide accessible address for the kubernetes apiserver, including protocol and optional port.

Type: string

Example:

```
"https://kubernetes-apiserver.example.com:6443"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubernetes.caFile
Default kubernetes certificate authority

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubernetes.clusterCidr
Kubernetes controller manager and proxy CIDR Range for Pods in cluster.

Type: null or string

Default:

```
"10.1.0.0/16"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubernetes.controllerManager.enable
Whether to enable Kubernetes controller manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.allocateNodeCIDRs
Whether to automatically allocate CIDR ranges for cluster nodes.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.bindAddress
Kubernetes controller manager listening address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.clusterCidr
Kubernetes CIDR Range for Pods in cluster.

Type: string

Default:

```
config.services.kubernetes.clusterCidr
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.extraOpts
Kubernetes controller manager extra command line options.

Type: strings concatenated with " "

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.featureGates
Attribute set of feature gates.

Type: attribute set of boolean

Default:

```
config.services.kubernetes.featureGates
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.kubeconfig.caFile
Kubernetes controller manager certificate authority file used to connect to kube−apiserver.

Type: null or absolute path

Default:

```
config.services.kubernetes.caFile
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.kubeconfig.certFile
Kubernetes controller manager client certificate file used to connect to kube−apiserver.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.kubeconfig.keyFile
Kubernetes controller manager client key file used to connect to kube−apiserver.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.kubeconfig.server
Kubernetes controller manager kube−apiserver server address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.leaderElect
Whether to start leader election before executing main loop.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.rootCaFile
Kubernetes controller manager certificate authority file included in service account's token secret.

Type: null or absolute path

Default:

```
config.services.kubernetes.caFile
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.securePort
Kubernetes controller manager secure listening port.

Type: signed integer

Default:

```
10252
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.serviceAccountKeyFile
Kubernetes controller manager PEM−encoded private RSA key file used to sign service account tokens

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.tlsCertFile
Kubernetes controller−manager certificate file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.tlsKeyFile
Kubernetes controller−manager private key file.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.controllerManager.verbosity
Optional glog verbosity level for logging statements. See **https://github.com/kubernetes/community/blob/master/contributors/devel/logging.md**

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/controller−manager.nix>

services.kubernetes.dataDir
Kubernetes root directory for managing kubelet files.

Type: absolute path

Default:

```
"/var/lib/kubernetes"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubernetes.easyCerts
Automatically setup x509 certificates and keys for the entire cluster.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubernetes.featureGates
List set of feature gates.

Type: attribute set of boolean

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubernetes.flannel.enable
Whether to enable flannel networking.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/flannel.nix>

services.kubernetes.flannel.openFirewallPorts
Whether to open the Flannel UDP ports in the firewall on all interfaces.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/flannel.nix>

services.kubernetes.kubeconfig.caFile
Default kubeconfig certificate authority file used to connect to kube−apiserver.

Type: null or absolute path

Default:

```
config.services.kubernetes.caFile
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubernetes.kubeconfig.certFile
Default kubeconfig client certificate file used to connect to kube−apiserver.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubernetes.kubeconfig.keyFile
Default kubeconfig client key file used to connect to kube−apiserver.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubernetes.kubeconfig.server
Default kubeconfig kube−apiserver server address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubernetes.kubelet.enable
Whether to enable Kubernetes kubelet.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.address
Kubernetes kubelet info server listening address.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.clientCaFile
Kubernetes apiserver CA file for client authentication.

Type: null or absolute path

Default:

```
config.services.kubernetes.caFile
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.clusterDns
Use alternative DNS.

Type: list of string

Default:

```
[
  "10.1.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.clusterDomain
Use alternative domain.

Type: string

Default:

```
config.services.kubernetes.addons.dns.clusterDomain
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.cni.packages
List of network plugin packages to install.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.cni.config
Kubernetes CNI configuration.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[{
  "cniVersion": "0.3.1",
  "name": "mynet",
  "type": "bridge",
  "bridge": "cni0",
  "isGateway": true,
  "ipMasq": true,
  "ipam": {
      "type": "host-local",
      "subnet": "10.22.0.0/16",
      "routes": [
          { "dst": "0.0.0.0/0" }
      ]
  }
```

```
} {
  "cniVersion": "0.3.1",
  "type": "loopback"
}]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.cni.configDir
Path to Kubernetes CNI configuration directory.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.containerRuntimeEndpoint
Endpoint at which to find the container runtime api interface/socket

Type: string

Default:

```
"unix:///run/containerd/containerd.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.extraConfig
Kubernetes kubelet extra configuration file entries.

See also **Set Kubelet Parameters Via A Configuration File** and **Kubelet Configuration**.

Type: attribute set of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.extraOpts
Kubernetes kubelet extra command line options.

Type: strings concatenated with " "

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.featureGates
Attribute set of feature gate

Type: attribute set of boolean

Default:

```
config.services.kubernetes.featureGates
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.healthz.bind
Kubernetes kubelet healthz listening address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.healthz.port
Kubernetes kubelet healthz port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
10248
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.hostname
Kubernetes kubelet hostname override.

Type: string

Default:

```
config.networking.fqdnOrHostName
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.kubeconfig.caFile
Kubelet certificate authority file used to connect to kube−apiserver.

Type: null or absolute path

Default:

```
config.services.kubernetes.caFile
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.kubeconfig.certFile
Kubelet client certificate file used to connect to kube−apiserver.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.kubeconfig.keyFile
Kubelet client key file used to connect to kube−apiserver.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.kubeconfig.server
Kubelet kube−apiserver server address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.manifests
List of manifests to bootstrap with kubelet (only pods can be created as manifest entry)

Type: attribute set of (attribute set)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.nodeIp
IP address of the node. If set, kubelet will use this IP address for the node.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.port
Kubernetes kubelet info server listening port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
10250
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.registerNode
Whether to auto register kubelet with API server.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.seedDockerImages
List of docker images to preload on system

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.taints
Node taints (https://kubernetes.io/docs/concepts/configuration/assign−pod−node/).

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.taints.<name>.effect
Effect of taint.

Type: one of “NoSchedule”, “PreferNoSchedule”, “NoExecute”

Example:

```
"NoSchedule"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.taints.<name>.key
Key of taint.

Type: string

Default: Name of this submodule.

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.taints.<name>.value
Value of taint.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.tlsCertFile
File containing x509 Certificate for HTTPS.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.tlsKeyFile
File containing x509 private key matching tlsCertFile.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.unschedulable
Whether to set node taint to unschedulable=true as it is the case of node that has only master role.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.kubelet.verbosity
Optional glog verbosity level for logging statements. See **https://github.com/kubernetes/community/blob/master/contributors/devel/logging.md**

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/kubelet.nix>

services.kubernetes.lib
Common functions for the kubernetes modules.

Type: attribute set

Default:

```
{
  mkCert = <function, args: {CN, action?, fields?, hosts?, name, pr \
ivateKeyGroup?, privateKeyOwner?}>;
  mkKubeConfig = <function>;
  mkKubeConfigOptions = <function>;
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubernetes.masterAddress
Clusterwide available network address or hostname for the kubernetes master server.

Type: string

Example:

```
"master.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubernetes.path
Packages added to the services' PATH environment variable. Both the bin and sbin subdirectories of each package are added.

Type: list of package

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubernetes.pki.enable
Whether to enable easyCert issuer service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/pki.nix>

services.kubernetes.pki.caCertPathPrefix
Path−prefrix for the CA−certificate to be used for cfssl signing. Suffixes ".pem" and "−key.pem" will be automatically appended for the public and private keys respectively.

Type: string

Default:

```
"${config.services.cfssl.dataDir}/ca"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/pki.nix>

services.kubernetes.pki.caSpec
Certificate specification for the auto−generated CAcert.

Type: attribute set

Default:

```
{
  CN = "kubernetes-cluster-ca";
  L = "auto-generated";
  O = "NixOS";
  OU = "services.kubernetes.pki.caSpec";
}
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/pki.nix>

services.kubernetes.pki.certs
List of certificate specs to feed to cert generator.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/pki.nix>

services.kubernetes.pki.cfsslAPIExtraSANs
Extra x509 Subject Alternative Names to be added to the cfssl API webserver TLS cert.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "subdomain.example.com"
]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/pki.nix>

services.kubernetes.pki.etcClusterAdminKubeconfig
Symlink a kubeconfig with cluster−admin privileges to environment path (/etc/<path>).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/pki.nix>

services.kubernetes.pki.genCfsslAPICerts
Whether to automatically generate cfssl API webserver TLS cert and key, if they don’t exist.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/pki.nix>

services.kubernetes.pki.genCfsslAPIToken
Whether to automatically generate cfssl API−token secret, if they doesn’t exist.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/pki.nix>

services.kubernetes.pki.genCfsslCACert
Whether to automatically generate cfssl CA certificate and key, if they don’t exist.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/pki.nix>

services.kubernetes.pki.pkiTrustOnBootstrap
Whether to always trust remote cfssl server upon initial PKI bootstrap.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/pki.nix>

services.kubernetes.proxy.enable
Whether to enable Kubernetes proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/proxy.nix>

services.kubernetes.proxy.bindAddress
Kubernetes proxy listening address.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/proxy.nix>

services.kubernetes.proxy.extraOpts
Kubernetes proxy extra command line options.

Type: strings concatenated with " "

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/proxy.nix>

services.kubernetes.proxy.featureGates
Attribute set of feature gates.

Type: attribute set of boolean

Default:

```
config.services.kubernetes.featureGates
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/proxy.nix>

services.kubernetes.proxy.hostname
Kubernetes proxy hostname override.

Type: string

Default:

```
config.networking.hostName
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/proxy.nix>

services.kubernetes.proxy.kubeconfig.caFile
Kubernetes proxy certificate authority file used to connect to kube−apiserver.

Type: null or absolute path

Default:

```
config.services.kubernetes.caFile
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/proxy.nix>

services.kubernetes.proxy.kubeconfig.certFile
Kubernetes proxy client certificate file used to connect to kube−apiserver.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/proxy.nix>

services.kubernetes.proxy.kubeconfig.keyFile
Kubernetes proxy client key file used to connect to kube−apiserver.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/proxy.nix>

services.kubernetes.proxy.kubeconfig.server
Kubernetes proxy kube−apiserver server address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/proxy.nix>

services.kubernetes.proxy.verbosity
Optional glog verbosity level for logging statements. See **https://github.com/kubernetes/community/blob/master/contributors/devel/logging.md**

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/proxy.nix>

services.kubernetes.roles
Kubernetes role that this machine should take.

Master role will enable etcd, apiserver, scheduler, controller manager addon manager, flannel and proxy services. Node role will enable flannel, docker, kubelet and proxy services.

Type: list of (one of “master”, “node”)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubernetes.scheduler.enable
Whether to enable Kubernetes scheduler.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/scheduler.nix>

services.kubernetes.scheduler.address
Kubernetes scheduler listening address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/scheduler.nix>

services.kubernetes.scheduler.extraOpts
Kubernetes scheduler extra command line options.

Type: strings concatenated with " "

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/scheduler.nix>

services.kubernetes.scheduler.featureGates
Attribute set of feature gates.

Type: attribute set of boolean

Default:

```
config.services.kubernetes.featureGates
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/scheduler.nix>

services.kubernetes.scheduler.kubeconfig.caFile
Kubernetes scheduler certificate authority file used to connect to kube−apiserver.

Type: null or absolute path

Default:

```
config.services.kubernetes.caFile
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/scheduler.nix>

services.kubernetes.scheduler.kubeconfig.certFile
Kubernetes scheduler client certificate file used to connect to kube−apiserver.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/scheduler.nix>

services.kubernetes.scheduler.kubeconfig.keyFile
Kubernetes scheduler client key file used to connect to kube−apiserver.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/scheduler.nix>

services.kubernetes.scheduler.kubeconfig.server
Kubernetes scheduler kube−apiserver server address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/scheduler.nix>

services.kubernetes.scheduler.leaderElect
Whether to start leader election before executing main loop.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/scheduler.nix>

services.kubernetes.scheduler.port
Kubernetes scheduler listening port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
10251
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/scheduler.nix>

services.kubernetes.scheduler.verbosity
Optional glog verbosity level for logging statements. See **https://github.com/kubernetes/community/blob/master/contributors/devel/logging.md**

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/scheduler.nix>

services.kubernetes.secretsPath
Default location for kubernetes secrets. Not a store location.

Type: absolute path

Default:

```
config.services.kubernetes.dataDir + "/secrets"
```

Declared by:
<nixpkgs/nixos/modules/services/cluster/kubernetes/default.nix>

services.kubo.enable
Whether to enable the Interplanetary File System (WARNING: may cause severe network degradation). NOTE: after enabling this option and rebuilding your system, you need to log out and back in for the 'IPFS_PATH' environment variable to be present in your shell. Until you do that, the CLI tools won't be able to talk to the daemon by default .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.enableGC
Whether to enable automatic garbage collection

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.package
The kubo package to use.

Type: package

Default:

```
pkgs.kubo
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.autoMigrate
Whether Kubo should try to migrate its filesystem repository automatically.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.autoMount
Whether Kubo should try to mount /ipfs, /ipns and /mfs at startup.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.dataDir
The data dir for Kubo

Type: string

Default:

```
if lib.versionAtLeast config.system.stateVersion "17.09"
then "/var/lib/ipfs"
else "/var/lib/ipfs/.ipfs"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.defaultMode
systemd service that is enabled by default

Type: one of “online”, “offline”, “norouting”

Default:

```
"online"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.emptyRepo
If set to false, the repo will be initialized with help files

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.extraFlags
Extra flags passed to the Kubo daemon

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.group

Group under which the Kubo daemon runs

Type: string

Default:

```
"ipfs"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.localDiscovery

Whether to enable local discovery for the Kubo daemon. This will allow Kubo to scan ports on your local network. Some hosting services will ban you if you do this.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.serviceFdlimit

The fdlimit for the Kubo systemd unit or 'null' to have the daemon attempt to manage it

Type: null or signed integer

Default:

```
null
```

Example:

```
65536
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.settings

Attrset of daemon configuration. See **https://github.com/ipfs/kubo/blob/master/docs/config.md** for reference. You can't set 'Identity' or 'Pinning'.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Example:

```
{
  Bootstrap = [
    "/ip4/128.199.219.111/tcp/4001/ipfs/QmSoLSafTMBsPKadTEgaXctDQVc \
qN88CNLHXMkTNwMKPnu"
    "/ip4/162.243.248.213/tcp/4001/ipfs/QmSoLueR4xBeUbY9WZ9xGUUxunb \
KWcrNFTDAadQJmocnWm"
  ];
  Datastore = {
    StorageMax = "100GB";
  };
  Discovery = {
    MDNS = {
      Enabled = false;
```

```
    };
  };
  Swarm = {
    AddrFilters = null;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.settings.Addresses.API
Multiaddr or array of multiaddrs describing the address to serve the local HTTP API on. In addition to the multiaddrs listed here, the daemon will also listen on a Unix domain socket. To allow the ipfs CLI tools to communicate with the daemon over that socket, add your user to the correct group, e.g. ‘users.users.alice.extraGroups = [config.services.kubo.group];’

Type: string or list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.settings.Addresses.Gateway
Where the IPFS Gateway can be reached

Type: string or list of string

Default:

```
"/ip4/127.0.0.1/tcp/8080"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.settings.Addresses.Swarm
Where Kubo listens for incoming p2p connections

Type: list of string

Default:

```
[
  "/ip4/0.0.0.0/tcp/4001"
  "/ip6/::/tcp/4001"
  "/ip4/0.0.0.0/udp/4001/quic−v1"
  "/ip4/0.0.0.0/udp/4001/quic−v1/webtransport"
  "/ip4/0.0.0.0/udp/4001/webrtc−direct"
  "/ip6/::/udp/4001/quic−v1"
  "/ip6/::/udp/4001/quic−v1/webtransport"
  "/ip6/::/udp/4001/webrtc−direct"
]
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.settings.Mounts.FuseAllowOther
Allow all users to access the FUSE mount points

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.settings.Mounts.IPFS
Where to mount the IPFS namespace to

Type: string

Default:

```
"/ipfs"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.settings.Mounts.IPNS
Where to mount the IPNS namespace to

Type: string

Default:

```
"/ipns"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.settings.Mounts.MFS
Where to mount the MFS namespace to

Type: string

Default:

```
"/mfs"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.startWhenNeeded
Whether to use socket activation to start Kubo when needed.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.kubo.user
User under which the Kubo daemon runs

Type: string

Default:

```
"ipfs"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/kubo.nix>

services.labgrid.coordinator.enable
Whether to enable Labgrid Coordinator.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/labgrid/coordinator.nix>

services.labgrid.coordinator.package
The labgrid package to use.

Type: package

Default:

```
pkgs.python3Packages.labgrid
```

Declared by:
<nixpkgs/nixos/modules/services/development/labgrid/coordinator.nix>

services.labgrid.coordinator.bindAddress
Bind address for the labgrid coordinator.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/development/labgrid/coordinator.nix>

services.labgrid.coordinator.debug
Whether to enable debug mode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/development/labgrid/coordinator.nix>

services.labgrid.coordinator.openFirewall
Whether to automatically open the coordinator listen port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/development/labgrid/coordinator.nix>

services.labgrid.coordinator.port

Coordinator port to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
20408
```

Declared by:

<nixpkgs/nixos/modules/services/development/labgrid/coordinator.nix>

services.lact.enable

Whether to enable LACT, a tool for monitoring, configuring and overclocking GPUs.

Note

If you are on an AMD GPU, it is recommended to enable overdrive mode by using 'hardware.amdgpu.overdrive.enable = true;' in your configuration. See **LACT wiki** for more information.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/lact.nix>

services.lact.package

The lact package to use.

Type: package

Default:

```
pkgs.lact
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/lact.nix>

services.lact.settings

Settings for LACT.

The easiest method of acquiring the settings is to delete */etc/lact/config.yaml*, enter your settings and look at the file.

Note

When 'settings' is populated, the config file will be a symbolic link and thus LACT daemon will not be able to modify it through the GUI.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/lact.nix>

services.lambdabot.enable

Enable the Lambdabot IRC bot

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/lambdabot.nix>

services.lambdabot.package

The lambdabot package to use.

Type: package

Default:

```
pkgs.lambdabot
```

Declared by:

<nixpkgs/nixos/modules/services/networking/lambdabot.nix>

services.lambdabot.script

Lambdabot script

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/lambdabot.nix>

services.languagetool.enable

Whether to enable the LanguageTool server, a multilingual spelling, style, and grammar checker that helps correct or paraphrase texts.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/languagetool.nix>

services.languagetool.package

The languagetool package to use.

Type: package

Default:

```
pkgs.languagetool
```

Declared by:

<nixpkgs/nixos/modules/services/misc/languagetool.nix>

services.languagetool.allowOrigin

Set the Access−Control−Allow−Origin header in the HTTP response, used for direct (non−proxy) JavaScript−based access from browsers. ‘"*"’ to allow access from all sites.

Type: null or string

Default:

```
null
```

Example:

```
"https://my-website.org"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/languagetool.nix>

services.languagetool.jvmOptions

Extra command line options for the JVM running languagetool. More information can be found here: **https://docs.oracle.com/en/java/javase/19/docs/specs/man/java.html#standard−options−for−java**

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-Xmx512m"
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/languagetool.nix>

services.languagetool.port

Port on which LanguageTool listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8081
```

Example:

```
8081
```

Declared by:

<nixpkgs/nixos/modules/services/misc/languagetool.nix>

services.languagetool.public

Whether to enable access from anywhere (rather than just localhost).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/languagetool.nix>

services.languagetool.settings

Configuration file options for LanguageTool, see ‘languagetool−http−server −−help’ for supported settings.

Type: open submodule of attribute set of (string, package, bool, int or float)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/misc/languagetool.nix>

services.languagetool.settings.cacheSize

Number of sentences cached.

Type: unsigned integer, meaning >=0

Default:

```
1000
```

Declared by:

<nixpkgs/nixos/modules/services/misc/languagetool.nix>

services.lanraragi.enable

Whether to enable LANraragi.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lanraragi.nix>

services.lanraragi.package

The lanraragi package to use.

Type: package

Default:

```
pkgs.lanraragi
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lanraragi.nix>

services.lanraragi.openFirewall

Open ports in the firewall for LANraragi’s web interface.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lanraragi.nix>

services.lanraragi.passwordFile

A file containing the password for LANraragi's admin interface.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/lanraragi-password"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/lanraragi.nix>

services.lanraragi.port

Port for LANraragi's web interface.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/lanraragi.nix>

services.lanraragi.redis.passwordFile

A file containing the password for LANraragi's Redis server.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/redis-lanraragi-password"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/lanraragi.nix>

services.lanraragi.redis.port

Port for LANraragi's Redis server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6379
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/lanraragi.nix>

services.lasuite-docs.enable

Whether to enable SuiteNumérique Docs.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.enableNginx
Whether to enable enable and configure Nginx for reverse proxying.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.backendPackage
The lasuite−docs package to use.

Type: package

Default:

```
pkgs.lasuite−docs
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.bind
The path, host/port or file descriptior to bind the gunicorn socket to.

See **https://docs.gunicorn.org/en/stable/settings.html#bind** for possible options.

Type: string

Default:

```
"unix:/run/lasuite−docs/gunicorn.sock"
```

Example:

```
"127.0.0.1:8000"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.celery.extraArgs
Extra arguments to pass to the celery process.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.collaborationServer.package
The lasuite−docs−collaboration−server package to use.

Type: package

Default:

```
pkgs.lasuite−docs−collaboration−server
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/lasuite-docs.nix>

services.lasuite-docs.collaborationServer.port
Port used by the collaboration server to listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4444
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/lasuite-docs.nix>

services.lasuite-docs.collaborationServer.settings
Configuration options of collaboration server.

See **https://github.com/suitenumerique/docs/blob/v4.8.6/docs/env.md**

Type: open submodule of attribute set of (string or boolean)

Default:

```
{ }
```

Example:

```
{
  COLLABORATION_LOGGING = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/lasuite-docs.nix>

services.lasuite-docs.collaborationServer.settings.COLLABORATION_BACKEND_BASE_URL
URL to the backend server base

Type: string

Default:

```
https://${cfg.domain}
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/lasuite-docs.nix>

services.lasuite-docs.collaborationServer.settings.COLLABORATION_SERVER_ORIGIN
Origins allowed to connect to the collaboration server

Type: string

Default:

```
https://${cfg.domain}
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/lasuite-docs.nix>

services.lasuite-docs.collaborationServer.settings.PORT
Port used by collaboration server to listen to

Type: string *(read only)*

Default:

```
"4444"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.domain
Domain name of the docs instance.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.environmentFile
Path to environment file.

This can be useful to pass secrets to docs via tools like ‘agenix’ or ‘sops’.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.frontendPackage
The lasuite−docs−frontend package to use.

Type: package

Default:

```
pkgs.lasuite-docs-frontend
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.gunicorn.extraArgs
Extra arguments to pass to the gunicorn process.

Type: list of string

Default:

```
[
  "--name=impress"
  "--workers=3"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.postgresql.createLocally
Configure local PostgreSQL database server for docs.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.redis.createLocally
Configure local Redis cache server for docs.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.s3Url
URL of the S3 bucket.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.secretKeyPath
Path to the Django secret key.

The key can be generated using:

```
python3 −c 'import secrets; print(secrets.token_hex())'
```

If not set, the secret key will be automatically generated.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.settings
Configuration options of docs.

See **https://github.com/suitenumerique/docs/blob/v4.8.6/docs/env.md**

'REDIS_URL' and 'CELERY_BROKER_URL' are set if 'services.lasuite−docs.redis.createLocally' is true. 'DB_HOST' is set if 'services.lasuite−docs.postgresql.createLocally' is true.

Type: open submodule of attribute set of (null or string or boolean or absolute path or signed integer)

Default:

```
{ }
```

Example:

```
{
  DJANGO_ALLOWED_HOSTS = "*";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.settings.CELERY_BROKER_URL
URL of the redis backend for celery

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.settings.DATA_DIR
Path to the data directory

Type: absolute path

Default:

```
"/var/lib/lasuite−docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.settings.DB_HOST
Host of the database

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.settings.DB_NAME
Name of the database

Type: string

Default:

```
"lasuite−docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.settings.DB_USER
User of the database

Type: string

Default:

```
"lasuite−docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.settings.DJANGO_ALLOWED_HOSTS
Comma−separated list of hosts that are able to connect to the server

Type: string

Default:

```
if cfg.enableNginx then "localhost,127.0.0.1,${cfg.domain}" else ""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−docs.nix>

services.lasuite−docs.settings.DJANGO_SECRET_KEY_FILE
The path to the file containing Django’s secret key

Type: absolute path

Default:

```
"/var/lib/lasuite-docs/django_secret_key"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/lasuite-docs.nix>

services.lasuite-docs.settings.REDIS_URL
URL of the redis backend

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/lasuite-docs.nix>

services.lasuite-meet.enable
Whether to enable SuiteNumérique Meet.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/lasuite-meet.nix>

services.lasuite-meet.enableNginx
Whether to enable enable and configure Nginx for reverse proxying.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/lasuite-meet.nix>

services.lasuite-meet.backendPackage
The lasuite-meet package to use.

Type: package

Default:

```
pkgs.lasuite-meet
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/lasuite-meet.nix>

services.lasuite-meet.bind
The path, host/port or file descriptior to bind the gunicorn socket to.

See **https://docs.gunicorn.org/en/stable/settings.html#bind** for possible options.

Type: string

Default:

```
"unix:/run/lasuite-meet/gunicorn.sock"
```

Example:

```
"127.0.0.1:8000"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.celery.extraArgs
Extra arguments to pass to the celery process.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.domain
Domain name of the meet instance.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.environmentFile
Path to environment file.

This can be useful to pass secrets to meet via tools like ‘agenix’ or ‘sops’.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.frontendPackage
The lasuite−meet−frontend package to use.

Type: package

Default:

```
pkgs.lasuite−meet−frontend
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.gunicorn.extraArgs
Extra arguments to pass to the gunicorn process.

Type: list of string

Default:

```
[
  "−−name=meet"
  "−−workers=3"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.livekit.enable

Whether to enable Configure local livekit server.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.livekit.keyFile

LiveKit key file holding one or multiple application secrets. Use ‘livekit−server generate−keys’ to generate a random key name and secret.

The file should have the YAML format ‘<keyname>: <secret>’. Example: ‘lasuite−meet: f6lQGaHtM5HfgZjIcec3cOCRfiDqIine4CpZZnqdT5cE’

Individual key/secret pairs need to be passed to clients to connect to this instance.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.livekit.openFirewall

Whether to enable Open firewall ports for livekit.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.livekit.settings

Settings to pass to the livekit server.

See ‘services.livekit.settings’ for more details.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.postgresql.createLocally

Whether to enable Configure local PostgreSQL database server for meet.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.redis.createLocally
Whether to enable Configure local Redis cache server for meet.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.secretKeyPath
Path to the Django secret key.

The key can be generated using:

```
python3 −c 'import secrets; print(secrets.token_hex())'
```

If not set, the secret key will be automatically generated.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.settings
Configuration options of meet. See https://github.com/suitenumerique/meet/blob/v1.14.0/docs/env.md 'REDIS_URL' and 'CELERY_BROKER_URL' are set if 'services.lasuite−meet.redis.createLocally' is true. 'DB_NAME' 'DB_USER' and 'DB_HOST' are set if 'services.lasuite−meet.postgresql.createLocally' is true.

Type: open submodule of lazy attribute set of (null or string or boolean or absolute path or signed integer)

Default:

```
{ }
```

Example:

```
{
  DJANGO_ALLOWED_HOSTS = "*";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.settings.CELERY_BROKER_URL
URL of the redis backend for celery

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.settings.DB_HOST
Host of the database

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.settings.DB_NAME
Name of the database

Type: string

Default:

```
"lasuite−meet"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.settings.DB_USER
User of the database

Type: string

Default:

```
"lasuite−meet"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.settings.DJANGO_ALLOWED_HOSTS
Comma−separated list of hosts that are able to connect to the server

Type: string

Default:

```
if cfg.enableNginx then "localhost,127.0.0.1,${cfg.domain}" else ""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.settings.DJANGO_DATA_DIR
Path to the data directory

Type: absolute path

Default:

```
"/var/lib/lasuite−meet"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lasuite−meet.nix>

services.lasuite−meet.settings.DJANGO_SECRET_KEY_FILE
The path to the file containing Django’s secret key

Type: absolute path

Default:

```
"/var/lib/lasuite-meet/django_secret_key"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/lasuite-meet.nix>

services.lasuite-meet.settings.LIVEKIT_API_URL
URL to the livekit server

Type: null or string

Default:

```
if cfg.enableNginx && cfg.livekit.enable then
  "http://${cfg.domain}/livekit"
else
  null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/lasuite-meet.nix>

services.lasuite-meet.settings.REDIS_URL
URL of the redis backend

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/lasuite-meet.nix>

services.lauti.enable
Whether to enable Lauti community event calendar web app.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/lauti.nix>

services.lauti.dataDir
Data directory for Lauti

Type: absolute path

Default:

```
"/var/lib/lauti"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/lauti.nix>

services.lauti.secrets
A list of files containing the various secrets. Should be in the format expected by systemd's 'EnvironmentFile' directory.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lauti.nix>

services.lauti.settings
Settings to configure web service. See **https://codeberg.org/Klasse−Methode/lauti/src/branch/main/DEPLOYMENT.md** for available options.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  LAUTI_ADDR = ":1234";
  LAUTI_ADMIN_EMAIL = "admin@example.org";
  LAUTI_TIMEZONE = "Europe/Berlin";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lauti.nix>

services.lavalink.enable
Whether to enable Lavalink.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.enableHttp2
Whether to enable HTTP/2 support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.package
The lavalink package to use.

Type: package

Default:

```
pkgs.lavalink
```

Declared by:
<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.address

The network address to bind to.

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.environmentFile

Add custom environment variables from a file. See **https://lavalink.dev/configuration/index.html#example−environment−variables** for the full documentation.

Type: null or string

Default:

```
null
```

Example:

```
"/run/secrets/lavalink/passwordEnvFile"
```

Declared by:

<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.extraConfig

Configuration to write to *application.yml*. See **https://lavalink.dev/configuration/#example−applicationyml** for the full documentation.

Individual configuration parameters can be overwritten using environment variables. See **https://lavalink.dev/configuration/#example−environment−variables** for more information.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
{
  lavalink.server = {
    sources.twitch = true;
    filters.volume = true;
  };
  logging.file.path = "./logs/";
}
```

Declared by:

<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.group

The group of the service.

Type: string

Default:

```
"lavalink"
```

Example:

```
"medias"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.home
The home directory for lavalink.

Type: string

Default:

```
"/var/lib/lavalink"
```

Example:

```
"/home/lavalink"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.jvmArgs
Set custom JVM arguments.

Type: string

Default:

```
"-Xmx4G"
```

Example:

```
"-Djava.io.tmpdir=/var/lib/lavalink/tmp -Xmx6G"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.openFirewall
Whether to expose the port to the network.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.password
The password for Lavalink's authentication in plain text.

Type: null or string

Default:

```
null
```

Example:

```
"s3cRe!p4SsW0rD"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.plugins

A list of plugins for lavalink.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    dependency = "dev.lavalink.youtube:youtube-plugin:1.8.0";
    repository = "https://maven.lavalink.dev/snapshots";
    hash = lib.fakeHash;
    configName = "youtube";
    extraConfig = {
      enabled = true;
      allowSearch = true;
      allowDirectVideoIds = true;
      allowDirectPlaylistIds = true;
    };
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.plugins.*.configName

The name of the plugin to use as the key for the plugin configuration.

Type: null or string

Default:

```
null
```

Example:

```
"youtube"
```

Declared by:

<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.plugins.*.dependency

The coordinates of the plugin.

Type: string

Example:

```
"dev.lavalink.youtube:youtube-plugin:1.8.0"
```

Declared by:

<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.plugins.*.extraConfig

The configuration for the plugin.

The **services.lavalink.plugins.*.configName** option must be set.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.plugins.*.hash
The hash of the plugin.

Type: string

Example:

```
"sha256-AAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA="
```

Declared by:
<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.plugins.*.repository
The plugin repository. Defaults to the lavalink releases repository.

To use the snapshots repository, use **https://maven.lavalink.dev/snapshots** instead

Type: string

Default:

```
"https://maven.lavalink.dev/releases"
```

Example:

```
"https://maven.example.com/releases"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.port
The port that Lavalink will use.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
2333
```

Example:

```
4567
```

Declared by:
<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.lavalink.user
The user of the service.

Type: string

Default:

```
"lavalink"
```

Example:

```
"root"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/lavalink.nix>

services.leaps.enable

Whether to enable leaps, a pair programming service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/leaps.nix>

services.leaps.address

Hostname or IP−address to listen to. By default it will listen on all interfaces.

Type: string

Default:

```
""
```

Example:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/leaps.nix>

services.leaps.path

Subdirectory used for reverse proxy setups

Type: absolute path

Default:

```
"/"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/leaps.nix>

services.leaps.port

A port where leaps listens for incoming http requests

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:

<nixpkgs/nixos/modules/services/misc/leaps.nix>

services.legit.enable

Whether to enable legit git web frontend.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.legit.package
The legit−web package to use.

Type: package

Default:

```
pkgs.legit-web
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.legit.group
Group account under which legit runs.

Type: string

Default:

```
"legit"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.legit.settings
The primary legit configuration. See the **sample configuration** for possible values.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.legit.settings.dirs.static
Directories where static files are located.

Type: absolute path

Default:

```
"${pkgs.legit-web}/lib/legit/static"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.legit.settings.dirs.templates
Directories where template files are located.

Type: absolute path

Default:

```
"${pkgs.legit-web}/lib/legit/templates"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.legit.settings.meta.description
Website description.

Type: string

Default:

```
"git frontend"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.legit.settings.meta.title
Website title.

Type: string

Default:

```
"legit"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.legit.settings.repo.ignore
Repositories to ignore.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.legit.settings.repo.mainBranch
Main branch to look for.

Type: list of string

Default:

```
[
  "main"
  "master"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.legit.settings.repo.readme
Readme files to look for.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.legit.settings.repo.scanPath
Directory where legit will scan for repositories.

Type: absolute path

Default:

```
"/var/lib/legit"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.legit.settings.server.host
Host address.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.legit.settings.server.name
Server name.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.legit.settings.server.port
Legit port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5555
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.legit.user
User account under which legit runs.

Type: string

Default:

```
"legit"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/legit.nix>

services.lemmy.enable
Whether to enable lemmy a federated alternative to reddit in rust.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.adminPasswordFile
File which contains the value of ‘setup.admin_password’.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.caddy.enable
Whether to enable exposing lemmy with the caddy reverse proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.database.createLocally
Whether to enable creation of database on the instance.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.database.uri
The connection URI to use. Takes priority over the configuration file if set.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.database.uriFile
File which contains the database uri.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.nginx.enable

Whether to enable exposing lemmy with the nginx reverse proxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.pictrsApiKeyFile

File which contains the value of ‘pictrs.api_key’.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.server.package

The lemmy−server package to use.

Type: package

Default:

```
pkgs.lemmy-server
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.settings

Lemmy configuration

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.settings.captcha.enabled

Enable Captcha.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.settings.captcha.difficulty

The difficultly of the captcha to solve.

Type: one of “easy”, “medium”, “hard”

Default:

```
"medium"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.settings.hostname

The domain name of your instance (eg ‘lemmy.ml’).

Type: string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.settings.port

Port where lemmy should listen for incoming requests.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8536
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.smtpPasswordFile

File which contains the value of ‘email.smtp_password’.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.ui.package

The lemmy−ui package to use.

Type: package

Default:

```
pkgs.lemmy−ui
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.lemmy.ui.port

Port where lemmy−ui should listen for incoming requests.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1234
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lemmy.nix>

services.libeufin.bank.enable
Whether to enable libeufin core banking system and web interface.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/bank.nix>

services.libeufin.bank.package
The libeufin package to use.

Type: package

Default:

```
pkgs.libeufin
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/bank.nix>

services.libeufin.bank.createLocalDatabase
Whether to enable automatic creation of a local postgres database.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/bank.nix>

services.libeufin.bank.debug
Whether to enable debug logging.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/bank.nix>

services.libeufin.bank.initialAccounts
Accounts to enable before the bank service starts.

This is mainly needed for the nexus currency conversion since the exchange’s bank account is expected to be already registered.

Don’t forget to change the account passwords afterwards.

Type: list of (attribute set)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/bank.nix>

services.libeufin.bank.openFirewall
Whether to open ports in the firewall

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/bank.nix>

services.libeufin.bank.settings
Configuration options for the libeufin bank system config file.

For a list of all possible options, please see the man page 'libeufin−bank.conf(5)'

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/bank.nix>

services.libeufin.bank.settings.libeufin−bank.CURRENCY
The currency under which the libeufin−bank should operate.

This defaults to the GNU taler module's currency for convenience but if you run libeufin−bank separately from taler, you must set this yourself.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/bank.nix>

services.libeufin.bank.settings.libeufin−bank.PORT
The port on which libeufin−bank should listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8082
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/bank.nix>

services.libeufin.bank.settings.libeufin−bank.SUGGESTED_WITHDRAWAL_EXCHANGE
Exchange that is suggested to wallets when withdrawing.

Note that, in order for withdrawals to work, your libeufin−bank must be able to communicate with and send money etc. to the bank at which the exchange used for withdrawals has its bank account.

If you also have your own bank and taler exchange network, you probably want to set one of your exchange's url here instead of the demo exchange.

This setting must always be set in order for the Android app to not crash during the withdrawal process but the exchange to be used can always be changed in the app.

Type: string

Default:

```
"https://exchange.demo.taler.net/"
```

Declared by:

<nixpkgs/nixos/modules/services/finance/libeufin/bank.nix>

services.libeufin.bank.settings.libeufin−bankdb−postgres.CONFIG

The database connection string for the libeufin−bank database.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/finance/libeufin/bank.nix>

services.libeufin.nexus.enable

Whether to enable libeufin core banking system and web interface.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.package

The libeufin package to use.

Type: package

Default:

```
pkgs.libeufin
```

Declared by:

<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.createLocalDatabase

Whether to enable automatic creation of a local postgres database.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.debug

Whether to enable debug logging.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.openFirewall
Whether to open ports in the firewall

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.settings
Configuration options for the libeufin nexus config file.

For a list of all possible options, please see the man page ‘libeufin−nexus.conf(5)’

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.settings.libeufin−nexusdb−postgres.CONFIG
The database connection string for the libeufin−nexus database.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.settings.nexus−ebics.BANK_DIALECT
Name of the following combination: EBICS version and ISO20022 recommendations that Nexus would honor in the communication with the bank.

Currently only the “postfinance” or “gls” value is supported.

Type: one of “postfinance”, “gls”

Example:

```
"postfinance"
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.settings.nexus−ebics.BANK_PUBLIC_KEYS_FILE
Filesystem location where Nexus should store the bank public keys.

Type: absolute path

Default:

```
"/var/lib/libeufin−nexus/bank−ebics−keys.json"
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.settings.nexus−ebics.BIC
BIC of the bank account that is associated with the EBICS subscriber.

Type: non−empty string

Example:

```
"POFICHBEXXX"
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.settings.nexus-ebics.CLIENT_PRIVATE_KEYS_FILE
Filesystem location where Nexus should store the subscriber private keys.

Type: absolute path

Default:

```
"/var/lib/libeufin-nexus/client-ebics-keys.json"
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.settings.nexus-ebics.CURRENCY
Name of the fiat currency.

Type: non-empty string

Example:

```
"CHF"
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.settings.nexus-ebics.HOST_BASE_URL
URL of the EBICS server.

Type: non-empty string

Example:

```
"https://ebics.postfinance.ch/ebics/ebics.aspx"
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.settings.nexus-ebics.HOST_ID
Name of the EBICS host.

Type: non-empty string

Example:

```
"PFEBICS"
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.settings.nexus-ebics.IBAN
IBAN of the bank account that is associated with the EBICS subscriber.

Type: non-empty string

Example:

```
"CH7789144474425692816"
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.settings.nexus-ebics.NAME
Legal entity that is associated with the EBICS subscriber.

Type: non-empty string

Example:

```
"John Smith S.A."
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.settings.nexus−ebics.PARTNER_ID
Partner ID of the EBICS subscriber.

This value must be assigned by the bank after having activated a new EBICS subscriber.

Type: non−empty string

Example:

```
"PFC00563"
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.settings.nexus−ebics.USER_ID
User ID of the EBICS subscriber.

This value must be assigned by the bank after having activated a new EBICS subscriber.

Type: non−empty string

Example:

```
"PFC00563"
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.nexus.settings.nexus−httpd.PORT
The port on which libeufin−bank should listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8084
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/nexus.nix>

services.libeufin.settings
Global configuration options for the libeufin bank system config file.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/finance/libeufin/module.nix>

services.libinput.enable
Whether to enable libinput.

Type: boolean

Default:

```
config.services.xserver.enable
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.accelPointsFallback
Sets the points of the fallback acceleration function. The value must be a list of floating point non−negative numbers. This only applies to the custom profile.

Type: null or (list of (signed integer or floating point number))

Default:

```
null
```

Example:

```
[
  0.0
  1.0
  2.4
  2.5
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.accelPointsMotion
Sets the points of the (pointer) motion acceleration function. The value must be a list of floating point non−negative numbers. This only applies to the custom profile.

Type: null or (list of (signed integer or floating point number))

Default:

```
null
```

Example:

```
[
  0.0
  1.0
  2.4
  2.5
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.accelPointsScroll
Sets the points of the scroll acceleration function. The value must be a list of floating point non−negative numbers. This only applies to the custom profile.

Type: null or (list of (signed integer or floating point number))

Default:

```
null
```

Example:

```
[
  0.0
  1.0
  2.4
  2.5
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.accelProfile
Sets the pointer acceleration profile to the given profile. Permitted values are ‘adaptive’, ‘flat’, ‘custom’. Not all devices support this option or all profiles. If a profile is unsupported, the default profile for this is used. ‘flat’: Pointer motion is accelerated by a constant (device−specific) factor, depending on the current speed. ‘adaptive’: Pointer acceleration depends on the input speed. This is the default profile for most devices. ‘custom’: Allows the user to define a custom acceleration function. To define custom functions use the accelPoints<Fallback/Motion/Scroll> and accelStep<Fallback/Motion/Scroll> options.

Type: one of “flat”, “adaptive”, “custom”

Default:

```
"adaptive"
```

Example:

```
"flat"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.accelSpeed
Cursor acceleration (how fast speed increases from minSpeed to maxSpeed). This only applies to the flat or adaptive profile.

Type: null or string

Default:

```
null
```

Example:

```
"−0.5"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.accelStepFallback
Sets the step between the points of the fallback acceleration function. When a step of 0.0 is provided, libinput’s Fallback acceleration function is used. This only applies to the custom profile.

Type: null or signed integer or floating point number

Default:

```
null
```

Example:

```
0.1
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.accelStepMotion
Sets the step between the points of the (pointer) motion acceleration function. When a step of 0.0 is provided, libinput’s Fallback acceleration function is used. This only applies to the custom profile.

Type: null or signed integer or floating point number

Default:

```
null
```

Example:

```
0.1
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.accelStepScroll
Sets the step between the points of the scroll acceleration function. When a step of 0.0 is provided, libinput's Fallback acceleration function is used. This only applies to the custom profile.

Type: null or signed integer or floating point number

Default:

```
null
```

Example:

```
0.1
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.additionalOptions
Additional options for libinput mouse driver. See **libinput**(4) for available options.";

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
  Option "DragLockButtons" "L1 B1 L2 B2"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.buttonMapping
Sets the logical button mapping for this device, see **XSetPointerMapping**(3). The string must be a space−separated list of button mappings in the order of the logical buttons on the device, starting with button 1. The default mapping is "1 2 3 … 32". A mapping of 0 deac- tivates the button. Multiple buttons can have the same mapping. Invalid mapping strings are discarded and the default mapping is used for all buttons. Buttons not specified in the user's mapping use the default mapping. See section BUTTON MAPPING for more details.

Type: null or string

Default:

```
null
```

Example:

```
"1 6 3 4 5 0 7"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.calibrationMatrix
A string of 9 space−separated floating point numbers. Sets the calibration matrix to the 3x3 matrix where the first row is (abc), the second row is (def) and the third row is (ghi).

Type: null or string

Default:

```
null
```

Example:

```
"0.5 0 0 0 0.8 0.1 0 0 1"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.clickMethod
Enables a click method. Permitted values are ‘none’, ‘buttonareas’, ‘clickfinger’. Not all devices support all methods, if an option is unsupported, the default click method for this device is used.

Type: null or one of “none”, “buttonareas”, “clickfinger”

Default:

```
null
```

Example:

```
"buttonareas"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.dev
Path for mouse device. Set to ‘null’ to apply to any auto−detected mouse.

Type: null or string

Default:

```
null
```

Example:

```
"/dev/input/event0"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.disableWhileTyping
Disable input method while typing.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.horizontalScrolling
Enables or disables horizontal scrolling. When disabled, this driver will discard any horizontal scroll events from libinput. This does not disable horizontal scroll events from libinput; it merely discards the horizontal axis from any scroll events.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.leftHanded

Enables left−handed button orientation, i.e. swapping left and right buttons.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.middleEmulation

Enables middle button emulation. When enabled, pressing the left and right buttons simultaneously produces a middle mouse button click.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.naturalScrolling

Enables or disables natural scrolling behavior.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.scrollButton

Designates a button as scroll button. If the ScrollMethod is button and the button is logically held down, x/y axis movement is converted into scroll events.

Type: null or signed integer

Default:

```
null
```

Example:

```
1
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.scrollMethod

Specify the scrolling method: ‘twofinger’, ‘edge’, ‘button’, or ‘none’

Type: one of “twofinger”, “edge”, “button”, “none”

Default:

```
"twofinger"
```

Example:

```
"edge"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.sendEventsMode
Sets the send events mode to ‘disabled’, ‘enabled’, or ‘disabled−on−external−mouse’

Type: one of “disabled”, “enabled”, “disabled−on−external−mouse”

Default:

```
"enabled"
```

Example:

```
"disabled"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.tapping
Enables or disables tap−to−click behavior.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.tappingButtonMap
Set the button mapping for 1/2/3−finger taps to left/right/middle or left/middle/right, respectively.

Type: null or one of “lrm”, “lmr”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.tappingDragLock
Enables or disables drag lock during tapping behavior. When enabled, a finger up during tap− and−drag will not immediately release the button. If the finger is set down again within the timeout, the dragging process continues.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.mouse.transformationMatrix
A string of 9 space−separated floating point numbers. Sets the transformation matrix to the 3x3 matrix where the first row is (abc), the second row is (def) and the third row is (ghi).

Type: null or string

Default:

```
null
```

Example:

```
"0.5 0 0 0 0.8 0.1 0 0 1"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.accelPointsFallback
Sets the points of the fallback acceleration function. The value must be a list of floating point non−negative numbers. This only applies to the custom profile.

Type: null or (list of (signed integer or floating point number))

Default:

```
null
```

Example:

```
[
  0.0
  1.0
  2.4
  2.5
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.accelPointsMotion
Sets the points of the (pointer) motion acceleration function. The value must be a list of floating point non−negative numbers. This only applies to the custom profile.

Type: null or (list of (signed integer or floating point number))

Default:

```
null
```

Example:

```
[
  0.0
  1.0
  2.4
  2.5
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.accelPointsScroll
Sets the points of the scroll acceleration function. The value must be a list of floating point non−negative numbers. This only applies to the custom profile.

Type: null or (list of (signed integer or floating point number))

Default:

```
null
```

Example:

```
[
  0.0
  1.0
  2.4
  2.5
]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.accelProfile
Sets the pointer acceleration profile to the given profile. Permitted values are ‘adaptive’, ‘flat’, ‘custom’. Not all devices support this option or all profiles. If a profile is unsupported, the default profile for this is used. ‘flat’: Pointer motion is accelerated by a constant (device−specific) factor, depending on the current speed. ‘adaptive’: Pointer acceleration depends on the input speed. This is the default profile for most devices. ‘custom’: Allows the user to define a custom acceleration function. To define custom functions use the accelPoints<Fallback/Motion/Scroll> and accelStep<Fallback/Motion/Scroll> options.

Type: one of “flat”, “adaptive”, “custom”

Default:

```
"adaptive"
```

Example:

```
"flat"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.accelSpeed
Cursor acceleration (how fast speed increases from minSpeed to maxSpeed). This only applies to the flat or adaptive profile.

Type: null or string

Default:

```
null
```

Example:

```
"−0.5"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.accelStepFallback
Sets the step between the points of the fallback acceleration function. When a step of 0.0 is provided, libinput’s Fallback acceleration function is used. This only applies to the custom profile.

Type: null or signed integer or floating point number

Default:

```
null
```

Example:

```
0.1
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.accelStepMotion
Sets the step between the points of the (pointer) motion acceleration function. When a step of 0.0 is provided, libinput’s Fallback acceleration function is used. This only applies to the custom profile.

Type: null or signed integer or floating point number

Default:

```
null
```

Example:

```
0.1
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.accelStepScroll

Sets the step between the points of the scroll acceleration function. When a step of 0.0 is provided, libinput's Fallback acceleration function is used. This only applies to the custom profile.

Type: null or signed integer or floating point number

Default:

```
null
```

Example:

```
0.1
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.additionalOptions

Additional options for libinput touchpad driver. See **libinput**(4) for available options.";

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
  Option "DragLockButtons" "L1 B1 L2 B2"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.buttonMapping

Sets the logical button mapping for this device, see **XSetPointerMapping**(3). The string must be a space−separated list of button mappings in the order of the logical buttons on the device, starting with button 1. The default mapping is "1 2 3 … 32". A mapping of 0 deac- tivates the button. Multiple buttons can have the same mapping. Invalid mapping strings are discarded and the default mapping is used for all buttons. Buttons not specified in the user's mapping use the default mapping. See section BUTTON MAPPING for more details.

Type: null or string

Default:

```
null
```

Example:

```
"1 6 3 4 5 0 7"
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.calibrationMatrix

A string of 9 space−separated floating point numbers. Sets the calibration matrix to the 3x3 matrix where the first row is (abc), the second row is (def) and the third row is (ghi).

Type: null or string

Default:

```
null
```

Example:

```
"0.5 0 0 0 0.8 0.1 0 0 1"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.clickMethod
Enables a click method. Permitted values are ‘none’, ‘buttonareas’, ‘clickfinger’. Not all devices support all methods, if an option is unsupported, the default click method for this device is used.

Type: null or one of “none”, “buttonareas”, “clickfinger”

Default:

```
null
```

Example:

```
"buttonareas"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.dev
Path for touchpad device. Set to ‘null’ to apply to any auto−detected touchpad.

Type: null or string

Default:

```
null
```

Example:

```
"/dev/input/event0"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.disableWhileTyping
Disable input method while typing.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.horizontalScrolling
Enables or disables horizontal scrolling. When disabled, this driver will discard any horizontal scroll events from libinput. This does not disable horizontal scroll events from libinput; it merely discards the horizontal axis from any scroll events.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.leftHanded

Enables left−handed button orientation, i.e. swapping left and right buttons.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.middleEmulation

Enables middle button emulation. When enabled, pressing the left and right buttons simultaneously produces a middle mouse button click.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.naturalScrolling

Enables or disables natural scrolling behavior.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.scrollButton

Designates a button as scroll button. If the ScrollMethod is button and the button is logically held down, x/y axis movement is converted into scroll events.

Type: null or signed integer

Default:

```
null
```

Example:

```
1
```

Declared by:

<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.scrollMethod

Specify the scrolling method: ‘twofinger’, ‘edge’, ‘button’, or ‘none’

Type: one of “twofinger”, “edge”, “button”, “none”

Default:

```
"twofinger"
```

Example:

```
"edge"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.sendEventsMode
Sets the send events mode to ‘disabled’, ‘enabled’, or ‘disabled−on−external−mouse’

Type: one of “disabled”, “enabled”, “disabled−on−external−mouse”

Default:

```
"enabled"
```

Example:

```
"disabled"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.tapping
Enables or disables tap−to−click behavior.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.tappingButtonMap
Set the button mapping for 1/2/3−finger taps to left/right/middle or left/middle/right, respectively.

Type: null or one of “lrm”, “lmr”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.tappingDragLock
Enables or disables drag lock during tapping behavior. When enabled, a finger up during tap− and−drag will not immediately release the button. If the finger is set down again within the timeout, the dragging process continues.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.libinput.touchpad.transformationMatrix
A string of 9 space−separated floating point numbers. Sets the transformation matrix to the 3x3 matrix where the first row is (abc), the second row is (def) and the third row is (ghi).

Type: null or string

Default:

```
null
```

Example:

```
"0.5 0 0 0 0.8 0.1 0 0 1"
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/libinput.nix>

services.librechat.enable
Whether to enable the LibreChat server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librechat.nix>

services.librechat.enableLocalDB
Whether to enable a local mongodb instance.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librechat.nix>

services.librechat.package
The librechat package to use.

Type: package

Default:

```
pkgs.librechat
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librechat.nix>

services.librechat.credentials
Environment variables which are loaded from the contents of files at a file paths, mainly used for secrets. See **LibreChat environment variables**. Alternatively you can use ‘services.librechat.credentialsFile’ to define all the variables in a single file.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  CREDS_KEY = "/run/secrets/creds_key";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librechat.nix>

services.librechat.credentialsFile

Path to a file that contains environment variables. See **LibreChat environment variables**.

Example content of the file:

```
CREDS_KEY=6d6deb03cdfb27ea454f6b9ddd42494bdce4af25d50d8aee454ddce58 \
3690cc5
```

Alternatively you can use ‘services.librechat.credentials’ to define the value of each variable in a separate file.

Type: null or absolute path

Default:

```
"/dev/null"
```

Example:

```
"/run/secrets/librechat"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/librechat.nix>

services.librechat.dataDir

Absolute path for where the LibreChat server will use as its data directory to store logs, user uploads, and generated images.

Type: absolute path

Default:

```
"/var/lib/librechat"
```

Example:

```
"/persist/librechat"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/librechat.nix>

services.librechat.env

Environment variables that will be set for the service. See **LibreChat environment variables**.

Type: open submodule of attribute set of (string or absolute path or (string or signed integer convertible to it) or (string or floating point number convertible to it) or (string or 16 bit unsigned integer; between 0 and 65535 (both inclusive) convertible to it) or (string or boolean convertible to it))

Example:

```
{
  ALLOW_REGISTRATION = true;
  CONSOLE_JSON_STRING_LENGTH = 255;
  HOST = "0.0.0.0";
  PORT = 2309;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/librechat.nix>

services.librechat.env.LIBRECHAT_LOG_DIR

Logs will be saved into this directory. By default it is relative to ‘services.librechat.dataDir’.

Type: string

Default:

```
/var/lib/librechat/logs
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librechat.nix>

services.librechat.env.PORT
The value that will be passed to the PORT environment variable, telling LibreChat what to listen on.

Type: string or 16 bit unsigned integer; between 0 and 65535 (both inclusive) convertible to it

Default:

```
3080
```

Example:

```
2309
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librechat.nix>

services.librechat.group
The group to run the service as.

Type: string

Default:

```
"librechat"
```

Example:

```
"users"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librechat.nix>

services.librechat.meilisearch
See **LibreChat search feature**.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librechat.nix>

services.librechat.meilisearch.enable
Whether to enable and configure Meilisearch locally for Librechat. You will manually need to set ‘services.meilisearch.masterKeyFile’.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librechat.nix>

services.librechat.openFirewall

Whether to open the port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/librechat.nix>

services.librechat.settings

A free−form attribute set that will be written to librechat.yaml. See the **LibreChat configuration options**. You can use environment variables by wrapping them in ${}. Take care to escape the $ character.

Type: open submodule of (YAML 1.1 value)

Default:

```
{
  version = "1.2.1";
}
```

Example:

```
{
  cache = true;
  endpoints = {
    custom = [
      {
        apiKey = "\${OPENROUTER_KEY}";
        baseURL = "https://openrouter.ai/api/v1";
        dropParams = [
          "stop"
        ];
        modelDisplayLabel = "OpenRouter";
        models = {
          default = [
            "meta−llama/llama−3−70b−instruct"
          ];
          fetch = true;
        };
        name = "OpenRouter";
        titleConvo = true;
        titleModule = "meta−llama/llama−3−70b−instruct";
      }
    ];
  };
  interface = {
    privacyPolicy = {
      externalUrl = "https://librechat.ai/privacy−policy";
      openNewTab = true;
    };
  };
  version = "1.2.1";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librechat.nix>

services.librechat.user
The user to run the service as.

Type: string

Default:

```
"librechat"
```

Example:

```
"alice"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librechat.nix>

services.librenms.enable
Whether to enable LibreNMS network monitoring system.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.enableLocalBilling
Enable billing Cron−Jobs on the local instance. Enabled by default, but you may disable it on some nodes within a distributed poller setup. See **the docs** for more informations about billing with distributed pollers.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.enableOneMinutePolling
Enables the **1−Minute Polling**. Changing this option will automatically convert your existing rrd files.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.package
The librenms package to use.

Type: package

Default:

```
pkgs.librenms
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.dataDir
Path of the LibreNMS state directory.

Type: absolute path

Default:

```
"/var/lib/librenms"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.database.createLocally
Whether to create a local database automatically.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.database.database
Name of the database on the MySQL/MariaDB server.

Type: string

Default:

```
"librenms"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.database.host
Hostname or IP of the MySQL/MariaDB server. Ignored if ‘socket’ is defined.

Type: unspecified value

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.database.passwordFile
A file containing the password for the user of the MySQL/MariaDB server. Must be readable for the LibreNMS user. Ignored if ‘socket’ is defined, mandatory otherwise.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/mysql.pass"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.database.port

Port of the MySQL/MariaDB server. Ignored if 'socket' is defined.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.database.socket

A unix socket to mysql, accessible by the librenms user. Useful when mysql is on the localhost.

Type: null or string

Default:

```
null
```

Example:

```
"/run/mysqld/mysqld.sock"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.database.username

Name of the user on the MySQL/MariaDB server. Ignored if 'socket' is defined.

Type: string

Default:

```
"librenms"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.distributedPoller.enable

Configure this LibreNMS instance as a **distributed poller**. This will disable all web features and just configure the poller features. Use the 'mysql' database of your main LibreNMS instance in the database settings.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.distributedPoller.distributedBilling

Enable distributed billing on this poller.

Note: according to **the docs**, billing should only be calculated on a single node per poller group. You can disable billing on some nodes with the 'services.librenms.enableLocalBilling' option.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.distributedPoller.group
Group(s) of this poller.

Type: string

Default:

```
"0"
```

Example:

```
"1,2"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.distributedPoller.memcachedHost
Hostname or IP of the ‘memcached’ server.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.distributedPoller.memcachedPort
Port of the ‘memcached’ server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
11211
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.distributedPoller.name
Custom name of this poller.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.distributedPoller.rrdcachedHost
Hostname or IP of the ‘rrdcached’ server.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.distributedPoller.rrdcachedPort
Port of the ‘memcached’ server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
42217
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.environmentFile
File containing env−vars to be substituted into the final config. Useful for secrets. Does not apply to settings defined in 'extraConfig'.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.extraConfig
Additional config for LibreNMS that will be appended to the 'config.php'. See **https://github.com/librenms/librenms/blob/master/misc/config_definitions.json** for possible options. Useful if you want to use PHP−Functions in your config.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.finalPackage
The final package used by the module. This is the package that has all overrides.

Type: package *(read only)*

Default:

```
package
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.group
Name of the LibreNMS group.

Type: string

Default:

```
"librenms"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.hostname
The hostname to serve LibreNMS on.

Type: string

Default:

```
config.networking.fqdnOrHostName
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.logDir

Path of the LibreNMS logging directory.

Type: absolute path

Default:

```
"/var/log/librenms"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx

With this option, you can customize the nginx virtualHost settings.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  serverAliases = [
    "librenms.${config.networking.domain}"
  ];
  # To enable encryption and let let's encrypt take care of certifi \
cate
  forceSSL = true;
  enableACME = true;
  # To set the LibreNMS virtualHost as the default virtualHost;
  default = true;
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.enableACME

Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.acmeFallbackHost

Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don’t put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme-challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix-shell --packages apacheHttpd --run 'htpasswd -B -c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with ‘redirectCode’) to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.http2
Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx’s implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.http3
Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.http3_hq
Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.kTLS
Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.listen
Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides 'addSSL' and 'onlySSL'.

If you only want to set the addresses manually and not the ports, take a look at 'listenAddresses'.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
```

```
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.listen.*.ssl

Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations.<name>.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix-shell --packages apacheHttpd --run 'htpasswd -B -c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with 'lib.mkOrder'. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en-US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.rejectSSL
Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.root

The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.serverName

Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.sslCertificate

Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca-bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

2. see the **security.acme.certs** option

services.librenms.phpOptions
Options for PHP's php.ini file for librenms.

Please note that this option is *additive* on purpose while the attribute values inside the default are option defaults: that means that

```
{
  services.librenms.phpOptions."opcache.enable" = 1;
}
```

will override the 'php.ini' option 'opcache.enable' without discarding the rest of the defaults.

Overriding all of 'phpOptions' can be done like this:

```
{
  services.librenms.phpOptions = lib.mkForce {
    /* ... */
  };
```

```
}
```

Type: attribute set of (string or signed integer)

Default:

```
{
  "date.timezone" = {
    _type = "literalExpression";
    text = "config.time.timeZone";
  };
  log_errors = "on";
  memory_limit = {
    _type = "literalExpression";
    text = "\${toString cfg.settings.php_memory_limit}M";
  };
  "opcache.enable" = {
    _type = "literalExpression";
    text = "1";
  };
  "opcache.memory_consumption" = {
    _type = "literalExpression";
    text = "256";
  };
  post_max_size = "100M";
  upload_max_filesize = "100M";
  zend_extension = {
    _type = "literalExpression";
    text = "opcache";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.pollerThreads

Amount of threads of the cron−poller.

Type: signed integer

Default:

```
16
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.poolConfig

Options for the LibreNMS PHP pool. See the documentation on ‘php−fpm.conf’ for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
```

```
  "pm.start_servers" = 2;
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.settings
Attrset of the LibreNMS configuration. See **https://docs.librenms.org/Support/Configuration/** for reference. All possible options are listed **here**. See **https://docs.librenms.org/Extensions/Authentication/** for setting other authentication methods.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Example:

```
{
  base_url = "/librenms/";
  top_devices = true;
  top_ports = false;
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.useDistributedPollers
Enables **distributed pollers** for this LibreNMS instance. This will enable a local ‘rrdcached’ and ‘memcached’ server.

To use this feature, make sure to configure your firewall that the distributed pollers can reach the local ‘mysql’, ‘rrdcached’ and ‘memcached’ ports.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librenms.user
Name of the LibreNMS user.

Type: string

Default:

```
"librenms"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/librenms.nix>

services.librespeed.enable
Whether to enable LibreSpeed server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.package
The librespeed−rust package to use.

Type: package

Default:

```
pkgs.librespeed-rust
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.domain
If not ‘null’, this will add an entry to ‘services.librespeed.servers’ and configure librespeed to use TLS.

Type: null or non−empty string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.downloadIPDB
Whether to download the IP info database before starting librespeed. Disable this if you want to use the Go implementation.

Type: boolean

Default:

```
!(config.services.librespeed.secrets ? "ipinfo_api_key")
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.frontend.enable
Enables the LibreSpeed frontend and adds a nginx virtual host if not explicitly disabled and ‘services.librespeed.domain’ is not ‘null’.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.frontend.contactEmail
Email address listed in the privacy policy.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.frontend.pageTitle
Title of the webpage.

Type: string

Default:

```
"LibreSpeed"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.frontend.servers
LibreSpeed servers that should appear in the server list.

Type: list of (submodule)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.frontend.servers.*.dlURL
URL path to download test on this server. Append ‘.php’ to the default value if the server uses the php implementation.

Type: non−empty string

Default:

```
"backend/garbage"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.frontend.servers.*.getIpURL
URL path to IP lookup on this server. Append ‘.php’ to the default value if the server uses the php implementation.

Type: non−empty string

Default:

```
"backend/getIP"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.frontend.servers.*.name
Name shown in the server list.

Type: non−empty string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.frontend.servers.*.pingURL
URL path to latency/jitter test on this server. Append ‘.php’ to the default value if the server uses the php implementation.

Type: non−empty string

Default:

```
"backend/empty"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.frontend.servers.*.server

URL to the server. You may use '//' instead of 'http://' or 'https://'.

Type: non−empty string

Declared by:

<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.frontend.servers.*.ulURL

URL path to upload test on this server. Append '.php' to the default value if the server uses the php implementation.

Type: non−empty string

Default:

```
"backend/empty"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.frontend.settings

Override default settings of the speedtest web client. See **speedtest_worker.js** for a list of possible values.

Type: null or (open submodule of attribute set of (boolean or signed integer or string or floating point number))

Default:

```
{
  telemetry_level = "basic";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.frontend.useNginx

Configure nginx for the LibreSpeed frontend. This will only create a virtual host for the frontend and won't proxy all requests because the reported upload and download speeds are inaccurate if proxied.

Type: boolean

Default:

```
config.services.librespeed.domain != null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.secrets

Attribute set of filesystem paths. The contents of the specified paths will be read at service start time and merged with the attributes provided in 'settings'.

Type: null or (attribute set of absolute path not in the Nix store)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.settings

LibreSpeed configuration written as Nix expression. All values set to ‘null’ will be excluded from the evaluated config. This is useful if you want to omit certain defaults when using a different LibreSpeed implementation.

See **github.com/librespeed** for configuration help.

Type: null or (attribute set of (null or boolean or signed integer or string or package))

Default:

```
{
  assets_path = if (config.services.librespeed.frontend.enable && ! \
config.services.librespeed.frontend.useNginx) then
    librespeedAssets
  else
    pkgs.writeTextDir "index.html" "";
  bind_address = "::";
  listen_port = 8989;
  base_url = "backend";
  worker_threads = "auto";
  database_type = "none";
  database_file = "/var/lib/librespeed/speedtest.sqlite";
  # librespeed-rust will fail to start if the following config par \
ameters are omitted.
  ipinfo_api_key = "";
  stats_password = "";
  redact_ip_addresses = false;
  result_image_theme = "light";
  enable_tls = config.services.librespeed.tlsCertificate != null && \
 config.services.librespeed.tlsKey != null;
  tls_cert_file = lib.optionalString (config.services.librespeed.tl \
sCertificate != null) "/run/credentials/librespeed.service/cert.pem \
";
  tls_key_file = lib.optionalString (config.services.librespeed.tls \
Key != null) "/run/credentials/librespeed.service/key.pem";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/librespeed.nix>

services.librespeed.tlsCertificate

TLS certificate to use. Use together with ‘tlsKey’.

Type: null or non-empty string

Default:

```
lib.optionalString (config.services.librespeed.useACMEHost != null) \
 "${config.security.acme.certs.${config.services.librespeed.useACME \
Host}.directory}/cert.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/librespeed.nix>

services.librespeed.tlsKey

TLS private key to use. Use together with ‘tlsCertificate’.

Type: null or non−empty string

Default:

```
lib.optionalString (config.services.librespeed.useACMEHost != null) \
 "${config.security.acme.certs.${config.services.librespeed.useACME \
Host}.directory}/key.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.librespeed.useACMEHost

Use a certificate generated by the NixOS ACME module for the given host. Note that this will not generate a new certificate − you will need to do so with ‘security.acme.certs’.

Type: null or non−empty string

Default:

```
null
```

Example:

```
"speed.example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/librespeed.nix>

services.libreswan.enable

Whether to enable Libreswan IPsec service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/libreswan.nix>

services.libreswan.configSetup

Options to go in the ‘config setup’ section of the Libreswan IPsec configuration

Type: strings concatenated with “\n”

Default:

```
  protostack=netkey
  virtual_private=%v4:10.0.0.0/8,%v4:192.168.0.0/16,%v4:172.16.0.0/ \
12,%v4:25.0.0.0/8,%v4:100.64.0.0/10,%v6:fd00::/8,%v6:fe80::/10
```

Example:

```
  secretsfile=/root/ipsec.secrets
  protostack=netkey
  virtual_private=%v4:10.0.0.0/8,%v4:192.168.0.0/16,%v4:172.16.0.0/ \
12,%v4:25.0.0.0/8,%v4:100.64.0.0/10,%v6:fd00::/8,%v6:fe80::/10
```

Declared by:
<nixpkgs/nixos/modules/services/networking/libreswan.nix>

services.libreswan.connections
A set of connections to define for the Libreswan IPsec service

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Example:

```
{ myconnection = ''
    auto=add
    left=%defaultroute
    leftid=@user
    right=my.vpn.com
    ikev2=no
    ikelifetime=8h
  '';
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/libreswan.nix>

services.libreswan.disableRedirects
Whether to disable send and accept redirects for all network interfaces. See the Libreswan **FAQ** page for why this is recommended.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/libreswan.nix>

services.libreswan.policies
A set of policies to apply to the IPsec connections.

Note
The policy name must match the one of connection it needs to apply to.

Type: attribute set of strings concatenated with “\n”

Default:

```
{ }
```

Example:

```
{ private-or-clear = ''
    # Attempt opportunistic IPsec for the entire Internet
    0.0.0.0/0
    ::/0
  '';
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/libreswan.nix>

services.libretranslate.enable
Whether to enable LibreTranslate service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/libretranslate.nix>

services.libretranslate.enableApiKeys
Whether to enable the API keys database.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/libretranslate.nix>

services.libretranslate.package
The libretranslate package to use.

Type: package

Default:

```
pkgs.libretranslate
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/libretranslate.nix>

services.libretranslate.configureNginx
Configure nginx as a reverse proxy for LibreTranslate.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/libretranslate.nix>

services.libretranslate.dataDir
The data directory.

Type: absolute path

Default:

```
"/var/lib/libretranslate"
```

Example:

```
"/srv/data/libretranslate"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/libretranslate.nix>

services.libretranslate.disableWebUI
Whether to disable the Web UI.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/libretranslate.nix>

services.libretranslate.domain
The domain serving your LibreTranslate instance. Required for configure nginx as a reverse proxy.

Type: string

Default:

```
""
```

Example:

```
"libretranslate.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/libretranslate.nix>

services.libretranslate.extraArgs
Extra arguments passed to the LibreTranslate.

Type: attribute set of (null or boolean or string or signed integer or list of (boolean or string or signed integer))

Default:

```
{ }
```

Example:

```
{
  debug = true;
  disable−files−translation = true;
  url−prefix = "translate";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/libretranslate.nix>

services.libretranslate.group
Group account under which libretranslate runs.

Type: string

Default:

```
"libretranslate"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/libretranslate.nix>

services.libretranslate.host

The address the application should listen on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/libretranslate.nix>

services.libretranslate.port

The the application should listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/libretranslate.nix>

services.libretranslate.threads

Set number of threads.

Type: null or (positive integer, meaning >0)

Default:

```
null
```

Example:

```
8
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/libretranslate.nix>

services.libretranslate.updateModels

Update language models at startup

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/libretranslate.nix>

services.libretranslate.user

User account under which libretranslate runs.

Type: string

Default:

```
"libretranslate"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/libretranslate.nix>

services.libvirtd.autoSnapshot.enable

Whether to enable LibVirt VM snapshots.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/libvirtd−autosnapshot.nix>

services.libvirtd.autoSnapshot.calendar

When to create snapshots (systemd calendar format). Default is 4:15 AM.

Type: string

Default:

```
"04:15:00"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/libvirtd−autosnapshot.nix>

services.libvirtd.autoSnapshot.keep

Default number of snapshots to keep for VMs that don’t specify a keep value.

Type: signed integer

Default:

```
2
```

Declared by:

<nixpkgs/nixos/modules/services/backup/libvirtd−autosnapshot.nix>

services.libvirtd.autoSnapshot.prefix

Prefix for automatic snapshot names. This is used to identify and manage automatic snapshots separately from manual ones.

Type: string

Default:

```
"autosnap"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/libvirtd−autosnapshot.nix>

services.libvirtd.autoSnapshot.snapshotType

Type of snapshot to create (internal or external).

Type: one of “internal”, “external”

Default:

```
"internal"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/libvirtd−autosnapshot.nix>

services.libvirtd.autoSnapshot.vms

If specified only the list of VMs will be snapshotted else all existing one. Each entry can be either:

- A string (VM name, uses default settings)
- An attribute set with VM configuration

Type: null or (list of (string or (submodule)))

Default:

```
null
```

Example:

```
[
  "myvm1"              # Uses defaults
  {
    name = "myvm2";
    keep = 30;         # Override retention
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/backup/libvirtd-autosnapshot.nix>

services.lidarr.enable

Whether to enable Lidarr, a Usenet/BitTorrent music downloader.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/lidarr.nix>

services.lidarr.package

The lidarr package to use.

Type: package

Default:

```
pkgs.lidarr
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/lidarr.nix>

services.lidarr.dataDir

The directory where Lidarr stores its data files.

Type: string

Default:

```
"/var/lib/lidarr/.config/Lidarr"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/lidarr.nix>

services.lidarr.environmentFiles

Environment file to pass secret configuration values. Each line must follow the 'LIDARR__SECTION__KEY=value' pattern. Please consult the documentation at the **wiki**.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/lidarr.nix>

services.lidarr.group

Group under which Lidarr runs.

Type: string

Default:

```
"lidarr"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/lidarr.nix>

services.lidarr.openFirewall

Open ports in the firewall for Lidarr

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/lidarr.nix>

services.lidarr.settings

Attribute set of arbitrary config options. Please consult the documentation at the **wiki**.

WARNING: this configuration is stored in the world−readable Nix store! For secrets use **services.lidarr.environmentFiles**.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  update.mechanism = "internal";
  server = {
    urlbase = "localhost";
    port = 8686;
    bindaddress = "*";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/servarr/lidarr.nix>

services.lidarr.settings.log.analyticsEnabled
Send Anonymous Usage Data

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/lidarr.nix>

services.lidarr.settings.server.port
Port Number

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8686
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/lidarr.nix>

services.lidarr.settings.update.automatically
Automatically download and install updates.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/lidarr.nix>

services.lidarr.settings.update.mechanism
which update mechanism to use

Type: null or one of “external”, “builtIn”, “script”

Default:

```
"external"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/lidarr.nix>

services.lidarr.user
User account under which Lidarr runs.

Type: string

Default:

```
"lidarr"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/servarr/lidarr.nix>

services.lifecycled.enable
Whether to enable lifecycled, a daemon for responding to AWS AutoScaling Lifecycle Hooks.

Type: boolean

Default:

```
false
```

Example:

`true`

Declared by:
<nixpkgs/nixos/modules/services/misc/lifecycled.nix>

services.lifecycled.awsRegion
The region used for accessing AWS services.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/misc/lifecycled.nix>

services.lifecycled.cloudwatchGroup
Write logs to a specific Cloudwatch Logs group.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/misc/lifecycled.nix>

services.lifecycled.cloudwatchStream
Write logs to a specific Cloudwatch Logs stream. Defaults to the instance ID.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/misc/lifecycled.nix>

services.lifecycled.debug
Enable debugging information.

Type: boolean

Default:

`false`

Declared by:
<nixpkgs/nixos/modules/services/misc/lifecycled.nix>

services.lifecycled.handler
The script to invoke to handle events.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/misc/lifecycled.nix>

services.lifecycled.instanceId
The instance ID to listen for events for.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/misc/lifecycled.nix>

services.lifecycled.json
Enable JSON logging.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/lifecycled.nix>

services.lifecycled.noSpot
Disable the spot termination listener.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/lifecycled.nix>

services.lifecycled.queueCleaner.enable
Whether to enable lifecycled−queue−cleaner.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/lifecycled.nix>

services.lifecycled.queueCleaner.frequency
How often to trigger the queue cleaner.

NOTE: This string should be a valid value for a systemd timer's 'OnCalendar' configuration. See **systemd.timer**(5) for more information.

Type: string

Default:

```
"hourly"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/lifecycled.nix>

services.lifecycled.queueCleaner.parallel
The number of parallel deletes to run.

Type: unsigned integer, meaning >=0

Default:

```
20
```

Declared by:
<nixpkgs/nixos/modules/services/misc/lifecycled.nix>

services.lifecycled.snsTopic
The SNS topic that receives events.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/lifecycled.nix>

services.lighthouse.package
The lighthouse package to use.

Type: package

Default:

```
pkgs.lighthouse
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon
Beacon node

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.enable
Whether to enable Lightouse Beacon node.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.address
Listen address of Beacon node.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.dataDir

Directory where data will be stored. Each chain will be stored under it’s own specific subdirectory.

Type: string

Default:

```
"/var/lib/lighthouse-beacon"
```

Declared by:

<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.disableDepositContractSync

Explicitly disables syncing of deposit logs from the execution node. This overrides any previous option that depends on it. Useful if you intend to run a non-validating beacon node.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.execution.address

Listen address for the execution layer.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.execution.jwtPath

Path for the jwt secret required to connect to the execution layer.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.execution.port

Port number the Beacon node will be listening on for the execution layer.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8551
```

Declared by:

<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.extraArgs

Additional arguments passed to the lighthouse beacon command.

Type: string

Default:

```
""
```

Example:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.http.enable
Whether to enable Beacon node http api.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.http.address
Listen address of Beacon node RPC service.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.http.port
Port number of Beacon node RPC service.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5052
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.metrics.enable
Whether to enable Beacon node prometheus metrics.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.metrics.address
Listen address of Beacon node metrics service.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.metrics.port
Port number of Beacon node metrics service.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5054
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.openFirewall
Open the port in the firewall

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.beacon.port
Port number the Beacon node will be listening on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9000
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.extraArgs
Additional arguments passed to every lighthouse command.

Type: string

Default:

```
""
```

Example:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.network
The network to connect to. Mainnet is the default ethereum network.

Type: one of “mainnet”, “gnosis”, “chiado”, “sepolia”, “holesky”

Default:

```
"mainnet"
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.validator
Validator node

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.validator.enable
Enable Lightouse Validator node.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.validator.beaconNodes
Beacon nodes to connect to.

Type: list of string

Default:

```
[
  "http://localhost:5052"
]
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.validator.dataDir
Directory where data will be stored. Each chain will be stored under it’s own specific subdirectory.

Type: string

Default:

```
"/var/lib/lighthouse-validator"
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.validator.extraArgs
Additional arguments passed to the lighthouse validator command.

Type: string

Default:

```
""
```

Example:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.validator.metrics.enable
Whether to enable Validator node prometheus metrics.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.validator.metrics.address
Listen address of Validator node metrics service.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighthouse.validator.metrics.port
Port number of Validator node metrics service.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5056
```

Declared by:
<nixpkgs/nixos/modules/services/blockchain/ethereum/lighthouse.nix>

services.lighttpd.enable
Enable the lighttpd web server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/lighttpd/default.nix>

services.lighttpd.enableModules
List of lighttpd modules to enable. Sub−services take care of enabling modules as needed, so this option is mainly for when you want to add custom stuff to **services.lighttpd.extraConfig** that depends on a certain module.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "mod_cgi"
  "mod_status"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/lighttpd/default.nix>

services.lighttpd.enableUpstreamMimeTypes
Whether to include the list of mime types bundled with lighttpd (upstream). If you disable this, no mime types will be added by NixOS and you will have to add your own mime types in **services.lighttpd.extraConfig**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/lighttpd/default.nix>

services.lighttpd.package
The lighttpd package to use.

Type: package

Default:

```
pkgs.lighttpd
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/lighttpd/default.nix>

services.lighttpd.cgit.enable
If true, enable cgit (fast web interface for git repositories) as a sub−service in lighttpd.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/lighttpd/cgit.nix>

services.lighttpd.cgit.configText
Verbatim contents of the cgit runtime configuration file. Documentation (with cgitrc example file) is available in “man cgitrc”. Or online: **http://git.zx2c4.com/cgit/tree/cgitrc.5.txt**

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  source−filter=${pkgs.cgit}/lib/cgit/filters/syntax−highlighting \
.py
  about−filter=${pkgs.cgit}/lib/cgit/filters/about−formatting.sh
  cache−size=1000
  scan−path=/srv/git
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/lighttpd/cgit.nix>

services.lighttpd.cgit.subdir

The subdirectory in which to serve cgit. The web application will be accessible at http://yourserver/${subdir}

Type: string

Default:

```
"cgit"
```

Example:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/lighttpd/cgit.nix>

services.lighttpd.collectd.enable

Whether to enable collectd subservice accessible at http://yourserver/collectd.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/lighttpd/collectd.nix>

services.lighttpd.collectd.collectionCgi

Path to collection.cgi script from (collectd sources)/contrib/collection.cgi This option allows to use a customized version

Type: absolute path

Default: config.services.collectd.package configured for lighttpd

Declared by:

<nixpkgs/nixos/modules/services/web−servers/lighttpd/collectd.nix>

services.lighttpd.configText

Overridable config file contents to use for lighttpd. By default, use the contents automatically generated by NixOS.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"...verbatim config file contents..."
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/lighttpd/default.nix>

services.lighttpd.document−root

Document−root of the web server. Must be readable by the “lighttpd” user.

Type: absolute path

Default:

```
"/srv/www"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/lighttpd/default.nix>

services.lighttpd.extraConfig
These configuration lines will be appended to the generated lighttpd config file. Note that this mechanism does not work when the manual **configText** option is used.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/lighttpd/default.nix>

services.lighttpd.gitweb.enable
If true, enable gitweb in lighttpd. Access it at http://yourserver/gitweb

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/lighttpd/gitweb.nix>

services.lighttpd.mod_status
Show server status overview at /server−status, statistics at /server−statistics and list of loaded modules at /server−config.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/lighttpd/default.nix>

services.lighttpd.mod_userdir
If true, requests in the form /~user/page.html are rewritten to take the file public_html/page.html from the home directory of the user.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/lighttpd/default.nix>

services.lighttpd.port
TCP port number for lighttpd to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
80
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/lighttpd/default.nix>

services.limesurvey.enable

Whether to enable Limesurvey web application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.package

The limesurvey package to use.

Type: package

Default:

```
pkgs.limesurvey
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.config

LimeSurvey configuration. Refer to **https://manual.limesurvey.org/Optional_settings** for details on supported values.

Type: limesurvey config type (str, int, bool or attribute set thereof)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.database.createLocally

Create the database and database user locally. This currently only applies if database type “mysql” is selected.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.database.dbEngine

Database storage engine to use.

Type: one of “MyISAM”, “InnoDB”

Default:

```
"InnoDB"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.database.host
Database host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.database.name
Database name.

Type: string

Default:

```
"limesurvey"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.database.passwordFile
A file containing the password corresponding to **database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/limesurvey−dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.database.socket
Path to the unix socket file to use for authentication.

Type: null or absolute path

Default:

```
/run/mysqld/mysqld.sock
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.database.type

Database engine to use.

Type: one of “mysql”, “pgsql”, “odbc”, “mssql”

Default:

```
"mysql"
```

Example:

```
"pgsql"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.database.user

Database user.

Type: string

Default:

```
"limesurvey"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.encryptionKeyFile

32−byte key used to encrypt variables in the database.

Note: It should be string not a store path in order to prevent the password from being world readable

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.encryptionNonceFile

24−byte used to encrypt variables in the database.

Note: It should be string not a store path in order to prevent the password from being world readable

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost

Apache configuration can be done by adapting ‘services.httpd.virtualHosts.<name>’. See **services.httpd.virtualHosts** for further information.

Type: submodule

Example:

```
{
  hostName = "survey.example.org";
  adminAddr = "webmaster@example.org";
  forceSSL = true;
  enableACME = true;
```

```
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.enableUserDir
Whether to enable serving *~/public_html* as '/~«username»'.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.acmeRoot
Directory for the acme challenge which is PUBLIC, don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.adminAddr
E−mail address of the server administrator.

Type: null or string

Default:

```
null
```

Example:

```
"admin@example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.documentRoot
The path of Apache’s document root directory. If left undefined, an empty directory in the Nix store will be used as root.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.extraConfig
These lines go to httpd.conf verbatim. They will go after directories and directory aliases defined by default.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
<Directory /home>
  Options FollowSymlinks
  AllowOverride All
</Directory>
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.forceSSL
Whether to add a separate nginx server block that permanently redirects (301) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.globalRedirect
If set, all requests for this host are redirected permanently to the given URL.

Type: null or string

Default:

```
null
```

Example:

```
"http://newserver.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.hostName
Canonical hostname for the server.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.http2
Whether to enable HTTP 2. HTTP/2 is supported in all multi−processing modules that come with httpd. *However, if you use the prefork mpm, there will be severe restrictions.* Refer to **https://httpd.apache.org/docs/2.4/howto/http2.html#mpm−config** for details.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.listen
Listen addresses and ports for this virtual host.

Note
This option overrides ‘addSSL’, ‘forceSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    ip = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    ip = "192.154.1.1";
    port = 80;
  }
  {
    ip = "*";
    port = 8080;
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.listen.*.ip
IP to listen on. 0.0.0.0 for IPv4 only, * for all.

Type: string

Default:

```
"*"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.listen.*.port
Port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.listen.*.ssl
Whether to enable SSL (https) support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Type: non−empty (list of string)

Default:

```
[
  "*"
]
```

Example:

```
[
  "127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.locations
Declarative location config. See **https://httpd.apache.org/docs/2.4/mod/core.html#location** for details.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
```

```
      proxyPass = "http://localhost:3000";
    };
    "/foo/bar.png" = {
      alias = "/home/eelco/some-file.png";
    };
  };
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.locations.<name>.alias
Alias directory for requests. See **https://httpd.apache.org/docs/2.4/mod/mod_alias.html#alias**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.locations.<name>.index
Adds DirectoryIndex directive. See **https://httpd.apache.org/docs/2.4/mod/mod_dir.html#directoryindex**.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.locations.<name>.proxyPass
Sets up a simple reverse proxy as described by **https://httpd.apache.org/docs/2.4/howto/reverse_proxy.html#simple**.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.logFormat
Log format for Apache's log files. Possible values are: combined, common, referer, agent.

Type: string

Default:

```
"common"
```

Example:

```
"combined"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.robotsEntries
Specification of pages to be ignored by web crawlers. See **http://www.robotstxt.org/** for details.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
"Disallow: /foo/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.servedDirs

This option provides a simple way to serve static directories.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    dir = "/home/eelco/Dev/nix-homepage";
    urlPath = "/nix";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.servedFiles

This option provides a simple way to serve individual, static files.

Note

This option has been deprecated and will be removed in a future version of NixOS. You can achieve the same result by making use of the ‘locations.<name>.alias’ option.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    file = "/home/eelco/some-file.png";
    urlPath = "/foo/bar.png";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "www.example.org:8080"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.sslServerCert
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.sslServerChain
Path to server SSL chain file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/ca.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.sslServerKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.httpd.virtualHost.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

2. see the **security.acme.certs** option

services.limesurvey.nginx.virtualHost
Nginx configuration can be done by adapting 'services.nginx.virtualHosts.<name>'. See **services.nginx.virtualHosts** for further information.

Type: submodule

Example:

```
{
```

```
  serverName = "survey.example.org";
  forceSSL = true;
  enableACME = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.default

Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.extraConfig

These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.forceSSL

Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with 'redirectCode') to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.http2
Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.http3
Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.http3_hq
Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides ‘addSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.listen.*.addr

Listen address.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.listen.*.extraParameters

Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
```

```
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.listen.*.ssl
Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations.<name>.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations.<name>.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.rejectSSL
Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.reuseport
Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.root
The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.serverName
Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.nginx.virtualHost.useACMEHost
A host of an existing Let’s Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

2. see the **security.acme.certs** option

services.limesurvey.poolConfig
Options for the LimeSurvey PHP pool. See the documentation on ‘php−fpm.conf’ for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.limesurvey.webserver
Webserver to configure for reverse−proxying limesurvey.

Type: one of “httpd”, “nginx”

Default:

```
"httpd"
```

Example:

```
"nginx"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/limesurvey.nix>

services.linkding.enable
Whether to enable linkding, a self−hosted bookmark manager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkding.nix>

services.linkding.package
The linkding package to use.

Type: package

Default:

```
pkgs.linkding
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkding.nix>

services.linkding.address
Address on which linkding listens.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkding.nix>

services.linkding.contextPath
Configures a URL context path under which linkding is accessible. When set, linkding is available at ‘http://host:<port>/<contextPath>’. Must end with a ‘/’ when non−empty.

Type: string

Default:

```
""
```

Example:

```
"linkding/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkding.nix>

services.linkding.dataDir
Directory used for all mutable state: SQLite database, secret key, favicons, previews, and assets.

Type: absolute path

Default:

```
"/var/lib/linkding"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkding.nix>

services.linkding.database.createLocally
Whether to automatically create a local PostgreSQL database and user.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkding.nix>

services.linkding.database.host
PostgreSQL server host.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkding.nix>

services.linkding.database.name
PostgreSQL database name.

Type: string

Default:

```
"linkding"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkding.nix>

services.linkding.database.port
PostgreSQL server port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5432
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkding.nix>

services.linkding.database.type
Database engine to use. Defaults to SQLite.

Type: one of “sqlite”, “postgres”

Default:

```
"sqlite"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkding.nix>

services.linkding.database.user
PostgreSQL user name.

Type: string

Default:

```
"linkding"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkding.nix>

services.linkding.environmentFile
Path to an environment file loaded by all linkding services. Useful for injecting secrets that should not appear in the Nix store, such as ‘LD_DB_PASSWORD’ or ‘LD_SUPERUSER_PASSWORD’.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/linkding.env"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkding.nix>

services.linkding.group

Group under which linkding runs.

> **Note**
> If left as the default value this group will automatically be created on system activation, otherwise you are responsible for ensuring the group exists before the linkding service starts.

Type: string

Default:

```
"linkding"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/linkding.nix>

services.linkding.openFirewall

Open the linkding port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/linkding.nix>

services.linkding.port

Port on which linkding listens.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9090
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/linkding.nix>

services.linkding.settings

Additional environment variables passed to linkding. Refer to the **linkding documentation** for the full list of supported 'LD_*' options.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  LD_DISABLE_BACKGROUND_TASKS = "True";
  LD_DISABLE_URL_VALIDATION = "True";
  LD_ENABLE_OIDC = "True";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/linkding.nix>

services.linkding.user

User account under which linkding runs.

> **Note**
> If left as the default value this user will automatically be created on system activation, otherwise you are responsible for ensuring the user exists before the linkding service starts.

Type: string

Default:

```
"linkding"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkding.nix>

services.linkwarden.enable
Whether to enable Linkwarden.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkwarden.nix>

services.linkwarden.enableRegistration
Whether to enable registration for new users.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkwarden.nix>

services.linkwarden.package
The linkwarden package to use.

Type: package

Default:

```
pkgs.linkwarden
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkwarden.nix>

services.linkwarden.cacheLocation
Directory used as cache. If it is not the default, the directory has to be created manually such that the linkwarden user is able to read and write to it.

Type: absolute path

Default:

```
"/var/cache/linkwarden"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/linkwarden.nix>

services.linkwarden.database.createLocally

Whether to enable the automatic creation of the database for Linkwarden…

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/linkwarden.nix>

services.linkwarden.database.host

Hostname or address of the postgresql server. If an absolute path is given here, it will be interpreted as a unix socket path.

Type: string

Default:

```
"/run/postgresql"
```

Example:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/linkwarden.nix>

services.linkwarden.database.name

The name of the Linkwarden database.

Type: string

Default:

```
"linkwarden"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/linkwarden.nix>

services.linkwarden.database.port

Port of the postgresql server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5432
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/linkwarden.nix>

services.linkwarden.database.user

The database user for Linkwarden.

Type: string

Default:

```
"linkwarden"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/linkwarden.nix>

services.linkwarden.environment

Extra configuration environment variables. Refer to the **documentation** for options.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  PAGINATION_TAKE_COUNT = "50";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/linkwarden.nix>

services.linkwarden.environmentFile

Path of a file with extra environment variables to be loaded from disk. This file is not added to the nix store, so it can be used to pass secrets to linkwarden. Refer to the **documentation** for options.

Linkwarden needs at least a nextauth secret. To set a database password use POSTGRES_PASSWORD:

```
NEXTAUTH_SECRET=<secret>
POSTGRES_PASSWORD=<pass>
```

Type: null or string

Default:

```
null
```

Example:

```
"/run/secrets/linkwarden"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/linkwarden.nix>

services.linkwarden.group

The group Linkwarden should run as.

Type: string

Default:

```
"linkwarden"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/linkwarden.nix>

services.linkwarden.host

The host that Linkwarden will listen on.

Type: string

Default:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/linkwarden.nix>

services.linkwarden.openFirewall

Whether to open the Linkwarden port in the firewall

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/linkwarden.nix>

services.linkwarden.port

The port that Linkwarden will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/linkwarden.nix>

services.linkwarden.secretFiles

Attribute set containing paths to files to add to the environment of linkwarden. The files are not added to the nix store, so they can be used to pass secrets to linkwarden. Refer to the **documentation** for options.

Linkwarden needs at least a nextauth secret. To set a database password use POSTGRES_PASSWORD:

```
NEXTAUTH_SECRET=<secret>
POSTGRES_PASSWORD=<pass>
```

Type: attribute set of (null or string)

Default:

```
{ }
```

Example:

```
{
  NEXTAUTH_SECRET = "/run/secrets/linkwarden_secret";
  POSTGRES_PASSWORD = "/run/secrets/linkwarden_postgres_passwd";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/linkwarden.nix>

services.linkwarden.storageLocation

Directory used to store media files. If it is not the default, the directory has to be created manually such that the linkwarden user is able to read and write to it.

Type: absolute path

Default:

```
"/var/lib/linkwarden"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/linkwarden.nix>

services.linkwarden.user

The user Linkwarden should run as.

Type: string

Default:

```
"linkwarden"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/linkwarden.nix>

services.linux−enable−ir−emitter.enable

Whether to enable IR emitter hardware. Designed to be used with the Howdy facial authentication. After enabling the service, configure the emitter with 'sudo linux−enable−ir−emitter configure'.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/linux−enable−ir−emitter.nix>

services.linux−enable−ir−emitter.package

Package to use for the Linux Enable IR Emitter service.

Type: package

Default:

```
pkgs.linux−enable−ir−emitter
```

Declared by:

<nixpkgs/nixos/modules/services/misc/linux−enable−ir−emitter.nix>

services.linux−enable−ir−emitter.device

IR camera device to depend on. For example, for '/dev/video2' the value would be 'video2'. Find this with the command **realpath /dev/v4l/by−path/<generated−driver−name>**.

Type: string

Default:

```
"video2"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/linux−enable−ir−emitter.nix>

services.linyaps.enable

Whether to enable linyaps, a cross−distribution package manager with sandboxed apps and shared runtime.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/linyaps.nix>

services.linyaps.package
The linyaps package to use.

Type: package

Default:

```
pkgs.linyaps
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/linyaps.nix>

services.linyaps.boxPackage
The linyaps−box package to use.

Type: package

Default:

```
pkgs.linyaps-box
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/linyaps.nix>

services.linyaps.webStoreInstallerPackage
The linyaps−web−store−installer package to use.

Type: package

Default:

```
pkgs.linyaps-web-store-installer
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/linyaps.nix>

services.liquidsoap.streams
Set of Liquidsoap streams to start, one systemd service per stream.

Type: attribute set of (absolute path or string)

Default:

```
{ }
```

Example:

```
{
  myStream1 = "/etc/liquidsoap/myStream1.liq";
  myStream2 = ./myStream2.liq;
  myStream3 = "out(playlist(\"/srv/music/\"))";
}
```

Declared by:
<nixpkgs/nixos/modules/services/audio/liquidsoap.nix>

services.lirc.enable
Whether to enable the LIRC daemon, to receive and send infrared signals.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/lirc.nix>

services.lirc.configs
Configurations for lircd to load, see man:lircd.conf(5) for details (*lircd.conf*)

Type: list of strings concatenated with “\n”

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/lirc.nix>

services.lirc.extraArguments
Extra arguments to lircd.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/lirc.nix>

services.lirc.options
LIRC default options described in man:lircd(8) (*lirc_options.conf*)

Type: strings concatenated with “\n”

Example:

```
[lircd]
nodaemon = False
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/lirc.nix>

services.listmonk.enable
Whether to enable Listmonk, this module assumes a reverse proxy to be set.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.package
The listmonk package to use.

Type: package

Default:

```
pkgs.listmonk
```

Declared by:
<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.database.createLocally
Create the PostgreSQL database and database user locally.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.database.mutableSettings
Database settings will be reset to the value set in this module if this is not enabled. Enable this if you want to persist changes you have done in the application.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.database.settings
Dynamic settings in the PostgreSQL database, set by a SQL script, see **https://github.com/knadh/listmonk/blob/master/schema.sql#L177−L230** for details.

Type: null or (open submodule of attribute set of ((list of string) or list of attribute set of anything or string or signed integer or boolean))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.database.settings."app.notify_emails"
Administrator emails for system notifications

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.database.settings."bounce.mailboxes"
List of bounce mailboxes

Type: list of (open submodule of list of attribute set of anything)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.database.settings.messengers

List of messengers, see: **https://github.com/knadh/listmonk/blob/master/models/settings.go#L64−L74** for options.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.database.settings."privacy.domain_blocklist"

E−mail addresses with these domains are disallowed from subscribing.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.database.settings."privacy.exportable"

List of fields which can be exported through an automatic export request

Type: list of string

Default:

```
[
  "profile"
  "subscriptions"
  "campaign_views"
  "link_clicks"
]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.database.settings.smtp

List of outgoing SMTP servers

Type: list of (open submodule of attribute set of anything)

Declared by:

<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.database.settings.smtp.*.enabled

Whether to enable this SMTP server for listmonk.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.database.settings.smtp.*.host
Hostname for the SMTP server

Type: string

Declared by:
<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.database.settings.smtp.*.max_conns
Maximum number of simultaneous connections, defaults to 1

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.database.settings.smtp.*.port
Port for the SMTP server

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.database.settings.smtp.*.tls_type
Type of TLS authentication with the SMTP server

Type: one of “none”, “STARTTLS”, “TLS”

Declared by:
<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.secretFile
A file containing secrets as environment variables. See **https://listmonk.app/docs/configuration/#environment-variables** for details on supported values.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.listmonk.settings
Static settings set in the config.toml, see **https://github.com/knadh/listmonk/blob/master/config.toml.sample** for details. You can set secrets using the secretFile option with environment variables following **https://listmonk.app/docs/configuration/#environment-variables**.

Type: open submodule of (TOML value)

Declared by:
<nixpkgs/nixos/modules/services/mail/listmonk.nix>

services.litellm.enable
Whether to enable LiteLLM server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/litellm.nix>

services.litellm.package
The litellm package to use.

Type: package

Default:

```
pkgs.litellm
```

Declared by:
<nixpkgs/nixos/modules/services/misc/litellm.nix>

services.litellm.environment
Extra environment variables for LiteLLM.

Type: attribute set of string

Default:

```
{
  ANONYMIZED_TELEMETRY = "False";
  DO_NOT_TRACK = "True";
  SCARF_NO_ANALYTICS = "True";
}
```

Example:

```
{
  NO_DOCS="True";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/litellm.nix>

services.litellm.environmentFile
Environment file to be passed to the systemd service. Useful for passing secrets to the service to prevent them from being world−readable in the Nix store.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/secrets/liteLLMSecrets"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/litellm.nix>

services.litellm.host
The host address which the LiteLLM server HTTP interface listens to.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/litellm.nix>

services.litellm.openFirewall
Whether to open the firewall for LiteLLM. This adds 'services.litellm.port' to 'networking.firewall.allowedTCPPorts'.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/litellm.nix>

services.litellm.port
Which port the LiteLLM server listens to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Example:

```
11111
```

Declared by:
<nixpkgs/nixos/modules/services/misc/litellm.nix>

services.litellm.settings
Configuration for LiteLLM. See **https://docs.litellm.ai/docs/proxy/configs** for more.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/litellm.nix>

services.litellm.settings.environment_variables
Environment variables to pass to the Lite

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/litellm.nix>

services.litellm.settings.general_settings
LiteLLM Server settings

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/litellm.nix>

services.litellm.settings.litellm_settings
LiteLLM Module settings

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/litellm.nix>

services.litellm.settings.model_list
List of supported models on the server, with model−specific configs.

Type: YAML 1.1 value

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/litellm.nix>

services.litellm.settings.router_settings
LiteLLM Router settings

Type: YAML 1.1 value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/litellm.nix>

services.litellm.stateDir
State directory of LiteLLM.

Type: absolute path

Default:

```
"/var/lib/litellm"
```

Example:

```
"/home/foo"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/litellm.nix>

services.litestream.enable
Whether to enable litestream.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/litestream/default.nix>

services.litestream.package

The litestream package to use.

Type: package

Default:

```
pkgs.litestream
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/litestream/default.nix>

services.litestream.environmentFile

Environment file as defined in **systemd.exec**(5).

Secrets may be passed to the service without adding them to the world−readable Nix store, by specifying placeholder variables as the option value in Nix and setting these variables accordingly in the environment file.

By default, Litestream will perform environment variable expansion within the config file before reading it. Any references to $VAR or ${VAR} formatted variables will be replaced with their environment variable values. If no value is set then it will be replaced with an empty string.

```
  # Content of the environment file
  LITESTREAM_ACCESS_KEY_ID=AKIAxxxxxxxxxxxxxxx
  LITESTREAM_SECRET_ACCESS_KEY=xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx/xxxxx \
xxxx
```

Note that this file needs to be available on the host on which this exporter is running.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/litestream"
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/litestream/default.nix>

services.litestream.settings

See the **documentation**.

Type: YAML 1.1 value

Default:

```
null
```

Example:

```
{
  dbs = [
    {
      path = "/var/lib/db1";
      replicas = [
        {
          url = "s3://mybkt.litestream.io/db1";
        }
      ];
    }
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/litestream/default.nix>

services.livebook.enableUserService
Whether to enable a user service for Livebook.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/development/livebook.nix>

services.livebook.package
The livebook package to use.

Type: package

Default:

```
pkgs.livebook
```

Declared by:
<nixpkgs/nixos/modules/services/development/livebook.nix>

services.livebook.environment
Environment variables to set.

Livebook is configured through the use of environment variables. The available configuration options can be found in the **Livebook documentation**.

Note that all environment variables set through this configuration parameter will be readable by anyone with access to the host machine. Therefore, sensitive information like **LIVEBOOK_PASSWORD** or **LIVEBOOK_COOKIE** should never be set using this configuration option, but should instead use **services.livebook.environmentFile**. See the documentation for that option for more information.

Any environment variables specified in the **services.livebook.environmentFile** will supersede environment variables specified in this option.

Type: attribute set of (null or boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  LIVEBOOK_PORT = 8080;
}
```

Declared by:
<nixpkgs/nixos/modules/services/development/livebook.nix>

services.livebook.environmentFile
Additional environment file as defined in **systemd.exec**(5).

Secrets like **LIVEBOOK_PASSWORD** (which is used to specify the password needed to access the livebook site) or **LIVEBOOK_COOKIE** (which is used to specify the **cookie** used to connect to the running Elixir system) may be passed to the service without making them readable to everyone with access to systemctl by using this configuration parameter.

Note that this file needs to be available on the host on which 'livebook' is running.

For security purposes, this file should contain at least **LIVEBOOK_PASSWORD** or **LIVEBOOK_TOKEN_ENABLED=false**.

See the **Livebook documentation** and the **services.livebook.environment** configuration parameter for further options.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/livebook.env"
```

Declared by:
<nixpkgs/nixos/modules/services/development/livebook.nix>

services.livebook.extraPackages
Extra packages to make available to the Livebook service.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs; [ gcc gnumake ]
```

Declared by:
<nixpkgs/nixos/modules/services/development/livebook.nix>

services.livekit.enable
Whether to enable the livekit server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/livekit.nix>

services.livekit.package
The livekit package to use.

Type: package

Default:

```
pkgs.livekit
```

Declared by:
<nixpkgs/nixos/modules/services/networking/livekit.nix>

services.livekit.ingress.enable

Whether to enable the livekit ingress service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit−ingress.nix>

services.livekit.ingress.package

The livekit−ingress package to use.

Type: package

Default:

```
pkgs.livekit−ingress
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit−ingress.nix>

services.livekit.ingress.environmentFile

Environment file as defined in **systemd.exec**(5) passed to the service.

Use this to specify ‘LIVEKIT_API_KEY’ and ‘LIVEKIT_API_SECRET’.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit−ingress.nix>

services.livekit.ingress.openFirewall.rtc

Open WebRTC ports in the firewall.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit−ingress.nix>

services.livekit.ingress.openFirewall.rtmp

Open RTMP port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit−ingress.nix>

services.livekit.ingress.openFirewall.whip

Open WHIP port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit−ingress.nix>

services.livekit.ingress.settings

LiveKit Ingress configuration.

See **https://github.com/livekit/ingress?tab=readme−ov−file#config** for possible options.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
{
  cpu_cost = {
    rtmp_cpu_cost = 3.0;
    whip_cpu_cost = 1.0;
  };
  prometheus_port = 9039;
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit−ingress.nix>

services.livekit.ingress.settings.redis.address

Address or hostname and port for redis connection

Type: null or string

Default:

```
"Host and port of the local livekit redis instance, if enabled, or  \
null"
```

Example:

```
"redis.example.com:6379"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit−ingress.nix>

services.livekit.ingress.settings.rtc_config.port_range_end

End of UDP port range for WebRTC

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
51000
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit−ingress.nix>

services.livekit.ingress.settings.rtc_config.port_range_start

Start of UDP port range for WebRTC

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
50000
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit−ingress.nix>

services.livekit.ingress.settings.rtc_config.use_external_ip

When set to true, attempts to discover the host's public IP via STUN. This is useful for cloud environments such as AWS & Google where hosts have an internal IP that maps to an external one.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit−ingress.nix>

services.livekit.ingress.settings.rtmp_port

TCP port for RTMP connections. −1 to disable

Type: integer between −1 and 65535 (both inclusive)

Default:

```
1935
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit−ingress.nix>

services.livekit.ingress.settings.whip_port

TCP port for WHIP connections. −1 to disable

Type: integer between −1 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit−ingress.nix>

services.livekit.keyFile

LiveKit key file holding one or multiple application secrets. Use 'livekit−server generate−keys' to generate a random key name and secret.

The file should have the format '<keyname>: <secret>'. Example: 'lk−jwt−service: f6lQGaHtM5HfgZjIcec3cOCRfiDqIine4CpZZnqdT5cE'

Individual key/secret pairs need to be passed to clients to connect to this instance.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit.nix>

services.livekit.openFirewall

Opens port range for LiveKit on the firewall.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit.nix>

services.livekit.redis.createLocally

Whether to set up a local redis instance.

Type: boolean

Default:

```
"true if any other Livekit component is enabled locally else false"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit.nix>

services.livekit.redis.host

Address to bind local redis instance to.

Type: null or string

Default:

```
"127.0.0.1 if config.services.livekit.redis.createLocally else null \
"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit.nix>

services.livekit.redis.port

Port to bind local redis instance to.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit.nix>

services.livekit.settings

LiveKit configuration file expressed in nix.

For an example configuration, see **https://docs.livekit.io/home/self−hosting/deployment/#configuration**. For all possible values, see **https://github.com/livekit/livekit/blob/master/config−sample.yaml**.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit.nix>

services.livekit.settings.port

Main TCP port for RoomService and RTC endpoint.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7880
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit.nix>

services.livekit.settings.redis.address

Host and port used to connect to a redis instance.

Type: null or string

Default:

```
Local Redis host/port when a local ingress component is enabled els \
e null
```

Example:

```
"redis.example.com:6379"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit.nix>

services.livekit.settings.rtc.port_range_end

End of UDP port range for WebRTC

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
51000
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit.nix>

services.livekit.settings.rtc.port_range_start

Start of UDP port range for WebRTC

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
50000
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit.nix>

services.livekit.settings.rtc.use_external_ip

When set to true, attempts to discover the host's public IP via STUN. This is useful for cloud environments such as AWS & Google where hosts have an internal IP that maps to an external one.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/livekit.nix>

services.lk−jwt−service.enable

Whether to enable lk−jwt−service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/lk−jwt−service.nix>

services.lk−jwt−service.package

The lk−jwt−service package to use.

Type: package

Default:

```
pkgs.lk−jwt−service
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/lk−jwt−service.nix>

services.lk−jwt−service.keyFile

Path to a file containing the credential mapping (‘<keyname>: <secret>’) to access LiveKit.

Example: ‘lk−jwt−service: f6lQGaHtM5HfgZjIcec3cOCRfiDqIine4CpZZnqdT5cE’

For more information, see **https://github.com/element−hq/lk−jwt−service#configuration**.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/matrix/lk−jwt−service.nix>

services.lk−jwt−service.livekitUrl

The public websocket URL for livekit. The proto needs to be either ‘wss://’ (recommended) or ‘ws://’ (insecure).

Type: string matching the pattern ^wss?://.*

Example:

```
"wss://example.com/livekit/sfu"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/lk−jwt−service.nix>

services.lk−jwt−service.port

Port that lk−jwt−service should listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/lk−jwt−service.nix>

services.llama-cpp.enable

Whether to enable LLaMA C++ server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/llama-cpp.nix>

services.llama-cpp.package

The llama-cpp package to use.

Type: package

Default:

```
pkgs.llama-cpp
```

Declared by:

<nixpkgs/nixos/modules/services/misc/llama-cpp.nix>

services.llama-cpp.extraFlags

Extra flags passed to llama-cpp-server.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-c"
  "4096"
  "-ngl"
  "32"
  "--numa"
  "numactl"
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/llama-cpp.nix>

services.llama-cpp.host

IP address the LLaMA C++ server listens on.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/llama-cpp.nix>

services.llama-cpp.model

Model path.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/models/mistral-instruct-7b/ggml-model-q4_0.gguf"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/llama-cpp.nix>

services.llama-cpp.modelsDir

Models directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/models/"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/llama-cpp.nix>

services.llama-cpp.modelsPreset

Models preset configuration as a Nix attribute set. This is converted to an INI file and passed to llama-server via --models-preset. See llama-server documentation for available options.

Type: null or (attribute set of (attribute set))

Default:

```
null
```

Example:

```
{
  "Qwen3-Coder-Next" = {
    hf-repo = "unsloth/Qwen3-Coder-Next-GGUF";
    hf-file = "Qwen3-Coder-Next-UD-Q4_K_XL.gguf";
    alias = "unsloth/Qwen3-Coder-Next";
    fit = "on";
    seed = "3407";
    temp = "1.0";
    top-p = "0.95";
    min-p = "0.01";
    top-k = "40";
    jinja = "on";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/llama-cpp.nix>

services.llama-cpp.openFirewall

Open ports in the firewall for LLaMA C++ server.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/llama-cpp.nix>

services.llama-cpp.port

Listen port for LLaMA C++ server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:

<nixpkgs/nixos/modules/services/misc/llama-cpp.nix>

services.llama-swap.enable

Whether to enable the llama-swap service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/llama-swap.nix>

services.llama-swap.package

The llama-swap package to use.

Type: package

Default:

```
pkgs.llama-swap
```

Declared by:

<nixpkgs/nixos/modules/services/networking/llama-swap.nix>

services.llama-swap.listenAddress

Address that llama-swap listens on.

Type: string

Default:

```
"localhost"
```

Example:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/llama-swap.nix>

services.llama-swap.openFirewall

Whether to open the firewall for llama-swap. This adds **port** to **networking.firewall.allowedTCPPorts**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/llama-swap.nix>

services.llama-swap.port

Port that llama-swap listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Example:

```
11343
```

Declared by:

<nixpkgs/nixos/modules/services/networking/llama-swap.nix>

services.llama-swap.settings

llama-swap configuration. Refer to the **llama-swap example configuration** for details on supported values.

Type: open submodule of (YAML 1.1 value)

Example:

```
let
  llama-cpp = pkgs.llama-cpp.override { rocmSupport = true; };
  llama-server = lib.getExe' llama-cpp "llama-server";
in
{
  healthCheckTimeout = 60;
  models = {
    "some-model" = {
      cmd = "${llama-server} --port ${PORT} -m /var/lib/llama- \
cpp/models/some-model.gguf -ngl 0 --no-webui";
      aliases = [
        "the-best"
      ];
    };
    "other-model" = {
      proxy = "http://127.0.0.1:5555";
      cmd = "${llama-server} --port 5555 -m /var/lib/llama-cpp \
/models/other-model.gguf -ngl 0 -c 4096 -np 4 --no-webui";
      concurrencyLimit = 4;
    };
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/networking/llama-swap.nix>

services.llama-swap.tls.enable

Whether to enable TLS encryption.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/llama-swap.nix>

services.llama-swap.tls.certFile

Path to the TLS certificate file. This certificate will be offered to, and may be verified by, clients.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/cert.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/llama-swap.nix>

services.llama-swap.tls.keyFile

Path to the TLS private key file. This key will be used to decrypt, data received from clients.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/key.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/llama-swap.nix>

services.lldap.enable

Whether to enable lldap, a lightweight authentication server that provides an opinionated, simplified LDAP interface for authentication.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.package

The lldap package to use.

Type: package

Default:

```
pkgs.lldap
```

Declared by:

<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.database.createLocally

Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.database.type

Database engine to use.

Type: one of “mariadb”, “postgresql”, “sqlite”

Default:

```
"sqlite"
```

Example:

```
"postgresql"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.environment

Environment variables passed to the service. Any config option name prefixed with ‘LLDAP_’ takes priority over the one in the configuration file.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  LLDAP_JWT_SECRET_FILE = "/run/lldap/jwt_secret";
  LLDAP_LDAP_USER_PASS_FILE = "/run/lldap/user_password";
}
```

Declared by:

<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.environmentFile

Environment file as defined in **systemd.exec**(5) passed to the service.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.settings
Free−form settings written directly to the *lldap_config.toml* file. Refer to **https://github.com/lldap/lldap/blob/main/lldap_config.docker_template.toml** for supported values.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.settings.database_url
Database URL.

Type: null or string

Default:

```
if config.services.lldap.database.createLocally
then
  if cfg.database.type == "sqlite"
  then "sqlite://./users.db?mode=rwc"
  else if cfg.database.type == "postgresql"
  then "postgresql:///lldap?host=/run/postgresql"
  else if cfg.database.type == "mariadb"
  then "mysql://lldap@localhost/lldap?socket=/run/mysqld/mysqld.soc \
k"
else null
```

Example:

```
"postgres://postgres-user:password@postgres-server/my-database"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.settings.force_ldap_user_pass_reset
Force reset of the admin password.

Set this setting to ‘"always"’ to update the admin password when ‘ldap_user_pass_file’ changes. Setting to ‘"always"’ also means any password update in the UI will be overwritten next time the service restarts.

The difference between ‘true’ and ‘"always"’ is the former is intended for a one time fix while the latter is intended for a declarative workflow. In practice, the result is the same: the password gets reset. The only practical difference is the former outputs a warning message while the latter outputs an info message.

Type: boolean or value “always” (singular enum)

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.settings.http_host
The host address that the HTTP server will be bound to.

Type: string

Default:

```
"::"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.settings.http_port
The port on which to have the HTTP server, for user login and administration.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
17170
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.settings.http_url
The public URL of the server, for password reset links.

Type: string

Default:

```
"http://localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.settings.jwt_secret_file
Path to a file containing the JWT secret.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.settings.ldap_base_dn
Base DN for LDAP.

Type: string

Example:

```
"dc=example,dc=com"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.settings.ldap_host
The host address that the LDAP server will be bound to.

Type: string

Default:

```
"::"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.settings.ldap_port
The port on which to have the LDAP server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3890
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.settings.ldap_user_dn
Admin username

Type: string

Default:

```
"admin"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.settings.ldap_user_email
Admin email.

Type: string

Default:

```
"admin@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.settings.ldap_user_pass
Password for default admin password.

Unsecure: Use ‘ldap_user_pass_file’ settings instead.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.settings.ldap_user_pass_file
Path to a file containing the default admin password.

If you want to update the default admin password through this setting, you must set ‘force_ldap_user_pass_reset’ to ‘true’. Otherwise changing this setting will have no effect unless this is the very first time LLDAP is started and its database is still empty.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldap.silenceForceUserPassResetWarning
Disable warning when the admin password is set declaratively with the ‘ldap_user_pass_file’ setting but the ‘force_ldap_user_pass_reset’ is set to ‘false’.

This can lead to the admin password to drift from the one given declaratively. If that is okay for you and you want to silence the warning, set this option to ‘true’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/lldap.nix>

services.lldpd.enable
Whether to enable Link Layer Discovery Protocol Daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lldpd.nix>

services.lldpd.extraArgs
List of command line parameters for lldpd

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-c"
  "-k"
  "-I eth0"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lldpd.nix>

services.local−content−share.enable
Whether to enable Local−Content−Share.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/local−content−share.nix>

services.local−content−share.package
The local−content−share package to use.

Type: package

Default:

```
pkgs.local−content−share
```

Declared by:
<nixpkgs/nixos/modules/services/misc/local−content−share.nix>

services.local−content−share.listenAddress
Address on which the service will be available.

The service will listen on all interfaces if set to an empty string.

Type: string

Default:

```
""
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/local−content−share.nix>

services.local−content−share.openFirewall
Whether to automatically open the specified port in the firewall

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/local−content−share.nix>

services.local−content−share.port
Port on which the service will be available

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/misc/local−content−share.nix>

services.localtimed.enable
Enable ‘localtimed’, a simple daemon for keeping the system timezone up−to−date based on the current location. It uses geoclue2 to determine the current location.

To avoid silent overriding by the service, if you have explicitly set a timezone, either remove it or ensure that it is set with a lower priority than the default value using ‘lib.mkDefault’ or ‘lib.mkOverride’. This is to make the choice deliberate. An error will be presented otherwise.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/system/localtimed.nix>

services.localtimed.package
The localtime package to use.

Type: package

Default:

```
pkgs.localtime
```

Declared by:
<nixpkgs/nixos/modules/services/system/localtimed.nix>

services.localtimed.geoclue2Package
The Geoclue2 package to use.

Type: package

Default:

```
pkgs.geoclue2-with-demo-agent
```

Declared by:
<nixpkgs/nixos/modules/services/system/localtimed.nix>

services.locate.enable
If enabled, NixOS will periodically update the database of files used by the **locate** command.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/misc/locate.nix>

services.locate.package
The plocate package to use.

Type: package

Default:

```
pkgs.plocate
```

Example:

```
mlocate
```

Declared by:
<nixpkgs/nixos/modules/misc/locate.nix>

services.locate.extraFlags
Extra flags to pass to **updatedb**.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/misc/locate.nix>

services.locate.interval

Update the locate database at this interval. Updates by default at 2:15 AM every day.

The format is described in **systemd.time**(7).

To disable automatic updates, set to ‘"never"’ and run **updatedb** manually.

Type: string

Default:

```
"02:15"
```

Example:

```
"hourly"
```

Declared by:

<nixpkgs/nixos/modules/misc/locate.nix>

services.locate.output

The database file to build.

Type: absolute path

Default:

```
"/var/cache/locatedb"
```

Declared by:

<nixpkgs/nixos/modules/misc/locate.nix>

services.locate.pruneBindMounts

Whether not to index bind mounts

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/misc/locate.nix>

services.locate.pruneFS

Which filesystem types to exclude from indexing

Type: list of string

Default:

```
[
  "afs"
  "anon_inodefs"
  "auto"
  "autofs"
  "bdev"
  "binfmt"
  "binfmt_misc"
  "ceph"
  "cgroup"
  "cgroup2"
  "cifs"
  "coda"
  "configfs"
  "cramfs"
```

```
"cpuset"
"curlftpfs"
"debugfs"
"devfs"
"devpts"
"devtmpfs"
"eventpollfs"
"exofs"
"futexfs"
"ftpfs"
"fuse"
"fusectl"
"fusesmb"
"fuse.ceph"
"fuse.glusterfs"
"fuse.gvfsd-fuse"
"fuse.mfs"
"fuse.rclone"
"fuse.rozofs"
"fuse.sshfs"
"gfs"
"gfs2"
"hostfs"
"hugetlbfs"
"inotifyfs"
"iso9660"
"jffs2"
"lustre"
"lustre_lite"
"misc"
"mfs"
"mqueue"
"ncpfs"
"nfs"
"NFS"
"nfs4"
"nfsd"
"nnpfs"
"ocfs"
"ocfs2"
"pipefs"
"proc"
"ramfs"
"rpc_pipefs"
"securityfs"
"selinuxfs"
"sfs"
"shfs"
"smbfs"
"sockfs"
"spufs"
"sshfs"
"subfs"
```

```
  "supermount"
  "sysfs"
  "tmpfs"
  "tracefs"
  "ubifs"
  "udev"
  "udf"
  "usbfs"
  "vboxsf"
  "vperfctrfs"
]
```

Declared by:
<nixpkgs/nixos/modules/misc/locate.nix>

services.locate.pruneNames
Directory components which should exclude paths containing them from indexing

Type: list of string

Default: [".bzr" ".cache" ".git" ".hg" ".svn"], if supported by the locate implementation (i.e. mlocate or plocate).

Declared by:
<nixpkgs/nixos/modules/misc/locate.nix>

services.locate.prunePaths
Which paths to exclude from indexing

Type: list of absolute path

Default:

```
[
  "/tmp"
  "/var/tmp"
  "/var/cache"
  "/var/lock"
  "/var/run"
  "/var/spool"
  "/nix/store"
  "/nix/var/log/nix"
]
```

Declared by:
<nixpkgs/nixos/modules/misc/locate.nix>

services.logcheck.enable
Whether to enable logcheck cron job, to mail anomalies in the system logfiles to the administrator.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logcheck.config
Config options that you would like in logcheck.conf.

Type: strings concatenated with “\n”

Default:

```
"FQDN=1"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logcheck.extraGroups
Extra groups for the logcheck user, for example to be able to use sendmail, or to access certain log files.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "postdrop"
  "mongodb"
]
```

Declared by:
<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logcheck.extraRulesDirs
Directories with extra rules.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/etc/logcheck"
]
```

Declared by:
<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logcheck.files
Which log files to check.

Type: list of absolute path

Default:

```
[
  "/var/log/messages"
]
```

Example:

```
[
  "/var/log/messages"
  "/var/log/mail"
```

```
]
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logcheck.ignore

This option defines extra ignore rules.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logcheck.ignore.<name>.level

Set the logcheck level.

Type: one of “workstation”, “server”, “paranoid”

Default:

```
"server"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logcheck.ignore.<name>.regex

Regex specifying which log lines to ignore.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logcheck.ignoreCron

This option defines extra ignore rules for cronjobs.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logcheck.ignoreCron.<name>.cmdline

Command line for the cron job. Will be turned into a regex for the logcheck ignore rule.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logcheck.ignoreCron.<name>.timeArgs

“min hr dom mon dow” crontab time args, to auto−create a cronjob too. Leave at null to not do this and just add a logcheck ignore rule.

Type: null or string

Default:

```
null
```

Example:

```
"02 06 * * *"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logcheck.ignoreCron.<name>.user

User that runs the cronjob.

Type: string

Default:

```
"root"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logcheck.level

Set the logcheck level. Either “workstation”, “server”, or “paranoid”.

Type: string

Default:

```
"server"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logcheck.mailTo

Email address to send reports to.

Type: string

Default:

```
"root"
```

Example:

```
"you@domain.com"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logcheck.timeOfDay

Time of day to run logcheck. A logcheck will be scheduled at xx:02 each day. Leave default (*) to run every hour. Of course when nothing special was logged, logcheck will be silent.

Type: string

Default:

```
"*"
```

Example:

```
"6"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logcheck.user
Username for the logcheck user.

Type: string

Default:

```
"logcheck"
```

Declared by:
<nixpkgs/nixos/modules/services/logging/logcheck.nix>

services.logind.enable
Whether to enable the ‘systemd−logind’ login service.

Type: boolean

Default:

```
config.systemd.package.withLogind
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/logind.nix>

services.logind.settings.Login
Settings option for systemd−logind. See **logind.conf**(5) for available options.

Type: open submodule of attribute set of (systemd option)

Default:

```
{ }
```

Example:

```
{
  HandleLidSwitch = "ignore";
  KillUserProcesses = false;
}
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/logind.nix>

services.logind.settings.Login.KillUserProcesses
Specifies whether the processes of a user should be killed when the user logs out. If true, the scope unit corresponding to the session and all processes inside that scope will be terminated. If false, the scope is “abandoned” (see **systemd.scope**(5)), and processes are not killed.

See **logind.conf**(5) for more details.

Defaulted to false in nixpkgs because many tools that rely on persistent user processes—like ‘tmux’, ‘screen’, ‘mosh’, ‘VNC’, ‘nohup’, and more — would break by the systemd−default behavior.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/system/boot/systemd/logind.nix>

services.logkeys.enable
Whether to enable logkeys, a keylogger service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/logkeys.nix>

services.logkeys.device
Use the given device as keyboard input event device instead of /dev/input/eventX default.

Type: null or string

Default:

```
null
```

Example:

```
"/dev/input/event15"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/logkeys.nix>

services.logmein−hamachi.enable
Whether to enable LogMeIn Hamachi, a proprietary (closed source) commercial VPN software.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/logmein−hamachi.nix>

services.logrotate.enable
Whether to enable the logrotate systemd service.

Type: boolean

Default:

```
cfg.settings != {}
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/logging/logrotate.nix>

services.logrotate.allowNetworking
Whether to enable network access for logrotate.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/logging/logrotate.nix>

services.logrotate.checkConfig
Whether the config should be checked at build time.

Some options are not checkable at build time because of the build sandbox: for example, the test does not know about existing files and system users are not known. These limitations mean we must adjust the file for tests (missingok is forced and users are replaced by dummy users), so tests are complemented by a logrotate−checkconf service that is enabled by default. This extra check can be disabled by disabling it at the systemd level with the **systemd.services.logrotate−checkconf.enable** option.

Conversely there are still things that might make this check fail incorrectly (e.g. a file path where we don't have access to intermediate directories): in this case you can disable the failing check with this option.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/logging/logrotate.nix>

services.logrotate.configFile
Override the configuration file used by logrotate. By default, NixOS generates one automatically from **services.logrotate.settings**.

Type: absolute path

Default:

```
A configuration file automatically generated by NixOS.
```

Example:

```
pkgs.writeText "logrotate.conf" ''
  missingok
  "/var/log/*.log" {
    rotate 4
    weekly
  }
```

Declared by:
<nixpkgs/nixos/modules/services/logging/logrotate.nix>

services.logrotate.extraArgs
Additional command line arguments to pass on logrotate invocation

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/logging/logrotate.nix>

services.logrotate.settings

logrotate freeform settings: each attribute here will define its own section, ordered by **services.logrotate.settings.<name>.priority**, which can either define files to rotate with their settings or settings common to all further files settings. All attribute names not explicitly defined as sub−options here are passed through as logrotate config directives, refer to **https://linux.die.net/man/8/logrotate** for details.

Type: attribute set of (open submodule of attribute set of (null or signed integer or boolean or string))

Default:

```
{ }
```

Example:

```
{
  # global options
  header = {
    dateext = true;
  };
  # example custom files
  "/var/log/mylog.log" = {
    frequency = "daily";
    rotate = 3;
  };
  "multiple paths" = {
     files = [
      "/var/log/first*.log"
      "/var/log/second.log"
    ];
  };
  # specify custom order of sections
  "/var/log/myservice/*.log" = {
    # ensure lower priority
    priority = 110;
    postrotate = ''
      systemctl reload myservice
    '';
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logrotate.nix>

services.logrotate.settings.<name>.enable

Whether to enable setting individual kill switch.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logrotate.nix>

services.logrotate.settings.<name>.files

Single or list of files for which rules are defined. The files are quoted with double−quotes in logrotate configuration, so globs and spaces are supported. Note this setting is ignored if globals is true.

Type: string or list of string

Default:

```
The attrset name if not specified
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logrotate.nix>

services.logrotate.settings.<name>.frequency

How often to rotate the logs. Defaults to previously set global setting, which itself defaults to weekly.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logrotate.nix>

services.logrotate.settings.<name>.global

Whether this setting is a global option or not: set to have these settings apply to all files settings with a higher priority.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logrotate.nix>

services.logrotate.settings.<name>.priority

Order of this logrotate block in relation to the others. The semantics are the same as with ‘lib.mkOrder’. Smaller values are inserted first.

Type: signed integer

Default:

```
1000
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logrotate.nix>

services.logstash.enable

Enable logstash.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logstash.nix>

services.logstash.package

The logstash package to use.

Type: package

Default:

```
pkgs.logstash
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logstash.nix>

services.logstash.dataDir

A path to directory writable by logstash that it uses to store data. Plugins will also have access to this path.

Type: string

Default:

```
"/var/lib/logstash"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logstash.nix>

services.logstash.extraJvmOptions

Extra JVM options, one per line (jvm.options format).

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
-Xms2g
-Xmx2g
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logstash.nix>

services.logstash.extraSettings

Extra Logstash settings in YAML format.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
pipeline:
  batch:
    size: 125
    delay: 5
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logstash.nix>

services.logstash.filterConfig

logstash filter configuration.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
      if [type] == "syslog" {
        # Keep only relevant systemd fields
        # https://www.freedesktop.org/software/systemd/man/systemd.jour \
    nal-fields.html
        prune {
          whitelist_names => [
            "type", "@timestamp", "@version",
            "MESSAGE", "PRIORITY", "SYSLOG_FACILITY"
          ]
        }
      }
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logstash.nix>

services.logstash.filterWorkers

The quantity of filter workers to run.

Type: signed integer

Default:

```
1
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logstash.nix>

services.logstash.inputConfig

Logstash input configuration.

Type: strings concatenated with “\n”

Default:

```
"generator { }"
```

Example:

```
      # Read from journal
      pipe {
        command => "${config.systemd.package}/bin/journalctl -f -o js \
    on"
        type => "syslog" codec => json {}
      }
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logstash.nix>

services.logstash.listenAddress

Address on which to start webserver.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logstash.nix>

services.logstash.logLevel

Logging verbosity level.

Type: one of “debug”, “info”, “warn”, “error”, “fatal”

Default:

```
"warn"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logstash.nix>

services.logstash.outputConfig

Logstash output configuration.

Type: strings concatenated with “\n”

Default:

```
"stdout { codec => rubydebug }"
```

Example:

```
  redis { host => ["localhost"] data_type => "list" key => "logstas \
h" codec => json }
  elasticsearch { }
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logstash.nix>

services.logstash.plugins

The paths to find other logstash plugins in.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[ pkgs.logstash-contrib ]
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logstash.nix>

services.logstash.port

Port on which to start webserver.

Type: string

Default:

```
"9292"
```

Declared by:

<nixpkgs/nixos/modules/services/logging/logstash.nix>

services.loki.enable

Whether to enable Grafana Loki.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/loki.nix>

services.loki.package
The grafana−loki package to use.

Type: package

Default:

```
pkgs.grafana−loki
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/loki.nix>

services.loki.configFile
Specify a configuration file that Loki should use.

Cannot be specified together with **services.loki.configuration**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/loki.nix>

services.loki.configuration
Specify the configuration for Loki in Nix.

See **documentation of Grafana Loki** for all available options.

Cannot be specified together with **services.loki.configFile**.

Type: JSON value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/loki.nix>

services.loki.dataDir
Specify the data directory for Loki.

Type: absolute path

Default:

```
"/var/lib/loki"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/loki.nix>

services.loki.extraFlags
Specify a list of additional command line flags, which get escaped and are then passed to Loki.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−server.http−listen−port=3101"
```

```
]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/loki.nix>

services.loki.group
Group under which the Loki service runs.

Type: string

Default:

```
"loki"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/loki.nix>

services.loki.user
User under which the Loki service runs.

Type: string

Default:

```
"loki"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/loki.nix>

services.lokinet.enable
Whether to enable Lokinet daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lokinet.nix>

services.lokinet.package
The lokinet package to use.

Type: package

Default:

```
pkgs.lokinet
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lokinet.nix>

services.lokinet.settings
Configuration for Lokinet. Currently, the best way to view the available settings is by generating a config file using ‘lokinet −g’.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Example:

```
{
  dns = {
    bind = "127.3.2.1";
    upstream = [ "1.1.1.1" "8.8.8.8" ];
  };
  network.exit-node = [ "example.loki" "example2.loki" ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lokinet.nix>

services.lokinet.settings.dns.bind
Address to bind to for handling DNS requests.

Type: string

Default:

```
"127.3.2.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lokinet.nix>

services.lokinet.settings.dns.upstream
Upstream resolver(s) to use as fallback for non-loki addresses. Multiple values accepted.

Type: list of string

Default:

```
[
  "9.9.9.10"
]
```

Example:

```
[
  "1.1.1.1"
  "8.8.8.8"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lokinet.nix>

services.lokinet.settings.network.exit
Whether to act as an exit node. Beware that this increases demand on the server and may pose liability concerns. Enable at your own risk.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lokinet.nix>

services.lokinet.settings.network.exit-node
Specify a '.loki' address and an optional ip range to use as an exit broker. See **http://probably.loki/wiki/index.php?title=Exit_Nodes** for a list of exit nodes.

Type: null or (list of string)

Default:

```
null
```

Example:

```
  exit-node = [ "example.loki" ];              # maps all exit tra \
ffic to example.loki
  exit-node = [ "example.loki:100.0.0.0/24" ]; # maps 100.0.0.0/24 \
 to example.loki
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lokinet.nix>

services.lokinet.settings.network.keyfile
The private key to persist address with. If not specified the address will be ephemeral. This keyfile is generated automatically if the specified file doesn't exist.

Type: null or string

Default:

```
null
```

Example:

```
"snappkey.private"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lokinet.nix>

services.lokinet.useLocally
Whether to use Lokinet locally.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lokinet.nix>

services.longview.enable
If enabled, system metrics will be sent to Linode LongView.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/longview.nix>

services.longview.apacheStatusUrl
The Apache status page URL. If provided, Longview will gather statistics from this location. This requires Apache mod_status to be loaded and enabled.

Type: string

Default:

```
""
```

Example:

```
"http://127.0.0.1/server-status"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/longview.nix>

services.longview.apiKey
Longview API key. To get this, look in Longview settings which are found at **https://manager.linode.com/longview/**.

Warning: this secret is stored in the world−readable Nix store! Use **apiKeyFile** instead.

Type: string

Default:

```
""
```

Example:

```
"01234567-89AB-CDEF-0123456789ABCDEF"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/longview.nix>

services.longview.apiKeyFile
A file containing the Longview API key. To get this, look in Longview settings which are found at **https://manager.linode.com/longview/**.

apiKeyFile takes precedence over **apiKey**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/longview-api-key"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/longview.nix>

services.longview.mysqlPassword
The password corresponding to **mysqlUser**. Warning: this is stored in cleartext in the Nix store! Use **mysqlPasswordFile** instead.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/longview.nix>

services.longview.mysqlPasswordFile
A file containing the password corresponding to **mysqlUser**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/longview.nix>

services.longview.mysqlUser
The user for connecting to the MySQL database. If provided, Longview will connect to MySQL and collect statistics about queries, etc. This user does not need to have been granted any extra privileges.

Type: string

Default:
```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/longview.nix>

services.longview.nginxStatusUrl
The Nginx status page URL. Longview will gather statistics from this URL. This requires the Nginx stub_status module to be enabled and configured at the given location.

Type: string

Default:
```
""
```

Example:
```
"http://127.0.0.1/nginx_status"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/longview.nix>

services.lorri.enable
Enables the daemon for ‘lorri’, a nix−shell replacement for project development. The socket−activated daemon starts on the first request issued by the ‘lorri’ command.

Type: boolean

Default:
```
false
```

Declared by:
<nixpkgs/nixos/modules/services/development/lorri.nix>

services.lorri.package
The lorri package to use.

Type: package

Default:
```
pkgs.lorri
```

Declared by:
<nixpkgs/nixos/modules/services/development/lorri.nix>

services.lubelogger.enable
Whether to enable LubeLogger, a self−hosted, open−source, web−based vehicle maintenance and fuel milage tracker.

Type: boolean

Default:
```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lubelogger.nix>

services.lubelogger.package
The lubelogger package to use.

Type: package

Default:

```
pkgs.lubelogger
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lubelogger.nix>

services.lubelogger.dataDir
Path to LubeLogger config and metadata inside of '/var/lib/'.

Type: string

Default:

```
"lubelogger"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lubelogger.nix>

services.lubelogger.environmentFile
Path to a file containing extra LubeLogger config options in the systemd 'EnvironmentFile' format. Refer to the **documentation** for supported options.

This can be used to pass secrets to LubeLogger without putting them in the Nix store.

For example, to set an SMTP password, point 'environmentFile' at a file containing:

```
MailConfig__Password=<pass>
```

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/lubelogger"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lubelogger.nix>

services.lubelogger.group
Group under which LubeLogger runs.

Type: string

Default:

```
"lubelogger"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/lubelogger.nix>

services.lubelogger.openFirewall

Open ports in the firewall for the LubeLogger web interface.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lubelogger.nix>

services.lubelogger.port

The TCP port LubeLogger will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5000
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lubelogger.nix>

services.lubelogger.settings

Additional configuration for LubeLogger, see **https://docs.lubelogger.com/Environment Variables** for supported values.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  LUBELOGGER_ALLOWED_FILE_EXTENSIONS = "";
  LUBELOGGER_LOGO_URL = "";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lubelogger.nix>

services.lubelogger.user

User account under which LubeLogger runs.

Type: string

Default:

```
"lubelogger"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/lubelogger.nix>

services.lvm.enable

Whether to enable lvm2.

Note

The lvm2 package contains device−mapper udev rules and without those tools like cryptsetup do not fully function!

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/lvm.nix>

services.lvm.boot.thin.enable
Whether to enable support for booting from ThinLVs.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/lvm.nix>

services.lvm.boot.vdo.enable
Whether to enable support for booting from VDOLVs.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/lvm.nix>

services.lvm.dmeventd.enable
Whether to enable the LVM dmevent daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/lvm.nix>

services.lvm.resizeHelper.enable
Whether to enable lvresize_fs_helper.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/tasks/lvm.nix>

services.lxd−image−server.enable
Whether to enable lxd−image−server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lxd−image−server.nix>

services.lxd−image−server.group
Group assigned to the user and the webroot directory.

Type: string

Default:

```
"nginx"
```

Example:

```
"www−data"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lxd−image−server.nix>

services.lxd−image−server.nginx.enable
Whether to enable nginx.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lxd−image−server.nix>

services.lxd−image−server.nginx.domain
Domain to use for nginx virtual host.

Type: string

Example:

```
"images.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lxd−image−server.nix>

services.lxd−image−server.settings
Configuration for lxd−image−server.

Example see **https://github.com/Avature/lxd−image−server/blob/master/config.toml**.

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/lxd−image−server.nix>

services.mackerel−agent.enable
Whether to enable mackerel.io agent.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/mackerel−agent.nix>

services.mackerel−agent.apiKeyFile
Path to file containing the Mackerel API key. The file should contain a single line of the following form:

‘apikey = "EXAMPLE_API_KEY"’

Type: absolute path

Example:

```
"/run/keys/mackerel−api−key"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/mackerel−agent.nix>

services.mackerel−agent.autoRetirement
Whether to enable retiring the host upon OS shutdown .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/mackerel−agent.nix>

services.mackerel−agent.runAsRoot
Whether to enable running as root.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/mackerel−agent.nix>

services.mackerel−agent.settings

Options for mackerel−agent.conf.

Documentation: **https://mackerel.io/docs/entry/spec/agent**

Type: open submodule of (TOML value)

Default:

```
{ }
```

Example:

```
{
  silent = false;
  verbose = false;
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/mackerel−agent.nix>

services.mackerel−agent.settings.diagnostic

Whether to enable collecting memory usage for the agent itself.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/mackerel−agent.nix>

services.mackerel−agent.settings.host_status.on_start

Host status after agent startup.

Type: one of “working”, “standby”, “maintenance”, “poweroff”

Default:

```
"working"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/mackerel−agent.nix>

services.mackerel−agent.settings.host_status.on_stop

Host status after agent shutdown.

Type: one of “working”, “standby”, “maintenance”, “poweroff”

Default:

```
"poweroff"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/mackerel−agent.nix>

services.maddy.enable

Whether to enable Maddy, a free an open source mail server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.package
The maddy package to use.

Type: package

Default:

```
pkgs.maddy
```

Declared by:
<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.config
Server configuration, see **https://maddy.email** for more information. The default configuration of this module will setup minimal Maddy instance for mail transfer without TLS encryption.

Note
This should not be used in a production environment.

Type: null or strings concatenated with "\n"

Default:

```
  # Minimal configuration with TLS disabled, adapted from upstream  \
example
  # configuration here https://github.com/foxcpp/maddy/blob/master/ \
maddy.conf
  # Do not use this in production!

  auth.pass_table local_authdb {
    table sql_table {
      driver sqlite3
      dsn credentials.db
      table_name passwords
    }
  }

  storage.imapsql local_mailboxes {
    driver sqlite3

resses"
      }
    }
  }

  imap tcp://0.0.0.0:143 {
    auth &local_authdb
    storage &local_mailboxes
  }
```

Declared by:

<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.ensureAccounts

List of IMAP accounts which get automatically created. Note that for a complete setup, user credentials for these accounts are required and can be created using the ‘ensureCredentials’ option. This option does not delete accounts which are not (anymore) listed.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "user1@localhost"
  "user2@localhost"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.ensureCredentials
List of user accounts which get automatically created if they don't exist yet. Note that for a complete setup, corresponding mail boxes have to get created using the 'ensureAccounts' option. This option does not delete accounts which are not (anymore) listed.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "user1@localhost" = {
    passwordFile = "/secrets/user1-localhost";
  };
  "user2@localhost" = {
    passwordFile = "/secrets/user2-localhost";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.ensureCredentials.<name>.passwordFile
Specifies the path to a file containing the clear text password for the user.

Type: absolute path

Default:

```
null
```

Example:

```
"/path/to/file"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.group
Group account under which maddy runs.

Note
If left as the default value this group will automatically be created on system activation, otherwise the sysadmin is responsible for ensuring the group exists before the maddy service starts.

Type: string

Default:

```
"maddy"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.hostname
Hostname to use. It should be FQDN.

Type: string

Default:

```
"localhost"
```

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.localDomains
Define list of allowed domains.

Type: list of string

Default:

```
[
  "$(primary_domain)"
]
```

Example:

```
[
  "$(primary_domain)"
  "example.com"
  "other.example.com"
]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.openFirewall
Open the configured incoming and outgoing mail server ports.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.primaryDomain
Primary MX domain to use. It should be FQDN.

Type: string

Default:

```
"localhost"
```

Example:

```
"mail.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.secrets
A list of files containing the various secrets. Should be in the format expected by systemd's 'EnvironmentFile' directory. Secrets can be referenced in the format '{env:VAR}'.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.tls.certificates
A list of attribute sets containing paths to TLS certificates and keys. Maddy will use SNI if multiple pairs are selected.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[{
  keyPath = "/etc/ssl/mx1.example.org.key";
  certPath = "/etc/ssl/mx1.example.org.crt";
}]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.tls.certificates.*.certPath
Path to the certificate used for TLS.

Type: absolute path

Example:

```
"/etc/ssl/mx1.example.org.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.tls.certificates.*.keyPath
Path to the private key used for TLS.

Type: absolute path

Example:

```
"/etc/ssl/mx1.example.org.key"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.tls.extraConfig
Arguments for the specified certificate loader.

In case the 'tls' loader is set, the defaults are considered secure and there is no need to change anything in most cases. For available options see **upstream manual**.

For ACME configuration, see **following page**.

Type: null or strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.tls.loader

TLS certificates are obtained by modules called “certificate loaders”.

The ‘file’ loader module reads certificates from files specified by the ‘certificates’ option.

Alternatively the ‘acme’ module can be used to automatically obtain certificates using the ACME protocol.

Module configuration is done via the ‘tls.extraConfig’ option.

Secrets such as API keys or passwords should not be supplied in plaintext. Instead the ‘secrets’ option can be used to read secrets at runtime as environment variables. Secrets can be referenced with ‘{env:VAR}’.

Type: null or one of “off”, “file”, “acme”

Default:

```
"off"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.maddy.user

User account under which maddy runs.

Note
If left as the default value this user will automatically be created on system activation, otherwise the sysadmin is responsible for ensuring the user exists before the maddy service starts.

Type: string

Default:

```
"maddy"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/maddy.nix>

services.magic−wormhole−mailbox−server.enable

Whether to enable Magic Wormhole Mailbox Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/magic−wormhole−mailbox−server.nix>

services.magnetico.enable

Whether to enable Magnetico, Bittorrent DHT crawler.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/magnetico.nix>

services.magnetico.crawler.address
Address to be used for indexing DHT nodes.

Type: string

Default:

```
"0.0.0.0"
```

Example:

```
"1.2.3.4"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/magnetico.nix>

services.magnetico.crawler.extraOptions
Extra command line arguments to pass to magneticod.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/magnetico.nix>

services.magnetico.crawler.maxLeeches
Maximum number of simultaneous leeches.

Type: positive integer, meaning >0

Default:

```
200
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/magnetico.nix>

services.magnetico.crawler.maxNeighbors
Maximum number of simultaneous neighbors of an indexer. Be careful changing this number: high values can very easily cause your network to be congested or even crash your router.

Type: positive integer, meaning >0

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/magnetico.nix>

services.magnetico.crawler.port
Port to be used for indexing DHT nodes. This port should be added to **networking.firewall.allowedTCPPorts**.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/services/torrent/magnetico.nix>

services.magnetico.web.address
Address the web interface will listen to.

Type: string

Default:

```
"localhost"
```

Example:

```
"1.2.3.4"
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/magnetico.nix>

services.magnetico.web.credentials
The credentials to access the web interface, in case authentication is enabled, in the format 'username:hash'. If unset no authentication will be required.

Usernames must start with a lowercase ([a−z]) ASCII character, might contain non−consecutive underscores except at the end, and consists of small−case a−z characters and digits 0−9. The **htpasswd** tool from the 'apacheHttpd' package may be used to generate the hash: **htpasswd −bnBC 12 username password**

Warning
The hashes will be stored world−readable in the nix store. Consider using the 'credentialsFile' option if you don't want this.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  myuser = "$2y$12$YE01LZ8jrbQbx6c0s2hdZO71dSjn2p/O9XsYJpz.5968yCys \
UgiaG";
}
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/magnetico.nix>

services.magnetico.web.credentialsFile
The path to the file holding the credentials to access the web interface. If unset no authentication will be required.

The file must contain user names and password hashes in the format 'username:hash', one for each line. Usernames must start with a lowecase ([a−z]) ASCII character, might contain non−consecutive underscores except at the end, and consists of small−case a−z characters and digits 0−9. The **htpasswd** tool from the 'apacheHttpd' package may be used to generate the hash: **htpasswd −bnBC 12 username password**

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/magnetico.nix>

services.magnetico.web.extraOptions
Extra command line arguments to pass to magneticow.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/magnetico.nix>

services.magnetico.web.port
Port the web interface will listen to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/torrent/magnetico.nix>

services.mail.sendmailSetuidWrapper.enable
Whether to enable the wrapper.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

services.mail.sendmailSetuidWrapper.capabilities
A comma−separated list of capability clauses to be given to the wrapper program. The format for capability clauses is described in the “TEXTUAL REPRESENTATION” section of the **cap_from_text**(3) manual page. For a list of capabilities supported by the system, check the **capabilities**(7) manual page.

Note
‘cap_setpcap’, which is required for the wrapper program to be able to raise caps into the Ambient set is NOT raised to the Ambient set so that the real program cannot modify its own capabilities!! This may be too restrictive for cases in which the real program needs cap_setpcap but it at least leans on the side security paranoid vs. too relaxed.

Type: strings concatenated with “,”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

services.mail.sendmailSetuidWrapper.group
The group of the wrapper program.

Type: string

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

services.mail.sendmailSetuidWrapper.owner
The owner of the wrapper program.

Type: string

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

services.mail.sendmailSetuidWrapper.permissions
The permissions of the wrapper program. The format is that of a symbolic or numeric file mode understood by **chmod**.

Type: file mode string

Default:

```
"u+rx,g+x,o+x"
```

Example:

```
"a+rx"
```

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

services.mail.sendmailSetuidWrapper.program
The name of the wrapper program. Defaults to the attribute name.

Type: null or string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

services.mail.sendmailSetuidWrapper.setgid
Whether to add the setgid bit the wrapper program.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

services.mail.sendmailSetuidWrapper.setuid
Whether to add the setuid bit the wrapper program.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/security/wrappers/default.nix>

services.mail.sendmailSetuidWrapper.source

The absolute path to the program to be wrapped.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/security/wrappers/default.nix>

services.mailcatcher.enable

Whether to enable MailCatcher, an SMTP server and web interface to locally test outbound emails.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailcatcher.nix>

services.mailcatcher.http.ip

The ip address of the http server.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailcatcher.nix>

services.mailcatcher.http.path

Prefix to all HTTP paths.

Type: null or string

Default:

```
null
```

Example:

```
"/mailcatcher"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailcatcher.nix>

services.mailcatcher.http.port

The port address of the http server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1080
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailcatcher.nix>

services.mailcatcher.smtp.ip

The ip address of the smtp server.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailcatcher.nix>

services.mailcatcher.smtp.port

The port address of the smtp server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1025
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailcatcher.nix>

services.mailhog.enable

Whether to enable MailHog, web and API based SMTP testing.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailhog.nix>

services.mailhog.apiPort

Port on which the API endpoint will listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8025
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailhog.nix>

services.mailhog.extraArgs

List of additional arguments to pass to the MailHog process.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailhog.nix>

services.mailhog.setSendmail

Whether to enable set the system sendmail to mailhogs's.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailhog.nix>

services.mailhog.smtpPort

Port on which the SMTP endpoint will listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1025
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailhog.nix>

services.mailhog.storage

Store mails on disk or in memory.

Type: one of "maildir", "memory"

Default:

```
"memory"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailhog.nix>

services.mailhog.uiPort

Port on which the HTTP UI will listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8025
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailhog.nix>

services.mailman.enable

Enable Mailman on this host. Requires an active MTA on the host (e.g. Postfix).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.enablePostfix

Enable Postfix integration. Requires an active Postfix installation.

If you want to use another MTA, set this option to false and configure settings in services.mailman.settings.mta.

Refer to the Mailman manual for more info.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.packageSet

The mailmanPackages package to use.

Type: attribute set

Default:

```
pkgs.mailmanPackages
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.hyperkitty.enable

Whether to enable the Hyperkitty archiver for Mailman.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.hyperkitty.baseUrl

Where can Mailman connect to Hyperkitty's internal API, preferably on localhost?

Type: string

Default:

```
"http://localhost:18507/archives/"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.ldap.enable

Whether to enable LDAP auth.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.ldap.attrMap.email
LDAP−attribute that corresponds to the ‘email’−attribute in mailman.

Type: string

Default:

```
"mail"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.ldap.attrMap.firstName
LDAP−attribute that corresponds to the ‘firstName’−attribute in mailman.

Type: string

Default:

```
"givenName"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.ldap.attrMap.lastName
LDAP−attribute that corresponds to the ‘lastName’−attribute in mailman.

Type: string

Default:

```
"sn"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.ldap.attrMap.username
LDAP−attribute that corresponds to the ‘username’−attribute in mailman.

Type: string

Default:

```
"uid"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.ldap.bindDn
Service account to bind against.

Type: string

Example:

```
"cn=root,dc=nixos,dc=org"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.ldap.bindPasswordFile

Path to the file containing the bind password of the service account defined by **services.mailman.ldap.bindDn**.

Type: string

Example:

```
"/run/secrets/ldap-bind"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.ldap.groupSearch.ou

Organizational unit to look up a group.

Type: string

Example:

```
"ou=groups,dc=nixos,dc=org"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.ldap.groupSearch.query

Query to find a group associated to a user in the LDAP database.

Type: string

Example:

```
"(objectClass=groupOfNames)"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.ldap.groupSearch.type

Type of group to perform a group search against.

Type: one of “posixGroup”, “groupOfNames”, “memberDNGroup”, “nestedMemberDNGroup”, “nestedGroupOfNames”, “groupOfUniqueNames”, “nestedGroupOfUniqueNames”, “activeDirectoryGroup”, “nestedActiveDirectoryGroup”, “organizationalRoleGroup”, “nestedOrganizationalRoleGroup”

Default:

```
"posixGroup"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.ldap.serverUri

LDAP host to connect against.

Type: string

Example:

```
"ldaps://ldap.host"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.ldap.superUserGroup

Group where a user must be a member of to gain superuser rights.

Type: null or string

Default:

```
null
```

Example:

```
"cn=admin,ou=groups,dc=nixos,dc=org"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.ldap.userSearch.ou

Organizational unit to look up a user.

Type: string

Example:

```
"ou=users,dc=nixos,dc=org"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.ldap.userSearch.query

Query to find a user in the LDAP database.

Type: string

Example:

```
"(&(objectClass=inetOrgPerson)(|(uid=%(user)s)(mail=%(user)s)))"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.restApiPassFile

Path to the file containing the value for ‘MAILMAN_REST_API_PASS’.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.serve.enable

Whether to enable automatic nginx and uwsgi setup for mailman−web.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.serve.uwsgiSettings

Extra configuration to merge into uwsgi config.

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  uwsgi = {
    buffer-size = 8192;
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.serve.virtualRoot

Path to mount the mailman-web django application on.

Type: string

Default:

```
"/"
```

Example:

```
/lists
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.settings

Settings for mailman.cfg

Type: attribute set of attribute set of string

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.siteOwner

Certain messages that must be delivered to a human, but which can't be delivered to a list owner (e.g. a bounce from a list owner), will be sent to this address. It should point to a human.

Type: string

Example:

```
"postmaster@example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.webHosts

The list of hostnames and/or IP addresses from which the Mailman Web UI will accept requests. By default, "localhost" and "127.0.0.1" are enabled. All additional names under which your web server accepts requests for the UI must be listed here or incoming requests will be rejected.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.webSettings
Overrides for the default mailman−web Django settings.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailman.webUser
User to run mailman−web as

Type: string

Default:

```
"mailman-web"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mailman.nix>

services.mailpit.instances
Configure mailpit instances. The attribute−set values are CLI flags passed to the ‘mailpit’ CLI.

See **upstream docs** for all available options.

Type: attribute set of (open submodule of attribute set of (string or signed integer or boolean))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mailpit.nix>

services.mailpit.instances.<name>.database
Specify the local database filename to store persistent data. If ‘null’, a temporary file will be created that will be removed when the application stops. It’s recommended to specify a relative path. The database will be written into the service’s state directory then.

Type: null or string

Default:

```
null
```

Example:

```
"mailpit.db"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mailpit.nix>

services.mailpit.instances.<name>.listen
HTTP bind interface and port for UI.

Type: string

Default:

```
"127.0.0.1:8025"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mailpit.nix>

services.mailpit.instances.<name>.max
Maximum number of emails to keep. If the number is exceeded, old emails will be deleted.

Set to ‘0’ to never prune old emails.

Type: unsigned integer, meaning >=0

Default:

```
500
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mailpit.nix>

services.mailpit.instances.<name>.smtp
SMTP bind interface and port.

Type: string

Default:

```
"127.0.0.1:1025"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mailpit.nix>

services.mainsail.enable
Whether to enable a modern and responsive user interface for Klipper.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.package
The mainsail package to use.

Type: package

Default:

```
pkgs.mainsail
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.hostName
Hostname to serve mainsail on

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx

Extra configuration for the nginx virtual host of mainsail.

Type: submodule

Default:

```
{ }
```

Example:

```
{
  serverAliases = [ "mainsail.${config.networking.domain}" ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.enableACME

Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.acmeFallbackHost

Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.acmeRoot

Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.addSSL

Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with 'redirectCode') to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.http2
Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.http3
Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.http3_hq
Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.kTLS
Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.listen
Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides ‘addSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.listen.*.ssl
Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations
Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations.<name>.alias
Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations.<name>.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.rejectSSL
Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.reuseport
Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.root
The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.serverName
Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

services.mainsail.nginx.useACMEHost
A host of an existing Let’s Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mainsail.nix>

2. see the **security.acme.certs** option

services.malcontent.enable
Whether to enable Malcontent, parental control support for applications.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/malcontent.nix>

services.mame.enable
Whether to setup TUN/TAP Ethernet interface for MAME emulator.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mame.nix>

services.mame.emuAddr
IP address of the guest system. The same you set inside guest OS under MAME. Should be on the same subnet as **services.mame.hostAddr**.

Type: string

Example:

```
"192.168.31.155"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mame.nix>

services.mame.hostAddr
IP address of the host system. Usually an address of the main network adapter or the adapter through which you get an internet connection.

Type: string

Example:

```
"192.168.31.156"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mame.nix>

services.mame.user
User from which you run MAME binary.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/mame.nix>

services.manticore.enable

Whether to enable Manticoresearch.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/search/manticore.nix>

services.manticore.settings

Configuration for Manticoresearch. See **https://manual.manticoresearch.com/Server settings** for more information.

Type: open submodule of (JSON value)

Default:

```
{
  searchd = {
    data_dir = "/var/lib/manticore";
    listen = [
      "127.0.0.1:9312"
      "127.0.0.1:9306:mysql"
      "127.0.0.1:9308:http"
    ];
    log = "/var/log/manticore/searchd.log";
    pid_file = "/run/manticore/searchd.pid";
    query_log = "/var/log/manticore/query.log";
  };
}
```

Example:

```
{
  searchd = {
      listen = [
        "127.0.0.1:9312"
        "127.0.0.1:9306:mysql"
        "127.0.0.1:9308:http"
      ];
      log = "/var/log/manticore/searchd.log";
      query_log = "/var/log/manticore/query.log";
      pid_file = "/run/manticore/searchd.pid";
      data_dir = "/var/lib/manticore";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/search/manticore.nix>

services.marytts.enable

Whether to enable MaryTTS.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/audio/marytts.nix>

services.marytts.package

The marytts package to use.

Type: package

Default:

```
pkgs.marytts
```

Declared by:

<nixpkgs/nixos/modules/services/audio/marytts.nix>

services.marytts.basePath

The base path in which MaryTTS runs.

Type: absolute path

Default:

```
"/var/lib/marytts"
```

Declared by:

<nixpkgs/nixos/modules/services/audio/marytts.nix>

services.marytts.openFirewall

Whether to open the port in the firewall for MaryTTS.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/audio/marytts.nix>

services.marytts.port

Port to bind the MaryTTS server to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
59125
```

Declared by:

<nixpkgs/nixos/modules/services/audio/marytts.nix>

services.marytts.settings

Settings for MaryTTS.

See the **default settings** for a list of possible keys.

Type: open submodule of attribute set of (string, package, bool, int or float)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/audio/marytts.nix>

services.marytts.userDictionaries

Paths to the user dictionary files for MaryTTS.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  (pkgs.writeTextFile {
    name = "userdict-en_US";
    destination = "/userdict-en_US.txt";
    text = ''
      Nixpkgs | n I k s - ' p { - k @ - dZ @ s
    '';
  })
]
```

Declared by:

<nixpkgs/nixos/modules/services/audio/marytts.nix>

services.marytts.voices

Paths to the JAR files that contain additional voices for MaryTTS.

Voices are automatically detected by MaryTTS, so there is no need to alter your config to make use of new voices.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  (pkgs.fetchzip {
    url = "https://github.com/marytts/voice-bits1-hsmm/releases/d \
ownload/v5.2/voice-bits1-hsmm-5.2.zip";
    hash = "sha256-1nK+qZxjumMev7z5lgKr660NCKH5FDwvZ9sw/YYYeaA=";
  })
]
```

Declared by:

<nixpkgs/nixos/modules/services/audio/marytts.nix>

services.mastodon.enable

Whether to enable Mastodon, a federated social network server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.enableUnixSocket

Instead of binding to an IP address like 127.0.0.1, you may bind to a Unix socket. This variable is process−specific, e.g. you need different values for every process, and it works for both web (Puma) processes and streaming API (Node.js) processes.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.package

The mastodon package to use.

Type: package

Default:

```
pkgs.mastodon
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.activeRecordEncryptionDeterministicKeyFile

This key must be set to enable the Active Record Encryption feature within Rails that Mastodon uses to encrypt and decrypt some database attributes. A new Active Record keys can be generated by running:

‘nix build −f '<nixpkgs>' mastodon; cd result; RAILS_ENV=production ./bin/rails db:encryption:init’

If this file does not exist, it will be created with a new Active Record keys.

Type: string

Default:

```
"/var/lib/mastodon/secrets/active−record−encryption−deterministi \
c−key"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.activeRecordEncryptionKeyDerivationSaltFile

This key must be set to enable the Active Record Encryption feature within Rails that Mastodon uses to encrypt and decrypt some database attributes. A new Active Record keys can be generated by running:

‘nix build −f '<nixpkgs>' mastodon; cd result; RAILS_ENV=production ./bin/rails db:encryption:init’

If this file does not exist, it will be created with a new Active Record keys.

Type: string

Default:

```
"/var/lib/mastodon/secrets/active-record-encryption-key-derivat \
ion-salt"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/mastodon.nix>

services.mastodon.activeRecordEncryptionPrimaryKeyFile

This key must be set to enable the Active Record Encryption feature within Rails that Mastodon uses to encrypt and decrypt some database attributes. A new Active Record keys can be generated by running:

‘nix build -f '<nixpkgs>' mastodon; cd result; RAILS_ENV=production ./bin/rails db:encryption:init’

If this file does not exist, it will be created with a new Active Record keys.

Type: string

Default:

```
"/var/lib/mastodon/secrets/active-record-encryption-primary-key \
"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/mastodon.nix>

services.mastodon.automaticMigrations

Do automatic database migrations.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/mastodon.nix>

services.mastodon.configureNginx

Configure nginx as a reverse proxy for mastodon. Note that this makes some assumptions on your setup, and sets settings that will affect other virtualHosts running on your nginx instance, if any. Alternatively you can configure a reverse-proxy of your choice to serve these paths:

‘/ -> ${pkgs.mastodon}/public’

‘/ -> 127.0.0.1:{{ webPort }} ’(If there was no file in the directory above.)

‘/system/ -> /var/lib/mastodon/public-system/’

‘/api/v1/streaming/ -> 127.0.0.1:{{ streamingPort }}’

Make sure that websockets are forwarded properly. You might want to set up caching of some requests. Take a look at mastodon’s provided nginx configuration at ‘https://github.com/mastodon/mastodon/blob/master/dist/nginx.conf’.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/mastodon.nix>

services.mastodon.database.createLocally

Configure local PostgreSQL database server for Mastodon.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.database.host

Database host address or unix socket.

Type: string

Default:

```
"/run/postgresql"
```

Example:

```
"192.168.23.42"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.database.name

Database name.

Type: string

Default:

```
"mastodon"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.database.passwordFile

A file containing the password corresponding to **database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/mastodon/secrets/db−password"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.database.port

Database host port.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
if config.services.mastodon.database.createLocally
then null
else 5432
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.database.user
Database user.

Type: string

Default:

```
"mastodon"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.elasticsearch.host
Elasticsearch host. If it is not null, Elasticsearch full text search will be enabled.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.elasticsearch.passwordFile
Path to file containing password for optionally authenticating with Elasticsearch.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/mastodon/secrets/elasticsearch−password"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.elasticsearch.port
Elasticsearch port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9200
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.elasticsearch.prefix
If provided, adds a prefix to indexes in Elasticsearch. This allows to use the same Elasticsearch cluster between different projects or Mastodon servers.

Type: null or string

Default:

```
null
```

Example:

```
"mastodon"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.elasticsearch.preset
It controls the ElasticSearch indices configuration (number of shards and replica).

Type: one of “single_node_cluster”, “small_cluster”, “large_cluster”

Default:

```
"single_node_cluster"
```

Example:

```
"large_cluster"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.elasticsearch.user
Used for optionally authenticating with Elasticsearch.

Type: null or string

Default:

```
null
```

Example:

```
"elasticsearch−mastodon"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.extraConfig
Extra environment variables to pass to all mastodon services.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.extraEnvFiles
Extra environment files to pass to all mastodon services. Useful for passing down environmental secrets.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  "/etc/mastodon/s3config.env"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.group

Group under which mastodon runs.

Type: string

Default:

```
"mastodon"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.localDomain

The domain serving your Mastodon instance.

Type: string

Example:

```
"social.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.mediaAutoRemove.enable

Automatically remove remote media attachments and preview cards older than the configured amount of days.

Recommended in **https://docs.joinmastodon.org/admin/setup/**.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.mediaAutoRemove.olderThanDays

How old remote media needs to be in order to be removed.

Type: signed integer

Default:

```
30
```

Example:

```
14
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.mediaAutoRemove.startAt

How often to remove remote media.

The format is described in **systemd.time**(7).

Type: string

Default:

```
"daily"
```

Example:

```
"hourly"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.redis.enableUnixSocket
Use Unix socket

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.redis.createLocally
Configure local Redis server for Mastodon.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.redis.host
Redis host.

Type: null or string

Default:

```
if config.services.mastodon.redis.createLocally && !config.services \
.mastodon.redis.enableUnixSocket then "127.0.0.1" else null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.redis.passwordFile
A file containing the password for Redis database.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/mastodon−redis−password"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.redis.port
Redis port.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
if config.services.mastodon.redis.createLocally && !config.services \
.mastodon.redis.enableUnixSocket then 31637 else null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.secretKeyBaseFile
Path to file containing the secret key base. A new secret key base can be generated by running:

‘nix build −f '<nixpkgs>' mastodon; cd result; bin/bundle exec rails secret’

If this file does not exist, it will be created with a new secret key base.

Type: string

Default:

```
"/var/lib/mastodon/secrets/secret−key−base"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.sidekiqPort
TCP port used by the mastodon−sidekiq service.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
55002
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.sidekiqProcesses
How many Sidekiq processes should be used to handle background jobs, and which job classes they handle. *Read the* **upstream documentation**[1] *before configuring this!*

Type: attribute set of (submodule)

Default:

```
{
  all = {
    jobClasses = [ ];
    threads = null;
  };
}
```

Example:

```
{
  all = {
    jobClasses = [ ];
    threads = null;
  };
  default = {
    jobClasses = [
      "default"
    ];
    threads = 10;
  };
  ingress = {
    jobClasses = [
      "ingress"
    ];
    threads = 5;
```

```
    };
    push-pull = {
      jobClasses = [
        "push"
        "pull"
      ];
      threads = 5;
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/mastodon.nix>

1. https://docs.joinmastodon.org/admin/scaling/#sidekiq

services.mastodon.sidekiqProcesses.<name>.jobClasses
If not empty, which job classes should be executed by this process. *Only one process should handle the 'scheduler' class. If left empty, this process will handle the 'scheduler' class.*

Type: list of (one of "default", "fasp", "push", "pull", "mailers", "scheduler", "ingress")

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/mastodon.nix>

services.mastodon.sidekiqProcesses.<name>.threads
Number of threads this process should use for executing jobs. If null, the configured 'sidekiqThreads' are used.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/mastodon.nix>

services.mastodon.sidekiqThreads
Worker threads used by the mastodon-sidekiq-all service. If 'sidekiqProcesses' is configured and any processes specify null 'threads', this value is used.

Type: signed integer

Default:

```
25
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/mastodon.nix>

services.mastodon.smtp.authenticate
Authenticate with the SMTP server using username and password.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.smtp.createLocally
Configure local Postfix SMTP server for Mastodon.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.smtp.fromAddress
“From” address used when sending Emails to users.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.smtp.host
SMTP host used when sending emails to users.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.smtp.passwordFile
Path to file containing the SMTP password.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/mastodon/secrets/smtp−password"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.smtp.port
SMTP port used when sending emails to users.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
25
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.smtp.user
SMTP login name.

Type: null or string

Default:

```
null
```

Example:

```
"mastodon@example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.streamingProcesses
Number of processes used by the mastodon−streaming service. Please define this explicitly, recommended is the amount of your CPU cores minus one.

Type: positive integer, meaning >0

Example:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.trustedProxy
You need to set it to the IP from which your reverse proxy sends requests to Mastodon's web process, otherwise Mastodon will record the reverse proxy's own IP as the IP of all requests, which would be bad because IP addresses are used for important rate limits and security functions.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.user
User under which mastodon runs. If it is set to "mastodon", that user will be created, otherwise it should be set to the name of a user created elsewhere. In both cases, the 'mastodon' package will be added to the user's package set and a tootctl wrapper to system packages that switches to the configured account and load the right environment.

Type: string

Default:

```
"mastodon"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.vapidPrivateKeyFile
Path to file containing the private key used for Web Push Voluntary Application Server Identification. A new keypair can be generated by running:

'nix build −f '<nixpkgs>' mastodon; cd result; bin/rake webpush:generate_keys'

If this file does not exist, it will be created with a new private key.

Type: string

Default:

```
"/var/lib/mastodon/secrets/vapid−private−key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.vapidPublicKeyFile
Path to file containing the public key used for Web Push Voluntary Application Server Identification. A new keypair can be generated by running:

‘nix build −f '<nixpkgs>' mastodon; cd result; RAILS_ENV=production bin/rake webpush:generate_keys’

If **mastodon.vapidPrivateKeyFile**does not exist, it and this file will be created with a new keypair.

Type: string

Default:

```
"/var/lib/mastodon/secrets/vapid−public−key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.webPort
TCP port used by the mastodon−web service.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
55001
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.webProcesses
Processes used by the mastodon−web service.

Type: signed integer

Default:

```
2
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.mastodon.webThreads
Threads per process used by the mastodon−web service.

Type: signed integer

Default:

```
5
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mastodon.nix>

services.matomo.enable
Enable Matomo web analytics with php−fpm backend. Either the nginx option or the webServerUser option is mandatory.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.package
The matomo package to use.

Type: package

Default:

```
pkgs.matomo
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.hostname
URL of the host, without https prefix. You may want to change it if you run Matomo on a different URL than matomo.yourdomain.

Type: string

Default:

```
"matomo.${config.networking.fqdnOrHostName}"
```

Example:

```
"matomo.yourdomain.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx
With this option, you can customize an nginx virtualHost which already has sensible defaults for Matomo. Either this option or the webServerUser option is mandatory. Set this to {} to just enable the virtualHost if you don't need any customization. If enabled, then by default, the **serverName** is '${user}.${config.networking.hostName}.${config.networking.domain}', SSL is active, and certificates are acquired via ACME. If this is set to null (the default), no nginx virtualHost will be configured.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  serverAliases = [
    "matomo.${config.networking.domain}"
    "stats.${config.networking.domain}"
  ];
  enableACME = false;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.default

Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.extraConfig

These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.forceSSL

Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.globalRedirect

If set, all requests for this host are redirected (defaults to 301, configurable with ‘redirectCode’) to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.http2

Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.http3

Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.http3_hq

Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides 'addSSL' and 'onlySSL'.

If you only want to set the addresses manually and not the ports, take a look at 'listenAddresses'.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.listen.*.proxyProtocol

Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.listen.*.ssl

Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations.<name>.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations.<name>.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations.<name>.extraConfig

These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations.<name>.fastcgiParams

FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with 'lib.mkOrder'. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.rejectSSL

Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.root

The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.serverName

Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

2. see the **security.acme.certs** option

services.matomo.periodicArchiveProcessing

Enable periodic archive processing, which generates aggregated reports from the visits.

This means that you can safely disable browser triggers for Matomo archiving, and safely enable to delete old visitor logs. Before deleting visitor logs, make sure though that you run ‘systemctl start matomo−archive−processing.service’ at least once without errors if you have already collected data before.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matomo.webServerUser

Name of the web server user that forwards requests to **services.phpfpm.pools.<name>.socket** the fastcgi socket for Matomo if the nginx option is not used. Either this option or the nginx option is mandatory. If you want to use another webserver than nginx, you need to set this to that server’s user and pass fastcgi requests to ‘index.php’, ‘matomo.php’ and ‘piwik.php’ (legacy name) to this socket.

Type: null or string

Default:

```
null
```

Example:

```
"lighttpd"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/matomo.nix>

services.matrix−alertmanager.enable

Whether to enable matrix−alertmanager.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/matrix−alertmanager.nix>

services.matrix−alertmanager.package

The matrix−alertmanager package to use.

Type: package

Default:

```
pkgs.matrix−alertmanager
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/matrix−alertmanager.nix>

services.matrix-alertmanager.homeserverUrl

URL of the Matrix homeserver to use.

Type: string

Example:

```
"https://matrix.example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/matrix-alertmanager.nix>

services.matrix-alertmanager.matrixRooms

Combination of Alertmanager receiver(s) and rooms for the bot to join. Each Alertmanager receiver can be mapped to post to a matrix room.

Note, you must use a room ID and not a room alias/name. Room IDs start with a "!".

Type: list of (submodule)

Example:

```
[
  {
    receivers = [
      "receiver1"
      "receiver2"
    ];
    roomId = "!roomid@example.com";
  }
  {
    receivers = [
      "receiver3"
    ];
    roomId = "!differentroomid@example.com";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/matrix-alertmanager.nix>

services.matrix-alertmanager.matrixRooms.*.receivers

List of receivers for this room

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/matrix-alertmanager.nix>

services.matrix-alertmanager.matrixRooms.*.roomId

Matrix room ID

Type: string

Declared by:

<nixpkgs/nixos/modules/services/matrix/matrix-alertmanager.nix>

services.matrix-alertmanager.matrixUser
Matrix user to use for the bot.

Type: string

Example:

```
"@alertmanageruser:example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/matrix-alertmanager.nix>

services.matrix-alertmanager.mention
Makes the bot mention @room when posting an alert

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/matrix-alertmanager.nix>

services.matrix-alertmanager.port
Port that matrix-alertmanager listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/matrix-alertmanager.nix>

services.matrix-alertmanager.secretFile
File that contains a secret for the Alertmanager webhook.

Type: absolute path not in the Nix store

Declared by:
<nixpkgs/nixos/modules/services/matrix/matrix-alertmanager.nix>

services.matrix-alertmanager.tokenFile
File that contains a valid Matrix token for the Matrix user.

Type: absolute path not in the Nix store

Declared by:
<nixpkgs/nixos/modules/services/matrix/matrix-alertmanager.nix>

services.matrix-appservice-discord.enable
Whether to enable a bridge between Matrix and Discord.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice-discord.nix>

services.matrix-appservice-discord.package
The matrix-appservice-discord package to use.

Type: package

Default:

```
pkgs.matrix-appservice-discord
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice-discord.nix>

services.matrix-appservice-discord.environmentFile
File containing environment variables to be passed to the matrix-appservice-discord service, in which secret tokens can be specified securely by defining values for 'APPSERVICE_DISCORD_AUTH_CLIENT_I_D' and 'APPSERVICE_DISCORD_AUTH_BOT_TOKEN'.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice-discord.nix>

services.matrix-appservice-discord.localpart
The user_id localpart to assign to the AS.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice-discord.nix>

services.matrix-appservice-discord.port
Port number on which the bridge should listen for internal communication with the Matrix homeserver.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9005
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice-discord.nix>

services.matrix-appservice-discord.serviceDependencies
List of Systemd services to require and wait for when starting the application service, such as the Matrix homeserver if it's running on the same host.

Type: list of string

Default:

```
lib.optional config.services.matrix-synapse.enable config.services \
.matrix-synapse.serviceUnit
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice-discord.nix>

services.matrix−appservice−discord.settings

config.yaml configuration as a Nix attribute set.

Configuration options should match those described in **config.sample.yaml**.

config.bridge.domain and **config.bridge.homeserverUrl** should be set to match the public host name of the Matrix homeserver for webhooks and avatars to work.

Secret tokens should be specified using **environmentFile** instead of this world−readable attribute set.

Type: attribute set

Default:

```
{
  auth = {
    botToken = "";
    clientID = "";
  };
  database = {
    filename = "/var/lib/matrix−appservice−discord/discord.db";
  };
}
```

Example:

```
{
  bridge = {
    domain = "public−domain.tld";
    homeserverUrl = "http://public−domain.tld:8008";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/appservice−discord.nix>

services.matrix−appservice−discord.url

The URL where the application service is listening for HS requests.

Type: string

Default:

```
"http://localhost:${toString config.services.matrix−appservice−di \
scord.port}"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/appservice−discord.nix>

services.matrix−appservice−irc.enable

Whether to enable the Matrix/IRC bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/appservice−irc.nix>

services.matrix-appservice-irc.localpart
The user_id localpart to assign to the appservice

Type: string

Default:

```
"appservice-irc"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice-irc.nix>

services.matrix-appservice-irc.needBindingCap
Whether the daemon needs to bind to ports below 1024 (e.g. for the ident service)

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice-irc.nix>

services.matrix-appservice-irc.passwordEncryptionKeyLength
Length of the key to encrypt IRC passwords with

Type: unsigned integer, meaning >=0

Default:

```
4096
```

Example:

```
8192
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice-irc.nix>

services.matrix-appservice-irc.port
The port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8009
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice-irc.nix>

services.matrix-appservice-irc.registrationUrl
The URL where the application service is listening for homeserver requests, from the Matrix homeserver perspective.

Type: string

Example:

```
"http://localhost:8009"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice-irc.nix>

services.matrix-appservice-irc.settings

Configuration for the appservice, see **https://github.com/matrix-org/matrix-appservice-irc/blob/4.0.0/config.sample.yaml** for supported values

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/appservice-irc.nix>

services.matrix-appservice-irc.settings.database

Configuration for the database

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/appservice-irc.nix>

services.matrix-appservice-irc.settings.database.connectionString

The database connection string

Type: string

Default:

```
"nedb://var/lib/matrix-appservice-irc/data"
```

Example:

```
"postgres://username:password@host:port/databasename"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/appservice-irc.nix>

services.matrix-appservice-irc.settings.database.engine

Which database engine to use

Type: string

Default:

```
"nedb"
```

Example:

```
"postgres"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/appservice-irc.nix>

services.matrix-appservice-irc.settings.homeserver

Homeserver configuration

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/appservice-irc.nix>

services.matrix−appservice−irc.settings.homeserver.domain
The ‘domain’ part for user IDs on this home server. Usually (but not always) is the “domain name” part of the homeserver URL.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice−irc.nix>

services.matrix−appservice−irc.settings.homeserver.url
The URL to the home server for client−server API calls

Type: string

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice−irc.nix>

services.matrix−appservice−irc.settings.ircService
IRC bridge configuration

Type: open submodule of (JSON value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice−irc.nix>

services.matrix−appservice−irc.settings.ircService.mediaProxy.bindPort
Port that the media proxy binds to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
11111
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice−irc.nix>

services.matrix−appservice−irc.settings.ircService.mediaProxy.publicUrl
URL under which the media proxy is publicly acccessible.

Type: string

Example:

```
"https://matrix.example.com/media"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice−irc.nix>

services.matrix−appservice−irc.settings.ircService.mediaProxy.signingKeyPath
Path to the signing key file for authenticated media.

Type: absolute path

Default:

```
"/var/lib/matrix−appservice−irc/media−signingkey.jwk"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice−irc.nix>

services.matrix-appservice-irc.settings.ircService.mediaProxy.ttlSeconds
Lifetime in seconds, that generated URLs stay valid.

Set the lifetime to 0 to prevent URLs from becoming invalid.

Type: unsigned integer, meaning >=0

Default:

```
3600
```

Example:

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice-irc.nix>

services.matrix-appservice-irc.settings.ircService.passwordEncryptionKeyPath
Location of the key with which IRC passwords are encrypted for storage. Will be generated on first run if not present.

Type: string

Default:

```
"/var/lib/matrix-appservice-irc/passkey.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice-irc.nix>

services.matrix-appservice-irc.settings.ircService.servers
IRC servers to connect to

Type: open submodule of (JSON value)

Declared by:
<nixpkgs/nixos/modules/services/matrix/appservice-irc.nix>

services.matrix-conduit.enable
Whether to enable matrix-conduit.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-conduit.package
The matrix-conduit package to use.

Type: package

Default:

```
pkgs.matrix-conduit
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-conduit.extraEnvironment

Extra Environment variables to pass to the conduit server.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  RUST_BACKTRACE = "yes";
}
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-conduit.secretFile

Path to a file containing sensitive environment as described in {manpage}`systemd.exec(5). Some variables that can be considered secrets are:

- CONDUIT_JWT_SECRET: The secret used to enable JWT login. Without it a 400 error will be returned.
- CONDUIT_TURN_SECRET: The TURN secret

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/matrix-conduit.env"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-conduit.settings

Generates the conduit.toml configuration file. Refer to **https://docs.conduit.rs/configuration.html** for details on supported values. Note that database_path can not be edited because the service's reliance on systemd StateDir. For secrets use the 'secretFile' option instead.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-conduit.settings.global.address

Address to listen on for connections by the reverse proxy/tls terminator.

Type: string

Default:

```
"::1"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-conduit.settings.global.allow_check_for_updates
Whether to allow Conduit to automatically contact **https://conduit.rs** hourly to check for important Conduit news.

Disabled by default because nixpkgs handles updates.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-conduit.settings.global.allow_encryption
Whether new encrypted rooms can be created. Note: existing rooms will continue to work.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-conduit.settings.global.allow_federation
Whether this server federates with other servers.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-conduit.settings.global.allow_registration
Whether new users can register on this server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-conduit.settings.global.database_backend
The database backend for the service. Switching it on an existing instance will require manual migration of data.

Type: one of “sqlite”, “rocksdb”

Default:

```
"sqlite"
```

Example:

```
"rocksdb"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-conduit.settings.global.database_path

Path to the conduit database, the directory where conduit will save its data. Note that due to using the DynamicUser feature of systemd, this value should not be changed and is set to be read only.

Type: string *(read only)*

Default:

```
"/var/lib/matrix-conduit/"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-conduit.settings.global.max_request_size

Max request size in bytes. Don't forget to also change it in the proxy.

Type: positive integer, meaning >0

Default:

```
20000000
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-conduit.settings.global.port

The port Conduit will be running on. You need to set up a reverse proxy in your web server (e.g. apache or nginx), so all requests to /_matrix on port 443 and 8448 will be forwarded to the Conduit instance running on this port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6167
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-conduit.settings.global.server_name

The server_name is the name of this server. It is used as a suffix for user # and room ids.

Type: string

Example:

```
"example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-conduit.settings.global.trusted_servers

Servers trusted with signing server keys.

Type: list of string

Default:

```
[
  "matrix.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/conduit.nix>

services.matrix-continuwuity.enable
Whether to enable continuwuity.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix-continuwuity.package
The matrix-continuwuity package to use.

Type: package

Default:

```
pkgs.matrix-continuwuity
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix-continuwuity.admin.enable
Add conduwuit command to PATH for administration

Type: boolean

Default:

```
config.services.matrix-continuwuity.enable
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix-continuwuity.extraEnvironment
Extra Environment variables to pass to the continuwuity server.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  RUST_BACKTRACE = "yes";
}
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix-continuwuity.group
The group **continuwuity** is run as.

Type: non-empty string

Default:

```
"continuwuity"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix−continuwuity.settings
Generates the continuwuity.toml configuration file. Refer to **https://continuwuity.org/configuration.html** for details on supported values.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix−continuwuity.settings.global.address
Addresses (IPv4 or IPv6) to listen on for connections by the reverse proxy/tls terminator. If set to ‘null’, continuwuity will listen on IPv4 and IPv6 localhost. Must be ‘null’ if ‘unix_socket_path’ is set.

Type: null or (list of non−empty string)

Default:

```
null
```

Example:

```
[
  "127.0.0.1"
  "::1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix−continuwuity.settings.global.allow_announcements_check
If enabled, continuwuity will send a simple GET request periodically to **https://continuwuity.org/.well−known/continuwuity/announcements** for any new announcements made.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix−continuwuity.settings.global.allow_encryption
Whether new encrypted rooms can be created. Note: existing rooms will continue to work.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix−continuwuity.settings.global.allow_federation
Whether this server federates with other servers.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix−continuwuity.settings.global.allow_registration
Whether new users can register on this server.

Registration with token requires ‘registration_token’ or ‘registration_token_file’ to be set.

If set to true without a token configured, and ‘yes_i_am_very_very_sure_i_want_an_open_registration_server_prone_to_abuse’ is set to true, users can freely register.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix−continuwuity.settings.global.database_path
Path to the continuwuity database, the directory where continuwuity will save its data. Note that database_path cannot be edited because of the service’s reliance on systemd StateDir.

Type: absolute path *(read only)*

Default:

```
"/var/lib/continuwuity/"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix−continuwuity.settings.global.max_request_size
Max request size in bytes. Don’t forget to also change it in the proxy.

Type: positive integer, meaning >0

Default:

```
20000000
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix−continuwuity.settings.global.port
The port(s) continuwuity will be running on. You need to set up a reverse proxy in your web server (e.g. apache or nginx), so all requests to /_matrix on port 443 and 8448 will be forwarded to the continuwuity instance running on this port.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[
  6167
]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix−continuwuity.settings.global.server_name
The server_name is the name of this server. It is used as a suffix for user and room ids.

Type: non−empty string

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix−continuwuity.settings.global.trusted_servers
Servers listed here will be used to gather public keys of other servers (notary trusted key servers).

Currently, continuwuity doesn't support inbound batched key requests, so this list should only contain other Synapse servers.

Example: '["matrix.org" "constellatory.net" "tchncs.de"]'

Type: list of non−empty string

Default:

```
[
  "matrix.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix−continuwuity.settings.global.unix_socket_path
Listen on a UNIX socket at the specified path. If listening on a UNIX socket, listening on an address will be disabled. The 'address' option must be set to 'null' (the default value). The option **services.continuwuity.group** must be set to a group your reverse proxy is part of.

This will automatically add a system user "continuwuity" to your system if **services.continuwuity.user** is left at the default, and a "continuwuity" group if **services.continuwuity.group** is left at the default.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix−continuwuity.settings.global.unix_socket_perms
The default permissions (in octal) to create the UNIX socket with.

Type: positive integer, meaning >0

Default:

```
660
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix−continuwuity.user
The user **continuwuity** is run as.

Type: non−empty string

Default:

```
"continuwuity"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/continuwuity.nix>

services.matrix-hookshot.enable

Whether to enable matrix-hookshot, a bridge between Matrix and project management services.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/hookshot.nix>

services.matrix-hookshot.package

The matrix-hookshot package to use.

Type: package

Default:

```
pkgs.matrix-hookshot
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/hookshot.nix>

services.matrix-hookshot.registrationFile

Appservice registration file. As it contains secret tokens, you may not want to add this to the publicly readable Nix store.

Type: absolute path

Example:

```
pkgs.writeText "matrix-hookshot-registration" \'\'
  id: matrix-hookshot
  as_token: aaaaaaaaaa
  hs_token: aaaaaaaaaa
  namespaces:
    rooms: []
    users:
      - regex: "@_webhooks_.*:foobar"
        exclusive: true
  sender_localpart: hookshot
  url: "http://localhost:9993"
  rate_limited: false
  \'\'
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/hookshot.nix>

services.matrix-hookshot.serviceDependencies

List of Systemd services to require and wait for when starting the application service, such as the Matrix homeserver if it's running on the same host.

Type: list of string

Default:

```
lib.optional config.services.matrix-synapse.enable config.services \
.matrix-synapse.serviceUnit
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/hookshot.nix>

services.matrix-hookshot.settings
config.yml configuration as a Nix attribute set.

For details please see the **documentation**.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
{
  bridge = {
    bindAddress = "127.0.0.1";
    domain = "example.com";
    mediaUrl = "https://example.com";
    port = 9993;
    url = "http://localhost:8008";
  };
  listeners = [
    {
      bindAddress = "0.0.0.0";
      port = 9000;
      resources = [
        "webhooks"
      ];
    }
    {
      bindAddress = "localhost";
      port = 9001;
      resources = [
        "metrics"
        "provisioning"
      ];
    }
  ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/hookshot.nix>

services.matrix-hookshot.settings.passFile
A passkey used to encrypt tokens stored inside the bridge. File will be generated if not found.

Type: absolute path

Default:

```
"/var/lib/matrix-hookshot/passkey.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/hookshot.nix>

services.matrix−synapse.enable

Whether to enable matrix.org synapse, the reference homeserver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.enableRegistrationScript

Whether to install the ‘register_new_matrix_user’ script, that allows account creation on the terminal.

Note

This script does not work when the client listener uses UNIX domain sockets

Type: boolean

Default:

```
Enabled if the client listener uses TCP sockets
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.package

Reference to the ‘matrix−synapse’ wrapper with all extras (e.g. for ‘oidc’ or ‘saml2’) added to the ‘PYTHONPATH’ of all executables.

This option is useful to reference the “final” ‘matrix−synapse’ package that’s actually used by ‘matrix−synapse.service’. For instance, when using workers, it’s possible to run ‘${config.services.matrix−synapse.package}/bin/synapse_worker’ and no additional PYTHONPATH needs to be specified for extras or plugins configured via ‘services.matrix−synapse’.

However, this means that this option is supposed to be only declared by the ‘services.matrix−synapse’ module itself and is thus read−only. In order to modify ‘matrix−synapse’ itself, use an overlay to override ‘pkgs.matrix−synapse−unwrapped’.

Type: package *(read only)*

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.configFile

Path to the configuration file on the target system. Useful to configure e.g. workers that also need this.

Type: absolute path *(read only)*

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.configureRedisLocally

Whether to automatically configure a local redis server for matrix−synapse.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.dataDir
The directory where matrix−synapse stores its stateful data such as certificates, media and uploads.

Type: string

Default:

```
"/var/lib/matrix-synapse"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.extraArgs
Extra command lines argument that are passed to synapse and workers.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--no-secrets-in-config"
]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.extraConfigFiles
Extra config files to include.

The configuration files will be included based on the command line argument −−config−path. This allows to configure secrets without having to go through the Nix store, e.g. based on deployment keys if NixOps is in use.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.extras
Explicitly install extras provided by matrix−synapse. Most will require some additional configuration.

Extras will automatically be enabled, when the relevant configuration sections are present.

Please note that this option is additive: i.e. when adding a new item to this list, the defaults are still kept. To override the defaults as well, use ‘lib.mkForce’.

Type: list of (one of “cache−memory”, “jwt”, “oidc”, “postgres”, “redis”, “saml2”, “sentry”, “systemd”, “url−preview”)

Default:

```
[
  "systemd"
  "postgres"
  "url-preview"
]
```

Example:

```
[
  "cache-memory" # Provide statistics about caching memory consump \
tion
  "jwt"          # JSON Web Token authentication
  "oidc"         # OpenID Connect authentication
  "postgres"     # PostgreSQL database backend
  "redis"        # Redis support for the replication stream between \
 worker processes
  "saml2"        # SAML2 authentication
  "sentry"       # Error tracking and performance metrics
  "systemd"      # Provide the JournalHandler used in the default l \
og_config
  "url-preview"  # Support for oEmbed URL previews
]
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.log

Default configuration for the loggers used by 'matrix-synapse' and its workers. The defaults are added with the default priority which means that these will be merged with additional declarations. These additional declarations also take precedence over the defaults when declared with at least normal priority. For instance the log-level for synapse and its workers can be changed like this:

```
{ lib, ... }: {
  services.matrix-synapse.log.root.level = "WARNING";
}
```

And another field can be added like this:

```
{
  services.matrix-synapse.log = {
    loggers."synapse.http.matrixfederationclient".level = "DEBUG";
  };
}
```

Additionally, the field 'handlers.journal.SYSLOG_IDENTIFIER' will be added to each log config, i.e.

- 'synapse' for 'matrix-synapse.service'
- 'synapse-<worker name>' for 'matrix-synapse-worker-<worker name>.service'

This is only done if this option has a 'handlers.journal' field declared.

To discard all settings declared by this option for each worker and synapse, 'lib.mkForce' can be used.

To discard all settings declared by this option for a single worker or synapse only, **services.matrix-synapse.workers.<name>.worker_log_config** or **services.matrix-synapse.settings.log_config** can be used.

Type: attribute set of (YAML 1.1 value)

Default:

```
{
  disable_existing_loggers = false;
  formatters = {
    journal_fmt = {
      format = "%(name)s: [%(request)s] %(message)s";
    };
```

```
      };
      handlers = {
        journal = {
          class = "systemd.journal.JournalHandler";
          formatter = "journal_fmt";
        };
      };
      root = {
        handlers = [
          "journal"
        ];
        level = "INFO";
      };
      version = 1;
    }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.plugins
List of additional Matrix plugins to make available.

Type: list of package

Default:

```
[ ]
```

Example:

```
with config.services.matrix−synapse.package.plugins; [
  matrix−synapse−ldap3
  matrix−synapse−pam
];
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.serviceUnit
The systemd unit (a service or a target) for other services to depend on if they need to be started after matrix−synapse.

This option is useful as the actual parent unit for all matrix−synapse processes changes when configuring workers.

Type: string *(read only)*

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings
The primary synapse configuration. See the **sample configuration** for possible values.

Secrets should be passed in by using the ‘extraConfigFiles’ option.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.enable_metrics
Enable collection and rendering of performance metrics

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.enable_registration
Enable registration for new users.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.app_service_config_files
A list of application service config file to use

Type: list of absolute path

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.database.args.database
Name of the database when using the psycopg2 backend, path to the database location when using sqlite3.

Type: string

Default:

```
{
  sqlite3 = "${services.matrix-synapse.dataDir}/homeserver.db";
  psycopg2 = "matrix-synapse";
}.${services.matrix-synapse.settings.database.name};
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.database.args.user
Username to connect with psycopg2, set to null when using sqlite3.

Type: null or string

Default:

```
{
  sqlite3 = null;
  psycopg2 = "matrix-synapse";
}.${cfg.settings.database.name};
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.database.name
The database engine name. Can be sqlite3 or psycopg2.

Type: one of “sqlite3”, “psycopg2”

Default:

```
if versionAtLeast config.system.stateVersion "18.03"
then "psycopg2"
else "sqlite3"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.dynamic_thumbnails
Whether to generate new thumbnails on the fly to precisely match the resolution requested by the client. If true then whenever a new resolution is requested by the client the server will generate a new thumbnail. If false the server will pick a thumbnail from a precalculated list.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.listeners
List of ports that Synapse should listen on, their purpose and their configuration.

By default, synapse will be configured for client and federation traffic on port 8008, and use a UNIX domain socket for worker replication. See ‘services.matrix-synapse.workers’ for more details.

Type: list of (submodule)

Default:

```
[
  {
    bind_addresses = [
      "127.0.0.1"
    ];
    port = 8008;
    resources = [
      {
        compress = true;
        names = [
          "client"
        ];
      }
      {
        compress = false;
        names = [
          "federation"
        ];
```

```
        }
      ];
      tls = false;
      type = "http";
      x_forwarded = true;
    }
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.listeners.*.bind_addresses
IP addresses to bind the listener to.

Type: null or (list of string)

Default:

```
if path != null then
  null
else
  [
    "::1"
    "127.0.0.1"
  ]
```

Example:

```
[
  "::"
  "0.0.0.0"
]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.listeners.*.mode
File permissions on the UNIX domain socket.

Type: null or string matching the pattern ^[0,2−7]{3,4}$

Default:

```
if path != null then
  "660"
else
  null
```

Example:

```
"660"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.listeners.*.path
Unix domain socket path to bind this listener to.

> **Note**
> This option is incompatible with **bind_addresses**, **port**, **tls** and also does not support the ‘metrics’ and ‘manhole’ listener **type**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.listeners.*.port

The port to listen for HTTP(S) requests on.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Example:

```
8448
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.listeners.*.resources

List of HTTP resources to serve on this listener.

Type: list of (submodule)

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.listeners.*.resources.*.compress

Whether synapse should compress HTTP responses to clients that support it. This should be disabled if running synapse behind a load balancer that can do automatic compression.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.listeners.*.resources.*.names

List of resources to host on this listener.

Type: list of (one of “client”, “consent”, “federation”, “health”, “keys”, “media”, “metrics”, “openid”, “replication”, “static”)

Default:

```
[ ]
```

Example:

```
[
  "client"
]
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.listeners.*.tls

Whether to enable TLS on the listener socket.

Note
This option will be ignored for UNIX domain sockets.

Type: null or boolean

Default:

```
  Enabled for the main instance listener, unless it is configured w \
ith a UNIX domain socket path.
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.listeners.*.type

The type of the listener, usually http.

Type: one of “http”, “manhole”, “metrics”, “replication”

Default:

```
"http"
```

Example:

```
"metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.listeners.*.x_forwarded

Use the X−Forwarded−For (XFF) header as the client IP and not the actual client IP.

Type: boolean

Default:

```
  Enabled if the listener is configured with a UNIX domain socket p \
ath
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.log_config

The file that holds the logging configuration.

Type: absolute path

Default: Path to a yaml file generated from this Nix expression:

```
{
  disable_existing_loggers = false;
  formatters = {
    journal_fmt = {
      format = "%(name)s: [%(request)s] %(message)s";
    };
  };
  handlers = {
```

```
      journal = {
        SYSLOG_IDENTIFIER = "synapse";
        class = "systemd.journal.JournalHandler";
        formatter = "journal_fmt";
      };
    };
    root = {
      handlers = [
        "journal"
      ];
      level = "INFO";
    };
    version = 1;
  }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.macaroon_secret_key
Secret key for authentication tokens. If none is specified, the registration_shared_secret is used, if one is given; otherwise, a secret key is derived from the signing key.

Secrets should be passed in via ‘extraConfigFiles’!

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.max_image_pixels
Maximum number of pixels that will be thumbnailed

Type: string

Default:

```
"32M"
```

Example:

```
"64M"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.max_upload_size
The largest allowed upload size in bytes

Type: string

Default:

```
"50M"
```

Example:

```
"100M"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.media_store_path

Directory where uploaded images and attachments are stored.

Type: absolute path

Default:

```
"/var/lib/matrix-synapse/media_store for when system.stateVersion  \
is at least 22.05, /var/lib/matrix-synapse/media when lower than 2 \
2.05"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.pid_file

The file to store the PID in.

Type: absolute path *(read only)*

Default:

```
"/run/matrix-synapse.pid"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.presence.enabled

Whether to enable presence tracking.

Presence tracking allows users to see the state (e.g online/offline) of other local and remote users.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.public_baseurl

The public-facing base URL for the client API (not including _matrix/…)

Type: null or string

Default:

```
null
```

Example:

```
"https://example.com:8448/"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.redis

Redis configuration for synapse.

See the **upstream documentation** for available options.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.redis.enabled
Whether to use redis support

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.registration_shared_secret
If set, allows registration by anyone who also has the shared secret, even if registration is otherwise disabled.

Secrets should be passed in via 'extraConfigFiles'!

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.report_stats
Whether or not to report anonymized homeserver usage statistics.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.server_name
The domain name of the server, with optional explicit port. This is used by remote servers to look up the server address. This is also the last part of your UserID.

The server_name cannot be changed later so it is important to configure this correctly before you start Synapse.

Type: string

Default:

```
config.networking.hostName
```

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.signing_key_path
Path to the signing key to sign messages with.

Type: absolute path

Default:

```
"/var/lib/matrix-synapse/homeserver.signing.key"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.tls_certificate_path
PEM encoded X509 certificate for TLS. You can replace the self−signed certificate that synapse autogenerates on launch with your own SSL certificate + key pair if you like. Any required intermediary certificates can be appended after the primary certificate in hierarchical order.

Type: null or string

Default:

```
null
```

Example:

```
"/var/lib/acme/example.com/fullchain.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.tls_private_key_path
PEM encoded private key for TLS. Specify null if synapse is not speaking TLS directly.

Type: null or string

Default:

```
null
```

Example:

```
"/var/lib/acme/example.com/key.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.trusted_key_servers
The trusted servers to download signing keys from.

Type: list of (open submodule of (YAML 1.1 value))

Default:

```
[
  {
    server_name = "matrix.org";
    verify_keys = {
      "ed25519:auto" = "Noi6WqcDj0QmPxCNQqgezwTlBKrfqehY1u2FyWP9uYw \
";
    };
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.trusted_key_servers.*.server_name
Hostname of the trusted server.

Type: string

Example:

```
"matrix.org"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.turn_shared_secret
The shared secret used to compute passwords for the TURN server.

Secrets should be passed in via 'extraConfigFiles'!

Type: string

Default:
```
""
```

Example:
```
config.services.coturn.static-auth-secret
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.turn_uris
The public URIs of the TURN server to give to clients

Type: list of string

Default:
```
[ ]
```

Example:
```
[
  "turn:turn.example.com:3487?transport=udp"
  "turn:turn.example.com:3487?transport=tcp"
  "turns:turn.example.com:5349?transport=udp"
  "turns:turn.example.com:5349?transport=tcp"
]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.url_preview_enabled
Is the preview URL API enabled? If enabled, you *must* specify an explicit url_preview_ip_range_blacklist of IPs that the spider is denied from accessing.

Type: boolean

Default:
```
true
```

Example:
```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.settings.url_preview_ip_range_blacklist
List of IP address CIDR ranges that the URL preview spider is denied from accessing.

Type: list of string

Default:
```
[
  "10.0.0.0/8"
  "100.64.0.0/10"
```

```
    "127.0.0.0/8"
    "169.254.0.0/16"
    "172.16.0.0/12"
    "192.0.0.0/24"
    "192.0.2.0/24"
    "192.168.0.0/16"
    "192.88.99.0/24"
    "198.18.0.0/15"
    "198.51.100.0/24"
    "2001:db8::/32"
    "203.0.113.0/24"
    "224.0.0.0/4"
    "::1/128"
    "fc00::/7"
    "fe80::/10"
    "fec0::/10"
    "ff00::/8"
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.url_preview_ip_range_whitelist
List of IP address CIDR ranges that the URL preview spider is allowed to access even if they are specified in url_preview_ip_range_blacklist.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.settings.url_preview_url_blacklist
Optional list of URL matches that the URL preview spider is denied from accessing.

Type: list of ((attribute set of string) or string convertible to it)

Default:

```
[ ]
```

Example:

```
[
  { scheme = "http"; } # no http previews
  { netloc = "www.acme.com"; path = "/foo"; } # block http(s)://www \
.acme.com/foo
]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.withJemalloc
Whether to preload jemalloc to reduce memory fragmentation and overall usage.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.workers

Options for configuring workers. Worker support will be enabled if at least one worker is configured here.

See the **worker documention** for possible options for each worker. Worker−specific options overriding the shared homeserver configuration can be specified here for each worker.

Note

Worker support will add a replication listener on port 9093 to the main synapse process using the default value of 'services.matrix−synapse.settings.listeners' and configure that listener as 'services.matrix−synapse.settings.instance_map.main'. If you set either of those options, make sure to configure a replication listener yourself.

A redis server is required for running workers. A local one can be enabled using 'services.matrix−synapse.configureRedisLocally'.

Workers also require a proper reverse proxy setup to direct incoming requests to the appropriate process. See the **reverse proxy documentation** for a general reverse proxying setup and the **worker documentation** for the available endpoints per worker application.

Type: attribute set of (open submodule of (YAML 1.1 value))

Default:

```
{ }
```

Example:

```
{
  "federation_sender" = { };
  "federation_receiver" = {
    worker_listeners = [
      {
        type = "http";
        port = 8009;
        bind_addresses = [ "127.0.0.1" ];
        tls = false;
        x_forwarded = true;
        resources = [{
          names = [ "federation" ];
        }];
      }
    ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix−synapse.workers.<name>.worker_app

Type of this worker

Type: one of "synapse.app.generic_worker", "synapse.app.media_repository"

Default:

```
"synapse.app.generic_worker"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.workers.<name>.worker_listeners
List of ports that this worker should listen on, their purpose and their configuration.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.workers.<name>.worker_listeners.*.bind_addresses
IP addresses to bind the listener to.

Type: null or (list of string)

Default:

```
if path != null then
  null
else
  [
    "::1"
    "127.0.0.1"
  ]
```

Example:

```
[
  "::"
  "0.0.0.0"
]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.workers.<name>.worker_listeners.*.mode
File permissions on the UNIX domain socket.

Type: null or string matching the pattern ^[0,2-7]{3,4}$

Default:

```
if path != null then
  "660"
else
  null
```

Example:

```
"660"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.workers.<name>.worker_listeners.*.path
Unix domain socket path to bind this listener to.

Note
This option is incompatible with **bind_addresses**, **port**, **tls** and also does not support the ‘metrics’ and ‘manhole’ listener **type**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.workers.<name>.worker_listeners.*.port
The port to listen for HTTP(S) requests on.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Example:

```
8448
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.workers.<name>.worker_listeners.*.resources
List of HTTP resources to serve on this listener.

Type: list of (submodule)

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.workers.<name>.worker_listeners.*.resources.*.compress
Whether synapse should compress HTTP responses to clients that support it. This should be disabled if running synapse behind a load balancer that can do automatic compression.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.workers.<name>.worker_listeners.*.resources.*.names
List of resources to host on this listener.

Type: list of (one of “client”, “consent”, “federation”, “health”, “keys”, “media”, “metrics”, “openid”, “replication”, “static”)

Default:

```
[ ]
```

Example:

```
[
  "client"
]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.workers.<name>.worker_listeners.*.tls

Whether to enable TLS on the listener socket.

Note
This option will be ignored for UNIX domain sockets.

Type: null or boolean

Default:

```
  Enabled for the main instance listener, unless it is configured w \
ith a UNIX domain socket path.
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.workers.<name>.worker_listeners.*.type

The type of the listener, usually http.

Type: one of “http”, “manhole”, “metrics”, “replication”

Default:

```
"http"
```

Example:

```
"metrics"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.workers.<name>.worker_listeners.*.x_forwarded

Use the X-Forwarded-For (XFF) header as the client IP and not the actual client IP.

Type: boolean

Default:

```
  Enabled if the listener is configured with a UNIX domain socket p \
ath
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-synapse.workers.<name>.worker_log_config

The file for log configuration.

See the **python documentation** for the schema and the **upstream repository** for an example.

Type: absolute path

Default: Path to a yaml file generated from this Nix expression:

```
{
  disable_existing_loggers = false;
  formatters = {
    journal_fmt = {
      format = "%(name)s: [%(request)s] %(message)s";
    };
  };
```

```
handlers = {
  journal = {
    SYSLOG_IDENTIFIER = "synapse-‹name›";
    class = "systemd.journal.JournalHandler";
    formatter = "journal_fmt";
  };
};
root = {
  handlers = [
    "journal"
  ];
  level = "INFO";
};
version = 1;
}
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/synapse.nix>

services.matrix-tuwunel.enable
Whether to enable tuwunel.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix-tuwunel.package
The matrix-tuwunel package to use.

Type: package

Default:

```
pkgs.matrix-tuwunel
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix-tuwunel.extraEnvironment
Extra Environment variables to pass to the tuwunel server.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  RUST_BACKTRACE = "yes";
}
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix−tuwunel.group
The group **tuwunel** is run as. If left as the default, the group will automatically be created by the service.

Type: non−empty string

Default:

```
"tuwunel"
```

Example:

```
"conduit"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix−tuwunel.settings
Generates the tuwunel.toml configuration file. Refer to **https://matrix−construct.github.io/tuwunel/configuration.html** for details on supported values.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix−tuwunel.settings.global.address
Addresses (IPv4 or IPv6) to listen on for connections by the reverse proxy/tls terminator. If set to ‘null’, tuwunel will listen on IPv4 and IPv6 localhost.

Type: null or (list of non−empty string)

Default:

```
null
```

Example:

```
[
  "127.0.0.1"
  "::1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix−tuwunel.settings.global.allow_encryption
Whether new encrypted rooms can be created. Note: existing rooms will continue to work.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix−tuwunel.settings.global.allow_federation
Whether this server federates with other servers.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix−tuwunel.settings.global.allow_registration
Whether new users can register on this server.

Registration with token requires ‘registration_token’ or ‘registration_token_file’ to be set.

If set to true without a token configured, and ‘yes_i_am_very_very_sure_i_want_an_open_registration_server_prone_to_abuse’ is set to true, users can freely register.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix−tuwunel.settings.global.max_request_size
Max request size in bytes. Don’t forget to also change it in the proxy.

Type: positive integer, meaning >0

Default:

```
20000000
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix−tuwunel.settings.global.port
The port(s) tuwunel will be running on. You need to set up a reverse proxy in your web server (e.g. apache or nginx), so all requests to /_matrix on port 443 and 8448 will be forwarded to the tuwunel instance running on this port.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
[
  6167
]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix−tuwunel.settings.global.server_name
The server_name is the name of this server. It is used as a suffix for user and room ids.

Type: non−empty string

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix−tuwunel.settings.global.trusted_servers
Servers listed here will be used to gather public keys of other servers (notary trusted key servers).

Currently, tuwunel doesn't support inbound batched key requests, so this list should only contain other Synapse servers.

Example: '["matrix.org" "constellatory.net" "tchncs.de"]'

Type: list of non−empty string

Default:

```
[
  "matrix.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix−tuwunel.settings.global.unix_socket_path
Listen on a UNIX socket at the specified path. If listening on a UNIX socket, listening on an address will be disabled. The 'address' option must be set to 'null' (the default value). The option **services.tuwunel.group** must be set to a group your reverse proxy is part of.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix−tuwunel.settings.global.unix_socket_perms
The default permissions (in octal) to create the UNIX socket with.

Type: positive integer, meaning >0

Default:

```
660
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix−tuwunel.stateDirectory
The name of the directory under /var/lib/ where the database will be stored.

Note that 'stateDirectory' cannot be changed once created because of the service's reliance on systemd 'StateDirectory'.

Type: non−empty string

Default:

```
"tuwunel"
```

Example:

```
"matrix-conduit"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matrix−tuwunel.user

The user **tuwunel** is run as. If left as the default, the user will automatically be created by the service.

Type: non−empty string

Default:

```
"tuwunel"
```

Example:

```
"conduit"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/tuwunel.nix>

services.matter−server.enable

Whether to enable Matter−server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/matter−server.nix>

services.matter−server.package

The python−matter−server package to use.

Type: package

Default:

```
pkgs.python−matter−server
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/matter−server.nix>

services.matter−server.extraArgs

Attribute set of extra arguments to pass to the matter−server executable. See **https://github.com/home−assistant−libs/python−matter−server?tab=readme−ov−file#running−the−development−server** for options.

Type: attribute set

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/home−automation/matter−server.nix>

services.matter−server.logLevel

Verbosity of logs from the matter−server

Type: one of “critical”, “error”, “warning”, “info”, “debug”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/matter−server.nix>

services.matter−server.openFirewall
Whether to open the port in the firewall.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/matter−server.nix>

services.matter−server.port
Port to expose the matter−server service on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5580
```

Declared by:
<nixpkgs/nixos/modules/services/home−automation/matter−server.nix>

services.matterbridge.enable
Whether to enable Matterbridge chat platform bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/matterbridge.nix>

services.matterbridge.package
The matterbridge package to use.

Type: package

Default:

```
pkgs.matterbridge
```

Declared by:
<nixpkgs/nixos/modules/services/networking/matterbridge.nix>

services.matterbridge.configFile
WARNING: THIS IS INSECURE, as your password will end up in */nix/store*, thus publicly readable. Use ‘services.matterbridge.configPath’ instead.

The matterbridge configuration file in the TOML file format.

Type: string

Example:

```
  # WARNING: as this file contains credentials, do not use this opt \
ion!
  # It is kept only for backwards compatibility, and would cause yo \
ur
```

```
  # credentials to be in the nix-store, thus with the world-reada \
ble
  # permission bits.
  # Use services.matterbridge.configPath instead.

  [irc]
      [irc.libera]
      Server="irc.libera.chat:6667"
      Nick="matterbot"

  [mattermost]
      [mattermost.work]
       # Do not prefix it with http:// or https://
       Server="yourmattermostserver.domain"
       Team="yourteam"
       Login="yourlogin"
       Password="yourpass"
       PrefixMessagesWithNick=true

  [[gateway]]
  name="gateway1"
  enable=true
      [[gateway.inout]]
      account="irc.libera"
      channel="#testing"

      [[gateway.inout]]
      account="mattermost.work"
      channel="off-topic"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/matterbridge.nix>

services.matterbridge.configPath

The path to the matterbridge configuration file.

Type: null or string

Default:

```
null
```

Example:

```
"/etc/nixos/matterbridge.toml"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/matterbridge.nix>

services.matterbridge.group

Group which runs the matterbridge service.

Type: string

Default:

```
"matterbridge"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/matterbridge.nix>

services.matterbridge.user
User which runs the matterbridge service.

Type: string

Default:

```
"matterbridge"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/matterbridge.nix>

services.mattermost.enable
Whether to enable Mattermost chat server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.package
The mattermost package to use.

Type: package

Default:

```
pkgs.mattermost
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.configDir
Mattermost config directory.

Type: absolute path

Default:

```
if versionAtLeast config.system.stateVersion "25.05" then
  "/etc/mattermost"
else
  "''${config.services.mattermost.dataDir}/config";
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.dataDir
Mattermost working directory.

Type: absolute path

Default:

```
"/var/lib/mattermost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.database.create
Create a local PostgreSQL database for Mattermost automatically.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.database.extraConnectionOptions
Extra options that are placed in the connection URI's query parameters.

Type: attribute set of (signed integer or string)

Default:

```
{
  sslmode = "disable";
  connect_timeout = 60;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.database.fromEnvironment
Use services.mattermost.environmentFile to configure the database instead of writing the database URI to the Nix store. Useful if you use password authentication with peerAuth set to false.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.database.host
Host to use for the database. Can also be set to a path if you'd like to connect to a socket using a username and password.

Type: string

Default:

```
"localhost"
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.database.name
Local Mattermost database name.

Type: string

Default:

```
"mattermost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.database.password
Password for local Mattermost database user. If set and peerAuth is not true, will cause a warning nagging you to use environmentFile instead since it will end up in the Nix store.

Type: string

Default:

```
"mmpgsecret"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.database.peerAuth
If set, will use peer auth instead of connecting to a Postgres server. Use services.mattermost.database.socketPath to configure the socket path.

Type: boolean

Default:

```
  versionAtLeast config.system.stateVersion "25.05" && config.servi \
ces.mattermost.database.host == "localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.database.port
Port to use for the database.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5432
```

Example:

```
1234
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.database.socketPath
The database socket path.

Type: absolute path

Default:

```
"/run/postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.database.user
Local Mattermost database username.

Type: string

Default:

```
"mattermost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.environment
Extra environment variables to export to the Mattermost process from the systemd unit configuration.

Type: attribute set of (signed integer or string)

Default:

```
{ }
```

Example:

```
{
  MM_SERVICESETTINGS_SITEURL = "http://example.com";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.environmentFile
Environment file (see **systemd.exec**(5) “EnvironmentFile=” section for the syntax) which sets config options for mattermost (see **the Mattermost documentation**).

Settings defined in the environment file will overwrite settings set via Nix or via the **services.mattermost.extraConfig** option.

Useful for setting config options without their value ending up in the (world−readable) Nix store, e.g. for a database password.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.group
Group which runs the Mattermost service.

Type: string

Default:

```
"mattermost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.host
Host or address that this Mattermost instance listens on.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.logDir
Mattermost log directory.

Type: absolute path

Default:

```
  if versionAtLeast config.system.stateVersion "25.05" then "/var/l \
og/mattermost"
  else "''${config.services.mattermost.dataDir}/logs";
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/mattermost.nix>

services.mattermost.matterircd.enable
Whether to enable Mattermost IRC bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/mattermost.nix>

services.mattermost.matterircd.package
The matterircd package to use.

Type: package

Default:

```
pkgs.matterircd
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/mattermost.nix>

services.mattermost.matterircd.parameters
Set commandline parameters to pass to matterircd. See **https://github.com/42wim/matterircd#usage** for more information.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "-mmserver chat.example.com"
  "-bind [::]:6667"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/mattermost.nix>

services.mattermost.mutableConfig

Whether the Mattermost config.json is writeable by Mattermost.

Most of the settings can be edited in the system console of Mattermost if this option is enabled. A template config using the options specified in services.mattermost will be generated but won't be overwritten on changes or rebuilds.

If this option is disabled, persistent changes in the system console won't be possible (the default). If a config.json is present, it will be overwritten at service start!

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.plugins

Plugins to add to the configuration. Overrides any installed if non−null. This is a list of paths to .tar.gz files or derivations evaluating to .tar.gz files. You can use 'mattermost.buildPlugin' to build plugins; see the NixOS documentation for more details.

Type: list of (absolute path or package)

Default:

```
[ ]
```

Example:

```
"[ ./com.github.moussetc.mattermost.plugin.giphy−2.0.0.tar.gz ]"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.pluginsBundle

Derivation building to a directory of plugin tarballs. This overrides **services.mattermost.plugins** if provided.

Type: null or package

Default:

```
All entries in {config}'services.mattermost.plugins', repacked
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.port

Port for Mattermost server to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8065
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.preferNixConfig

If both mutableConfig and this option are set, the Nix configuration will take precedence over any settings configured in the server console.

Type: boolean

Default:

```
versionAtLeast config.system.stateVersion "25.05";
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.settings

Additional configuration options as Nix attribute set in config.json schema.

Type: JSON value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.siteName

Name of this Mattermost site.

Type: string

Default:

```
"Mattermost"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.siteUrl

URL this Mattermost instance is reachable under, without trailing slash.

Type: string

Example:

```
"https://chat.example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.socket.enable

Whether to enable Mattermost control socket.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.socket.export

Whether to enable Export socket control to system environment variables.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.socket.path

Default location for the Mattermost control socket used by ‘mmctl’.

Type: absolute path

Default:

```
"\${config.mattermost.dataDir}/mattermost.sock"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.telemetry.enableDiagnostics

True if we should enable sending diagnostic data. This reaches out to Mattermost’s servers: https://docs.mattermost.com/manage/telemetry.html#error−and−diagnostics−reporting−feature

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.telemetry.enableSecurityAlerts

True if we should enable security update checking. This reaches out to Mattermost’s servers: https://docs.mattermost.com/manage/telemetry.html#security−update−check−feature

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.mattermost.user

User which runs the Mattermost service.

Type: string

Default:

```
"mattermost"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mattermost.nix>

services.maubot.enable

Whether to enable maubot.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.package

The maubot package to use.

Type: package

Default:

```
pkgs.maubot
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.configMutable

Whether maubot should write updated config into ‘extraConfigFile’. **This will make your Nix module settings have no effect besides the initial config, as extraConfigFile takes precedence over NixOS settings!**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.dataDir

The directory where maubot stores its stateful data.

Type: string

Default:

```
"/var/lib/maubot"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.extraConfigFile

A file for storing secrets. You can pass homeserver registration keys here. If it already exists, **it must contain** ‘server.unshared_secret’ which is used for signing API keys. If ‘configMutable’ is not set to true, **maubot user must have write access to this file**.

Type: string

Default:

```
"${config.services.maubot.dataDir}/config.yaml"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.plugins

List of additional maubot plugins to make available.

Type: list of package

Default:

```
[ ]
```

Example:

```
with config.services.maubot.package.plugins; [
  xyz.maubot.reactbot
  xyz.maubot.rss
];
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.pythonPackages

List of additional Python packages to make available for maubot.

Type: list of package

Default:

```
[ ]
```

Example:

```
with pkgs.python3Packages; [
  aiohttp
];
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings

YAML settings for maubot. See the **example configuration** for more info.

Secrets should be passed in by using ‘extraConfigFile’.

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.admins

List of administrator users. Plaintext passwords will be bcrypted on startup. Set empty password to prevent normal login. Root is a special user that can’t have a password and will always exist.

Type: attribute set of string

Default:

```
{
  root = "";
}
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.api_features

API feature switches.

Type: attribute set of boolean

Default:

```
{
  client = true;
  client_auth = true;
  client_proxy = true;
  dev_open = true;
  instance = true;
  instance_database = true;
  log = true;
  login = true;
  plugin = true;
  plugin_upload = true;
}
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.crypto_database

Separate database URL for the crypto database. By default, the regular database is also used for crypto.

Type: string

Default:

```
"default"
```

Example:

```
"postgresql://username:password@hostname/dbname"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.database

The full URI to the database. SQLite and Postgres are fully supported. Other DBMSes supported by SQLAlchemy may or may not work.

Type: string

Default:

```
"sqlite:maubot.db"
```

Example:

```
"postgresql://username:password@hostname/dbname"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.database_opts

Additional arguments for asyncpg.create_pool() or sqlite3.connect()

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.homeservers
Known homeservers. This is required for the ‘mbc auth’ command and also allows more convenient access from the management UI. If you want to specify registration secrets, pass this via extraConfigFile instead.

Type: attribute set of (submodule)

Default:

```
{
  "matrix.org" = {
    url = "https://matrix-client.matrix.org";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.homeservers.<name>.url
Client−server API URL

Type: string

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.logging
Python logging configuration. See **section 16.7.2 of the Python documentation** for more info.

Type: attribute set

Default:

```
{
  formatters = {
    colored = {
      "()" = "maubot.lib.color_log.ColorFormatter";
      format = "[%(asctime)s] [%(levelname)s@%(name)s] %(message)s" \
;
    };
    normal = {
      format = "[%(asctime)s] [%(levelname)s@%(name)s] %(message)s" \
;
    };
  };
  handlers = {
    console = {
      class = "logging.StreamHandler";
      formatter = "colored";
    };
    file = {
      backupCount = 10;
      class = "logging.handlers.RotatingFileHandler";
      filename = "./maubot.log";
      formatter = "normal";
      maxBytes = 10485760;
    };
```

```
      };
      loggers = {
        aiohttp = {
          level = "INFO";
        };
        mau = {
          level = "DEBUG";
        };
        maubot = {
          level = "DEBUG";
        };
      };
      root = {
        handlers = [
          "file"
          "console"
        ];
        level = "DEBUG";
      };
      version = 1;
    }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.plugin_databases
Plugin database settings

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.plugin_databases.postgres
The connection URL for plugin database. See **example config** for exact format.

Type: null or string

Default:

```
if isPostgresql config.services.maubot.settings.database then "defa \
ult" else null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.plugin_databases.postgres_max_conns_per_plugin
Maximum number of connections per plugin instance.

Type: null or signed integer

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.plugin_databases.postgres_opts
Overrides for the default database_opts when using a non−default postgres connection URL.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.plugin_databases.sqlite
The directory where SQLite plugin databases should be stored.

Type: string

Default:

```
"${config.services.maubot.dataDir}/plugins"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.plugin_directories
Plugin directory paths

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.plugin_directories.load
The directories from which plugins should be loaded. Duplicate plugin IDs will be moved to the trash.

Type: list of string

Default:

```
[ "${config.services.maubot.dataDir}/plugins" ]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.plugin_directories.trash
The directory where old plugin versions and conflicting plugins should be moved. Set to null to delete files immediately.

Type: null or string

Default:

```
"${config.services.maubot.dataDir}/trash"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.plugin_directories.upload
The directory where uploaded new plugins should be stored.

Type: string

Default:

```
"${config.services.maubot.dataDir}/plugins"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.server
Listener config

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.server.hostname
The IP to listen on

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.server.override_resource_path
Override path from where to load UI resources.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.server.plugin_base_path
The base path for plugin endpoints. The instance ID will be appended directly.

Type: string

Default:

```
"${config.services.maubot.settings.server.ui_base_path}/plugin/"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.server.port
The port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
29316
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.server.public_url
Public base URL where the server is visible.

Type: string

Default:

```
"http://${config.services.maubot.settings.server.hostname}:${toStri \
ng config.services.maubot.settings.server.port}"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.maubot.settings.server.ui_base_path
The base path for the UI.

Type: string

Default:

```
"/_matrix/maubot"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/maubot.nix>

services.mautrix−discord.enable
Whether to enable Mautrix−Discord, a Matrix−Discord puppeting/relay−bot bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−discord.nix>

services.mautrix−discord.package
The mautrix−discord package to use.

Type: package

Default:

```
pkgs.mautrix−discord
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−discord.nix>

services.mautrix−discord.dataDir
Directory to store the bridge's configuration and database files. This directory will be created if it does not exist.

Type: absolute path

Default:

```
"/var/lib/mautrix−discord"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−discord.nix>

services.mautrix−discord.environmentFile
File containing environment variables to substitute when copying the configuration out of Nix store to the 'services.mautrix−discord.dataDir'. Can be used for storing the secrets without making them available in the Nix store. For example, you can set 'services.mautrix−discord.settings.appservice.as_token = "$MAUTRIX_DISCORD_APPSERVICE_AS_TOKEN"' and then specify 'MAUTRIX_DISCORD_APPSERVICE_AS_TOKEN="{token}"' in the environment file. This value will get substituted into the configuration file as a token.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−discord.nix>

services.mautrix−discord.registerToSynapse

Whether to add the bridge's app service registration file to 'services.matrix−synapse.settings.app_service_config_files'.

Type: boolean

Default:

```
config.services.matrix−synapse.enable
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−discord.nix>

services.mautrix−discord.registrationServiceUnit

The registration service that generates the registration file. Systemd unit (a service or a target) for other services to depend on if they need to be started after mautrix−discord registration service. This option is useful as the actual parent unit for all matrix−synapse processes changes when configuring workers.

Type: string *(read only)*

Default:

```
"mautrix−discord−registration.service"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−discord.nix>

services.mautrix−discord.serviceDependencies

List of Systemd services to require and wait for when starting the application service.

Type: list of string

Default:

```
  [ cfg.registrationServiceUnit ] ++
  (lib.lists.optional config.services.matrix−synapse.enable config \
.services.matrix−synapse.serviceUnit) ++
  (lib.lists.optional config.services.matrix−conduit.enable "matri \
x−conduit.service") ++
  (lib.lists.optional config.services.dendrite.enable "dendrite.ser \
vice");
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−discord.nix>

services.mautrix−discord.serviceUnit

The systemd unit (a service or a target) for other services to depend on if they need to be started after matrix−synapse. This option is useful as the actual parent unit for all matrix−synapse processes changes when configuring workers.

Type: string *(read only)*

Default:

```
"mautrix−discord.service"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−discord.nix>

services.mautrix−discord.settings
config.yaml configuration as a Nix attribute set. Configuration options should match those described in **example−config.yaml**.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Example:

```
{
  homeserver = {
    address = "http://localhost:8008";
    domain = "public−domain.tld";
  };
  appservice.public = {
    prefix = "/public";
    external = "https://public−appservice−address/public";
  };
  bridge.permissions = {
    "example.com" = "user";
    "@admin:example.com" = "admin";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−discord.nix>

services.mautrix−discord.settings.appservice
Appservice configuration. See **example−config.yaml** for more information.

Type: attribute set

Default:

```
{
  address = "http://localhost:29334";
  hostname = "0.0.0.0";
  port = 29334;
  database = {
    type = "sqlite3";
    uri = "file:${config.services.mautrix−discord.dataDir}/mautrix \
−discord.db?_txlock=immediate";
    max_open_conns = 20;
    max_idle_conns = 2;
    max_conn_idle_time = null;
    max_conn_lifetime = null;
  };
  id = "discord";
  bot = {
    username = "discordbot";
    displayname = "Discord bridge bot";
    avatar = "mxc://maunium.net/nIdEykemnwdisvHbpxflpDlC";
  };
  ephemeral_events = true;
```

```
  async_transactions = false;
  as_token = "This value is generated when generating the registrat \
ion";
  hs_token = "This value is generated when generating the registrat \
ion";
}
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix-discord.nix>

services.mautrix-discord.settings.bridge

Bridge configuration. See **example-config.yaml** for more information.

Type: attribute set

Default:

```
{
  animated_sticker = {
    args = {
      fps = 25;
      height = 320;
      width = 320;

}
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix-discord.nix>

services.mautrix-discord.settings.homeserver

fullDataDiration. See **example-config.yaml** for more information.

Type: attribute set

Default:

```
{
  async_media = false;
  message_send_checkpoint_endpoint = null;
  ping_interval_seconds = 0;
  software = "standard";
  status_endpoint = null;
  websocket = false;
}
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix-discord.nix>

services.mautrix-discord.settings.logging

Logging configuration. See **example-config.yaml** for more information.

Type: attribute set

Default:

```
{
  min_level = "info";
  writers = [
    {
      format = "pretty-colored";
      time_format = " ";
      type = "stdout";
    }
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix-discord.nix>

services.mautrix−meta.package

The mautrix−meta package to use.

Type: package

Default:

```
pkgs.mautrix−meta
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−meta.nix>

services.mautrix−meta.instances

Configuration of multiple ‘mautrix−meta’ instances. ‘services.mautrix−meta.instances.facebook’ and ‘services.mautrix−meta.instances.instagram’ come preconfigured with network.mode, appservice.id, bot username, display name and avatar.

Type: attribute set of (submodule)

Example:

```
{
  facebook = {
    enable = true;
    settings = {
      homeserver.domain = "example.com";
    };
  };

  instagram = {
    enable = true;
    settings = {
      homeserver.domain = "example.com";
    };
  };

  messenger = {
    enable = true;
    settings = {
      network.mode = "messenger";
      homeserver.domain = "example.com";
      appservice = {
        id = "messenger";
        bot = {
          username = "messengerbot";
          displayname = "Messenger bridge bot";
          avatar = "mxc://maunium.net/ygtkteZsXnGJLJHRchUwYWak";
        };
      };
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−meta.nix>

services.mautrix−meta.instances.<name>.enable

Whether to enable Mautrix−Meta, a Matrix <−> Facebook and Matrix <−> Instagram hybrid puppeting/relaybot bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−meta.nix>

services.mautrix−meta.instances.<name>.dataDir

Path to the directory with database, registration, and other data for the bridge service. This path is relative to '/var/lib', it cannot start with '../' (it cannot be outside of '/var/lib').

Type: string

Default:

```
"mautrix−meta−‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−meta.nix>

services.mautrix−meta.instances.<name>.environmentFile

File containing environment variables to substitute when copying the configuration out of Nix store to the 'services.mautrix−meta.dataDir'.

Can be used for storing the secrets without making them available in the Nix store.

For example, you can set 'services.mautrix−meta.settings.appservice.as_token = "$MAUTRIX_META_APPSERVICE_AS_TOKEN"' and then specify 'MAUTRIX_META_APPSERVICE_AS_TOKEN="{token}"' in the environment file. This value will get substituted into the configuration file as as token.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−meta.nix>

services.mautrix−meta.instances.<name>.registerToSynapse

Whether to add registration file to 'services.matrix−synapse.settings.app_service_config_files' and make Synapse wait for registration service.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−meta.nix>

services.mautrix−meta.instances.<name>.registrationFile
Path to the yaml registration file of the appservice.

Type: absolute path *(read only)*

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−meta.nix>

services.mautrix−meta.instances.<name>.registrationServiceUnit
The registration service that generates the registration file.

Systemd unit (a service or a target) for other services to depend on if they need to be started after mautrix−meta registration service.

This option is useful as the actual parent unit for all matrix−synapse processes changes when configuring workers.

Type: string *(read only)*

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−meta.nix>

services.mautrix−meta.instances.<name>.serviceDependencies
List of Systemd services to require and wait for when starting the application service.

Type: list of string

Default:

```
  [ config.registrationServiceUnit ] ++
  (lib.lists.optional upperConfig.services.matrix−synapse.enable u \
pperConfig.services.matrix−synapse.serviceUnit) ++
  (lib.lists.optional upperConfig.services.matrix−conduit.enable " \
matrix−conduit.service") ++
  (lib.lists.optional upperConfig.services.dendrite.enable "dendrit \
e.service");
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−meta.nix>

services.mautrix−meta.instances.<name>.serviceUnit
The systemd unit (a service or a target) for other services to depend on if they need to be started after matrix−synapse.

This option is useful as the actual parent unit for all matrix−synapse processes changes when configuring workers.

Type: string *(read only)*

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−meta.nix>

services.mautrix−meta.instances.<name>.settings
config.yaml configuration as a Nix attribute set. Configuration options should match those described in **example−config.yaml**.

Secret tokens should be specified using **environmentFile** instead

Type: YAML 1.1 value

Default:

```
{
  homeserver = {
    software = "standard";
    address = "https:///''${config.settings.homeserver.domain}";
```

```
    };

    appservice = {
      database = {
        type = "sqlite3-fk-wal";
        uri = "file:''${fullDataDir config}/mautrix-meta.db?_txloc \
k=immediate";
      };

      hostname = "localhost";
      port = 29319;
      address = "http://''${config.settings.appservice.hostname}:'' \
${toString config.settings.appservice.port}";
    };

    bridge = {
      # Require encryption by default to make the bridge more secur \
e
      encryption = {
        allow = true;
        default = true;
        require = true;

        # Recommended options from mautrix documentation
        # for optimal security.
        delete_keys = {
          dont_store_outbound = true;
          ratchet_on_decrypt = true;
          delete_fully_used_on_decrypt = true;
          delete_prev_on_new_session = true;
          delete_on_device_delete = true;
          periodically_delete_expired = true;
          delete_outdated_inbound = true;
        };

        verification_levels = {
          receive = "cross-signed-tofu";
          send = "cross-signed-tofu";
          share = "cross-signed-tofu";
        };
      };
    };

    logging = {
      min_level = "info";
      writers = lib.singleton {
        type = "stdout";
        format = "pretty-colored";
        time_format = " ";
      };
    };
  };
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−meta.nix>

services.mautrix−signal.enable
Whether to enable mautrix−signal, a Matrix−Signal puppeting bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−signal.nix>

services.mautrix−signal.package
The mautrix−signal package to use.

Type: package

Default:

```
pkgs.mautrix−signal
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−signal.nix>

services.mautrix−signal.environmentFile
File containing environment variables to be passed to the mautrix−signal service. If an environment variable 'MAUTRIX_SIGNAL_BRIDGE_LOGIN_SHARED_SECRET' is set, then its value will be used in the configuration file for the option 'double_puppet.secrets' without leaking it to the store, using the configured 'homeserver.domain' as key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−signal.nix>

services.mautrix−signal.registerToSynapse
Whether to add the bridge's app service registration file to 'services.matrix−synapse.settings.app_service_config_files'.

Type: boolean

Default:

```
config.services.matrix−synapse.enable
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−signal.nix>

services.mautrix−signal.serviceDependencies
List of systemd units to require and wait for when starting the application service.

Type: list of string

Default:

```
(optional config.services.matrix−synapse.enable config.services.ma \
trix−synapse.serviceUnit)
++ (optional config.services.matrix−conduit.enable "conduit.servic \
```

```
e")
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−signal.nix>

services.mautrix−signal.settings

config.yaml configuration as a Nix attribute set. Configuration options should match those described in the example configuration. Get an example configuration by executing ‘mautrix−signal −c example.yaml −−generate−example−config’ Secret tokens should be specified using **environmentFile** instead of this world−readable attribute set.

Type: JSON value

Default:

```
{
  appservice = {
    as_token = "";
    bot = {
      displayname = "Signal Bridge Bot";
      username = "signalbot";
    };
    hostname = "[::]";
    hs_token = "";
    id = "signal";
    port = 29328;
    username_template = "signal_{{.}}";
  };
  bridge = {
    command_prefix = "!signal";
    permissions = {
      "*" = "relay";
    };
    relay = {
      enabled = true;
    };
  };
  database = {
    type = "sqlite3";
    uri = "file:/var/lib/mautrix−signal/mautrix−signal.db?_txlock \
=immediate";
  };
  direct_media = {
    server_key = "";
  };
  double_puppet = {
    secrets = { };
    servers = { };
  };
  encryption = {
    pickle_key = "";
  };
  homeserver = {
    address = "http://localhost:8448";
  };
  logging = {
```

```
      min_level = "info";
      writers = [
        {
          format = "pretty-colored";
          time_format = " ";
          type = "stdout";
        }
      ];
    };
    network = {
      displayname_template = "{{or .ProfileName .PhoneNumber \"Unkno \
  wn user\"}}";
    };
    provisioning = {
      shared_secret = "";
    };
    public_media = {
      signing_key = "";
    };
  }
```

Example:

```
  {
    appservice = {
      ephemeral_events = false;
      id = "signal";
    };
    backfill = {
      enabled = true;
    };
    bridge = {
      mute_only_on_create = false;
      permissions = {
        "example.com" = "user";
      };
      private_chat_portal_meta = true;
    };
    database = {
      type = "postgres";
      uri = "postgresql:///mautrix_signal?host=/run/postgresql";
    };
    encryption = {
      allow = true;
      default = true;
      pickle_key = "$ENCRYPTION_PICKLE_KEY";
      require = true;
    };
    homeserver = {
      address = "http://[::1]:8008";
      domain = "my-domain.tld";
    };
    matrix = {
      message_status_events = true;
```

```
    };
    provisioning = {
      shared_secret = "disable";
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−signal.nix>

services.mautrix−telegram.enable
Whether to enable Mautrix−Telegram, a Matrix−Telegram hybrid puppeting/relaybot bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−telegram.nix>

services.mautrix−telegram.package
The mautrix−telegram package to use.

Type: package

Default:

```
pkgs.mautrix-telegram
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−telegram.nix>

services.mautrix−telegram.environmentFile
File containing environment variables to be passed to the mautrix−telegram service, in which secret tokens can be specified securely by defining values for e.g. ‘MAUTRIX_TELEGRAM_APPSERVICE_AS_TOKEN’, ‘MAUTRIX_TELEGRAM_APPSERVICE_HS_TOKEN’, ‘MAUTRIX_TELEGRAM_TELEGRAM_API_ID’, ‘MAUTRIX_TELEGRAM_TELEGRAM_API_HASH’ and optionally ‘MAUTRIX_TELEGRAM_TELEGRAM_BOT_TOKEN’.

These environment variables can also be used to set other options by replacing hierarchy levels by ‘.’, converting the name to uppercase and prepending ‘MAUTRIX_TELEGRAM_’. For example, the first value above maps to **settings.appservice.as_token**.

The environment variable values can be prefixed with ‘json::’ to have them be parsed as JSON. For example, ‘login_shared_secret_map’ can be set as follows: ‘MAUTRIX_TELEGRAM_BRIDGE_LOGIN_SHARED_SECRET_MAP=json::{"example.com":"secret"}’.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−telegram.nix>

services.mautrix−telegram.registerToSynapse

Whether to add the bridge's app service registration file to 'services.matrix−synapse.settings.app_service_config_files'.

Type: boolean

Default:

```
config.services.matrix-synapse.enable
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−telegram.nix>

services.mautrix−telegram.serviceDependencies

List of Systemd services to require and wait for when starting the application service.

Type: list of string

Default:

```
lib.optional config.services.matrix-synapse.enable config.services \
.matrix-synapse.serviceUnit
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−telegram.nix>

services.mautrix−telegram.settings

config.yaml configuration as a Nix attribute set. Configuration options should match those described in **example−config.yaml**.

Secret tokens should be specified using **environmentFile** instead of this world−readable attribute set.

Type: JSON value

Default:

```
{
  appservice = {
    address = "http://localhost:8080";
    database = "sqlite:////var/lib/mautrix-telegram/mautrix-teleg \
ram.db";
    database_opts = { };
    hostname = "0.0.0.0";
    port = 8080;
  };
  bridge = {
    double_puppet_server_map = { };
    login_shared_secret_map = { };
    permissions = {
      "*" = "relaybot";
    };
    relaybot = {
      whitelist = [ ];
    };
  };
  homeserver = {
    software = "standard";
  };
  logging = {
    formatters = {
      precise = {
```

```
            format = "[%(levelname)s@%(name)s] %(message)s";
          };
        };
        handlers = {
          console = {
            class = "logging.StreamHandler";
            formatter = "precise";
          };
        };
        loggers = {
          aiohttp = {
            level = "WARNING";
          };
          mau = {
            level = "INFO";
          };
          telethon = {
            level = "INFO";
          };
        };
        root = {
          handlers = [
            "console"
          ];
          level = "INFO";
        };
        version = 1;
      };
    }
```

Example:

```
    {
      homeserver = {
        address = "http://localhost:8008";
        domain = "public-domain.tld";
      };
      appservice.public = {
        prefix = "/public";
        external = "https://public-appservice-address/public";
      };
      bridge.permissions = {
        "example.com" = "full";
        "@admin:example.com" = "admin";
      };
      telegram = {
        connection.use_ipv6 = true;
      };
    }
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix-telegram.nix>

services.mautrix−whatsapp.enable

Whether to enable mautrix−whatsapp, a Matrix−WhatsApp puppeting bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−whatsapp.nix>

services.mautrix−whatsapp.package

The mautrix−whatsapp package to use.

Type: package

Default:

```
pkgs.mautrix−whatsapp
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−whatsapp.nix>

services.mautrix−whatsapp.environmentFile

File containing environment variables to be passed to the mautrix−whatsapp service. If an environment variable 'MAUTRIX_WHATSAPP_BRIDGE_LOGIN_SHARED_SECRET' is set, then its value will be used in the configuration file for the option 'double_puppet.secrets' without leaking it to the store, using the configured 'homeserver.domain' as key.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−whatsapp.nix>

services.mautrix−whatsapp.registerToSynapse

Whether to add the bridge's app service registration file to 'services.matrix−synapse.settings.app_service_config_files'.

Type: boolean

Default:

```
config.services.matrix−synapse.enable
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−whatsapp.nix>

services.mautrix−whatsapp.serviceDependencies

List of systemd units to require and wait for when starting the application service.

Type: list of string

Default:

```
optional config.services.matrix−synapse.enable config.services.mat \
rix−synapse.serviceUnit
++ optional config.services.matrix−conduit.enable "conduit.service \
"
```

Declared by:

<nixpkgs/nixos/modules/services/matrix/mautrix−whatsapp.nix>

services.mautrix−whatsapp.settings

config.yaml configuration as a Nix attribute set. Configuration options should match those described in the example configuration. Get an example configuration by executing 'mautrix−whatsapp −c example.yaml −−generate−example−config' Secret tokens should be specified using **environmentFile** instead of this world−readable attribute set.

Type: JSON value

Default:

```
{
  appservice = {
    as_token = "";
    bot = {
      displayname = "WhatsApp Bridge Bot";
      username = "whatsappbot";
    };
    hostname = "[::]";
    hs_token = "";
    id = "whatsapp";
    port = 29318;
    username_template = "whatsapp_{{.}}";
  };
  bridge = {
    command_prefix = "!wa";
    permissions = {
      "*" = "relay";
    };
    relay = {
      enabled = true;
    };
  };
  database = {
    type = "sqlite3−fk−wal";
    uri = "file:/var/lib/mautrix−whatsapp/mautrix−whatsapp.db?_tx \
lock=immediate";
  };
  direct_media = {
    server_key = "";
  };
  double_puppet = {
    secrets = { };
    servers = { };
  };
  encryption = {
    pickle_key = "";
  };
  homeserver = {
    address = "http://localhost:8448";
  };
  logging = {
    min_level = "info";
```

```
      writers = [
        {
          format = "pretty-colored";
          time_format = " ";
          type = "stdout";
        }
      ];
    };
    network = {
      displayname_template = "{{or .BusinessName .PushName .Phone}} ( \
  WA)";
      history_sync = {
        request_full_sync = true;
      };
      identity_change_notices = true;
    };
    provisioning = {
      shared_secret = "";
    };
    public_media = {
      signing_key = "";
    };
  }
```

Example:

```
  {
    appservice = {
      ephemeral_events = false;
      id = "whatsapp";
    };
    backfill = {
      enabled = true;
    };
    bridge = {
      mute_only_on_create = false;
      permissions = {
        "example.com" = "user";
      };
      private_chat_portal_meta = true;
    };
    database = {
      type = "postgres";
      uri = "postgresql:///mautrix_whatsapp?host=/run/postgresql";
    };
    encryption = {
      allow = true;
      default = true;
      pickle_key = "$ENCRYPTION_PICKLE_KEY";
      require = true;
    };
    homeserver = {
      address = "http://[::1]:8008";
      domain = "my-domain.tld";
```

```
    };
    matrix = {
      message_status_events = true;
    };
    provisioning = {
      shared_secret = "disable";
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mautrix−whatsapp.nix>

services.mbpfan.enable
Whether to enable mbpfan, fan controller daemon for Apple Macs and MacBooks.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mbpfan.nix>

services.mbpfan.package
The mbpfan package to use.

Type: package

Default:

```
pkgs.mbpfan
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mbpfan.nix>

services.mbpfan.aggressive
If true, favors higher default fan speeds.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mbpfan.nix>

services.mbpfan.settings
INI configuration for Mbpfan.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mbpfan.nix>

services.mbpfan.settings.general.high_temp
If temperature is above this, fan speed will gradually increase.

Type: signed integer

Default:

```
58
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mbpfan.nix>

services.mbpfan.settings.general.low_temp
If temperature is below this, fans will run at minimum speed.

Type: signed integer

Default:

```
55
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mbpfan.nix>

services.mbpfan.settings.general.max_temp
If temperature is above this, fans will run at maximum speed.

Type: signed integer

Default:

```
78
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mbpfan.nix>

services.mbpfan.settings.general.polling_interval
The polling interval.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mbpfan.nix>

services.mbpfan.verbose
If true, sets the log level to verbose.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mbpfan.nix>

services.mchprs.enable
Whether to enable MCHPRS, a Minecraft server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.package
The mchprs package to use.

Type: package

Default:

```
pkgs.mchprs
```

Declared by:
<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.dataDir
Directory to store MCHPRS database and other state/data files.

Type: absolute path

Default:

```
"/var/lib/mchprs"
```

Declared by:
<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.declarativeSettings
Whether to use a declarative configuration for MCHPRS.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.declarativeWhitelist
Whether to use a declarative whitelist. The options **services.mchprs.whitelist.list** will be applied if and only if set to ‘true’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.maxRuntime
Automatically restart the server after **services.mchprs.maxRuntime**. The **systemd.time**(7) time span format is described here: **https://www.freedesktop.org/software/systemd/man/systemd.time.html#Parsing Time Spans**. If ‘null’, then the server is not restarted automatically.

Type: string

Default:

```
"infinity"
```

Example:

```
"7d"
```

Declared by:
<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.openFirewall
Whether to open ports in the firewall for the server. Only has effect when **services.mchprs.declarativeSettings** is ‘true’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.settings
Configuration for MCHPRS via *Config.toml*. See **https://github.com/MCHPR/MCHPRS/blob/master/README.md** for documentation.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.settings.address
Address for the server. Please use enclosing square brackets when using ipv6. Only has effect when **services.mchprs.declarativeSettings** is ‘true’.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.settings.auto_redpiler
Use redpiler automatically. Only has effect when **services.mchprs.declarativeSettings** is ‘true’.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.settings.block_in_hitbox
Allow placing blocks inside of players (hitbox logic is simplified). Only has effect when **services.mchprs.declarativeSettings** is ‘true’.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.settings.bungeecord

Enable compatibility with **BungeeCord**. Only has effect when **services.mchprs.declarativeSettings** is ‘true’.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.settings.chat_format

How to format chat message interpolating ‘username’ and ‘message’ with curly braces. Only has effect when **services.mchprs.declarativeSettings** is ‘true’.

Type: string

Default:

```
"<{username}> {message}"
```

Declared by:

<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.settings.max_players

Maximum number of simultaneous players. Only has effect when **services.mchprs.declarativeSettings** is ‘true’.

Type: positive integer, meaning >0

Default:

```
99999
```

Declared by:

<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.settings.motd

Message of the day. Only has effect when **services.mchprs.declarativeSettings** is ‘true’.

Type: string

Default:

```
"Minecraft High Performance Redstone Server"
```

Declared by:

<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.settings.port

Port for the server. Only has effect when **services.mchprs.declarativeSettings** is ‘true’.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
25565
```

Declared by:

<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.settings.schemati

Mimic the verification and directory layout used by the Open Redstone Engineers **Schemati plugin**. Only has effect when **services.mchprs.declarativeSettings** is ‘true’.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.settings.view_distance

Maximal distance (in chunks) between players and loaded chunks. Only has effect when **services.mchprs.declarativeSettings** is ‘true’.

Type: positive integer, meaning >0

Default:

```
8
```

Declared by:

<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.whitelist.enable

Whether or not the whitelist (in *whitelist.json*) shoud be enabled. Only has effect when **services.mchprs.declarativeSettings** is ‘true’.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mchprs.whitelist.list

Whitelisted players, only has an effect when **services.mchprs.declarativeWhitelist** is ‘true’ and the whitelist is enabled via **services.mchprs.whitelist.enable**. This is a mapping from Minecraft usernames to UUIDs. You can use **https://mcuuid.net/** to get a Minecraft UUID for a username.

Type: attribute set of Minecraft UUID

Default:

```
{ }
```

Example:

```
{
  username1 = "xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx";
  username2 = "yyyyyyyy-yyyy-yyyy-yyyy-yyyyyyyyyyyy";
};
```

Declared by:

<nixpkgs/nixos/modules/services/games/mchprs.nix>

services.mealie.enable

Whether to enable Mealie, a recipe manager and meal planner.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/mealie.nix>

services.mealie.package
The mealie package to use.

Type: package

Default:

```
pkgs.mealie
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/mealie.nix>

services.mealie.credentialsFile
File containing credentials used in mealie such as **POSTGRES_PASSWORD** or sensitive LDAP options.

Expects the format of an 'EnvironmentFile=', as described by **systemd.exec**(5).

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/mealie-credentials.env"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/mealie.nix>

services.mealie.database.createLocally
Configure local PostgreSQL database server for Mealie.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/mealie.nix>

services.mealie.extraOptions
Specifies extra command line arguments to pass to mealie (Gunicorn).

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--log-level"
  "debug"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mealie.nix>

services.mealie.listenAddress
Address on which the service should listen.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mealie.nix>

services.mealie.port
Port on which to serve the Mealie service.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mealie.nix>

services.mealie.settings
Configuration of the Mealie service.

See **the mealie documentation** for available options and default values.

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  ALLOW_SIGNUP = "false";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mealie.nix>

services.mediagoblin.enable
Whether to enable MediaGoblin.

After the initial deployment, make sure to add an admin account:

```
mediagoblin−gmg adduser −−username admin −−email admin@example \
.com
mediagoblin−gmg makeadmin admin
```

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediagoblin.nix>

services.mediagoblin.package
The mediagoblin package to use.

Type: package

Default:

```
pkgs.mediagoblin
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediagoblin.nix>

services.mediagoblin.createDatabaseLocally
Whether to configure a local postgres database and connect to it.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediagoblin.nix>

services.mediagoblin.domain
Domain under which mediagoblin will be served.

Type: string

Example:

```
"mediagoblin.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediagoblin.nix>

services.mediagoblin.paste.port
Port under which paste will listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6543
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediagoblin.nix>

services.mediagoblin.paste.settings
Settings which are written into ‘paste.ini’.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediagoblin.nix>

services.mediagoblin.pluginPackages

Plugins to add to the environment of MediaGoblin. They still need to be enabled in the config.

Type: list of package

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mediagoblin.nix>

services.mediagoblin.settings

Settings which are written into ‘mediagoblin.ini’.

Type: open submodule of anything

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mediagoblin.nix>

services.mediagoblin.settings.mediagoblin.allow_registration

Whether to enable user self registration. This is generally not recommend due to spammers. See **upstream FAQ**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mediagoblin.nix>

services.mediagoblin.settings.mediagoblin.email_debug_mode

Disable email debug mode to start sending outgoing mails. This requires configuring SMTP settings, see the **upstream docs** for details.

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mediagoblin.nix>

services.mediagoblin.settings.mediagoblin.email_sender_address

Email address which notices are sent from.

Type: string

Example:

```
"noreply@example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mediagoblin.nix>

services.mediagoblin.settings.mediagoblin.plugins

Plugins to enable. See **upstream docs** for details. Extra dependencies are automatically enabled.

Type: unspecified value

Default:

```
{
  "mediagoblin.plugins.geolocation" = { };
  "mediagoblin.plugins.processing_info" = { };
  "mediagoblin.plugins.basic_auth" = { };
  "mediagoblin.media_types.image" = { };
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mediagoblin.nix>

services.mediagoblin.settings.mediagoblin.sql_engine

Database to use.

Type: string

Default:

```
"sqlite:///var/lib/mediagoblin/mediagoblin.db"
```

Example:

```
"postgresql:///mediagoblin"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mediagoblin.nix>

services.mediamtx.enable

Whether to enable MediaMTX.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/video/mediamtx.nix>

services.mediamtx.package

The mediamtx package to use.

Type: package

Default:

```
pkgs.mediamtx
```

Declared by:

<nixpkgs/nixos/modules/services/video/mediamtx.nix>

services.mediamtx.allowVideoAccess

Whether to enable access to video devices like cameras on the system .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/video/mediamtx.nix>

services.mediamtx.env

Extra environment variables for MediaMTX

Type: attribute set of anything

Default:

```
{ }
```

Example:

```
{
  MTX_CONFKEY = "mykey";
}
```

Declared by:

<nixpkgs/nixos/modules/services/video/mediamtx.nix>

services.mediamtx.settings

Settings for MediaMTX. Refer to the defaults at **https://github.com/bluenviron/mediamtx/blob/main/mediamtx.yml**.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  paths = {
    cam = {
      runOnInit = "\${lib.getExe pkgs.ffmpeg} -f v4l2 -i /dev/vi \
deo0 -f rtsp rtsp://localhost:$RTSP_PORT/$RTSP_PATH";
      runOnInitRestart = true;
    };
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/video/mediamtx.nix>

services.mediatomb.enable

Whether to enable the Gerbera/Mediatomb DLNA server.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.package
The gerbera package to use.

Type: package

Default:

```
pkgs.gerbera
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.customCfg
Allow the service to create and use its own config file inside the ‘dataDir’ as configured by **services.mediatomb.dataDir**. Deactivated by default, the service then runs with the configuration generated from this module. Otherwise, when enabled, no service configuration is generated. Gerbera/Mediatomb then starts using config.xml within the configured ‘dataDir’. It’s up to the user to make a correct configuration file.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.dataDir
The directory where Gerbera/Mediatomb stores its state, data, etc.

Type: absolute path

Default:

```
"/var/lib/${config.services.mediatomb.package.pname}"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.dsmSupport
Whether to enable D−Link DSM 320 specific tweaks. WARNING: incompatible with ps3 support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.group
Group account under which the service runs.

Type: string

Default:

```
"mediatomb"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.interface

A specific interface to bind to.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.mediaDirectories

Declare media directories to index.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    hidden-files = false;
    path = "/data/pictures";
    recursive = false;
  }
  {
    hidden-files = false;
    path = "/data/audio";
    recursive = true;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.mediaDirectories.*.hidden-files

Whether to index the hidden files or not.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.mediaDirectories.*.path

Absolute directory path to the media directory to index.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.mediaDirectories.*.recursive

Whether the indexation must take place recursively or not.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.openFirewall
If false (the default), this is up to the user to declare the firewall rules. If true, this opens port 1900 (tcp and udp) and the port specified by **sercvices.mediatomb.port**.

If the option **services.mediatomb.interface** is set, the firewall rules opened are dedicated to that interface. Otherwise, those rules are opened globally.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.pcDirectoryHide
Whether to list the top−level directory or not (from upnp client standpoint).

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.port
The network port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
49152
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.ps3Support
Whether to enable ps3 specific tweaks. WARNING: incompatible with DSM 320 support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.serverName
How to identify the server on the network.

Type: string

Default:

```
"Gerbera (Mediatomb)"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.tg100Support
Whether to enable Telegent TG100 specific tweaks.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.transcoding
Whether to enable transcoding.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.user
User account under which the service runs.

Type: string

Default:

```
"mediatomb"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediatomb.uuid
A unique (on your network) to identify the server by.

Type: string

Default:

```
"fdfc8a4e-a3ad-4c1d-b43d-a2eedb03a687"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mediatomb.nix>

services.mediawiki.enable
Whether to enable MediaWiki.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/mediawiki.nix>

services.mediawiki.package
The mediawiki package to use.

Type: package

Default:

```
pkgs.mediawiki
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.database.createLocally
Create the database and database user locally. This currently only applies if database type “mysql” or “postgres” is selected.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.database.host
Database host address. Used only if database type is not SQLite.

Type: null or string

Default:

```
"\"localhost\""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.database.name
Database name.

Type: string

Default:

```
"mediawiki"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.database.passwordFile
A file containing the password corresponding to **database.user**. Used only if database type is not SQLite.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/mediawiki−dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.database.path

Path to store the MediaWiki database in if using SQLite.

Type: null or absolute path

Default:

```
"/var/lib/mediawiki/data"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.database.port

Database host port. Used only if database type is not SQLite.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.database.socket

Path to the unix socket file to use for authentication. Used only if database type is not SQLite.

Type: null or absolute path

Default:

```
/run/mysqld/mysqld.sock
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.database.tablePrefix

If you only have access to a single database and wish to install more than one version of MediaWiki, or have other applications that also use the database, you can give the table names a unique prefix to stop any naming conflicts or confusion. Only used if database type is MySQL. See **https://www.mediawiki.org/wiki/Manual:$wgDBprefix**.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.database.type

Database engine to use. MySQL/MariaDB is the database of choice by MediaWiki developers.

Type: one of “mysql”, “postgres”, “mssql”, “oracle”, “sqlite”

Default:

```
"mysql"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.database.user

Database user. Used only if database type is not SQLite.

Type: null or string

Default:

```
"mediawiki"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/mediawiki.nix>

services.mediawiki.extensions

Attribute set of paths whose content is copied to the *extensions* subdirectory of the MediaWiki installation and enabled in configuration.

Use 'null' instead of path to enable extensions that are part of MediaWiki.

Type: attribute set of (null or absolute path)

Default:

```
{ }
```

Example:

```
{
  Matomo = pkgs.fetchzip {
    url = "https://github.com/DaSchTour/matomo-mediawiki-extensio \
n/archive/v4.0.1.tar.gz";
    sha256 = "0g5rd3zp0avwlmqagc59cg9bbkn3r7wx7p6yr80s644mj6dlvs1b" \
;
  };
  ParserFunctions = null;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/mediawiki.nix>

services.mediawiki.extraConfig

Any additional text to be appended to MediaWiki's LocalSettings.php configuration file. For configuration settings, see **https://www.mediawiki.org/wiki/Manual:Configuration_settings**.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
  $wgEnableEmail = false;
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/mediawiki.nix>

services.mediawiki.finalPackage

The final package used by the module. This is the package that will have extensions and skins installed.

Type: package *(read only)*

Default:

```
pkg
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost
Apache configuration can be done by adapting **services.httpd.virtualHosts**. See **services.httpd.virtualHosts** for further information.

Type: submodule

Example:

```
{
  hostName = "mediawiki.example.org";
  adminAddr = "webmaster@example.org";
  forceSSL = true;
  enableACME = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.enableUserDir
Whether to enable serving *~/public_html* as '/~«username»'.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.acmeRoot
Directory for the acme challenge which is PUBLIC, don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.adminAddr
E−mail address of the server administrator.

Type: null or string

Default:

```
null
```

Example:

```
"admin@example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.documentRoot
The path of Apache's document root directory. If left undefined, an empty directory in the Nix store will be used as root.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.extraConfig
These lines go to httpd.conf verbatim. They will go after directories and directory aliases defined by default.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
<Directory /home>
  Options FollowSymlinks
  AllowOverride All
</Directory>
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.forceSSL
Whether to add a separate nginx server block that permanently redirects (301) all plain HTTP traffic to HTTPS. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.globalRedirect
If set, all requests for this host are redirected permanently to the given URL.

Type: null or string

Default:

```
null
```

Example:

```
"http://newserver.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.hostName
Canonical hostname for the server.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.http2
Whether to enable HTTP 2. HTTP/2 is supported in all multi−processing modules that come with httpd. *However, if you use the prefork mpm, there will be severe restrictions.* Refer to **https://httpd.apache.org/docs/2.4/howto/http2.html#mpm−config** for details.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.listen
Listen addresses and ports for this virtual host.

Note
This option overrides ‘addSSL’, ‘forceSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    ip = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
```

```
      ip = "192.154.1.1";
      port = 80;
    }
    {
      ip = "*";
      port = 8080;
    }
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.listen.*.ip
IP to listen on. 0.0.0.0 for IPv4 only, * for all.

Type: string

Default:

```
"*"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.listen.*.port
Port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.listen.*.ssl
Whether to enable SSL (https) support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Type: non−empty (list of string)

Default:

```
[
  "*"
]
```

Example:

```
[
  "127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.locations

Declarative location config. See **https://httpd.apache.org/docs/2.4/mod/core.html#location** for details.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
  "/foo/bar.png" = {
    alias = "/home/eelco/some-file.png";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.locations.<name>.alias

Alias directory for requests. See **https://httpd.apache.org/docs/2.4/mod/mod_alias.html#alias**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.locations.<name>.extraConfig

These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.locations.<name>.index

Adds DirectoryIndex directive. See **https://httpd.apache.org/docs/2.4/mod/mod_dir.html#directoryindex**.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.locations.<name>.proxyPass
Sets up a simple reverse proxy as described by **https://httpd.apache.org/docs/2.4/howto/reverse_proxy.html#simple**.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.logFormat
Log format for Apache’s log files. Possible values are: combined, common, referer, agent.

Type: string

Default:

```
"common"
```

Example:

```
"combined"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for ‘listen’ to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.robotsEntries
Specification of pages to be ignored by web crawlers. See **http://www.robotstxt.org/** for details.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
"Disallow: /foo/"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.servedDirs

This option provides a simple way to serve static directories.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    dir = "/home/eelco/Dev/nix−homepage";
    urlPath = "/nix";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.servedFiles

This option provides a simple way to serve individual, static files.

Note

This option has been deprecated and will be removed in a future version of NixOS. You can achieve the same result by making use of the ‘locations.<name>.alias’ option.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    file = "/home/eelco/some−file.png";
    urlPath = "/foo/bar.png";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "www.example.org:8080"
```

```
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.sslServerCert
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.sslServerChain
Path to server SSL chain file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/ca.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.sslServerKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.httpd.virtualHost.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

2. see the **security.acme.certs** option

services.mediawiki.name
Name of the wiki.

Type: string

Default:

```
"MediaWiki"
```

Example:

```
"Foobar Wiki"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.nginx.hostName
The hostname to use for the nginx virtual host. This is used to generate the nginx configuration.

Type: string

Default:

```
"localhost"
```

Example:

```
wiki.example.com
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.passwordFile
A file containing the initial password for the administrator account “admin”.

Type: absolute path

Example:

```
"/run/keys/mediawiki−password"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.passwordSender
Contact address for password reset.

Type: string

Default:

```
if cfg.webserver == "apache" then
  if cfg.httpd.virtualHost.adminAddr != null then
    cfg.httpd.virtualHost.adminAddr
  else
    config.services.httpd.adminAddr else "root@localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.path
Extra packages to add to the PATH of phpfpm−pool.

Type: list of package

Default:

```
with pkgs; [ diffutils imagemagick ]
```

Example:

```
with pkgs; [ librsvg ]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.phpPackage
The php package to use.

Type: package

Default:

```
pkgs.php
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.poolConfig
Options for the MediaWiki PHP pool. See the documentation on 'php−fpm.conf' for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.skins
Attribute set of paths whose content is copied to the *skins* subdirectory of the MediaWiki installation in addition to the default skins.

Type: attribute set of absolute path

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.uploadsDir
This directory is used for uploads of pictures. The directory passed here is automatically created and permissions adjusted as required.

Type: null or absolute path

Default:

```
"/var/lib/mediawiki/uploads"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.url
URL of the wiki.

Type: string

Default:

```
  if "mediawiki uses ssl" then "{"https" else "http"}:///'’${cfg.hos \
tName}" else "http://localhost";
```

Example:

```
"https://wiki.example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.mediawiki.webserver
Webserver to use.

Type: one of “apache”, “none”, “nginx”

Default:

```
"apache"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mediawiki.nix>

services.meilisearch.enable
Whether to enable Meilisearch − a RESTful search API.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/search/meilisearch.nix>

services.meilisearch.package
The meilisearch package to use. Use this if you require specific features to be enabled. The default package has no features.

Type: package

Default:

```
pkgs.meilisearch
```

Declared by:
<nixpkgs/nixos/modules/services/search/meilisearch.nix>

services.meilisearch.listenAddress
The IP address that Meilisearch will listen on.

It can also be a hostname like “localhost”. If it resolves to an IPv4 and IPv6 address, Meilisearch will listen on both.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/search/meilisearch.nix>

services.meilisearch.listenPort
The port that Meilisearch will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7700
```

Declared by:
<nixpkgs/nixos/modules/services/search/meilisearch.nix>

services.meilisearch.masterKeyFile
Path to file which contains the master key. By doing so, all routes will be protected and will require a key to be accessed. If no master key is provided, all routes can be accessed without requiring any key.

You can generate a master key by running ‘openssl rand −base64 36’. Alternatively, you can start Meilisearch without a master key and use the pre−generated key from the service’s logs that can be obtained by ‘journalctl −u meilisearch | grep −− −−master−key’.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/search/meilisearch.nix>

services.meilisearch.settings
Configuration settings for Meilisearch. Look at the documentation for available options: https://github.com/meilisearch/meilisearch/blob/main/config.toml https://www.meilisearch.com/docs/learn/self_hosted/configure_meilisearch_at_launch#all−instance−options

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/search/meilisearch.nix>

services.memcached.enable
Whether to enable Memcached.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/memcached.nix>

services.memcached.enableUnixSocket

Whether to enable Unix Domain Socket at /run/memcached/memcached.sock instead of listening on an IP address and port. The ‘listen’ and ‘port’ options are ignored.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/databases/memcached.nix>

services.memcached.extraOptions

A list of extra options that will be added as a suffix when running memcached.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/databases/memcached.nix>

services.memcached.listen

The IP address to bind to.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/memcached.nix>

services.memcached.maxConnections

The maximum number of simultaneous connections.

Type: unsigned integer, meaning >=0

Default:

```
1024
```

Declared by:

<nixpkgs/nixos/modules/services/databases/memcached.nix>

services.memcached.maxMemory

The maximum amount of memory to use for storage, in MiB (1024×1024 bytes).

Type: unsigned integer, meaning >=0

Default:

```
64
```

Declared by:

<nixpkgs/nixos/modules/services/databases/memcached.nix>

services.memcached.port

The port to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
11211
```

Declared by:

<nixpkgs/nixos/modules/services/databases/memcached.nix>

services.memcached.user

The user to run Memcached as

Type: string

Default:

```
"memcached"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/memcached.nix>

services.meme−bingo−web.enable

Whether to enable a web app for the meme bingo, rendered entirely on the web server and made interactive with forms.

Note: The application's author suppose to run meme−bingo−web behind a reverse proxy for SSL and HTTP/3 .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/meme−bingo−web.nix>

services.meme−bingo−web.package

The meme−bingo−web package to use.

Type: package

Default:

```
pkgs.meme−bingo−web
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/meme−bingo−web.nix>

services.meme−bingo−web.address

The address the webserver will bind to.

Type: string

Default:

```
"localhost"
```

Example:

```
"::"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/meme−bingo−web.nix>

services.meme−bingo−web.baseUrl
URL to be used for the HTML <base> element on all HTML routes.

Type: string

Default:

```
"http://localhost:41678/"
```

Example:

```
"https://bingo.example.com/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/meme−bingo−web.nix>

services.meme−bingo−web.openFirewall
Whether to enable Opens the specified port in the firewall. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/meme−bingo−web.nix>

services.meme−bingo−web.port
Port to be used for the web server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
41678
```

Example:

```
21035
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/meme−bingo−web.nix>

services.memos.enable
Whether to enable Memos note−taking.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/memos.nix>

services.memos.package

The Memos package to use.

Type: package

Default:

```
pkgs.memos
```

Declared by:

<nixpkgs/nixos/modules/services/misc/memos.nix>

services.memos.dataDir

Specifies the directory where Memos will store its data.

Note

It will be automatically created with the permissions of **services.memos.user** and **services.memos.group**.

Type: absolute path

Default:

```
"/var/lib/memos/"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/memos.nix>

services.memos.environmentFile

The environment file to use when starting Memos.

Note

By default, generated from [1].

Type: absolute path

Default: generated from **services.memos.settings**

Example:

```
"/var/lib/memos/memos.env"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/memos.nix>

1. opt−services.memos.settings

services.memos.group

The group to run Memos as.

Note

If changing the default value, **you** are responsible of creating the corresponding group with **users.groups**.

Type: string

Default:

```
"memos"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/memos.nix>

services.memos.openFirewall

Whether to enable opening the ports in the firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/memos.nix>

services.memos.settings

The environment variables to configure Memos.

Note

At time of writing, there is no clear documentation about possible values. It's possible to convert CLI flags into these variables. Example : CLI flag "–unix−sock" converts to **MEMOS_UNIX_SOCK**.

Type: attribute set of (atom (null, bool, int, float or string))

Default:

```
{
  MEMOS_MODE = "prod";
  MEMOS_ADDR = "127.0.0.1";
  MEMOS_PORT = "5230";
  MEMOS_DATA = config.services.memos.dataDir;
  MEMOS_DRIVER = "sqlite";
  MEMOS_INSTANCE_URL = "http://localhost:5230";
}
```

Declared by:

<nixpkgs/nixos/modules/services/misc/memos.nix>

services.memos.user

The user to run Memos as.

Note

If changing the default value, **you** are responsible of creating the corresponding user with **users.users**.

Type: string

Default:

```
"memos"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/memos.nix>

services.merecat.enable

Whether to enable Merecat HTTP server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/merecat.nix>

services.merecat.settings
Merecat configuration. Refer to **merecat**(8) for details on supported values.

Type: attribute set of (atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  directory = "/srv/www";
  hostname = "localhost";
  port = 8080;
  virtual−host = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/merecat.nix>

services.meshcentral.enable
Whether to enable MeshCentral computer management server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/admin/meshcentral.nix>

services.meshcentral.package
The meshcentral package to use.

Type: package

Default:

```
pkgs.meshcentral
```

Declared by:
<nixpkgs/nixos/modules/services/admin/meshcentral.nix>

services.meshcentral.settings
Settings for MeshCentral. Refer to upstream documentation for details:

- **JSON Schema definition**
- **simple sample configuration**
- **complex sample configuration**
- **Old homepage with documentation link**

Type: open submodule of attribute set of (JSON value)

Example:

```
{
  domains = {
```

```
      "" = {
        certUrl = "https://meshcentral.example.com/";
      };
    };
    settings = {
      Cert = "meshcentral.example.com";
      Port = 4430;
      TlsOffload = "10.0.0.2,fd42::2";
      WANonly = true;
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/admin/meshcentral.nix>

services.meshtasticd.enable
Whether to enable Meshtastic daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/meshtasticd.nix>

services.meshtasticd.package
The meshtasticd package to use.

Type: package

Default:

```
pkgs.meshtasticd
```

Declared by:
<nixpkgs/nixos/modules/services/networking/meshtasticd.nix>

services.meshtasticd.dataDir
The data directory.

Type: absolute path

Default:

```
"/var/lib/meshtasticd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/meshtasticd.nix>

services.meshtasticd.group
Group meshtasticd runs as.

Type: string

Default:

```
"meshtasticd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/meshtasticd.nix>

services.meshtasticd.port
Port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4403
```

Declared by:
<nixpkgs/nixos/modules/services/networking/meshtasticd.nix>

services.meshtasticd.settings
The Meshtastic configuration file.

An example of configuration can be found at **https://github.com/meshtastic/firmware/blob/develop/bin/config-dist.yaml**

Type: YAML 1.1 value

Default:

```
null
```

Example:

```
Lora = {
  Module = "auto";
};
Webserver = {
  Port = 9443;
  RootPath = pkgs.meshtastic-web;
};
General = {
  MaxNodes = 200;
  MaxMessageQueue = 100;
  MACAddressSource = "eth0";
};
```

Declared by:
<nixpkgs/nixos/modules/services/networking/meshtasticd.nix>

services.meshtasticd.user
User meshtasticd runs as.

Type: string

Default:

```
"meshtasticd"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/meshtasticd.nix>

services.metabase.enable
Whether to enable Metabase service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/metabase.nix>

services.metabase.package
The metabase package to use.

Type: package

Default:

```
pkgs.metabase
```

Declared by:
<nixpkgs/nixos/modules/services/misc/metabase.nix>

services.metabase.listen.ip
IP address that Metabase should listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/metabase.nix>

services.metabase.listen.port
Listen port for Metabase.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/misc/metabase.nix>

services.metabase.openFirewall
Open ports in the firewall for Metabase.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/metabase.nix>

services.metabase.ssl.enable
Whether to enable SSL (https) support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/metabase.nix>

services.metabase.ssl.keystore

Java KeyStore file containing the certificates.

Type: null or absolute path

Default:

```
"/var/lib/metabase/metabase.jks"
```

Example:

```
"/etc/secrets/keystore.jks"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/metabase.nix>

services.metabase.ssl.port
Listen port over SSL (https) for Metabase.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8443
```

Declared by:
<nixpkgs/nixos/modules/services/misc/metabase.nix>

services.metricbeat.enable
Whether to enable metricbeat.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/metricbeat.nix>

services.metricbeat.package
The metricbeat package to use.

Type: package

Default:

```
pkgs.metricbeat
```

Example:

```
metricbeat7
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/metricbeat.nix>

services.metricbeat.modules
Metricbeat modules are responsible for reading metrics from the various sources.

This is like ‘services.metricbeat.settings.metricbeat.modules’, but structured as an attribute set. This has the benefit that multiple NixOS modules can contribute settings to a single metricbeat module.

A module can be specified multiple times by choosing a different ‘<name>’ for each, but setting **services.metricbeat.modules.<name>.module** to the same value.

See **https://www.elastic.co/guide/en/beats/metricbeat/current/metricbeat−modules.html**.

Type: attribute set of (open submodule of (YAML 1.1 value))

Default:

```
{ }
```

Example:

```
{
  system = {
    core = {
      metrics = [
        "percentages"
      ];
    };
    cpu = {
      metrics = [
        "percentages"
        "normalized_percentages"
      ];
    };
    enabled = true;
    metricsets = [
      "cpu"
      "load"
      "memory"
      "network"
      "process"
      "process_summary"
      "uptime"
      "socket_summary"
    ];
    period = "10s";
    processes = [
      ".*"
    ];
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/metricbeat.nix>

services.metricbeat.modules.<name>.module

The name of the module.

Look for the value after ‘module:’ on the individual module pages linked from **https://www.elastic.co/guide/en/beats/metricbeat/current/metricbeat−modules.html**.

Type: string

Default:

```
"‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/metricbeat.nix>

services.metricbeat.settings

Configuration for metricbeat. See **https://www.elastic.co/guide/en/beats/metricbeat/current/configuring−howto−metricbeat.html** for supported values.

Type: open submodule of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/metricbeat.nix>

services.metricbeat.settings.name

Name of the beat. Defaults to the hostname. See **https://www.elastic.co/guide/en/beats/metricbeat/current/configuration−general−options.html#_name**.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/metricbeat.nix>

services.metricbeat.settings.tags

Tags to place on the shipped metrics. See **https://www.elastic.co/guide/en/beats/metricbeat/current/configuration−general−options.html#_tags_2**.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/metricbeat.nix>

services.microbin.enable

Whether to enable MicroBin is a super tiny, feature rich, configurable paste bin web application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/microbin.nix>

services.microbin.package

The microbin package to use.

Type: package

Default:

```
pkgs.microbin
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/microbin.nix>

services.microbin.dataDir

Default data folder for MicroBin.

Type: string

Default:

```
"/var/lib/microbin"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/microbin.nix>

services.microbin.passwordFile

Path to file containing environment variables. Useful for passing down secrets. Variables that can be considered secrets are:

- MICROBIN_BASIC_AUTH_USERNAME
- MICROBIN_BASIC_AUTH_PASSWORD
- MICROBIN_ADMIN_USERNAME
- MICROBIN_ADMIN_PASSWORD
- MICROBIN_UPLOADER_PASSWORD

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/microbin.env"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/microbin.nix>

services.microbin.settings

Additional configuration for MicroBin, see **https://microbin.eu/docs/installation−and−configuration/configuration/** for supported values.

For secrets use passwordFile option instead.

Type: open submodule of attribute set of (boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  MICROBIN_HIDE_LOGO = false;
  MICROBIN_PORT = 8080;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/microbin.nix>

services.microsocks.enable

Whether to enable Tiny, portable SOCKS5 server with very moderate resource usage.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/microsocks.nix>

services.microsocks.package
The microsocks package to use.

Type: package

Default:

```
pkgs.microsocks
```

Declared by:
<nixpkgs/nixos/modules/services/networking/microsocks.nix>

services.microsocks.authOnce
If true, once a specific ip address authed successfully with user/pass, it is added to a whitelist and may use the proxy without auth.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/microsocks.nix>

services.microsocks.authPasswordFile
Path to a file containing the password for authentication.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/microsocks-password"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/microsocks.nix>

services.microsocks.authUsername
Optional username to use for authentication.

Type: null or string

Default:

```
null
```

Example:

```
"alice"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/microsocks.nix>

services.microsocks.disableLogging
If true, microsocks will not log any messages to stdout/stderr.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/microsocks.nix>

services.microsocks.execWrapper
An optional command to prepend to the microsocks command (such as proxychains, or a VPN exclude command).

Type: null or string

Default:

```
null
```

Example:

```
''${pkgs.mullvad-vpn}/bin/mullvad-exclude
```

Declared by:
<nixpkgs/nixos/modules/services/networking/microsocks.nix>

services.microsocks.group
Group microsocks runs as.

Type: string

Default:

```
"microsocks"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/microsocks.nix>

services.microsocks.ip
IP on which microsocks should listen. Defaults to 127.0.0.1 for security reasons.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/microsocks.nix>

services.microsocks.outgoingBindIp
Specifies which ip outgoing connections are bound to

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/microsocks.nix>

services.microsocks.port
Port on which microsocks should listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1080
```

Declared by:
<nixpkgs/nixos/modules/services/networking/microsocks.nix>

services.microsocks.user

User microsocks runs as.

Type: string

Default:

```
"microsocks"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/microsocks.nix>

services.mighttpd2.enable

Whether to enable Mighttpd2 web server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/mighttpd2.nix>

services.mighttpd2.config

Verbatim config file to use (see **https://kazu−yamamoto.github.io/mighttpd2/config.html**)

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  # Example configuration for Mighttpd 2
  Port: 80
  # IP address or "*"
  Host: *
  Debug_Mode: Yes # Yes or No
  User: mighttpd2
  Group: mighttpd2
  Pid_File: /run/mighty.pid
  Logging: Yes # Yes or No
  Log_File: /var/log/mighty # The directory must be writable by Use \
r:
  Log_File_Size: 16777216 # bytes
  Log_Backup_Number: 10
  Index_File: index.html
  Index_Cgi: index.cgi
  Status_File_Dir: /usr/local/share/mighty/status
  Connection_Timeout: 30 # seconds
  Fd_Cache_Duration: 10 # seconds
  # Server_Name: Mighttpd/3.x.y
  Tls_Port: 443
  Tls_Cert_File: cert.pem # should change this with an absolute pat \
h
  # should change this with comma−separated absolute paths
  Tls_Chain_Files: chain.pem
```

```
    # Currently, Tls_Key_File must not be encrypted.
    Tls_Key_File: privkey.pem # should change this with an absolute p \
  ath
    Service: 0 # 0 is HTTP only, 1 is HTTPS only, 2 is both
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/mighttpd2.nix>

services.mighttpd2.cores
How many cores to use. If null it will be determined automatically

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/mighttpd2.nix>

services.mighttpd2.routing
Verbatim routing file to use (see **https://kazu−yamamoto.github.io/mighttpd2/config.html**)

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
# Example routing for Mighttpd 2

# Domain lists
[localhost www.example.com]

# Entries are looked up in the specified order
# All paths must end with "/"

# A path to CGI scripts should be specified with "=>"
/~alice/cgi−bin/ => /home/alice/public_html/cgi−bin/

# A path to static files should be specified with "−>"
/~alice/         −> /home/alice/public_html/
/cgi−bin/        => /export/cgi−bin/

# Reverse proxy rules should be specified with ">>"
# /path >> host:port/path2
# Either "host" or ":port" can be committed, but not both.
/app/cal/        >> example.net/calendar/
# Yesod app in the same server
/app/wiki/       >> 127.0.0.1:3000/

/                −> /export/www/
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/mighttpd2.nix>

services.mihomo.enable

Whether to enable Mihomo, A rule−based proxy in Go.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mihomo.nix>

services.mihomo.package

The mihomo package to use.

Type: package

Default:

```
pkgs.mihomo
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mihomo.nix>

services.mihomo.configFile

Configuration file to use.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/networking/mihomo.nix>

services.mihomo.extraOpts

Extra command line options to use.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mihomo.nix>

services.mihomo.processesInfo

Whether to enable necessary capabilities for rules about process information such as ‘process−name’ .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mihomo.nix>

services.mihomo.tunMode

Whether to enable necessary capabilities for Mihomo's systemd service for TUN mode to function properly.

Keep in mind, that you still need to enable TUN mode manually in Mihomo's configuration .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mihomo.nix>

services.mihomo.webui

Local web interface to use.

You can also use the following website:

- metacubexd:
  - **https://d.metacubex.one**
  - **https://metacubex.github.io/metacubexd**
  - **https://metacubexd.pages.dev**
- yacd:
  - **https://yacd.haishan.me**
- clash−dashboard:
  - **https://clash.razord.top**

Type: null or absolute path

Default:

```
null
```

Example:

```
pkgs.metacubexd
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mihomo.nix>

services.mimir.enable

Whether to enable mimir.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/mimir.nix>

services.mimir.package

The mimir package to use.

Type: package

Default:

```
pkgs.mimir
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/mimir.nix>

services.mimir.configFile

Specify a configuration file that Mimir should use.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/mimir.nix>

services.mimir.configuration

Specify the configuration for Mimir in Nix.

Type: JSON value

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/mimir.nix>

services.mimir.extraFlags

Specify a list of additional command line flags, which get escaped and are then passed to Mimir.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--config.expand-env=true"
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/mimir.nix>

services.minecraft-server.enable

If enabled, start a Minecraft Server. The server data will be loaded from and saved to **services.minecraft-server.dataDir**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/games/minecraft-server.nix>

services.minecraft−server.package
The minecraft−server package to use.

Type: package

Default:

```
pkgs.minecraft−server
```

Example:

```
pkgs.minecraft−server_1_12_2
```

Declared by:
<nixpkgs/nixos/modules/services/games/minecraft−server.nix>

services.minecraft−server.dataDir
Directory to store Minecraft database and other state/data files.

Type: absolute path

Default:

```
"/var/lib/minecraft"
```

Declared by:
<nixpkgs/nixos/modules/services/games/minecraft−server.nix>

services.minecraft−server.declarative
Whether to use a declarative Minecraft server configuration. Only if set to ‘true’, the options **services.minecraft−server.whitelist** and **services.minecraft−server.serverProperties** will be applied.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/minecraft−server.nix>

services.minecraft−server.eula
Whether you agree to **Mojangs EULA**. This option must be set to ‘true’ to run Minecraft server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/minecraft−server.nix>

services.minecraft−server.jvmOpts
JVM options for the Minecraft server.

Type: strings concatenated with " "

Default:

```
"−Xmx2048M −Xms2048M"
```

Example:

```
"−Xms4092M −Xmx4092M −XX:+UseG1GC −XX:+CMSIncrementalPacing −X \
X:+CMSClassUnloadingEnabled −XX:ParallelGCThreads=2 −XX:MinHeapFr \
eeRatio=5 −XX:MaxHeapFreeRatio=10"
```

Declared by:
<nixpkgs/nixos/modules/services/games/minecraft-server.nix>

services.minecraft-server.openFirewall
Whether to open ports in the firewall for the server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/minecraft-server.nix>

services.minecraft-server.serverProperties
Minecraft server properties for the server.properties file. Only has an effect when **services.minecraft-server.declarative** is set to 'true'. See **https://minecraft.wiki/w/Server.properties#Java_Edition** for documentation on these values.

Type: attribute set of (boolean or signed integer or string)

Default:

```
{ }
```

Example:

```
{
  server-port = 43000;
  difficulty = 3;
  gamemode = 1;
  max-players = 5;
  motd = "NixOS Minecraft server!";
  white-list = true;
  enable-rcon = true;
  "rcon.password" = "hunter2";
}
```

Declared by:
<nixpkgs/nixos/modules/services/games/minecraft-server.nix>

services.minecraft-server.whitelist
Whitelisted players, only has an effect when **services.minecraft-server.declarative** is 'true' and the whitelist is enabled via **services.minecraft-server.serverProperties** by setting 'white-list' to 'true'. This is a mapping from Minecraft usernames to UUIDs. You can use **https://mcuuid.net/** to get a Minecraft UUID for a username.

Type: attribute set of Minecraft UUID

Default:

```
{ }
```

Example:

```
{
  username1 = "xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx";
  username2 = "yyyyyyyy-yyyy-yyyy-yyyy-yyyyyyyyyyyy";
};
```

Declared by:
<nixpkgs/nixos/modules/services/games/minecraft-server.nix>

services.minetest-server.enable
If enabled, starts a Minetest Server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/games/minetest-server.nix>

services.minetest-server.config
Settings to add to the minetest config file.

This option is ignored if 'configPath' is set.

Type: attribute set of anything

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/games/minetest-server.nix>

services.minetest-server.configPath
Path to the config to use.

If set to null, the config of the running user will be used: '~/.minetest/minetest.conf'.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/games/minetest-server.nix>

services.minetest-server.extraArgs
Additional command line flags to pass to the minetest executable.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/games/minetest-server.nix>

services.minetest-server.gameId
Id of the game to use. To list available games run 'minetestserver --gameid list'.

If only one game exists, this option can be null.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/games/minetest-server.nix>

services.minetest−server.logPath

Path to logfile for logging.

If set to null, logging will be output to stdout which means all output will be caught by systemd.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/games/minetest−server.nix>

services.minetest−server.port

Port number to bind to.

If set to null, the default 30000 will be used.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/games/minetest−server.nix>

services.minetest−server.world

Name of the world to use. To list available worlds run ‘minetestserver −−world list’.

If only one world exists, this option can be null.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/games/minetest−server.nix>

services.minidlna.enable

Whether to enable MiniDLNA, a simple DLNA server. Consider adding ‘openFirewall = true’ into your config.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/minidlna.nix>

services.minidlna.package

The minidlna package to use.

Type: package

Default:

```
pkgs.minidlna
```

Declared by:
<nixpkgs/nixos/modules/services/networking/minidlna.nix>

services.minidlna.openFirewall
Whether to enable opening HTTP (TCP) and SSDP (UDP) ports in the firewall.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/minidlna.nix>

services.minidlna.settings
Configuration for **minidlna.conf**(5).

Type: open submodule of attribute set of (atom (null, bool, int, float or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/minidlna.nix>

services.minidlna.settings.enable_subtitles
Enable subtitle support on unknown clients.

Type: one of “yes”, “no”

Default:

```
"yes"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/minidlna.nix>

services.minidlna.settings.enable_tivo
Support for streaming .jpg and .mp3 files to a TiVo supporting HMO.

Type: one of “yes”, “no”

Default:

```
"no"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/minidlna.nix>

services.minidlna.settings.db_dir
Specify the directory to store database and album art cache.

Type: absolute path

Default:

```
"/var/cache/minidlna"
```

Example:

```
"/tmp/minidlna"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/minidlna.nix>

services.minidlna.settings.friendly_name
Name that the server presents to clients.

Type: string

Default:

```
config.networking.hostName
```

Example:

```
"rpi3"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/minidlna.nix>

services.minidlna.settings.inotify
Whether to enable inotify monitoring to automatically discover new files.

Type: one of “yes”, “no”

Default:

```
"no"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/minidlna.nix>

services.minidlna.settings.log_level
Defines the type of messages that should be logged and down to which level of importance.

Type: string

Default:

```
"warn"
```

Example:

```
"general,artwork,database,inotify,scanner,metadata,http,ssdp,tivo=w \
arn"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/minidlna.nix>

services.minidlna.settings.media_dir
Directories to be scanned for media files. The ‘A,’ ‘V,’ ‘P,’ prefixes restrict a directory to audio, video or image files. The directories must be accessible to the ‘minidlna’ user account.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "/data/media"
  "V,/home/alice/video"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/minidlna.nix>

services.minidlna.settings.notify_interval

The interval between announces (in seconds). Instead of waiting for announces, you should set 'openFirewall' option to use SSDP discovery. Lower values (e.g. 30 seconds) should be used if your network is blocking the SSDP multicast. Some relevant information can be found **here**.

Type: signed integer

Default:

```
90000
```

Declared by:

<nixpkgs/nixos/modules/services/networking/minidlna.nix>

services.minidlna.settings.port

Port number for HTTP traffic (descriptions, SOAP, media transfer).

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8200
```

Declared by:

<nixpkgs/nixos/modules/services/networking/minidlna.nix>

services.minidlna.settings.root_container

Use a different container as the root of the directory tree presented to clients.

Type: string

Default:

```
"B"
```

Example:

```
"."
```

Declared by:

<nixpkgs/nixos/modules/services/networking/minidlna.nix>

services.minidlna.settings.wide_links

Set this to yes to allow symlinks that point outside user−defined 'media_dir'.

Type: one of "yes", "no"

Default:

```
"no"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/minidlna.nix>

services.miniflux.enable

Whether to enable miniflux.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/miniflux.nix>

services.miniflux.package
The miniflux package to use.

Type: package

Default:

```
pkgs.miniflux
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/miniflux.nix>

services.miniflux.adminCredentialsFile
File containing the ADMIN_USERNAME and ADMIN_PASSWORD (length >= 6) in the format of an EnvironmentFile=, as described by **systemd.exec**(5).

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/nixos/miniflux-admin-credentials"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/miniflux.nix>

services.miniflux.config
Configuration for Miniflux, refer to **https://miniflux.app/docs/configuration.html** for documentation on the supported values.

Type: open submodule of attribute set of (string or signed integer)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/miniflux.nix>

services.miniflux.config.CREATE_ADMIN
Create an admin user from environment variables.

Type: signed integer or boolean convertible to it

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/miniflux.nix>

services.miniflux.config.DATABASE_URL
Postgresql connection parameters. See **lib/pq** for more details.

Type: null or string

Default:

```
if createDatabaseLocally then "user=miniflux host=/run/postgresql d \
bname=miniflux" else null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/miniflux.nix>

services.miniflux.config.LISTEN_ADDR
Address to listen on. Use absolute path for a Unix socket. Multiple addresses can be specified, separated by commas.

Type: string

Default:

```
"localhost:8080"
```

Example:

```
"127.0.0.1:8080, 127.0.0.1:8081"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/miniflux.nix>

services.miniflux.config.RUN_MIGRATIONS
Run database migrations.

Type: signed integer or boolean convertible to it

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/miniflux.nix>

services.miniflux.config.WATCHDOG
Enable or disable Systemd watchdog.

Type: signed integer or boolean convertible to it

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/miniflux.nix>

services.miniflux.createDatabaseLocally
Whether a PostgreSQL database should be automatically created and configured on the local host. If set to ‘false’, you need provision a database yourself.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/miniflux.nix>

services.minio.enable
Whether to enable Minio Object Storage.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/minio.nix>

services.minio.package
The minio package to use.

Type: package

Default:

```
pkgs.minio
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/minio.nix>

services.minio.accessKey
Access key of 5 to 20 characters in length that clients use to access the server. This overrides the access key that is generated by minio on first startup and stored inside the ‘configDir’ directory.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/minio.nix>

services.minio.browser
Enable or disable access to web UI.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/minio.nix>

services.minio.certificatesDir
The directory where TLS certificates are stored.

Type: absolute path

Default:

```
"/var/lib/minio/certs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/minio.nix>

services.minio.configDir
The config directory, for the access keys and other settings.

Type: absolute path

Default:

```
"/var/lib/minio/config"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/minio.nix>

services.minio.consoleAddress

IP address and port of the web UI (console).

Type: string

Default:

```
":9001"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/minio.nix>

services.minio.dataDir

The list of data directories or nodes for storing the objects. Use one path for regular operation and the minimum of 4 endpoints for Erasure Code mode.

Type: list of (absolute path or string)

Default:

```
[
  "/var/lib/minio/data"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/minio.nix>

services.minio.listenAddress

IP address and port of the server.

Type: string

Default:

```
":9000"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/minio.nix>

services.minio.region

The physical location of the server. By default it is set to us−east−1, which is same as AWS S3's and Minio's default region.

Type: string

Default:

```
"us−east−1"
```

Declared by:

<nixpkgs/nixos/modules/services/web−servers/minio.nix>

services.minio.rootCredentialsFile

File containing the MINIO_ROOT_USER, default is "minioadmin", and MINIO_ROOT_PASSWORD (length >= 8), default is "minioadmin"; in the format of an EnvironmentFile=, as described by **systemd.exec**(5).

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/nixos/minio−root−credentials"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/minio.nix>

services.minio.secretKey
Specify the Secret key of 8 to 40 characters in length that clients use to access the server. This overrides the secret key that is generated by minio on first startup and stored inside the ‘configDir’ directory.

Type: string

Default:
```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/minio.nix>

services.miniupnpd.enable
Whether to enable MiniUPnP daemon.

Type: boolean

Default:
```
false
```

Example:
```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/miniupnpd.nix>

services.miniupnpd.appendConfig
Configuration lines appended to the MiniUPnP config.

Type: strings concatenated with “\n”

Default:
```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/miniupnpd.nix>

services.miniupnpd.externalInterface
Name of the external interface.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/miniupnpd.nix>

services.miniupnpd.internalIPs
The IP address ranges to listen on.

Type: list of string

Default:
```
[ ]
```

Example:
```
[
  "192.168.1.1/24"
  "enp1s0"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/miniupnpd.nix>

services.miniupnpd.natpmp
Whether to enable NAT−PMP support.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/miniupnpd.nix>

services.miniupnpd.upnp
Whether to enable UPNP support.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/miniupnpd.nix>

services.mirakurun.enable
Whether to enable the Mirakurun DVR Tuner Server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/video/mirakurun.nix>

services.mirakurun.allowSmartCardAccess
Install polkit rules to allow Mirakurun to access smart card readers which is commonly used along with tuner devices.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/video/mirakurun.nix>

services.mirakurun.channelSettings
Options which are added to channels.yml. If none is specified, it will automatically be generated at runtime.

Documentation: **https://github.com/Chinachu/Mirakurun/blob/master/doc/Configuration.md**

Type: null or YAML 1.1 value

Default:

```
null
```

Example:

```
[
  {
    name = "channel";
    types = "GR";
    channel = "0";
  }
];
```

Declared by:
<nixpkgs/nixos/modules/services/video/mirakurun.nix>

services.mirakurun.openFirewall
Open ports in the firewall for Mirakurun.

Warning
Exposing Mirakurun to the open internet is generally advised against. Only use it inside a trusted local network, or consider putting it behind a VPN if you want remote access.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/video/mirakurun.nix>

services.mirakurun.port
Port to listen on. If 'null', it won't listen on any port.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
40772
```

Declared by:
<nixpkgs/nixos/modules/services/video/mirakurun.nix>

services.mirakurun.serverSettings
Options for server.yml.

Documentation: **https://github.com/Chinachu/Mirakurun/blob/master/doc/Configuration.md**

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  highWaterMark = 25165824;
  overflowTimeLimit = 30000;
};
```

Declared by:
<nixpkgs/nixos/modules/services/video/mirakurun.nix>

services.mirakurun.tunerSettings

Options which are added to tuners.yml. If none is specified, it will automatically be generated at runtime.

Documentation: **https://github.com/Chinachu/Mirakurun/blob/master/doc/Configuration.md**

Type: null or YAML 1.1 value

Default:

```
null
```

Example:

```
[
  {
    name = "tuner-name";
    types = [ "GR" "BS" "CS" "SKY" ];
    dvbDevicePath = "/dev/dvb/adapterX/dvrX";
  }
];
```

Declared by:

<nixpkgs/nixos/modules/services/video/mirakurun.nix>

services.mirakurun.unixSocket

Path to unix socket to listen on. If ‘null’, it won’t listen on any unix sockets.

Type: null or absolute path

Default:

```
"/var/run/mirakurun/mirakurun.sock"
```

Declared by:

<nixpkgs/nixos/modules/services/video/mirakurun.nix>

services.miredo.enable

Whether to enable the Miredo IPv6 tunneling service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/miredo.nix>

services.miredo.package

The miredo package to use.

Type: package

Default:

```
pkgs.miredo
```

Declared by:

<nixpkgs/nixos/modules/services/networking/miredo.nix>

services.miredo.bindAddress

Depending on the local firewall/NAT rules, you might need to force Miredo to use a fixed UDP port and or IPv4 address.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/miredo.nix>

services.miredo.bindPort

Depending on the local firewall/NAT rules, you might need to force Miredo to use a fixed UDP port and or IPv4 address.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/miredo.nix>

services.miredo.interfaceName

Name of the network tunneling interface.

Type: string

Default:

```
"teredo"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/miredo.nix>

services.miredo.serverAddress

The hostname or primary IPv4 address of the Teredo server. This setting is required if Miredo runs as a Teredo client. “teredo.remlab.net” is an experimental service for testing only. Please use another server for production and/or large scale deployments.

Type: string

Default:

```
"teredo.remlab.net"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/miredo.nix>

services.misskey.enable

Whether to enable misskey.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.package
The misskey package to use.

Type: package

Default:

```
pkgs.misskey
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.database.createLocally
Create the PostgreSQL database locally. Sets ‘services.misskey.settings.db.{db,host,port,user,pass}’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.database.passwordFile
The path to a file containing the database password. Sets ‘services.misskey.settings.db.pass’.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.meilisearch.createLocally
Create and use a local Meilisearch instance. Sets ‘services.misskey.settings.meilisearch.{host,port,ssl}’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.meilisearch.keyFile
The path to a file containing the Meilisearch API key. Sets ‘services.misskey.settings.meilisearch.apiKey’.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.redis.createLocally
Create and use a local Redis instance. Sets ‘services.misskey.settings.redis.host’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.redis.passwordFile
The path to a file containing the Redis password. Sets ‘services.misskey.settings.redis.pass’.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.reverseProxy.enable
Whether to enable a HTTP reverse proxy for Misskey.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.reverseProxy.host
The fully qualified domain name to bind to. Sets ‘services.misskey.settings.url’.

This is required when using ‘services.misskey.reverseProxy.enable = true’.

Type: null or string

Default:

```
null
```

Example:

```
"misskey.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.reverseProxy.ssl
Whether to enable SSL for the reverse proxy. Sets ‘services.misskey.settings.url’.

This is required when using ‘services.misskey.reverseProxy.enable = true’.

Type: null or boolean

Default:

```
null
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.reverseProxy.webserver
The webserver to use as the reverse proxy.

Type: attribute−tagged union with choices: caddy, nginx

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.reverseProxy.webserver.caddy
Extra configuration for the caddy virtual host of Misskey. Set to '{ }' to use the default configuration.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.reverseProxy.webserver.caddy.extraConfig
Additional lines of configuration appended to this virtual host in the automatically generated 'Caddyfile'.

Type: strings concatenated with "\n"

Default:

```
""
```

services.misskey.reverseProxy.webserver.caddy.hostName
Canonical hostname for the server.

Type: string

Default:

```
"‹name›"
```

services.misskey.reverseProxy.webserver.caddy.listenAddresses
A list of host interfaces to bind to for this virtual host.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "::1"
]
```

services.misskey.reverseProxy.webserver.caddy.logFormat
Configuration for HTTP request logging (also known as access logs). See **https://caddyserver.com/docs/caddyfile/directives/log#log** for details.

Type: null or strings concatenated with "\n"

Default:

```
  output file ''${config.services.caddy.logDir}/access−''${hostNam \
e}.log
```

Example:

```
mkForce ''
  output discard
```

1. https://caddyserver.com/docs/caddyfile/directives/log#log

services.misskey.reverseProxy.webserver.caddy.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

services.misskey.reverseProxy.webserver.caddy.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is mostly useful if you use DNS challenges but Caddy does not currently support your provider.

Note that this option does not create any certificates, nor does it add subdomains to existing ones – you will need to create them manually using **security.acme.certs**[1].

Type: null or string

Default:

```
null
```

1. see the **security.acme.certs** option

services.misskey.reverseProxy.webserver.nginx
Extra configuration for the nginx virtual host of Misskey. Set to '{ }' to use the default configuration.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.reverseProxy.webserver.nginx.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

services.misskey.reverseProxy.webserver.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

services.misskey.reverseProxy.webserver.nginx.acmeRoot

Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme-challenge"
```

services.misskey.reverseProxy.webserver.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

services.misskey.reverseProxy.webserver.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

services.misskey.reverseProxy.webserver.nginx.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix-shell --packages apacheHttpd --run 'htpasswd -B -c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

services.misskey.reverseProxy.webserver.nginx.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

services.misskey.reverseProxy.webserver.nginx.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with "\n"

Default:

```
""
```

services.misskey.reverseProxy.webserver.nginx.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with 'redirectCode') all plain HTTP traffic to HTTPS. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443), where the non-SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

services.misskey.reverseProxy.webserver.nginx.globalRedirect

If set, all requests for this host are redirected (defaults to 301, configurable with ‘redirectCode’) to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

services.misskey.reverseProxy.webserver.nginx.http2

Type: boolean

Default:

```
true
```

services.misskey.reverseProxy.webserver.nginx.http3

Type: boolean

Default:

```
true
```

1. https://quic.nginx.org/

services.misskey.reverseProxy.webserver.nginx.http3_hq

Type: boolean

Default:

```
false
```

1. https://quic.nginx.org/

services.misskey.reverseProxy.webserver.nginx.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

services.misskey.reverseProxy.webserver.nginx.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides ‘addSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
```

```
    {
      addr = "195.154.1.1";
      port = 443;
      ssl = true;
    }
    {
      addr = "192.154.1.1";
      port = 80;
    }
    {
      addr = "unix:/var/run/nginx.sock";
    }
  ]
```

services.misskey.reverseProxy.webserver.nginx.listen.*.addr
Listen address.

Type: string

services.misskey.reverseProxy.webserver.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

services.misskey.reverseProxy.webserver.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

services.misskey.reverseProxy.webserver.nginx.listen.*.proxyProtocol
Enable PROXY protocol.

Type: boolean

Default:

```
false
```

services.misskey.reverseProxy.webserver.nginx.listen.*.ssl
Enable SSL.

Type: boolean

Default:

```
false
```

services.misskey.reverseProxy.webserver.nginx.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

services.misskey.reverseProxy.webserver.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

services.misskey.reverseProxy.webserver.nginx.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

services.misskey.reverseProxy.webserver.nginx.locations.<name>.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

services.misskey.reverseProxy.webserver.nginx.locations.<name>.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

services.misskey.reverseProxy.webserver.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

services.misskey.reverseProxy.webserver.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

services.misskey.reverseProxy.webserver.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

services.misskey.reverseProxy.webserver.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

services.misskey.reverseProxy.webserver.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

services.misskey.reverseProxy.webserver.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

services.misskey.reverseProxy.webserver.nginx.locations.<name>.recommendedProxySettings

Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

services.misskey.reverseProxy.webserver.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

services.misskey.reverseProxy.webserver.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

services.misskey.reverseProxy.webserver.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

services.misskey.reverseProxy.webserver.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

services.misskey.reverseProxy.webserver.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

services.misskey.reverseProxy.webserver.nginx.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for ‘listen’ to listen

on all interfaces on port 443.

Type: boolean

Default:

```
false
```

services.misskey.reverseProxy.webserver.nginx.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

1. https://quic.nginx.org/

services.misskey.reverseProxy.webserver.nginx.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en-US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

1. https://developer.mozilla.org/en-US/docs/Web/HTTP/Redirections

services.misskey.reverseProxy.webserver.nginx.rejectSSL
Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

1. see the **services.nginx.virtualHosts.<name>.default** option

services.misskey.reverseProxy.webserver.nginx.reuseport
Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

services.misskey.reverseProxy.webserver.nginx.root
The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

services.misskey.reverseProxy.webserver.nginx.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

services.misskey.reverseProxy.webserver.nginx.serverName
Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

services.misskey.reverseProxy.webserver.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

services.misskey.reverseProxy.webserver.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

services.misskey.reverseProxy.webserver.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca-bundle.crt"
```

services.misskey.reverseProxy.webserver.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

1. https://letsencrypt.org/docs/rate−limits
2. see the **security.acme.certs** option

services.misskey.settings

Configuration for Misskey, see ‘example.yml’ for all supported options.

Type: open submodule of attribute set of (YAML 1.1 value)

Declared by:

<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.chmodSocket

The file access mode of the UNIX socket.

Type: null or string

Default:

```
null
```

Example:

```
"777"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.db

Database settings.

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.db.db

The database name.

Type: string

Default:

```
"misskey"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.db.disableCache

Whether to disable caching queries.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.db.extra

Extra connection options.

Type: null or (attribute set of (YAML 1.1 value))

Default:

```
null
```

Example:

```
{
  ssl = true;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.db.host

The PostgreSQL host.

Type: string

Default:

```
"/var/run/postgresql"
```

Example:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.db.pass

The password used for database authentication.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.db.port

The PostgreSQL port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5432
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.db.user

The user used for database authentication.

Type: string

Default:

```
"misskey"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.id
The ID generation method to use. Do not change after starting Misskey for the first time.

Type: one of “aid”, “aidx”, “meid”, “ulid”, “objectid”

Default:

```
"aidx"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.meilisearch
Meilisearch connection options.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.meilisearch.apiKey
The Meilisearch API key.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.meilisearch.host
The Meilisearch host.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.meilisearch.index
Meilisearch index to use.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.meilisearch.port
The Meilisearch port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7700
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/misskey.nix>

services.misskey.settings.meilisearch.scope
The search scope.

Type: one of “local”, “global”

Default:

```
"local"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/misskey.nix>

services.misskey.settings.meilisearch.ssl
Whether to connect via SSL.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/misskey.nix>

services.misskey.settings.port
The port your Misskey server should listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3000
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/misskey.nix>

services.misskey.settings.redis
‘ioredis’ options. See ‘README’ for reference.

Type: open submodule of attribute set of (YAML 1.1 value)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/misskey.nix>

services.misskey.settings.redis.host
The Redis host.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/misskey.nix>

services.misskey.settings.redis.port
The Redis port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6379
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.redisForJobQueue
'ioredis' options for the job queue. See 'README' for reference.

Type: null or (open submodule of attribute set of (YAML 1.1 value))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.redisForJobQueue.host
The Redis host.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.redisForJobQueue.port
The Redis port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6379
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.redisForPubsub
'ioredis' options for pubsub. See 'README' for reference.

Type: null or (open submodule of attribute set of (YAML 1.1 value))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.redisForPubsub.host
The Redis host.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.redisForPubsub.port
The Redis port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6379
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.redisForTimelines
'ioredis' options for timelines. See 'README' for reference.

Type: null or (open submodule of attribute set of (YAML 1.1 value))

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.redisForTimelines.host
The Redis host.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.redisForTimelines.port
The Redis port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6379
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.socket
The UNIX socket your Misskey server should listen on.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/misskey.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.misskey.settings.url

The final user−facing URL. Do not change after running Misskey for the first time.

This needs to match up with the configured reverse proxy and is automatically configured when using ‘services.misskey.reverseProxy’.

Type: string

Example:

```
"https://example.tld/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/misskey.nix>

services.mjolnir.enable

Whether to enable Mjolnir, a moderation tool for Matrix.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.accessTokenFile

File containing the matrix access token for the ‘mjolnir’ user.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.dataPath

The directory the bot should store various bits of information in.

Type: absolute path

Default:

```
"/var/lib/mjolnir"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.homeserverUrl

Where the homeserver is located (client−server URL).

If ‘pantalaimon.enable’ is ‘true’, this option will become the homeserver to which ‘pantalaimon’ connects. The listen address of ‘pantalaimon’ will then become the ‘homeserverUrl’ of ‘mjolnir’.

Type: string

Default:

```
"https://matrix.org"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.managementRoom
The room ID where people can use the bot. The bot has no access controls, so anyone in this room can use the bot − secure your room! This should be a room alias or room ID − not a matrix.to URL. Note: ‘mjolnir’ is fairly verbose − expect a lot of messages from it.

Type: string

Default:

```
"#moderators:example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.pantalaimon
‘pantalaimon’ options (enables E2E Encryption support).

This will create a ‘pantalaimon’ instance with the name “mjolnir”.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.pantalaimon.enable
Whether to enable ignoring the accessToken. If true, accessToken is ignored and the username/password below will be used instead. The access token of the bot will be stored in the dataPath .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.pantalaimon.options
passthrough additional options to the ‘pantalaimon’ service.

Type: submodule

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.pantalaimon.options.dataPath
The directory where ‘pantalaimon’ should store its state such as the database file.

Type: absolute path

Default:

```
"/var/lib/pantalaimon-‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.pantalaimon.options.extraSettings
Extra configuration options. See **pantalaimon(5)** for available options.

Type: attribute set

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.pantalaimon.options.homeserver
The URI of the homeserver that the ‘pantalaimon’ proxy should forward requests to, without the matrix API path but including the http(s) schema.

Type: string

Example:

```
"https://matrix.org"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.pantalaimon.options.listenAddress
The address where the daemon will listen to client connections for this homeserver.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.pantalaimon.options.listenPort
The port where the daemon will listen to client connections for this homeserver. Note that the listen address/port combination needs to be lib.unique between different homeservers.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8009
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.pantalaimon.options.logLevel
Set the log level of the daemon.

Type: one of “info”, “warning”, “error”, “debug”

Default:

```
"warning"
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.pantalaimon.options.ssl
Whether or not SSL verification should be enabled for outgoing connections to the homeserver.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.pantalaimon.passwordFile
File containing the matrix password for the ‘mjolnir’ user.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.pantalaimon.username
The username to login with.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.protectedRooms
A list of rooms to protect (matrix.to URLs).

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "https://matrix.to/#/#yourroom:example.org"
  "https://matrix.to/#/#anotherroom:example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjolnir.settings
Additional settings (see **mjolnir default config** for available settings). These settings will override settings made by the module config.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  autojoinOnlyIfManager = true;
  automaticallyRedactForReasons = [ "spam" "advertising" ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/matrix/mjolnir.nix>

services.mjpg−streamer.enable
Whether to enable mjpg−streamer webcam streamer.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mjpg−streamer.nix>

services.mjpg−streamer.group
mjpg−streamer group name.

Type: string

Default:

```
"video"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mjpg−streamer.nix>

services.mjpg−streamer.inputPlugin
Input plugin. See plugins documentation for more information.

Type: string

Default:

```
"input_uvc.so"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mjpg−streamer.nix>

services.mjpg−streamer.outputPlugin
Output plugin. '@www@' is substituted for default mjpg−streamer www directory. See plugins documentation for more information.

Type: string

Default:

```
"output_http.so −w @www@ −n −p 5050"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mjpg−streamer.nix>

services.mjpg−streamer.user
mjpg−streamer user name.

Type: string

Default:

```
"mjpg−streamer"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mjpg−streamer.nix>

services.mlmmj.enable
Enable mlmmj

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mlmmj.nix>

services.mlmmj.group
mailinglist local group

Type: string

Default:

```
"mlmmj"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mlmmj.nix>

services.mlmmj.listDomain
Set the mailing list domain

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mlmmj.nix>

services.mlmmj.mailLists
The collection of hosted maillists

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mlmmj.nix>

services.mlmmj.maintInterval
Time interval between mlmmj−maintd runs, see **systemd.time**(7) for format information.

Type: string

Default:

```
"20min"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mlmmj.nix>

services.mlmmj.user
mailinglist local user

Type: string

Default:

```
"mlmmj"
```

Declared by:
<nixpkgs/nixos/modules/services/mail/mlmmj.nix>

services.mmsd.enable
Whether to enable Multimedia Messaging Service Daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mmsd.nix>

services.mmsd.extraArgs
Extra arguments passed to ‘mmsd−tng’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "--debug"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mmsd.nix>

services.mobilizon.enable
Whether to enable Mobilizon federated organization and mobilization platform.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mobilizon.nix>

services.mobilizon.package
The mobilizon package to use.

Type: package

Default:

```
pkgs.mobilizon
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mobilizon.nix>

services.mobilizon.nginx.enable

Whether an Nginx virtual host should be set up to serve Mobilizon.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mobilizon.nix>

services.mobilizon.settings

Mobilizon Elixir documentation, see **https://docs.joinmobilizon.org/administration/configure/reference/** for supported values.

Type: open submodule of attribute set of attribute set of (Elixir value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mobilizon.nix>

services.mobilizon.settings.":mobilizon"."instance".email_from

The email for the From: header in emails

Type: string or (raw elixir)

Default:

```
noreply@${settings.":mobilizon"."instance".hostname}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mobilizon.nix>

services.mobilizon.settings.":mobilizon"."instance".email_reply_to

The email for the Reply−To: header in emails

Type: string or (raw elixir)

Default:

```
${email_from}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mobilizon.nix>

services.mobilizon.settings.":mobilizon"."instance".hostname

Your instance's hostname

Type: string or (raw elixir)

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mobilizon.nix>

services.mobilizon.settings.":mobilizon"."instance".name

The fallback instance name if not configured into the admin UI

Type: string or (raw elixir)

Declared by:

<nixpkgs/nixos/modules/services/web−apps/mobilizon.nix>

services.mobilizon.settings.":mobilizon"."Mobilizon.Storage.Repo".database
Name of the database

Type: null or string or (raw elixir)

Default:

```
"mobilizon_prod"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mobilizon.nix>

services.mobilizon.settings.":mobilizon"."Mobilizon.Storage.Repo".socket_dir
Path to the postgres socket directory.

Set this to null if you want to connect to a remote database.

If non−null, the local PostgreSQL server will be configured with the configured database, permissions, and required extensions.

If connecting to a remote database, please follow the instructions on how to setup your database: **https://docs.joinmobilizon.org/administration/install/release/#database−setup**

Type: null or string or (raw elixir)

Default:

```
"/run/postgresql"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mobilizon.nix>

services.mobilizon.settings.":mobilizon"."Mobilizon.Storage.Repo".username
User used to connect to the database

Type: null or string or (raw elixir)

Default:

```
"mobilizon"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mobilizon.nix>

services.mobilizon.settings.":mobilizon"."Mobilizon.Web.Endpoint".has_reverse_proxy
Whether you use a reverse proxy

Type: boolean or (raw elixir)

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mobilizon.nix>

services.mobilizon.settings.":mobilizon"."Mobilizon.Web.Endpoint".http.ip
The IP address to listen on. Defaults to [::1] notated as a byte tuple.

Type: (elixir tuple) or (raw elixir)

Default:

```
{
  _elixirType = "tuple";
  value = [
    0
    0
    0
```

```
      0
      0
      0
      0
      1
    ];
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mobilizon.nix>

services.mobilizon.settings.":mobilizon"."Mobilizon.Web.Endpoint".http.port
The port to run the server

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive) or (raw elixir)

Default:

```
4000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mobilizon.nix>

services.mobilizon.settings.":mobilizon"."Mobilizon.Web.Endpoint".url.host
Your instance’s hostname for generating URLs throughout the app

Type: string or (raw elixir)

Default: ${settings.“:mobilizon”.“:instance”.hostname}

Declared by:
<nixpkgs/nixos/modules/services/web−apps/mobilizon.nix>

services.molly−brown.enable
Whether to enable Molly−Brown Gemini server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/molly−brown.nix>

services.molly−brown.certPath
Path to TLS certificate. An ACME certificate and key may be shared with an HTTP server, but only if molly−brown has permissions allowing it to read such keys.

As an example:

```
systemd.services.molly−brown.serviceConfig.SupplementaryGroups =
  [ config.security.acme.certs."example.com".group ];
```

Type: absolute path

Example:

```
"/var/lib/acme/example.com/cert.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/molly−brown.nix>

services.molly−brown.docBase
Base directory for Gemini content.

Type: absolute path

Example:

```
"/var/lib/molly-brown"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/molly−brown.nix>

services.molly−brown.hostName
The hostname to respond to requests for. Requests for URLs with other hosts will result in a status 53 (PROXY REQUEST REFUSED) response.

Type: string

Default:

```
config.networking.hostName
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/molly−brown.nix>

services.molly−brown.keyPath
Path to TLS key. See **CertPath**.

Type: absolute path

Example:

```
"/var/lib/acme/example.com/key.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/molly−brown.nix>

services.molly−brown.port
TCP port for molly−brown to bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1965
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/molly−brown.nix>

services.molly−brown.settings
molly−brown configuration. Refer to **https://tildegit.org/solderpunk/molly−brown/src/branch/master/example.conf** for details on supported values.

Type: TOML value

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−servers/molly−brown.nix>

services.mollysocket.enable

Whether to enable **MollySocket** for getting Signal notifications via UnifiedPush .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/mollysocket.nix>

services.mollysocket.environmentFile

Environment file (see **systemd.exec**(5) “EnvironmentFile=” section for the syntax) passed to the service. This option can be used to safely include secrets in the configuration.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/secrets/mollysocket"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/mollysocket.nix>

services.mollysocket.logLevel

Set the **RUST_LOG** environment variable

Type: string

Default:

```
"info"
```

Example:

```
"debug"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/mollysocket.nix>

services.mollysocket.settings

Configuration for MollySocket. Available options are listed **here**.

Type: open submodule of (TOML value)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/misc/mollysocket.nix>

services.mollysocket.settings.allowed_endpoints

List of UnifiedPush servers

Type: list of string

Default:

```
[
  "*"
```

```
]
```

Example:

```
[
  "https://ntfy.sh"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mollysocket.nix>

services.mollysocket.settings.allowed_uuids
UUIDs of Signal accounts that may use this server

Type: list of string

Default:

```
[
  "*"
]
```

Example:

```
[
  "abcdef-12345-tuxyz-67890"
]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mollysocket.nix>

services.mollysocket.settings.host
Listening address of the web server

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mollysocket.nix>

services.mollysocket.settings.port
Listening port of the web server

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8020
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mollysocket.nix>

services.monado.enable
Whether to enable Monado user service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/monado.nix>

services.monado.package
The monado package to use.

Type: package

Default:

```
pkgs.monado
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/monado.nix>

services.monado.defaultRuntime
Whether to enable Monado as the default OpenXR runtime on the system.

Note that applications can bypass this option by setting an active runtime in a writable XDG_CONFIG_DIRS location like '~/.config'.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/monado.nix>

services.monado.forceDefaultRuntime
Whether to ensure that Monado is the active runtime set for the current user.

This replaces the file 'XDG_CONFIG_HOME/openxr/1/active_runtime.json' when starting the service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/monado.nix>

services.monado.highPriority
Whether to enable high priority capability for monado−service.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/hardware/monado.nix>

services.monero.enable

Whether to enable Monero node daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.banlist

Path to a text file containing IPs to block. Useful to prevent DDoS/deanonymization attacks.

https://github.com/monero-project/meta/issues/1124

Type: null or absolute path

Default:

```
null
```

Example:

```
builtins.fetchurl {
  url = "https://raw.githubusercontent.com/rblaine95/monero-banlis \
t/c6eb9413ddc777e7072d822f49923df0b2a94d88/block.txt";
  hash = "";
};
```

Declared by:

<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.dataDir

The directory where Monero stores its data files.

Type: string

Default:

```
"/var/lib/monero"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.environmentFile

Path to an EnvironmentFile for the monero service as defined in **systemd.exec**(5).

Secrets may be passed to the service by specifying placeholder variables in the Nix config and setting values in the environment file.

Example:

```
# In environment file:
MINING_ADDRESS=888tNkZrPN6JsEgekjMnABU4TBzc2Dt29EPAvkRxbANsAnjyPbb3 \
iQ1YBRk1UXcdRsiKc9dhwMVgN5S9cQUiyoogDavup3H

# Service config
services.monero.mining.address = "$MINING_ADDRESS";
```

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/monero/monerod.env"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.exclusiveNodes
List of peer IP addresses to connect to *only*. If given the other peer options will be ignored.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.extraConfig
Extra lines to be added verbatim to monerod configuration.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.extraNodes
List of additional peer IP addresses to add to the local list.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.limits.download
Limit of the download rate in kB/s. Set to ‘−1’ to leave unlimited.

Type: signed integer

Default:

```
-1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.limits.syncSize
Maximum number of blocks to sync at once. Set to ‘0’ for adaptive.

Type: unsigned integer, meaning >=0

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.limits.threads

Maximum number of threads used for a parallel job. Set to ‘0’ to leave unlimited.

Type: unsigned integer, meaning >=0

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.limits.upload

Limit of the upload rate in kB/s. Set to ‘−1’ to leave unlimited.

Type: signed integer

Default:

```
-1
```

Declared by:
<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.mining.enable

Whether to mine monero.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.mining.address

Monero address where to send mining rewards.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.mining.threads

Number of threads used for mining. Set to ‘0’ to use all available.

Type: unsigned integer, meaning >=0

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.priorityNodes

List of peer IP addresses to connect to and attempt to keep the connection open.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.prune

Whether to prune the blockchain. **https://www.getmonero.org/resources/moneropedia/pruning.html**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.rpc.address

IP address the RPC server will bind to.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.rpc.password

Password for RPC connections.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.rpc.port

Port the RPC server will bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
18081
```

Declared by:

<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.rpc.restricted

Whether to restrict RPC to view only commands.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monero.rpc.user

User name for RPC connections.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/monero.nix>

services.monetdb.enable
Whether to enable the MonetDB database server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/monetdb.nix>

services.monetdb.package
The monetdb package to use.

Type: package

Default:

```
pkgs.monetdb
```

Declared by:
<nixpkgs/nixos/modules/services/databases/monetdb.nix>

services.monetdb.dataDir
Data directory for the dbfarm.

Type: absolute path

Default:

```
"/var/lib/monetdb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/monetdb.nix>

services.monetdb.group
Group under which MonetDB runs.

Type: string

Default:

```
"monetdb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/monetdb.nix>

services.monetdb.listenAddress
Address to listen on.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/monetdb.nix>

services.monetdb.port
Port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
50000
```

Declared by:
<nixpkgs/nixos/modules/services/databases/monetdb.nix>

services.monetdb.user
User account under which MonetDB runs.

Type: string

Default:

```
"monetdb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/monetdb.nix>

services.mongodb.enable
Whether to enable the MongoDB server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mongodb.nix>

services.mongodb.enableAuth
Enable client authentication. Creates a default superuser with username root!

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mongodb.nix>

services.mongodb.package
The mongodb package to use.

Type: package

Default:

```
pkgs.mongodb
```

Example:

```
pkgs.mongodb-ce
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mongodb.nix>

services.mongodb.bind_ip
IP to bind to

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mongodb.nix>

services.mongodb.dbpath
Location where MongoDB stores its files

Type: string

Default:

```
"/var/db/mongodb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mongodb.nix>

services.mongodb.extraConfig
MongoDB extra configuration in YAML format

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
  storage.journal.enabled: false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mongodb.nix>

services.mongodb.initialRootPasswordFile
Path to the file containing the password for the root user if auth is enabled.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mongodb.nix>

services.mongodb.initialScript
A file containing MongoDB statements to execute on first startup.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mongodb.nix>

services.mongodb.mongoshPackage
The mongosh package to use.

Type: package

Default:

```
pkgs.mongosh
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mongodb.nix>

services.mongodb.pidFile
Location of MongoDB pid file

Type: string

Default:

```
"/run/mongodb.pid"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mongodb.nix>

services.mongodb.quiet
quieter output

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mongodb.nix>

services.mongodb.replSetName
If this instance is part of a replica set, set its name here. Otherwise, leave empty to run as single node.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mongodb.nix>

services.mongodb.user
User account under which MongoDB runs

Type: string

Default:

```
"mongodb"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mongodb.nix>

services.monica.enable
Whether to enable monica.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.appKeyFile

A file containing the Laravel APP_KEY − a 32 character long, base64 encoded key used for encryption where needed. Can be generated with <code>head −c 32 /dev/urandom | base64</code>.

Type: absolute path

Example:

```
"/run/keys/monica−appkey"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.appURL

The root URL that you want to host monica on. All URLs in monica will be generated using this value. If you change this in the future you may need to run a command to update stored URLs in the database. Command example: <code>php artisan monica:update−url https://old.example.com https://new.example.com</code>

Type: string

Default:

```
"http\${lib.optionalString tlsEnabled \"s\"}://\${cfg.hostname} \
"
```

Example:

```
"https://example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.config

monica configuration options to set in the <filename>.env</filename> file.

Refer to <link xlink:href=“https://github.com/monicahq/monica”/> for details on supported values.

Settings containing secret data should be set to an attribute set containing the attribute <literal>_secret</literal> − a string pointing to a file containing the value the option should be set to. See the example to get a better picture of this: in the resulting <filename>.env</filename> file, the <literal>OIDC_CLIENT_SECRET</literal> key will be set to the contents of the <filename>/run/keys/oidc_secret</filename> file.

Type: attribute set of (null or boolean or signed integer or 16 bit unsigned integer; between 0 and 65535 (both inclusive) or absolute path or string or (submodule))

Default:

```
{ }
```

Example:

```
{
  ALLOWED_IFRAME_HOSTS = "https://example.com";
  WKHTMLTOPDF = "/home/user/bins/wkhtmltopdf";
  AUTH_METHOD = "oidc";
  OIDC_NAME = "MyLogin";
  OIDC_DISPLAY_NAME_CLAIMS = "name";
  OIDC_CLIENT_ID = "monica";
  OIDC_CLIENT_SECRET = {_secret = "/run/keys/oidc_secret"};
```

```
    OIDC_ISSUER = "https://keycloak.example.com/auth/realms/My%20Re \
alm";
    OIDC_ISSUER_DISCOVER = true;
  }
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/monica.nix>

services.monica.dataDir
monica data directory

Type: absolute path

Default:

```
"/var/lib/monica"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/monica.nix>

services.monica.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/monica.nix>

services.monica.database.host
Database host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/monica.nix>

services.monica.database.name
Database name.

Type: string

Default:

```
"monica"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/monica.nix>

services.monica.database.passwordFile
A file containing the password corresponding to <option>database.user</option>.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/monica-dbpassword"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.database.port
Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.database.user
Database username.

Type: string

Default:

```
user
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.group
Group monica runs as.

Type: string

Default:

```
"monica"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.hostname
The hostname to serve monica on.

Type: string

Default:

```
config.networking.fqdn
```

Example:

```
"monica.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.mail.driver
Mail driver to use.

Type: one of “smtp”, “sendmail”

Default:

```
"smtp"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.mail.encryption

SMTP encryption mechanism to use.

Type: null or value “tls” (singular enum)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.mail.from

Mail “from” email.

Type: string

Default:

```
"mail@monica.com"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.mail.fromName

Mail “from” name.

Type: string

Default:

```
"monica"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.mail.host

Mail host address.

Type: string

Default:

```
"localhost"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.mail.passwordFile

A file containing the password corresponding to <option>mail.user</option>.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/monica−mailpassword"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.mail.port

Mail host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1025
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.mail.user

Mail username.

Type: null or string

Default:

```
null
```

Example:

```
"monica"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.maxUploadSize

The maximum size for uploads (e.g. images).

Type: string

Default:

```
"18M"
```

Example:

```
"1G"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx

With this option, you can customize the nginx virtualHost settings.

Type: submodule

Default:

```
{ }
```

Example:

```
  {
    serverAliases = [
      "monica.''${config.networking.domain}"
    ];
    # To enable encryption and let let's encrypt take care of certi \
ficate
    forceSSL = true;
    enableACME = true;
  }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.default
Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.extraConfig
These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.forceSSL
Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.globalRedirect
If set, all requests for this host are redirected (defaults to 301, configurable with ‘redirectCode’) to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.http2

Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.http3

Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.http3_hq

Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.listen
Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides ‘addSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.listen.*.port

Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.listen.*.proxyProtocol

Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.listen.*.ssl

Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
```

```
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.locations.<name>.alias
Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.locations.<name>.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.locations.<name>.basicAuthFile
Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.locations.<name>.fastcgiParams
FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won't unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with 'lib.mkOrder'. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/monica.nix>

services.monica.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/monica.nix>

services.monica.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/monica.nix>

services.monica.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/monica.nix>

services.monica.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/monica.nix>

services.monica.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.locations.<name>.uwsgiPass

Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.onlySSL

Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.quic

Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.redirectCode

HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.rejectSSL

Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.root

The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.serverName

Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca−bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

2. see the **security.acme.certs** option

services.monica.phpPackage
The php83 package to use.

Type: package

Default:

```
pkgs.php83
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.poolConfig
Options for the monica PHP pool. See the documentation on <literal>php−fpm.conf</literal> for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monica.user
User monica runs as.

Type: string

Default:

```
"monica"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/monica.nix>

services.monit.enable
Whether to enable Monit.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/monit.nix>

services.monit.config
monitrc content

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/monit.nix>

services.moodle.enable
Whether to enable Moodle web application.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.package
The moodle package to use.

Type: package

Default:

```
pkgs.moodle
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.database.createLocally
Create the database and database user locally.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.database.host
Database host address.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.database.name
Database name.

Type: string

Default:

```
"moodle"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.database.passwordFile

A file containing the password corresponding to **database.user**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/run/keys/moodle-dbpassword"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/moodle.nix>

services.moodle.database.port

Database host port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/moodle.nix>

services.moodle.database.socket

Path to the unix socket file to use for authentication.

Type: null or absolute path

Default:

```
/run/mysqld/mysqld.sock
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/moodle.nix>

services.moodle.database.type

Database engine to use.

Type: one of “mysql”, “pgsql”

Default:

```
"mysql"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/moodle.nix>

services.moodle.database.user

Database user.

Type: string

Default:

```
"moodle"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/moodle.nix>

services.moodle.extraConfig

Any additional text to be appended to the config.php configuration file. This is a PHP script. For configuration details, see **https://docs.moodle.org/37/en/Configuration_file**.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
$CFG->disableupdatenotifications = true;
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/moodle.nix>

services.moodle.initialPassword

Specifies the initial password for the admin, i.e. the password assigned if the user does not already exist. The password specified here is world-readable in the Nix store, so it should be changed promptly.

Type: string

Example:

```
"correcthorsebatterystaple"
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/moodle.nix>

services.moodle.poolConfig

Options for the Moodle PHP pool. See the documentation on 'php-fpm.conf' for details on configuration directives.

Type: attribute set of (string or signed integer or boolean)

Default:

```
{
  pm = "dynamic";
  "pm.max_children" = 32;
  "pm.max_requests" = 500;
  "pm.max_spare_servers" = 4;
  "pm.min_spare_servers" = 2;
  "pm.start_servers" = 2;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/moodle.nix>

services.moodle.virtualHost

Apache configuration can be done by adapting **services.httpd.virtualHosts**. See **services.httpd.virtualHosts** for further information.

Type: submodule

Example:

```
{
  hostName = "moodle.example.org";
  adminAddr = "webmaster@example.org";
  forceSSL = true;
  enableACME = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.enableACME
Whether to ask Let’s Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.enableUserDir
Whether to enable serving *~/public_html* as ‘/~«username»’.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.acmeRoot
Directory for the acme challenge which is PUBLIC, don’t put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.adminAddr
E−mail address of the server administrator.

Type: null or string

Default:

```
null
```

Example:

```
"admin@example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.documentRoot
The path of Apache’s document root directory. If left undefined, an empty directory in the Nix store will be used as root.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.extraConfig
These lines go to httpd.conf verbatim. They will go after directories and directory aliases defined by default.

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
<Directory /home>
  Options FollowSymlinks
  AllowOverride All
</Directory>
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.forceSSL
Whether to add a separate nginx server block that permanently redirects (301) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.globalRedirect
If set, all requests for this host are redirected permanently to the given URL.

Type: null or string

Default:

```
null
```

Example:

```
"http://newserver.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.hostName
Canonical hostname for the server.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.http2
Whether to enable HTTP 2. HTTP/2 is supported in all multi−processing modules that come with httpd. *However, if you use the prefork mpm, there will be severe restrictions.* Refer to **https://httpd.apache.org/docs/2.4/howto/http2.html#mpm−config** for details.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.listen
Listen addresses and ports for this virtual host.

Note
This option overrides ‘addSSL’, ‘forceSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    ip = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    ip = "192.154.1.1";
    port = 80;
  }
  {
    ip = "*";
    port = 8080;
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.listen.*.ip
IP to listen on. 0.0.0.0 for IPv4 only, * for all.

Type: string

Default:

```
"*"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.listen.*.port
Port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.listen.*.ssl
Whether to enable SSL (https) support.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.listenAddresses
Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Type: non−empty (list of string)

Default:

```
[
  "*"
]
```

Example:

```
[
  "127.0.0.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.locations
Declarative location config. See **https://httpd.apache.org/docs/2.4/mod/core.html#location** for details.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
```

```
      proxyPass = "http://localhost:3000";
    };
    "/foo/bar.png" = {
      alias = "/home/eelco/some-file.png";
    };
  };
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/moodle.nix>

services.moodle.virtualHost.locations.<name>.alias
Alias directory for requests. See **https://httpd.apache.org/docs/2.4/mod/mod_alias.html#alias**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/moodle.nix>

services.moodle.virtualHost.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/moodle.nix>

services.moodle.virtualHost.locations.<name>.index
Adds DirectoryIndex directive. See **https://httpd.apache.org/docs/2.4/mod/mod_dir.html#directoryindex**.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/moodle.nix>

services.moodle.virtualHost.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.locations.<name>.proxyPass
Sets up a simple reverse proxy as described by **https://httpd.apache.org/docs/2.4/howto/reverse_proxy.html#simple**.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.logFormat
Log format for Apache's log files. Possible values are: combined, common, referer, agent.

Type: string

Default:

```
"common"
```

Example:

```
"combined"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.robotsEntries
Specification of pages to be ignored by web crawlers. See **http://www.robotstxt.org/** for details.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
"Disallow: /foo/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.servedDirs

This option provides a simple way to serve static directories.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    dir = "/home/eelco/Dev/nix-homepage";
    urlPath = "/nix";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/moodle.nix>

services.moodle.virtualHost.servedFiles

This option provides a simple way to serve individual, static files.

Note

This option has been deprecated and will be removed in a future version of NixOS. You can achieve the same result by making use of the ‘locations.<name>.alias’ option.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    file = "/home/eelco/some-file.png";
    urlPath = "/foo/bar.png";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/web-apps/moodle.nix>

services.moodle.virtualHost.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "www.example.org:8080"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.sslServerCert
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.sslServerChain
Path to server SSL chain file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/ca.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.sslServerKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

services.moodle.virtualHost.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/moodle.nix>

2. see the **security.acme.certs** option

services.moonraker.enable
Whether to enable Moonraker, an API web server for Klipper.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/moonraker.nix>

services.moonraker.package
The moonraker package to use.

Type: null or package

Default:

```
pkgs.moonraker
```

Example:

```
moonraker.override { useGpiod = true; }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/moonraker.nix>

services.moonraker.address
The IP or host to listen on.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/moonraker.nix>

services.moonraker.allowSystemControl
Whether to allow Moonraker to perform system−level operations.

Moonraker exposes APIs to perform system−level operations, such as reboot, shutdown, and management of systemd units. See the **documentation** for details on what clients are able to do.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/moonraker.nix>

services.moonraker.analysis.enable
Whether to enable Runtime analysis with klipper−estimator.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/moonraker.nix>

services.moonraker.configDir

Deprecated directory containing client−writable configuration files.

Clients will be able to edit files in this directory via the API. This directory must be writable.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/misc/moonraker.nix>

services.moonraker.group

Group account under which Moonraker runs.

Type: string

Default:

```
"moonraker"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/moonraker.nix>

services.moonraker.klipperSocket

Path to Klipper's API socket.

Type: absolute path

Default:

```
config.services.klipper.apiSocket
```

Declared by:

<nixpkgs/nixos/modules/services/misc/moonraker.nix>

services.moonraker.port

The port to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
7125
```

Declared by:

<nixpkgs/nixos/modules/services/misc/moonraker.nix>

services.moonraker.settings

Configuration for Moonraker. See the **documentation** for supported values.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a non−empty list of them)

Default:

```
{ }
```

Example:

```
{
  authorization = {
    cors_domains = [
      "https://app.fluidd.xyz"
      "https://my.mainsail.xyz"
    ];
    trusted_clients = [
```

```
        "10.0.0.0/24"
      ];
    };
  }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/moonraker.nix>

services.moonraker.stateDir
The directory containing the Moonraker databases.

Type: absolute path

Default:

```
"/var/lib/moonraker"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/moonraker.nix>

services.moonraker.user
User account under which Moonraker runs.

Type: string

Default:

```
"moonraker"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/moonraker.nix>

services.moosefs.cgiserver.enable
Whether to enable MooseFS GUI server (mfsgui) for web interface. Warning: The GUI server interface should be properly secured from unauthorized access, as it provides full control over your MooseFS installation. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.cgiserver.openFirewall
Whether to automatically open the web interface port.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.cgiserver.settings
GUI server configuration options.

Type: open submodule of attribute set of (Flat key−value file)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.cgiserver.settings.DATA_PATH
Directory for lock files.

Type: string

Default:

```
"/var/lib/mfs"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.cgiserver.settings.GUISERV_LISTEN_HOST
IP address to bind GUI server to (* means any).

Type: string

Default:

```
"*"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.cgiserver.settings.GUISERV_LISTEN_PORT
Port for GUI server to listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9425
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.chunkserver.enable
Whether to enable MooseFS chunkserver daemon that stores file data.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.chunkserver.hdds
Mount points used by chunkserver for data storage (see mfshdd.cfg).

Type: list of string

Default:

```
null
```

Example:

```
[
  "/mnt/hdd1"
  "/mnt/hdd2"
]
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.chunkserver.openFirewall
Whether to automatically open required firewall ports for chunkserver service.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.chunkserver.settings
Chunkserver configuration options (mfschunkserver.cfg).

Type: open submodule of attribute set of (Flat key−value file)

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.chunkserver.settings.DATA_PATH
Directory for lock files and other runtime data.

Type: string

Default:

```
"/var/lib/mfs"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.client.enable
Whether to enable MooseFS client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.master.enable

Enable MooseFS master daemon. The master server coordinates all MooseFS operations and stores metadata.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.master.autoInit

Whether to automatically initialize the master's metadata directory on first run. Use with caution.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.master.exports

Export definitions for MooseFS (see mfsexports.cfg).

Type: list of string

Default:

```
null
```

Example:

```
[
  "* / rw,alldirs,admin,maproot=0:0"
  "* . rw"
]
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.master.openFirewall

Whether to automatically open required firewall ports for master service.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.master.settings

Master configuration options (mfsmaster.cfg).

Type: open submodule of attribute set of (Flat key−value file)

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.master.settings.DATA_PATH
Directory for storing master metadata.

Type: string

Default:

```
"/var/lib/mfs"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.masterHost
IP or DNS name of the MooseFS master server.

Type: string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.metalogger.enable
Whether to enable MooseFS metalogger daemon that maintains a backup copy of the master's metadata.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.metalogger.settings
Metalogger configuration options (mfsmetalogger.cfg).

Type: open submodule of attribute set of (Flat key−value file)

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.metalogger.settings.DATA_PATH
Directory for storing metalogger data.

Type: string

Default:

```
"/var/lib/mfs"
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.moosefs.runAsUser
Run daemons as moosefs user instead of root for better security.

Type: boolean

Default:

```
true
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/moosefs.nix>

services.mopidy.enable
Whether to enable Mopidy, a music player daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mopidy.nix>

services.mopidy.dataDir
The directory where Mopidy stores its state.

Type: string

Default:

```
"/var/lib/mopidy"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mopidy.nix>

services.mopidy.extensionPackages
Mopidy extensions that should be loaded by the service.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.mopidy−spotify ]
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mopidy.nix>

services.mopidy.extraConfigFiles
Extra config file read by Mopidy when the service starts. Later files in the list overrides earlier configuration.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mopidy.nix>

services.mopidy.settings
The configuration that Mopidy should use. See the upstream documentation **https://docs.mopidy.com/stable/config/** for details.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  mpd = {
    enabled = true;
    hostname = "::";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mopidy.nix>

services.mosquitto.enable
Whether to enable the MQTT Mosquitto broker.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.package
The mosquitto package to use.

Type: package

Default:

```
pkgs.mosquitto
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.bridges
Bridges to build to other MQTT brokers.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.bridges.<name>.addresses
Remote endpoints for the bridge.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.bridges.<name>.addresses.*.address
Address of the remote MQTT broker.

Type: single−line string

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.bridges.<name>.addresses.*.port
Port of the remote MQTT broker.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1883
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.bridges.<name>.settings
Additional settings for this bridge.

Type: open submodule of attribute set of (string, path, bool, or integer)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.bridges.<name>.topics
Topic patterns to be shared between the two brokers. Refer to the **mosquitto.conf documentation** for details on the format.

Type: list of single−line string

Default:

```
[ ]
```

Example:

```
[
  "# both 2 local/topic/ remote/topic/"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.dataDir
The data directory.

Type: absolute path

Default:

```
"/var/lib/mosquitto"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.includeDirs

Directories to be scanned for further config files to include. Directories will processed in the order given, '*.conf' files in the directory will be read in case−sensitive alphabetical order.

Type: list of absolute path

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners

Listeners to configure on this broker.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners.*.acl

Additional ACL items to prepend to the generated ACL file.

Type: list of single−line string

Default:

```
[ ]
```

Example:

```
[
  "pattern read #"
  "topic readwrite anon/report/#"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners.*.address

Address to listen on. Listen on '0.0.0.0'/'::' when unset.

Type: null or single−line string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners.*.authPlugins

Authentication plugin to attach to this listener. Refer to the **mosquitto.conf documentation** for details on authentication plugins.

Type: list of (submodule)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners.*.authPlugins.*.denySpecialChars
Automatically disallow all clients using '#' or '+' in their name/id.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners.*.authPlugins.*.options
Options for the plugin. Each key turns into a 'plugin_opt_*' line in the config.

Type: attribute set of (string, path, bool, or integer)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners.*.authPlugins.*.plugin
Plugin path to load, should be a '.so' file.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners.*.omitPasswordAuth
Omits password checking, allowing anyone to log in with any user name unless other mandatory authentication methods (eg TLS client certificates) are configured.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners.*.port
Port to listen on. Must be set to 0 to listen on a unix domain socket.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1883
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners.*.settings
Additional settings for this listener.

Type: open submodule of attribute set of (string, path, bool, or integer)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners.*.users
A set of users and their passwords and ACLs.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  john = {
    acl = [
      "readwrite john/#"
    ];
    password = "123456";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners.*.users.<name>.acl
Control client access to topics on the broker.

Type: list of single−line string

Default:

```
[ ]
```

Example:

```
[
  "read A/B"
  "readwrite A/#"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners.*.users.<name>.hashedPassword
Specifies the hashed password for the MQTT User. To generate hashed password install the ‘mosquitto’ package and use ‘mosquitto_passwd’, then extract the second field (after the ‘:’) from the generated file.

Type: null or single−line string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners.*.users.<name>.hashedPasswordFile
Specifies the path to a file containing the hashed password for the MQTT user. To generate hashed password install the ‘mosquitto’ package and use ‘mosquitto_passwd’, then remove the ‘username:’ prefix from the generated file. The file is securely passed to mosquitto by leveraging systemd credentials. No special permissions need to be set on this file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/file"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners.*.users.<name>.password
Specifies the (clear text) password for the MQTT User.

Type: null or single−line string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.listeners.*.users.<name>.passwordFile
Specifies the path to a file containing the clear text password for the MQTT user. The file is securely passed to mosquitto by leveraging systemd credentials. No special permissions need to be set on this file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/path/to/file"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.logDest
Destinations to send log messages to.

Type: list of (absolute path or one of “stdout”, “stderr”, “syslog”, “topic”, “dlt”)

Default:

```
[
  "stderr"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.logType
Types of messages to log.

Type: list of (one of “debug”, “error”, “warning”, “notice”, “information”, “subscribe”, “unsubscribe”, “websockets”, “none”, “all”)

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.persistence

Enable persistent storage of subscriptions and messages.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.mosquitto.settings

Global configuration options for the mosquitto broker.

Type: open submodule of attribute set of (string, path, bool, or integer)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mosquitto.nix>

services.motioneye.enable

Whether to enable motionEye.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/video/motioneye.nix>

services.motioneye.packages.ffmpeg

The ffmpeg package to use.

Type: package

Default:

```
pkgs.ffmpeg
```

Declared by:

<nixpkgs/nixos/modules/services/video/motioneye.nix>

services.motioneye.packages.motion

The motion package to use.

Type: package

Default:

```
pkgs.motion
```

Declared by:

<nixpkgs/nixos/modules/services/video/motioneye.nix>

services.motioneye.packages.motioneye
The motioneye package to use.

Type: package

Default:

```
pkgs.motioneye
```

Declared by:
<nixpkgs/nixos/modules/services/video/motioneye.nix>

services.motioneye.group
Group to run motionEye under.

Type: string

Default:

```
"motioneye"
```

Declared by:
<nixpkgs/nixos/modules/services/video/motioneye.nix>

services.motioneye.settings
Configuration to put in motioneye.conf. See **https://github.com/motioneye-project/motioneye/wiki/Configuration-File** for more details.

Type: attribute set of string

Default:

```
{
  conf_path = lib.mkDefault "/var/lib/motioneye/conf";
  run_path = lib.mkDefault "/run/motioneye";
  log_path = lib.mkDefault "/var/log/motioneye";
  media_path = lib.mkDefault "/var/lib/motioneye/media";
}
```

Declared by:
<nixpkgs/nixos/modules/services/video/motioneye.nix>

services.motioneye.user
User to run motionEye under.

Type: string

Default:

```
"motioneye"
```

Declared by:
<nixpkgs/nixos/modules/services/video/motioneye.nix>

services.movim.enable
Whether to enable a Movim instance.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.package
The movim package to use.

Type: package

Default:

```
pkgs.movim
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.dataDir
State directory of the ‘movim’ user which holds the application’s state & data.

Type: absolute path

Default:

```
"/var/lib/movim"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.database.createLocally
local database using UNIX socket authentication

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.database.name
Database name.

Type: non−empty string

Default:

```
"movim"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.database.type
Database engine to use.

Type: one of “mariadb”, “postgresql”

Default:

```
"postgresql"
```

Example:

```
"mariadb"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.database.user

Database username.

Type: non−empty string

Default:

```
"movim"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.debug

Debugging logs.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.domain

Fully−qualified domain name (FQDN) for the Movim instance.

Type: non−empty string

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.group

Group running Movim service

Type: non−empty string

Default:

```
"movim"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o

With this option, you can customize an H2O virtual host which already has sensible defaults for Movim. Set to '{ }' if you do not need any customization to the virtual host. If enabled, then by default, the **serverName** is '${domain}', If this is set to 'null' (the default), no H2O 'hosts' will be configured.

Type: null or (submodule)

Default:

```
null
```

Example:

```
{
  serverAliases = [
    "pics.${config.movim.domain}"
  ];
  acme.enable = true;
  tls.policy = "force";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.acme
ACME options for virtual host.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.acme.enable
Whether to ask Let's Encrypt to sign a certificate for this virtual host. Alternatively, an existing host can be used thru **acme.useHost**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.acme.root
Directory for the ACME challenge, which is **public**. Don't put certs or keys in here. Set to 'null' to inherit from config.security.acme.

Type: null or absolute path

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.acme.useHost
An existing Let's Encrypt certificate to use for this virtual host. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **acme.enable**. Note that this option neither creates any certificates nor does it add subdomains to existing ones — you will need to create them manually using **security.acme.certs**.

Type: null or non−empty string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.host
Set the host address for this virtual host. If unset, the default is to listen on all network interfaces.

Type: null or non−empty string

Default:

```
null
```

Example:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.http
HTTP options for virtual host

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.http.port
Override the default HTTP port for this virtual host.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
config.services.h2o.defaultHTTPListenPort
```

Example:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.serverAliases
Additional names of virtual hosts served by this virtual host configuration.

Type: list of non−empty string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.serverName
Server name to be used for this virtual host. Defaults to attribute name in hosts.

Type: null or non−empty string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.settings

Attrset to be transformed into YAML for host config. Note that the HTTP / TLS configurations will override these config values. See **https://h2o.examp1e.net/configure/base_directives.html#hosts**.

Type: attribute set

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.tls

TLS options for virtual host

Type: null or (submodule)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.tls.extraSettings

Additional TLS/SSL−related configuration options. See **https://h2o.examp1e.net/configure/base_directives.html#listen−ssl**.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  minimum−version = "TLSv1.3";
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.tls.identity

Key / certificate pairs for the virtual host.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    key−file = "/path/to/rsa.key";
    certificate−file = "/path/to/rsa.crt";
  }
  {
    key−file = "/path/to/ecdsa.key";
    certificate−file = "/path/to/ecdsa.crt";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.tls.identity.*.certificate−file
Path to certificate file. See **https://h2o.examp1e.net/configure/base_directives.html#certificate−file**.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.tls.identity.*.key−file
Path to key file. See **https://h2o.examp1e.net/configure/base_directives.html#key−file**.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.tls.policy
'add' will additionally listen for TLS connections. 'only' will disable TLS connections. 'force' will redirect non−TLS traffic to the TLS connection.

Type: one of "add", "only", "force"

Example:

```
"force"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.tls.port
Override the default TLS port for this virtual host.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
config.services.h2o.defaultTLSListenPort
```

Example:

```
8443
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.tls.quic
Enables HTTP/3 over QUIC on the UDP port for TLS. The attrset provides fine−turning for QUIC behavior, but can be empty. See **https://h2o.examp1e.net/configure/http3_directives.html#quic−attributes**.

Type: null or (attribute set)

Default:

```
null
```

Example:

```
{
  amp−limit = 2;
  handshake−timeout−rtt−multiplier = 300;
  retry = "ON";
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.tls.recommendations
By default, H2O, without prejudice, will use as many TLS versions & cipher suites as it & the TLS library (OpenSSL) can support. The user is expected to hone settings for the security of their server. Setting some constraints is recommended, & if unsure about what TLS settings to use, this option gives curated TLS settings recommendations from Mozilla's 'SSL Configuration Generator' project (see **https://ssl−config.mozilla.org**) or read more at Mozilla's Wiki (see **https://wiki.mozilla.org/Security/Server_Side_TLS**).

modern
Services with clients that support TLS 1.3 & don't need backward compatibility

intermediate
General−purpose servers with a variety of clients, recommended for almost all systems

old
Compatible with a number of very old clients, & should be used only as a last resort

The default for all virtual hosts can be set with services.h2o.defaultTLSRecommendations, but this value can be overridden on a per−host basis using services.h2o.hosts.<name>.tls.recommmendations. The settings will also be overidden by manual values set with services.settings.h2o.hosts.<name>.tls.extraSettings.

NOTE: older/weaker ciphers might require overriding the OpenSSL version of H2O (such as 'openssl_legacy'). This can be done with sevices.settings.h2o.package.

Type: null or one of "modern", "intermediate", "old"

Default:

```
null
```

Example:

```
"intermediate"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.h2o.tls.redirectCode
HTTP status used by 'globalRedirect' & 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method & body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.logDir
Log directory of the 'movim' user which holds the application's logs.

Type: absolute path

Default:

```
"/var/log/movim"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.minifyStaticFiles
Do minification on public static files which reduces the size of assets—saving data for the server & users as well as offering a performance improvement. This adds typing for the 'minifyStaticFiles' attribute for the Movim package which *will* override any existing override value. The default 'true' will enable minification for all supported asset types with sane defaults.

Type: boolean or (submodule)

Default:
```
true
```

Example:
```
{
  script.enable = false;
  style = {
    enable = true;
    target = "> 0.5%, last 2 versions, Firefox ESR, not dead";
  };
  svg.enable = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx
With this option, you can customize an Nginx virtual host which already has sensible defaults for Movim. Set to '{ }' if you do not need any customization to the virtual host. If enabled, then by default, the **serverName** is '${domain}', If this is set to 'null' (the default), no Nginx 'virtualHost' will be configured.

Type: null or (submodule)

Default:
```
null
```

Example:
```
{
  serverAliases = [
    "pics.${config.movim.domain}"
  ];
  enableACME = true;
  forceHttps = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.enableACME
Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:
```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.acmeFallbackHost
Host which to proxy requests to if ACME challenge is not found. Useful if you want multiple hosts to be able to verify the same domain name.

With this option, you could request certificates for the present domain with an ACME client that is running on another host, which you would specify here.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.acmeRoot
Directory for the ACME challenge, which is **public**. Don’t put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme−challenge"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.addSSL
Whether to enable HTTPS in addition to plain HTTP. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.basicAuth
Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.default

Makes this vhost the default.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.extraConfig

These lines go to the end of the vhost verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.forceSSL

Whether to add a separate nginx server block that redirects (defaults to 301, configurable with ‘redirectCode’) all plain HTTP traffic to HTTPS. This will set defaults for ‘listen’ to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.globalRedirect

If set, all requests for this host are redirected (defaults to 301, configurable with ‘redirectCode’) to the given hostname.

Type: null or string

Default:

```
null
```

Example:

```
"newserver.example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.http2

Whether to enable the HTTP/2 protocol. Note that (as of writing) due to nginx's implementation, to disable HTTP/2 you have to disable it on all vhosts that use a given IP address / port. If there is one server block configured to enable http2, then it is enabled for all server blocks on this IP. See **https://stackoverflow.com/a/39466948/263061**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.http3

Whether to enable the HTTP/3 protocol. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that HTTP/3 support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/** HTTP/3 availability must be manually advertised, preferably in each location block.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.http3_hq

Whether to enable the HTTP/0.9 protocol negotiation used in QUIC interoperability tests. This requires activating the QUIC transport protocol 'services.nginx.virtualHosts.<name>.quic = true;'. Note that special application protocol support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.kTLS

Whether to enable kTLS support. Implementing TLS in the kernel (kTLS) improves performance by significantly reducing the need for copying operations between user space and the kernel. Required Nginx version 1.21.4 or later.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.listen

Listen addresses and ports for this virtual host. IPv6 addresses must be enclosed in square brackets. Note: this option overrides 'addSSL' and 'onlySSL'.

If you only want to set the addresses manually and not the ports, take a look at 'listenAddresses'.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    addr = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    addr = "192.154.1.1";
    port = 80;
  }
  {
    addr = "unix:/var/run/nginx.sock";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.listen.*.addr
Listen address.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.listen.*.extraParameters
Extra parameters of this listen directive.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "backlog=1024"
  "deferred"
]
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.listen.*.port
Port number to listen on. If unset and the listen address is not a socket then nginx defaults to 80.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.listen.*.proxyProtocol

Enable PROXY protocol.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.listen.*.ssl

Enable SSL.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Note: This option overrides ‘networking.enableIPv6’

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "127.0.0.1"
  "[::1]"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations

Declarative location config

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations.<name>.alias

Alias directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations.<name>.basicAuth

Basic Auth protection for a vhost.

WARNING: This is implemented to store the password in plain text in the Nix store.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  user = "password";
};
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations.<name>.basicAuthFile

Basic Auth password file for a vhost. Can be created by running **nix−shell −−packages apacheHttpd −−run 'htpasswd −B −c FILENAME USERNAME'**.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations.<name>.extraConfig

These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations.<name>.fastcgiParams

FastCGI parameters to override. Unlike in the Nginx configuration file, overriding only some default parameters won’t unset the default values for other parameters.

Type: attribute set of (string or absolute path)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations.<name>.index
Adds index directive.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with 'lib.mkOrder'. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations.<name>.proxyPass
Adds proxy_pass directive and sets recommended proxy headers if recommendedProxySettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations.<name>.proxyWebsockets
Whether to support proxying websocket connections with HTTP/1.1.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations.<name>.recommendedProxySettings
Enable recommended proxy settings.

Type: boolean

Default:

```
config.services.nginx.recommendedProxySettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations.<name>.recommendedUwsgiSettings
Enable recommended uwsgi settings.

Type: boolean

Default:

```
config.services.nginx.recommendedUwsgiSettings
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations.<name>.return
Adds a return directive, for e.g. redirections.

Type: null or string or signed integer

Default:

```
null
```

Example:

```
"301 http://example.com$request_uri"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations.<name>.root
Root directory for requests.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/root/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations.<name>.tryFiles
Adds try_files directive.

Type: null or string

Default:

```
null
```

Example:

```
"$uri =404"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.locations.<name>.uwsgiPass
Adds uwsgi_pass directive and sets recommended proxy headers if recommendedUwsgiSettings is enabled.

Type: null or string

Default:

```
null
```

Example:

```
"unix:/run/example/example.sock"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.onlySSL
Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.quic
Whether to enable the QUIC transport protocol. Note that QUIC support is experimental and *not* yet recommended for production. Read more at **https://quic.nginx.org/**

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.redirectCode
HTTP status used by 'globalRedirect' and 'forceSSL'. Possible usecases include temporary (302, 307) redirects, keeping the request method and body (307, 308), or explicitly resetting the method to GET (303). See **https://developer.mozilla.org/en−US/docs/Web/HTTP/Redirections**.

Type: integer between 300 and 399 (both inclusive)

Default:

```
301
```

Example:

```
308
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.rejectSSL

Whether to listen for and reject all HTTPS connections to this vhost. Useful in **default** server blocks to avoid serving the certificate for another vhost. Uses the 'ssl_reject_handshake' directive available in nginx versions 1.19.4 and above.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.reuseport

Create an individual listening socket . It is required to specify only once on one of the hosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.root

The path of the web root directory.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.nginx.serverName

Name of this virtual host. Defaults to attribute name in virtualHosts.

Type: null or string

Default:

```
null
```

Example:

```
"example.org"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/movim.nix>

services.movim.nginx.sslCertificate
Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/movim.nix>

services.movim.nginx.sslCertificateKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/movim.nix>

services.movim.nginx.sslTrustedCertificate
Path to root SSL certificate for stapling and client certificates.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${pkgs.cacert}/etc/ssl/certs/ca-bundle.crt"
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/movim.nix>

services.movim.nginx.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web-apps/movim.nix>

2. see the **security.acme.certs** option

services.movim.phpCfg

Extra PHP INI options such as ‘memory_limit’, ‘max_execution_time’, etc.

Type: attribute set of (signed integer or string or boolean)

Default:

```
{
  error_reporting = "E_ALL & ~E_DEPRECATED & ~E_STRICT";
  "opcache.enable_cli" = 1;
  "opcache.fast_shutdown" = 1;
  "opcache.interned_strings_buffer" = 8;
  "opcache.max_accelerated_files" = 6144;
  "opcache.memory_consumption" = 128;
  "opcache.revalidate_freq" = 2;
  output_buffering = 0;
}
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.phpPackage

The php package to use.

Type: package

Default:

```
pkgs.php
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.podConfig

Pod configuration (values from ‘php daemon.php config −−help’). Note that these values will now be disabled in the admin panel.

Type: submodule

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.podConfig.chatonly

Disable all the social feature (Communities, Blog…) and keep only the chat ones

Type: null or boolean

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.podConfig.description

General description of the instance

Type: null or non−empty string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.podConfig.disableregistration
Remove the XMPP registration flow and buttons from the interface

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.podConfig.info
Content of the info box on the login page

Type: null or non−empty string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.podConfig.locale
The server main locale

Type: null or non−empty string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.podConfig.loglevel
The server loglevel

Type: null or integer between 0 and 3 (both inclusive)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.podConfig.restrictsuggestions
Only suggest chatrooms, Communities and other contents that are available on the user XMPP server and related services

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.podConfig.timezone
The server timezone

Type: null or non−empty string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.podConfig.xmppdescription
The default XMPP server description

Type: null or non−empty string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.podConfig.xmppdomain
The default XMPP server domain

Type: null or non−empty string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.podConfig.xmppwhitelist
The allowlisted XMPP servers

Type: null or non−empty string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.poolConfig
Options for Movim's PHP−FPM pool.

Type: attribute set of (signed integer or string or boolean)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.port
Movim daemon port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.precompressStaticFiles
Aggressively precompress static files

Type: submodule

Default:

```
{
  brotli = {
    enable = true;
  };
  gzip = {
    enable = false;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.precompressStaticFiles.brotli.enable
Whether to enable Brotli precompression.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.precompressStaticFiles.brotli.package
The brotli package to use.

Type: package

Default:

```
pkgs.brotli
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.precompressStaticFiles.brotli.compressionLevel
Brotli compression level

Type: integer between 0 and 11 (both inclusive)

Default:

```
11
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.precompressStaticFiles.gzip.enable
Whether to enable Gzip precompression.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.precompressStaticFiles.gzip.package
The gzip package to use.

Type: package

Default:

```
pkgs.gzip
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.precompressStaticFiles.gzip.compressionLevel
Gzip compression level

Type: integer between 1 and 9 (both inclusive)

Default:

```
9
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.runtimeDir
Runtime directory of the ‘movim’ user which holds the application’s caches & temporary files.

Type: absolute path

Default:

```
"/run/movim"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.secretFile
The secret file to be sourced for the .env settings.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.settings

.env settings for Movim. Secrets should use ‘secretFile’ option instead. ‘null’s will be culled.

Type: attribute set of (null or signed integer or string or boolean)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.user

User running Movim service

Type: non−empty string

Default:

```
"movim"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.movim.verbose

Verbose logs.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/movim.nix>

services.mozillavpn.enable

Whether to enable Mozilla VPN daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mozillavpn.nix>

services.mpd.enable

Whether to enable MPD, the music player daemon.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpd.credentials

Credentials and permissions for accessing the mpd server.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    passwordFile = "/var/lib/secrets/mpd_readonly_password";
    permissions = [
      "read"
    ];
  }
  {
    passwordFile = "/var/lib/secrets/mpd_admin_password";
    permissions = [
      "read"
      "add"
      "player"
      "control"
      "admin"
    ];
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpd.credentials.*.passwordFile

Path to file containing the password.

Type: absolute path

Declared by:

<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpd.credentials.*.permissions

List of permissions that are granted with this password. Permissions can be “read”, “add”, “player”, “control”, “admin”.

Type: list of (one of “read”, “add”, “player”, “control”, “admin”)

Default:

```
[
  "read"
]
```

Declared by:

<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpd.dataDir

The directory where MPD stores its state, tag cache, playlists etc. If left as the default value this directory will automatically be created before the MPD server starts, otherwise the sysadmin is responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: absolute path

Default:

```
"/var/lib/mpd"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpd.fluidsynth
If set, add fluidsynth soundfont ‘decoder’ block.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpd.group
Group account under which MPD runs.

Type: string

Default:

```
"mpd"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpd.openFirewall
Open ports in the firewall for mpd. If ‘null’ (default), you might get a warning asking you to set it explicitly to ‘true’ or ‘false’, depending upon the value of ‘services.mpd.settings.bind_to_address’.

Type: null or boolean

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpd.settings
Configuration for MPD. MPD supports key−value like blocks for settings like ‘audio_output’ and ‘neighbor’. Some of these blocks can be specified multiple times, so the following configuration:

```
audio_output {
    device "iec958:CARD=Intel,DEV=0"
    mixer_control "PCM"
    name "My specific ALSA output"
    type "alsa"
}
audio_output {
    mixer_type "null"
    name "ALSA Null"
    type "alsa"
}
audio_output {
    name "The Pulse"
    type "pulse"
}
```

Can be inserted with:

```
audio_output = [
  {
    type = "alsa";
    name = "My specific ALSA output";
    device = "iec958:CARD=Intel,DEV=0";
    mixer_control = "PCM";
  }
  {
    type = "alsa";
    name = "ALSA Null";
    mixer_type = "null";
  }
  {
    type = "pulse";
    name = "The Pulse";
  }
];
```

Type: open submodule of attribute set of (string or signed integer or boolean or absolute path or list of attribute set of (string or signed integer or boolean or absolute path))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpd.settings.bind_to_address
The address for the daemon to listen on. Use ‘any’ to listen on all addresses.

Type: string

Default:

```
"127.0.0.1"
```

Example:

```
"any"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpd.settings.db_file
The path to MPD’s database.

Type: null or absolute path

Default:

```
"${dataDir}/tag_cache"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpd.settings.music_directory
The directory or URI where MPD reads music from. If left as the default value this directory will automatically be created before the MPD server starts, otherwise the sysadmin is responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: absolute path or string matching the pattern ([a−z]+)://.+

Default:

```
"${dataDir}/music"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpd.settings.playlist_directory
The directory where MPD stores playlists. If left as the default value this directory will automatically be created before the MPD server starts, otherwise the sysadmin is responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: absolute path

Default:

```
"${dataDir}/playlists"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpd.settings.port
This setting is the TCP port that is desired for the daemon to get assigned to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
6600
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpd.startWhenNeeded
If set, **mpd** is socket−activated; that is, instead of having it permanently running as a daemon, systemd will start it on the first incoming connection.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpd.user
User account under which MPD runs.

Type: string

Default:

```
"mpd"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpd.nix>

services.mpdscribble.enable
Whether to enable mpdscribble, an MPD client which submits info about tracks being played to Last.fm (formerly AudioScrobbler).

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpdscribble.nix>

services.mpdscribble.endpoints
Endpoints to scrobble to. If the endpoint is one of “jamendo”, “last.fm”, “libre.fm”, “listenbrainz” the url is set automatically.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "last.fm" = {
    passwordFile = "/run/secrets/lastfm_password";
    username = "foo";
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpdscribble.nix>

services.mpdscribble.endpoints.<name>.passwordFile
File containing the password, either as MD5SUM or cleartext.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpdscribble.nix>

services.mpdscribble.endpoints.<name>.url
The url endpoint where the scrobble API is listening.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpdscribble.nix>

services.mpdscribble.endpoints.<name>.username
Username for the scrobble service.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/audio/mpdscribble.nix>

services.mpdscribble.host
Host for the mpdscribble daemon to search for a mpd daemon on.

Type: string

Default:

```
if config.services.mpd.settings.bind_to_address != "any"
then config.services.mpd.settings.bind_to_address
else "localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpdscribble.nix>

services.mpdscribble.journalInterval
How often should mpdscribble save the journal file? [seconds]

Type: signed integer

Default:

```
600
```

Example:

```
60
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpdscribble.nix>

services.mpdscribble.passwordFile
File containing the password for the mpd daemon. If there is a local mpd configured using **services.mpd.credentials** the default is automatically set to a matching passwordFile of the local mpd.

Type: null or string

Default: The first password file with read access configured for MPD when using a local instance, otherwise null.

Declared by:
<nixpkgs/nixos/modules/services/audio/mpdscribble.nix>

services.mpdscribble.port
Port for the mpdscribble daemon to search for a mpd daemon on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
config.services.mpd.settings.port
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpdscribble.nix>

services.mpdscribble.proxy
HTTP proxy URL.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpdscribble.nix>

services.mpdscribble.verbose
Log level for the mpdscribble daemon.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mpdscribble.nix>

services.mptcpd.enable

Whether to enable the Multipath TCP path management daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mptcpd.nix>

services.mptcpd.package

The mptcpd package to use.

Type: package

Default:

```
pkgs.mptcpd
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mptcpd.nix>

services.mqtt2influxdb.enable

Whether to enable BigClown MQTT to InfluxDB bridge.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.package

The mqtt2influxdb package to use.

Type: package

Default:

```
pkgs.python3Packages.mqtt2influxdb
```

Declared by:

<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.environmentFiles

File to load as environment file. Environment variables from this file will be interpolated into the config file using envsubst with this syntax: '$ENVIRONMENT' or '${VARIABLE}'. This is useful to avoid putting secrets into the nix store.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
```

```
    "/run/keys/mqtt2influxdb.env"
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.influxdb.database
Name of the InfluxDB database.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.influxdb.host
Host where InfluxDB server is running.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.influxdb.password
Password for InfluxDB login.

It is highly suggested to use here replacement through environmentFiles as otherwise the password is put world readable to the store.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.influxdb.port
InfluxDB server port

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8086
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.influxdb.ssl
Use SSL to connect to the InfluxDB server.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.influxdb.username
Username for InfluxDB login.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.influxdb.verify_ssl
Verify SSL certificate when connecting to the InfluxDB server.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.mqtt.cafile
Certification Authority file for MQTT

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.mqtt.certfile
Certificate file for MQTT

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.mqtt.host
Host where MQTT server is running.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.mqtt.keyfile
Key file for MQTT

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.mqtt.password
MQTT password.

It is highly suggested to use here replacement through environmentFiles as otherwise the password is put world readable to the store.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.mqtt.port
MQTT server port.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
1883
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.mqtt.username
Username used to connect to the MQTT server.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.points
Points to bridge from MQTT to InfluxDB.

Type: list of (submodule)

Default:

```
[
  {
    fields = {
      value = "$.payload";
    };
    measurement = "temperature";
    tags = {
      channel = "$.topic[3]";
      id = "$.topic[1]";
    };
    topic = "node/+/thermometer/+/temperature";
  }
  {
    fields = {
      value = "$.payload";
    };
```

```
      measurement = "relative-humidity";
      tags = {
        channel = "$.topic[3]";
        id = "$.topic[1]";
      };
      topic = "node/+/hygrometer/+/relative-humidity";
    }
    {
      fields = {
        value = "$.payload";
      };
      measurement = "illuminance";
      tags = {
        id = "$.topic[1]";
      };
      topic = "node/+/lux-meter/0:0/illuminance";
    }
    {
      fields = {
        value = "$.payload";
      };
      measurement = "pressure";
      tags = {
        id = "$.topic[1]";
      };
      topic = "node/+/barometer/0:0/pressure";
    }
    {
      fields = {
        value = "$.payload";
      };
      measurement = "co2";
      tags = {
        id = "$.topic[1]";
      };
      topic = "node/+/co2-meter/-/concentration";
    }
    {
      fields = {
        value = "$.payload";
      };
      measurement = "voltage";
      tags = {
        id = "$.topic[1]";
      };
      topic = "node/+/battery/+/voltage";
    }
    {
      fields = {
        value = "$.payload";
      };
      measurement = "button";
      tags = {
```

```
            channel = "$.topic[3]";
            id = "$.topic[1]";
          };
          topic = "node/+/push-button/+/event-count";
        }
        {
          fields = {
            value = "$.payload";
          };
          measurement = "tvoc";
          tags = {
            id = "$.topic[1]";
          };
          topic = "node/+/voc-lp-sensor/0:0/tvoc";
        }
      ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.points.*.fields
Field selector.

Type: submodule

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.points.*.fields.type
Type to be picked up

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.points.*.fields.value
Value to be picked up

Type: string

Default:

```
"$.payload"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.points.*.measurement
Name of the measurement

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.points.*.tags
Tags applied

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mqtt2influxdb.points.*.topic
MQTT topic to subscribe to.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/mqtt2influxdb.nix>

services.mstpd.enable
Whether to enable the multiple spanning tree protocol daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mstpd.nix>

services.mtprotoproxy.enable
Whether to enable mtprotoproxy.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mtprotoproxy.nix>

services.mtprotoproxy.adTag
Tag for advertising that can be obtained from @MTProxybot.

Type: null or string

Default:

```
null
```

Example:

```
"3c09c680b76ee91a4c25ad51f742267d"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mtprotoproxy.nix>

services.mtprotoproxy.extraConfig

Extra configuration options for mtprotoproxy.

Type: attribute set

Default:

```
{ }
```

Example:

```
{
  STATS_PRINT_PERIOD = 600;
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mtprotoproxy.nix>

services.mtprotoproxy.port

TCP port to accept mtproto connections on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3256
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mtprotoproxy.nix>

services.mtprotoproxy.secureOnly

Don’t allow users to connect in non−secure mode (without random padding).

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mtprotoproxy.nix>

services.mtprotoproxy.users

Allowed users and their secrets. A secret is a 32 characters long hex string.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  tg = "00000000000000000000000000000000";
  tg2 = "0123456789abcdef0123456789abcdef";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mtprotoproxy.nix>

services.mtr−exporter.enable

Whether to enable a Prometheus exporter for MTR.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mtr−exporter.nix>

services.mtr−exporter.package
The mtr−exporter package to use.

Type: package

Default:

```
pkgs.mtr−exporter
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mtr−exporter.nix>

services.mtr−exporter.address
Listen address for MTR exporter.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mtr−exporter.nix>

services.mtr−exporter.extraFlags
Extra command line options to pass to MTR exporter.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−flag.deprecatedMetrics"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mtr−exporter.nix>

services.mtr−exporter.jobs
List of MTR jobs. Will be added to /etc/mtr−exporter.conf

Type: non−empty (list of (submodule))

Declared by:
<nixpkgs/nixos/modules/services/networking/mtr−exporter.nix>

services.mtr−exporter.jobs.*.address
Target address for MTR client.

Type: string

Example:

```
"host.example.org:1234"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mtr−exporter.nix>

services.mtr−exporter.jobs.*.flags
Additional flags to pass to MTR.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−G1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mtr−exporter.nix>

services.mtr−exporter.jobs.*.name
Name of ICMP pinging job.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/mtr−exporter.nix>

services.mtr−exporter.jobs.*.schedule
Schedule of MTR checks. Also accepts Cron format.

Type: string

Default:

```
"@every 60s"
```

Example:

```
"@hourly"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mtr−exporter.nix>

services.mtr−exporter.mtrPackage
The mtr package to use.

Type: package

Default:

```
pkgs.mtr
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mtr−exporter.nix>

services.mtr−exporter.port
Listen port for MTR exporter.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8080
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mtr−exporter.nix>

services.mullvad−vpn.enable
This option enables Mullvad VPN daemon.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mullvad−vpn.nix>

services.mullvad−vpn.enableEarlyBootBlocking
This option activates an additional oneshot systemd service to ensure that the mullvad daemon will start and block traffic before any network configuration will be applied. This matches what upstream Mullvad distributes for their supported distros, but is disabled by default in NixOS as it may conflict with non−Mullvad network configuration.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mullvad−vpn.nix>

services.mullvad−vpn.enableExcludeWrapper
This option activates the wrapper that allows the use of mullvad−exclude. Might have minor security impact, so consider disabling if you do not use the feature.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mullvad−vpn.nix>

services.mullvad−vpn.package
The mullvad package to use. ‘pkgs.mullvad’ only provides the CLI tool, ‘pkgs.mullvad−vpn’ provides both the CLI and the GUI.

Type: package

Default:

```
pkgs.mullvad
```

Example:

```
mullvad-vpn
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mullvad−vpn.nix>

services.multipath.enable
Whether to enable the device mapper multipath (DM−MP) daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.package
The multipath−tools package to use.

Type: package

Default:

```
pkgs.multipath-tools
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.blacklist
This section defines which devices should be excluded from the multipath topology discovery.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.blacklist_exceptions
This section defines which devices should be included in the multipath topology discovery, despite being listed in the blacklist section.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.defaults
This section defines default values for attributes which are used whenever no values are given in the appropriate device or multipath sections.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices
This option allows you to define arrays for use in multipath groups.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
```

```
      vendor = "\"COMPELNT\"";
      product = "\"Compellent Vol\"";
      path_checker = "tur";
      no_path_retry = "queue";
      max_sectors_kb = 256;
    }, ...
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.alias_prefix
The user_friendly_names prefix to use for this device type, instead of the default mpath

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.all_tg_pt
Set the 'all targets ports' flag when registering keys with mpathpersist

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.deferred_remove
If set to "yes", multipathd will do a deferred remove instead of a regular remove when the last path device has been deleted. This means that if the multipath device is still in use, it will be freed when the last user closes it. If path is added to the multipath device before the last user closes it, the deferred remove will be canceled.

Type: null or one of "yes", "no"

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.delay_wait_checks
This option is deprecated, and mapped to san_path_err_recovery_time

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.delay_watch_checks

This option is deprecated, and mapped to san_path_err_forget_rate

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.detect_checker

If set to “yes”, multipath will try to detect if the device supports SCSI−3 ALUA. If so, the device will automatically use the tur checker. If set to “no”, the checker will be selected as usual.

Type: null or one of “yes”, “no”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.detect_prio

If set to “yes”, multipath will try to detect if the device supports SCSI−3 ALUA. If so, the device will automatically use the sysfs prioritizer if the required sysf attributes access_state and preferred_path are supported, or the alua prioritizer if not. If set to “no”, the prioritizer will be selected as usual.

Type: null or one of “yes”, “no”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.dev_loss_tmo

Specify the number of seconds the SCSI layer will wait after a problem has been detected on a FC remote port before removing it from the system. This can be set to “infinity” which sets it to the max value of 2147483647 seconds, or 68 years. It will be automatically adjusted to the overall retry interval no_path_retry * polling_interval if a number of retries is given with no_path_retry and the overall retry interval is longer than the specified dev_loss_tmo value. The Linux kernel will cap this value to 600 if fast_io_fail_tmo is not set.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.failback

Tell multipathd how to manage path group failback. Quote integers as strings

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.fast_io_fail_tmo
Specify the number of seconds the SCSI layer will wait after a problem has been detected on a FC remote port before failing I/O to devices on that remote port. This should be smaller than dev_loss_tmo. Setting this to “off” will disable the timeout. Quote integers as strings.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.features
Specify any device−mapper features to be used

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.flush_on_last_del
If set to “yes” multipathd will disable queueing when the last path to a device has been deleted.

Type: null or one of “yes”, “no”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.getuid_callout
(Superseded by uid_attribute) The default program and args to callout to obtain a unique path identifier. Should be specified with an absolute path.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.ghost_delay
Sets the number of seconds that multipath will wait after creating a device with only ghost paths before marking it ready for use in systemd

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.hardware_handler

The hardware handler to use for this device type

Type: null or one of “emc”, “rdac”, “hp_sw”, “alua”, “ana”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.marginal_path_double_failed_time

One of the four parameters of supporting path check based on accounting IO error such as intermittent error

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.marginal_path_err_rate_threshold

The error rate threshold as a permillage (1/1000)

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.marginal_path_err_recheck_gap_time

One of the four parameters of supporting path check based on accounting IO error such as intermittent error

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.marginal_path_err_sample_time

One of the four parameters of supporting path check based on accounting IO error such as intermittent error

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.max_sectors_kb

Sets the max_sectors_kb device parameter on all path devices and the multipath device to the specified value

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.no_path_retry

Specify what to do when all paths are down. Quote integers as strings

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.path_checker

The default method used to determine the paths state

Type: one of “readsector0”, “tur”, “emc_clariion”, “hp_sw”, “rdac”, “directio”, “cciss_tur”, “none”

Default:

```
"tur"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.path_grouping_policy

The default path grouping policy to apply to unspecified multipaths

Type: null or one of “failover”, “multibus”, “group_by_serial”, “group_by_prio”, “group_by_node_name”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.path_selector

The default path selector algorithm to use; they are offered by the kernel multipath target

Type: null or one of "“round−robin 0"”, "“queue−length 0"”, "“service−time 0"”, "“historical−service−time 0"”

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.prio
The name of the path priority routine

Type: null or one of “none”, “const”, “sysfs”, “emc”, “alua”, “ontap”, “rdac”, “hp_sw”, “hds”, “random”, “weightedpath”, “path_latency”, “ana”, “datacore”, “iet”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.prio_args
Arguments to pass to to the prio function

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.product
Regular expression to match the product name

Type: string

Example:

```
"Compellent Vol"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.product_blacklist
Products with the given vendor matching this string are blacklisted

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.revision
Regular expression to match the product revision

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.rr_min_io
Number of I/O requests to route to a path before switching to the next in the same path group. This is only for Block I/O (BIO) based multipath and only apply to round−robin path_selector.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.rr_min_io_rq
Number of I/O requests to route to a path before switching to the next in the same path group. This is only for Request based multipath and only apply to round−robin path_selector.

Type: null or signed integer

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.rr_weight
If set to priorities the multipath configurator will assign path weights as “path prio * rr_min_io”.

Type: null or one of “priorities”, “uniform”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.san_path_err_forget_rate
If set to a value greater than 0, multipathd will check whether the path failures has exceeded the san_path_err_threshold within this many checks i.e san_path_err_forget_rate. If so we will not reinstante the path till san_path_err_recovery_time.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.san_path_err_recovery_time
If set to a value greater than 0, multipathd will make sure that when path failures has exceeded the san_path_err_threshold within san_path_err_forget_rate then the path will be placed in failed state for san_path_err_recovery_time duration. Once san_path_err_recovery_time has timeout we will reinstante the failed path. san_path_err_recovery_time value should be in secs.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.san_path_err_threshold
If set to a value greater than 0, multipathd will watch paths and check how many times a path has been failed due to errors.If the number of failures on a particular path is greater then the san_path_err_threshold, then the path will not reinstate till san_path_err_recovery_time. These path failures should occur within a san_path_err_forget_rate checks, if not we will consider the path is good enough to reinstantate.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.skip_kpartx
If set to yes, kpartx will not automatically create partitions on the device

Type: null or one of “yes”, “no”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.uid_attribute
The udev attribute providing a unique path identifier (WWID)

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.user_friendly_names
If set to “yes”, using the bindings file /etc/multipath/bindings to assign a persistent and unique alias to the multipath, in the form of mpath. If set to “no” use the WWID as the alias. In either case this be will be overridden by any specific aliases in the multipaths section.

Type: null or one of “yes”, “no”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.vendor
Regular expression to match the vendor name

Type: string

Example:

```
"COMPELNT"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.devices.*.vpd_vendor
The vendor specific vpd page information, using the vpd page abbreviation

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.extraConfig

Lines to append to default multipath.conf

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.extraConfigFile

Append an additional file's contents to /etc/multipath.conf

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.overrides

This section defines values for attributes that should override the device−specific settings for all devices.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.pathGroups

This option allows you to define multipath groups as described in http://christophe.varoqui.free.fr/usage.html.

Type: list of (submodule)

Example:

```
[
  {
    wwid = "360080e500043b35c0123456789abcdef";
    alias = 10001234;
    array = "bigarray.example.com";
    fsType = "zfs"; # optional
    options = "ro"; # optional
  }, ...
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.pathGroups.*.alias

The name of the multipath device

Type: signed integer

Example:

```
1001234
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.pathGroups.*.array
The DNS name of the storage array

Type: string

Default:

```
null
```

Example:

```
"bigarray.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.pathGroups.*.fsType
Type of the filesystem

Type: null or string

Default:

```
null
```

Example:

```
"zfs"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.pathGroups.*.options
Options used to mount the file system

Type: null or string

Default:

```
null
```

Example:

```
"ro"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.multipath.pathGroups.*.wwid
The identifier for the multipath device

Type: string (with check: hexadecimal string)

Example:

```
"360080e500043b35c0123456789abcdef"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/multipath.nix>

services.munge.enable
Whether to enable munge service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/security/munge.nix>

services.munge.password

The path to a daemon's secret key.

Type: absolute path

Default:

```
"/etc/munge/munge.key"
```

Declared by:

<nixpkgs/nixos/modules/services/security/munge.nix>

services.munin−cron.enable

Enable munin−cron. Takes care of all heavy lifting to collect data from nodes and draws graphs to html. Runs munin−update, munin−limits, munin−graphs and munin−html in that order.

HTML output is in */var/www/munin/*, configure your favourite webserver to serve static files.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/munin.nix>

services.munin−cron.extraCSS

Custom styling for the HTML that munin−cron generates. This will be appended to the CSS files used by munin−cron and will thus take precedence over the builtin styles.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
/* A simple dark theme. */
html, body { background: #222222; }
#header, #footer { background: #333333; }
img.i, img.iwarn, img.icrit, img.iunkn {
  filter: invert(100%) hue−rotate(−30deg);
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/munin.nix>

services.munin−cron.extraGlobalConfig

munin.conf extra global configuration. See **https://guide.munin−monitoring.org/en/latest/reference/munin.conf.html**. Useful to setup notifications, see **https://guide.munin−monitoring.org/en/latest/tutorial/alert.html**

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
  contact.email.command mail -s "Munin notification for ''${var:ho \
st}" someone@example.com
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/munin.nix>

services.munin-cron.hosts

Definitions of hosts of nodes to collect data from. Needs at least one host for cron to succeed. See **https://guide.munin-monitoring.org/en/latest/reference/munin.conf.html**

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
[${config.networking.hostName}]
address localhost
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/munin.nix>

services.munin-node.enable

Enable Munin Node agent. Munin node listens on 0.0.0.0 and by default accepts connections only from 127.0.0.1 for security reasons.

See **https://guide.munin-monitoring.org/en/latest/architecture/index.html**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/munin.nix>

services.munin-node.disabledPlugins

Munin plugins to disable, even if 'munin-node-configure --suggest' tries to enable them. To disable a wildcard plugin, use an actual wildcard, as in the example.

munin_stats is disabled by default as it tries to read '/var/log/munin/munin-update.log' for timing information, and the NixOS build of Munin does not write this file.

Type: list of string

Default:

```
[
  "munin_stats"
]
```

Example:

```
[
  "diskstats"
  "zfs_usage_*"
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/munin.nix>

services.munin−node.extraAutoPlugins

Additional Munin plugins to autoconfigure, using ‘munin−node−configure −−suggest’. These should be the actual paths to the plugin files (or directories containing them), not just their names.

If you want to manually enable individual plugins instead, use **services.munin−node.extraPlugins**.

Note that only plugins that have the ‘autoconfig’ capability will do anything if listed here, since plugins that cannot autoconfigure won’t be automatically enabled by ‘munin−node−configure’.

Plugins will be copied into the Nix store, and it will attempt to modify them to run properly by fixing hardcoded references to ‘/bin’, ‘/usr/bin’, ‘/sbin’, and ‘/usr/sbin’.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[
  /src/munin-contrib/plugins/zfs
  /src/munin-contrib/plugins/ssh
];
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/munin.nix>

services.munin−node.extraConfig

munin−node.conf extra configuration. See **https://guide.munin−monitoring.org/en/latest/reference/munin−node.conf.html**

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/munin.nix>

services.munin−node.extraPluginConfig

plugin−conf.d extra plugin configuration. See **https://guide.munin−monitoring.org/en/latest/plugin/use.html**

Type: strings concatenated with “\n”

Default:

```
""
```

Example:

```
[fail2ban_*]
user root
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/munin.nix>

services.munin−node.extraPlugins

Additional Munin plugins to activate. Keys are the name of the plugin symlink, values are the path to the underlying plugin script. You can use the same plugin script multiple times (e.g. for wildcard plugins).

Note that these plugins do not participate in autoconfiguration. If you want to autoconfigure additional plugins, use **services.munin−node.extraAutoPlugins**.

Plugins enabled in this manner take precedence over autoconfigured plugins.

Plugins will be copied into the Nix store, and it will attempt to modify them to run properly by fixing hardcoded references to ‘/bin’, ‘/usr/bin’, ‘/sbin’, and ‘/usr/sbin’.

Type: attribute set of absolute path

Default:

```
{ }
```

Example:

```
{
  zfs_usage_bigpool = /src/munin-contrib/plugins/zfs/zfs_usage_;
  zfs_usage_smallpool = /src/munin-contrib/plugins/zfs/zfs_usage_;
  zfs_list = /src/munin-contrib/plugins/zfs/zfs_list;
};
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/munin.nix>

services.murmur.enable

Whether to enable Mumble server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.package

The murmur package to use.

Type: package

Default:

```
pkgs.murmur
```

Declared by:

<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.allowHtml

Allow HTML in client messages, comments, and channel descriptions.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.autobanAttempts

Number of attempts a client is allowed to make in ‘autobanTimeframe’ seconds, before being banned for ‘autobanTime’.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.autobanTime
The amount of time an IP ban lasts (in seconds).

Type: signed integer

Default:

```
300
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.autobanTimeframe
Timeframe in which a client can connect without being banned for repeated attempts (in seconds).

Type: signed integer

Default:

```
120
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.bandwidth
Maximum bandwidth (in bits per second) that clients may send speech at.

Type: signed integer

Default:

```
72000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.bonjour
Whether to enable Bonjour auto−discovery, which allows clients over your LAN to automatically discover Mumble servers.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.clientCertRequired
Whether to enable requiring clients to authenticate via certificates.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.dbus
Enable D−Bus remote control. Set to the bus you want Murmur to connect to.

Type: one of <null>, “session”, “system”

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.environmentFile
Environment file as defined in **systemd.exec**(5).

Secrets may be passed to the service without adding them to the world−readable Nix store, by specifying placeholder variables as the option value in Nix and setting these variables accordingly in the environment file.

```
# snippet of murmur-related config
services.murmur.password = "$MURMURD_PASSWORD";
```

```
# content of the environment file
MURMURD_PASSWORD=verysecretpassword
```

Note that this file needs to be available on the host on which ‘murmur’ is running.

Type: null or absolute path

Default:

```
null
```

Example:

```
"${config.services.murmur.stateDir}/murmurd.env"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.extraConfig
Extra configuration to put into murmur.ini.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.group
The name of an existing group to use to run the service. If not specified, the default group will be created.

Type: string

Default:

```
"murmur"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.hostName

Host to bind to. Defaults binding on all addresses.

Type: string

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.imgMsgLength

Max length of image messages. Set 0 for no limit.

Type: signed integer

Default:

```
131072
```

Declared by:

<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.logDays

How long to store RPC logs for in the database. Set 0 to keep logs forever, or −1 to disable DB logging.

Type: signed integer

Default:

```
31
```

Declared by:

<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.logToFile

Whether to enable logging to a file instead of journald, which is stored in /var/log/murmur.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.openFirewall

Whether to enable opening ports in the firewall for the Mumble server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.password

Required password to join server, if specified.

Type: string

Default:

""

Declared by:

<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.port

Ports to bind to (UDP and TCP).

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

`64738`

Declared by:

<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.registerHostname

DNS hostname where your server can be reached. This is only needed if you want your server to be accessed by its hostname and not IP − but the name *must* resolve on the internet properly.

Type: string

Default:

""

Declared by:

<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.registerName

Public server registration name, and also the name of the Root channel. Even if you don't publicly register your server, you probably still want to set this.

Type: string

Default:

""

Declared by:

<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.registerPassword

Public server registry password, used authenticate your server to the registry to prevent impersonation; required for subsequent registry updates.

Type: string

Default:

""

Declared by:

<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.registerUrl
URL website for your server.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.sendVersion
Send Murmur version in UDP response.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.stateDir
Directory to store data for the server.

Type: absolute path

Default:

```
"/var/lib/murmur"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.textMsgLength
Max length of text messages. Set 0 for no limit.

Type: signed integer

Default:

```
5000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.tls.caPath
Path to your TLS CA certificate.

Type: null or absolute path

Default: If **services.murmur.tls.useACMEHost** is set, defaults to what's provided by the ACME module.

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.tls.certPath
Path to your TLS certificate.

Type: null or absolute path

Default: If **services.murmur.tls.useACMEHost** is set, defaults to what's provided by the ACME module.

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.tls.keyPath
Path to your TLS key.

Type: null or absolute path

Default: If **services.murmur.tls.useACMEHost** is set, defaults to what's provided by the ACME module.

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.tls.useACMEHost
Host of an existing Let's Encrypt certificate to use for TLS. Make sure that the certificate directory is readable by the 'murmur' user or group. *Note that this option does not create any certificates and it doesn't add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**.

Type: null or string

Default:

```
null
```

Example:

```
"mumble.example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.user
The name of an existing user to use to run the service. If not specified, the default user will be created.

Type: string

Default:

```
"murmur"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.users
Maximum number of concurrent clients allowed.

Type: signed integer

Default:

```
100
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.murmur.welcometext
Welcome message for connected clients.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/murmur.nix>

services.music−assistant.enable
Whether to enable Music Assistant.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/music−assistant.nix>

services.music−assistant.package
The music−assistant package to use.

Type: package

Default:

```
pkgs.music−assistant
```

Declared by:
<nixpkgs/nixos/modules/services/audio/music−assistant.nix>

services.music−assistant.extraOptions
List of extra options to pass to the music−assistant executable.

Type: list of string

Default:

```
[
  "−−config"
  "/var/lib/music−assistant"
]
```

Example:

```
[
  "−−log−level"
  "DEBUG"
]
```

Declared by:
<nixpkgs/nixos/modules/services/audio/music−assistant.nix>

services.music−assistant.openFirewall
Whether to open required ports for the configured providers. Currently airplay and sendspin need port to be opened to function.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/audio/music−assistant.nix>

services.music−assistant.providers

List of provider names for which dependencies will be installed.

Type: list of (one of “airplay”, “airplay_receiver”, “alexa”, “apple_music”, “ard_audiothek”, “ariacast_receiver”, “audible”, “audiobookshelf”, “bandcamp”, “bbc_sounds”, “bluesound”, “builtin”, “chromecast”, “coverartarchive”, “dashie_kiosk”, “deezer”, “digitally_incorporated”, “dlna”, “emby”, “fanarttv”, “filesystem_local”, “filesystem_nfs”, “filesystem_smb”, “fully_kiosk”, “genius_lyrics”, “gpodder”, “hass”, “hass_players”, “heos”, “ibroadcast”, “internet_archive”, “itunes_podcasts”, “jellyfin”, “kion_music”, “lastfm_scrobble”, “listenbrainz_scrobble”, “lrclib”, “musicbrainz”, “musiccast”, “nicovideo”, “nugs”, “opensubsonic”, “orf_radiothek”, “pandora”, “party”, “phishin”, “plex”, “plex_connect”, “podcast_index”, “podcastfeed”, “qobuz”, “radiobrowser”, “radioparadise”, “roku_media_assistant”, “sendspin”, “siriusxm”, “snapcast”, “somafm”, “sonos”, “sonos_s1”, “soundcloud”, “spotify”, “spotify_connect”, “squeezelite”, “subsonic_scrobble”, “sync_group”, “test”, “theaudiodb”, “tidal”, “tunein”, “universal_group”, “universal_player”, “vban_receiver”, “yandex_music”, “yousee”, “ytmusic”, “zvuk_music”)

Default:

```
[ ]
```

Example:

```
[
  "opensubsonic"
  "snapcast"
]
```

Declared by:

<nixpkgs/nixos/modules/services/audio/music−assistant.nix>

services.mycelium.enable

Whether to enable mycelium network.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mycelium.nix>

services.mycelium.package

The mycelium package to use.

Type: package

Default:

```
pkgs.mycelium
```

Declared by:

<nixpkgs/nixos/modules/services/networking/mycelium.nix>

services.mycelium.addHostedPublicNodes

Adds the hosted peers from **https://github.com/threefoldtech/mycelium#hosted−public−nodes**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mycelium.nix>

services.mycelium.extraArgs
Extra command−line arguments to pass to mycelium.

See ‘mycelium −−help’ for all available options.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mycelium.nix>

services.mycelium.keyFile
Optional path to a file containing the mycelium key material. If unset, the location ‘/var/lib/mycelium/key.bin’ will be used. If no key exist at this location, it will be generated on startup.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mycelium.nix>

services.mycelium.openFirewall
Open the firewall for mycelium

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mycelium.nix>

services.mycelium.peers
List of peers to connect to, in the formats:

- ‘quic://[2001:0db8::1]:9651’
- ‘quic://192.0.2.1:9651’
- ‘tcp://[2001:0db8::1]:9651’
- ‘tcp://192.0.2.1:9651’

If addHostedPublicNodes is set to true, the hosted public nodes will also be added.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/mycelium.nix>

services.mympd.enable
Whether to enable MyMPD server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mympd.nix>

services.mympd.package
The mympd package to use.

Type: package

Default:

```
pkgs.mympd
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mympd.nix>

services.mympd.extraGroups
Additional groups for the systemd service.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "music"
]
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mympd.nix>

services.mympd.openFirewall
Open ports needed for the functionality of the program.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/audio/mympd.nix>

services.mympd.settings
Manages the configuration files declaratively. For all the configuration options, see **https://jcorporation.github.io/myMPD/020−configuration/configuration−files**.

Each key represents the “File” column from the upstream configuration table, and the value is the content of that file.

Type: open submodule of attribute set of (null or string or boolean or signed integer)

Declared by:
<nixpkgs/nixos/modules/services/audio/mympd.nix>

services.mympd.settings.http_port
The HTTP port where mympd’s web interface will be available.

The HTTPS/SSL port can be configured via **config**.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Example:

```
"8080"
```

Declared by:

<nixpkgs/nixos/modules/services/audio/mympd.nix>

services.mympd.settings.ssl

Whether to enable listening on the SSL port.

Refer to **https://jcorporation.github.io/myMPD/020−configuration/configuration−files#ssl−options** for more information.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/audio/mympd.nix>

services.mysql.enable

Whether to enable MySQL server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.package

Which MySQL derivation to use. MariaDB packages are supported too.

Type: package

Example:

```
pkgs.mariadb
```

Declared by:

<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.configFile

Override the configuration file used by MySQL. By default, NixOS generates one automatically from **services.mysql.settings**.

Type: absolute path

Default:

```
A configuration file automatically generated by NixOS.
```

Example:

```
pkgs.writeText "my.cnf" ''
  [mysqld]
  datadir = /var/lib/mysql
  bind−address = 127.0.0.1
  port = 3336
  !includedir /etc/mysql/conf.d/
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.dataDir
The data directory for MySQL.

Note
If left as the default value of '/var/lib/mysql' this directory will automatically be created before the MySQL server starts, otherwise you are responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: absolute path

Default:

```
"/var/lib/mysql"
```

Example:

```
"/var/lib/mysql"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.ensureDatabases
Ensures that the specified databases exist. This option will never delete existing databases, especially not when the value of this option is changed. This means that databases created once through this option or otherwise have to be removed manually.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "nextcloud"
  "matomo"
]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.ensureUsers
Ensures that the specified users exist and have at least the ensured permissions. The MySQL users will be identified using Unix socket authentication. This authenticates the Unix user with the same name only, and that without the need for a password. This option will never delete existing users or remove permissions, especially not when the value of this option is changed. This means that users created and permissions assigned once through this option or otherwise have to be removed manually.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    name = "nextcloud";
    ensurePermissions = {
      "nextcloud.*" = "ALL PRIVILEGES";
    };
```

```
    }
    {
      name = "backup";
      ensurePermissions = {
        "*.*" = "SELECT, LOCK TABLES";
      };
    }
  ]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.ensureUsers.*.ensurePermissions
Permissions to ensure for the user, specified as attribute set. The attribute names specify the database and tables to grant the permissions for, separated by a dot. You may use wildcards here. The attribute values specfiy the permissions to grant. You may specify one or multiple comma−separated SQL privileges here.

For more information on how to specify the target and on which privileges exist, see the **GRANT syntax**. The attributes are used as ‘GRANT ${attrName} ON ${attrValue}’.

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  "database.*" = "ALL PRIVILEGES";
  "*.*" = "SELECT, LOCK TABLES";
}
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.ensureUsers.*.name
Name of the user to ensure.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.galeraCluster.enable
Whether to enable MariaDB Galera Cluster.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.galeraCluster.package

The MariaDB Galera package that provides the shared library ‘libgalera_smm.so’ required for cluster functionality.

Type: package

Default:

```
pkgs.mariadb-galera
```

Declared by:

<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.galeraCluster.clusterAddress

Full Galera cluster connection string. If nodeAddresses is set, this will be auto-generated, but you can override it with a custom value. Format is typically ‘gcomm://node1,node2,node3’ with optional parameters.

Type: string

Default:

```
if (config.services.mysql.galeraCluster.nodeAddresses == [ ]) then
  ""
else
  "gcomm://${builtins.concatStringsSep \",\" config.services.mysq \
l.galeraCluster.nodeAddresses}"
  + lib.optionalString (config.services.mysql.galeraCluster.cluster \
Password != "")
    "?gmcast.seg=1:${config.services.mysql.galeraCluster.clusterPas \
sword}"
```

Example:

```
"gcomm://10.0.0.10,10.0.0.20,10.0.0.30?gmcast.seg=1:SomePassword"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.galeraCluster.clusterPassword

Optional password for securing cluster communications. If provided, it will be used in the clusterAddress for authentication between nodes.

Type: string

Default:

```
""
```

Example:

```
"SomePassword"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.galeraCluster.localAddress

IP address or hostname of this node that will be used for cluster communication. Must be reachable by all other nodes.

Type: string

Default:

```
config.services.mysql.galeraCluster.localName
```

Example:

```
"1.2.3.4"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.galeraCluster.localName
The unique name that identifies this particular node within the cluster. Each node must have a different name.

Type: string

Example:

```
"node1"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.galeraCluster.name
The logical name of the Galera cluster. All nodes in the same cluster must use the same name.

Type: string

Default:

```
"galera"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.galeraCluster.nodeAddresses
IP addresses or hostnames of all nodes in the cluster, including this node. This is used to construct the default clusterAddress connection string.

Type: list of string

Default:

```
[ ]
```

Example:

```
["10.0.0.10" "10.0.0.20" "10.0.0.30"]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.galeraCluster.sstMethod
Method for the initial state transfer (wsrep_sst_method) when a node joins the cluster. Be aware that rsync needs SSH keys to be generated and authorized on all nodes!

Type: one of “rsync”, “mariabackup”

Default:

```
"rsync"
```

Example:

```
"mariabackup"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.group

Group account under which MySQL runs.

> **Note**
> If left as the default value this group will automatically be created on system activation, otherwise you are responsible for ensuring the user exists before the MySQL service starts.

Type: string

Default:

```
"mysql"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.initialDatabases

List of database names and their initial schemas that should be used to create databases on the first startup of MySQL. The schema attribute is optional: If not specified, an empty database is created.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  { name = "foodatabase"; schema = ./foodatabase.sql; }
  { name = "bardatabase"; }
]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.initialDatabases.*.name

The name of the database to create.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.initialDatabases.*.schema

The initial schema of the database; if null (the default), an empty database is created.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.initialScript

A file containing SQL statements to be executed on the first startup. Can be used for granting certain permissions on the database.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.replication.masterHost
Hostname of the MySQL master server.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.replication.masterPassword
Password of the MySQL replication user.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.replication.masterPort
Port number on which the MySQL master server runs.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3306
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.replication.masterUser
Username of the MySQL replication user.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.replication.role
Role of the MySQL server instance.

Type: one of “master”, “slave”, “none”

Default:

```
"none"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.replication.serverId
Id of the MySQL server instance. This number must be unique for each instance.

Type: signed integer

Default:

```
1
```

Declared by:
<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.replication.slaveHost

Hostname of the MySQL slave server.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.settings

MySQL configuration. Refer to **https://dev.mysql.com/doc/refman/5.7/en/server−system−variables.html**,

https://dev.mysql.com/doc/refman/8.0/en/server−system−variables.html, and **https://mariadb.com/kb/en/server−system−variables/** for details on supported values.

Note

MySQL configuration options such as '−−quick' should be treated as boolean options and provided values such as 'true', 'false', '1', or '0'. See the provided example below.

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string) or a list of them for duplicate keys)

Default:

```
{ }
```

Example:

```
{
  mysqld = {
    key_buffer_size = "6G";
    table_cache = 1600;
    log−error = "/var/log/mysql_err.log";
    plugin−load−add = [ "server_audit" "ed25519=auth_ed25519" ];
  };
  mysqldump = {
    quick = true;
    max_allowed_packet = "16M";
  };
}
```

Declared by:

<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysql.user

User account under which MySQL runs.

Note

If left as the default value this user will automatically be created on system activation, otherwise you are responsible for ensuring the user exists before the MySQL service starts.

Type: string

Default:

```
"mysql"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/mysql.nix>

services.mysqlBackup.enable

Whether to enable MySQL backups.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/backup/mysql−backup.nix>

services.mysqlBackup.calendar

Configured when to run the backup service systemd unit (DayOfWeek Year−Month−Day Hour:Minute:Second).

Type: string

Default:

```
"01:15:00"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/mysql−backup.nix>

services.mysqlBackup.compressionAlg

Compression algorithm to use for database dumps.

Type: one of “gzip”, “xz”, “zstd”

Default:

```
"gzip"
```

Declared by:

<nixpkgs/nixos/modules/services/backup/mysql−backup.nix>

services.mysqlBackup.compressionLevel

Compression level to use for gzip, xz or zstd.

- For gzip: 1−9
- For xz: 0−9
- For zstd: 1−19

Note

If compression level is also specified in gzipOptions, the gzipOptions value will be overwritten

Type: null or signed integer

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/backup/mysql−backup.nix>

services.mysqlBackup.databases

List of database names to dump.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/backup/mysql−backup.nix>

services.mysqlBackup.gzipOptions
Command line options to use when invoking ‘gzip’. Only used when compression is set to “gzip”. If compression level is specified both here and in compressionLevel, the compressionLevel value will take precedence.

Type: string

Default:

```
"−−no−name −−rsyncable"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/mysql−backup.nix>

services.mysqlBackup.location
Location to put the compressed MySQL database dumps.

Type: absolute path

Default:

```
"/var/backup/mysql"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/mysql−backup.nix>

services.mysqlBackup.singleTransaction
Whether to create database dump in a single transaction. Can be either a boolean for all databases or a list of database names.

Type: boolean or list of string

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/backup/mysql−backup.nix>

services.mysqlBackup.user
User to be used to perform backup.

Type: string

Default:

```
"mysqlbackup"
```

Declared by:
<nixpkgs/nixos/modules/services/backup/mysql−backup.nix>

services.n8n.enable
Whether to enable n8n server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.package
The n8n package to use.

Type: package

Default:

```
pkgs.n8n
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.customNodes
List of custom n8n community node packages to load. Each package is expected to be an npm package with an 'n8n.nodes' entry in its 'package.json'. The packages are made available to n8n via the 'N8N_CUSTOM_EXTENSIONS' environment variable.

Type: list of package

Default:

```
[ ]
```

Example:

```
[ pkgs.n8n-nodes-carbonejs ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.environment
Environment variables to pass to the n8n service. See **https://docs.n8n.io/hosting/configuration/environment-variables/** for available options.

Environment variables ending with '_FILE' are automatically handled as secrets: they are loaded via systemd credentials for secure access with 'DynamicUser=true'.

This can be useful to pass secrets via tools like 'agenix' or 'sops-nix'.

Type: open submodule of attribute set of (string or (string or signed integer convertible to it) or (string or boolean convertible to it))

Default:

```
{ }
```

Example:

```
{
  N8N_ENCRYPTION_KEY_FILE = "/run/n8n/encryption_key";
  DB_POSTGRESDB_PASSWORD_FILE = "/run/n8n/db_postgresdb_password";
  WEBHOOK_URL = "https://n8n.example.com";
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.environment.GENERIC_TIMEZONE
The n8n instance timezone. Important for schedule nodes (such as Cron).

Type: null or string

Default:

```
config.time.timeZone
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.environment.N8N_DIAGNOSTICS_ENABLED
Whether to share selected, anonymous telemetry with n8n. Note that if you set this to false, you can't enable Ask AI in the Code node.

Type: string or boolean convertible to it

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.environment.N8N_PORT
The HTTP port n8n runs on.

Type: string or 16 bit unsigned integer; between 0 and 65535 (both inclusive) convertible to it

Default:

```
5678
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.environment.N8N_RUNNERS_AUTH_TOKEN_FILE
Path to a file containing the shared authentication token used between the n8n server (task broker) and the task runners.

This option is required when **services.n8n.taskRunners.enable** is true. The file should be readable by the service and not stored in the Nix store. Use tools like 'agenix' or 'sops−nix' to manage this secret.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.environment.N8N_RUNNERS_BROKER_LISTEN_ADDRESS
Address the task broker listens on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.environment.N8N_RUNNERS_BROKER_PORT
Port the task broker listens on for task runner connections.

Type: string or 16 bit unsigned integer; between 0 and 65535 (both inclusive) convertible to it

Default:

```
5679
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.environment.N8N_USER_FOLDER

Provide the path where n8n will create the .n8n folder. This directory stores user−specific data, such as database file and encryption key.

Type: absolute path *(read only)*

Default:

```
"/var/lib/n8n"
```

Declared by:

<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.environment.N8N_VERSION_NOTIFICATIONS_ENABLED

When enabled, n8n sends notifications of new versions and security updates.

Type: string or boolean convertible to it

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.openFirewall

Open ports in the firewall for the n8n web interface.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.taskRunners.enable

Whether to enable n8n task runners for sandboxed Code node execution.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.taskRunners.environment

Environment variables for the task runner launcher and runners. These are common to all runners and passed via 'allowed−env' in the launcher config. See **https://docs.n8n.io/hosting/configuration/environment−variables/task−runners/** for available options.

Environment variables ending with '_FILE' are automatically handled as secrets: they are loaded via systemd credentials for secure access with 'DynamicUser=true'.

Note: The authentication token should be set via **services.n8n.environment.N8N_RUNNERS_AUTH_TOKEN_FILE**.

Type: open submodule of attribute set of (string or (string or signed integer convertible to it) or (string or boolean convertible to it))

Default:

```
{ }
```

Example:

```
{
  N8N_RUNNERS_AUTO_SHUTDOWN_TIMEOUT = 15;
  N8N_RUNNERS_MAX_CONCURRENCY = 10;
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.taskRunners.environment.N8N_RUNNERS_AUTH_TOKEN_FILE
Path to the authentication token file for the task runner.

Type: null or absolute path

Default:

```
config.services.n8n.environment.N8N_RUNNERS_AUTH_TOKEN_FILE
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.taskRunners.environment.N8N_RUNNERS_TASK_BROKER_URI
URI of the n8n task broker that the runner connects to.

Type: string

Default:

```
"http://${config.services.n8n.environment.N8N_RUNNERS_BROKER_LISTEN \
_ADDRESS}:${config.services.n8n.environment.N8N_RUNNERS_BROKER_PORT \
}"
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.taskRunners.launcherPackage
The n8n-task-runner-launcher package to use.

Type: package

Default:

```
pkgs.n8n-task-runner-launcher
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.taskRunners.runners
Configuration for individual task runners.

Type: attribute set of (submodule)

Default:

```
{
  javascript = {
    enable = true;
    command = lib.getExe' config.services.n8n.package "n8n-task-r \
unner";
    healthCheckPort = 5681;
  };
  python = {
    enable = true;
```

```
    command = lib.getExe' config.services.n8n.package "n8n-task-r \
unner-python";
    healthCheckPort = 5682;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.taskRunners.runners.<name>.enable
Whether to enable the ‹name› task runner. Only takes effect when **services.n8n.taskRunners.enable** is true.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.taskRunners.runners.<name>.args
Additional command-line arguments to pass to the task runner.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.taskRunners.runners.<name>.command
Command to execute for this runner.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.taskRunners.runners.<name>.environment
Environment variables specific to this task runner.

Type: attribute set of string

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.n8n.taskRunners.runners.<name>.healthCheckPort
Port for the runner's health check server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:
<nixpkgs/nixos/modules/services/misc/n8n.nix>

services.nagios.enable

Whether to enable **Nagios** to monitor your system or network.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.enableWebInterface

Whether to enable the Nagios web interface. You should also enable Apache (**services.httpd.enable**).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.cgiConfigFile

Derivation for the configuration file of Nagios CGI scripts that can be used in web servers for running the Nagios web interface.

Type: package

Default:

```
nagiosCGICfgFile
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.extraConfig

Configuration to add to /etc/nagios.cfg

Type: attribute set of string

Default:

```
{ }
```

Example:

```
{
  debug_file = "/var/log/nagios/debug.log";
  debug_level = "-1";
}
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.mainConfigFile

If non−null, overrides the main configuration file of Nagios.

Type: null or package

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.objectDefs
A list of Nagios object configuration files that must define the hosts, host groups, services and contacts for the network that you want Nagios to monitor.

Type: list of absolute path

Default:

```
[ ]
```

Example:

```
[ ./objects.cfg ]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.plugins
Packages to be added to the Nagios **PATH**. Typically used to add plugins, but can be anything.

Type: list of package

Default:

```
[pkgs.monitoring-plugins pkgs.msmtp pkgs.mailutils]
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.validateConfig
if true, the syntax of the nagios configuration file is checked at build time

Type: boolean

Default:

```
pkgs.stdenv.hostPlatform == pkgs.stdenv.buildPlatform
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost
Apache configuration can be done by adapting **services.httpd.virtualHosts**. See **services.httpd.virtualHosts** for further information.

Type: submodule

Example:

```
{ hostName = "example.org";
  adminAddr = "webmaster@example.org";
  enableSSL = true;
  sslServerCert = "/var/lib/acme/example.org/full.pem";
  sslServerKey = "/var/lib/acme/example.org/key.pem";
}
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.enableACME

Whether to ask Let's Encrypt to sign a certificate for this vhost. Alternately, you can use an existing certificate through **useACMEHost**.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.enableUserDir

Whether to enable serving *~/public_html* as '/~«username»'.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.acmeRoot

Directory for the acme challenge which is PUBLIC, don't put certs or keys in here. Set to null to inherit from config.security.acme.

Type: null or string

Default:

```
"/var/lib/acme/acme-challenge"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.addSSL

Whether to enable HTTPS in addition to plain HTTP. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.adminAddr

E−mail address of the server administrator.

Type: null or string

Default:

```
null
```

Example:

```
"admin@example.org"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.documentRoot

The path of Apache's document root directory. If left undefined, an empty directory in the Nix store will be used as root.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/data/webserver/docs"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.extraConfig

These lines go to httpd.conf verbatim. They will go after directories and directory aliases defined by default.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
<Directory /home>
  Options FollowSymlinks
  AllowOverride All
</Directory>
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.forceSSL

Whether to add a separate nginx server block that permanently redirects (301) all plain HTTP traffic to HTTPS. This will set defaults for 'listen' to listen on all interfaces on the respective default ports (80, 443), where the non−SSL listens are used for the redirect vhosts.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.globalRedirect

If set, all requests for this host are redirected permanently to the given URL.

Type: null or string

Default:

```
null
```

Example:

```
"http://newserver.example.org/"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.hostName

Canonical hostname for the server.

Type: string

Default:

```
"‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.http2

Whether to enable HTTP 2. HTTP/2 is supported in all multi−processing modules that come with httpd. *However, if you use the prefork mpm, there will be severe restrictions.* Refer to **https://httpd.apache.org/docs/2.4/howto/http2.html#mpm−config** for details.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.listen

Listen addresses and ports for this virtual host.

Note

This option overrides ‘addSSL’, ‘forceSSL’ and ‘onlySSL’.

If you only want to set the addresses manually and not the ports, take a look at ‘listenAddresses’.

Type: list of (submodule)

Default:

```
[ ]
```

Example:

```
[
  {
    ip = "195.154.1.1";
    port = 443;
    ssl = true;
  }
  {
    ip = "192.154.1.1";
    port = 80;
  }
  {
    ip = "*";
    port = 8080;
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.listen.*.ip

IP to listen on. 0.0.0.0 for IPv4 only, * for all.

Type: string

Default:

```
"*"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.listen.*.port

Port to listen on

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.listen.*.ssl

Whether to enable SSL (https) support.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.listenAddresses

Listen addresses for this virtual host. Compared to ‘listen’ this only sets the addresses and the ports are chosen automatically.

Type: non−empty (list of string)

Default:

```
[
  "*"
]
```

Example:

```
[
  "127.0.0.1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.locations

Declarative location config. See **https://httpd.apache.org/docs/2.4/mod/core.html#location** for details.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  "/" = {
    proxyPass = "http://localhost:3000";
  };
```

```
    "/foo/bar.png" = {
      alias = "/home/eelco/some-file.png";
    };
  };
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.locations.<name>.alias
Alias directory for requests. See **https://httpd.apache.org/docs/2.4/mod/mod_alias.html#alias**.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/your/alias/directory"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.locations.<name>.extraConfig
These lines go to the end of the location verbatim.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.locations.<name>.index
Adds DirectoryIndex directive. See **https://httpd.apache.org/docs/2.4/mod/mod_dir.html#directoryindex**.

Type: null or string

Default:

```
null
```

Example:

```
"index.php index.html"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.locations.<name>.priority
Order of this location block in relation to the others in the vhost. The semantics are the same as with ‘lib.mkOrder’. Smaller values have a greater priority.

Type: signed integer

Default:

```
1000
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.locations.<name>.proxyPass

Sets up a simple reverse proxy as described by **https://httpd.apache.org/docs/2.4/howto/reverse_proxy.html#simple**.

Type: null or string

Default:

```
null
```

Example:

```
"http://www.example.org/"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.logFormat

Log format for Apache's log files. Possible values are: combined, common, referer, agent.

Type: string

Default:

```
"common"
```

Example:

```
"combined"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.onlySSL

Whether to enable HTTPS and reject plain HTTP connections. This will set defaults for 'listen' to listen on all interfaces on port 443.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.robotsEntries

Specification of pages to be ignored by web crawlers. See **http://www.robotstxt.org/** for details.

Type: strings concatenated with "\n"

Default:

```
""
```

Example:

```
"Disallow: /foo/"
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.servedDirs

This option provides a simple way to serve static directories.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    dir = "/home/eelco/Dev/nix-homepage";
    urlPath = "/nix";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.servedFiles

This option provides a simple way to serve individual, static files.

Note

This option has been deprecated and will be removed in a future version of NixOS. You can achieve the same result by making use of the ‘locations.<name>.alias’ option.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    file = "/home/eelco/some-file.png";
    urlPath = "/foo/bar.png";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.serverAliases

Additional names of virtual hosts served by this virtual host configuration.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "www.example.org"
  "www.example.org:8080"
  "example.org"
]
```

Declared by:

<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.sslServerCert

Path to server SSL certificate.

Type: absolute path

Example:

```
"/var/host.cert"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.sslServerChain
Path to server SSL chain file.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/ca.pem"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.sslServerKey
Path to server SSL certificate key.

Type: absolute path

Example:

```
"/var/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

services.nagios.virtualHost.useACMEHost
A host of an existing Let's Encrypt certificate to use. This is useful if you have many subdomains and want to avoid hitting the **rate limit**. Alternately, you can generate a certificate through **enableACME**. *Note that this option does not create any certificates, nor it does add subdomains to existing ones – you will need to create them manually using* **security.acme.certs**[2].

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/monitoring/nagios.nix>

2. see the **security.acme.certs** option

services.namecoind.enable
Whether to enable namecoind, Namecoin client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/namecoind.nix>

services.namecoind.extraNodes

List of additional peer IP addresses to connect to.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/namecoind.nix>

services.namecoind.generate

Whether to generate (mine) Namecoins.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/namecoind.nix>

services.namecoind.rpc.address

IP address the RPC server will bind to.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/namecoind.nix>

services.namecoind.rpc.allowFrom

List of IP address ranges allowed to use the RPC API. Wiledcards (*) can be user to specify a range.

Type: list of string

Default:

```
[
  "127.0.0.1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/namecoind.nix>

services.namecoind.rpc.certificate

Certificate file for securing RPC connections.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/namecoind/server.cert"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/namecoind.nix>

services.namecoind.rpc.key

Key file for securing RPC connections.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/var/lib/namecoind/server.pem"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/namecoind.nix>

services.namecoind.rpc.password

Password for RPC connections.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/namecoind.nix>

services.namecoind.rpc.port

Port the RPC server will bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8332
```

Declared by:

<nixpkgs/nixos/modules/services/networking/namecoind.nix>

services.namecoind.rpc.user

User name for RPC connections.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/namecoind.nix>

services.namecoind.trustedNodes

List of the only peer IP addresses to connect to. If specified no other connection will be made.

Type: list of string

Default:

```
[ ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/namecoind.nix>

services.namecoind.wallet

Wallet file. The ownership of the file has to be namecoin:namecoin, and the permissions must be 0640.

Type: absolute path

Default:

```
"/var/lib/namecoind/wallet.dat"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/namecoind.nix>

services.nar−serve.enable

Whether to enable serving NAR file contents via HTTP.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nar−serve.nix>

services.nar−serve.package

The nar−serve package to use.

Type: package

Default:

```
pkgs.nar−serve
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nar−serve.nix>

services.nar−serve.cacheURL

Binary cache URL to connect to.

The URL format is compatible with the nix remote url style, such as:

- http://, https:// for binary caches via HTTP or HTTPS
- s3:// for binary caches stored in Amazon S3
- gs:// for binary caches stored in Google Cloud Storage

Type: string

Default:

```
"https://cache.nixos.org/"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nar−serve.nix>

services.nar−serve.domain

When set, enables the feature of serving <nar−hash>.<domain> on top of <domain>/nix/store/<nar−hash>−<pname>.

Useful to preview static websites where paths are absolute.

Type: string

Default:

```
""
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nar−serve.nix>

services.nar−serve.port
Port number where nar−serve will listen on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8383
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nar−serve.nix>

services.nats.enable
Whether to enable NATS messaging system.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nats.nix>

services.nats.dataDir
The NATS data directory. Only used if JetStream is enabled, for storing stream metadata and messages.

If left as the default value this directory will automatically be created before the NATS server starts, otherwise the sysadmin is responsible for ensuring the directory exists with appropriate ownership and permissions.

Type: absolute path

Default:

```
"/var/lib/nats"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nats.nix>

services.nats.group
Group under which NATS runs.

Type: string

Default:

```
"nats"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nats.nix>

services.nats.jetstream
Whether to enable JetStream.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nats.nix>

services.nats.port

Port on which to listen.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4222
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nats.nix>

services.nats.serverName

Name of the NATS server, must be unique if clustered.

Type: string

Default:

```
"nats"
```

Example:

```
"n1-c3"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nats.nix>

services.nats.settings

Declarative NATS configuration. See the **NATS documentation** for a list of options.

Type: JSON value

Default:

```
{ }
```

Example:

```
{
  jetstream = {
    max_mem = "1G";
    max_file = "10G";
  };
};
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nats.nix>

services.nats.user

User account under which NATS runs.

Type: string

Default:

```
"nats"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nats.nix>

services.nats.validateConfig

If true, validate nats config at build time. When the config can't be checked during build time, for example when it includes other files, disable this option.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nats.nix>

services.navidrome.enable

Whether to enable Navidrome music server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/audio/navidrome.nix>

services.navidrome.package

The navidrome package to use.

Type: package

Default:

```
pkgs.navidrome
```

Declared by:

<nixpkgs/nixos/modules/services/audio/navidrome.nix>

services.navidrome.environmentFile

Environment file, used to set any secret ND_* environment variables.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/audio/navidrome.nix>

services.navidrome.group

Group under which Navidrome runs.

Type: string

Default:

```
"navidrome"
```

Declared by:

<nixpkgs/nixos/modules/services/audio/navidrome.nix>

services.navidrome.openFirewall

Whether to open the TCP port in the firewall

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/audio/navidrome.nix>

services.navidrome.settings

Configuration for Navidrome, see **https://www.navidrome.org/docs/usage/configuration-options/** for supported values.

Type: open submodule of (JSON value)

Default:

```
{ }
```

Example:

```
{
  MusicFolder = "/mnt/music";
}
```

Declared by:

<nixpkgs/nixos/modules/services/audio/navidrome.nix>

services.navidrome.settings.Address

Address to run Navidrome on.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/audio/navidrome.nix>

services.navidrome.settings.EnableInsightsCollector

Enable anonymous usage data collection, see **https://www.navidrome.org/docs/getting-started/insights/** for details.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/audio/navidrome.nix>

services.navidrome.settings.Port

Port to run Navidrome on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
4533
```

Declared by:

<nixpkgs/nixos/modules/services/audio/navidrome.nix>

services.navidrome.user

User under which Navidrome runs.

Type: string

Default:

```
"navidrome"
```

Declared by:

<nixpkgs/nixos/modules/services/audio/navidrome.nix>

services.nbd.server.enable

Whether to enable the Network Block Device (nbd) server.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nbd.nix>

services.nbd.server.exports

Files or block devices to make available over the network.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nbd.nix>

services.nbd.server.exports.<name>.allowAddresses

IPs and subnets that are authorized to connect for this device. If not specified, the server will allow all connections.

Type: null or (list of string)

Default:

```
null
```

Example:

```
[
  "10.10.0.0/24"
  "127.0.0.1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nbd.nix>

services.nbd.server.exports.<name>.extraOptions

Extra options for this export. See **nbd−server**(5).

Type: attribute set of (boolean or signed integer or floating point number or string)

Default:

```
{
  flush = true;
```

```
  fua = true;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nbd.nix>

services.nbd.server.exports.<name>.path
File or block device to export.

Type: string

Example:

```
"/dev/sdb1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nbd.nix>

services.nbd.server.extraOptions
Extra options for the server. See **nbd−server**(5).

Type: attribute set of (boolean or signed integer or floating point number or string)

Default:

```
{
  allowlist = false;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nbd.nix>

services.nbd.server.listenAddress
Address to listen on. If not specified, the server will listen on all interfaces.

Type: null or string

Default:

```
null
```

Example:

```
"10.10.0.1"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nbd.nix>

services.nbd.server.listenPort
Port to listen on. The port is NOT automatically opened in the firewall.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
10809
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nbd.nix>

services.ncdns.enable
Whether to enable ncdns, a Go daemon to bridge Namecoin to DNS. To resolve .bit domains set ‘services.namecoind.enable = true;’ and an RPC username/password .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ncdns.nix>

services.ncdns.address

The IP address the ncdns resolver will bind to. Leave this unchanged if you do not wish to directly expose the resolver.

Type: string

Default:

```
"[::1]"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ncdns.nix>

services.ncdns.dnssec.enable

Whether to enable DNSSEC support in ncdns. This will generate KSK and ZSK keypairs (unless provided via the options **services.ncdns.dnssec.publicKey**, **services.ncdns.dnssec.privateKey** etc.) and add a trust anchor to recursive resolvers .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ncdns.nix>

services.ncdns.dnssec.keys.private

Path to the file containing the KSK private key.

Type: absolute path

Default:

```
"/var/lib/ncdns/bit.private"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ncdns.nix>

services.ncdns.dnssec.keys.public

Path to the file containing the KSK public key. The key can be generated using the ‘dnssec−keygen’ command, provided by the package ‘bind’ as follows:

```
$ dnssec−keygen −a RSASHA256 −3 −b 2048 −f KSK bit
```

Type: absolute path

Default:

```
"/var/lib/ncdns/bit.key"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ncdns.nix>

services.ncdns.dnssec.keys.zonePrivate

Path to the file containing the ZSK private key.

Type: absolute path

Default:

```
"/var/lib/ncdns/bit-zone.private"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ncdns.nix>

services.ncdns.dnssec.keys.zonePublic

Path to the file containing the ZSK public key. The key can be generated using the 'dnssec-keygen' command, provided by the package 'bind' as follows:

```
$ dnssec-keygen -a RSASHA256 -3 -b 2048 bit
```

Type: absolute path

Default:

```
"/var/lib/ncdns/bit-zone.key"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ncdns.nix>

services.ncdns.identity.address

The IP address the hostname specified in **services.ncdns.identity.hostname** should resolve to. If you are only using ncdns locally you can ignore this.

Type: string

Default:

```
"127.127.127.127"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ncdns.nix>

services.ncdns.identity.hostmaster

An email address for the SOA record at the bit zone. If you are only using ncdns locally you can ignore this.

Type: string

Default:

```
""
```

Example:

```
"root@example.com"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ncdns.nix>

services.ncdns.identity.hostname

The hostname of this ncdns instance, which defaults to the machine hostname. If specified, ncdns lists the hostname as an NS record at the zone apex:

```
bit. IN NS ns1.example.com.
```

If unset ncdns will generate an internal pseudo-hostname under the zone, which will resolve to the value of **services.ncdns.identity.address**. If you are only using ncdns locally you can ignore this.

Type: string

Default:

```
config.networking.hostName
```

Example:

```
"example.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncdns.nix>

services.ncdns.port
The port the ncdns resolver will bind to.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5333
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncdns.nix>

services.ncdns.settings
ncdns settings. Use this option to configure ncds settings not exposed in a NixOS option or to bypass one. See the example ncdns.conf file at **https://github.com/namecoin/ncdns/blob/master/_doc/ncdns.conf.example** for the available options.

Type: TOML value

Default:

```
{ }
```

Example:

```
{ # enable webserver
  ncdns.httplistenaddr = ":8202";
  # synchronize TLS certs
  certstore.nss = true;
  # note: all paths are relative to the config file
  certstore.nsscertdir =  "../../var/lib/ncdns";
  certstore.nssdbdir = "../../home/alice/.pki/nssdb";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncdns.nix>

services.ncps.enable
Whether to enable ncps: Nix binary cache proxy service implemented in Go.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.package
The ncps package to use.

Type: package

Default:

```
pkgs.ncps
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.analytics.reporting.enable
Enable reporting anonymous usage statistics (DB type, Lock type, Total Size) to the project maintainers.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.analytics.reporting.samples
Whether to enable Enable printing the analytics samples to stdout. This is useful for debugging and verification purposes only…

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.allowDeleteVerb
Whether to enable Whether to allow the DELETE verb to delete narinfo and nar files from the cache. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.allowPutVerb
Whether to enable Whether to allow the PUT verb to push narinfo and nar files directly to the cache. .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.cdc.enabled
Whether to enable Whether to enable Content−Defined Chunking (CDC) for deduplication (experimental). .

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.cdc.avg
The average chunk size for CDC in bytes.

Type: 32 bit unsigned integer; between 0 and 4294967295 (both inclusive)

Default:

```
65536
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.cdc.max
The maximum chunk size for CDC in bytes.

Type: 32 bit unsigned integer; between 0 and 4294967295 (both inclusive)

Default:

```
262144
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.cdc.min
The minimum chunk size for CDC in bytes.

Type: 32 bit unsigned integer; between 0 and 4294967295 (both inclusive)

Default:

```
16384
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.database.pool.maxIdleConns
Maximum number of idle connections in the pool (0 = use database−specific defaults).

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.database.pool.maxOpenConns

Maximum number of open connections to the database (0 = use database−specific defaults).

Type: signed integer

Default:

Declared by:

<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.databaseURL

The URL of the database (currently only SQLite is supported)

Type: null or string

Default:

```
"sqlite:/var/lib/ncps/db/db.sqlite"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.databaseURLFile

File containing the URL of the database.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.hostName

The hostname of the cache server. **This is used to generate the private key used for signing store paths (.narinfo)**

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.lock.allowDegradedMode

Allow falling back to local locks if Redis is unavailable (WARNING: breaks HA guarantees).

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.lock.backend

Lock backend to use: ‘local’ (single instance), ‘redis’ (distributed).

Type: one of “local”, “redis”

Default:

```
"local"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.lock.downloadTTL
TTL for download locks (per−hash locks).

Type: string

Default:

```
"5m0s"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.lock.lruTTL
TTL for LRU lock (global exclusive lock).

Type: string

Default:

```
"30m0s"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.lock.redisKeyPrefix
Prefix for all Redis lock keys (only used when Redis is configured).

Type: string

Default:

```
"ncps:lock:"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.lock.retry.initialDelay
Initial retry delay for distributed locks.

Type: string

Default:

```
"100ms"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.lock.retry.jitter
Enable jitter in retry delays to prevent thundering herd.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.lock.retry.maxAttempts
Maximum number of retry attempts for distributed locks.

Type: signed integer

Default:

```
3
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.lock.retry.maxDelay
Maximum retry delay for distributed locks (exponential backoff caps at this).

Type: string

Default:

```
"2s"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.lru.schedule
The cron spec for cleaning the store to keep it under config.ncps.cache.maxSize. Refer to https://pkg.go.dev/github.com/robfig/cron/v3#hdr−Usage for documentation.

Type: null or string

Default:

```
null
```

Example:

```
"0 2 * * *"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.lru.scheduleTimeZone
The name of the timezone to use for the cron schedule. See **https://en.wikipedia.org/wiki/List_of_tz_database_time_zones** for a comprehensive list of possible values for this setting.

Type: string

Default:

```
"Local"
```

Example:

```
"America/Los_Angeles"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.maxSize
The maximum size of the store. It can be given with units such as 5K, 10G etc. Supported units: B, K, M, G, T.

Type: null or string

Default:

```
null
```

Example:

```
"100G"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.redis
Configure Redis.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.redis.addresses
A list of host:port for the Redis servers that are part of a cluster. To use a single Redis instance, just set this to its single address.

Type: list of string

Default:

```
[ ]
```

Example:

```
["redis0:6379" "redis1:6379"]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.redis.database
Redis database number (0−15)

Type: signed integer

Default:

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.redis.password
Redis password for authentication (for Redis ACL).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.redis.passwordFile
File containing the redis password for authentication (for Redis ACL).

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.redis.poolSize
Redis connection pool size.

Type: signed integer

Default:

```
10
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.redis.useTLS
Use TLS for Redis connection.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.redis.username
Redis username for authentication (for Redis ACL).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.secretKeyPath
The path to load the secretKey for signing narinfos. Leave this empty to automatically generate a private/public key.

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.signNarinfo
Whether to sign narInfo files or passthru as−is from upstream

Type: boolean

Default:

```
true
```

Example:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.storage.local
The local directory for storing configuration and cached store paths. This is ignored if services.ncps.cache.storage.s3 is not null.

Type: absolute path

Default:

```
"/var/lib/ncps"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.storage.s3
Use S3 for storage instead of local storage.

Type: null or (submodule)

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.storage.s3.accessKeyIdPath
The path to a file containing only the access−key−id.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.storage.s3.bucket
The name of the S3 bucket.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.storage.s3.endpoint
S3−compatible endpoint URL with scheme.

Type: string

Example:

```
"https://s3.amazonaws.com"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.storage.s3.forcePathStyle
Force path−style S3 addressing (bucket/key vs key.bucket).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.storage.s3.region
The S3 region.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.storage.s3.secretAccessKeyPath
The path to a file containing only the secret−access−key.

Type: absolute path

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.tempPath
The path to the temporary directory that is used by the cache to download NAR files

Type: absolute path

Default:

```
"/tmp"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.upstream.dialerTimeout
Timeout for establishing TCP connections to upstream caches (e.g., 3s, 5s, 10s).

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.upstream.publicKeys
A list of public keys of upstream caches in the format ‘host[−[0−9]*]:public−key’. This flag is used to verify the signatures of store paths downloaded from upstream caches.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "cache.nixos.org−1:6NCHdD59X431o0gWypbMrAURkbJ16ZPMQFGspcDShjY="
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.upstream.responseHeaderTimeout
Timeout for waiting for upstream server’s response headers.

Type: null or string

Default:

```
null
```

Example:

```
"5s"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.cache.upstream.urls
A list of URLs of upstream binary caches.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "https://cache.nixos.org"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.logLevel
Set the level for logging. Refer to **https://pkg.go.dev/github.com/rs/zerolog#readme-leveled-logging** for more information.

Type: one of “trace”, “debug”, “info”, “warn”, “error”, “fatal”, “panic”

Default:

```
"info"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.netrcFile
The path to netrc file for upstream authentication. When unspecified ncps will look for ``$HOME/.netrc`.

Type: null or absolute path

Default:

```
null
```

Example:

```
"/etc/nix/netrc"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.openTelemetry.enable
Whether to enable Enable OpenTelemetry logs, metrics, and tracing.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.openTelemetry.grpcURL
Configure OpenTelemetry gRPC URL. Missing or “https” scheme enables secure gRPC, “insecure” otherwise. Omit to emit telemetry to stdout.

Type: null or string

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.prometheus.enable
Whether to enable Enable Prometheus metrics endpoint at /metrics.

Type: boolean

Default:

`false`

Example:

`true`

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ncps.server.addr
The address and port the server listens on.

Type: string

Default:

`":8501"`

Declared by:
<nixpkgs/nixos/modules/services/networking/ncps.nix>

services.ndppd.enable
Whether to enable daemon that proxies NDP (Neighbor Discovery Protocol) messages between interfaces.

Type: boolean

Default:

`false`

Example:

`true`

Declared by:
<nixpkgs/nixos/modules/services/networking/ndppd.nix>

services.ndppd.configFile
Path to configuration file.

Type: null or absolute path

Default:

`null`

Declared by:
<nixpkgs/nixos/modules/services/networking/ndppd.nix>

services.ndppd.interface
Interface which is on link−level with router. (Legacy option, use services.ndppd.proxies.<interface>.rules.<network> instead)

Type: null or string

Default:

```
null
```

Example:

```
"eth0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ndppd.nix>

services.ndppd.network
Network that we proxy. (Legacy option, use services.ndppd.proxies.<interface>.rules.<network> instead)

Type: null or string

Default:

```
null
```

Example:

```
"1111::/64"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ndppd.nix>

services.ndppd.proxies
This sets up a listener, that will listen for any Neighbor Solicitation messages, and respond to them according to a set of rules.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  eth0.rules."1111::/64" = {};
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ndppd.nix>

services.ndppd.proxies.<name>.interface
Listen for any Neighbor Solicitation messages on this interface, and respond to them according to a set of rules. Defaults to the name of the attrset.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ndppd.nix>

services.ndppd.proxies.<name>.router
Turns on or off the router flag for Neighbor Advertisement Messages.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ndppd.nix>

services.ndppd.proxies.<name>.rules
This is a rule that the target address is to match against. If no netmask is provided, /128 is assumed. You may have several rule sections, and the addresses may or may not overlap.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ndppd.nix>

services.ndppd.proxies.<name>.rules.<name>.interface
Interface to use when method is iface.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ndppd.nix>

services.ndppd.proxies.<name>.rules.<name>.method
static: Immediately answer any Neighbor Solicitation Messages (if they match the IP rule). iface: Forward the Neighbor Solicitation Message through the specified interface and only respond if a matching Neighbor Advertisement Message is received. auto: Same as iface, but instead of manually specifying the outgoing interface, check for a matching route in /proc/net/ipv6_route.

Type: one of “static”, “iface”, “auto”

Default:

```
"auto"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ndppd.nix>

services.ndppd.proxies.<name>.rules.<name>.network
This is the target address is to match against. If no netmask is provided, /128 is assumed. The addresses of several rules may or may not overlap. Defaults to the name of the attrset.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ndppd.nix>

services.ndppd.proxies.<name>.timeout
Controls how long to wait for a Neighbor Advertisement Message before invalidating the entry, in milliseconds.

Type: signed integer

Default:

```
500
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ndppd.nix>

services.ndppd.proxies.<name>.ttl
Controls how long a valid or invalid entry remains in the cache, in milliseconds.

Type: signed integer

Default:

```
30000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ndppd.nix>

services.ndppd.routeTTL
This tells 'ndppd' how often to reload the route file /proc/net/ipv6_route, in milliseconds.

Type: signed integer

Default:

```
30000
```

Declared by:
<nixpkgs/nixos/modules/services/networking/ndppd.nix>

services.neard.enable
Whether to enable neard, an NFC daemon.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/neard.nix>

services.neard.settings
Neard INI−style configuration file as a Nix attribute set.

See the upstream **configuration file**.

Type: open submodule of attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/neard.nix>

services.neard.settings.General.ConstantPoll
Enable constant polling. Constant polling will automatically trigger a new polling loop whenever a tag or a device is no longer in the RF field.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/neard.nix>

services.neard.settings.General.DefaultPowered
Automatically turn an adapter on when being discovered.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/neard.nix>

services.neard.settings.General.ResetOnError
Power cycle the adapter when getting a driver error from the kernel.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/desktops/neard.nix>

services.nebula.networks
Nebula network definitions.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.enable
Enable or disable this network.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.enableReload
Enable automatic config reload on config change. This setting is not enabled by default as nix cannot determine if the config change is reloadable. Please refer to the **config reference** for documentation on reloadable changes.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.package

The nebula package to use.

Type: package

Default:

```
pkgs.nebula
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.ca

Path to the certificate authority certificate.

Type: absolute path

Example:

```
"/etc/nebula/ca.crt"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.cert

Path to the host certificate.

Type: absolute path

Example:

```
"/etc/nebula/host.crt"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.firewall.inbound

Firewall rules for inbound traffic.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    host = "any";
    port = "any";
    proto = "any";
  }
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.firewall.outbound

Firewall rules for outbound traffic.

Type: list of (attribute set)

Default:

```
[ ]
```

Example:

```
[
  {
    host = "any";
    port = "any";
    proto = "any";
  }
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.isLighthouse
Whether this node is a lighthouse.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.isRelay
Whether this node is a relay.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.key
Path or reference to the host key.

Type: non−empty string or absolute path

Example:

```
"/etc/nebula/host.key"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.lighthouse.dns.enable
Whether this lighthouse node should serve DNS.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.lighthouse.dns.host
IP address on which nebula lighthouse should serve DNS. ‘localhost’ is a good default to ensure the service does not listen on public interfaces; use a Nebula address like 10.0.0.5 to make DNS resolution available to nebula hosts only.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.lighthouse.dns.port
UDP port number for lighthouse DNS server.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
5353
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.lighthouses
List of IPs of lighthouse hosts this node should report to and query from. This should be empty on lighthouse nodes. The IPs should be the lighthouse's Nebula IPs, not their external IPs.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "192.168.100.1"
]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.listen.host
IP address to listen on.

Type: string

Default:

```
"0.0.0.0"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.listen.port
Port number to listen on.

Type: null or 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
if (config.services.nebula.networks.${name}.isLighthouse ||
    config.services.nebula.networks.${name}.isRelay) then
  4242
else
  0;
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.relays

List of IPs of relays that this node should allow traffic from.

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "192.168.100.1"
]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.settings

Nebula configuration. Refer to **https://github.com/slackhq/nebula/blob/master/examples/config.yml** for details on supported values.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  lighthouse.interval = 15;
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.staticHostMap

The static host map defines a set of hosts with fixed IP addresses on the internet (or any network). A host can have multiple fixed IP addresses defined here, and nebula will try each when establishing a tunnel.

Type: attribute set of list of string

Default:

```
{ }
```

Example:

```
{
  "192.168.100.1" = [
    "100.64.22.11:4242"
  ];
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.tun.device

Name of the tun device. Defaults to nebula.${networkName}.

Type: null or string

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula.networks.<name>.tun.disable
When tun is disabled, a lighthouse can be started without a local tun interface (and therefore without root).

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula.nix>

services.nebula−lighthouse−service.enable
Whether to enable nebula−lighthouse−service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula−lighthouse−service.nix>

services.nebula−lighthouse−service.settings
Configuration for nebula−lighthouse−service.

Type: YAML 1.1 value

Default:

```
{ }
```

Example:

```
{
  max−port = 65535;
  min−port = 49152;
  "webserver.ip" = "127.0.0.1";
  "webserver.port" = 8080;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula−lighthouse−service.nix>

services.nebula−lighthouse−service.user
The user and group to run nebula−lighthouse−service as.

Type: string

Default:

```
"nebula−lighthouse"
```

Example:

```
"nebula−lighthouse"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/nebula−lighthouse−service.nix>

services.neo4j.enable
Whether to enable Neo4j Community Edition.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.package
The neo4j package to use.

Type: package

Default:

```
pkgs.neo4j
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.bolt.enable
Enable the BOLT connector for Neo4j. Setting this option to ‘false’ will stop Neo4j from listening for incoming connections on the BOLT port (7687 by default).

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.bolt.advertisedAddress
Neo4j advertised address for BOLT traffic. The advertised address is expressed in the format ‘<ip−address>:<port−number>’.

Type: string

Default:

```
config.services.neo4j.bolt.listenAddress
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.bolt.listenAddress
Neo4j listen address for BOLT traffic. The listen address is expressed in the format ‘<ip−address>:<port−number>’.

Type: string

Default:

```
":7687"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.bolt.sslPolicy

Neo4j SSL policy for BOLT traffic.

The legacy policy is a special policy which is not defined in the policy configuration section, but rather derives from **directories.certificates** and associated files (by default: *neo4j.key* and *neo4j.cert*). Its use will be deprecated.

Note: This connector must be configured to support/require SSL/TLS for the legacy policy to actually be utilized. See **bolt.tlsLevel**.

Type: string

Default:

```
"legacy"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.bolt.tlsLevel

SSL/TSL requirement level for BOLT traffic.

Type: one of “REQUIRED”, “OPTIONAL”, “DISABLED”

Default:

```
"OPTIONAL"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.constrainLoadCsv

Sets the root directory for file URLs used with the Cypher ‘LOAD CSV’ clause to be that defined by **directories.imports**. It restricts access to only those files within that directory and its subdirectories.

Setting this option to ‘false’ introduces possible security problems.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.defaultListenAddress

Default network interface to listen for incoming connections. To listen for connections on all interfaces, use “0.0.0.0”.

Specifies the default IP address and address part of connector specific **listenAddress** options. To bind specific connectors to a specific network interfaces, specify the entire **listenAddress** option for that connector.

Type: string

Default:

```
"127.0.0.1"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.directories.certificates

Directory for storing certificates to be used by Neo4j for TLS connections.

When setting this directory to something other than its default, ensure the directory's existence, and that read/write permissions are given to the Neo4j daemon user 'neo4j'.

Note that changing this directory from its default will prevent the directory structure required for each SSL policy from being automatically generated. A policy's directory structure as defined by its **baseDirectory**,**revokedDir** and **trustedDir** must then be setup manually. The existence of these directories is mandatory, as well as the presence of the certificate file and the private key. Ensure the correct permissions are set on these directories and files.

Type: absolute path

Default:

```
"${config.services.neo4j.directories.home}/certificates"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.directories.data

Path of the data directory. You must not configure more than one Neo4j installation to use the same data directory.

When setting this directory to something other than its default, ensure the directory's existence, and that read/write permissions are given to the Neo4j daemon user 'neo4j'.

Type: absolute path

Default:

```
"${config.services.neo4j.directories.home}/data"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.directories.home

Path of the Neo4j home directory. Other default directories are subdirectories of this path. This directory will be created if non−existent, and its ownership will be **chown** to the Neo4j daemon user 'neo4j'.

Type: absolute path

Default:

```
"/var/lib/neo4j"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.directories.imports

The root directory for file URLs used with the Cypher 'LOAD CSV' clause. Only meaningful when **constrainLoadCvs** is set to 'true'.

When setting this directory to something other than its default, ensure the directory's existence, and that read permission is given to the Neo4j daemon user 'neo4j'.

Type: absolute path

Default:

```
"${config.services.neo4j.directories.home}/import"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.directories.plugins

Path of the database plugin directory. Compiled Java JAR files that contain database procedures will be loaded if they are placed in this directory.

When setting this directory to something other than its default, ensure the directory's existence, and that read permission is given to the Neo4j daemon user 'neo4j'.

Type: absolute path

Default:

```
"${config.services.neo4j.directories.home}/plugins"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.extraServerConfig

Extra configuration for Neo4j Community server. Refer to the **complete reference** of Neo4j configuration settings.

Type: strings concatenated with "\n"

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.http.enable

Enable the HTTP connector for Neo4j. Setting this option to 'false' will stop Neo4j from listening for incoming connections on the HTTPS port (7474 by default).

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.http.advertisedAddress

Neo4j advertised address for HTTP traffic. The advertised address is expressed in the format '<ip−address>:<port−number>'.

Type: string

Default:

```
config.services.neo4j.http.listenAddress
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.http.listenAddress

Neo4j listen address for HTTP traffic. The listen address is expressed in the format '<ip−address>:<port−number>'.

Type: string

Default:

```
":7474"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.https.enable
Enable the HTTPS connector for Neo4j. Setting this option to 'false' will stop Neo4j from listening for incoming connections on the HTTPS port (7473 by default).

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.https.advertisedAddress
Neo4j advertised address for HTTPS traffic. The advertised address is expressed in the format '<ip−address>:<port−number>'.

Type: string

Default:

```
config.services.neo4j.https.listenAddress
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.https.listenAddress
Neo4j listen address for HTTPS traffic. The listen address is expressed in the format '<ip−address>:<port−number>'.

Type: string

Default:

```
":7473"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.https.sslPolicy
Neo4j SSL policy for HTTPS traffic.

The legacy policy is a special policy which is not defined in the policy configuration section, but rather derives from **directories.certificates** and associated files (by default: *neo4j.key* and *neo4j.cert*). Its use will be deprecated.

Type: string

Default:

```
"legacy"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.readOnly
Only allow read operations from this Neo4j instance.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.shell.enable
Enable a remote shell server which Neo4j Shell clients can log in to. Only applicable to **neo4j−shell**.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.ssl.policies
Defines the SSL policies for use with Neo4j connectors. Each attribute of this set defines a policy, with the attribute name defining the name of the policy and its namespace. Refer to the operations manual section on Neo4j's **SSL Framework** for further details.

Type: attribute set of (submodule)

Default:

```
{ }
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.ssl.policies.<name>.allowKeyGeneration
Allows the generation of a private key and associated self−signed certificate. Only performed when both objects cannot be found for this policy. It is recommended to turn this off again after keys have been generated.

The public certificate is required to be duplicated to the directory holding trusted certificates as defined by the **trustedDir** option.

Keys should in general be generated and distributed offline by a trusted certificate authority and not by utilizing this mode.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.ssl.policies.<name>.baseDirectory
The mandatory base directory for cryptographic objects of this policy. This path is only automatically generated when this option as well as **directories.certificates** are left at their default. Ensure read/write permissions are given to the Neo4j daemon user 'neo4j'.

It is also possible to override each individual configuration with absolute paths. See the **privateKey** and **publicCertificate** policy options.

Type: absolute path

Default:

```
"${config.services.neo4j.directories.certificates}/${name}"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.ssl.policies.<name>.ciphers

Restrict the allowed ciphers of this policy to those defined here. The default ciphers are those of the JVM platform.

Type: null or (list of string)

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.ssl.policies.<name>.clientAuth

The client authentication stance for this policy.

Type: one of “NONE”, “OPTIONAL”, “REQUIRE”

Default:

```
"REQUIRE"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.ssl.policies.<name>.privateKey

The name of private PKCS #8 key file for this policy to be found in the **baseDirectory**, or the absolute path to the key file. It is mandatory that a key can be found or generated.

Type: string

Default:

```
"private.key"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.ssl.policies.<name>.publicCertificate

The name of public X.509 certificate (chain) file in PEM format for this policy to be found in the **baseDirectory**, or the absolute path to the certificate file. It is mandatory that a certificate can be found or generated.

The public certificate is required to be duplicated to the directory holding trusted certificates as defined by the **trustedDir** option.

Type: string

Default:

```
"public.crt"
```

Declared by:

<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.ssl.policies.<name>.revokedDir

Path to directory of CRLs (Certificate Revocation Lists) in PEM format. Must be an absolute path. The existence of this directory is mandatory and will need to be created manually when: setting this option to something other than its default; setting either this policy’s **baseDirectory** or **directories.certificates** to something other than their default. Ensure read/write permissions are given to the Neo4j daemon user ‘neo4j’.

Type: absolute path

Default:

```
"${config.services.neo4j.ssl.policies.<name>.baseDirectory}/revoked \
```

```
"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.ssl.policies.<name>.tlsVersions
Restrict the TLS protocol versions of this policy to those defined here.

Type: list of string

Default:

```
[
  "TLSv1.2"
]
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.ssl.policies.<name>.trustAll
Makes this policy trust all remote parties. Enabling this is not recommended and the policy's trusted directory will be ignored. Use of this mode is discouraged. It would offer encryption but no security.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.ssl.policies.<name>.trustedDir
Path to directory of X.509 certificates in PEM format for trusted parties. Must be an absolute path. The existence of this directory is mandatory and will need to be created manually when: setting this option to something other than its default; setting either this policy's **baseDirectory** or **directories.certificates** to something other than their default. Ensure read/write permissions are given to the Neo4j daemon user 'neo4j'.

The public certificate as defined by **publicCertificate** is required to be duplicated to this directory.

Type: absolute path

Default:

```
"${config.services.neo4j.ssl.policies.<name>.baseDirectory}/trusted \
"
```

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.neo4j.workerCount
Number of Neo4j worker threads, where the default of '0' indicates a worker count equal to the number of available processors.

Type: integer between 0 and 44738 (both inclusive)

Default:

Declared by:
<nixpkgs/nixos/modules/services/databases/neo4j.nix>

services.netatalk.enable

Whether to enable the Netatalk AFP fileserver.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/netatalk.nix>

services.netatalk.extmap

File name extension mappings. See **extmap.conf**(5). for more information.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/netatalk.nix>

services.netatalk.port

TCP port to be used for AFP.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
548
```

Declared by:

<nixpkgs/nixos/modules/services/network−filesystems/netatalk.nix>

services.netatalk.settings

Configuration for Netatalk. See **afp.conf**(5).

Type: attribute set of section of an INI file (attrs of INI atom (null, bool, int, float or string))

Default:

```
{ }
```

Example:

```
{
  Global = {
    "uam list" = "uams_guest.so";
  };
  Homes = {
    "basedir regex" = "/home";
    path = "afp−data";
  };
  example−volume = {
    path = "/srv/volume";
    "read only" = true;
  };
}
```

Declared by:
<nixpkgs/nixos/modules/services/network−filesystems/netatalk.nix>

services.netbird.enable
Enables backward−compatible NetBird client service.

This is strictly equivalent to:

```
services.netbird.clients.default = {
  port = 51820;
  name = "netbird";
  interface = "wt0";
  hardened = false;
};
```

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.package
The netbird package to use.

Type: package

Default:

```
pkgs.netbird
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients
Attribute set of NetBird client daemons, by default each one will:

1. be manageable using dedicated tooling:
   - ‘netbird−<name>’ script,
   - ‘NetBird − netbird−<name>’ graphical interface when appropriate (see ‘ui.enable’),
2. run as a ‘netbird−<name>.service’,
3. listen for incoming remote connections on the port ‘51820’ (‘openFirewall’ by default),
4. manage the ‘netbird−<name>’ wireguard interface,
5. use the */var/lib/netbird−<name>/config.json* configuration file,
6. override */var/lib/netbird−<name>/config.json* with values from */etc/netbird−<name>/config.d/*.json*,
7. (‘hardened’) be locally manageable by ‘netbird−<name>’ system group,

With following caveats:

- multiple daemons will interfere with each other’s DNS resolution of ‘netbird.cloud’, but should remain fully operational otherwise. Setting up custom (non−conflicting) DNS zone is currently possible only when self−hosting.

Type: attribute set of (submodule)

Default:

```
{ }
```

Example:

```
{
  services.netbird.clients.wt0.port = 51820;
```

```
  services.netbird.clients.personal.port = 51821;
  services.netbird.clients.work1.port = 51822;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.autoStart
Start the service with the system.

As of 2024−02−13 it is not possible to start a NetBird client daemon without immediately connecting to the network, but it is **planned for a near future**.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.bin.suffix
A system group name for this client instance.

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.config
Additional configuration that exists before the first start and later overrides the existing values in *config.json*.

It is mostly helpful to manage configuration ignored/not yet implemented outside of ‘netbird up’ invocation.

WARNING: this is not an upstream feature, it could break in the future (by having lower priority) after upstream implements an equivalent.

It is implemented as a ‘preStart’ script which overrides *config.json* with content of */etc/netbird−‹name›/config.d/*.json* files. This option manages specifically *50−nixos.json* file.

Consult **the source code** or inspect existing file for a complete list of available configurations.

Type: JSON value

Default:

```
{
  DisableAutoConnect = !client.autoStart;
  WgIface = client.interface;
  WgPort = client.port;
} // optionalAttrs (client.dns−resolver.address != null) {
  CustomDNSAddress = "${client.dns−resolver.address}:${toString cl \
ient.dns−resolver.port}";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.dir.baseName

A systemd service name to use (without '.service' suffix).

Type: string

Default:

```
"netbird-‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.dir.runtime

A runtime directory used by NetBird client.

Type: absolute path

Default:

```
"/var/run/netbird-‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.dir.state

A state directory used by NetBird client to store *config.json*, *state.json* & *resolv.conf*.

Type: absolute path

Default:

```
"/var/lib/netbird-‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.dns-resolver.address

An explicit address that NetBird will serve '*.netbird.cloud.' (usually) entries on.

NetBird serves DNS on it's own (dynamic) client address by default.

Type: null or string

Default:

```
null
```

Example:

```
"127.0.0.123"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.dns-resolver.port

A port to serve DNS entries on when 'dns-resolver.address' is enabled.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
53
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.environment

Environment for the netbird service, used to pass configuration options.

Type: attribute set of string

Default:

```
{
  NB_STATE_DIR = client.dir.state;
  NB_CONFIG = "${client.dir.state}/config.json";
  NB_DAEMON_ADDR = "unix://${client.dir.runtime}/sock";
  NB_INTERFACE_NAME = client.interface;
  NB_LOG_FILE = mkOptionDefault "console";
  NB_LOG_LEVEL = client.logLevel;
  NB_SERVICE = client.service.name;
  NB_WIREGUARD_PORT = toString client.port;
} // optionalAttrs (client.dns-resolver.address != null) {
  NB_DNS_RESOLVER_ADDRESS = "${client.dns-resolver.address}:${toSt \
ring client.dns-resolver.port}";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.hardened

Hardened service:

- runs as a dedicated user with minimal set of permissions (see caveats),
- restricts daemon configuration socket access to dedicated user group (you can grant access to it with ‘users.users."<user>".extraGroups = [netbird-‹name›]’),

Even though the local system resources access is restricted:

- ‘CAP_NET_RAW’, ‘CAP_NET_ADMIN’ and ‘CAP_BPF’ still give unlimited network manipulation possibilites,
- older kernels don’t have ‘CAP_BPF’ and use ‘CAP_SYS_ADMIN’ instead,

Known security features that are not (yet) integrated into the module:

- 2024-02-14: ‘rosenpass’ is an experimental feature configurable solely through ‘--enable-rosenpass’ flag on the ‘netbird up’ command, see **the docs**

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.interface

Name of the network interface managed by this client.

Type: string

Default:

```
"nb-‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.logLevel

Log level of the NetBird daemon.

Type: one of “panic”, “fatal”, “error”, “warn”, “warning”, “info”, “debug”, “trace”

Default:

```
"info"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.login.enable

Whether to enable automated login for NetBird client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.login.setupKeyFile

A Setup Key file path used for automated login of the machine.

Type: null or string

Default:

```
null
```

Example:

```
"/run/secrets/netbird-priv/setup-key"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.login.systemdDependencies

Additional systemd dependencies required to succeed before the Setup Key file becomes available.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "sops-install-secrets.service" ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.name

Primary name for use (as a suffix) in:

- systemd service name,
- hardened user name and group,
- **systemd** ‘*Directory=’ names,
- desktop application identification,

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.openFirewall
Opens up firewall ‘port’ for communication between NetBird peers directly over LAN or public IP, without using (internet−hosted) TURN servers as intermediaries.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.openInternalFirewall
Opens up internal firewall ports for the NetBird’s network interface.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.port
Port the NetBird client listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Example:

```
51820
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.service.name
A systemd service name to use (without ‘.service’ suffix).

Type: string

Default:

```
"netbird−‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.suffixedName
A systemd service name to use (without ‘.service’ suffix).

Type: string

Default:

```
"netbird−‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.ui.enable

Controls presence of ‘netbird−ui’ wrapper for this NetBird client.

Type: boolean

Default:

```
client.ui.enable
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.user.group

A system group name for this client instance.

Type: string

Default:

```
"netbird−‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.clients.<name>.user.name

A system user name for this client instance.

Type: string

Default:

```
"netbird−‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.server.enable

Whether to enable Netbird Server stack, comprising the dashboard, management API and signal service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/server.nix>

services.netbird.server.enableNginx

Whether to enable Nginx reverse−proxy for the netbird server services.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/server.nix>

services.netbird.server.coturn.enable

Whether to enable a Coturn server for Netbird, will also open the firewall on the configured range.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/coturn.nix>

services.netbird.server.coturn.domain

The domain under which the coturn server runs.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/coturn.nix>

services.netbird.server.coturn.openPorts

The list of ports used by coturn for listening to open in the firewall.

Type: list of 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
with config.services.coturn; [
  listening-port
  alt-listening-port
  tls-listening-port
  alt-tls-listening-port
];
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/coturn.nix>

services.netbird.server.coturn.password

The password of the user used by netbird to connect to the coturn server. Be advised this will be world readable in the nix store.

Type: null or string

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/coturn.nix>

services.netbird.server.coturn.passwordFile

The path to a file containing the password of the user used by netbird to connect to the coturn server.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/coturn.nix>

services.netbird.server.coturn.useAcmeCertificates

Whether to use ACME certificates corresponding to the given domain for the server.

Type: boolean

Default:

```
false
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/coturn.nix>

services.netbird.server.coturn.user

The username used by netbird to connect to the coturn server.

Type: string

Default:

```
"netbird"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/coturn.nix>

services.netbird.server.dashboard.enable

Whether to enable the static netbird dashboard frontend.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/dashboard.nix>

services.netbird.server.dashboard.enableNginx

Whether to enable Nginx reverse−proxy to serve the dashboard.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/dashboard.nix>

services.netbird.server.dashboard.package

The netbird−dashboard package to use.

Type: package

Default:

```
pkgs.netbird-dashboard
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/dashboard.nix>

services.netbird.server.dashboard.domain
The domain under which the dashboard runs.

Type: string

Default:

```
"localhost"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/dashboard.nix>

services.netbird.server.dashboard.finalDrv
The derivation containing the final templated dashboard.

Type: package *(read only)*

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/dashboard.nix>

services.netbird.server.dashboard.managementServer
The address of the management server, used for the API endpoints.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/dashboard.nix>

services.netbird.server.dashboard.settings
An attribute set that will be used to substitute variables when building the dashboard. Any values set here will be templated into the frontend and be public for anyone that can reach your website. The exact values sadly aren't documented anywhere. A starting point when searching for valid values is this **script** The only mandatory value is 'AUTH_AUTHORITY' as we cannot set a default value here.

Type: open submodule of attribute set of (string or boolean)

Default:

```
{
  AUTH_AUDIENCE = "netbird";
  AUTH_CLIENT_ID = "netbird";
  AUTH_SUPPORTED_SCOPES = "openid profile email";
  NETBIRD_TOKEN_SOURCE = "idToken";
  USE_AUTH0 = false;
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/dashboard.nix>

services.netbird.server.domain
The domain under which the netbird server runs.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/server.nix>

services.netbird.server.management.enable
Whether to enable Netbird Management Service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.management.enableNginx
Whether to enable Nginx reverse−proxy for the netbird management service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.management.package
The netbird−management package to use.

Type: package

Default:

```
pkgs.netbird−management
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.management.disableAnonymousMetrics
Disables push of anonymous usage metrics to NetBird.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.management.disableSingleAccountMode
If set to true, disables single account mode. The ‘singleAccountModeDomain’ property will be ignored and every new user will have a separate NetBird account.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.management.dnsDomain
Domain used for peer resolution.

Type: string

Default:

```
"netbird.selfhosted"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.management.domain
The domain under which the management API runs.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.management.extraOptions
Additional options given to netbird−mgmt as commandline arguments.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.management.logLevel
Log level of the netbird services.

Type: one of “ERROR”, “WARN”, “INFO”, “DEBUG”

Default:

```
"INFO"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.management.metricsPort
Internal port of the metrics server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9090
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.management.oidcConfigEndpoint
The oidc discovery endpoint.

Type: string

Example:

```
"https://example.eu.auth0.com/.well-known/openid-configuration"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.management.port
Internal port of the management server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8011
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.management.settings

Configuration of the netbird management server. Options containing secret data should be set to an attribute set containing the attribute _secret

- a string pointing to a file containing the value the option should be set to. See the example to get a better picture of this: in the resulting management.json file, the 'DataStoreEncryptionKey' key will be set to the contents of the /run/agenix/netbird_mgmt−data_store_encryption_key file.

Type: JSON value

Default:

```
defaultSettings = {
  Stuns = [
    {
      Proto = "udp";
      URI = "stun:${cfg.turnDomain}:3478";
      Username = "";
      Password = null;
    }
  ];
  TURNConfig = {
    Turns = [
      {
        Proto = "udp";
        URI = "turn:${cfg.turnDomain}:3478";
        Username = "netbird";
        Password = "netbird";
      }
    ];
    CredentialsTTL = "12h";
    Secret = "not−secure−secret";
    TimeBasedCredentials = false;
  };
  Signal = {
    Proto = "https";
    URI = "${cfg.domain}:443";
    Username = "";
    Password = null;
  };
  ReverseProxy = {
    TrustedHTTPProxies = [ ];
    TrustedHTTPProxiesCount = 0;
    TrustedPeers = [ "0.0.0.0/0" ];
  };
  Datadir = "${stateDir}/data";
  DataStoreEncryptionKey = "genEVP6j/Yp2EeVujm0zgqXrRos29dQkpvX0hHd \
EUlQ=";
  StoreConfig = { Engine = "sqlite"; };
  HttpConfig = {
    Address = "127.0.0.1:${toString cfg.port}";
    IdpSignKeyRefreshEnabled = true;
    OIDCConfigEndpoint = cfg.oidcConfigEndpoint;
```

```
      };
      IdpManagerConfig = {
        ManagerType = "none";
        ClientConfig = {
          Issuer = "";
          TokenEndpoint = "";
          ClientID = "netbird";
          ClientSecret = "";
          GrantType = "client_credentials";
        };
        ExtraConfig = { };
        Auth0ClientCredentials = null;
        AzureClientCredentials = null;
        KeycloakClientCredentials = null;
        ZitadelClientCredentials = null;
      };
      DeviceAuthorizationFlow = {
        Provider = "none";
        ProviderConfig = {
          Audience = "netbird";
          Domain = null;
          ClientID = "netbird";
          TokenEndpoint = null;
          DeviceAuthEndpoint = "";
          Scope = "openid profile email offline_access api";
          UseIDToken = false;
        };
      };
      PKCEAuthorizationFlow = {
        ProviderConfig = {
          Audience = "netbird";
          ClientID = "netbird";
          ClientSecret = "";
          AuthorizationEndpoint = "";
          TokenEndpoint = "";
          Scope = "openid profile email offline_access api";
          RedirectURLs = "http://localhost:53000";
          UseIDToken = false;
        };
      };
    };
```

Example:

```
    {
      DataStoreEncryptionKey = {
        _secret = "/run/agenix/netbird_mgmt−data_store_encryption_key" \
    ;
      };
    }
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.management.singleAccountModeDomain

Enables single account mode. This means that all the users will be under the same account grouped by the specified domain. If the installation has more than one account, the property is ineffective.

Type: string

Default:

```
"netbird.selfhosted"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.management.turnDomain

The domain of the TURN server to use.

Type: string

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.management.turnPort

The port of the TURN server to use.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
3478
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/management.nix>

services.netbird.server.signal.enable

Whether to enable Netbird's Signal Service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/signal.nix>

services.netbird.server.signal.enableNginx

Whether to enable Nginx reverse−proxy for the netbird signal service.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird/signal.nix>

services.netbird.server.signal.package
The netbird−signal package to use.

Type: package

Default:

```
pkgs.netbird-signal
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/signal.nix>

services.netbird.server.signal.domain
The domain name for the signal service.

Type: string

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/signal.nix>

services.netbird.server.signal.extraOptions
Additional options given to netbird−signal as commandline arguments.

Type: list of string

Default:

```
[ ]
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/signal.nix>

services.netbird.server.signal.logLevel
Log level of the netbird signal service.

Type: one of “ERROR”, “WARN”, “INFO”, “DEBUG”

Default:

```
"INFO"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/signal.nix>

services.netbird.server.signal.metricsPort
Internal port of the metrics server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
9091
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/signal.nix>

services.netbird.server.signal.port
Internal port of the signal server.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
8012
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird/signal.nix>

services.netbird.tunnels

Alias of **services.netbird.clients**.

Type: attribute set of (submodule)

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.autoStart

Start the service with the system.

As of 2024−02−13 it is not possible to start a NetBird client daemon without immediately connecting to the network, but it is **planned for a near future**.

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.bin.suffix

A system group name for this client instance.

Type: string

Default:

```
"‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.config

Additional configuration that exists before the first start and later overrides the existing values in *config.json*.

It is mostly helpful to manage configuration ignored/not yet implemented outside of ‘netbird up’ invocation.

WARNING: this is not an upstream feature, it could break in the future (by having lower priority) after upstream implements an equivalent.

It is implemented as a ‘preStart’ script which overrides *config.json* with content of */etc/netbird−‹name›/config.d/*.json* files. This option manages specifically *50−nixos.json* file.

Consult **the source code** or inspect existing file for a complete list of available configurations.

Type: JSON value

Default:

```
{
  DisableAutoConnect = !client.autoStart;
  WgIface = client.interface;
  WgPort = client.port;
} // optionalAttrs (client.dns-resolver.address != null) {
  CustomDNSAddress = "${client.dns-resolver.address}:${toString cl \
ient.dns-resolver.port}";
}
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.dir.baseName
A systemd service name to use (without '.service' suffix).

Type: string

Default:

```
"netbird-‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.dir.runtime
A runtime directory used by NetBird client.

Type: absolute path

Default:

```
"/var/run/netbird-‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.dir.state
A state directory used by NetBird client to store *config.json*, *state.json* & *resolv.conf*.

Type: absolute path

Default:

```
"/var/lib/netbird-‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.dns-resolver.address
An explicit address that NetBird will serve '*.netbird.cloud.' (usually) entries on.

NetBird serves DNS on it's own (dynamic) client address by default.

Type: null or string

Default:

```
null
```

Example:

```
"127.0.0.123"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.dns-resolver.port
A port to serve DNS entries on when 'dns-resolver.address' is enabled.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Default:

```
53
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.environment

Environment for the netbird service, used to pass configuration options.

Type: attribute set of string

Default:

```
{
  NB_STATE_DIR = client.dir.state;
  NB_CONFIG = "${client.dir.state}/config.json";
  NB_DAEMON_ADDR = "unix://${client.dir.runtime}/sock";
  NB_INTERFACE_NAME = client.interface;
  NB_LOG_FILE = mkOptionDefault "console";
  NB_LOG_LEVEL = client.logLevel;
  NB_SERVICE = client.service.name;
  NB_WIREGUARD_PORT = toString client.port;
} // optionalAttrs (client.dns-resolver.address != null) {
  NB_DNS_RESOLVER_ADDRESS = "${client.dns-resolver.address}:${toSt \
ring client.dns-resolver.port}";
}
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.hardened

Hardened service:

- runs as a dedicated user with minimal set of permissions (see caveats),
- restricts daemon configuration socket access to dedicated user group (you can grant access to it with ‘users.users."<user>".extraGroups = [netbird-‹name›]’),

Even though the local system resources access is restricted:

- ‘CAP_NET_RAW’, ‘CAP_NET_ADMIN’ and ‘CAP_BPF’ still give unlimited network manipulation possibilites,
- older kernels don’t have ‘CAP_BPF’ and use ‘CAP_SYS_ADMIN’ instead,

Known security features that are not (yet) integrated into the module:

- 2024-02-14: ‘rosenpass’ is an experimental feature configurable solely through ‘--enable-rosenpass’ flag on the ‘netbird up’ command, see **the docs**

Type: boolean

Default:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.interface

Name of the network interface managed by this client.

Type: string

Default:

```
"nb-‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.logLevel

Log level of the NetBird daemon.

Type: one of “panic”, “fatal”, “error”, “warn”, “warning”, “info”, “debug”, “trace”

Default:

```
"info"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.login.enable

Whether to enable automated login for NetBird client.

Type: boolean

Default:

```
false
```

Example:

```
true
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.login.setupKeyFile

A Setup Key file path used for automated login of the machine.

Type: null or string

Default:

```
null
```

Example:

```
"/run/secrets/netbird-priv/setup-key"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.login.systemdDependencies

Additional systemd dependencies required to succeed before the Setup Key file becomes available.

Type: list of string

Default:

```
[ ]
```

Example:

```
[ "sops-install-secrets.service" ]
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.name

Primary name for use (as a suffix) in:

- systemd service name,
- hardened user name and group,
- **systemd** ‘*Directory=’ names,
- desktop application identification,

Type: string

Default:

```
"‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.openFirewall
Opens up firewall ‘port’ for communication between NetBird peers directly over LAN or public IP, without using (internet−hosted) TURN servers as intermediaries.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.openInternalFirewall
Opens up internal firewall ports for the NetBird’s network interface.

Type: boolean

Default:

```
true
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.port
Port the NetBird client listens on.

Type: 16 bit unsigned integer; between 0 and 65535 (both inclusive)

Example:

```
51820
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.service.name
A systemd service name to use (without ‘.service’ suffix).

Type: string

Default:

```
"netbird−‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.suffixedName
A systemd service name to use (without ‘.service’ suffix).

Type: string

Default:

```
"netbird−‹name›"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.ui.enable

Controls presence of ‘netbird−ui’ wrapper for this NetBird client.

Type: boolean

Default:

```
client.ui.enable
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.user.group

A system group name for this client instance.

Type: string

Default:

```
"netbird−‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.tunnels.<name>.user.name

A system user name for this client instance.

Type: string

Default:

```
"netbird−‹name›"
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.ui.enable

Controls presence ‘netbird−ui’ wrappers, defaults to presence of graphical sessions.

Type: boolean

Default:

```
config.services.displayManager.sessionPackages != [ ] || config.ser \
vices.xserver.enable
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.ui.package

The netbird−ui package to use.

Type: package

Default:

```
pkgs.netbird−ui
```

Declared by:

<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbird.useRoutingFeatures

Enables settings required for NetBird’s routing features: Network Resources, Network Routes & Exit Nodes.

When set to ‘client’ or ‘both’, reverse path filtering will be set to loose instead of strict. When set to ‘server’ or ‘both’, IP forwarding will be enabled.

Type: one of “none”, “client”, “server”, “both”

Default:

```
"none"
```

Example:

```
"server"
```

Declared by:
<nixpkgs/nixos/modules/services/networking/netbird.nix>

services.netbox.enable
Enable Netbox.

This module requires a reverse proxy that serves '/static' separately. See this **example** on how to configure this.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netbox.enableLdap
Enable LDAP−Authentication for Netbox.

This requires a configuration file being pass through 'ldapConfigPath'.

Type: boolean

Default:

```
false
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netbox.package
NetBox package to use.

Type: package

Default:

```
if lib.versionAtLeast config.system.stateVersion "26.05"
then pkgs.netbox_4_5
else pkgs.netbox_4_4;
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netbox.apiTokenPeppersFile
Path to a file containing the API_TOKEN_PEPPER that will be configured for the pepper_id with the id 1. This is required for netbox >= 4.5. For generating this pepper, **consider using** '$INSTALL_ROOT/netbox/generate_secret_key.py'

Type: null or absolute path

Default:

```
null
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netbox.dataDir

Storage path of netbox.

Type: string

Default:

```
"/var/lib/netbox"
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netbox.extraConfig

Additional lines of configuration appended to the ‘configuration.py’. See the **documentation** for more possible options.

Type: strings concatenated with “\n”

Default:

```
""
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netbox.gunicornArgs

extra args for gunicorn when serving netbox

Type: list of string

Default:

```
[ ]
```

Example:

```
[
  "−−workers"
  "9"
]
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netbox.keycloakClientSecret

File that contains the keycloak client secret.

Type: null or absolute path

Default:

```
null
```

Declared by:

<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netbox.ldapConfigPath

Path to the Configuration−File for LDAP−Authentication, will be loaded as ‘ldap_config.py’. See the **documentation** for possible options.

Type: absolute path

Default:

```
""
```

Example:

```
  import ldap
```

```
from django_auth_ldap.config import LDAPSearch, PosixGroupType

AUTH_LDAP_SERVER_URI = "ldaps://ldap.example.com/"

AUTH_LDAP_USER_SEARCH = LDAPSearch(
    "ou=accounts,ou=posix,dc=example,dc=com",
    ldap.SCOPE_SUBTREE,
    "(uid=%(user)s)",
)

AUTH_LDAP_GROUP_SEARCH = LDAPSearch(
    "ou=groups,ou=posix,dc=example,dc=com",
    ldap.SCOPE_SUBTREE,
    "(objectClass=posixGroup)",
)
AUTH_LDAP_GROUP_TYPE = PosixGroupType()

# Mirror LDAP group assignments.
AUTH_LDAP_MIRROR_GROUPS = True

# For more granular permissions, we can map LDAP groups to Django \
groups.
AUTH_LDAP_FIND_GROUP_PERMS = True
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netbox.listenAddress
Address the server will listen on. Ignored if ‘unixSocket’ is set.

Type: string

Default:

```
"[::1]"
```

Declared by:
<nixpkgs/nixos/modules/services/web−apps/netbox.nix>

services.netbox.plugins
List of plugin packages to install.

Type: function that evaluates to a(n) list of package
